R1	Policy should address need for Energy Centres.	Neither the Policy nor the Local Plan makes reference to energy centres which are fundamental to developing heat networks. The plan does not allocate any sites for energy centres and is unsupportive and restrictive planning policy context for any planning applications. Applicants would need to overcome any policy designations / allocations on otherwise suitable sites to make development permissible. Energy centres are key to net zero carbon goals and can bring wider positive benefits e.g. jobs, public health. Additional wording suggested including that low carbon energy centres be supported alongside development of heat networks; that Council will work proactively with developers to overcome constraints like heritage, infrastructure and crossing water; that Council will expect developers to connect to a network where is has sufficient heat/capacity; and that where applicants propose not to connect they provide robust justification.	We agree it would be helpful to also flag support of energy centres alongside general heat network development and will amend the policy as such. However, an allocation in the Local Plan is not considered necessary to allow the development of an energy centre to come forward in a suitable location in the city. An allocation would also not negate any additional policy considerations in the Local Plan that development would need to comply with where these are of relevance to developing in a certain location.

			See previous responses which address other elements of these comments.

2275

R1	Suggested Energy Centre Site Allocations	Whilst aware of the development constraints within the Oxford, have identified two suitable sites for an energy centre that would minimise impacts on heritage / Green Belt / other environmental considerations. Propose that Council removes/ reduces GI protection and allocates for energy centre: • Former Hinksey Campsite – part of core GI network but considered to have limited scale/ quality of GI on site and not of significant ecological value. Site is no longer in use as a campsite and no longer confers social benefit. • Park Farm - currently allocated for residential development thus principle of development is accepted. Allocation now being removed indicates site is not needed for housing. Site is not publicly accessible, limited in green features and has minimal opportunity for biodiversity – thus unclear why it has supporting status in the Green Infrastructure. Securing site allocations to allow energy centres to come forward will enable the benefits of the proposed network to be realised. A future network would ultimately require multiple energy centres to power the network in future phases, thus both are needed as allocations.	As set out above, a specific allocation in the Local Plan is not considered necessary to allow the development of an energy centre to come forward in a suitable location in the city. The Local Plan has sought to identify sites for designation within the Green Infrastructure Network (as either core or supporting spaces) where they meet particular criteria regardless of location. Where a site may be identified as beneficial for another use, this would not negate the considerations regarding its identified green infrastructure value.
R1	More guidance/support needed for sports facilities	Sport England is concerned that new or upgraded community facilities may not be delivered, or old community buildings may be retained that cannot meet current standards for accessibility. Sports facilities will face different challenges to other sectors when seeking to make their facilities more sustainable. Important that the Plan considers including polices that operators of these facilities can	We appreciate that there will be various nuances and challenges for each type of development. The policy includes varying targets for some different types of development as well as

2276

		navigate. Could the Local Plan point to our guidance on delivering sustainable sports facilities and flood prevention?	mechanisms that can be followed where particular site/proposal specific constraints will make certain requirements challenging. There are limits to how far we can diversify the policy to meet every different type of application however. We intend to produce an updated Technical Advice Note which provides additional guidance in meeting the requirements of policy R1 and this could be a place where we can link to more specific guidance for particular types of application.
R1	No mention of community owned energy/local energy hubs	No mention of "community owned energy hubs" or "local energy hubs"- which should be far more common features of any large application. With reference to the success of Low Carbon Hub projects in Oxford City Centre, there could be more emphasis on locally generated and owned energy hubs, as an inherent part of the design.	We will incorporate reference to these within the supporting text of the policy.

R1	No mention of cooling	There are multiple details about heating methods but no mention of air-conditioning or cooling systems. Although we are aware that a/c would increase energy use - the use of cooling systems would be used at a time of increased/excess solar energy (and when there is less need for heating) We are concerned that if city over-heating is not mentioned and the option of a/c and/or planting large trees near buildings (prioritising care homes, hospitals, schools and nurseries) is ignored, then the future of health and wellbeing could be at risk.	Pursuing high fabric efficiency, in line with designing in accordance with the energy hierarchy, should have equal benefits for keeping the building cool in summer as it does warm in winter. However, we agree that addressing overheating will be an increasing issue, and separate policy G9's resilient design requirements
			specifically set out that applicants need to thinking about this issue (criteria a and b) – including having a cooling strategy.
R1	Supplementary guidance should be produced.	Supplementary guidance should also be given to developers on how to meet the targets, including changing plans, such as position/direction of solar panels.	Agreed – the design checklist (in appendix) touches on various aspects of net zero design and should support applicant's iin approaching their design. Equally, we intend to produce an updated Technical Advice Note which provides additional guidance in meeting the requirements of policy R1.

2278

Statutory Consultee Responses – Draft Policy R1

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

2279

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
Policy R1 Net Zero Buildings in operation	**Climate Action** We are strongly in favour of the preferred option for this policy, and support the inclusion of regulated and unregulated energy in the net zero carbon mandate. Consideration should	Noted. We will consider setting a separate lower EUI target for schools compared to other non-residential uses.	Oxford City Action: Consider proposed wording going forward.

	be given to setting a separate, lower EUI target for schools, compared to other non-residential uses. We support the reference to heat networks and the need to consider connections at design stage where relevant. Consideration should be given to the solar orientation of new buildings and developments at design stage to maximise solar capture and ensure thermal comfort. The policy should specify a preference for onsite offsetting of residual emissions through naturebased solutions which also provide other adaptation-related benefits such as shade, cooling, and flood risk management.	Noted. Consideration is given to orientation and solar gain in policy HD11: *Privacy, Daylight and sunlight,* Policy HD13: *Outdoor amenity space.* The Design Checklist – Appendix 1.1 also discusses building orientation to maximise solar gain, glazing design to ensure thermal comfort. We can consider whether "on-site offsetting" would work in a constrained city such as Oxford.	No Action Required No Action Required Oxford City Action: Consider proposed wording going forward.
Draft Policy/Evidence base/topic	**Summary of comment**	**Response**	**Outcome**

	This policy should require proposals for redevelopment of a building to improve the energy efficiency of the building and consider retrofit measures which could be undertaken alongside the proposed works. Proposals which significantly improve energy efficiency should be supported.	Policy R1 already sets out that proposals for conversions and changes of use. Policy R3 supports retrofit of existing buildings and expects the energy hierarchy to be followed.	No Action Required

South Oxfordshire District Council and Vale of White Horse District Council

Draft Policy R1	Part 2 of draft Policy R1 should be more specific and refer to limiting unregulated energy demands only, whilst still including a regulated total energy cap set by supporting evidence. Regulated energy is easier to limit than unregulated energy in these cases, so providing a regulated energy cap would allow for carbon emissions to be reduced whilst allowing flexibility for applicants. Support the aims but more evidence than the literature review is required, including viability, energy modelling. Part 3 regarding EUI is inaccurate. The wording 'the portion of the development's total EUI associated with space heating is no more than 20kwh/m2/yr should be reworded to ensure it accurately reflects the space heat demand metric.	We concur that the requirement in criterion 3 could be worded more clearly and will amend this for the Reg 19 draft of the policy. Regarding criterion 2, we disagree that the policy should only refer to limiting unregulated energy demands and the EUI target applies to total energy (regulated and unregulated). We envisage that the supporting technical advice note can incorporate additional guidance on how we expect applicants to justify where a higher EUI is	Reg 19 draft R1 wording for criterion 3 will be updated in relation to space heating demand. R1 supporting text will flag the preference for net zero carbon heat sources in heat networks.

2281

2282

	Space heat demand is the amount of heat needed to keep the building at a comfortable temperature, regardless of how that heat is delivered, whereas EUI reflects the actual energy use at the meter. All industry frameworks recommend using actual space heat demand as the metric. Should change 'EUI associated with space heating' to 'space heat demand'. Recommend undertaking feasibility work to determine EUI requirements by building type, to assess whether they can be more ambitious where technically feasible. We recommend that Policy R1 states that heat networks should be powered from zero emission sources	needed and this could potentially include steps taken to reduce regulated and unregulated loads in turn. We agree that additional evidence is required in relation to viability, and will of course be viability testing the policy alongside the other policies of the Local Plan. However, we disagree in relation to energy modelling. The intention of the literature review was to set out the ever-increasing cumulative evidence base that justifies similar policies emerging/adopted across the country. This focusses on local authority areas whose evidence examines locally applicable building typologies to what could be expected to come forward in Oxford. These all generally show that net zero carbon development is *technically feasible* for types of development we expect to come forward under the new Local Plan.	

2283

		We agree that heat networks being powered from net zero	

2284

		sources should be the preference in the first instance and this should be highlighted in supporting text. However, we are unsure whether low carbon sourced networks with a clear pathway to net zero in future should be firmly ruled out, particularly if other sustainability considerations apply.	

2285

All Public Responses – Draft Policy R2

R2	Preferred option	Support for different options in consultation e.g. some flagged support for alternative option 1, whilst others supported option 2.	Noted
R2	BBOWT	BBOWT strongly agree with preferred option.	Support welcomed.
R2	Welcome the proposed policy	Various comments flagging support. Comments included that applications that seek to limit embodied carbon should be considered favourably, as well as where a fabric-first approach taken. Other comments included that policy is overdue and would bring in line with RIBA recommendations, or that it would address concerns about embodied carbon impacts of previous buildings in city being knocked down and replaced. Also, that the principle of this policy helps meet Net Zero objectives.	Noted and support is welcomed.
R2	Support principle of asking applicants to consider impacts and take actions.	Supportive of the principle that developments are expected to demonstrate consideration of embodied carbon in the construction process and take actions to limit this as much as possible through careful design choices.	Noted and support is welcomed.
R2	Mixed support and concern	Some comments welcomed the flexibility of the policy not having targets. Others felt that the policy is too rigid. Lacks clarity and that more flexibility is needed particularly for the science and innovation sector. Also some concern about onerous requirements but also support a quantitative approach.	The range of comments reflects the complexity of this topic. See responses below which respond to these issues raised.

R2	Policy should go further – explicit targets needed.	Some felt that the Council should take stronger position on sustainable development including embodied carbon in light of the current climate crisis. Some felt that the policy should include specific requirements for major development measuring embodied carbon during construction through a recognised methodology. Others have specific targets e.g. South Gloucs - 625kgCO2e/m2 for residential of four storeys or less, to 970kgCO2e/m2 for major nonresidential schemes	As the consultation set out, the topic of embodied carbon is incredibly complex, and still subject to evolving learning and guidance. The policy is intended as a stepping stone to potentially stronger requirements in future as understanding and approaches
			to reducing it improve. It takes requirements further than the currently adopted Local Plan by seeking to ensure applicants consider the issue of embodied carbon appropriately based on the scale of their development and demonstrate how they have sought to reduce it.

2289

R2	Policy should be removed, current barriers are too extensive.	Aecom, research highlights issues with the lack consistency in reporting on carbon assessment outputs, the quality of carbon assessments, large gaps in the availability of both product specific environmental product declarations (EPDs) and generic data, the variation in product carbon results for similar building products, and lack of consistency across carbon tools. Also highlights issues with the uptake of lower embodied carbon materials and products due to costs, risks and insurance, the need to upskill the industry and access to carbon tools. The challenges have not been addressed yet and are not likely to be addressed in the short term. Without consistent data and information, almost impossible for applicants to provide decision makers with reliable information on which to base a decision. Policy should be deleted.	Whilst understanding is still evolving, the policy is considered to be a flexible and pragmatic response to the need to take actions to limit embodied carbon wherever possible without setting strict targets (for the reasons set out in previous response above). As buildings become net zero in operation, embodied carbon in construction will become the primary source of emissions and this needs to be considered.
R2	National standards will ultimately address embodied carbon – no need for local ones	National standards already moving towards a unified approach (draft Part Z) – setting local standards risks double-regulation and overcomplicates approach with various potential consequences. Oxford should let forthcoming national standards handle the complex, rapidly standardising field of embodied-carbon measurement.	This is not certain – the policy wording includes flexibility to defer to national standards where they arise in future.
R2	No policy needed	No local policy needed – no further reason given.	Comment noted

2290

R2	Demolition is a last resort	Policy should explicitly set out that demolition is a last resort, especially when a building has not exceeded its expected useful life. Another suggestion was for the policy requirement to be more strongly worded: “prioritise the renovation or retrofit of existing structures, as part of an efficient use of resources and minimising carbon emissions”	Comment noted – the policy sets out expectations for applicants to show they have considered whether reuse is feasible.

2291

R2	Variety of concerns with criterion a (explore reuse of buildings before demolition)	Various concerns related to criterion a of the policy and the requirement to explore reuse before resorting to demolition including: - That feasibility of retaining existing buildings does not just relate to technical considerations such as structural limitations or operational requirements. - That the requirement ignores longer term sustainability benefits of replacing some buildings (e.g. where they are inefficient) which may outweigh carbon cost that come from demolition and that may derive larger carbon savings in the future, along with wider social and economic benefits - That is unclear how the Council will assess the feasibility of re-use vs demolition. - That this is an open-ended policy test which leaves the final assessment down to the judgement of the decision-maker at the end of the process, reducing certainty for applicants. - That national policy does not strictly prohibit demolition, nor does it suggest that carbon saving policies should be prioritised over the growth of the economy and innovation. - That the requirement stifles potential for innovation.	The policy is not intended to rule out demolition entirely, or to force applicants to retain all existing buildings. We agree there can indeed be good reasons for replacing existing buildings. The policy simply seeks to introduce a requirement that applicants begin the design process of their site by exploring potential for reuse of existing buildings and robustly demonstrating through their application that this has been determined to be unfeasible before resorting to demolition (explaining why). We have incorporated wording into the supporting text to the policy which expands on criteria a and acknowledges that replacement of buildings can have benefits which override their retention for a variety of reasons.

2292

R2	Support in principle – More focus on whole life carbon testing	Whilst supporting the approach to exploring reuse of buildings in principle, but flagging similar concerns to the above, one comment set out that the Council should place greater emphasis on whole life carbon testing to ensure that operational carbon of existing buildings is factored and that buildings constructed have a longer life span and are capable of flexibility rather than constructing a low embodied carbon building now which is no longer fit for purpose in future years.	Applicants need to set out in their Energy and Carbon Statement how the principles in the policy are embedded in design choices. There may be justifiable reasons why particular design choices need to be made which diverge from some of the principles and this will be for the applicant to explain through their statement. Whole life carbon testing could be one means of justifying a particular design choice, but we have not mandated this as a requirement in showing how the principles have been responded to. We have incorporated some wording into supporting text to help clarify this.

2293

R2	Support in principle – more focus on comprehensive redevelopment approach	Another comment in relation to the approach of criterion a was that the policy should support a comprehensive redevelopment approach where planning and place making benefits outweigh those achievable through the limitations/constraints imposed by reuse of existing buildings. A supporting paragraph should be introduced to go alongside part a) to reference that any such assessment of part a) is proportionate to the assets being reviewed and in the context of other planning policies, such as those which promote transformational change and encourage redevelopment to deliver optimum outcomes. This would ensure that brownfield sites with existing buildings and those allocated for redevelopment in the Local Plan are optimised where a	As per response earlier, we have made sure to incorporate some wording in the supporting text that responds to this point.

2294

		retention approach renders development undeliverable. This would particularly be the case for the Templars Square site.	
R2	Impacts on need for intensifying employment sites should be considered	Oxford is seeking to intensify existing employment sites and there may be an existing building on a site that would not be suitable for the proposed employment use and would not result in making the best and most efficient use of brownfield land. It is therefore proposed that the following wording in bold is added to part a): “Re-use of any existing buildings on a site has been robustly explored and demonstrated to be unfeasible, or where it is not making the most efficient use of brownfield land, before resorting to demolition”	As per response earlier, the wording we have incorporated into the supporting text to the policy expands on criteria a and acknowledges that replacement of buildings can have benefits which override their retention for a variety of reasons.

R2	Policy should be "retrofit/refurbishment-first" not retrofit/refurbishment *only*	Policy R2 should be a "retrofit/refurbishment-first" policy, not a "retrofit/refurbishment *only*" policy. Partially addressed in criteria (a), however the wording highlighting the potential benefits of replacing buildings should be included.	The policy is not intended to be a "retrofit/refurbishment *only*" policy. See earlier response.
R2	Concern justification of demolition will be too easy	Support principle that repurposing existing buildings should be default before looking to demolish. Concern that Council will be swayed by expensive reports that too easily justify demolition.	Comment noted.
R2	Additional guidance for the TAN	Suggest including text in future technical advice note on the re-use of existing buildings being dependent on whether they are suited to the requirements of the site.	See earlier response, we have added wording as part of supporting text which addresses this issue.
R2	Some elements of policy should be conditioned, not required up front.	At planning application stage, it is not always possible to define with any certainty the source of materials. This is not known until a contractor is appointed, after planning permission has been granted. As such certain elements of this policy should be conditioned and should not be required up front.	Comment noted
R2	Additional evidence needed to support applications	The policy introduces the need for complex Energy and Carbon Statements including Whole Life Carbon Assessments as well as quantitative measures for reducing embodied carbon, amongst various other additional reports through the new LP. Government has wider ambition to streamline the planning system and additional requests for information through local	The draft Local Plan seeks to ensure that applicants' evidence for demonstrating how the requirements of policies R1-R3 are met, is submitted as part of an Energy and Carbon statement. This is to ensure a

2295

		policy in support of planning applications should be examined carefully.	consistent way of collating this information across applications
R2	Support proposed threshold for Whole Life Carbon Assessments	Support only requiring submission of Whole Life Cycle Carbon Assessments for larger applications (developments of 100 or more dwellings, or 10,000m2 or more non-residential floorspace). This will enable flexibility for future development in the city which will ensure embodied carbon principles are incorporated without adding unduly high burdens on small developments.	Support noted.
R2	Object to requirement for Whole Life Cycle Carbon Assessment.	Embodied-carbon auditing is technically demanding, data-poor, and still evolving. Forcing every major scheme to commission a WholeLife-Cycle Carbon Assessment and negotiate bespoke reduction measures will lengthen pre-construction phases, raise consultant fees and tilt marginal brownfield projects into non-viability – ultimately impacting pipeline of needed development.	Comment noted, the draft policy requires only the largest scale developments to undertake WLCCA – rather than every major development.
R2	Whole Life Carbon Assessments for all development	Whole Life Carbon Assessment should apply to development at all scales. Given the sustainable development goals within this plan and the national targets it is important to understand the embodied carbon implications of all development.	Comment noted. It is important the policies are proportionate, justified and achievable, which the policy as written is considered to be.

2296

R2	Object to lack of detail regarding Whole Life Cycle Carbon Assessment requirements	Policy requires Whole Life Carbon Assessments (WLCAs) for largescale new-build development but does not specify: - The required methodology; - The system boundaries (e.g. whether lab fit-out, site-wide infrastructure or external plant are included); - Baselines or benchmarks by building type or use class; - Measurable reduction targets.	The policy does not set targets that should be met in terms of overall embodied carbon or how much reduction should be secured through design process for the reasoning as set out in response to earlier comments above. It is for the applicant to
		Lack of detail prevents meaningful engagement during design/ planning process & creates risk of subjective/ inconsistent decisionmaking.	set out how far they have limited embodied carbon in line with the spirit of the policy and within the existing constraints and specific requirements of their particular proposal. In terms of required methodology, including the specifics of what a WLCCA should cover, this would be expanded on in a technical advice note, which can more easily be kept up-todate to reflect evolving best practice and understanding.

22297

R2	Enforcing requirements of policy	Compliance should be strictly enforced with sanctions for noncompliance. If applications do not adhere to the specific targets set, then applications should be sent further guidelines, and if not followed, should be refused. No point in allowing plans to “demonstrate a robust feasibility survey” and then allowing to exceed carbon targets.	Whilst we appreciate desire for targets, and have responded above on this point, we do not currently see a way to introduce these and assess in a consistent way. Applicants would need to submit an energy and carbon statement detailing how they have met the policy requirements and the permission would be granted subject to a condition that the development is built in accordance with submitted documents. Were an applicant to fail to build in accordance with
			the condition they could be subject to enforcement action.

2298

R2	Objection – policy not clear	This policy is not effective. It is not clear whether it applies to buildings in Conservation Areas (Designated Heritage Assets)	The draft policy clearly sets out that the first part (the principles set out in criteria a-e) applies to all development, and the second part (criteria f and g) applies to large scale new-build development that meets the size thresholds. It would apply to development within conservation areas or outside of them where they meet the above conditions – though of course other policies would also need to be considered (e.g. HD1 Conservation Areas).
R2	Clarification needed	Council should clarify what it means by major development.	The term major development is as defined in the town and Country Planning legislation.

2299

R2	Objection – specialist buildings not considered	Policy doesn't consider specialist nature of lab/ R&D buildings. These buildings often require bespoke, heavily serviced structures that may limit opportunities for material reuse/ application of low-carbon alternatives. Blanket requirement for reuse/ prescriptive performance thresholds risks undermining building safety, functionality, or future adaptability.	Criteria a-e are not rigid in their requirements, they set out particular principles in the design/construction process which need to be considered. Generally, operational requirements of a proposed development will be able to be factored into how they are responded to. E.g. in terms of criteria b – it does not explicitly ask for all materials to be reused,
			or for no waste to be generated – it asks for the Energy and Carbon statement to show that waste has been minimised and reuse of materials maximised, and of course, particular needs of a building's design and construction will influence how far these asks can be demonstrated.

2300

R2	Objection – not viability tested	Concerns about policy increasing cost of development, and that the cumulative burden with other policies has not tested through Viability assessment. Additional assessment, reporting and material specification costs all add pressure to schemes that already face tight margins due to lab specification, planning obligations, and land values.	The whole plan viability testing will be published at the next stage of consultation. The development of the policy is informed by viability testing alongside other policies in the Local Plan.
R2	TAN should be published before Reg 19 to inform comments	The Council intends to produce a TAN - this must be issued before/ at Regulation 19 for informed comment.	Technical Advice Notes are intended to aid applicants and provide additional support/guidance in meeting the policy requirements. It is not necessary for informing comments on the requirements of the policy itself.
R2	General comment	It is possible to carbon cost the Local Plan as it develops and site details develop?	Unfortunately, without being able to predict the finer detail of how each new development brought forward across the plan period would be designed – e.g. specifics of site layout, materials

2301

			used, processes of construction – any quantitative carbon estimate would be subject to significant uncertainties. The Sustainability Appraisal does seek to consider the impacts of the Local Plan against carbon emissions at a very high-level and in a more qualitative way, as it this is one of the 12 SA objectives. The assessment draws out the importance of including policies like R1 and R2 in mitigating carbon impacts as much as possible.

2302

Statutory Consultee Responses – Draft Policy R2

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

Policy R2 Embodied Carbon	**Minerals and Waste Policy & Strategy** Odd choice to use the phrase 'from cradle to grave' when referencing whole life carbon cycle – in a truly circular economy there should be no 'grave', suggest using 'lifetime of the development' as an alternative phrase.	Noted. We can consider an alternative phrase for the next draft of the plan.	Oxford City Action: Consider proposed wording going forward.

2303

	Welcome point b in Policy R2 – minimisation of waste generation, and re-use and recycling of materials.	Noted.	No Action Required
	Climate Action We suggest referring to the use of nationally recognised tools in order to produce a relatively standard response for Lifecycle Assessments which will be easier for officers to assess (e.g. OneClick LCA).	We can consider whether it is appropriate to recommend a particular Life Cycle Assessment within the Plan or whether this issue would be better explored within a Technical Advice Note.	Oxford City Action: Consider proposed wording going forward.
	Innovation We are pleased to see the inclusion and emphasis on embedded carbon and the innovative choice of alternative materials that this focus can lead to. One such is the increased use of timber in construction. This also has the potential of reducing the quantity of concrete in foundations as wooden structures can be lighter than traditional build.	Noted.	No Action Required

2304

Historic England

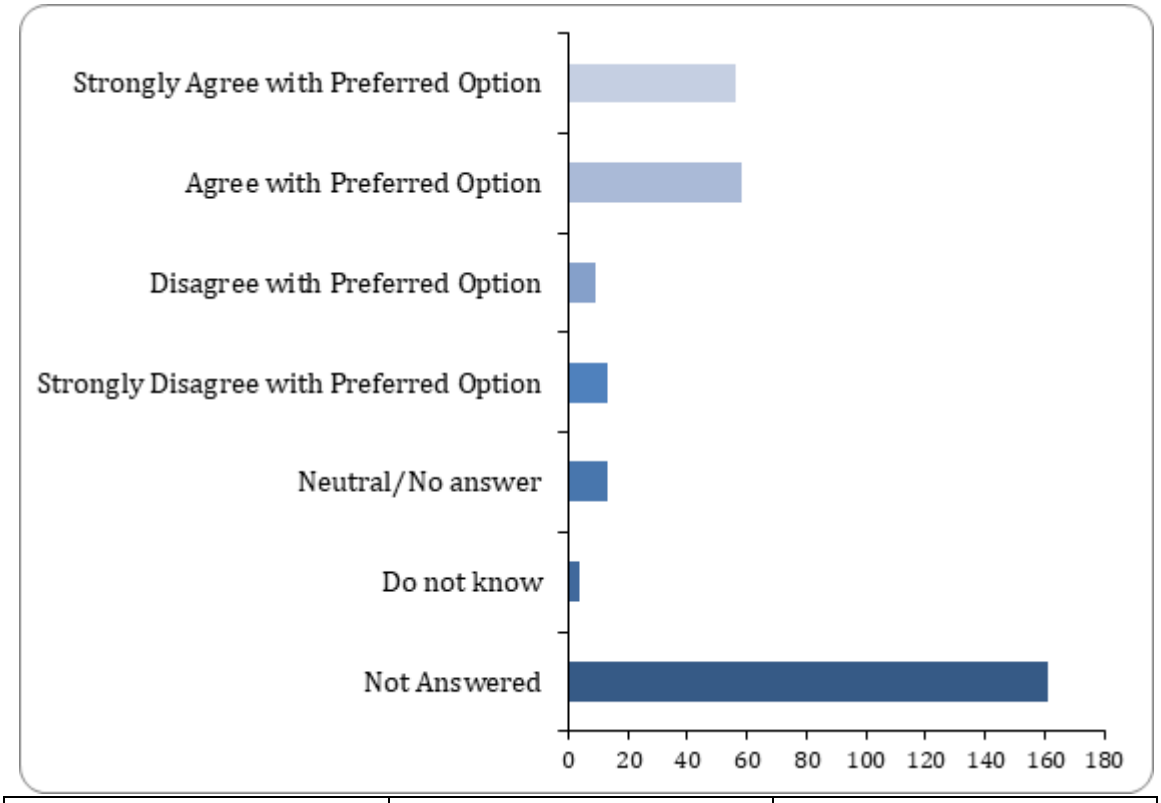
Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
R2	Welcome policy and encourage supporting text to make explicit the link to heritage conservation. Building re-use has the potential to contribute to the Council's positive strategy for the historic environment.	Support welcomed	N/A

2305

All Public Responses – Draft Policy R3

Please let us know what you think about Policy Option Set 008c (draft policy R3): Retrofitting existing buildings including heritage assets. If you have any additional comments please put them in the comment box.

There were 153 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	56	17.83%
Agree with Preferred Option	58	18.47%
Disagree with Preferred Option	9	2.87%

Neutral/No answer	13	4.14%
Do not know	4	1.27%
Not Answered	161	51.27%

Draft policy	Topic	Summary of comments	Response
R3	Preferred option	Support for different options in consultation e.g. some flagged support for alternative option 1, whilst others supported option 2.	
R3	BBOWT	BBOWT strongly agree with preferred option.	Support welcomed.
R3	Support for policy	Support for the Preferred option, including: the positive approach set out in the Policy in terms of retrofitting; the emphasis on a "whole building" approach; that it does not set out targets or introduce specific measures; the acknowledgement that historic buildings and heritage assets are more sensitive to change; the more nuanced approach to the retrofit of heritage assets/buildings/conservation areas.	Support welcomed.
R3	Support balancing temporary harm versus long term benefit.	Support balancing of 'temporary harm' vs 'long term benefit' and other trade-offs that prioritize climate resilience and our collective ambitions to reach net zero - against-aesthetic/heritage considerations.	Comments noted.
R3	Support retro-fit over demolition	Some comments agreeing with the need for retrofit before exploring demolition and that there are examples in the city where buildings have been demolished instead of repurposed.	Comments noted.
R3	Retro-fit of existing buildings will help cut emissions faster	A presumption in favour of fabric upgrades, heat-pump installation and solar PV on non-designated buildings will cut emissions faster than efforts to achieve net zero new-build.	Comment noted.
R3	Carbon-saving measures as a public benefit	Counting carbon-saving measures as a public benefit in ListedBuilding or Conservation-Area cases gives owners a clear,	Comment noted.

		workable path to decarbonise landmark stock without endless bespoke arguments.	
R3	Policy should go further – helping	Should go even further in encouraging historic buildings to be modernised in energy efficient ways. This might mean helping building owners to work with English Heritage to find compromises	The Local Plan policy is one tool in supporting applicants to drive retro-fit of existing buildings.

Draft policy	Topic	Summary of comments	Response
	occupants to access grants	that respect conservation goals and sustainability goals. Given how many historic buildings, Oxford has and in such a small footprint, it seems like we ought to be able to show leadership on this.	Agree that other ways to support building owners is important although this generally falls outside of the scope of the Local Plan preparation itself. Where possible we could look at how we can incorporate additional helpful guidance of relevance into our supporting technical advice note, which will need to be updated for the new Local Plan's adoption.

2308

R3	Refuse applications which don't comply	If applications do not show compliance with the policy, then applications should be refused.	Accordance with the policy requirements will be a material consideration in the process of determining planning permission for relevant applications, as with other applicable policies in the Local Plan.
R3	If retro-fit not feasible, this should be justified by applicant	Applications proposing retrofit of buildings should be considered favourably. Where retrofitting is not feasible / viable, then applicants should seek to provide adequate justification.	The policy cannot force applicants to retro-fit or to justify why they cannot, it provides a framework for how applicable applications should approach their retro-fit projects when they come forward seeking planning permission to do so.
R3	Flexibility needed	Policy should be flexible. Also common sense is needed in application of policy. Other flagged that it may not be realistic to make retrofitting compulsory. Instead, encouraging new	Agree that flexibility is important so that each project can be designed in the most suitable

Draft policy	**Topic**	**Summary of comments**	**Response**

		development or refurbishing sites to take up alternative new energy and other to reduce carbon emission may be more realistic.	way for its particular context. The policy does not set rigid targets, or explicit requirements in terms of type of retro-fit that should be undertaken. Instead, it sets the framework for how to approach design of the project, including promoting a whole building approach which helps to ensure that retro-fit measures are selected which most suit the building.
R3	Concern about heritage impacts from retro-fit	Concern that policy will allow historic buildings to receive ugly external changes in order to achieve carbon reduction and undermine conservation principles.	The purpose of asking applicants to take a whole building approach to the retrofitting of traditional buildings, including heritage assets, is precisely to avoid this kind of impact (amongst other reasons). The approach means ensuring that a proposal is informed by a thorough understanding of the building, including the particular characteristics/qualities for which it might be protected, and then ensuring that design of retro-fit measures factors these qualities in.

2310

Draft policy	Topic	Summary of comments	Response
R3	No policy wanted	Council should not interfere. There should be no policy for this topic.	Comment noted. The policy is intended to help support applicants who wish to pursue retro-fit so that they can approach these projects in the most appropriate way and avoid harmful impacts, which will enable them to be better placed to navigate the planning process.
R3	Policy is too expensive and waste of money	Concern about who will pay for the retro-fitting and that householders will be forced to retro-fit. Concern about expense generally not being justified and that policy is a waste of money that is paid for by tax payers.	The policy does not force anyone to undertake retro-fitting. Other than costs that might be associated with meeting the requirements of the policy for the applicant undertaking such a project, the policy does not directly impose costs on others in the city.

R3	Need for retro-fit may only be temporary	Heritage needs to be preserved beyond the current climate crisis. Future technical advances that may later negate the need for retrofitting.	Comment noted, however, we are unable to prepare policies based upon uncertain or unforeseen future technical advances. The policy responds to an existing need to support owners of current buildings who wish to pursue retro-fitting projects. As set out in earlier responses, the policy is intended to help ensure retro-fit projects

2312

Draft policy	Topic	Summary of comments	Response
			that require planning permission happen in the most appropriate way whilst balancing out our responsibilities towards protecting the historic environment.

R3	Connecting to heat networks	Should also strongly encourage connection to heat networks as these (particularly where designed to operate at higher temperatures than building-level heat pumps) provide a way of decarbonising hard to treat (listed) buildings with minimal impact on their existing fabric/heritage assets. The vast majority of emissions in 2040 and 2050 will be from buildings that already exist - encouraging/mandating connections to these when retrofitting should be a key lever in the City achieving this.	Comment noted – there could be a variety of ways to secure the most sustainable outcomes from a retro-fit project including connecting to/using heat networks/heat pumps. The policy does not rigidly require applicants to utilise any one particular technology, as the best solution may differ depending on context of the building and the wider site. Equally, technology is continually evolving and it is important that the policy approach is future-proofed as best as possible. The policy sets the framework for how to approach design of the project, including promoting a whole building approach which helps to ensure that retro-fit measures are selected which most suit the building.

2313

Draft policy	**Topic**	**Summary of comments**	**Response**

R3		Give more explicit encouragement to carbon-reduction technologies with an externally visible aspect -- e.g. solar panels and heat pump external units -- by encouraging their use including in publicly visible locations in more circumstances. Still seeing advice issued that solar panels should be reduced to produce a 'balanced' roof, the implication being that panels are an aesthetic negative compared to roof tile, and that this aesthetic is important enough that we should accept increased emissions. Proximity to a heritage asset is also being cited as a reason to remove or minimise use of solar panels. We should constrain ourselves to only restricting solar directly upon a heritage asset or in very close proximity to a highly sensitive asset.	
R3	Retro-fit against overheating	Retro fitting is important and needs to include resilience against heat.	Agreed, this is why the policy talks about retrofit measures that go beyond just energy efficiency. It highlights that the Council will support retrofit measures to existing buildings where they secure energy efficiency improvements or adaptation to changing climate. Resilience to overheating/higher summer temperatures is an important facet of adaptation to climate change.
R3	Homeowners need support	Comments about need for need expert assistance and/or funding (e.g. grants) to support people to achieve this objective.	Criterion c of the policy talks about the need for obtaining professional expertise where necessary/appropriate. The

Draft policy	Topic	Summary of comments	Response
			accompanying Technical Advice Note (TAN) will be able to point applicants to further guidance/support to some degree, as is the case in the existing retro-fitting TAN.

Statutory Consultee Responses – Draft Policy R3

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

2315

Policy R3 Retro-fitting existing buildings	**Climate Action** The reference to the adaptation benefits of retrofit is welcomed. Reference should be made to the need to maximise reuse and retaining of materials where possible during retrofit in order to reduce the embodied carbon of the proposal.	Noted. We can consider whether to include this reference in the Reg. 19 plan. Reuse and retention of materials is already covered within Policy R2.	No Action Required Oxford City Action: Consider proposed wording going forward. Oxford City Action:

2316

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

	Suggest inclusion of a statement about postimplementation monitoring e.g., *The Council may request postcompletion monitoring of retrofit outcomes for major schemes to support continuous learning and citywide performance improvements.*	We can consider whether to include some text about post-implementation monitoring for retrofit schemes however compliance with any such statement would be entirely voluntary and we would not need a planning policy to ask for such information. This issue may be better addressed through an "Informative" on decision notices.	Consider proposed wording going forward.
	Retrofit proposals should also consider their impact on natural resources including air, water, and soil, and take opportunities to mitigate environmental harm.	Noted.	No Action Required
	Urban Design (Placemaking) Retrofitting of buildings should also encompass improving accessibility for all, some heritage assets do not offer step free access.	Policy R3 addresses retrofit measures in relation to energy efficiency and climate change adaptation.	No Action Required No Action Required

2317

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
	Also, policies throughout the local plan refer to conserving/protecting heritage assets, so retrofitting buildings could also include physical measures e.g. Boundary treatments, to provide a level of protection if a hostile incident occurred.	Where development involving heritage assets is proposed, this are specifically covered by policies HD1-5.

Option	Total	Percent
Strongly Agree with Preferred Option	82	26.11%
Agree with Preferred Option	43	13.69%
Disagree with Preferred Option	5	1.59%
Strongly Disagree with Preferred Option	8	2.55%
Neutral/No answer	12	3.82%
Do not know	1	0.32%
Not Answered	163	51.91%

Draft policy	Topic	Summary of comments	Response
R4	Preferred option	Various comments supporting option 1	
R4	BBOWT	Strongly support preferred option.	Support welcomed.
R4	Preferred option	Strongly support preferred option – target is more ambitious than elsewhere.	Support welcomed.
R4	Air quality a serious health issue.	Agreement that air quality is a serious health issue. Also comment that no development is more important than healthy children and clean air.	Agreed, the health impacts of poor air quality is a key driver for why we are proposing the policy.

2320

R4	No need for local policy which goes beyond national requirements.	National planning guidance already mandates Air Quality Assessments – some also commented that these are restrictive enough. Layering a blanket Oxford-specific AQA plus a tighter 30 µg/m³ NO_2 cap on every major scheme simply adds modelling fees, lengthens determinations and squeezes viability, yet cannot cure the dominant pollutant source—regional road traffic—without city-wide transport reform.	Any level of air pollution can have detrimental impacts for health including the minimum acceptable targets required nationally. The Council's air quality action plan is a key strategic document which captures the local ambitions for driving improvements in air quality in the city beyond national minimums. Whilst there are a range of initiatives for tackling air quality across various sectors outside of the Local Plan's influence, the Local Plan's policies play a role in ensuring that new development is designed in alignment with this wider strategy for the city by ensuring that new developments are not permitted which would conflict with these local ambitions.

2321

R4	No need for local policy	No need for extra micro-managing by the city, or 'don't need a local policy' more generally. Concern about increasing layers of regulation and policy requirements.	Comment noted – see other reponses (e.g. above) for why we believe a local air quality policy is necessary.

R4	Need common sense.	Need common sense.	Comment noted.
R4	Relationship between transport and housebuilding.	Inclusion of transport within housebuilding criteria is long overdue. Estates and developments should be designed with a presupposition that car travel is not the norm. Some general comments were made about the need for vehicle movements need to be reduced as far as possible, and that even hybrid and EVs are responsible for various non-exhaust emissions. Other comments included that the policy is not effective as it only addresses air quality, not the wider problems caused by traffic.That the Local Plan does not acknowledge Oxford's responsibility to tackle climate change by reducing the factors that lead to congestion and emissions. Nor does Local Plan offer solutions relating to reducing car traffic.	It is important to note that the Local Plan has limited influence over the transport network as much of this sits within the wider County Council's control. However, we acknowledge the strong need for reducing reliance on private vehicles and the various roles they play in contributing to air pollution and wider issues relating to congestion in the city. The policy is clear (in criterion a) that Air Quality Assessments need to consider the impacts of all the sources of air pollution generated during the development's operational and construction phases, including but not limited to transport. Separately, Chapter 7 sets out various policies in relation to supporting and encouraging more uptake of sustainable/active transport modes and seeking to ensure

2322

			occupants do not have to rely upon on private vehicles wherever possible.
R4	Parking at Headington hospitals	Oxford can (via planning) reduce destination parking especially at the Headington Hospitals.	
R4	Impact of woodburning needs to be addressed.	Air Quality assessments are meaningless if the impact of woodburning is not addressed (even from so-called eco-stoves).	Noted – air quality assessments would need to consider all sources of air pollution.
R4	Local Plan does not define areas of poor air quality.	Policy does not define areas of poor air quality..	Whilst there are monitored hotspots for more regularly occurring poor air quality in the city – such as those which are monitored and reported upon on the Oxonair website, the nature of the problem is that air pollution can arise from various sources and be transient or temporary in nature – e.g. where it relates to construction processes or changes in traffic patterns and can be difficult to map. We have incorporated a link to the council's air quality webpages and the above county wide mapping within the supporting text.

2323

R4	Change reference to mitigation to 'netzero'	The word mitigation must be replaced with 'net-zero'	The term net zero more broadly means to ensure no net increase – e.g. in the context of carbon emissions, it means ensuring the
			same amount of carbon dioxide is removed from the atmosphere to balance out anything emitted and ensure no overall net increase as a minimum. Mitigation is a broader term, but is effectively about avoiding, or else seeking to reduce the severity of impacts.
R4	Policy needs to be enforced.	Stressed that the policy needs to be enforced. Concern flagged about pollution impacts arising from various major developments in the city including Cherwell House, the Old Power Station, Network Rail, Gibbs Crescent, and that this is not reflective of a 'world-class city'. This includes periods when residents cannot open windows even in a heatwave and pollutants coating streets.	Similar to our earlier responses against policies R1 and R2, the policy sets the requirements that will need to be met through the planning application. The permission would be granted subject to a condition that the development is built in accordance with submitted documents. Were an applicant to fail to build in accordance with the condition they could be subject to enforcement action.

R4	Objection – Headington Hospitals parking provision (and others)	The policy and goals are ineffective without urgent reduction of Headington Hospital (John Radcliffe, Churchill and NOC) car parking provision. The three Headington Hospitals, football fields of staff car parking (70%) is mostly responsible for air quality, health and environmental issues caused by vehicles in Oxford as a whole, as the centre of transport and employment is now Headington, causing miles of traffic jams every day and gridlocking Headington and Oxford in general.	Comment noted, however, parking provision at the hospitals is not within the scope of this policy.
R4	Increase pedestrianised areas.	Pedestrianised areas must be increased; the number of 'through' roads in residential areas should be decreased; walking and cycling networks of high quality should be joined up throughout the City as a long-term goal Plan after Plan.	Comment noted – the Local Plan has varous policies which seek to support walking/cycling/wheeling (chapter 6).
R4	Is noise factored into policy?	Does air quality include noise? I used to live in countries where heat pumps are normal, and there is no such thing as a quiet heat pump.	Noise would be addressed through separate Policy R8.
R4	Council should prioritise	Agree with principle but feel that Council should prioritise and be less concerned about issues which are felt to have limited/no impact on city-wide air such as personal home-use bbqs and bonfires, which are part of the importance of quality of life.	Comment noted – the policy covers the design and operation of new development, it is unable to control how occupants behave in the development.

2325

Statutory Consultee Responses – Draft Policy R4

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

Policy R4 Air Quality Assessments and Standards	**Strategic Planning** Air quality is a particular issue for Oxford, and the entire city is an Air Quality Management Area. Transport schemes and transport policy that the County Council is working on with the City Council have an aim of improving air quality. **Public Health**	Noted.	No Action Required
Draft Policy/Evidence base/topic	**Summary of comment**	**Response**	**Outcome**
	The inclusion of sensitive receptors (schools, nurseries, care homes and healthcare settings) is welcomed, although developers should also be considering the impact of schemes on outdoor amenity such as parks and greenspaces, especially where young children are likely to play.	Noted. The list of sensitive uses set out in the policy is not exhaustive.	No Action Required

60

Draft policy	Topic	Summary of comments	Response
R5	Preferred option	Comments supported different options e.g. some flagged support for alternative option 1, whilst others supported option 2.	
R5	BBOWT	Strongly support preferred option.	Support welcomed.
R5	General support	Comments supported the policy generally including that anything to support the improvement in city's watercourses is welcome.	Support welcomed.
R5	Need for strongly emphasising using water prudently and protecting water quality so as to not allow new development to further exacerbate pollution problems in watercourses.	Comments about need for strong emphasis on using water prudently and for protecting water quality, and that new development should not be allowed to exacerbate water pollution problems or have an adverse affect on water bodies or groundwater. There were also general comments flagging ongoing concern about the pollution issues impacting the city's watercourses and the role of water companies and new development in this problem.	Comments noted – this new policy has been incorporated into the Local Plan 2045 to ensure the issues around water resources and water quality are taken seriously and considered as part of applications. The policy is being further updated following the Reg 18 feedback and we have sought to emphasize these messages within the supporting text to the policy also.

2328

R5	Bespoke policy is unnecessary.	Preference for folding water requirements into other policies. Bespoke policy duplicates requirements such as Building Regs' cap of water use to 110lppd, as well as EA regulation of foul-and-surfacewater discharge, as well as the Local Plan's other policies such as Flood-Risk/SuDS. Bespoke policy would mean applicant's need to prepare another consultant report and also push marginal brown-field schemes further from viability.	The building regs optional 110 lppd standards need to be enforced through local policy. The EA, along with various other stakeholders, have also put forward a strong preference to us that a bespoke water quality/resources policy is needed (indeed ever since preparation of Local Plan 2040). The policy's development is being informed by Whole Plan viability assessment which will consider any viability impacts arising from it, as with all policies in the Local Plan.
R5	Bespoke policy is unnecessary.	No need for bespoke policy/interference from the Council and/or national policy is sufficient.	See response above.

2329

R5	Importance of grey water reuse and stronger requirement in policy.	Various comments about need for incentivising/requiring grey water capture and reuse. Suggestion that Council could work with Thames Water to inform constructors of cost-saving implications of water-saving measures. Also that the policy could be more strongly worded in terms of mandatory inclusion of designs to use grey water. One suggestion to require all new builds to have water re-use from basins/showers/baths to flush toilets. Another suggested a change to wording by removing the words 'where appropriate: "All applications should demonstrate what other measures have been incorporated into the design to conserve water use including rain/grey water harvesting/reuse where appropriate."	Comments noted and we agree that grey water and rainwater recycling is an important way to help conserve water resources. We have expanded on the policy requirement in the supporting text to further emphasize the variety of measures applicants might be able to consider and that might be suitable for their proposal. The wording 'where appropriate' was intended to reflect that each application will be different and different measures may be suitable for each proposal – we will consider further whether this is necessary.
R5	Lawns are not sustainable – grey/rainwater should at least be used to maintain them.	Passion for lawns in the Colleges is ecologically unsustainable on water management and biodiversity grounds. At the very least, Colleges should be using grey water for watering these. Terrific systems being applied at the scale of households in both Germany and Australia that make really good use of grey water.	Maintenance and management of existing green spaces is something that is not within the scope of the Local Plan to influence. We concur with the importance of making use of grey and rainwater recycling wherever possible, see above comment.

2330

R5	Sewage	Concerned that the issue of sewage discharge and treatment is barely referred to at all, which is totally incompatible with the plans to build large number of houses in Oxford and the surrounding area. There is an assumption that Thames Water will provide the necessary upgrades to the water treatment plant at Sandford-uponThames ("Oxford STW") in a timely fashion to meet the large increase in wastewater discharge resulting from the large-scale developments proposed in the draft local plan. Any approval for residential development needs to be contingent on appropriate foul network and treatment facility upgrades being completed before any occupation of new development is permitted. The proposed Policy R5 is insufficiently robust and will, if not substantially amended, lead to an increase in pollution which will impact on peoples' health – including those using the watercourses for pleasure or workor other uses.	Comments noted - We have sought to ensure that the supporting text for the policy in the Reg 19 Local Plan emphasises the ongoing water quality concerns in the city, and the various impacts contributing to this including sewage discharges, alongside other updates to the policy to strengthen where practical. The Council continues to engage with Thames Water to ensure that they are aware of growth planned for in the Local Plan and that this can be accommodated and the supporting text will also encourage applicants to engage directly with them as early as possible as proposals come forward.

2331

R5	Threshold for foul and surface drainage is too high.	Policy Threshold for requiring a Foul and Surface water drainage is set too high. Smaller development can also impact the sewage network (both individually and cumulatively). Threshold should be set much lower, i.e. 10 dwellings or more. Strategies should consider existing developments' impacts before development allowed.	The requirement seeks to ensure the largest developments go further to demonstrate how foul and surface water will be managed through a strategy because they could have particularly significant impacts. It is acknowledged smaller scale development can still have an impact and the policy will still require proposals of smaller scales of development to demonstrate how they have mitigated impacts that are within the applicant's control.
R5	Improvements to Sewage treatment works should be monitored through the policy.	Various stages of improvements promised for the Sandford Treatment works should be monitored by the Council and the results obtained made available for public inspection as part of the suggested policy.	Whilst the upgrades to the sewage treatment works are an important step in addressing water quality concerns in the city, they are not directly in the control of this policy or the Local Plan and as such this would not be the correct mechanism through which to undertake the monitoring suggested.

2332

R5	Water shortages should be addressed.	All new planning applications must address the issue of water shortages which is clearly going to be a real problem during the timeline of the draft plan.	Agreed. The new policy is intended to present the issue of prudent water use more clearly through the Local Plan (where previously water use requirements were spread across various other policies) and sets various requirements for new development to address in relation to this issue.
R5	Impact on water bills	Concern requirements will mean increases in water bills.	It is unclear why or how the new policy would directly drive increases in water bills. Indeed, the policy should help to ensure that new development reduces its impacts on the water
			environment, and by extension, associated infrastructure that maintains this.

2333

R5	Retention of green frontages to properties to deal with draineg issues	Abandon unenforced SUDs maintenance as an idea and have a local policy requiring retention of earth/grass/other vegetation on frontages for all properties to deal with recurring drainage issues.	Addressing the issue of surface water run off requires a variety of responses and design measures. Equally, SuDS can take many forms, including areas of natural green space and other features. We concur, that limiting artificial surface cover on new developments is important (for a wide range of issues) and would direct you to other policies, including the new Urban Greening Factor requirements (draft policy G3) which seeks to ensure new developments have areas of natural surface cover.

2334

Statutory Consultee Responses – Draft Policy R5

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
Policy R5	**Strategic Planning** We welcome the introduction of a separate policy which deals with water resources and support the	Noted.	No Action Required

Water Resource and Water Quality	setting of a policy which require all dwellings (including conversions, reversions and change of use) to achieve an estimated water consumption of no more than 110 litres per person per day, and encouraging all non-residential development to demonstrate what measures have been incorporated to reduce water use. **Minerals and Waste Policy and Strategy** The County Council is responsible for wastewater treatment, Policy W10 of the Oxfordshire Minerals and Waste Core Strategy (2017) allows for proposals for the treatment and disposal of wastewater and sewage sludge.	Noted. Oxford does not have any wastewater treatment facilities within its administrative boundary.	No Action Required

2335

Environment Agency

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
R5	Welcome the inclusion of water quality policy, but currently find it unsound as it is not robust in relation to addressing water quality concerns. Policy does not meet requirements of paragraph	Whilst we are keen to ensure that the policy meets the EA's expectations and responds to the requirements of the Water Framework Directive, it is	Meeting organised to discuss these comments with the EA and agree amendments to the policy that might overcome these concerns.

	187e of NPPF which requires plans and planning		

	decisions to ensure that there are no unacceptable levels of water pollution. Appropriate measures must be in place to ensure; delivery of growth does not outpace required wastewater infrastructure improvements and growth does not lead to a deterioration of the water environment. Development must only be permitted where it can be demonstrated that there is adequate provision for the treatment of wastewater in place to prevent wastewater leakage into the environment including rivers. This is to maintain and improve waterbody status in Oxford as required under Water Framework Directive. Suggest a few changes/amendments to the policy wording but are willing to work with Council regarding how the policy wording could be strengthened.	important that the policy requirements are justified and deliverable in terms of what can be expected of a developer making an application. We would propose a meeting in order to discuss these comments further with the EA in order to find the best way to respond to these concerns and strengthen the policy where possible.	

2336

R5	Pleased to see emphasis on separation of foul and surface water drainage. Should also highlight the hierarchy of drainage options that must be considered and discounted in the following order: 1. Connection to the public sewer 2. Package sewage treatment plant (adopted in due course by the sewerage company or owned and operated under a new appointment or variation) 3. Septic Tank. This must be considered when applications are made for wastewater/sewage/foul water disposal from all new development. In a sewered area such as Oxford City, private	We will reflect on how best to reflect this feedback in the Local Plan where appropriate, bearing in mind that some of this is set out in national guidance and may not necessarily need to be repeated here. Some of these considerations may be better reflected in supporting text or a Technical Advice Note. Again, we would like to discuss further with you.	As above.
	discharges to non-mains drainage systems must be avoided in line with the hierarchy of options. Deep infiltration systems for non-mains foul drainage or surface water disposal are not optimal discharge solutions, and should be avoided wherever possible. Techniques and designs which treat and manage rainwater and surface water drainage without allowing the runoff to soak into the ground (infiltration) is necessary for protecting groundwater sources. Changes suggested to policy for consideration.		

2337

R5	There are important and sensitive water resource receptors in Oxford such as designated bathing water at Wolvercore Mill Stream which should be recognised within the local plan policy, with a commitment to working to achieve and maintain sufficient status of these sensitive receptors. Changes suggested to policy for consideration.	We agree with the suggested change to bullet point two of the policy, we will also look to flag the presence of designated bathing water in the supporting text as it is useful context.	Amend to policy wording to reference designated bathing water. Reference to be added into supporting text also.

Thames Water

Draft Policy/Evidence base/topic	**Summary of comment**	**Response**	**Outcome**
R5 Water resources and quality	Important to consider the net increase in water and wastewater demand to serve the development and also any impact that developments may have off site, further down the network. The new Local Plan should therefore seek to ensure that there is adequate water and	It will be important to continue to work together to ensure that Thames Water are aware of the Local Plan's provisions and that necessary	Continue to engage together. We would aim to document this as part of a Statement of Common Ground in due course.
	wastewater infrastructure to serve all new developments.	upgrades to infrastructure are planned for accordingly.	

R5 Water resources and quality	Recommend that developers engage with them at the earliest opportunity when bringing forward a proposal to establish the following: • The demand for water supply and network infrastructure both on and off site; • The demand for Sewage/Wastewater Treatment and network infrastructure both on and off site and can it be met; and • The surface water drainage requirements and flood risk of the development both on and off site and can it be met. Also flag that time to undertake upgrades to infrastructure can be lengthy, so early engagement from developers is important where possible. Thames Water offer a pre-planning service to assist applicants (on their website).	Noted, we concur it could be helpful to reiterate the recommendation of early discussions between developers and Thames Water where possible and can add this into supporting text to the policy.	Updated policy to be published as part of Reg 19.
R5 Water resources and quality	Support references to water efficiency and requirement of the water efficiency standard of 110 litres per person per day using the fittings approach. This is an important tool to help sustain water supplies for the long term, particularly in light of future climate change. This should be required by condition.	Support welcomed. We can make it clearer in supporting text that the requirement will be subject to a condition.	Updated policy to be published as part of Reg 19.

2339

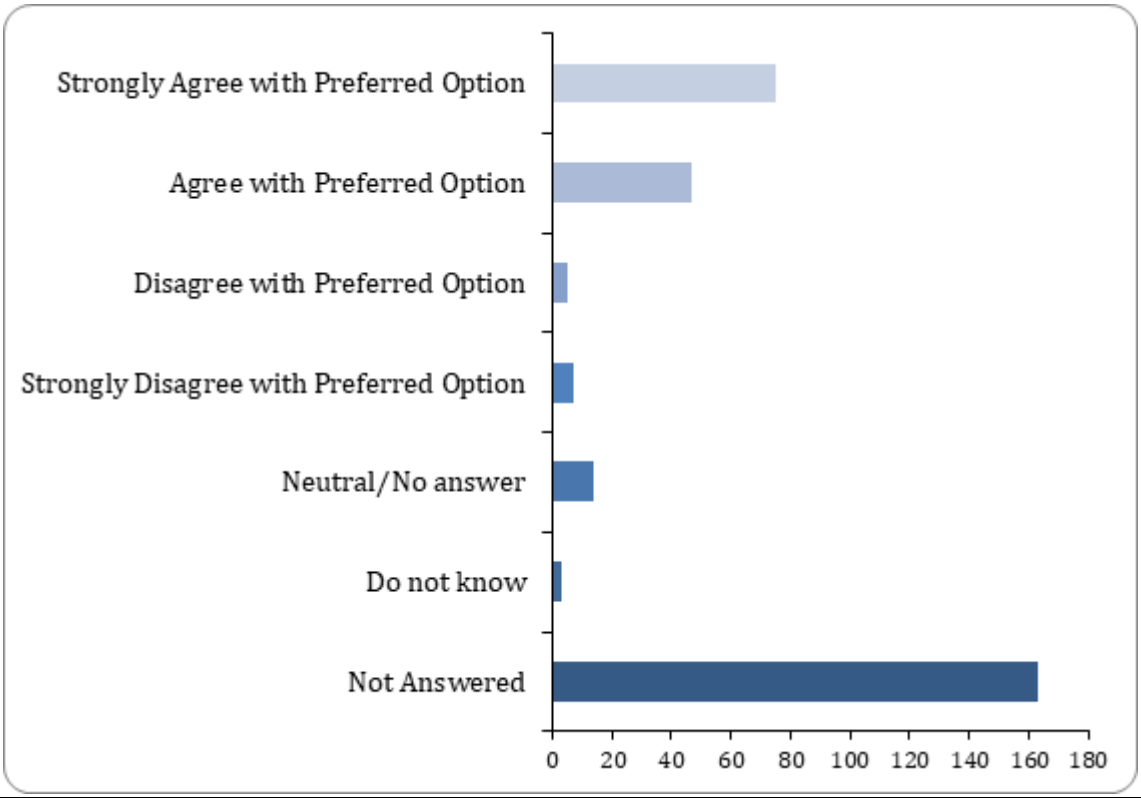
R5 Water resources and quality	Additional wording suggested to the policy in relation to requirements for conditions to ensure occupation aligned with delivery of upgrades, and about when development or expansion of water supply or waste water facilities would be permitted.	The Council does not currently consider these as necessary or helpful additions as they can be dealt with through existing mechanisms/other policies,	No change proposed at this time.
		but we would be happy to discuss further.	

2340

All Public Responses – Draft Policy R6

Please let us know what you think about Policy Option Set 009c (draft policy R6): Soil Quality. If you have any additional comments please put them in the comment box.

There were 151 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	75	23.89%
Agree with Preferred Option	47	14.97%
Disagree with Preferred Option	5	1.59%
Strongly Disagree with Preferred Option	7	2.23%
Neutral/No answer	14	4.46%
Do not know	3	0.96%
Not Answered	163	51.91%

Draft policy	Topic	Summary of comments	Response
R6	Support for policy	Generally support policy, or support option 1	Support welcomed.
R6	BBOWT	Strongly support preferred option.	Support welcomed.

2342

R6	No bespoke policy needed	No bespoke policy should be included. Duplicates requirements of DEFRA's Code of Practice, the Environment Agency's permitting and the Building Regulations. Additional local requirements would make redevelopment of brownfield edges and former allotments more complex, lengthen geotechnical investigation phases and push up costs, yet deliver marginal environmental gain in a city where peat outcrops are rare. Streamlining makes land recycling swifter and more affordable.	The Local Plan policy reflects the Council's priority for conserving and enhancing the natural environment, and soils are a key dimension of this. It will help to ensure applicants evidence how they have considered impacts on soils and sets out a consistent list of principles which we would look for applicants to respond to. Some of the references flagged in the comment are guidance to assist developers only (e.g. DEFRA code of practice). Where applicants need to undertake some of the same actions to meet other regulatory requirements, they can use this as evidence for how they have met the policy. The additional requirements around development in proximity to peat reserves responds to the limited national protections for these deposits despite the particular importance of their protection in

2343

			light of their relatively finite nature and the various benefits they provide.
R6	Current wording is too restrictive	The impact of the consideration of soil quality in all development proposals (as the policy is currently worded) would further restrict the opportunities for development. This could further sterilise development opportunities on sites where there are other conflicting constraints on the site.	The policy simply asks that applicants demonstrate how they have sought to mitigate impacts on soils and taken up opportunities for conserving and enhancing them. Additional requirements are set out for protecting the limited remaining peat reserves on undeveloped land in the city, for the reasons outlined in the above response. We feel that this is a pragmatic approach, without being overly prescriptive, which seeks to ensure the design of new development takes soils into account and limits further damage where possible.
R6	No bespoke policy needed	Council should not micro-manage and/or no need for bespoke local policy (no further reason given).	Comment noted, see above responses for why we consider a local policy is important.

R6	Objection – lack of clarity	Policy should define clear rules and metrics.	As a new policy for the Local Plan, we have sought to frame its requirements in the most practical and effective way possible. Every proposal will be different, and each site in the city will have a different context (e.g.

2345

			varying levels of historic development, varying quality of soils), thus it is challenging to set strict rules/metrics). The policy flags key considerations which applicants need to demonstrate they have responded to in relation to soils. These generally cover the broad ways development can impact on soils but will be of varying relevance to each application depending on what is proposed. Additional sensitivities around the city's remaining peat deposits have prompted more specific requirements (e.g. not allowing losses or dewatering of peat as a result of new development, and assessing potential for impacts on undiscovered peat in near vicinity to known deposits).

2346

R6	Unclear on impact for pitches	Unclear on what impact policy has for new playing fields or improvements to existing ones. Sport England has detailed guidance on the provision of new grass playing field available on their website.	Where a proposal relating to pitches requires planning permission and would meet the thresholds in the policy, the application would need to respond to the requirements in the same way as other types of development.

2347

R6	Addition to policy needed	Addition to policy needed in a local by-law requiring retention of degraded peat areas identified in the Oxford City Council area, pursuant to a general policy of restoring them through re-wetting and promoting the return of wetland biodiversity using Lye Valley as seed source.	The Local Plan sets a framework through its policies for how new development should happen in the city, including where this should come forward, what standards it should meet and how impacts on the wider environment need to be avoided/mitigated. Whilst this new policy seeks to protect existing deposits of peat from loss due to development, regardless of their condition, as well as asking applicants to mitigate impacts on soils more generally, it is beyond the Local Plan's scope to require general restoration of deposits in the city. This would need to be pursued through other mechanisms outside of the Local Plan's control.

2348

R6	More mapping of peat needed.	Welcome the precautionary 200m buffer around known peat reserves, however, stress that Council should actively be mapping peat (making use of local sources of info) and not just rely on Natural England mapping. Mapping should be included on policies map.	It is outside of the resources of the Council to pursue active investigation and mapping of additional areas in the city unfortunately. We intend to include peat reserves on the policies map to aid applicants.
R6	General comment on threats to peat	Peat is at risk from climate change (particularly hotter/drier summers). Need to find ways to ensure peat stays wet and protected	We concur that peat reserves are an important store of carbon –
		such as by preserving green spaces in catchment, reducing the ongoing threats to existing reserves e.g from erosion due to surface water run off after storms. Also favouring fen restoration in city (e.g. Lye Valley LWS). Another comment flags that peat conserves carbon better than a tropical rain forest so restoration is an elementary necessity for UK Climate policy.	this is one of the reasons for the new policy requirements around recorded peat reserves in the city – and that they are under threat from various pressures including climate change. As referenced in response earlier, whilst the Local Plan can include certain requirements in relation to mitigating impacts from new development on these important reserves, there are limitations to what else is within the scope of the Local Plan's influence – such as driving improved management of these areas.

2349

R6	Objection	Peat reserves should be identified including Lye Valley, Dunstan Park, Headington Hill north slope (along A40) (Ruskin, Larkin's Lane Field), along with demarcation of groundwater and surface water catchments. The 200m buffer is considered to be entirely arbitrary. Once a report is written, what are the metrics to permit or not permit the development?	We intend to identify recorded peat reserves on the policies map to assist applicants. In the absence of clearly defined best practice, we identified the 200m buffer in liason with Natural England to be a pragmattic and proportionate area to investigate around recorded deposits in ackowledgement that there could be additional deposits which are not well recorded.

Statutory Consultee Responses – Draft Policy R6

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
	Landscape and Nature Recovery – Biodiversity		

Policy R6 Soil Quality	It would be useful to define what is considered 'highest quality soils' in the context of this policy. For example, nutrient poor soils would have a high value for biodiversity and creating species rich grassland habitats but a lower value for activities such as agriculture that would value a high nutrient soil content.	We will seek to provide a definition of 'highest quality soils' in the Reg. 19 version of the plan.	Oxford City Action: Consider proposed wording going forward.

Draft policy	Topic	Summary of comments	Response
R7	Preferred option	Some general support for preferred option	Support welcomed.
R7	No need for bespoke policy.	No bespoke policy needed. Duplicates requirements of Part 2A of the Environmental Protection Act, the NPPF and the Environment Agency's Land-Contamination Risk-Management guidance. Local policy results in another report, validation step and more professional fees, with no material gain in public health or environmental protection. Streamlining supports brownfield schemes viability and allows new homes/workspaces to be delivered quicker.	The Local Plan policy reflects the extensive nature of historic land uses in the city which could give rise to potential risks from contamination and the need for this local context to be taken into consideration when developing sites in Oxford. It sets out the specific local requirements which the Council will need to see addressed to be satisfied that potential harms arising from contaminated land have been appropriately responded to.
R7	No need for bespoke policy.	No need for bespoke city policy – no further reason.	Comment noted, see response above.

2354

R7		Couple of issues flagged with wording which states that responsibility for securing a safe development rests with the developer and/or landowner. Lack of records about a site's remediation could mean subsequent development may undermine measures/expose problem again - proposed plans for developing Bertie Park given as example. Also does not specify a role for the local authority who may/may not have records of the previous contamination and remediation which applicant should be aware of. Council should be able to access a comprehensive record of previous contamination for remediated land.	The wording relating to responsibilities for securing a safe development lying with the developer/landowner are simply reflective of national policy. In relation to the Council's role, the draft policy sets out the requirements for the supporting information which the Council is asking proposals for new development to be accompanied by and which it will be assessing
			the application against. The supporting text for the policy will set out that the Council will refer to its own records of potentially contaminated sites when assessing whether land contamination is an issue, as well as other information sources.
R7	Thames water and contamination of water.	Concerns with trusting that Thames Water will be able to deal with wastewater and clearing up potential contamination of water. Would like to know more about the recent agreements made by Oxford City Council with Thames Water and Environment Agency.	Concerns noted. Information relating to the agreed upgrades for the Oxford Sewage Treatment Works were published online earlier in 2025.

2355

R7	Policy wording should be amended to ensure the requirement for a Preliminary Risk assessment in the first instance is included. This should be the initial assessment to be undertaken in an area where there is suspected contamination. Changes suggested to policy for consideration.	We agree with these changes, subject to a couple of minor tweaks, this will be reflected in the Reg 19 draft.	Policy R7 updated
R7	Risk of explosions after failed remediation	Concern about risk of explosions happening in new development areas because remedial measures have not been taken before the site was developed.	The policy sets out the assessments that the Council will expect applicants to undertake where there are potential risks of contamination, and requirements around any remediation where necessary. Where site investigation and remediation measures are needed, these will be required as a condition of any planning permission.

Not Answered	165	52.55%

Draft policy	Topic	Summary of comments	Response
R8	Preferred option	Some general support for preferred option and/or need for policy addressing amenity generally as well as that the Local Plan should support making Oxford neighbourly and help promote good collaboration between roads.	Support welcomed.
R8	Need to do better in future compared to previous developments in city.	Concern that amenity impacts have not been considered previously to detriment of existing residents and existing buildings. Examples such as over-development of Mill Street area, development in west Oxford quoted in some comments. Also comments that future developments need to be better.	Comments noted.
R8	Support wording re: Impacts on waste and wastewater.	Support the mention of impacts on waste and wastewater. Concerns about Thames Water being able to deliver.	Comments noted and support welcomed, see responses to comments against policy R5 which discuss these issues further.
R8	Support, with suggested addition	Support policy but wording in the Joint South and Vale Local Plan should be considered for inclusion in Oxford Local Plan also: "protect landscape character, dark skies and the natural beauty of the countryside in development decisions'	Comment noted – however the city's urban setting differs significantly to other more rural areas. The policy does set out that planning permission will only be granted for development that ensures that the amenity of communities, occupiers, neighbours and the natural environment is protected.

R8	No need for bespoke policy	No need for bespoke policy – no further reason given. Another comment suggested national requirements are sufficient.	Comment noted – the Local Plan policy brings together all of the key amenity impacts of particular relevance to developing in the city. It is considered important for

			ensuring that applicants appropriately address these issues as part of their proposal so that the amenity/environmental health of existing residents as well as future ones are protected.
R8	Support for the agent of change principle	Support the “agent of change” advisory principle (para 5.36) to protect valuable music and cultural venues	Comment noted - we have also flagged readers to the agent of change requirements of the NPPF in supporting text.

2359

2360

R8		Amenity of existing users of public amenities like recreation grounds should also be protected. New MUGAs can be noisy. Placement near housing means considering not only the rights of occupiers, but the rights of young people to have a place to go. Buffer zones are particularly important in this regard. Ignoring this simply sets up a situation where conflict that could have easily been predicted will then require management - with implications financially and social/health impacts.	The policy seeks to ensure that new development (regardless of proposed use) is designed appropriately to mitigate any relevant impacts on existing users, whilst also ensuring design is appropriate so as to protect amenity of users of the new development. Whether particular buffer zones are needed, and the specifics of what these should entail, will be highly dependant on location and types of uses proposed and this is difficult to specify in the Local Plan policy. See comment below regarding buffer zones.
R8	More clarity needed re: requirements for noise assessment	Wording at end policy in relation to noise and when noise assessment needed is very unclear. Should be written simpler and with targets, such as decibel levels and distance of buffer zones.	The requirements for any assessment will depend upon the particular context of the location where development is proposed.

			We may be able to provide additional guidance through a supporting technical advice note and will consider this in due course.

R8	Impacts of noise pollution	Noise pollution is often overlooked but has been widely shown to be detrimental to health.	Agreed that noise is an important health issue, which is part of the reasoning for why it is included as a consideration in the policy.
R8	Stronger policy requirements re: light pollution	Stronger policies needed for reducing light pollution, by requiring all existing and new developments to have lighting which is targeted, proportionate and sensitive. Increased use of very bright/poorly designed lighting in commercial and domestic development has negatives for people and nature.	We have expanded on the wording in the design checklist in the Local Plan appendix relating to external lighting about the need for lighting. The Local Plan's requirements would not be able to be retrospectively applied to existing developments.
R8	Various issues which should be covered in the policy.	'Etc' should include increased risk of flooding, loss of privacy, pedestrian and bicycle congestion as well as vehicular.	The criteria as set out in the draft policy address these issues to varying degrees, other than flooding – which is addressed through separate policy requirements (see policies G7 and G8 of chapter 4).

2361

R8	Policy should apply to construction too, and also mention public engagement.	Clause also needed to include during construction of these new proposals/developments and strong local public engagement to be undertaken.	The supporting text to the policy will make clear that impacts from development include not only the development in operation but also during the construction process. Public engagement during the planning process is a
			wider consideration than just this policy, there are no particular demands relating specifically to this policy (and not to others) that would warrant its explicit reference here.
R8	Policy should be expanded in relation to HMOs.	Preferred option needs expansion: enlarging existing HMOs should be obstructed on car parking, noise, amount of council bins required and any other applicable grounds.	The policy sets a framework of amenity/environmental health considerations which apply to all types of developments – though to varying degrees depending on the specifics of the proposal. This would already encompass applications relating to HMOs.

	or prejudice the use of a site safeguarded for waste management.		

2363

Thames Water

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

R8 Amenity ad environmental health	The new Local Plan should assess impact of any development within the vicinity of existing sewage works/sewage pumping stations in line with the Agent of Change principle set out in the NPPF. Note that this is recognized at paragraph 5.37 of the draft Local Plan.	Without having specific detail about how individual sites would come forward, it is unclear how this would be achievable or beneficial without being subject to a lot of uncertainty. We have added in requirements for odour assessments where applicable in policy R8 in response to another comment from you. The Agent of Change principle will continue to be referenced in the policy.	No further change proposed at this time.
R8 Amenity ad environmental health	Where development is being proposed within 800m of a sewage treatment works or 20m of a sewage pumping station, the developer or local	Thanks for the suggestion, we will add additional wording into the policy to	Updated policy to be published as part of Reg 19.

2364

	authority should liaise with Thames Water to consider whether an odour impact assessment is required as part of the promotion of the site and potential planning application submission. The odour impact assessment would determine whether the proposed development would result in adverse amenity impact for new occupiers, as those new occupiers would be located in closer proximity to a sewage treatment works/pumping station. The odour impact study would establish whether new resident's amenity will be adversely affected by the sewage works and it would set the evidence to establish an appropriate amenity buffer – and would be in line with various paras in NPPF and PPG. Additional wording suggested in relation to requirements for technical assessment looking at potential of odour impacts.	expand on expectations in relation to odour in proximity to the sewage treatment works.	

2365

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
R8	Definition of 'unacceptable transport impact'	Sports England flag that where new sports facilities are proposed this may mean additional traffic. But there is no explanation of 'unacceptable transport impact' is.	What would result in an unacceptable impact will be highly dependant on the

			nature of the location, existing

Sports England

			network, and what development is proposed.
R8	Impact on applications involving lighting	Sports England have concern about how policy applies to planning applications for sports lighting or lighting of streets to support active travel. Gives no acknowledgement of the benefits of outdoor sports lighting or street lighting to providing health communities. Policy strongly favours 'the amenity of communities, occupiers, neighbours and the natural environment'	Undoubtedly there are valid reasons for various types of lighting as part of new development, however, a balance needs to be struck between needs of the development and managing impacts on neighbouring uses. The policy is focused on ensuring that this balance informs the design process.

2366

R8	Impact on sports facilities	Sports England also concerned about how this applies to new outdoor sports facilities. The policy offers no context for applicants as to when a noise assessment will be needed, so it may be required for very minor planning applications. Sport England's planning guidance on 'Artificial Grass Pitches Acoustics Planning Implications' may be helpful for the development of this policy. The agent of change principle also works the other way, for example, housing development should not be located near existing 'noisy' uses such as existing MUGAs, artificial pitch facilities or playing fields with sports lighting. There does not appear to be a policy that expands on paragraph 200 of the NPPF so it is recommended that this is also developed.	The requirement for noise assessment will be highly dependent on the context including location, type of development proposed and is challenging to define explicitly. We will consider whether additional guidance could be helpful as part of a Technical Advice Note in due course. The supporting text will make it clear that amenity considerations apply both to impacts created by new uses, but also impacts arising from existing uses, and that both dimensions need to inform the proposal.

2367

All Public General Responses to Chapter 5

Draft policy	Topic	Summary of comments	Response

Chapter 5	Supportive	Various comments providing support for policies in this chapter.	Support noted and welcomed.
Chapter 5	Need for sustainable development	Comment across all policies about need for promoting sustainable development, climate adaptation, energy efficiency and offsetting adverse environmental effects.	Agreed, the policies of chapter 5 (and in part chapter 4 in relation to adaptation) are intended to promote these topics.
Chapter 5	Solar PV arrays	Object to placing large swathes of solar PV in Green Belt areas. Council should prioritise maximising solar PV on all rooftops both residential, community, commercial.	The Local Plan does not allocate greenfield land for solar PV, nor does it seek to encourage this. See also responses against policy R1 below.

Headlines for Chapter 6:

- Preserving Oxford's unique heritage must be prioritised

- Other comments expressed a different sentiment, that heritage should not hold back green innovations (such as retrofitting), housing expansion and businesses
- General support for medium-to-high density development, to maintain green belt and third spaces however, infrastructure must also be to a high standard
- Some comments perceive the policies are ineffective, either because they are not specific enough or because they are seen to be included in the NPPF
- Affordable housing and new developments need to be of a high quality (good materials and design) to allow them to last
- New developments should merge with the character of the surrounding built environment, including heritage
- Green space is crucial for health, wellbeing and climate adaptation
- To become a cycling city, bicycle infrastructure needs to be improved • Cyclox supports all policies in this chapter

2371

Short questionnaire responses

Good design

Good design is about ensuring development functions positively for the people who live and work there and that it makes best use of land and respects heritage. We have also drafted a policy that requires high density development and efficient use of land first and foremost, alongside policies to ensure design respects heritage including views of the renowned skyline. To what extent do you agree with this approach?

2374

Draft policy	Topic	Summary of comments	Response
HD1-HD9	Supportive	We strongly support these policies. Like those on green infrastructure, they should be given very strong weight in recognition of the outstanding heritage importance of the city as a whole and the contribution made by individual historic assets including many non-designated historic assets.	Noted, support welcomed.
HD1	Should be reworded to reflect NPPF	It is noted that the draft policy states that 'substantial harm to or loss of significance of a conservation area should be wholly exceptional'. It is considered that the word 'wholly' should be removed from the policy drafting as this is not consistent with the wording of paragraph 214 of the NPPF.	The NPPF provides a national context. The policy has been combined with others relating to designated heritage assets and reworded.

2375

HD1	Objection	Conservation Areas are not up-to-date and ineffective as many have large sections destroyed, so should be drawn to new boundaries, removing areas that no longer have anything to preserve. For example, Headington Hill "Conservation Area" includes Clive Booth Student Housing, Oxford Brookes Campus and modern housing estates, whereas much of Central Conservation Area, due to recent developments, has all the charm and atmosphere of Swindon, this is supported by NPPF Para 191. Almost all development in Conservation Areas will confer substantial benefit, by for example, providing more housing which will always be a "substantial public benefit" so Policy HD1 becomes ineffective. It is contrary to NPPF Para 201 which states several tests to be met which are omitted in the policy. Conservation area boundaries should be reviewed with a view to removing parts which have been destroyed.	The conservation areas are considered to remain relevant. They all contain newer development and will always be evolving, but the special characters that led to their designation in the first place remain relevant and it is not considered that parts of conservation areas in Oxford are 'destroyed'. Instead of repeating all of the NPPF, the Policy (no redrafted Policy HD3) refers to the criteria in paragraph 214 or equivalent if updated (was para 201).
Draft policy	**Topic**	**Summary of comments**	**Response**

2376

		Proposed modifications: • Shrink Conservation Areas to parts where something remains to conserve. • Remove “substantial public benefits” clause, revert to NPPF para. 201 etc. • Update fluffy wording such as responds, considered, informed to specifics such as must not etc. • Add, (and consult), the Conservation Area Appraisals have not been added to the evidence base as they clearly have never been consulted in this Local Plan	

2377

Statutory Consultee Responses – Draft Policy HD1

Historic England

Policy/Topic	Summary of Comments	Officer Response	Outcome

HD1	Welcome the changes made to the policy. Only query relates to use of phrase “to avoid harm” in the paragraph at the top of p123. Is that phrase needed? Potentially it risks overlooking the potential to enhance the conservation area by responding sensitively. Also, it might make it	We have removed the wording from the policy as suggested.	Amended policy and addressed in supporting text.

Policy/Topic	Summary of Comments	Officer Response	Outcome
	harder to reach a balanced outcome, where harm is minimized. That being so, might “to avoid harm” be deleted?		

All Public Responses - Draft Policy HD2

Draft policy	Topic	Summary of comments	Response
HD2: Listed Buildings	Detailed wording comments about requirement to enhance.	The drafting of the policy risks implying that there is a policy requirement to 'enhance'. The NPPF para 210 encourages enhancement where desirable but does not mandate it (in line with the Act). Should be rebalanced so the statutory duty to preserve significance is clearly identified as the primary requirement, with enhancement presented as a desirable aspiration, rather than an obligation.	Re-drafted Policy HD3 covers all designated heritage assets and refers to the NPPF rather than incorporating its wording.

2379

Statutory Consultee Responses – Draft Policy HD2

Historic England

Policy/Topic	Summary of Comments	Officer Response	Outcome

HD2	Welcome the changes made to the policy. In the opening paragraph, suggest integrating the concept (from the NPPF) that the more important the asset, the greater the weight should be. Note typo “ess than substantial” Also, maintain a concern about referring to compensation in the context of harm to heritage significance. Suggest a different way of framing this in terms of the delivery	Happy to take these suggestions on board.	Policy HD3 refers to the significance of the asset. Deletion of wording in relation to compensation. Typo amended.

No public comments about draft policy HD3.

Statutory Consultee Responses – Draft Policy HD3

Historic England

Draft Policy	Summary	Response	Outcome
HD3	Welcome changes to policy, but question whether the policy could be tailored further to be more locally specific and whether more context can be added to inform decision making. Trust that the detailed wording in the supporting text that was agreed through the SoCG for LP2040 will be carried forward. (S*uggested wording provided in appendix to their comments).*	The draft of the policy was absent of the supporting text which is where we planned to add more context, including detail we previously agreed for the LP2040. This has now been incorporated into the draft supporting text.	Supporting text drafted with additional contextual details. Policy wording updated to incorporate HE's suggestions.

2381

All Public Responses - Draft Policy HD4

Draft policy	Topic	Summary of comments	Response
HD4: Scheduled Monuments	Detailed wording comments about requirement to enhance.	The requirement that a proposal should identify 'enhancement to the significance of the Scheduled Monument (including its setting) where possible' goes beyond the Act, which focuses on preservation, and the NPPF which encourages but does not require enhancement.	Policy HD3 is re-worded with greater reference to the NPPF, rather than incorporating its wording within the Plan and to cover all designated assets.

Statutory Consultee Responses – Draft Policy HD4

Historic England

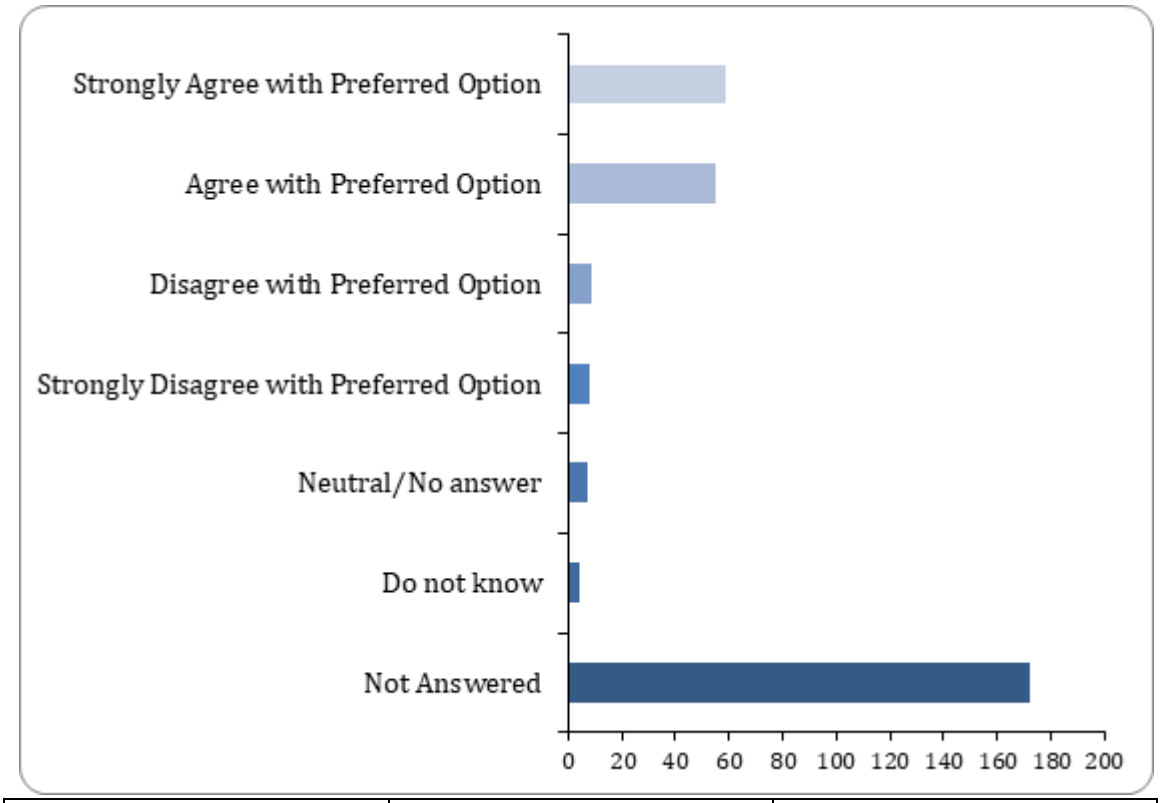
Policy/Topic	Summary of Comments	Officer Response	Outcome
HD4	Welcome changes made to the policy. As with HD2, maintain a concern about referring to compensation in the context of harm to significance and offer alternative wording for consideration (*suggested wording provided*)	Happy to take suggestion on board as with HD2.	Re-drafted Policy HD3 covers all designated heritage assets and refers to the NPPF rather than incorporating its wording.

2382

All Public Responses - Draft Policy HD5

Please tell us know what you think of policy options set 011b (draft policy HD5): Non Designated Heritage Assets. If you have any additional comments please put them in the comment box below.

There were 142 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	59	18.79%
Agree with Preferred Option	55	17.52%
Disagree with Preferred Option	9	2.87%
Strongly Disagree with Preferred Option	8	2.55%
Neutral/No answer	7	2.23%
Do not know	4	1.27%
Not Answered	172	54.78%

Draft policy	Topic	Summary of comments	Response
HD5	Policy wording should reflect NPPF	It is agreed that there are buildings within the City that do not warrant formal Listing but make an important contribution to the character and appearance of the area and therefore, should be afforded due regard in considering development proposals. The policy as proposed requires the impact of the development upon the significance of a non-designated heritage asset to be weighed against the 'public benefits' of the scheme. This is out of alignment with the requirements of the NPPF (paragraph 203) which states that 'a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the asset'. The policy should reflect this test rather than the test associated with designated heritage assets.	Wording removed to align with the NPPF.
HD5	Allow for individual nominations for non-designated heritage assets	Historic England in Advice Note 7 (2nd Edition) clearly states that individual non designated heritage assets can be identified within conservation areas and makes the distinction between CA protection and NDHA protection via LA Registers. Other LA's have encouraged local people to get involved in identifying and surveying NDHA's in their conservation areas. The current rules the City Council have set out for registration have created a 2 tier system with communities and citizens outside CA's given preferential treatment allowing them to nominate possible NDHA's for consideration to be registered. This is because it is very possible that a CA appraisal will not identify all of the heritage assets might be valued by local people in that area and Conservation Area Protections differ in their criteria from the criteria that can be applied to NDHAs.	The Policy is clear that the Oxford Heritage Asset Register is only one way that non-designated heritage assets may be identified. A non-designated heritage asset is considered in the same way in a proposal however it is identified. There is no greater (or lesser) protection for those on the OHAR, or indeed for those listed in a conservation area appraisal.

Draft policy	Topic	Summary of comments	Response
		NDHA are usually criteria are more akin to those of formal listing which identify more than just external appearance for protection. The NDHA Register, like listing, can allow for interiors and special features within a buildings structure to be protected for instance. CA protection does not. So I ask that the Local Plan 2042 Policy HD5 includes a provision to allow individual non designated heritage assets to be nominates by members of the public or communities even if they are in a CA. Then that the criteria for nomination be modified to allow this also. This would remove the in equality that I have pointed out and probably add and protect many assets and their special features which being in a CA cannot.	
HD5	Comment	Goal seems to write a report rather than define the degree of harm that would acceptable.	Comment noted.

2386

Statutory Consultee Responses – Draft Policy HD5

No statutory consultee comments on draft policy HD5.

Do not know	3	0.96%
Not Answered	173	55.10%

Draft policy	Topic	Summary of comments	Response
HD6	Support with suggested amendments	CPRE would like to see policy "proactively" map areas of known archaeological interest. We support the general intent to not allow development unless harm is removed, although feel the wording of the sentence in relation to mitigation is unclear and ask for this wording to be revisited: "mitigated to an appropriate level, conserving the remains and the significance of the archaeological or paleoenvironmental asset better revealed and understanding of that significance enhanced (by agreed measures). "	The central area has such a concentration of archaeology of such high significance that it is very likely to be present. Other areas do not have quite such a concentration over a particular area, but the potential is across such large areas of the city that to map too many particular areas may falsely give the impression that areas outside them may have little interest. Wording re mitigation has been checked for clarity.
HD6	Comment	The policy reads as if central Oxford is the only place of any importance. Headington is far older as a settlement and manor, for example.	The policy explicitly refers to the 'City Centre Archaeological Area, on allocated sites where identified, or elsewhere where archaeological deposits and features are suspected to be present'.
HD6	Policy not strong enough	Language should be stronger. Should require professional site-based assessments. Should require protection rather than talking of 'mitigation' which admits harms.	The policy approach needs to be proportionate and cannot assume that the presence of archaeology will prevent development.

Draft policy	Topic	Summary of comments	Response
		college management plans) turns normal due diligence into a costly pre-planning obstacle course that discourages brownfield development.	policy that responds to this is required.
HD6	Support	Good and clearly expressed.	The support is welcomed.
HD6	Flood risk and basements	Basement additions to university/college areas should be resisted on drainage ground wherever appropriate, as well as archaeological ones.	Flooding and drainage issues are dealt with in separate bespoke policies.
HD6	Have no policy	Rely on national policy for archaeology only. The local elements (the City Centre Archaeological Area, mandating desk-based assessments for any 'suspected' deposits and whole-	The significance of archaeology in Oxford means that a bespoke

Draft policy	Topic	Summary of comments	Response
HD7	Strongly support	ONV supports high quality design in the city. This should be proportionate to the location and setting of the proposed development and should recognise the form of development proposed.	Noted, welcome support.
HD7	Support	Christ Church supports high quality design in the city. This should be proportionate to the location and setting of the proposed development, and also viability considerations.	Support for policy is welcomed.
HD7	Support	Yes… and building should be built with a life expectancy of greater than 20-30 years! We have a city full of buildings that have lasted >500 years so new developments should be built with longevity in mind to reduce their environmental impact.	Support for policy is welcomed
HD7	Should prioritise design checklist questions.	Design Checklist or Questions should include hierarchy of design priorities and consider various scales (major / minor) and types (residential / commercial) of development. The local plan should rely on either the checklist or the existing policy questions, not both, to avoid confusion and ensure policy compliance.	Elements of design should be considered in the round and can't be prioritised. The policy links to the checklist, where the detail is included.

HD7	Objection	Policy Is ineffective. The vast majority of applications, namely, householders, are excluded from the necessity to provide even a basic rationale for the proposal. Modification proposed: Remove Householder application exception, this is covered by the proportionality clause.	Many of the detailed assessment criteria under this policy will not be applicable to householder applications, and a mandatory requirement will require additional work from the application while not bringing significant value. It should be noted that householder applications refer to small scale proposals such as extensions that

2395

Draft policy	Topic	Summary of comments	Response
			are subordinate to existing buildings, and distinct from erection of new self-contained dwellings.

HD7		The policy has not reflected how new measures will meet the carbon emission reduction goal and how the design should cope with climate change.	The design checklist includes climate change resilience, carbon emissions and net zero building operations as considerations for assessing a proposal. The plan is to be read as a whole and this policy will not be applied in isolation. There are a number of environmental policies that are included in the plan, and they will be applied where relevant.
HD7		Alternative Option 2 is best as good design does not come from a checklist, but (for most development in Oxford being brownfield), from appraisal of the existing site and building and surroundings to find the effective solution.	Noted.
HD7		Agree with the principle; but the current approach to assessing "high quality" is fundamentally flawed, as shown by a number of developments in Oxford. For a start, the [design review] panel is not permitted to understand the local community within which the development sits, and makes its assessment based on some pretty pictures with no local context. It is also influenced by developers' assertions without testing them against local reality. Would like to see this changed and the whole panel approach rebooted.	Site visits occur in nearly all cases and understanding the local context is an important part of achieving high quality design. However, it is the case that the panel meetings actively involve the applicants, City Council

2396

Draft policy	Topic	Summary of comments	Response

			officers and the panel only, to keep focus on design issues. It is important to note this is only a part of the process of developing and assessing planning applications.
HD7		"High Quality Design" is much too vague a term and useless in practice. Any planning consultant can demonstrate that any building, whatever its quality, is "high quality" . It is a scandal that City policy has been so weak on heritage assets. It should be a fundamental principle that proposals should enhance and preserve the building affected and the area around it. There should be tight controls on materials, style and size to ensure that these are appropriate to the surrounding buildings and area. Conservation Area Appraisals must be produced for all Conservation Areas especially the Central City area which is still incomplete after many years and these should inform precise requirements in any area.	Applicants will have to demonstrate the merits of their proposals and provide justification for their choices through an assessment of specific criteria and design considerations. Pre-application discussions and where required design reviews are also part of the process of the assessment of applications. Conservation Areas in the city nearly all have had conservation area appraisals produced for them, including the Central City CA whose conservation area appraisal was adopted in November 2023.

Draft policy	Topic	Summary of comments	Response
HD7		"Responsive to the site" is often cited in rejecting designs of increased bulk and massing relative to the existing building or the nearby street scene. This suppresses densification, which forgoes increased housing capacity, which we are severely lacking, and particularly increased housing capacity at the most environmentally-sustainable locations. We should explicitly call out circumstances where increased height, bulk or massing are appropriate in order to deliver more housing than could be achieved at present building height and mass-- - Nearby (not necessarily immediately neighbouring) to other buildings of comparable size - Close to public transport links and amenities -- this would likely in practice mean close to district centres - Out of the immediate proximity of highly sensitive heritage assets - In locations with a CPZ or other parking management such that the consequences of increased motor traffic can be managed	Densification and the efficient use of space are supported in the plan where they are suited to the setting and create no adverse impact on the local and city-wide character, and where there is no adverse impact on the amenity of the occupiers of development or the adjoining uses. The plan includes an efficient use of land policy (policy HD8) and a views and building heights policy (policy HD9) which in combination with the High Buildings Study sets out locations in the city that are best suited for added height, and the criteria that proposals will be assessed against to avoid unnecessary harm to the unique visual and spatial environment of the city.
HD7	No policy required	Government interference in decoration just seems unnecessary. Even for the purpose of promoting aesthetics (which is of dubious value relative to the practical purposes buildings serve), variety is	Local authorities are required to prepare design guides or codes consistent with the principles

		valuable and having a checklist seems potentially counterproductive.	set out in the National Design Guide
Draft policy	**Topic**	**Summary of comments**	**Response**
			and National Model Design Code. It is a good way to set out the principles of good practice in design and placemaking, which go beyond just visual appearance. It can also allow for requirements to be tailored to specific local contexts. There is no fixed format, and the checklist we seek to use functions as a series of prompts for applicants to consider if key principles have been followed. They can also be a useful starting point for discussions with officers at early design stages to address any points of concern or contention.

Draft policy	Topic	Summary of comments	Response
HD8	Strongly support	Supports the preferred option of a policy requiring development proposals to make the best use of site capacity, in a way that is compatible with both the site itself and the surrounding area, with building heights and massing at least equivalent to the surrounding area. NPPF paragraph 129 sets out that planning policies and decisions should support development that makes efficient use of land. This policy will support intensification of existing employment sites where there is the opportunity to achieve increased scale and density to support economic growth in Oxford.	Support for policy is welcomed.
HD8	Support in principle - Clarification	The Universities and Network Rail support the principle of maximising efficient use of land and maximising capacity, but would draw attention to the final paragraph of the draft policy. It would be helpful to understand how these densities relate to different typologies to ensure these do not inadvertently reduce efficiencies.	There is no reason that setting out indicative minimum capacities should inadvertently reduce efficiencies.

2406

HD8	Design-led approach	The draft policy states that 'very-high density' residential development will indicatively be taken as over 100dph. We acknowledge the reference to 'over' 100dph is a starting point not maximum which is positive in the context of housing need and limited land availability. That said, we remain of the view that it should be clearly expressed within the main policy wording that a 'design-led' approach should be taken, based on the opportunities and constraints of a site and assessment of impacts. It is considered that this is the only approach that is capable of delivering the intention of the policy to 'make efficient use of land and maximise capacity'.	Policy HD7 sets out the requirement for high-quality design.
HD8	Policy requirements when creating	Draft Policy HD8 relates to granting planning permission only where development proposals make efficient use of land and maximise capacity and that sites across the City will be capable of	Allocated sites have their own bespoke policies in the plan, which contain site and context–

2407

Draft policy	**Topic**	**Summary of comments**	**Response**

	new transformative context.	accommodating development at an increased scale and density to their surroundings. In contrast, draft Policy HD9 sets out that planning permission will only be granted for development that will retain the special significance of views of the historic skyline, both from within the historic core area and from outside the historic core area. As per previous written representations, we would encourage further guidance in relation to strategic site allocations and large areas which are planned for intensification and transformation such as the Botley Road Retail Park, which will create a new context because of their size and scale in draft Policy HD8. The Plan should make reference to and recognise the fact that development at strategic sites need to acknowledge existing context but also have the opportunity to create new transformative context.	specific guidance on appropriate type and quantum of development and design requirements – including density.
HD8	Suggested amendments	Car infrastructure, roads, driveways and garages are the single biggest cause of inefficient use of land, occupying space that could be a bedroom or extension, yet this not acknowledged anywhere. Modification proposed: The phrase "*is informed*" is practically meaningless, as is "*does not substantially impact*" Remove Para e) "opportunities for net zero carbon design" as it is unrelated to the topic, also remove, f) "flood risk" for the same reason.	Urban design principles were used to determine the indicative density figures. It is a holistic approach that takes into consideration factors that are deemed to be relevant in the context of the built environment. E.g. n et zero carbon design may have implications on siting, height, massing etc and flood risk may impact the amount of developable land on a site.

2408

		Should include an exemption for coneervation areas.	

2409

Draft policy	Topic	Summary of comments	Response
HD8	Support	The aims of this draft Policy are supported, including building at appropriate densities as it is an important component of sustainable development. Making efficient use of any land in the City is a priority.	Support noted and welcomed.

HD8/ HD9	Conflicting policy requirements	Policy HD8 supports efficient use of land and maximising densities, while Policy HD9 helps protect the setting of Oxford, including its historic skyline, and views into and out from the historic core area. Encourage Local Plan to provide further guidance about how strategic allocations (inc. Osney Mead), can balance these competing policy interests and delivery required benefits and intensification. OUD generally encourages the Local Plan to recognise that largescale redevelopment / regen. projects need to acknowledge the existing context and can also create new transformative contexts.	Policies HD8 and HD9 (HD2 and HD6 in the Submission Draft Plan) do not inherently contradict as it is possible to make efficient use of land/ increase densities while responding to and protecting the historic skyline. Policy HD6 sets out the process and tools which help to limit harm to the skyline from development. Site allocation policies and Area of Focus policies provide clarity around redevelopment opportunities and areas where additional growth is encouraged/ expected. Note the point about further clarity in strategic allocations.
HD8	Should go further	There should be densification outside of the centre as well as inside it. Arterial roads are lined with low-density housing but they are highly accessible and justify and urban scale of development. They should be lined with minimum four-storey blocks of flats and offices with 100dph+ all along them arterial roads (except in conservation areas) not just in the district centres that are along them. Suggest 80dph suburban, 120dph gateways, 200dph centres.	The minimum indicative capacities do represent densification. The character of arterial roads does vary considerably. Some parts of arterial roads, near the ring road, will be gateway sites, but between these and the

2410

Draft policy	Topic	Summary of comments	Response
			centres, very high densities will not always be appropriate. The suggested densities are very high and not considered feasible.
HD8	Object	Stop interfering with development. Do not set minimum densities as they lead to poor design and prevent low densities that may be appropriate. Too many buildings out of keeping with height of surroundings and add to existing problems of infrastructure and amenity. Need to be careful- justified controversy when the University built high-rise buildings that damaged view in and around Port Meadow. The centre brings tourists to Oxford and provides economic benefit, which as it risk if it is allowed to deteriorate further (it is already harmed by increased heights and sizes). Open spaces are important. Green sites should have more retained. This affects density.	The policy does have enough flexibility to allow lower densities if it can be justified that they are more appropriate because of the context of the site. The densities do allow for amenity space, green space, etc.

Historic England

Draft Policy	**Summary**	**Response**	**Outcome**

2412

HD8	Strongly encourage more nuanced wording in the opening paragraph of HD8. Background paper 11 summarises the preferred option as "Require that proposals make the best use of site capacity, taking into account the surrounding area, building heights, massing and other contextual factors such as heritage and green infrastructure". While this is a reasonable description of HD8 in OLP 2040, the policy's emphasis has changed in OLP 2042. There may be circumstances where the expectation as stated in the revised policy, especially regarding scale, will not be realistic. Some form of caveat is needed. We suggest adding "most" to the opening paragraph.	We agree with the comment in general and will update the wording, though would propose slightly different wording.	Policy updated.

2413

Oxfordshire County Council

Policy/Topic	Summary of Comments	Officer Response	Outcome

Policy HD8 Making Efficient Use of Land	**Strategic Planning** This policy approach is supported by the County Council as it will help reduce the unmet housing need identified in the plan. The approach to densities in a hierarchical manner depending on accessibility is welcomed as it should reduce reliance on private vehicles and increase access to sustainable modes of transport.	Noted.	No Action Required
	It is important however, to make it clear that this policy works in tandem with draft Policy HD7 and the principles included in Appendix 1.1. We encourage the City Council to make explicit reference to this, to ensure high quality developments.	We do not propose to make an explicit reference in the plan to that effect. The plan should be read as a whole and relevant policies applied in the decision-making process.	No Action Required
	Urban Design (Placemaking) Paragraph 6.36 - 'Transport hubs generally enable a greater density to be assumed.' - The same should apply to areas with key services such as hospitals, education, leisure/shopping - not just transport. Generally, people want to live near services, therefore there will be a greater demand for housing, increasing density.	Noted.	No Action Required

Draft policy	Topic	Summary of comments	Response
HD9	Support but VuCity requirement should be deleted	The aims of policy HD9 in terms of the impact of development upon views into and out of the City are acknowledged and supported by Mansfield College and ONV. However [the policy] requires the use of specific software (VuCity). It is not appropriate for a Local Plan to push a particular brand of software. This puts undue costs onto projects especially where an alternative modelling software is already being used by the applicants. This reference should be deleted, and the policy simply refer to the use of an appropriate 3D model. However, it is welcomed that the Council has introduced an acknowledgement that the software model may change over time.	The LPA has a licence with VuCity software to view the submitted 3D models. Alternative or generic software may not be compatible with the Council's systems which is why the policy is specific in its requirement for VuCity.

2417

HD9	Rewording to reflect NPPF	Previous representations submitted on behalf of ORVIL in response to the Reg 19 consultation on the LP2040) states that Policy HD9 should be revised to reflect the NPPF and the guidance as set out in GLVIA 3rd edition. It is acknowledged that (part e) of the draft policy references this guidance. However, it is considered that replacing 'special significance' in the first paragraph of the policy with 'important characteristics' would more appropriately respond to this guidance. It is considered that the word 'bulk' should be removed from the following sentence 'Development above this height must be limited in bulk and must be of the highest design quality'. The meaning of the word bulk can be overly interpreted, and it is considered unhelpful to include within the policy. Removal of the word 'bulk' does not dilute the intention of the policy due to the supporting explanatory paragraphs. **Objection 2:**	Views into and from within the city are important elements of the setting of heritage assets. The collection of buildings that make up the 'dreaming spires' are considered a heritage asset in their own right, and they do have special significance. There is sufficient detail in the supporting text that provides clarity to the policy. The word 'bulk' is considered to be vital to the policy, and its removal does not add to clarity, but would lead to greater potential for harm. It is a design term that will be used in the

2418

Draft policy	**Topic**	**Summary of comments**	**Response**

		It should be made clear within the policy that a view is not itself a heritage asset and does not have significance in the same way a heritage asset does, as defined in the NPPF. It is considered that replacing 'special significance' in the first and sixth paragraphs of the policy with 'important characteristics' would appropriately respond to the guidance set out in GLVIA 3rd edition. It is also considered that 'limited in bulk and must be' should be removed from the following sentence 'Development above this height must be limited in bulk and must be of the highest design quality'. The meaning of these words can be overly interpreted and it is considered unhelpful to include within the policy. Removal of the words does not dilute the intention of the policy due to the supporting explanatory paragraphs and text which site alongside policy HD9.	assessment of planning applications.
HD9: Views and building heights	Setting of View Cones	The policy states that planning permission will not be granted for development proposed 'within a View Cone or the setting of a View Cone' if it would harm the special significance of the view. The use of the term 'setting' is problematic, as the NPPF defines 'setting' as the surroundings in which a heritage asset is experienced but View Cones are not designated heritage assets. They are intended to manage townscape character and safeguard settings of heritage assets visible within them. Reference to setting should be changed to 'townscape' or 'landscape context'.	Views into and from within the city are important elements of the setting of heritage assets. The collection of buildings that make up the 'dreaming spires' are considered a heritage asset in their own right, and they do have special significance. There is sufficient detail in the supporting text that provides clarity to the policy.
HD9: Views and	Harm to View Cones	The policy does not allow harm to the special significance of a view, but it should allow assessment of level of harm outweighed against benefits.	The policy sets out guidance to inform design decisions about heights and to enable an

2419

Draft policy	Topic	Summary of comments	Response
building heights			understanding and detailed assessment of the impact of heights.
HD9	Policy too rigid	The rigid height thresholds and extensive assessment requirements across all sites should be reviewed as this approach may restrict good design and sustainable development, especially in less sensitive areas.	There are no rigid height thresholds set out in the policy at all. The assessment requirements are proportionate and are most extensive for only specific circumstances.
HD9	Support for policy	We welcome this Policy's intention to 'retain the special significance of the historic skyline' of Oxford. However we are concerned that, as currently written, the Policy places almost exclusive emphasis on views of the Historic Core Area. ... The Policy should explicitly prohibit such high buildings that would impinge on the skyline from Port Meadow, in order to ensure there is no repeat of the Castle Mill flats disaster and the more recent spoiling of Port Meadow views by the tall buildings at Oxford North.	The policy states that all developments will need to address their impact on character and views, not just those within the Central Core. Although the policy is in several parts, it is considered that this is clear, especially as the second part starts 'Applications for any building that exceeds 15m...'

HD9	Support in principle	We worked closely with the city council and other specialists to create the 'Assessment of the Oxford View Cone' Report in 2015, we strongly support reference to this report within the policy text. We are also pleased to see that reference is made to the view cones but also the wider setting of the views. This makes it clear that the 10 view cones do not provide a definitive list of all the views, and that the wider setting, or even views that do not fall within the 10 'official' view cones can also be sensitive and warrant a high level of protection.	Policies HD1 and 2, in particular (HD3 in the Submission Draft Plan), do carefully consider the setting of heritage assets and may also be of relevance, alongside Policy HD9.

Draft policy	**Topic**	**Summary of comments**	**Response**
		The policy, or its supporting text, also needs to be clear on the difference between 'views' and historic 'setting'.	
HD9	Objection	Policy is ineffective as it only appears to refer to central Oxford and the dreaming spires, not views for example into, and out of the Old Headington Conservation area. The language needs to be clearer that it applies to ALL of Oxford where views exist either in or out. See also Ruskin Field SPE19.	The policy states that all developments will need to address their impact on character and views, not just those within the Central Core. Although the policy is in several parts, it is considered that this is clear, especially as the second part starts 'Applications for any building that exceeds 15m…'

2421

HD9	Inconsistent with national policy	The preferred option for this policy states that 'Planning permission will not be granted for development proposed within a View Cone or the setting of a View Cone if it would harm the special significance of the view'. Under the terms of the policy, all levels of harm are unacceptable, regardless of the level of harm and the extent of any benefits which may outweigh that harm. This is inconsistent with national planning policy, in that it does not enable a balancing exercise to be undertaken. We would ask the Policy to be rebalanced.	The policy sets out guidance to inform design decisions about heights and to enable an understanding and detailed assessment of the impact of heights.
HD9: Views and building heights	Setting of View Cones	The policy states that planning permission will not be granted for development proposed 'within a View Cone or the setting of a View Cone' if it would harm the special significance of the view. The use of the term 'setting' is problematic, as the NPPF defines 'setting' as the surroundings in which a heritage asset is experienced but View Cones are not designated heritage assets. Draft policy	Topic	Summary of comments	Response
HD10	Objection – Not in line with NPPF	Older Persons' Housing produces a large number of significant benefits which can help to reduce the demands exerted on Health and Social Services and other care facilities - not only in terms of the fact that many of the residents remain in better health, both physically and mentally, but also doctors, physiotherapists, community nurses, hairdressers and other essential practitioners can all attend to visit several occupiers at once. This leads to a far more efficient and effective use of public resources. A report "' Healthier and Happier An analysis of the fiscal and wellbeing benefits of building more homes for later living" by WPI Strategy for Homes for Later Living explored the significant savings that Government and individuals could expect to make if more older people in the UK could access this type of housing. In addition, specifically designed housing for older people offers significant opportunities to enable residents to be as independent as possible in a safe and warm environment. Older homes are typically in a poorer state of repair, are often colder, damper, have more risk of fire and fall hazards. They lack adaptions such as handrails, wider internal doors, stair lifts and walk in showers. Without these simple features everyday tasks can become harder and harder. For the future plan to be in line with national policy and effective, the following wording should be included within the policy: *"Specialist Housing for older people has a number of health benefits and proposals for such schemes will not be required to submit a Health Impact Assessment".*	The requirement for HIAs for all major development proposals is not at odds with the benefits associated with Older Persons' Housing. No changes are required.

HD10 (HIAs)	General comment	The inclusion of a health impact assessment sounds great, but it should be made clear not just what should be included in an HIA, but how the information is to be used. Oxford is very short of space. If	As set out in the last paragraph of the policy, additional information

Draft policy	**Topic**	**Summary of comments**	**Response**
		HIAs are to be used e.g. to push through developments which conflict with national policy in disadvantaged or working-class areas, then this is not a good thing. These can be huge documents. If they increase the volume of paper that councillors and residents have to plough through, it is important to clarify both their scope and their role.	and guidance can be found in the appendices and within the TAN.
HD10	Several comments against including a policy	Several comments saying they don't agree with including a policy and one saying there are already lots of health-related tests as part of the plan and a HIA is an additional level in the way of development	The HIA is not overly onerous, but helps focus on health impacts. Creating a healthy places is fundamental, and overarching, so this focus is important.
HD10	General comment	The inclusion of a health impact assessment sounds great, but it should be made clear not just what should be included in an HIA, but how the information is to be used. Oxford is very short of space. If HIAs are to be used e.g. to push through developments which conflict with national policy in disadvantaged or working-class areas, then this is not a good thing. These can be huge documents. If they increase the volume of paper that councillors and residents have to plough through, it is important to clarify both their scope and their role.	HIAs do not need to be extensive, but bring together elements of a proposal to show how they work together to impact health, and help show when any mitigations are needed.

HD10	HIA policy scope too wide.	The HBF would agree that they are an essential part of plan making to ensure the Council understand the health outcomes it is seeking to achieve and creates a plan that seeks to deliver these. This should be achieved through the preparation of a whole plan HIA which will inform the Council that the policies it contains address the key health outcomes for the area. As the plan and the policies, it contains has been prepared to address the key health issues it is therefore unnecessary for future development proposals that accord with this plan to undertake a separate HIA. If a development meets the	HIAs submitted in support of major development proposals will contain specific details relevant to the proposal which are in addition to the general overarching requirements of the Local Plan as a whole.
Draft policy	**Topic**	**Summary of comments**	**Response**
		policies in the plan, then it is by default addressing the health outcomes already identified by the Council. An HIA as part of the application would merely be repetition of the work the council has already undertaken. The only circumstance where an HIA may be appropriate would be for a larger unallocated site where the impacts may not have been fully considered by the council as part of the plan wide HIA.	

HD10	Objection	Policy is not effective. The policy as drafted requires an assessment however it does not set a target for compliance. It is not clear how this is to be implemented (e.g., health impacts from increased traffic, loss of green space etc.).	As set out in the last paragraph of the policy, additional information and guidance can be found in the appendices and within the TAN. The TAN states "Planning officers will refer to Appendix 3 of the Oxfordshire HIA toolkit when assessing the submitted HIA report to ensure it adequately addresses all relevant health determinants."

Statutory Consultee Responses – Draft Policy HD10

Oxfordshire County Council

Draft Policy	**Summary**	**Response**	**Outcome**
Policy HD10	**Public Health**		

Health Impact Assessments	Health Impact Assessments needs to be specific on the threshold for triggering the need for a developer to conduct an HIA. For example, requiring all developments which include 50 or more residential units, or over 1,000sq.m if commercial, to do an HIA, as is the case in Birmingham's Local Plan. This helps to remove any ambiguity over whether or not a development requires an HIA and should actually remove some of the extra burden that has been outlined as a potential negative consequence of this approach in the SA. As such, Option A is our preferred approach for this policy, on the basis that formal thresholds are included.	Policy HD10 requires an HIA to be submitted as part of major development proposals. Major developments (as defined in the NPPF,) are developments of 10 or more dwellings or 1,000sqm or more nonresidential floorspace. Major development is not currently defined in the Glossary of the Local Plan	Oxford City Action: Consider whether Local Plan glossary should also include a definition of 'major development'

Draft policy	Topic	Summary of comments	Response
HD11	General comment	This policy should address dual aspect to provide shade. We consider a problem here is the insistence on little bits of garden for individual houses means that the quality of space is inevitably really limited. A greater emphasis on community living and shared spaces would enable a greater density with a much better quality of life. This is another reason to encourage the greater involvement of community land trusts.	Policy HD13 (HD10 in the Draft Submission Plan) supports shared outdoor amenity space. Assessments of daylight and sunlight which follow BRE guidance include shade (overshadowing) and dual/ single aspects openings.
HD11	Policy unnecessary	Building Regulations and existing BRE guidance already secure reasonable daylight, sunlight and privacy for homes, while employers have clear incentives (and statutory duties) to provide acceptable working conditions. Extending a prescriptive local test to offices, labs and healthcare buildings would add another consultancy layer— modelling, section diagrams, over-shadowing studies—without materially improving welfare, but it would raise costs, lengthen determinations and make the compact, mid-rise schemes Oxford needs harder to finance. A flexible, performance-based approach— using national benchmarks where issues genuinely arise—will protect amenity while keeping land available for the new homes and workspaces the city sorely lacks.	The policy requirements will relate specifically to residential development and sensitive workplaces such as schools. It is not intended to apply to most employment sites, and the reference to sensitive uses and potential safeguarding issues is considered to be clear enough.
HD11	Too limiting	I'm concerned that this would limit density too much.	High densities can be achieved that still create decent homes with amenity space. When pushing density, these policies are even more important.

HD11	Green spaces and density	[Include] access to green spaces	Provision of green spaces is addressed in other policies (e.g. G2, G3)

HD12	No policy	Do not apply national space standards in oxford. A substandard small bedroom must be better than being on the streets or in a hotel. The layout of some houses does not allow change to make rooms up to size. Do not interfere. Push prices upward, limiting choice for singles, key workers and students who may prefer a smaller studio.	This applies to new development. The pressing housing need does not justify poor standards of accommodation, and the standards are applicable to a range of tenure types.
HD12	More space is needed	In communal areas- fixed seating and wider area of corridor or lobby space is not enough to support community living. Bigger and better planned shared spaces are needed. Expectation of remote working, need for study space, teenagers need more space.	Space standards are set nationally.
HD12	Ensure doesn't deter building	Support but must not deter building	The policy approach has been included in the whole-plan viability testing.

Draft policy	Topic	Summary of comments	Response
HD14	M4(3) does not remove need for specific older persons' housing.	It is common for Local Authorities to conflate the needs of wheelchair users with the needs of older people in the community. Although adaptable and accessible housing can assist it does not remove the need for specific older persons' housing. Housing particularly built to M4(3) standard may serve to institutionalise an older person's scheme reducing independence contrary to the ethos of older persons and particularly extra care housing.	Policy HD14 (HD11 in the Submission Draft Plan) works together with other policies, including Policy H12, which sets criteria for older persons accommodation

HD14	Should go further	Those requiring accessibility arrangements shouldn't be restricted to affordable housing. We also recommend that 10% of new homes are built to the M4(3) standard across all tenures to meet current and future disability needs. Where exceptions are allowed, accessible accommodation must be provided on the ground floor. All multistorey buildings should be accessible by lift, especially if social housing. It's discriminatory to restrict those with a physical disability to live on the ground floor. The standards are essential to ensure inclusive, future-proof homes that support aging in place. Therefore 100% should be M4(2) and 10% M4(3), recognising the critical shortage currently. This supports inclusive communities but also reduces long-term costs that may otherwise fall to the local authority- e.g. stairlift installation about £6,000 cheaper. The local plan could also help address disabled people's housing needs by requiring planning teams to track the number of homes given planning permission to one or other of the higher level accessibility standards. This will help to establish and track delivery which in turn will assist future strategic planning.	The Planning Practice Guidance[1] is clear that local plan policies for wheelchair user homes should only be applied to those dwellings where the local authority is responsible for allocating or nominating a person to live in that dwelling. The PPG is also clear that requirements are based on local need. The exceptions criteria do require that option to use the ground floor is fully explored.

2447

Draft policy	Topic	Summary of comments	Response
HD14	Do not have policy	Rely on NPPF	The NPPF does not set any specific requirements/thresholds for Oxford.
HD14	Viability	As per comments already made in respect of viability, it is currently unclear if the M4(3) standard requirements are viable for older persons housing and we recommend that the council update the study and provide clarification on the testing undertaken for sheltered and extra care housing. Lifts, wider corridors, reinforced bathrooms- adds £8-10k per flat and potentially reduces number of units. Price out the households the policy aims to help.	The policy approach has been considered in the whole-plan viability testing.

Statutory Consultee Responses – Draft Policy HD14

Oxfordshire County Council

Draft Policy	Summary	Response	Outcome

Policy HD14 Accessible and Adaptable homes	**Housing Services / Public Health** We appreciate the recognition in the supporting text to Policy HD14 that homes need to be built with the flexibility to be adapted to the changing needs of residents. The policy requirements include 100% of affordable dwellings and 15% of market dwellings on major sites being constructed to the Category 2 standard as set out in the Building Regulations Approved Document M4. There are some further requirements to a higher level in the policy, as well as exceptions identified. The City	Noted. We will consider suitable wording to ensure the continued application of the policy should changes in Building Regulations arise.	Oxford City Action: Ensure wording is futureproofed for changes in legislation

Draft Policy	Summary	Response	Outcome

	Council needs to be confident that even if the Building Regulations change, that the requirements of the policy will still apply. The County Council wants to see 'lifetime homes' built to the maximum extent possible so that people do not need to enter the care sector prematurely. The County Council does not wish to see more care homes built in Oxford City.	Noted. In this instance we assume that you are referring to accommodation with 24/7 care rather than extra care housing, i.e., self-contained on-site homes with on-site care available as required. Draft policy	Topic	Summary of comments	Response
C1	More homes in centres	Policy should encourage homes, e.g. above shops/other businesses.	Policy C2 makes it clear upper storeys may be used for housing.
C1	List of facilities for town centres	It is noted that 'community facilities' are referenced, but not specifically uses pertaining to education and learning. Templars Square currently includes existing education and learning facilities, therefore, these uses should be included as suitable.	The policy is about where new Use Class E and other main town centre uses will be permitted, and education and learning facilities do not fall into these categories, but it is not to say they won't be permitted in these locations.
C1	Do not separate town centre uses by type or location	A more flexible policy that encourages a mix of uses across different centres and does not limit student accommodation/hotels to the larger centres would better support community cohesion.	The local centres are not generally considered suitable locations for new student accommodation.
C1	Hierarchy of Centres	In broad agreement with the hierarchy of centres defined in the Plan. However, the city centre should be differentiated from the District Centres as the highest order centre in the hierarchy.	There is not a difference between what would or wouldn't be permitted in the city centre compared to the district centres, so there is no need for the differentiation.

2463

C1	Out of centre development	Where out of centre development is proposed, the implications of its comparative accessibility by non-sustainable modes of transport should be included as a policy criterion and reflected in	The policy does require that, if an out of town location is justified by the sequential test it must then

Draft policy	Topic	Summary of comments	Response
		the assessment of its impacts on the city centre. If a higher level of dedicated parking provision is deemed necessary than for equivalent uses in the city centre, then this should be identified as a conflict with Draft Policy C8 (Motor Vehicle Parking Design Standards) since it confers competitive advantage on such locations and would be contrary to the sustainable transport objectives of the Plan. As such, it will require a commensurately higher level of public benefits in the overall planning balance to outweigh the policy conflict. .	demonstrate good connectivity by sustainable travel and that impacts on the road network are mitigated. In response to this comment, additional wording about minimising parking has been added.

C1	Threshold for retail impact assessment	• The requirement for retail impact assessment for proposals for out-of-centre developments exceeding 350m2 should be justified in the Plan given the default threshold of 2,500m2 in the NPPF. It is assumed to reflect to the oversupply of retail and leisure floorspace in the city, as evidenced through widespread repurposing of such floorspace for other purposes in the city centre, and endorsed by the evidence base1. This needs to be clearly stated in the Plan. This requirement for a costly assessment is not justified and the approach does not support 15-minute city goals.	Given the overall aims of the plan is to ensure sustainable modes of travel, any proposals in less accessible locations could be particularly damaging to these aims, and the requirement for retail impact assessments from small out of town units is considered justified.

2465

Draft policy	**Topic**	**Summary of comments**	**Response**
C1	Flexibility within Use Class E	Caution against limiting the flexibility to change between uses within Class E, if that is what is foreshadowed in paragraph 7.3, bullet 5, which would be contrary to the Government's intentions through the Use Classes Order and permitted development regime, and prejudicial to the commercial imperative to be able to respond to rapid changes in the retail and leisure industries as foreshadowed in NPPF, para. 90(a).	There is no intention or means to prevent change within Use Class E.

C1	Supportive	Cyclox are pleased to note that you are aspiring for residents to be within 20 minutes' walk or a short cycle ride of most services. This will encourage people to walk or cycle and is consistent with your overall aims.	Support is welcomed.
C1	Additional local centres	The policy should define additional Local Centres such that all homes (or say 95%) are within a 15-minute walk of a Local Centre. Some potential additional local centres were mentioned: Littlemore; Greater Leys; Botley Road; Abingdon Road/New Hinksey, Lower Wolvercote, Cutteslowe, Kassam area when development happens.	The NPPF is very clear that defined local centres and 'town centres' suitable for town centre uses, and that they must be more than a small parade of shops of significance only to the immediate neighbourhood. These smaller centres in many cases
Draft policy	**Topic**	**Summary of comments**	**Response**
C1	Headington district centre boundary	Headington District Centre includes Bury Knowle Park. This is not effective and not justified. It is therefore unsound as most of the uses are clearly inappropriate for a Core Green Space such as Bury Knowle Park.	Bury Knowle Park has strong protection as part of the Core Green Infrastructure Network. It is in the district centre as a key part of the offer of the centre that is part of its attraction to the community (including the library), but it does not mean that town centre uses would be permitted on the park.

2467

Draft Policy	Summary of comment	Response	Outcome

Draft Policy C1 – City, District and Local centres	**Transport Strategy** At paragraph 7.1 – It would be beneficial to acknowledge here that there are areas of Oxford which suffer from severance from the city centre due to the road ring road and the barrier this creates around the city.	Noted. We can consider whether adding a reference to severance is appropriate in this section of the plan.	Oxford City Action: consider inclusion of text

Statutory Consultee Comments – Draft Policy C1

Oxfordshire County Council

2468

Draft Policy	Summary of comment	Response	Outcome

	Adding reference to Oxfordshire becoming a Marmot Place would be welcome to showcase how this can help tackle health inequalities and support Oxford in becoming A Liveable City with Strong Communities. Suggest adding wording which plays emphasis on the benefits Mobility Hubs will bring. For example, support LTCP targets and provide transport choice for the residents of Oxford. The opening sentence is not clear on the definition of mobility hub. It reads that the city and district centres as a whole, are mobility hubs. This sentence should be reworded and provide clearer language. One example could be: "The city and district centres include a range of mobility hubs (refer to Mobility Hub Strategy) helping to create places which are highly accessible." **Public Health**	We note that Oxfordshire County Council is initially focussing on three of the Marmot Principles and has developed a number of projects aligned to them. We can consider whether to add a reference to the plan on this issue. We do not consider this cross reference is necessary as mobility hubs already feature in the LTCP. A Definition of Mobility Hub is contained in the Glossary of the Local Plan. We will ensure that any text about Mobility Hubs provides clarity as to what they are.	Oxford City Action: consider inclusion of text No Action Required Oxford City Action: consider inclusion of text

2469

Draft Policy	Summary of comment	Response	Outcome

2470

	This appears to be the only policy which contains any reference to hot food takeaways (HFTs). While we support the notion that proposals for new HFTs will not be permitted outside of the city, district or local centres, this doesn't go far enough to adequately restrict unhealthy food environments. There should be a standalone policy focusing on the restriction of HFTs and, similar to many other local authorities in the UK, this should specify a minimum 400m/ walk buffer zone from schools. From March 2025 the new National Planning Policy Framework contains an explicit direction to 'prioritise preventing ill-health' stating that local planning authorities should refuse applications for hot food takeaways and fast-food outlets that are near where children congregate (unless in a designated town centre).' In Oxford, children living with excess weight is concentred in some areas, particularly more deprived areas (in some cases with levels of excess weight being over 40%) and close to local centres where there are already hot food takeaways (proliferation –	We are not considering the inclusion of a stand-alone policy on HFTs. Our policy approach broadly aligns with the national policy approach as it does not allow HFTs outside designated centres. The NPPF definition of town centres states that: *References to town centres or centres apply to city centres, town centres, district centres and local centres but exclude small parades of shops of purely neighbourhood significance.* The inclusion of a 400m buffer zone policy in Oxford would effectively increase opportunities for HFTs in additional locations across the city that are outside the city, district and local centres.	City and County Council officers met to discuss the County Council comments on Hot Food Takeaways. Following on from that meeting, no changes have been proposed. However, the County Council still consider a location policy approach to Hot Food Takeaways as described in their response should be included in the plan.

2471

Draft Policy	Summary of comment	Response	Outcome

2472

	increasing numbers of hot food takeaways is linked to higher levels of excess weight). To both tackle excess weight and health inequalities, the wording of the Oxford Local Plan should be strengthened by including a standard restriction on any new hot food takeaways within 400m radius of any school AND by not allowing new hot food takeaways in geographical areas with consistently higher levels of excess weight in children – above the Oxfordshire and England averages. Given the geography of Oxford City the wording could be "no new hot food takeaways will be granted within 400m radius of any school or in any geographical areas with higher levels of excess weight in children than the England or Oxfordshire average (with the exception of within Oxford City Centre)." Similar wording has been incorporated into Local Plans elsewhere. There is backing data to support this approach readily available from the public health team – including accurate excess weight data for children and number and type of hot food takeaway (including proliferation in areas of excess weight).

	A Healthy Weight Health Needs Assessment undertaken in 2023 found frustration amongst Oxford		

Draft Policy	Summary of comment	Response	Outcome
	City population of the easy access to 'fast food' close to home leading to increased likelihood of consuming this which has higher calorific as well as fat, sugar and salt content. The suggested change links to local policy. Oxfordshire Joint Health and Wellbeing Strategy 2024-2030 as part of immediate actions for healthy people and healthy places on page 20 (published Jan 2024): Take opportunities to shift the environment toward being healthier – advertising healthy options rather than food or drink high in fat, salt or sugar, and restricting the introduction of new hot food takeaways. A letter from Oxfordshire's Health Overview and Scrutiny Committee to the Head of Planning and Chief Executive urged Oxford City to take this approach. The Local Plan cannot effectively deliver its vision for Oxford to be a healthy, inclusive and fair city without such a policy. The County Public Health team can support City Council officers, share detailed data on the subject and support a draft modification of the Local Plan.	We disagree that the inclusion of such a policy would mean that the Local Plan does not effectively deliver its vision. Especially as the proposed approach in the plan to restrict HFTs

Draft policy	Topic	Summary of comments	Response
C2	Change away from retail/Class E is needed	Too many empty shops/the ongoing repurposing of Class E floorspace is evidence of oversupply and shows it's clearly time to allow a change away from retail. Centres should reflect the wide variety of uses that serve different communities. Non Class E uses make an important contribution to overall vitality and viability and maintaining investment that protects against physical decline.	Use Class E is a very broad Use Class, allowing a very wide range of facilities within the thresholds (as well as the thresholds allowing many other uses a well).

2479

C2	Setting Use Class E threshold inappropriate	The NPPF does not set prescriptive targets for active frontages in District Centres, although it does encourage the vitality and vibrancy of centres overall. Setting a threshold in this manner will ultimately restrict the opportunities available to modernise and respond to the change in retail and shopping habits since the Covid-19 pandemic. Retention of existing thresholds (para. 7.4, bullet 7) that are a snapshot of current trading profile, operator representation and market circumstances may not facilitate the essential and rapid response to dynamic retail and leisure markets and could impact negatively on the longer-term vitality and sustainability of centres. With resi above there will be considerable pressure on ground floor space which will also need to incorporate residential	All the thresholds are set comfortably above current levels. In addition, the policy does allow significant flexibility, in allowing for justification of falling below the Use Class E threshold, as well as by Use Class E relating to a very wide range of uses.

2480

Draft policy	**Topic**	**Summary of comments**	**Response**

		entrances, escapes for upper floor uses, bins and bike store, all of which have a space requirement at ground floor. Where comprehensive redevelopment of a site in a District Centre is proposed then compliance with any threshold is not required, but instead demonstrated 'maximisation' of active nonresidential frontage is required. Further consideration is also required on what is currently deemed as an 'active frontage' within the Templars Square site ie. Internal vs external to the shopping centre. The current policies map suggests that internal areas are 'shopping frontage'. We do not consider this is correct. An active frontage is an outward facing unit/frontage, CBRE and ORVIL can assist with the process of defining the existing active and street facing frontages on the Templars Square site.	
C2	Supportive	Some comments in support of various aspects of the policy including that there's a suitable level of flexibility.	The support is welcomed.
C2	Unclear policy/clarity suggestions	Comment policy is not effective as it is unclear and comment that the first sentence requires amendment or the addition of further text or bullet points to reference the city and district centres.	Agreed- this has been amended.

Statutory Consultee Comments – Draft Policy C2

Oxfordshire County Council

Draft Policy	Summary of comment	Response	Outcome
Policy C2 Maintaining Vibrant Centres	**Transport Strategy** This policy should state Oxford City Council will incorporate the County's future Street Design Code which includes a Kerbside Strategy (anticipated later this year or early next year).	We can only include references to adopted/ published strategies.	Oxford City Action: Watching brief for County studies publication
	Suggested wording: The densification and growth of district centres and the city centre is encouraged. High density development is generally expected in the city centre and district centres as set out in Policy HD8, and this should be low car and have incorporated OCC's Street Design Code"	We do not see the need to cross reference other policies in the plan in this instance. The plan should be read as a whole. As the County's Street Design Code is not yet published, we cannot make reference to it.	No Action Required
	Including stronger language would benefit the following:		
	e) rationalisation of public car parking so it ~~is well~~located limits and reduces surface-level parking where possible, and makes better use of workplace surfacelevel car parking;	This change weakens the policy as is does not support "well-located" public car parking.	No Action Required
	f) public realm improvements for cycling ~~sts and~~ pedestrians and public transport users and		

2482

	rebalancing of the space within streets from vehicles	The amendments proposed seem to prioritise public realm improvements for cycling and focus on cycle parking (Policy C7 already covers cycle parking requirements). As such, the proposed changes to are not accepted.	No Action Required (see response for Policy C7 below re: children's bikes)
	to pedestrians; by providing cycle parking in convenient locations which benefit the public realm		

Draft Policy	Summary of comment	Response	Outcome
	using thoughtful inclusive design and materials, catering for standard and non-standard bikes, including children's bikes g) Public realm improvements for pedestrians and public transport users and rebalancing of the space within streets from vehicles to pedestrians. Within active frontages page 154, it would be helpful to include a sentence referring to maintaining active frontages through inclusive design to ensure accessibility and a positive experience for people. **Urban Design (Placemaking)** Paragraph 7.4 – some reference should be made in relation to densification around city/district centres, it is important to still ensure there is some	Policies covering the design of development proposals are covered elsewhere in the plan (e.g., Policy HD7 – High Quality Design). Bullet point h) of the policy makes reference to new opportunities for public realm and the incorporation of small green spaces where people can dwell, 17ocialize and play.	No Action Required No Action Required

	open/public space for people to dwell, rather than expect everyone to pass through.

Draft policy	Topic	Summary of comments	Response
C3	Exception to the policy should be applied to major sites	The policy relating to small-scale shops should be clarified to be clear that it is relating to individual isolated small shops that serve localised and more isolated communities.	The policy does say it applies to shops meeting the definition of Use Class F2- but brackets have been added to spell out what this is in terms of size and having no other facility within 1,000m.
C3	Greater protection needed.	Only like for like replacement should be allowed, following extensive community engagement. Loss of parts to fund other things is not sustainable.	It is considered important that the policy does allow flexibility for more modern or efficient combined facilities that respond to current needs.
C3	Do not protect community assets or be cautious about over protection	A few comments saying there should be no protection of community assets, including because there should be no meddling in assets not owned by the City Council (and whether the City Council should own assets it does should be reviewed). Also because protecting chronically underuesd facilities or those duplicated nearby or that could be more efficiently provided in a mixed-use development would be more useful. If replacements/contributions are proportional or there are other facilities in walking distance then they should be lost.	Regardless of ownership, community facilities can be really important for many social and quality of life reasons. There is no evidence at all that Oxford has chronically under-used facilities, and the policy does have flexibility to make a case for variations in provision.

		Too much expectation may mean developments don't happen at all.	

2489

Draft policy	Topic	Summary of comments	Response
C3	Supportive/ support with minor comments	Some support of protections. Comment that some spaces are not safe for all, e.g. some churches may not feel welcoming to LGBTQIA+ or other faiths, so not a community facility for all.	Comment noted.
C3	Use of colleges	Make the universities share facilities. Require private developer and college contribution to existing assets.	The policy does say that opportunities will be taken to secure community use and joint user agreements.

C3	Access	Not clear why these new facilities must be easily accessible by sustainable transport, but commercial developments and new housing not subject to the same tests.	New developments are generally subject to these requirements, but also it is the case that community facilities by definition attract people, so they must be able to travel there sustainably.
C3 & C6	Community-led regeneration	Would like to see policy to discourage vacant properties and support community-led regeneration e.g. introduce "meanwhile uses" and council using CPO and High Street Retail Auctions to bring properties back into use. See Cambridge example.	Policies are considered flexible enough to respond to any proposals, but promotion of these measures is outside the planning system.
C3 & C6	More protection for cultural, social and leisure activities	Draft Policies C3 and C5 do not adequately protect cultural, social and leisure activities and culture because they do not take into account that the people and communities are starved of access to facilities when community centres and venues are closed down for long	Significant redevelopment of facilities may take some time, and too many requirements about temporary reprovision may act to stifle opportunities for redevelopment.
Draft policy	**Topic**	**Summary of comments**	**Response**

2490

		periods, years in some recent cases for redevelopment to take place. They appear to have the intention of preserving community and culture by specifying that a space has to be retained or a suitable local equivalent has to be provided by the applicant. The wording is much like the existing policies in the 2036 Plan under which the above examples occurred. However, a newly built or appointed facility opened years after closure of the original means that the culture and community will either have moved on or just died.

Draft policy	Topic	Summary of comments	Response
C4	Support	Support in principle	The support is welcomed.
C4	Should allow loss/should not have a policy protection.	Allow loss for homes Do not protect at all- market forces and national policy cover. Policy over-reaching Ossifies valuable plots even when it could be better used.	The use class F1 includes schools, museums and libraries, which are important pieces of infrastructure to support communities, needed in the city, which should have some protection. However, the policy is flexible enough, to allow responses to a change in need.
C4	Should be more restrictive of these use	No more private schools. No more expansion of education sector. Issues such as traffic stress. No capacity for more education institutions. Transport impacts need to be better managed.	The planning system is unable to treat private schools any differently to state schools. Accessibility by sustainable travel is key part of the assessment criteria in the policy.

C4	Policy should not exclude universities	Policy confirms “This does not apply to academic institutions exclusively for 18+ students such as the University of Oxford and Oxford Brookes University.” This statement is objected to, with the basis of this being that there is no alternative policy that is considered to be comparable and allowing objective assessment of the need for new facilities. If the policy is to be brought	The universities meet different needs and have different considerations, and the policy is not intended to apply to them. The main impact of the universities is student accommodation, which is
Draft policy	**Topic**	**Summary of comments**	**Response**
		forward, the caveat should be removed, or an alternative University development specific policy should be proposed.	managed by policies in the housing chapter.
C4	Open to manipulation	Institutions may use the policy to get a footprint in the city that can then be repurposed for financial gain.	This potential occurrence can’t dictate whether or how new learning facilities should be allowed.

2497

C4	Objection	OCC has, at every single local plan, attempted to block any rivals to Oxford University or other institutions trading on the Oxford moniker. Modification Requested: Remove the phrase *"the proposal will meet local needs or an existing deficiency in provision or access"* - this is a a "backdoor method" of banning new institutions Many of the of requirements of this policy are addressed in other policies such as traffic and environmental impacts.	There is a third university with a presence in Oxford- the University of West London has a campus at Ruskin College, Dunstan Road. It is important new facilities meet local needs.

Draft policy	Topic	Summary of comments	Response
C5	Support	General support- good to preserve facilities and allow new.	The support is welcomed.
C5	Alternative options	Preference for alternative option 1/alternative option 2- more flexible/pragmatic, leave to the market, preferred option prevents dynamic change. Leisure tastes change and business models shift. Should not freeze every cinema, museum, etc.	The policy is implicitly clear that facilities do not have to be protected in exactly the same use within the general category, but addition has been made to the policy to make this clear. So a cinema does not necessarily need to remain as a cinema if alternative kinds of facilities would meet needs. This does give sufficient flexibility.
C5	Heritage	Historic use may be important to character.	Policy HD2, relating to listed buildings, is clear that the use of the listed building may be part of its significance.
C5	Pubs	Suggest use of CAMRA's Public House Viability Test, to ensure pubs are not deliberately run down so they can be redeveloped into more profitable uses.	Marketing evidence is required, with details set out in Appendix 7.1.
C5	Implementation	Implementation is key. Policies are too woolly. Need to make sure meet range of needs, including young people. Should	The vast majority of greenfield spaces in the city are protected

		ensure these facilities are not on greenfield sites. Should not limit things	by other policies. The conversion of a

Draft policy	Topic	Summary of comments	Response
		happening like a famous person's house becoming a museum after they die (or similar)	house (for example) to a museum is not ruled out by the policy, but justification and mitigation of impacts would be required, which is considered to be the right approach.

C5	Flexibility should apply. Supporting text suggestion	It should be made evident in the policy that flexibility should apply with regard to the application of this policy against wider plan policies to enable development to be delivered to meet the ambitions of the Local Plan and in particular with reference to the Nuffield Sites. It is suggested that supporting text is incorporated which supports a flexible approach toward protection and retention of cultural venues where site allocations are supported for comprehensive mixed use redevelopment, as well as an additional bullet point included in the policy itself regarding the list of circumstances where the loss of cultural venues is supported. this additional bullet point could be incorporated/read as follows: • Or forms part of comprehensive, mixed use development scheme.	There is not a need to make an exception to the policy for allocated development sites, as the policy itself allows sufficient flexibility.

Draft policy	Topic	Summary of comments	Response
C6	EV parking should be prioritised over cycle parking	The idea of assessing travel and transport is good but current plans of restricting cars and parking bays is bad. Oxford should be planning for the future by providing an infrastructure for electric cars and independent transport with parking areas built under all new buildings with charging stations rather than letting developers off by simply providing an inexpensive bike rack.	The Oxfordshire Electric Vehicle Infrastructure Strategy sets out the policies and plans to realise the County, City and District Councils vision for EV charging in Oxfordshire. The design and location of any EV charging infrastructure should consider and avoid negatively impacting on street scene in line with the principles of high quality design and the supporting design checklist.
C6	No transport/travel policies	Do not include a policy requiring transport assessments/statements, travel plans, construction management plans or service and delivery plans.	Noted.

C6	Traffic – private school drop offs	Require all private schools within the city to have a transport plan for students that includes assessment of their impact and their steps taken to provide mass transport e.g. buses and prevent single occupancy cars from dropping off. The traffic vanishes from Oxford during private school holidays - address	The City Council will continue to work with the County Council to identify potential solutions to conflicts between different road users in the city centre, with the aim of enhancing public realm, whilst also allowing good

Draft policy	**Topic**	**Summary of comments**	**Response**
		this and we will have much better traffic flows in oxford termtime too.	accessibility by bus. However, the details of this work, and implementation of schemes, will be led by the County Council as Highways Authority and are outside the realm of the Local Plan.
C6	Better public transport	Public transport needs to be frequent, affordable and accessible. Subsidies may be needed to fully achieve this Council needs to work closely with the county and bus companies to achieve this.	Noted. A key aim of the City Council and of the County Council as Highways Authority is to promote a shift to sustainable modes of travel.

C6	A40 congestion – impact of Oxford North	I look forward to what you are going to do about the impact of the Oxford North Development on traffic congestion on A40 area.	The link road is already under construction, as part of the Oxford North planning permission.
C6	Policy to only include locally specific transport mitigation requirements	BMW support alternative option 1. Planning policy should be distinct from the validation requirements. The local validation checklist should set out when a Transport Assessment, Travel Plan and/or Servicing and Delivery Plan is needed, and policy should only include the locally specific transport mitigation requirements that are not previously covered in national policy.	Appendix 7.2 outlines when an assessment is likely to be required, as well as potential mitigation measures.

2508

Draft policy	**Topic**	**Summary of comments**	**Response**

C6	Construction Management Plans should be required for all developments	Developers of large sites should be required to liaise with other developers within a 1km range of their site and work together to ensure CMPs have minimum impact on local residents. Construction Management Plans should be required not just where large amounts of construction traffic will be generated, but also for developments where smaller amount of construction traffic may cause significant disruption to the surrounding area (e.g. on small residential roads where access to the site may be very limited).	The policy (as drafted) requires Construction Management Plans (CMP) to be submitted where the proposed development will generate significant amounts of movement. The requirement for a CMP can also be conditioned as part of any planning permission if appropriate and necessary.
C6	Supportive	Cyclox support the proposed policy on Transport Assessments, Travel Plans, and Service and Delivery Plans, and align with the Coalition for Healthy Streets and Active Travel (CoHSAT)'s response. We highlight the poor condition of Oxford's pavements, which are often uneven, obstructed, and difficult to navigate for wheelchair users, people with buggies, and those with mobility issues. To address this, policies should require pavements to remain level across driveways - avoiding the current car-centric design - and mandate the use of Dutch Entry Kerbs, now adopted as Oxfordshire County Council policy. Developers and homeowners undertaking renovations should be required to implement these standards.	Appendix 1.1 of the draft Local Plan sets out a design checklist that development proposals are expected to consider.

2509

Draft policy	Topic	Summary of comments	Response
C6	Support but policy could go further to reflect NPPF	It is considered that this policy is sound with regard to the promotion of sustainable/active modes of travel, and the documentation that is required to support an application. The Reg 19 reps submitted by CBRE in Jan 2024 expressed concern with parts a) and b) of this policy. However, it is noted that the Local Plan 2042 reg 18 document now refers to 'no unacceptable impact on highway safety', rather than 'no impact on highway safety'. This is welcomed. It is also welcomed that the wording of part (b) has been updated to refer to 'no severe residual cumulative impact on the road network'. This wording could still go further to reflect the wording in the updated NPPF 2024, para.116, which also refers to mitigation and all reasonable future scenarios. It states: "Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network, following mitigation, would be severe, taking into account all reasonable future scenarios". We request this is reviewed and incorporated in the next draft version of the Plan.	The current draft wording of additional policies covers these point. Draft policy C8 requires Transport Assessments to demonstrate that there will not be unacceptable impacts on the transport network. Draft policy C1 states "planning permission will only be granted where…impacts on the road network can be mitigated".

2510

C6	Support with suggested amendments	We strongly support the proposed policy for Transport Assessments, Travel Plans and Service and Delivery Plans.	Minor amendment.

Draft policy	Topic	Summary of comments	Res
		o Travel Assessments and Travel Plans should recognise that 32% of households in Oxford do not have access to a car. 92% of adults are able to cycle and about 60% of adults in Oxford cycled in the last year. Over 90% of Oxford adults walked (or equivalent) at least ten minutes in the last year. (Sources: Census 2021, Cycling UK, Sport England Active Lives). o In addition to the Street Design Guide, Policy C6 should refer to any further OCC or best practice guidance, such as Active Travel England planning guidance (https://www.activetravelengland.gov.uk/planning-active-places) and the use of Dutch Entry Kerbs to keep pavements flat (https://www.oxfordshire.gov.uk/sites/default/files/file/roadshttps://www.oxfordshire.gov.uk/sites/default/files/file/roads-and-transportpolicies-and-plans/hsd-1100-115_p01_series_1100_-_dutch_entry_kerb.pdfand-transportpolicies-and-plans/hsd-1100- 115_p01_series_1100_-_dutch_entry_kerb.pdf)	

2511

		o Appendices 7.2 and 7.3 need an addition for non-residential institutions to include for example libraries, museums and places of worship. o We strongly support the inclusion of CLOCS	
C6	Objection	A typical bureaucratic view of the world, plan=delivered. Modification requested:	Po ab en an im ap ad an be to the in
Draft policy	**Topic**	**Summary of comments**	**Re**

2512

2513		Paragraph b) what does "*…residual … impact*" mean? Paragraph c) the phrase "*and within neighbouring areas"* is ineffective. It is outside of the developer's control. The policy is ineffective, as the policy does not actually result in any reductions. It implies that an increase in traffic is acceptable (which it is not as roads are already 100% full). The policy is also ineffective as it muddles planning with delivery of the plan objectives. The policy must state what must be done, rather than what should be planned for. The policy is Ineffective as it states, "*is likely to*". This phrase is meaningless and only applies to the City Centre AQMA not the whole city.	Th po wo do ma dir ref the Th the de AQ 20 co ab Cit is co to ap

Draft Policy	Summary of comment	Response	Outcome

2514

Policy C6 TAs, Travel Plans and Service Delivery Plans	**Transport Strategy** Paragraph 7.11, page 160 - It would be positive to add to 7.11 a reference to improving health outcomes along with the other outcomes mentioned here. Key things to consider when drafting this policy – recommendation for the bullets in this section below: We suggest this also includes reference to the County's Freight Strategy, future OxRail 2040: Plan for Rail and future Street Design Code. It is also worth recognising the County are working on delivering an integrated transport policy which will be incorporated into LTCP, this will build upon the Oxfordshire Metro Concept. We recommend that C6 incorporates Vision Led Transport Planning as a requirement to ensure Oxford	Policy HD10: HIA already focuses on Health outcomes and requires a Health Impact Assessment. We can only include references to published/ adopted documents. Once these are published and available in their final "adopted" form, we can consider the inclusion of any costed infrastructure projects within our IDP.	No Action Required Oxford City Action: Watching brief for publication of county guidance/ strategies etc.

2515

Draft Policy	Summary of comment	Response	Outcome

2516

	City has the highest quality developments, showing how developers have used Vision Led Transport Planning to achieve sustainable transport infrastructure.	We can consider the inclusion of the phrase Vision Led Transport Planning within the policy.	Consider including the phrase 'vision-led transport planning'
	It would be helpful in Draft Policy C6 if it also references how this policy will support LTCP policy to remove 1 in 4 car trips by 2030 and 1 in 3 by 2040 and reduce vehicle mileage. Travel Plans and TA's should actively show how they will be supporting this policy, this will also support the monitoring of Travel Plans.	The LTCP is the statutory transport plan for Oxfordshire. As such, no need to duplicate its content. Especially as this may be subject to change/ review when the next iteration is delivered.	No Action Required
	Within Draft Policy C6, outcome h) including e-bike/ecargo bike charging would support the growth of ebikes and e-cargo bikes.	The plan already contains a policy on electric vehicle charging.	No Action Required
	Travel Plans should incentive sustainable travel and support the delivery of cycle training for children, adults and families to support positive travel choices and provide health benefits to local communities.	Noted.	No Action Required

2517

Draft Policy	Summary of comment	Response	Outcome

2518

	Place Planning and TDM teams (Central) We fully support the requirement for transport assessments to assess the multi-modal impacts of development proposals. The County Council's LTCP includes a transport user hierarchy to ensure future schemes consider walking, cycling, public and shared transport before the private car. It is important that development proposals also consider development impacts and any mitigation in this order too. We note this "The requirements for the transport assessment and travel plans are set out in Oxfordshire County Council's document Implementing Decide and Provide in Transport Assessments." Whilst this is helpful, it doesn't include this text in the policy wording itself. We think it would be incredibly helpful if specific reference to the County's Implementing Decide and Provide was included and worded as follows: *"All major development proposals must demonstrate that the methodology in Oxfordshire County Council's Implementing Decide and Provide: Requirements for*	Noted. We do not consider that the inclusion of adopted county council policy within our Local Plan is necessary.	No Action Required No Action Required

	Transport Assessments document has been used to		

2520

Draft Policy	Summary of comment	Response	Outcome
	assess the need for infrastructure and provision of transport services." The latest version of the NPPF published in December 2024, includes the new requirement for development proposals to follow a vision-led approach to transport planning. This is referenced in paragraphs 109 and 115 and in paragraph 118 (p.33), which states: *"All developments that will generate significant amounts of movement should be required to provide a travel plan, and the application should be supported by a vision-led transport statement or transport assessment so that the likely impacts of the proposal can be assessed and monitored."* Further to this, the glossary at Annex 2 (p.80) of the NPPF describes a vision-led approach as: *"…an approach to transport planning based on setting outcomes for a development based on achieving welldesigned, sustainable and popular places, and*	We can consider the inclusion of the phrase 'vision-led transport statement/ assessment/ plan' in our Reg. 19 plan.	Oxford City Action: consider inclusion of text relating to 'vision-led transport planning'

2521

	providing the transport solutions to deliver those outcomes as opposed to predicting future demand to		
Draft Policy	**Summary of comment**	**Response**	**Outcome**

2522

	provide capacity (often referred to as 'predict and provide')." When these changes to the NPPF were initially proposed it was stated in the supporting text for the accompanying consultation that (Chapter 8, paragraph 7, MHCLG), "To support the implementation of this updated policy, we will publish updated guidance alongside the policy coming into effect." At the time of writing, this guidance remains forthcoming. Thus, in the context of this description of the vision-led approach and in lieu of the updated guidance, the Implementing Decide & Provide document should be seen as the methodology that development proposals within Oxfordshire must follow in order to meet the requirement set out in paragraph 118 of the NPPF. However, it is expected that, once the updated guidance is made available, the County's Implementing Decide & Provide will be complementary to the national guidance and will remain necessary in setting out local requirements to ensure that a vision-led approach to transport planning has been followed.	Noted.	No Action Required

Draft policy	Topic	Summary of comments	Response
C7		Provide a more thorough definition of "secure", that unambiguously excludes handles removable by anyone with a screwdriver, or the rows of useless ground-mounted hoops around the Kassam stadium.	Examples of good practice for cycle storage are provided within the Car and Bicycle Parking TAN published in March 2022.
C7		Very strongly agree - good bike parking and storage, across a range of bike types, is critical to encouraging an active travelling city.	Noted.
C7		Residential and Non residential schemes should provide equipment and facilities for community owned e:bikes for hire. More stringent rules needed on the location of e-bikes.	The Design Checklist set out in appendix 1.1 requires sufficient pavement space for different users needs. Appendix 7.4 requires bicycle parking to be future proofed to ensure that the infrastructure to support the charging of electric bicycles is supported.

C7		Draft Policy C7 already insists that every scheme hit Oxfordshire County Council's minimum cycle-parking standards—two spaces per bedroom for conventional housing, one per study bedroom for students, plus extra cargo-bike bays, e-bike charging points, showers and lockers in most workplaces . Pushing "higher levels" on top of those generous baselines will consume valuable ground-floor footage, add capital cost and, on tight brownfield	Policy aligns with Oxfordshire County Council's Parking Standards for New Developments. A key aim of the City Council and of the County Council as Highways

Draft policy	Topic	Summary of comments	Response
		plots, force a trade-off with additional homes or lab space. Developers are best placed to judge precisely how many longstay versus short-stay racks, cargo bays or charging sockets their occupants will actually use; market demand and Building Control already penalise schemes that skimp on storage. A principle-led policy—secure, convenient, level access, with flexibility for reduced provision where spare capacity exists (as the draft itself allows for student blocks) would keep Oxford cycle-friendly without turning the bike shed into another viability hurdle that slows supply across the city.	Authority is to promote a shift to sustainable modes of travel.

2528

C7		Nice idea, but it goes a bit too far. Tricycles and trailers occupy a great deal more floor space than efficiently stacked pedal bikes.	A key aim of the City Council and of the County Council as Highways Authority is to promote a shift to sustainable modes of travel. The availability of various forms of bike parking is a key tool in achieving this aim.
C7		BMW support the inclusion of bicycle parking design standards, but recommend that the policy acknowledges the local circumstances of business and their operations and phrases the policy to “encourage” rather than “require” since the preferred design options may not always be achievable or necessary.	The targets only apply to new developments, and are considered appropriate in order to meet the City and County Council's key aim to promote a shift to sustainable modes of

2529

Draft policy	Topic	Summary of comments	Response
			travel. In line with the County Council's Parking Standards for New Developments paragraph 1.2, "new developments will need to work collaobratively with Oxfordshire County Council to achieve these targets."

C7		Buses should be the priority over cycling. That's how most people should get around.	Noted.
C7		Indoor bike parking should not be provided indoors.	Noted.
C7	Supportive	Divinity Road Area Residents Association support this policy.	Noted.
C7	Support with suggested amendments	o This policy should refer to 'Cycle Parking' not 'Bicycle Parking', as this is a more inclusive term. o The policy reference the guidance on cycle parking quality, inclusivity and security in LTN 1/20, Chapter 11 and the 'Appendix: Specific points from Cyclox update to Oxford City Council Technical Advice Note on cycle parking' below. All of these are important, as people must feel their cycles will be secure to buy and adopt cycling, particularly with more expensive e-cycles. For new developments, internal or hangar type storage should be the standard.	Amendment proposed.
Draft policy	**Topic**	**Summary of comments**	**Response**

		o Appendix 7.4 has an error in use type F1 where it assigns 'student' spaces to museums, libraries and places of worship. These should be covered by the 'Leisure centres, assembly halls, hospitals and healthcare' part of Table 11-1 in LTN 1/20 and have 1 space per 5 employees, plus the greater of 1 per 50m^2 or 1 per 30 seats/capacity. It should be possible to simplify Appendix 7.4 with reference to LTN 1/20 Table 11-1.	
C7	Comment	Policy reflects existing policy and importantly allows for lower parking standards where justified. This is important as the cycle parking standards can result in excessive provision, leading to inefficient use of land, a proliferation of unsightly cycle stands and adverse impact on heritage assets, particularly in the City Centre. The policy sets out a sensible and pragmatic approach to deal with this issue.	Noted.

wheelers Parking Design Standards	wording of the policy is such that it can reflect that these standards will be reviewed on a regular basis. Therefore, we encourage the City Council to make reference to the County Council parking standards with an open wording, noting the need to refer to the County as the Highway Authority for the latest standards, instead of including them as an Appendix to the City Plan.	making, it is helpful for them to be included within an adopted Local Plan. While standards do change from time to time, we need to produce a new local plan every five years so would be able to quickly accommodate any changes to standards.	
	Transport Strategy		
	Paragraph 7.15 - we recommend a slight change in language to put greater emphasis on end of trip facilities for cycling. Suggested change to third bullet point: *"As well as parking facilities, changing rooms, showers and locker facilities in places of work can be <u>are</u> important in enabling people to cycle."*	While showers, parking facilities and changing rooms are important to some to enable them to cycle to work. They are not used by all and are not always available. As such "can be" is appropriate language in this context. Do not accept proposed amendment.	No Action Required
	Incorporating the importance of lighting should be added. In the paragraph relating to bicycle parking, it should also include – bicycle parking should be well lit.	This paragraph suggests cycle parking should be "well-lit" however the proposed amendment to the policy suggests it should be "inclusive". We	No Action Required

2533

Draft Policy	Summary of comments	Response	Outcome
	This removes one of the barriers to access and will improve natural surveillance as well as incorporating bike maintenance stand. Within the policy C7 a slight addition to the wording of the 4th paragraph: *"Bicycle parking should be well designed**, inclusive** and well-located, convenient, secure, covered (where possible enclosed) and provide level, unobstructed external access to the street."* It is important to include children's bikes within this, they are often overlooked when developing bicycle parking, and to help enable families to cycle all barriers to access should be considered. Children's bikes are often too small to be locked to standard Sheffield stands as the top bar is too high. See suggestion to 5th paragraph of policy :	do not consider that this suggested change reflects the preceding reasoning/ rationale. As such we do not accept it. In principle, we have no real objection to this amendment, however, are there any specific County Council design standards for Children's bikes that we can provide to developers? Are they publicly available? Are there any cost implications?	Oxford City Action: consider inclusion of phrase 'children's bikes' within the policy

	"Bicycle parking should be designed to accommodate an appropriate amount of parking for the needs of disabled people, ***children's bikes,*** *bicycle trailers and*

Do not know	7	2.23%
Not Answered	169	53.82%

Draft policy	Topic	Summary of comments	Response
C8	Not effective-detailed policy wording	Policy is not effective as the word "scheme" is not defined (in particular for smaller developments such as end of garden development/site split or 2-3 houses). Also "frequency" is not defined by time (e.g. rush-hour versus 04:00 AM) *will only be granted for residential schemes* that are low car:* The language is unclear What does "only" mean in this context? (1) Homes would have only a 'small number' of shared spaces. What is meant by 'small number' is not specified. That should be specified as a percentage of the number of homes relying on these shared spaces. The phrase "*Seek a reduction*" is ineffective. Additional staff or residents will use a variety of transport modes some of which will result in an increase in traffic. A net reduction is therefore required to compensate this. Waffle that belongs in supporting text, a plan is not a goal. Low should not be used to mean 'no'.	An amendment has been made to change 'scheme' to 'development', and the asterisk explains what this means. The word 'only' is considered to be clear. A small amendment has been made to remove the phrase 'a small number'- this related to the listed types of spaces that would be allowed, but in that case it is agreed is unnecessary. In accessible locations, where there are existing spaces, a reduction will often be possible and expected.

2539

C8	Out of centre development	Draft Policy C8 should include a presumption against outof-centre developments that would require other than operational and accessible parking. The evidence of the	Additional wording about parking has been added to Policy C1.

Draft policy	**Topic**	**Summary of comments**	**Response**
		retail study supports a 'strong stance' regarding out-ofcentre development. Opposite view also given- that some retailers selling bulky items need to provide parking.	

2540

C8	Restricting residential parking is not the answer and creates issues.	We believe the Policy is badly misconceived in its extreme emphasis on reducing car parking at residential developments. It ignores the obvious fact that car ownership is not solely driven by a determination to drive on congested Oxford roads. Improving public transport will lead to fewer cars. Public transport must be greatly improved first. Delivery vehicles generate as much, if not more, traffic. Some need a car- those looking after elderly, families with children. Residents could not be sure of having anywhere at all to park a car, and would be in constant conflict with neighbours. (2) Outside the deliberately 'low car' schemes, residents will be unable to entertain any visitor that arrives by car.	A key aim of the City Council and of the County Council as Highways Authority is to promote a shift to sustainable modes of travel. The availability of parking is a key tool in achieving this aim. It is important that sites are not isolated and the alternative travel options are available in order for this to be successful, which is why the policy has two options for residential developments.

2541

Draft policy	**Topic**	**Summary of comments**	**Response**

		Stop the anti-car obsession. Priority should be green car, not low car. If there is low car, there must be facilities and connections or anti-social behaviour (e.g. Barton Park).	
C8	HMO parking issues	This policy needs to recognise the existing parking issues associated particularly with HMOs and proximity to district centres. HMO households may have multiple cars (making use of visitor as well as resident permits) and anti-social pavement parking is very common. The only answer is for both universities to restrict students from bringing cars into Oxford (with certain exceptions such as disability, need to travel to work placement etc.) as already happens in Cambridge. We appreciate that this goes beyond the Local Plan process but would like to see our concerns noted to highlight the issue and encourage wider action.	Comment noted. HMOs meet a wide range of housing needs and are not all occupied by students. Provision of parking is considered with HMOs, but car ownership cannot be controlled.
C8	Issue with CPZs not existing over greenfield sites at time of application, and public transport	For 'low car' status, an equivalent to the CPZ and the other criteria should be added for greenfield and brownfield sites as CPZs may not be in place yet. This should require low car status for any area likely to become well served by services and public transport, including through development plans. As such services are required by other policies, this should apply to all major	Additional wording has been added to the policy to clarify this, in response to this concern.

2542

Draft policy	Topic	Summary of comments	Response
	improvements not being in place.	developments. This loophole should be addressed by applying CPZ-equivalent rules to all development sites, and low-car schemes should be expected for all developments across the city.	
C8	Support for low car or no car	Think there will be a surprisingly low car or no car developments. Benefits for children being able to play and travel independently. Some support for completely car free developments. City needs radical reductions in car parking. All new office/lab employment space should only have disabled parking spaces.	The support is welcomed. It is noted that some consider the policy should go further. It is considered that the policy strikes the right balance.

Draft Policy	**Summary of comments**	**Response**	**Outcome**

2544

	County as the Highway Authority for the latest standards, instead of including them as an Appendix to the City Plan. **Public Health** This is the only policy which makes reference to 'active travel'. As we stated in our previous consultation response, we believe the Local Plan requires a separate policy dedicated to active travel. **Transport Strategy** Paragraph 7.16 – health benefits should be included along with others already stated within this paragraph. **Place Planning and TDM teams (Central)**	Disagree that the plan needs a policy dedicated to "active travel". All active travel schemes should be included in the IDP Delivery Schedule. If new additional infrastructure schemes are needed to support development proposed in the plan, these should be set out in publicly available/ approved documents in order for them to be included within the IDP. Noted.	No Action Required No Action Required

2545

Draft Policy	Summary of comments	Response	Outcome

	Some sites coming forward are not on land currently developed, so are not within an existing CPZ. Notwithstanding this, the site still might be suitable for low car as a future CPZ could be introduced and as the proposed site access is already in an existing CPZ, and the site already benefits from good public transport connectivity and is within an acceptable walking distance of a local supermarket or equivalent. Suggest modification to bullet point a) as follows:	We are aware of this issue on certain sites. However, it can be addressed through specific site allocation policy wording rather than an amendment to this policy.	No Action Required
2547	*a) in Controlled Parking Zones (CPZs)* ***or the site access is within an existing CPZ****; and*	Disagree with proposed amendment to bullet point a). This issue would be better addressed through site specific policies.	No Action Required
	The text in the box refers to "TP" throughout but should this be "TA" i.e. transport assessment.	We will look into this issue and update as required.	Oxford City Action: Review and update as required.
	The current car parking policy for non-residential uses within LP 2036 (policy M3), in the case of the redevelopment of an existing or previously cleared	We have strengthened the policy to seek no additional car parking (except for blue badge/ servicing) and at	No Action Required

Draft Policy	Summary of comments	Response	Outcome
	site, was that "there should be no net increase in parking on the site from the previous level and the Council will seek a reduction where there is good accessibility to a range of facilities". This requirement, in the case of the redevelopment of an existing or previously cleared site, appears to no longer remain with the level of car parking to be demonstrated through the TA. The County Council fully supports no net increase in car parking in the case of the redevelopment of an existing or previously cleared site and given these can often be in locations which are congested and sensitive to changes in traffic flow. We feel the existing policy should be retained.	accessible sites, we are now seeking a reduction. Any increases need to be justified through the TA/ TP process. We feel this covers a wide range of sites and that specific reference to "existing/ previously cleared sites" is not required.

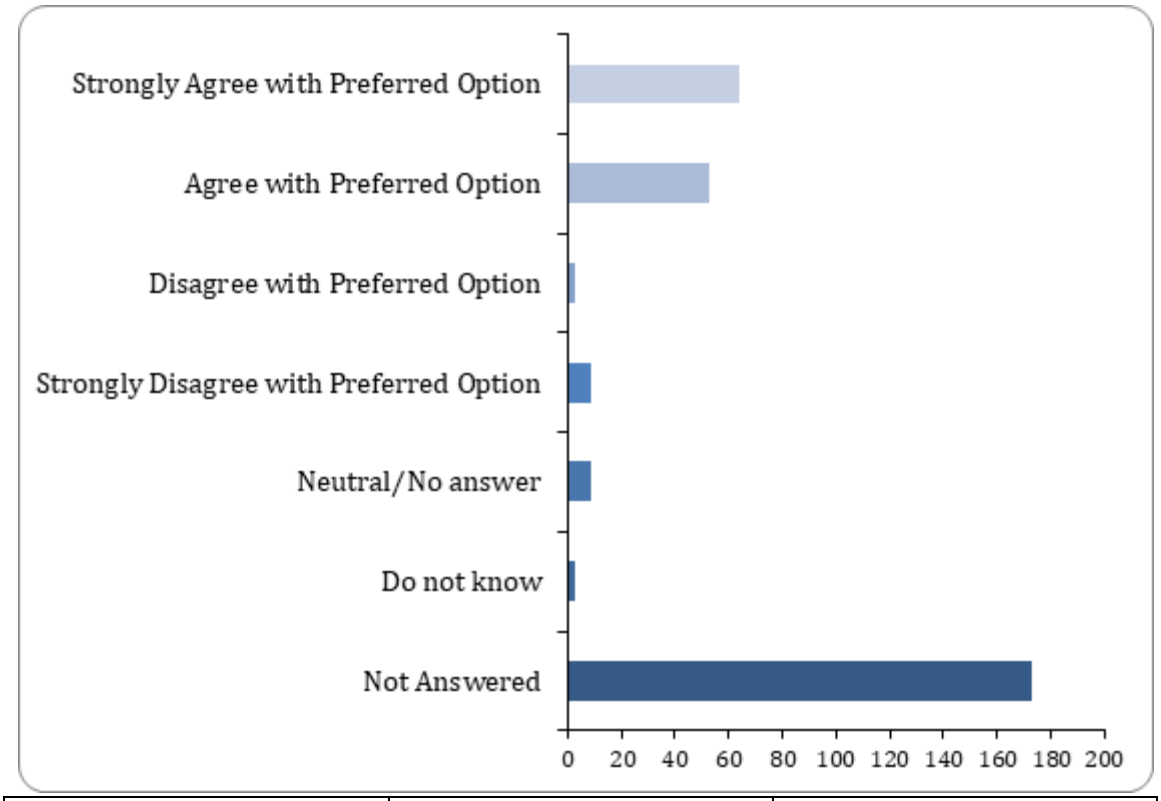
All Public Responses – Draft Policy C9

Please tell us what you think about policy option set 012e (draft policy C9): Electric Vehicle Charging.

There were 141 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	64	20.38%
Agree with Preferred Option	53	16.88%
Disagree with Preferred Option	3	0.96%
Strongly Disagree with Preferred Option	9	2.87%
Neutral/No answer	9	2.87%
Do not know	3	0.96%
Not Answered	173	55.10%

Draft policy	Topic	Summary of comments	Response
C9	Policy duplicates Building Regs	EV charging provision standards/ infrastructure already set nationally through Building Regulations. Is Draft Policy C9 necessary? If policy retained, support principle of enabling EV adoption. Agree that requiring a proportion of active charging points is reasonable. A minimum of 10% active provision is considered an appropriate and proportionate amount.	Draft policy C9 has been merged into Policy C8, Motor Vehicle Parking Design Standards. References to the amount of provision have been removed as these are covered by Building Regulations.
C9	Objection – blue badge/ car club requirements	Object to requirement that all new blue badge bays and all car club bays be fitted with live, ready-to-use EV charging infrastructure from the outset. Requirement not justified by evidence of user demand. Risks unintended consequences for usability/ safety and redundant infrastructure. Suggestion that these spaces should fall within the overall 10% requirement.	The provision of EV charging infrastructure is encouraged for blue badge/car club bays to help encourage take up of EV vehicles.

2551

C9	Support for policy	General comments received in support of a policy: • Essential for increasing uptake of EV's • Should be more than just disabled bays – the infrastructure should benefit everyone. • So few homes in the city have off street parking options, creating gullies across the pavements is necessary.	The support is welcomed. It is noted that some consider the policy should go further. It is considered that the policy strikes the right balance.

Draft policy	Topic	Summary of comments	Response
		• Should promote EV ownership rather than no car ownership. • Charging infrastructure must be flexible and widely available so that if necessary, motorists can park and charge their vehicle some distance from their own home.	
C9	Developer provision	On future residential developments, infrastructure for on street charging for EVs should be provided and maintained by developer at no cost to residents.	The charging provisions are set out in Part S of the Building Regulations 2010.
C9	Support for alternate policy	Prefer Alternate Option C	The reasons for the preferred option are set out in policy options set 012e of background paper 012: Transport

C9	Resident parking	For existing residents, be sensible about suggestions for charging when parking is difficult or impossible near or outside their houses (i.e. in terraced housing with onstreet parking).	EV charging infrastructure is required for residential and non-residential development in accordance with Part S of the Building Regulations 2010.
C9	Enforcement	How will on street charging work? Can you ensure that people move vehicles once charged?	This is beyond the remit of the local plan.
C9	Accessibility concern	You should mandate developments to adopt the British Standards Institution's PAS1899, accessible EV charging stations. EV charging is quite problematic for people with disabilities and PAS1899 has clear, valuable	The charging provisions are set out in Part S of the Building Regulations 2010. Oxfordshire County Council's Street Design Guide provides further guidance

2553

Draft policy	**Topic**	**Summary of comments**	**Response**
		recommendations.	on EV charging infrastructure for off plot parking.

C9	EV infrastructure design	EV infrastructure should be well designed and easily available, standards should be realistic.	Infrastructure for the charging of electric vehicles is addressed by Part S of the Building Regulations. This covers both residential and non-residential developments with specific levels of requirements set out for each use. Oxfordshire County Council's Street Design Guide provides further design guidance.
C9	Facilitate EV adoption	The policy does not go far enough to facilitate EV adoption by residents who lack off street parking. The Council needs a policy to resolve this, for which there are several options from Council funded pavement gulleys to lamppost charging to clusters of fast charging stations.	The policy seeks EV charging infrastructure provision in accordance with Part S of the Building Regulations 2010. Oxfordshire County Council's Street Design Guide provides further design guidance on EV charging infrastructure for off plot parking.
C9	Low car housing	Encourage more car free housing then EV charging will not be required. Charging points should be allocated to blue badge holders.	The Local Plan seeks to promote low car housing. Draft policy C9 has been merged into Policy C8 and seeks the provision of live EV charging infrastructure for new blue badge parking

Draft policy	**Topic**	**Summary of comments**	**Response**

			bays on new build residential and nonresidential development.
C9	Support for new parking spaces to be “EV-ready” to lower costs	Mandating a charging point for every dedicated bay, and retro-engineering on-street spaces, adds cost and technical complexity just when the Plan is rightly pushing for low-car or car-free schemes. Developers respond by trimming unit numbers or hiking prices, while the market for EVs is still evolving and rapid-charging hubs are proliferating off-site. A lighter rule would simply require new parking spaces to be “EV-ready” (conduit and power capacity) and reserve full chargers only for Blue-Badge bays and pooled-car slots; private owners can then install hardware as demand materialises. This keeps upfront costs down, preserves streetscape flexibility, and lets Oxford meet both its decarbonisation and housingdelivery goals without over-specifying technology that may change faster than the Plan.	Draft policy C9 has been merged into Policy C8, Motor Vehicle Parking Design Standards. The policy includes reference to charging infrastructure being provided in accordance with Part S of the Building Regulations 2010. It also requires all new blue badge and car club parking bays to provide access to live EV charging infrastructure that is ready to use.
C9	EV charging for boats	Consider and discuss the implementation of EV charging for canal boats adjacent to new development with the Canal & River Trust where relevant as this may reduce potential conflict between boaters and residential property occupiers as a result of noise from generators/engines and smoke from stoves at a later date.	Comment noted. Additional text added to Policy H13 point 3 to include reference to EV charging for boats.

2555

Draft policy	Topic	Summary of comments	Response
C9	Policy does not support move towards car-free developments	Hopefully you don't mean this 'on all new residential developments with a dedicated parking space' to say that every new home will need to have a car-parking space of their own?? That would seem to be contrary to the requirements proposed for car-free developments. Make sure it's clear what you mean!	Draft policy C9 has been merged into Policy C8, Motor Vehicle Parking Design Standards. The policy includes reference to charging infrastructure being provided in accordance with Part S of the Building Regulations 2010.
C9	Charging provisions	For new build residential development, the number of charge points to be: one 11kw point per 20 dwellings. For New build non-residential development, the number of charge points to be: one 11kw point per 20 car park spaces	The charging provisions are set out in Part S of the Building Regulations 2010.

All Public Responses to the Whole of Chapter 7

Draft policy	Topic	Summary of comments	Response

Chapter 7	Transport	Recommendations of the Citizens Assembly on Transport: While I acknowledge that the City has no direct responsibility for travel, I'm sure the City council can influence County plans and actions. To this end I urge the City council to do more to create better mobility and inclusive transport by following up on many of the recommendations which came out of the recent Citizens Assembly on Transport, including the recommendation to support a rail/bus interchange, the recommendation to support a car-free city centre	Comments noted.
Chapter 7	Community wealth-building	Community wealth-building is both redistribution of financial resources but also development of personal wellbeing and health in our communities. Plan needs stronger	Comment noted.

2558

Draft policy	Topic	Summary of comments	Response
		commitment to importance of social infrastructure and the foundational economy. Any new development should serve & benefit local residents primarily. Also see report on Community Wealth Building across Oxfordshire https://www.oiep.org.uk/big-conversations--oxfordshire-a-county-of-community-wealth-building	
Chapter 7	Omission policy: community-led stewardship	Community First notes policy expectation with regard 'to the appropriate maintenance/management plans [being] organised as part of the design/construction process' in policy G2. Yet argues the Plan could be strengthened by explicitly supporting community-led stewardship. This involves working with, supporting, and releasing the skills, experiences and energy of citizens and inspiring projects that reflect what local people want and need. For instance, green space management plans, nature recovery and biodiversity initiatives, volunteering strategies, local food initiatives, links to schools and business, skills development, cultural and historical celebrations, and climate action. The cross-cutting nature of stewardship lends itself to being a new standalone policy, most obviously in Chapter 7.	Agreed these projects sound inspiring. These appear to be largely things that can't be actioned by the Planning system, and would take place outside of it. The Stewardship Strategy does not seem to be something that could justifiably be required or expected to be implemented, although many of the intended function of it such as maintenance would be covered by a Planning Condition (but the details of how that is managed are not matters for the Planning System).

All Public Responses to the Whole of Chapter 8 135

General Comments Collected During Consultation 143

Headlines for Chapter 8:

2561

Infrastructure

- Consensus that infrastructure improvements should occur before planned development, not after
- Need for the Infrastructure Delivery Plan to adequately mitigate the impacts of planned development
- Concern over increases in traffic congestion
- Lack of 5G coverage in Oxford **Areas of Focus**
- General support for overarching, spatial policies **Site Allocations**
- Several site allocations must include reprovision of play and sports areas, entertainment venues, public parking and community centres
- Encouragement to continue to prioritise brownfield sites (those already developed on)
- Concern over potential loss of green corridors in East Oxford impacting biodiversity and wellbeing
- Health risks associated with contaminated land

- Concerns over the impact of new high density housing developments on existing communities, such as in Kidlington and Water Eaton **General Comments Collected During Consultation**
- Support for 15-minute city principle
- Transport concerns: park and ride, congestion, anti-LTNs, potholes, stationary traffic outside of Westgate centre, cycle highways, trams etc.
- Council tax is too high due to over-regulation

Infrastructure

All Public Responses - Draft Policy I1

Please tell us what you think about policy options set 014b (draft policy I1): Digital Infrastructure to support new development. If you have any additional comments please put them in the comment box.

Not Answered	174	55.41%

Draft policy	Topic	Summary of comments	Response
I1	Broadband connectivity in new developments	Pre-installing gigabit-ready ducts and risers while trenches are open costs pennies per unit and future-proofs buildings for the knowledge economy Oxford relies on; denying it would mean ripping up pavements later at far higher social and financial cost. Requiring developments to have appropriate digital infrastructure from the development stage will aid accessibility and ensure that needs for later remedial works, with the associated disruption for residents of the city and those reliant on the spaces created, are minimised.	Comment noted.
I1	Scope of policy	• This policy is too narrowly focused on broadband and data centres associated with new developments. The policy framework in the Plan should be broadened to provide for the full range of contemporary digital infrastructure requirements, including digital screens associated with existing developments, which are essential to sustaining the vitality of contemporary city centres and ensuring inclusivity and equality.	The policy already includes requirements for minimising the visual and amenity impacts of digital infrastructure. In combination with other policies of the plan, there are sufficient instruments to ensure that installations are not sited in inappropriate locations or have unacceptable impacts.

2565

Draft policy	Topic	Summary of comments	Response
		• As evidenced through recent planning applications in the city centre, there is pressure for the installation of such technology, many in inappropriate locations, which is likely to escalate. A policy approach, with identification of opportunities in key locations for the installation of digital screens working collaboratively with key city centre stakeholders such as WOA, will ensure that such pressures are managed and such necessary infrastructure can be delivered in an appropriate manner.	
I1	Support with suggested amendments	In I1, Data centres may be a commercial use rather than a digital infrastructure, so might not need for a special mention here.	While they are commercial in nature, data centres are forming an increasingly important element of the digital infrastructure that supports the economy and day to day life, and as such their impact as a sector goes beyond what will be the case for a typical commercial enterprise.

I1	Policy not adequate as written	All new data centres should be required to provide details of likely water and electricity requirements. It is confusing that in relation to R5 that there is a limit on domestic water use but that in relation to data centres which use large volumes of water for coolant purposes no restriction is applied to them as part of the planning process. Similar considerations apply to electricity supply where the grid is unable	Policies R1 (net zero buildings in operation) and R5 (water resources and quality) include requirements for energy and water usage that apply to nonresidential/commercial development, which data centres will fall under. It is also unlikely that such proposals are likely to come forward at a significant scale within the city's boundaries due to spatial constraints that would limit the availability of suitable sites.

2567

Draft policy	Topic	Summary of comments	Response
		to satisfy demand at certain critical periods.	
I1	Objection to data centres	Object to the approval for data centres. These conflict with previous supports intensification of employment land. To my knowledge, data centres do not need to be located near to users and so should be treated in the same way as warehousing.	There is a move by government towards considering data centres and similar facilities as critical infrastructure in support of national and regional economic development. Approvals of proposals will still be on the basis of their being sited in suitable locations and in compliance with other relevant plan policies. It is also unlikely that such proposals are likely to come forward at a significant scale within the city's boundaries due to spatial constraints that would limit the availability of suitable sites.
I1	Specific policy unnecessary	I disagree if this makes it more difficult and costly to build more homes	Building regulations also include standards for broadband ready new homes, which this policy will be in alignment with.

I1	Specific policy unnecessary	Have no specific policy	The NPPF requires local planning policies to facilitate the development and expansion of digital infrastructure. They are also recognised as significant infrastructure in national policy and it is therefore considered appropriate to refer to them as such in the local plan.
I1	Specific policy unnecessary	5G internet is so fast and reliable for the home I'm not sure physical internet connections are so important anymore. It'd be interesting to know how many people are making the switch. Make sure there is decent 5G connection. If you insist on going for a physical connection then I think look beyond 1G, in another 5 years I think that'll look slow, that's not future proof.	Mobile connectivity still requires a level of physical infrastructure to support its operation. Building regulations also include standards for broadband ready new homes, which this policy will be in alignment with.

2568

Draft policy	Topic	Summary of comments	Response
I1	Mandate service conduits	One current issue is that every new development digs another channel under the streets, which collapse and are not properly resurfaced by the Council. (We have 50 or so of those in our street for example.). Would it help to have some policies that pre-position service conduits in key areas, and mandate developers to use those rather than creating yet more surface damage?	Through this policy and other design policies, developers are encouraged to consider the placement and integration of conduits, access points for maintenance etc from the earliest design stages. While the city council is not the highway authority that manages approvals for roadworks (that is the county council), the delivery of buildings that are already futureproofed for digital infrastructure will hopefully mitigate the level of disruption for new development at least.

Statutory Consultees Responses – Draft Policy I1

Oxfordshire County Council

Draft Policy	Summary of comment	Response	Outcome
Policy I1 - Digital Infrastructure	**Digital Connectivity** Oxfordshire County Council supports this policy however we would request a change to part d) of the policy as follows: *"**actively** ~~where required~~ support the effective use of buildings, outdoor spaces and the public realm to accommodate welldesigned and suitably located mobile digital infrastructure; minimise impacts of digital infrastructure. on the visual amenity, appearance and character of buildings and surrounding areas, and minimise impacts on the amenity of occupiers and neighbours of development."* This gives more strength to the requirement.	Unclear whether the change "strengthens" the requirement or not. Although it potentially widens its application, it may weaken situations where there an actual requirement to deliver digital infrastructure. Will consider how best to address this this in the next stage of the plan.	Oxford City Action: Consider wording of bullet point d)

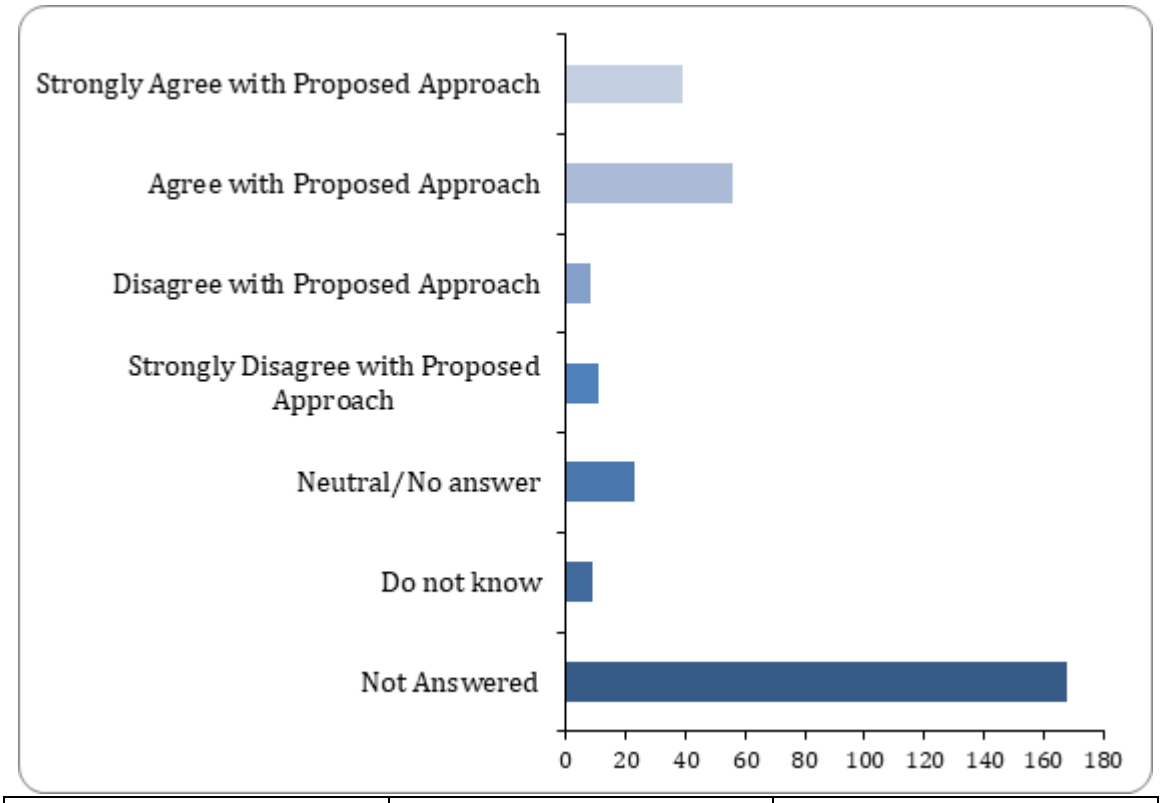
2569

Areas of Focus

All Public Responses to North Oxford (Northern Edge of Oxford) Area of Focus

Please tell us what you think about our approach to identifying the North Oxford (Northern Edge of Oxford) Area of Focus

There were 146 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Proposed Approach	39	12.42%
Agree with Proposed Approach	56	17.83%
Disagree with Proposed Approach	8	2.55%
Strongly Disagree with Proposed Approach	11	3.50%
Neutral/No answer	23	7.32%
Do not know	9	2.87%
Not Answered	168	53.50%

Draft Policy	Topic	Summary	Response
Northern Edge of Oxford AOF	Collaboration with Wolvercote Neighbourhood Forum	The Plan proposes four 'Areas of Focus' that will each have 'an overarching policy'. One of these is proposed to be 'The Northern Edge of Oxford Area of Focus', which will (presumably, in view of its name) overlap with the Wolvercote Neighbourhood Forum area. However, the vagueness of its name makes this unclear. We are surprised there has been no consultation with WNF about it, and we note there is no mention of the Wolvercote Neighbourhood Plan in relation to it. Seven reasons are given for identifying this Area of Focus, one of which will be provocative to our residents: 'Generally lowdensity suburban development therefore has potential for intensification'. We ask that the Plan makes clear that the 'overarching policy' to be developed for this Area of Focus will be developed in collaboration with WNF, to ensure it fully takes account of the views of its residents.	Reference is made to the Wolvercote Neighbourhood Plan in the introduction to the North Infrastructure Area. The description of the area at Regulation 18 it is considered did make it clear the broad area applicable, and the bullet points of key considerations provided thoughts to respond to.

2572

Draft Policy	Topic	Summary	Response
Northern Edge of Oxford AOF	Support	The approach set out in the policy is supported. It would be useful to have wording to recognise that developments such as Oxford North have already contributed to providing significant improvements to pedestrian and cycling infrastructure as well as public transport.	Comment noted.
Northern Edge of Oxford	Support but no urban sprawl	But need to ensure that this AoF does not become urban sprawl and erode any further into the Green Belt.	The Plan only applies within Oxford City Council's boundary.
Northern Edge of Oxford	Support but need to think about infrastructure	Supports development and understands it is needed, but needs to ensure more infrastructure is built in accordance and improved active transport opportunities	Infrastructure needs in the North of the city are described in the Plan and in the Infrastructure Development Plan.
Northern Edge of Oxford	Disagree with car parking	Disagree with reducing car parking	Comment noted.
Northern Edge of Oxford	Concern about traffic	Transport policies are not strong enough and traffic is an issue in this area, the relocation of the Kassam could worsen this	The City Council is not the Highways Authority and the Local Plan set highways policy.

2573

Draft Policy	Topic	Summary	Response
Northern Edge of Oxford	Concern about water table	Concern about development and intensifying North Oxford because of the impact on the water table across the city	General policies of the plan are concerned with groundwater impacts.
Northern Edge of Oxford	Support and could go further	Encourage an extension of this Focus Area northwards to be 'Science North' cluster as a nationally significant economic asset that demands a measure of cross-boundary cooperation at a spatial strategy level.	The AoF cannot extend northwards a that would be outside of Oxford City Council's boundary .
Northern Edge of Oxford AOF	Align with neighbouring authorities	We support the acknowledgement that this area is adjacent to other urban extension sites in Cherwell District Council and we would urge that on Areas of Focus (AOF) of this scale, the Council works effectively and proactively to ensure there is a joined up approach with neighbouring authorities, to guarantee neighbouring sites work in conjunction with each other and provide the necessary wider infrastructure. Reference should also be made to the close proximity to the Green Belt to this AOF and the important role it plays in providing a green gap between North Oxford and Kidlington. It should be acknowledged that the green belt	Comment noted. The Green Belt area referred to is within Cherwell DC area.

2574

Draft Policy	Topic	Summary	Response
		needs to remain and be protected to ensure the gap is not lost and the areas of development merge into one another.	

Statutory Consultee Responses – North Oxford Area of Focus

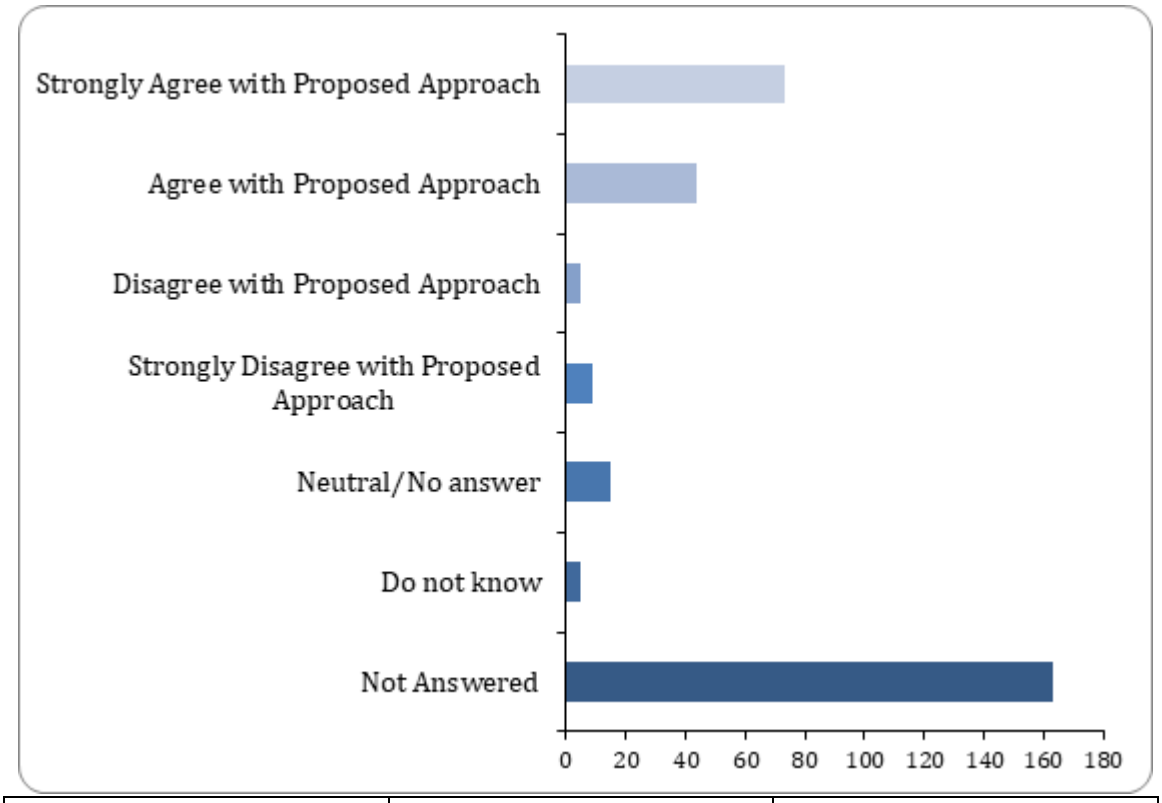
2575

All Public Responses to South Oxford (Cowley Branch Line, Littlemore and the

Leys Area) Area of Focus

Please tell us what you think about our approach to identifying the South Oxford (Cowley Branch Line, Littlemore and the Leys Area) Area of Focus.

There were 151 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Proposed Approach	73	23.25%
Agree with Proposed Approach	44	14.01%
Disagree with Proposed Approach	5	1.59%
Strongly Disagree with Proposed Approach	9	2.87%
Neutral/No answer	15	4.78%
Do not know	5	1.59%
Not Answered	163	51.91%

Draft Policy	Topic	Summary	Response
Cowley Branch line, Littlemore and The Lyes AOF	Support	This area contains several of the city's key employment sites with the Unipart Site adjacent to the Area of Focus. Improved public transport connectivity, including the opening of passenger services on the Cowley Branch Line and the proposed station near Oxford Business Park will offer major opportunity. Many proposed developments are a long way from a station, so the Cowley Branch Line is needed.	General support noted.
Cowley Branch line, Littlemore and The Lyes AOF	Support	Network Rail welcome their inclusion of the Cowley Branch proposal and policy to maximise development value in and around the two proposed stations. Network Rail supports an approach which favours sustainable travel modes. The	Support noted. Added additional text in relation to level crossings.

Draft Policy	Topic	Summary	Response
		oxford station connectivity study has been designed to promote sustainable travel choices for Oxford Station and those stations nearby which also serve travel into the city. This has included a number of cycle parking's around Oxford station and leisure cark park to ease pressure within the immediate station environment. It should also be noted that the area surrounding Oxford Parkway station is likely to be subject to master planning activities over the next 12 months. Development sites coming across the area should seek to reduce car parking in line with Policy C8 – Network Rail recognise the ambitions to reduce parking within the Oxford Station area. The station gateway movement	

2579

Draft Policy	Topic	Summary	Response

		principles state plans should aim to limit parking provision where there is good accessibility to a range of facilities. Whilst promotion of sustainable transport methods is favoured, there is currently no provision at Oxford South for car parking, drop off/ pick-up, disable parking or bus links. The non-provision of bus access from Grenoble Road or Shuttle bus from Grenoble housing needs to be considered when providing accessible public transport options. The policy also makes references to the proposed CBL railway stations at Oxford Science Park and in the vicinity of ARC Business Park. In order for these stations to be delivered Mallams footpath level crossing must be formally closed as currently part of the PROW	

2581

Draft Policy	Topic	Summary	Response
		network and the nearby Spring Lane Level Crossing upgraded as an alternative to Mallams as part of the Cowley Branch project. The policy should therefore recognise and reference the need to close this level crossing before the stations can be delivered.	
Cowley Branch line, Littlemore and The Lyes AOF	Support and working in better partnership with south and vale	Good idea but better joinworking is needed. Support for more tree cover and would like to see urban sprawl and green belt is protected.	General support noted. Urban sprawl and green belt are covered under national policies.
Cowley Branch line, Littlemore and The Lyes AOF	Support	Lots of support for more tree cover and policies.	General support noted.

2582

Draft Policy	Topic	Summary	Response
Cowley Branch line, Littlemore and The Lyes AOF	General support	Support but would want to see infrastructure and travel infrastructure significantly improved	General support noted. The policy covers infrastructure improvements.
Cowley Branch line, Littlemore and The Lyes AOF	Disagree with elements	Disagree with high-rise condensed housing and reduced parking. LTNs have made traffic worse and better public transport links are needed.	The policy specifically support improvements to public transport links. The policy explicitly requires buildings of height to be carefully designed and this is also required under other policies in the plan (HD9).
Cowley Branch Line AOF	Templars Square clarification	According to the Preferred Options Draft Policy Map, Templars Square is outside of the Cowley Branch Line, Littlemore and The Leys AOF. The Templars Square site does however lie within the 1,500m buffer zone of the proposed CBL stations. Being outside of the CBL AOF, we are of the view that financial	As the nearest district centre to the proposed CBL stations, the role and importance of Cowley primary district centre in both serving the local community and local workforce is likely to increase, with associated increases in footfall at the centre. A recent announcement from Govt proposed £120m towards the £155m rail infrastructure costs. However, there is an additional suite of public realm and active travel related improvements which will be sought via S106 contributions, rather than CIL. As such, the plan introduces (through Policy S3) an expectation for financial contributions to be sought from new trip-generating

2583

Draft Policy	Topic	Summary	Response
		contributions associated with the delivery of the CBL would not be sought. We request clarification on this, given the impact such an approach would have on deliverability and viability. Any contributions towards the CBL should be delivered through CIL. It is noted that detailed policies around infrastructure contributions and site allocations are not included in the current consultation version of the draft Local Plan. Further review and comments will be provided when further detail is shared/becomes available in subsequent policy consultations on the draft Local Plan.	development within a 1,500m buffer zone of the proposed CBL stations in order to achieve public transport enhancements in this area including sustainable transport measures, in accordance with the paragraph 58 tests (NPPF, Dec 2024). We have included a specific cost for the "CBL S106 contributions" in our Local Plan Viability Assessment which will be published at the next consultation stage. The area of focus will have its own specific policy, which introduces area-specific policy requirements.

Statutory Consultee Responses – South Oxford Area of Focus

Oxfordshire County Council

Draft Policy	Summary of comment	Response	Outcome
Cowley Branch Line, Littlemore and The Leys Areas of Focus	**Strategic Planning** We look forward to seeing the proposed wording for this area of focus, noting that work is underway regarding the Cowley Branch Line (CBL) therefore, the County Council will continue its engagement with the City to assist in drafting a local plan policy which captures the flexibility and requirements to deliver this important piece of infrastructure. **Place Planning and TDM (Central)** There is a need to better integrate employment sites to the city's P&R network. There is a need for existing and future development to be better integrated into the surrounding areas, particularly in terms of walking and cycling.	Noted. What infrastructure is needed to deliver these outcomes that is in addition to the schemes included in the IDP? Is it in publicly available documents that we can reference and include? Are the schemes within Oxford city?	No Action Required – see comment in relation to S3 above. No Action Required

2586

All Public Responses to East Oxford (Marston Road and Old Road) Area of Focus

Please tell us what you think about our approach to identifying the East Oxford (Marston Road and Old Road) Area of Focus.

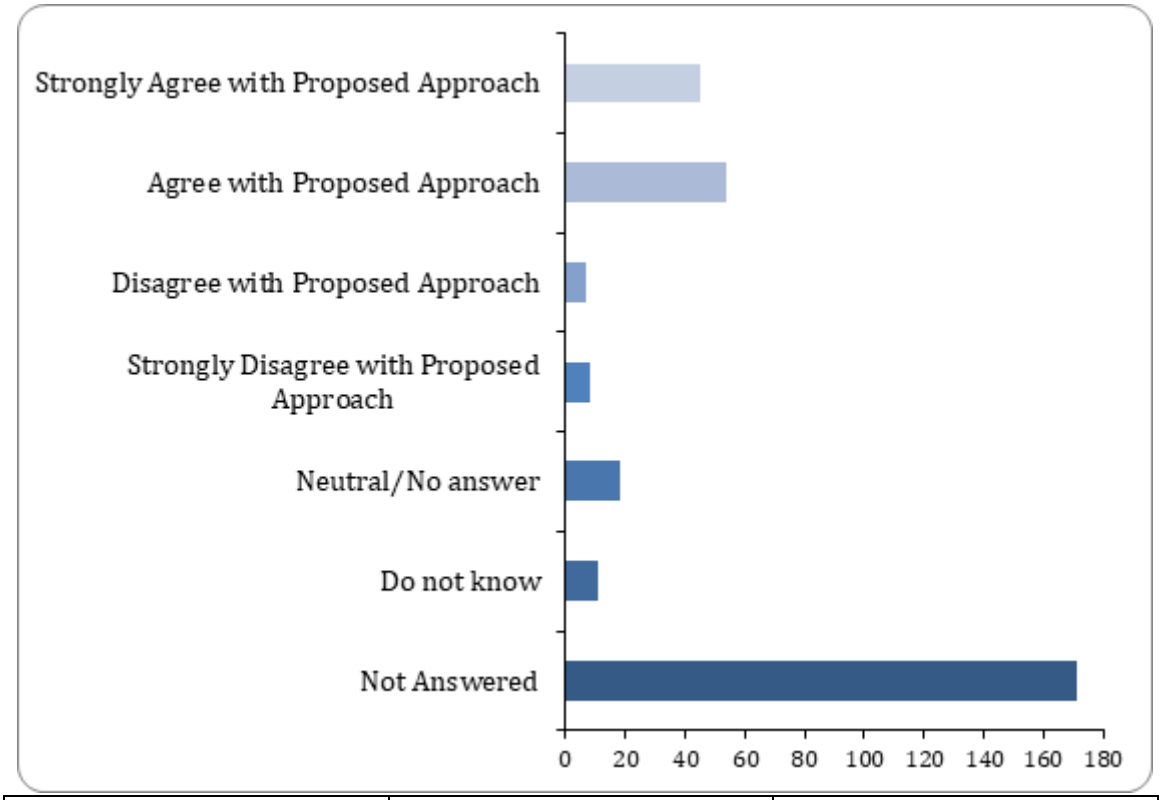
All Public Responses to West End and Botley Road Area of Focus

Please tell us what you think about our approach to identifying the West End and Botley Road Area of Focus.

There were 143 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Proposed Approach	45	14.33%
Agree with Proposed Approach	54	17.20%
Disagree with Proposed Approach	7	2.23%
Strongly Disagree with Proposed Approach	8	2.55%
Neutral/No answer	18	5.73%
Do not know	11	3.50%
Not Answered	171	54.46%

Draft Policy	Topic	Summary	Outcome
West End and Botley Road AOF	Nuffield Sites	A key objective for the Nuffield sites is for the masterplan to be a commercial led proposition which has the ability to revitalise the route from the station to the City Centre and to make a significant contribution to the creation of a wider Innovation District in the West End. The withdrawn 2040 Plan identified the West End and Botley Road AOF as 'an appropriate location for employment-related development opportunities which seek to build on Oxford's key economic strengths that link research, education and social enterprise in areas such as life sciences and energy. Given the high demand for commercial research and development space and specific developer interest, it is likely that this sector will be the main river of development across the area'. It also stated that 'there are also opportunities to accommodate a range of other sectors and uses, such as the creative and digital industries, as well as affordable workspaces for startups, co-working spaces, or even community uses where feasible across the wider area that this AOF covers'. These aspects of the withdrawn Plan	The Council has maintained a dialogue with landowners in relation to policy development. We have reviewed these comments and taken them into account when producing the Area of Focus Policy.

2594

Draft Policy	Topic	Summary	Outcome

2595

		continue to be supported by Nuffield as relevant for inclusion in the 2042 draft Plan, subject to viability considerations as outlined above. The Nuffield Sites are fundamental in supporting the delivery of an Innovation District in this key part of the city and assisting to realise the potential of Oxford's West End by supporting Oxford's knowledge economy, provision of commercial space and providing opportunities for a variety of occupiers from SMEs and startup businesses, research and development/life sciences occupants to head quarter office spaces. There is also the additional benefit that they are all in a single ownership allowing the owner to think strategically about the nature of the uses on parts of the sites, thereby promoting a Masterplan. Given the importance of the new Local Plan in establishing the planning policy framework and policy platform for the Nuffield West End Masterplan, it is important to ensure the 2042 Local Plan is sufficiently defined on site specific aspects whilst providing the necessary flexibility when applying wider Local Plan planning policies to such site proposals, to ensure they	

2596

Draft Policy	Topic	Summary	Outcome
		are able to successfully deliver a transformational development, new living accommodation, employment growth in the form of a new innovation district at the Nuffield Sites and enable the delivery of significant benefits for the community and for Oxford.	
West End and Botley Road AOF	Osney Mead	OUD continues to strongly support the inclusion of Osney Mead in the West End and Botley Road Area of Focus and the recognition in the draft Plan of the significant development and regeneration opportunities here.	The support is welcomed.
West End and Botley Road AOF	Support	Strongly supportive of development of Oxford's West End.	The support is welcomed.
West End and Botley Road AOF	Views/Building heights	Development within the West End and the Botley Road needs very careful management to prevent detrimental harm to the views out towards the western hills from the city centre, and views back from the western hills towards the historic city centre. This is a highly sensitive location – with Botley Road sitting within some of the key historic defensive views out from St Georges Tower to the west. More specific reference needs to be made to this to ensure buildings will be limited to appropriate heights.	These concerns are addressed through a combination of the AOF and other policies in the plan.

2597

Draft Policy	Topic	Summary	Outcome
West End and Botley Road AOF	Support	BL supports the recognition that that the West End and Botley Road Area of Focus will see significant development and regeneration opportunities.	Support noted.
West End and Botley Road AOF	Network Rail	Network Rail supports the allocation of the West End and Botley Road area as an 'Area of Focus' and the recognition that: a) 'The redevelopment of Oxford railway station presents the opportunity to create an easy and attractive transport interchange between rail, bus and active travel; and b) 'There is a significant opportunity to create highdensity urban living with good provision and access to open space and a vibrant mix of uses, and also that make a significant contribution to the knowledge economy'. Network Rail would encourage any future draft wording for the proposed Area of Focus to reflect the acknowledgements outlined above to enable the area to reach its full potential.	Support noted.

2598

West End and Botley Road AOF	General support but concern about infrastructure	Efforts need to ensure environmental, cultural, societal and commercial impacts Car parking needed. Concern about all infrastructure and transport infrastructure	These concerns are address by the AOF (where releveant), and by othe specific policies in the plan.
Draft Policy	**Topic**	**Summary**	**Outcome**
West End and Botley Road AOF	More homes needed	More homes needed to support development	The plan's over-arching strategy prioritises housing.
West End and Botley Road AOF	Support	Commentary supporting as this area is already built up with significant retail and commercial areas	Support noted.
West End and Botley Road AOF	Concern about flooding	Concern that majority of this area is in flood zone 3b	Policies elsewhere in the plan address flood risk. We have produced a Strategic Flood Risk Assessment which provides flood risk maps for the city.

2599

Statutory Consultee Responses – West End Area of Focus

There were no statutory consultee responses to this area of focus.

Comments on All Areas of Focus

This section contains all comments received regarding all areas of focus, including public and statutory responses.

Topic	Summary	Response	Outcome
AOFs	Options do not consider opportunities outside of city boundaries	The Draft Plan identifies Areas of Focus. There is a critical omission in the options presented in that it does not consider opportunities for expanding beyond the city's boundaries. In reviewing the reasons for identifying the areas as presented, supporting the regeneration of existing areas within Oxford, supporting infrastructure investment – would all equally apply. The draft Plan refers to ongoing discussions with neighbouring authorities and identification of areas of focus beyond the city's administrative boundaries would assist and focus discussions.	While the surrounding context and other activity in neighbouring districts may be taken as one of the wider considerations, the spatial and allocation policies within the plan can only apply within the local planning authority boundaries.

2602

AOFs	Scope of AOF beyond site allocation	ChCh generally supports the proposal to identify several 'Areas of Focus. The 'West and Central Area quadrant of the City' quadrant includes the 'West End and Botley Road Area of Focus'. ChCh agrees that this area "offers some significant development and regeneration opportunities". ChCh notes that the Areas of Focus have huge potential to help deliver the housing and economic needs of Oxford, in	The AoF policies cover issues relevant across a larger area, with multiple sites and also areas that are not identified sites or don't have a site allocation policy.
Topic	**Summary**	**Response**	**Outcome**
		particular the West End and Botley Road area. However, it is not clear from the Draft Document for consultation what these Areas of Focus will cover over and above any site specific allocation policies.	

2603

Oxfordshire County Council

Topic	**Summary**	**Response**	**Outcome**
Areas of Focus	**Place Planning and TDM (Central)** We welcome the opportunity to review overarching and area specific policy.	Noted.	No Action Required

2604

Site Allocations

This section contains all comments received regarding site allocations, including public and statutory responses.

1c – Red Barn Farm No comments.

1a1 - Northern Gateway (Oxford North)

Site no.	Site name	Summary	Response
001a	Northern Gateway	Objection – Do not allocate due to traffic, environmental (proximity to SAC) and economic reasons. This is directly next to the A34 the most congested and underspecified arterial route in the country, this will have severe countrywide negative impacts.	A lot of development in this area is already permitted and built out. This was supported by significant transport infrastructure works.
001a	Northern Gateway	Support - ONV supports the allocation of the Northern Gateway area within the Local Plan. At this stage the proposed wording for the final policy has not yet been provided. However, discussions are ongoing with various parties with regard to these policies. In relation to Oxford North, whilst ONV recognises the wider need for housing in Oxford, the focus of Category 1 employment sites must be for employment uses and housing should be located elsewhere, including using the	Not all of the housing part of the hybrid application has yet come forward.
Site no.	**Site name**	**Summary**	**Response**

		strategy of meeting the need in adjacent districts with efficient transport routes to the employment sites. This has already happened in the context of the Northern Gateway, through the Cherwell Local Plan Partial Review – Oxford's unmet Housing Need plan that allocates circa 4,500 homes to the north of the development. Such housing will provide sufficient housing to meet the labour demands for Oxford North without diluting the site's potential to boost the supply of jobs locally. We believe that the Council should look beyond its boundaries to address such issues.	

2607

1e - Pear Tree Farm

Site no.	Site name	Summary	Response
001e	Pear Tree P&R	Among the already allocated sites there are three within our area: OUP Sports Ground; Northern Gateway; Peartree Farm. We ask that it be made clear that development at the last of these is conditional on a direct pedestrian/cycling route being constructed to link the site to Parkway station, which will require collaboration with Cherwell District Council.	This connection is noted as important in the draft allocation policy.

6b - Banbury Road University Sites – Parcel B No comments.

8a - Bertie Place Recreation Ground

Site no.	Site name	Summary	Response
008a	Bertie Place Recreation Ground	Whilst we are aware that the site has previously been allocated for housing, this should not come at the expense of a public playground for children and families, which it is not intended to replace like for like. Other sites should be explored which does not result in the loss of a well-used community facility	All suitable and available sites with development potential are being considered as part of our efforts to address the city's housing need. The plan also recognises the importance of public open space, and other forms of green infrastructure. The allocation policy seeks to balance between providing housing on a suitable site and ensuring that the key function of the site as a public open air recreation ground is retained.
008a	Bertie Place Recreation Ground	Whilst it has been defined as a Supporting rather than Core part of the network, we nevertheless consider that their contribution as green spaces is important and that they should be protected.	The designated core (G1A) and supporting spaces (G1B) are afforded a higher level of protection than the minimum mandated in the NPPF (which is applicable to G1C 'all other green/blue spaces'). Development schemes affecting supporting

Site no.	Site name	Summary	Response

2608

			spaces, such as Bertie Park, will be required to reprovide affected spaces to the same standard or higher (see responses for policies G1 and G2).
008a	Bertie Place Recreation Ground	The considerable difficulties with the reprovision of the site have led OCC to suggest inclusion of Bertie Park as a site for development in the 2042 plan without the inclusion of a planning condition requiring re-provision. The impossibility of complying with NPPF s.104 means that grounds for its inclusion should be re-visited. It should not be re-included solely on the basis that it has been on the plan for a quarter of a century. Or that we have been consulted before.	The allocation policy specifically includes a requirement for reprovision of the existing playground. Reprovision will also be a requirement for any scheme to be compliant with the policies in the emerging plan (see policy G2). We consider this approach is compliant with national policy, this is addressed in more detail in the sections dealing with green infrastructure, policies G1 and G2 in particular.
008a	Bertie Place Recreation Ground	1. Flooding. All advice from the Environment Agency indicates significant increase in flooding 2. Safety. Advice from the police is that alternative recreation area is not a safe place for children to play.	The allocation policy includes site specific requirements for surface/ground water assessments, incorporated sustainable drainage systems and
Site no.	**Site name**	**Summary**	**Response**

2609

			management plans to deal with surface water flooding risks. The policy requirement with respect to the reprovision of current recreation facilities is that the playground is within the site boundary, at the same standard or higher (see policy G2), and it is expected that sound design principles such as those included in guides such as Secure by Design are followed.

2610

11 - Canalside Land, Jericho

Site no.	Site name	Summary	Response
011	Canalside Jericho	Nothing's happened for so long. The view of the church from the towpath should not be blocked by housing. This is on the canal, built for boats, and should be a boatyard. There are few spaces along the canal to sit and enjoy it. An open square, greenery, cafes and a wharf are more appropriate for the site.	It is likely some enabling development would be needed to bring the site back into use.
Site no.	**Site name**	**Summary**	**Response**

011	Canalside Jericho	The community and councillors have been very clear for many years that they need a new community centre, a public square and a boatyard, and it must be accepted that there won't be much room for housing. Definitely not student (especially speculative) house.	Comment noted.

12 - Churchill Hospital

2611

Site no.	Site name	Summary	Response
012	Churchill Hospital	Proximity to Lye Valley (abutting Lye Valley North fen) means that future of the site is of crucial importance to the fen ecology and water supply. Maintaining calcified alkaline groundwater supply to Lye Valley needs to go into the site-specific policy for the Churchill site.	Comment noted.

012	Churchill Hospital	BBOWT welcome that this allocation no longer includes the meadow, which is an Oxford City Wildlife Site. The meadow is not only vitally important in relation to the Lye Valley but is also subject of an ecological compensation scheme for a housing development in Littlemore. Nevertheless, any development on this site is of the utmost concern with respect to the Lye Valley. Any development on existing urbanised surfaces will still need a whole suite of measures to ensure there is no impact on the SSSI and LWS. It is on surfaces that are currently green and free draining that any development would have most impact on the hydrology of the meadow through reducing the evening out effect that such green surfaces have on the amount of water flowing into the fen, which is particularly vulnerable to severe and permanent damage from shortterm very high water flows. This matter is well dealt with in the detailed study in the evidence library on the Lye valley and there is no need for us to expand on it here. Development on green surfaces also may well lead to less water flow during dry periods causing the fen to dry out, and impacts on water quality which also can have a highly negative impact on the fen. In our opinion therefore no development on currently green surfaces should take place on this site.	The site allocation policy will state that development proposals will need to avoid adverse effects on the SSSI. This is also required under Policy G6 of the plan.

2612

012	Churchill Hospital	Protected species constraints go beyond nesting birds and roosting bats. The most recent planning application on the site identified presence of reptiles (e.g.viviparous lizards), a number of which had to be captured and translocated to a specially built refuge on the site edge nearer the SSSI. Also, proximity to Lye Valley suggests slow worms and grass snakes could be present on site (as they are found in the valley). Thus, reptiles should be added to protected species constraints flagged in policy. Note that wording of sentence in relation to species constraints in reg 18 is incomplete.	We have conferred with ecologists, and the policy has been updated to include reptiles.

2613

2614

012	Churchill Hospital	Parking Issues: The hospital has a total of 1506 parking spaces compared to a total of 2270 across whole of city centre. 4646 car parking spaces exist across the three hospitals with 70% allocated to staff. Modification Requested: (Rep relates to LP2040 Policies) References to Policies G1, G3, G5 are not relevant and are not related to the SSSI – Policies G6 and G7 Many specific statements about the Lye should NOT be included in the Site allocation policy but should be applied more generally (See comments on Policy G6+G7). Reduce parking in exchange for further development as discussed (Response R6 – Air Quality) The phrase "issues including parking are considered in a comprehensive way to make the most efficient use of land." should be amended to: "in a comprehensive way to make the most efficient use of land, address the climate crisis and realise essential health, social and environmental benefits."	Policies G1 – G3 and G6 are referenced in the site allocation policy as all are relevant and applicable to developments on this site. The site allocation policy also provides some additional detail in relation to the SSI and future development on this site.. The site allocation policy references potential contamination of hospital and historic uses on the site. Wording relating to parking and efficient use of land has been updated. Development proposals will be considered against requirements set out in the plan as a whole which would include landscaping

2615

		"A buffer zone should be provided during the construction period to avoid disturbance to the adjacent SSSI." Add "in operational phase" "because of the use as a hospital some areas of potential contamination are present on the site" – site contamination is mostly caused by asbestos and WWII contaminants, not hospital use. WWII buildings and assets must be identified and retained.	buffers and impacts on the SSSI during operational phases. The site allocation policy specifically references the WWII buildings as non-designated heritage assets which should be enhanced.

2616

14 - Templars Square

Site no.	Site name	Summary	Response
014	Templars Square	Crucial to local life and being allowed to die store by store. We need the shops in a warm and accessible indoor centre.	The draft allocation policy is clear that the centre must keep its district centre function, although retail specifically is not its own use class in the planning system anymore. However, being covered or not will be a detailed

Site no.	Site name	Summary	Response
			design decision and is not a requirement of the policy.

16 - Cowley Marsh Depot No

comments.

17 - Crescent Hall

Site no.	Site name	Summary	Response
017	Crescent Hall	Comment: Substantial Roman pottery activity has been identified in the general area.	The potential for the site to contain archaeological remains is low to moderate. (The site is within a very large zone of general potential for Roman kilns).

18 - Diamond Place and Ewert House

Site no.	Site name	Summary	Response

018	Diamond Place and Ewert House	Site should include medical facilities if possible.	The draft allocation policy lists healthcare uses as a suitable use on the site.

20b2 - Elsfield Hall, Elsfield Way

020b2	Myers Briggs, Elsfield Hall, Elsfield Way	We are pleased to see a proposal to convert the existing office accommodation to residential, which will be more appropriate at that location.	Support is welcomed.

2618

21 - Faculty of Music, St Aldates No

comments.

24 - Government Buildings & Harcourt House

Site no.	Site name	Summary	Response
024	Government Buildings and Harcourt House	Very important that any development have very minimal impact on the character and sense of seclusion of Headington Hill Park. Windows of buildings overlooking the park would have significant detrimental impact.	The importance of the interface with the park is noted in the draft site allocation policy.

Site no.	Site name	Summary	Response
024	Government Buildings and Harcourt House	It is noteworthy that this site has remained vacant for a very long time and that the Policy SP16 was prepared in 2016 so 9 years ago and the site had been vacant for at least 10 years before that. This is an attractive spot in a prosperous part of the City there is absolutely no reason why it could not have been redeveloped years ago and yet the Council provides no explanation as to why this is. There surely is a case for some increase in business rates for sites such as this to encourage the owners to progress their redevelopment.	The landowner has stated their interest in developing this site during the plan period.
024	Government Buildings and Harcourt House	The introduction of additional requirements (e.g., building performance/ ecology), on sites with longstanding viability challenges is likely to hinder redevelopment	Whole-plan viability testing has been carried out.
024	Government Buildings and Harcourt House	Welcome acknowledgement of the lawful employment use on site. We would wish to see the full range of uses set out under existing OLP2036 policy SP16 carried forward including complementary uses.	Noted. We will consider suitable uses for the site that align with our overarching strategy. LP2036 recognised Harcourt house as an employment site (Cat. 3). LP2045

Site no.	Site name	Summary	Response
		The Centre maintains an aspiration to include commercial research and development use within a site redevelopment to complement academic research. The commercial activities would be 'spin out' application of academic research as is the norm in the modern academic arena owing to obvious benefits from the co-location of cutting-edge academic research and its commercial application. The current Local Plan which allows for complementary uses has been important in allowing the Centre to advance development proposals.	considers Harcourt House as a "non-designated" employment site and introduces specific criteria relating to the redevelopment of non-designated sites outside of the city and district centres.
024	Government Buildings and Harcourt House SA Form	Disagree with negative rating against SA objective 11. The site contributes little to the character of the area and could be seen to detract from the heritage asset. Redevelopment of the site presents an opportunity to enhance the area, which should be viewed positively.	The reason for the negative SA rating on the SA Form is because in its current state, the site, as you point out, "contributes little to the character of the area and could be seen to detract from the heritage asset".

2620

26 - Jesus College Sports Ground (Herbert Close) and 32, 234 - Lincoln College and Jesus College Sports Grounds

Site no.	Site name	Summary	Response
026, 032, 234	Jesus and Lincoln College Sports Grounds	These are key green spaces with woodland providing biodiversity and landscape value.	The draft site allocation policies note these features and require significant retention of green infrastructure.
026 and 032, 234	Jesus College Sports Ground and Lincoln/Jesus College Sports Grounds	We assume that the reference to site 234 is an error as this site is not allocated in the Adopted Local Plan 2036. We appreciate that sites 026 and 032 are allocated in the existing Adopted Local Plan but we think that these allocations should be reconsidered because of the potential impacts of housing development on land that is now covered by green infrastructure policy G1. The arguments are very similar to those presented for Oriel College Sports Ground above, especially in relation to effects on the setting of the Conservation Area, visual prominence and loss of habitat connectivity. If, contrary to our preference, allocations here are confirmed, the City Council should ensure strong developer contributions, for example for provision of public outdoor space and biodiversity net gain. Affordable housing for NHS and university staff at the nearby Old Road Area of Focus (Warneford, Churchill, Old Road Campus) should be prioritised.	The sites do need to be developed carefully, reflecting the sensitivity of the conservation area. The raft site allocation policies are drafted to ensure this happens.
026	Jesus and Lincoln	Do not support the inclusion of a policy.	

Site no.	Site name	Summary	Response
2622	College Sports Grounds	Cowley is the most green-space-deprived suburb in Oxford. According to a study undertaken in 2006 it had only 1.14HA per 1000 residents in 2006 of a city-wide average, then, of 5.75HA, and with a now 11.2% population increase. This is the last large sports facility following the loss of other green space in the area. There is no suitable alternative available. Retaining some of the sports provision is NOT sufficient as it will not be adequate to service the needs of all at peak times, which invariably will mean residents can only use them at unpopular times. Most alternative sites to relocate sports facilities are already earmarked for development.	The data presented by the respondent was taken from a City Council study from 2006. The figures presented (both for Cowley and the city-wide average), relate to "publicly accessible green space". While reference was made to the city-wide average of 5.75ha per 1,000 population within the Oxford Core Strategy 2026, *that* Plan sought to maintain an overall average of 5.75ha of publicly accessible green space per 1,000 population and set out clearly that, while it was desirable that this standard was maintained, it should not necessarily be applied as a requirement within all new developments and was, at that time, used as a basis to support onsite open space provision within larger developments.

Site no.	Site name	Summary	Response
			The desire to maintain 5.75ha of publicly accessible green space per 1,000 population was not carried forward into OLP2036. Regardless, Jesus and Lincoln College sports grounds are both private open-air sports facilities/ private open space. LP2042 proposes that both sites are wholly "supporting GI". Site allocation policy wording will be drafted to ensure appropriate reprovision of sports pitches.
026	Jesus and Lincoln College Sports Grounds	BBOWT disagree with the site allocation as it is in the Oxford Green Infrastructure Network. Whilst it has been defined as a Supporting rather than Core part of the network, we nevertheless consider that their contribution as green spaces is important and that they should be protected.	Noted.
032	Lincoln College Sports Ground	Sports grounds are important to university culture and should be preserved. Already a very large student block	The policy does require that sports provision is retained or reprovided.

Site no.	Site name	Summary	Response
		nearby so concerned about adding to the high concentration.	
032	Lincoln College Sports Ground	Lincoln College support proposed site allocations in the Plan drawn primarily from previously allocated sites in the Oxford Local Plan 2036 and sites that were being considered in the (now withdrawn) Oxford Local Plan 2040. It is, however, important to note that the sites owned by Lincoln and Jesus Colleges are separate and therefore it is vital that each College is able to deliver each site individually and separately.	The Jesus and Lincoln Sports Grounds are proposed as separate allocations in the draft site allocation policies.

2624

27 - John Radcliffe Hospital

Site no.	Site name	Summary	Response
027	John Radcliffe Hospital	The SA form says the site is within the setting of a conservation area, but part of it is within a conservation area, so this needs correcting. Surface water flooding has been a serious issue recently, particularly in car park T.	SA form updated. Policies require that development proposals consider and mitigate for surface water flooding.

027	John Radcliffe Hospital	Key issues for this site are as follows: • Onsite Parking	It is agreed that surface-level parking is not an efficient use of land. New buildings and hard standing better manage surface

Site no.	**Site name**	**Summary**	**Response**

2625

		• Creating increased demand for housing • Huge basements which remove water retention capacity of land The hospital has a total of 2600 parking spaces compared to a total of 2270 across whole of city centre. 4646 car parking spaces exist across the three hospitals with 70% allocated to staff. The football fields of parking lead to: • • Environmental and health issues due to traffic generated • Flooding in Marston and Northway due to vast surface level parking • Prime housing land wasted, which in turn would reduce the need to travel *(Policy references are to LP2040 policy)* Policy includes no targets to reduce parking provision	water runoff, and policy approaches require this. Parking should be rationalised to reduce unnecessary circulating and queuing around the site, and to reduce the amount of space it takes up. The level of parking will have to be strongly justified, with mitigations to avoid worsening wider impacts.

2626

Site no.	Site name	Summary	Response

		There are long-standing surface water flooding issues in Northway relating to the John Radcliffe Hospital site. Future policy needs to be stronger and require a reduction of surface water flooding issues rather than seeking appropriate mitigation measures. Old Headington Conservation Area Appraisal does not discuss the John Radcliffe Hospital - it ignores it! Modifications proposed *(reference is to LP2040 policy)* • remove justification for retention of car parking based on need, instead it should reduce queueing, • parking should be replaced by development • "issues including parking are considered in a comprehensive way to make the most efficient use of land." Amend to: "in a comprehensive way to make the most efficient use of land, address the climate crisis and realise essential health, social and environmental benefits." • Protection and mapping of JR Green as Core Green Space	
Site no.	**Site name**	**Summary**	**Response**

2627

		• Protection of Cuckoo Lane, Listed Walls, Treelines, significant view lines • Removal of confusion around reduction and mitigation of flood risk in favour of reduction or "net-zero" • Enforce use of SuDS and other systems with policy specifying that civil action will be taken if runoff continues • " • Ostler Road and Ostler Way" is Osler Road, "Sandford Way" is Sandford Road. • Clear parameters for the protection of Cuckoo Lane, Listed walls and original John Radcliffe building and heritage barn near Osler Road/St Andrews junction • " • There is a helipad on the parkland grounds behind Headington Manor House" – No - This was temporary and removed. • Update wording that JR is partly inside the OHCA.	

2628

28a, 28c - Kassam Stadium, Ozone Leisure Complex and Minchery Farmhouse and 28b - Overflow carpark at Kassam Stadium site

Site no.	Site name	Summary	Response
028a	Kassam Stadium	Don't want a new football stadium in the north- refurbish the existing.	Planning permission is granted for a new stadium in Cherwell District, so the policy should respond to this and the potential for the stadium moving. Even if it does not move, there is some potential for intensification around the stadium.
028a	Kassam Stadium	There needs to be provision of leisure facilities proportional to the increasing number of houses. Building on the additional parking area for the Kassam Stadium site will just make it that much harder to get to; it's not acceptable that it's 800m away from the nearest bus stop, as that is far too far to walk.	The existing stadium provides a number of functions currently, and replacement of the local, community role of these facilities will be expected alongside the allocation of new homes. Site #028a (Kassam Stadium) has good bus connections to Oxford city centre. Site #028b (Overflow Car Park) is 600m from a bus stop to Littlemore (5A every 30 mins). It is just over 800m to Pegasus Road stop with buses every 5-6mins to the city centre.

2629

Site no.	Site name	Summary	Response
028a, 028b, 028c	Kassam Stadium and Ozone Leisure Park	The promoter (who also owns the land) seeks permission for the following: Complete demolition of existing commercial (Class E)/ leisure (Sui Generis) buildings to allow for the phased redevelopment of the site. Redevelopment to include: 1) Construction of mixed use R&D laboratories (Class E(g)) with active ancillary uses (Class E(a),(b),(c),(d),(e),(f)); 2) Restoration of Grade II* Listed Minchery Priory public house (sui generis); 3) Construction of community leisure building (sui generis); 4) Construction of Cowley Branch Line mobility hub; 5) Construction of electrical substation; 6) Comprehensive hard and soft amenity and biodiversity landscape and public realm, and, 7) Other supporting or ancillary works and infrastructure including access and servicing.	Noted.

		Firoka supports the vision for Oxford 2042 that balances the provision of access to housing together	

2631

Site no.	Site name	Summary	Response
		with nature, employment and social and leisure opportunities. To this end, we support the retained and refined allocation for the Firoka sites allowing for a mix of uses and confirm they are available and achievable. Firoka will be undertaking capacity studies ahead of the Regulation 19 stage of the Oxford Local Plan 2042, exploring densification potential appropriate to its potential future context of the reinstated Cowley Branch Line.	
028a, 028c	Kassam Stadium and Ozone Leisure Park	The policy SP14 was written before the proposed move by Oxford United Football Club to the Triangle at Kidlington. The move is very much at the planning stage and clearly there should be no consideration of any redevelopment of the Kassam Football stadium until the necessary planning permissions are in place and construction started as well as the required infrastructure such as foul water sewage and water supplies being ready. Policy SP14 needs updating to take this into account. As there is an existing playing field, this must be replaced before the site can be redeveloped.	The draft allocation policy does require reprovision of the sports provision before the stadium is developed for other uses.
Site no.	**Site name**	**Summary**	**Response**

2632

028a, 028c	Kassam Stadium and Ozone Leisure Park	Littlemore Priory was approximately at the location of Minchery (Nuns') Farm policy must be updated to address this. 		be impacted by development nearby.	

038a Thornhill Park (phase 2)

Site no.	Site name	Summary	Response
038a2	Thornhill Park	No need to include a site allocation policy – planning application already approved	While granting planning permission is generally considered a strong indication that development will go ahead, sites generally remain as allocations until development commences on site. As development has not yet commenced on *this* site, the site allocation will be retained in the plan.
038a2	Thornhill Park	Strongly disagree with the proposed development of phase 2.	Unclear if this refers to the grated planning permission, or if not, what aspect of the allocation.
038a2	Thornhill Park	The Shotover site provides a once-in-a-lifetime exceptional opportunity for Oxford and Oxfordshire to look forward and build upon its existing cluster of hospitals and life science	Noted. This is in reference to the adjacent site.

Site no.	Site name	Summary	Response

2638

		research to curate a bespoke biomedical healthcare research and development cluster on one site and at the boundary with Oxford City. This would enable deliver of better health outcomes for society and improved skills and educational attainment for the local population. This would be derived from establishing a sustainable, low carbon, accessible, world class biomedical research campus on land at Shotover, grounded within an abundant green landscape and deliver biodiversity net gain. The exceptional circumstances that justify the site's release from the green belt is the ability of a biomedical healthcare and research and development cluster to improve health outcomes on a local and global scale. This is bespoke to the Shotover site, given its sustainable location and its prime geographical positioning, being excellently connected to existing hospital locations in Oxford and the University of Oxford's Old Road Campus. The ability to unlock and realise the plan objectives rests with the role that employment land in the right location plays as vital infrastructure. Thus, the identification of employment land in the right location is critical.	
Site no.	**Site name**	**Summary**	**Response**

2639

038a2	Thornhill Park	Local resident – claims they were not consulted. Strongly disagrees that high rises would be in-keeping with the character of the neighbourhood. If the area needs to be developed, then 2-3 storeys would be acceptable. Expresses general disagreement with national policy for housebuilding.	All residents were posted leaflets about the consultation and advertisement of held events. Height and density policies in the plan address concerns about heights. National policy is out of the council's control.

42 - Nuffield Orthopaedic Centre (NOC)

Site no.	Site name	Summary	Response
042	Nuffield Orthopaedic Centre	Would support general residential development at this site. Not clear why employer-linked AH is supported (H6). Modifications requested: Policy needs to address the key issues linked to this site (summarised as follows): • Sensitivity as in the catchment of the Lye Valley and South Fen, LNRs and LWSs • Onsite Parking • Creating increased demand for housing	We will consider all of these issues when drafting any allocation policy for the site. Where necessary, site allocation can feature specific thematic issues that covered by other policies but usually this is only when there are site-specific issues that need to be addressed within a particular site allocation policy.
Site no.	**Site name**	**Summary**	**Response**

2640

		• Huge basements which remove water retention capacity of land Peat reserves are likely to be in the Lye Valley leading down from the NOC and Windmill Road/Old Road junction, these must be protected from being washed away.	
042	Nuffield Orthopaedic Centre	BBOWT - Any development on this site is of the utmost concern with respect to the Lye Valley. Any development on existing urbanised surfaces will still need a whole suite of measures to ensure there is no impact on the SSSI and LWS. It is on surfaces that are currently green and free draining that any development would have the most impact on the hydrology of the meadow through reducing the evening out effect that such green surfaces have on the amount of water flowing into the fen, which is particularly vulnerable to severe and permanent damage from short-term very high water flows. This matter is well dealt with in the detailed study in the evidence library on the Lye Valley and there is no need for us to expand on it here. Development on green surfaces also may well lead to less water flow during dry periods causing the fen to dry out, and impacts on water quality which also can have a highly negative impact on the fen. In our opinion therefore no development on currently green surfaces should take place on this site.	The site allocation policy in the draft Regulation 19 plan identifies that the site falls within the impact risk zone for the Lye Valley SSSI. Any proposals for development on the site would need to demonstrate that there would be no impact upon the Lye Valley SSSI.

2641

43 - Old Road Campus

Site no.	Site name	Summary	Response
043	Old Road Campus	Local Plan must include a site allocation policy for this site. Given the site's proximity to the Churchill Hospital Site (SHLAA Ref: 012), the issues affecting the site will be the same and can be summarised as follows: • Sensitivity as in the catchment of the Lye Valley and South Fen, LNRs and LWSs • Onsite Parking • Creating increased demand for housing Huge basements which remove water retention capacity of land	This site is no longer being taken forward as a site allocation. There are no vacant plots and any future redevelopment proposals at the site can be assessed against the wider suite of policies in the plan.

2642

043	Old Road Campus	BBOWT - Any development on this site is of the utmost concern with respect to the Lye Valley. Any development on existing urbanised surfaces will still need a whole suite of measures to ensure there is no impact on the SSSI and LWS. It is on surfaces that are currently green and free draining that any development would have the most impact on the hydrology of the meadow through reducing the evening out effect that such green surfaces have on the amount of water flowing into the fen, which is particularly vulnerable to severe and permanent damage from short-term very high water	This site is no longer being taken forward as a site allocation. 49 - Oxford University Press Sports Ground, Jordan Hill

Site no.	Site name	Summary	Response

049	OUP Sports Ground	Do not allocate due to lack of green space and proximity to the river. Sports pitches are used by the community.	The draft policy requires reprovision of pitches, which is most likely to be by significant retention on site.
049	OUP Sports Ground	BBOWT disagree with the site allocation as it is in the Oxford Green Infrastructure Network. Whilst it has been defined as a Supporting rather than Core part of the network, we nevertheless consider that their contribution as green spaces is important and that they should be protected.	It is agreed that the green space does have important functions, but it is not agreed that these justify full protection of the site because there is a reasonable prospect a solution can be found to ensure reprovision of the green infrastructure functions of the site, which may well be reprovision within the site itself, with enhancements of quality.

2645

54 - Ruskin College Campus

Site no.	Site name	Summary	Response
054	Ruskin College Campus	The site should remain restricted to college-only uses. The Old Headington Roads are already overloaded and could not cope with other types of development. More on-site residential accommodation for the college reduces pressure elsewhere.	The site is expected to remain as a college campus, with student accommodation and the allocation policy in the draft Regulation 19 plan reflects that.

054	Ruskin College Campus	BBOWT object to site allocation.	Noted

61 - Union Street Car Park and 159–161 Cowley Road (formerly Union Street Car Park)

Site no.	Site name	Summary	Response
061	Union Street Car Park	We are concerned about the loss of the car park as it is an important amenity for local businesses and its loss would put further pressure for parking on streets leading off Cowley	It will be a requirement in the policy that any development retains car parking on site at a sufficient level – as determined by relevant officers

2646

Site no.	Site name	Summary	Response
		Road, including obstructive pavement parking. However, in its favour, it is clearly brownfield land.	in the City Council - to support the district centre.
061	Union Street Car Park	This provides an important open space between developments. Building on it would create a more claustrophobic area. The existing buildings should be redeveloped instead.	Surface level parking is not an efficient use of land. General policies in the plan ensure high quality design that is not overbearing to its neighbours.

061	Union St Car Park	*(refers to LP2040 Policy)* There aren't any trees on the southern boundary. Policy is ineffective and is unjustified. There is no data to support the allocation. The reduction of car parking seems difficult to achieve without a severe economic impact on the Cowley Road District Centre. Car park is often at or near capacity. The allocation of this site would therefore be contrary to Policy C2, Maintaining Vibrant Centres. There is no rationale given for the allocation of this site. Modification requested:	The site is being considered for inclusion in the plan as an allocation because of developer interest in delivering residential units, and the sustainable location in the district centre. It will be a requirement in the policy that any development retains car parking on site at a sufficient level – as determined by relevant officers in the City Council - to support the district centre.
Site no.	**Site name**	**Summary**	**Response**
		A study should be undertaken to determine best use of site before the site is allocated/ prior to new policy being developed.

62 - University of Oxford Science Area & Keble Road Triangle No comments.

63 - Warneford Hospital

Site no.	Site name	Summary	Response
063	Warneford Hospital	Site allocation policy must be drafted in a way that addresses the following key issues: • Sensitivity as in the catchment of the Lye Valley and South Fen, LNRs and LWSs • Onsite Parking • Creating increased demand for housing • Huge basements which remove water retention capacity of land	Site allocations can feature specific thematic issues that covered by other policies but usually this is only when there are site-specific issues that need to be addressed within a particular site allocation policy.
Site no.	**Site name**	**Summary**	**Response**
063	Warneford Hospital		Comment noted.

2648

		Warneford Hospital is currently allocated within the Oxford Local Plan 2036 as Policy SP22. The Trust submitted a hybrid planning application for the development at Warneford Park in July 2025, and the planning application has been submitted in accordance with the adopted policy. The Trust continue to support the allocation of Warneford Hospital as it is expressed in the current Local Plan and request that it is carried through into the 2042 Regulation 19 Local Plan. We agreed a Statement of Common Ground with you in March 2024 substantially to that effect. The Trust look forward to engaging further with OCC at the next stage of the Local Plan consultation.	
063	Warneford Hospital	Object if paring for cars is not strongly restricted in line with other transport and environmental policies.	Development of all sites must be in line with the general policies of the plan.
063	Warneford Hospital	This site contains a playing field that may be needed for the community.	The playing field has never been used by the community, and would not be expected to be suitable for general community use, being in a residential mental health hospital.

2649

65 - West Wellington Square

Site no.	Site name	Summary	Response
065	West Wellington Square	This site was not included in the site assessment.	A Sustainability Appraisal and Site Capacity Assessment have been carried out for this site.

75a, 75b - Oxford Railway Station and Becket Street Car Park

Site no.	Site name	Summary	Response

075 (a and b)	Oxford Railway Station and Becket Street Car Park	Whilst we understand that the site allocation policies are being developed ready for the next stage of consultation, we note that the OLP2042 proposed site allocations map includes the 2.56 acre 'Oxford Railway Station and Becket Street Car Park' site (Ref: 075a/075b). The map identifies the site as being 'Suitable for a mix of uses, including retail, residential, community and commercial uses'. Network Rail welcome the proposed mix of acceptable uses but would advocate for hotel, education and student accommodation uses to be added to the list of	Given the site's location within the city centre, a range of uses are appropriate, including hotel, and student accommodation uses. The plan contains specific policies supporting both uses within the city centre. The site allocation policies should be read alongside the rest of the plan. The Western Entrance area at
Site no.	**Site name**	**Summary**	**Response**
		permissible uses during the next round of planmaking. Network Rail would also support the inclusion of the proposed Western Entrance area at Oxford Railway Station to be included within the boundary of any future Site Allocation.	Oxford Railway Station is currently under construction. As planning permission has been granted for the current scheme (which is not yet complete) rather than include the Western Entrance area within a site allocation, we will look to make a small alteration to the city centre boundary to include the Western Entrance area within it. We will also look to make a corresponding amendment to the West End Area of Focus boundary to include the Western Entrance area within it.

2651

075 (a and b)	Oxford Railway Station and Becket Street Car Park	Oxford must have a combined bus and coach station, and it would ideally located here.	Masterplanning work on the station will look at optimising oportunities for seamless interchange.

76 – Oxpens

No comments.

81 - Worcester Street Car Park

Site no.	Site name	Summary	Response
81	Worcester Street Car Park	Canal basin should be recreated, perhaps with a small amount of residential accommodation.	There is no longer an operational need for the canal basin in this location.
81	Worcester Street Car Park (Nuffield sites)	This should not be housing, but a hotel or public building around a restored canal basin.	A mix of uses is across the three Nuffield sites in the West End (which are one site allocation policy), including housing.

2652

104 - Former Iffley Mead Playing Field

Site no.	Site name	Summary	Response
104	Former Iffley Mead Playing Field	Do not allocate. Site is next to Cowley and East Oxford (lowest amount of green space per inhabitant in Oxford). Also, site is in close proximity to SSSI. Heritage and amenity must be preserved.	The site is private and not in public use. The site allocation policy acknowledges the site's proximity to the Iffley Meadow's SSSI and the Iffley Conservation Area. It also identifies that there is archaeological potential on the site

2653

Site no.	Site name	Summary	Response
			and potential for the site to impact views from the Rose Hill View Cone. Development of the site would include a requirement for the provision of public open space.
104	Former Iffley Mead Playing Field	Agree because it's a brownfield site and outside the conservation area, but this and Court Place Gardens is bringing significant numbers of new homes to a small area that couldn't then support any more (e.g. Land at Meadow Lane- which should not be developed).	Comments noted.

104	Former Iffley Mead Playing Field	This is an existing playing field.	The site is a disused playing field. At Examination of the Oxford Local Plan 2036, the Inspector concluded that the site was surplus to requirements as it had only even been attached to the school, which had moved and not used it for many years.
104	Former Iffley Mead Playing Field	Much previous opposition to LP 2042 development advocated re-allocating the homes designated for the Oxford CC-owned LP 2042 to Oxfordshire CC-owned field Iffley Mead, just outside the Conservation Area. This 2 Ha site is designated in the *OCC Local Plan to 2036* for 90 homes at an even higher density, and with much more problematic	Policy SP38 of the adopted Local Plan 2036 seeks a minimum of 84 homes for this site. The site allocation policy in the Local Plan 2045 also seeks a minimum of 84 homes. There are no proposals to
Site no.	**Site name**	**Summary**	**Response**
		vehicle access, than LP 2042, so increasing the number of homes on Iffley Mead by 36% would be both administratively impractical and permanently impair amenity for both its new residents and those of adjoining streets, including the recently enlarged Iffley Academy Special School. Displacing a 'problem' onto a neighbourhood less able or willing to protest effectively cannot be conducive to social cohesion.	reallocate any homes from elsewhere onto this site.

111 - Oxford Stadium (former Greyhound Stadium)

Site no.	Site name	Summary	Response
111	Oxford Stadium	Strongly support the inclusion of the stadium for a comprehensive redevelopment.	Because the site is currently in use for uses important for the community, and redevelopment could not feasibly take place alongside this, the site is not taken forward in the draft Regulation 19 Plan.

113 - Redbridge Paddock (land east of Redbridge Park and Ride)

Site no.	Site name	Summary	Response
113	Redbridge Paddock	Do not allocate. Site is next to Cowley and East Oxford (lowest amount of green space per inhabitant in Oxford). Heritage and amenity must be preserved.	General policies of the plan guide all of these topics. Development of the site would include a requirement for provision of public open space, biodiversity considerations such as the Local Nature Recovery Strategy, as well as heritage.
113	Redbridge Paddock	Support for allocation.	Noted.

113	Redbridge Paddock	Development on the site is a good idea, but the river frontage should be kept open and buildings should not be too tall.	General policies of the plan guide design decisions about building heights. the site allocation policy also includes a requirement for a green buffer along the river bank.
113	Redbridge Paddock	The site was a special place to visit- where have the horses gone?	The site does not officially have public access, although it can be viewed from the surrounding roads. Uses for grazing horses is a matter beyond the local plan.
113	Redbridge Paddock	The site is important for biodiversity and as a wildlife corridor and the green space should be protected.	The requirement for biodiversity net gain means that there should not be a loss of biodiversity overall. The general policies of the draft plan and

2656

Site no.	Site name	Summary	Response
			the site allocation policy require high quality green features to be designed into the development.

113	Redbridge Paddock	BBOWT – strongly object to site allocation. BBOWT have commented on this site before. It forms part of the Oxford Green Infrastructure Network. Whilst the proposed allocation site is not subject to a nature conservation designation it has considerable conservation interest (e.g. orchids, otter, kingfisher). It is also located adjacent to the nationally designated Iffley Meadows SSSI, which BBOWT manages. The SSSI is a fragile site comprising lowland grassland, which suffers under increased pressure from visitors. This site allocation raises concerns with regard to indirect impacts on the SSSI by affecting hydrological flows, increased disturbance, and nutrient enrichment etc. BBOWT use grazing animals to manage the SSSI, which is essential to maintain this important habitat, however, there is a real risk that increased disturbance and indirect recreational pressure might make the management of this site untenable over time, resulting in the decline of the site. We oppose this allocation as it does not adequately protect the SSSI.	The local plan evidence base includes reviewing Green Infrastructure network and protected sites, including SSSI. The SSSI is separated from the site by a watercourse, which reduces the potential for direct and indirect impacts, including visitor pressure. The SSSI site is not directly or easily accessed from the development site. Nonetheless the site allocation does highlight that the site is within the identified impact risk zone for the SSSI and any proposals must demonstrate no adverse impacts, including considering surface water and groundwater flows. The latest GI assessment identifies the site as Supporting GI, so
Site no.	**Site name**	**Summary**	**Response**
			enhancement will be required to mitigate any losses.

2657

117 - Land surrounding St Clement's Church

Site no.	Site name	Summary	Response
117	Land surrounding St Clement's Church	This should deliver strong public benefit in terms of increased access and retaining elements of the existing rural character.	Agreed, and the draft site allocation policy attempts to ensure these things.
117	Land surrounding St Clement's Church	At present, I look out from the back of my house directly on to the church. Concerns include invasion of privacy for my home as well as disruption to diverse wildlife currently dwelling on that land behind the church and leading down to the river such as voles, badgers, bats, foxes. It is also part of the floodplain that reaches over Angel and Greyhound Meadow. Any construction will have a detrimental effect on this, including the drainage infrastructure. The church will become virtually an island in the middle of a housing estate if these plans go ahead. This is one of the few remaining ancient parts and protected sites of Oxford. My haven of a garden would, like the church, be swallowed up in a housing estate.	Policies of the plan aim to ensure sufficient privacy of new and existing occupiers, and the site allocation policy acknowledges the closeness of existing dwellings to the site in this location. The site allocation policy is clear that there are potential wildlife impacts that would need to be investigated, relatively low densities are likely to be necessary, and green areas will need to be retained and enhanced
Site no.	**Site name**	**Summary**	**Response**
			on the site, including between the church and the river.
117			

2658

	Land surrounding St Clement's Church	No mention is made of foxes, deer and squirrels that visit the site. Nuthatch, magpies, green and greater spotted woodpeckers, great, blue and long tailed tits also visit the site. Therefore, the biodiveristy should be improved, rather than habitats destroyed. Marston Road floods when it rains.	These are not protected species and will be able to find habitats all along the river corridor. Full biodiversity surveys will be required as part of any detailed planning application.

Historic England

Site no. and name	Summary of comment	Response	Outcome
Site #117 Land at St Clements	Site assessment for proposed allocation St. Clement's Church does not appear to acknowledge proximity to a Grade I Registered Park and Garden.	Thanks for comment we will update where needed and where the allocation is carrying forward.	Update relevant info where applicable.

2659

120 – Unipart

Site no.	Site name	Summary	Response

120	Unipart	The policy SP 8 reserving this site solely for employment use was written in 2016 and since then nothing has changed in any meaningful way - most of the site is either used for vehicle parking or open-air storage. It has been like that since the Pressed Steel Plant closed 40 years ago. It represents a failure to redevelop what is effectively a Brownfield site and a large one. The Council provides no explanation as to why this is. There surely is a case for some increase in business rates for sites such as this to encourage the owners to progress their redevelopment. It seems pointless to designate sites like this solely for employment use when there is apparently no interest in developing them for such purposes.	The land owner has stated a clear intent to develop the site during the plan period.

2660

124 - Slade House

Site no.	Site name	Summary	Response
124	Slade House	It is envisaged that the Trust will continue to provide statutory healthcare services from this site subject to the outcome of our estates strategy review referenced above. In turn, the Trust also welcomes the housing allocation; however, it may also seek to develop an element of private residential accommodation in addition to the employer-linked affordable component. It would also not wish to exclude other complementary uses on the site including improved health	Comments noted and reflected in the wording of the draft site allocation policy.

Site no.	Site name	Summary	Response
		care facilities, associated administrative functions and extra care or student accommodation.	

2661

124	Slade House	This site has too much surface level parking on-site. It includes an important green space that should be preserved. Policy needs to address the key issues linked to this site (summarised as follows): • Sensitivity as in the catchment of the Lye Valley and South Fen, LNRs and LWSs • Onsite Parking • Creating increased demand for housing • Huge basements which remove water retention capacity of land. A footpath used to run from Horspath Driftway to the current ring-road and is still present for much of its length, although it seems householders have blocked this off, this should be reopened. *(refers to LP2040 Policy)*	Site allocations can feature specific thematic issues that covered by other policies but usually this is only when there are site-specific issues that need to be addressed within a particular site allocation policy.
Site no.	**Site name**	**Summary**	**Response**

2662

		No statement regarding how extra staff will be managed. Greenfield runoff rates must be achieved. Green spaces must be marked on Policy Map and preserved.	

144e Marston Paddock extension

Site no.	Site name	Summary	Response
144e	Marston Paddock extension Green Belt assessment	The full 2023 Green Belt assessment has not been made available for comment under the Evidence Base and Supporting Documents section of the consultation website or anywhere else on the Council's website. It has therefore not been possible to review the full 2023 assessment against the new requirements of the December 2024 NPPF (with reference to site 114e).	An updated Green Belt assessment, with methodology reflecting the NPPF, was published at Regulation 18, alongside the 2015 and 2017 assessment.

2663

173 - Bayards Hill Primary School Part Playing Fields

Site no.	Site name	Summary	Response
173	Bayards Hill Primary	Do not allocate this site as Barton:	This site is no longer being taken forward.
Site no.	**Site name**	**Summary**	**Response**

	School Part Playing Fields	• Is the most green-space-deprived suburb in Oxford, Barton Park even worse • Will be surrounded by Land North of Bayswater Brook development (1500 houses) • • Will lose green space and add residents via the Sandhills Field Development (150 houses) Inclusion of this policy would be ineffective as • this site is too close to the A40 for health • There is nowhere to provide re-provision of this green space in Oxford	

2664

204 - East Oxford Bowls Club and 665 Oriel College Sports Ground and adjoining land (comprising of 263 and 639)

Site no.	Site name	Summary	Response
204	Former East Oxford Bowls Club	• As a sports facility, this should be protected from development.	This is a small site previously used as a bowling green but it has been out of use for many years.
204	Former East Oxford Bowls Club	DRARA would like to see this run down empty site restored to beneficial use, but not necessarily for	The site is undoubtedly sensitive in terms of the potential impact

Site no.	Site name	Summary	Response

2665

		housing. The site is not identified as green infrastructure but perhaps it should be. The site is in the ownership of Oriel College and in recent years has become run down and affected by scrub regeneration, fly-tipping and anti-social behaviour. Despite these factors it still makes a positive contribution to the Bartlemas Conservation Area by helping to maintain the rural character and seclusion of the Area, acting as a green buffer along its Cowley Road edge, effectively marking the limit of Victorian Oxford. If intensively developed these benefits to the Conservation Area would be lost. In addition we note that the site is covered by policy HD9 View Cones so it is sensitive to any tall development. In our view a relatively low key community use for this site would be best – perhaps returning the site to use as community sports facilities, a community garden or play area, or even an extension to the very popular allotment site next door. If it is to be allocated for development, high density development in our view would be inappropriate. A use such as low rise specialist accommodation for the elderly with a generous amount of green space might possibly be accommodated, given very sensitive design.	of development on heritage assets. Development will need to be carefully designed with an understanding of the significance of the heritage assets, and should respond carefully to that.
Site no.	**Site name**	**Summary**	**Response**

2666

		Any change of use or development should retain the strong hedgerow cover next to Cowley Road so that the sense of a green oasis survives. The tests set out in Policy HD1 need to be applied very carefully to protect and enhance the character of the Conservation Area, including the quiet rural, hedged character of Bartlemas Lane, views to and from the historic hamlet and its Listed Buildings, dark skies, and the privacy and visual amenity of the neighbouring allotment site.	
204 and 655	Oriel College Sports Ground, Bartlemas and former Bowling Green	Great care needs to be taken with regard to the proposed development of these sites and the potential impacts on the setting of the Bartlemas Conservation Area. Should the adjoining sports grounds be allocated for development, detailing guidance should be provided within any relevant policies to ensure that the unique historic character of the Conservation Area is unharmed and unaffected. It should also be made clear that no intensification of traffic along Bartlemas Lane would be acceptable due to the proximity of sensitive historic buildings. A buffer should be left to the Bartlemas access lane to avoid affecting its character.	The site is undoubtedly sensitive in terms of the potential impact of development on heritage assets. Development will need to be carefully designed with an understanding of the significance of the heritage assets, and should respond carefully to that.

2667

Historic England

Site no. and name	Summary of comment	Response	Outcome

Site #665 inc #663 and #204 Oriel College Sports Ground, Bartlemas and former Bowling Green	Needs very careful consideration, including heritage impact assessment (HIA). Careful consideration is needed of the potential impacts of all associated development, including access to the site.	Thanks for comment we will update where needed and where the allocation is carrying forward.	Update relevant info where applicable.

289 - Sandy Lane Recreation Ground

Site no.	Site name	Summary	Response
289	Sandy Lane Recreation Ground	Objection: Do not progress this site as next to Cowley and East Oxford (areas of the city with the lowest amount of green space per inhabitant in the city). This land is needed for an increasing population (in the city) and any replacement sport facilities from Cowley/Littlemore.	Reprovision of sports facilities would be required.
289	Sandy Lane Recreation Ground	The Sandy Lane campaign objects to the inclusion of any recreation grounds on the local plan without paying proper heed to the requirements of the NPPF. The campaign will challenge the inclusion of Sandy Lane Recreation Ground as a development site when this plan goes to inspection.	Reprovision of sports facilities would be required, in accordance with the NPPF.
Site no.	**Site name**	**Summary**	**Response**

2668

289	Sandy Lane Recreation Ground	BBOWT disagree with the site allocation as it is in the Oxford Green Infrastructure Network. Whilst it has been defined as a Supporting rather than Core part of the network, we nevertheless consider that their contribution as green spaces is important and that they should be protected.	It is agreed that the green space does have important functions, but it is not agreed that these justify full protection of the site because there is a reasonable prospect a solution can be found to ensure reprovision of the green infrastructure functions of the site.

389 - Land at Meadow Lane

2669

Site no.	Site name	Summary	Response
389	Land at Meadow Lane - Weight of objections	The weight of opposition from public and other stakeholders means the site should not be allocated. There are objections from: Environment Agency Oxford Preservation Trust BBOWT Cyclox	What needs to be considered for the local plan is whether there is potential for a scheme to come forward that is acceptable in the context of national policy and of the Plan's proposed strategy and detailed policies. Moreover, what is relevant with objections is not the sheer number of objections, but whether a material issue is raised that informs the detailed drafting of

Site no.	Site name	Summary	Response
		As well as from over 1,000 respondees in the OxPlace January 2023 consultation and 50 comments to the OLP2042 Early Engagement Survey/ These responses highlight cross-cutting themes and many and varied reasons the site should not be developed. The community should be listened to and to override them would be an abuse of power, especially as the council has asked the public for input and has said they will listen to them. Suitable and compatible uses, such as a 'Meadow School' for outdoor education should then be discussed with local schools and communities	the policy or that shows this is not possible. The objections to the planning application relate to that application. The application is not yet determined, but even if it is turned down as not suitable, that does not necessarily mean that there is not potential for a suitable scheme to come forward.
389	Land at Meadow Lane - Heritage	Harm to the Iffley Conservation area. The sites lie within the Iffley Conservation area. Because of this the National Planning Policy Framework confirms that it is a heritage asset and places a large number of obligations on Local Planning Authorities. Policy HD1 Conservation Areas states that 'substantial harm to ….a conservation area should be wholly exceptional.' This is not addressed. Also, this ancient meadow, fully within the Iffley Conservation Area is bordered by an ancient drover's route. There are Two Grade II Listed Buildings (Tudor Cottage and Townsend Close) and a Grade II Listed Wall (Wall and Gate of Townsend Close) nearby. Road improvements and urbanization along Meadow Lane and Church Way will affect	The site is undoubtedly sensitive in terms of the potential impact of development on heritage assets. Development will need to be carefully designed with an understanding of the significance of the heritage assets, and should respond carefully to that. The policy is clear on this requirement. Many sites in Oxford have archaeological potential. That does not preclude development, but

2670

Site no.	Site name	Summary	Response
		the setting of these heritage assets. Not addressed by the Council. There is archaeological potential The site is within the view cone There are unevidenced changes in the description of Iffley Village, whereas the 2009 Conservation Area Appraisal was subject to thorough consultation	policies do require care, similarly to the View Cone.
389	Land at Meadow Lane - biodiversity	It is unsuitable according to the assessments of OCC and OxPlace themselves in respect of damage to current high biodiversity. It should be designated as an OCWS adhering to the Council's own biodiversity assessment. Local Nature Recovery Strategy (LNRS highlights this site for nature recovery) There are badgers present on the site.	The identification of a site as having potential for nature recovery does not preclude the site from development. General policies of the Local Plan do require that the mitigation hierarchy is followed, and Biodiversity Net Gain is also required.
389	Land at	Damage identified in the Flooding Risk Assessment.	

2671

	Meadow Lane - flood risk	Conflicts with national policy by not applying the sequential test (to compare with other potential sites with lower flood risk). NPPF (para 172) and the PPG. Disturbance to the drainage of the site and the risk of problems as a result of building on the edge of the floodplain.	The FRA referred to relates specifically to the proposed development in the planning application. A Level 2 SFRA has been carried out to support allocation of the site in the Local Plan. That assesses whether it is likely a development that passes the

Site no.	Site name	Summary	Response
			exceptions test could come forward. The Level 2 SFRA did not suggest this wasn't possible. The flood risk sequential test will be published alongside the Local Plan for the Regulation 19 consultation.
389	Land at Meadow Lane - sewage	Problems of ensuring adequate sewage disposal. The Environment Agency has had to put a stay on all Oxford development because of the failures of its sewage disposal routes. This is still not rectified. Piling more pressure onto it will make it worse.	Adequate sewage disposal is important, but there is no reason to think this is not achievable on this site. Thames Water have adequate proposals for the upgrade to the sewage treatment works and there is not a blanket restriction on development.
389	Land at		

2672

	Meadow land -access and transport	It will harm the Principal Quiet Route for Active Travel. The site will add substantial traffic onto a designated Quiet Route that is much used for journeys to and from Oxford. This is crazy and unsafe. Parking is frequent flashpoint for confrontation and competition between established and new residents for street parking, now regulated by the recently imposed CPZ, which may lead to disputes. LP 2042 development must include sufficient parking for all its residents. It's a pity the planners succumbed to pressure to delete from the 2021 scheme the pairs of purpose-built parking places on the SW side of Meadow Lane.	The change in the details of the planning application in relation to parking spaces relate to the details of the proposals, and not the inprincipal suitability of the site for parking. It is considered that the site can be accessed safely within minimal negative transport requirements. Meadow Lane is identified as an onroad quiet route in the LCWIP, but so are many other routes in Oxford that have significantly more

2673

Site no.	Site name	Summary	Response
		hazard along the Meadow Lane site will be caused by severely increased two-way traffic. This will urbanise the route and harm the Conservation Area	development alongside than Meadow Lane, even if development takes place on this site.
389		SA	

2674	Land at Meadow Lane-SA	The grading system used to indicate positive, negative or neutral impact, has been manipulated and upgraded when addressing many aspects of the proposed development – to less negative, more positive or neutral. Size: The total size is incorrectly shown as 0.99ha when it should be 1.5ha; Use: it has not been a 'pony paddock' for many years Objective 1 - Building on this greenfield site WOULD have high carbon costs, both from actual building work and from loss of carbon storage in the earth of this hitherto uncultivated meadow. Objective 2 - Regarding flood zones, the SA OMITS information from the LP2036 which states that 7% of the site is in Flood Zone 3b with additional land within FZ2. The flood testing has not been carried out correctly, by not applying the sequential test as required by government policy. Objective 3 - Reference to the site as 'unprotected open space' omits the fact that is it UNDEVELOPED open space. Further, this greenfield site has great biodiversity value and qualifies as an Oxford City Wildlife Site. No explanation as to why it is graded orange or what efforts to avoid its use has been made. Should be red.	The SA Framework ("grading system"), was developed in consultation with Natural England, the Environment Agency and Historic England. It provides a standardised approach for assessing the development potential for all sites. Each site has been considered in relation to the each of the SA Objectives and scored according to the SA Framework, taking into account additional information, where appropriate. Size: the correct site size is 0.99ha and this will be corrected on the SA form for the Regulation 19 consultation. Objective 1 The assessment is applied in the standard way. Objective 2 The flood zone information uses the most recent (2025) mapping from the

Site no.	Site name	Summary	Response

		Objective 4 – Numbers: not a material number. AH: There is no definition of 'affordable' housing; nor evidence given as to why this site is 'likely' to be policy compliant. Doubt it will be affordable housing. Objective 7 Public Open Space, the site is NOT in private ownership!! The Council bought it with taxpayers' money. It is public land. PUBLIC SPACE: The site is owned by the City Council and therefore not in private ownership as they state. It is not used for animal grazing. Such references indicate no renewed assessment but reliance on the outdated and flawed LP2036 assessment. The community access the land for scything to manage biodiversity as the Council have failed to mow the meadow despite their obligation as landowner to do so. Objective 8 No mention of the key Quiet Route of Meadow Lane which is well used every day for Active Travel. Under Objective 8, there are several errors. The bus stop, railway station, post office and schools are all further than is stated. Bust stop should not be green. The services are only 3, 3A, ST1. That is misleading. Under 'Post Office' it contains repeated information about the GP surgery. Objective 9 – Water. Incorrect information given. There IS a watercourse adjoining the site, which flows into the Thames and will be impacted by sewage and wastewater discharges.	Environment Agency. The flood risk sequential test is not part of the SA process, but a key part of planmaking has been carried out to inform the next stage of the plan. Objective 3 The orange grading aligns with the scoring system. The site is not a designated Oxford City Wildlife Site. The SA simply reports this. Objective 4 There is nothing to suggest the site could not or would not deliver the standard required amount of affordable housing. Objective 7 There is no public access to the site, so it is private and not public open space. The site was last used as a horse paddock, but the description will be updated. Objective 8: These measurements on the form have been reviewed and updated for the next stage of consultation.

2675

Site no.	Site name	Summary	Response

2676

		Objective 10 The site is rich in biodiversity and would be hugely negatively impacted by development. It lies along three of Oxford's wildlife corridors (see Oxford City Green Infrastructure Study). It is also notable that the Council's regular Biodiversity Net Gain offsite partner has withdrawn support re this site, because of the biodiversity value cited by several Statutory Consultee wildlife organisations. Objective 11 – It is in the Iffley Conservation Area and should never have been allocated: Policy HD1 Conservation Areas states that "substantial harm … to a conservation area should be wholly exceptional.." Regarding the designation of a 'Historic Core Area.' The Council states "Not within a historic core area." Which contradicts what they say under archaeology, where the site is (correctly) stated to be "located within the historic core of the medieval Village. There ARE listed building implications, especially for the wall and gate of Grade II listed Townsend Close. Road improvements and urbanisation along Meadow Lane and Church Way will affect the setting of these assets. Objective 12- diversifying the economy and employment opportunities. Fails to identify the importance of Iffley as contributing to culture/leisure/visitor sector (e.g. circular walk on Quiet Route). Should be orange. Access constraints. Council assessment says access via Church Way. Development proposals give the main access off Meadow Lane. Says surrounding uses are residential but to the west they are not.	Objective 9: This has been reviewed and updated for the next stage of consultation. Objective 10: The SA scoring undertaken at Reg. 18 has regard to the findings of the ecological assessments (undertaken to support planning application), while reflecting the position that no formal ecological designations are present. Given the ecological considerations present at the site, a suite of mitigation measures are proposed for the site. Objective 11: Location within a conservation area does not mean that development cannot happen. A conservation area is not an area where no new development can occur such that it remains exactly as it was when it was designated. Each conservation area has special characteristics that should not be harmed and that proposals should be informed by and respond to to preserve that special character. It is considered that development on this site can achieve that. The Historic

Site no.	Site name	Summary	Response
		The Stage 2 Conclusion is erroneous: for example, badgers and invertebrates cannot simply be dealt with 'in the policy and at the application stage'. That sounds as if it is possible to make this totally unsuitable site suitable simply by careful policy wording. It is not a robust or evidence-led approach to carry forward an allocation simply because it was allocated in LP2036.	Core Area is a specifically designated area of the city, which is where the 'dreaming spires' are found and which has a policy applying specifically to that area. Objective 12: There is no reason that potential development of the site would have a negative impact on the economy or employment. It is considered that the site can be suitable with careful proposals that respond to the sensitivities of the site.
389	Land at Meadow Lane	Support for site allocation – site is suitable for affordable housing; the development of the site would benefit the village and conservation area creating greater social and economic diversity. Do not believe site should be designated an Urban Wildlife site or Local Green Space - there are many other sites locally that provide for this.	Support noted.
389	Land at Meadow Lane	Protests land being used for a small amount of residential housing but would support a school at Meadow Lane.	Noted

2678

Site no.	Site name	Summary	Response
389	Land at Meadow Lane	Support (in the context of preference of this site over Iffley Mead) I regret the loss of farmland to urban development as much as anyone but understand that housing is urgently required and this site, with easy access to transport and employment, has much to offer. The Land at Meadow Lane LP 2042 has been closed to the public and leased for horse or sheep grazing for many decades and is mostly concealed behind hedges, so is inconspicuous to passers-by. At under 1 Ha, it represents only a tiny fraction of the large area of minimally cultivated land	Comments noted.

2681

440 - 1 Pullens Lane

Site no.	Site name	Summary	Response
440	Pullens Lane	Headington Hill has calcareous springs or surface water as map per below, showing TUFA, Fen and probable peat reserves in and around Headington Hill Park. Modification requested:	More detailed capacity assessment work can't give enough certainty that the site may have a capacity more than 10, so no site allocation policy has been included in the draft plan.
Site no.	**Site name**	**Summary**	**Response**

		Site allocation policies should include a requirement to undertake hydrological and fen survey, and recovery where possible. The intensification of development directly contradicts Headington Hill Conservation Area Appraisal which refers to, in Part 3, Pullen's Lane to loss of residential character, and tranquillity. There is simply no point having a Conservation Area if this sort of development is permitted.	

2682

463 - Ruskin Field

Site no.	Site name	Summary	Response
463	Ruskin Fields	The Site extends to c. 3.62ha and is entirely owned by Ruskin College (University of West London) with Welbeck Land in place as strategic land promoter and master developer (the Promoter). The Site has been identified as surplus to requirements by Ruskin College with disposal linked to generating capital for upgrading the college's facilities. The Site has been the subject of a comprehensive technical evidence base and consultation with OCC officers, which	Noted.

Site no.	Site name	Summary	Response
		has demonstrated there are no overriding constraints to the development of c. 130 homes with associated public open space, landscaping, infrastructure and access from Foxwell Drive. The Promoter can therefore confirm that Ruskin Fields is available, deliverable, and capable of providing c. 130 homes in the first five years of the new local plan period. The Site and proposals for residential development align with the Regulation 18 Local Plan Objectives and would support Oxford in the delivery of much needed homes in the first five years of the local plan. The Promoter intends to engage comprehensively with OCC and wider stakeholders as the Local Plan progresses to ensure opportunities for the Site are achieved alongside sensitive design and mitigation.	
463	Ruskin Fields	It is a supporting green space and has particular importance as part of the continuous green corridor from Dunstan Park in the west to Barton Triangle in the east. Loss of a green corridor can't easily be mitigated. The likelihood of peat deposits is extremely high. In addition, there are heritage impacts the green fields in this location provide the rural setting of the village.	The Regulation 19 plan puts forward the northern part of the fields only, leaving the southern part, where there is a pond, to remain as a wildlife corridor from west to east. The landowner has said the site is available and did not note legal

2683

Site no.	Site name	Summary	Response
		If they are taken forward despite our concerns then we consider that a minimum of 50% of the land must be retained as green space (in addition to gardens within the urban development) including a variety of habitats including trees, and wetlands, which will benefit both wildlife and people. Land Registry title ON269207 records covenants restricting building on the fields.	issues. It is their responsibility to ensure there are no legal issues.
463	Ruskin Fields	The site (463) is incorrectly defined, as the southernmost field is already allocated under SP56 of Local Plan 2036.	Local Plan 2045 will supersede Local Plan 2036.
463	Ruskin Fields – harms do not outweigh benefits and site previously dismissed	Site is undeliverable and unjustified (its allocation does not meet S1 as the adverse impacts significantly and demonstrably outweigh the benefits). Any building here will destroy the value of Ruskin Fields. This development is unjustified. 2300+ houses have been consented for Land North of Bayswater Brook, meaning there is reduced need, and increased need for the amenity of the very short Stoke Place Lane to Headington. In 2012, the Ruskin Fields site (HELAA 463) was wholly rejected by the Planning Inspector as part of the Core Strategy and Barton AAP, the Site DPD 2012, Sustainability Appraisal and all parties (Labour/LibDem) in the Council. Remove the site from the Local Plan.	Without a detailed proposal it is not possible to understand either the benefits or harms or to weigh them up. However, it is considered that there is potential for a scheme where the benefits outweigh the harms. A different part of the field is allocated in the Oxford Local Plan 2036. The Inspector's comments quoted in the full response pre-date that.

Site no.	Site name	Summary	Response
463	Ruskin Fields – provides views	Provides views in and out of the Conservation Area, especially from the Land North of Bayswater Brook development at Elsfield, and from Stoke Place to Elsfield.	These views are noted in the site assessment.
463	Ruskin Fields – green belt	It is effectively a green belt around Old Headington.	The site does not represent a belt around old Headington.
463	Ruskin Fields – traffic levels	Unacceptable traffic caused by development - Stoke Place is the last green lane in Old Headington. Usage as a cycleway or entrance to the development will destroy its charm and inflict substantial harm on the Old Headington Conservation Area. Traffic to and from the estate will not be sustainable Old Headington is already a major hospital rat-run. The proposed road access here would exacerbate severe traffic around the John Radcliffe Hospital.	It is agreed that Stoke Place is not suitable for vehicle access. It is not considered that the amount of pedestrian or cycle use that would be generated from this site has potential to destroy the character of the lane.

2685

463	Ruskin Fields – flooding and SuDS	(Re G7) Downstream flooding off Headington Hill from the John Radcliffe and TW sewers down Osler Road to Barton Park below is already an issue and any development here will increase flood risk. (Re G8) The groundwater level is too high at the base of the development for a SuDS system to be effective so drainage will need to be via Bayswater Brook which	The potential for SuDS will need to be explored as part of any proposals, but it is not considered there are potential unmitigable flood risk, surface or groundwater concerns from potential development on this site.
Site no.	**Site name**	**Summary**	**Response**
		already has LNBB and Barton Park and other developments	
463	Ruskin Fields – carbon capture	(Re R2) Large peat deposits on adjacent fields perform a valuable carbon capture role and permit an ecology identical to that of the Lye Valley SSSI.	The potential for peat will need to be explored as part of this development.
463	Ruskin Fields – housing need unjustified, will cause harm to local residents	Housing need does not outweigh substantial loss of heritage, conservation, and amenity value. It is used by residents of green space deprived areas in Barton (soon to be surrounded by Land North of Bayswater Brook dev).	The Regulation 19 plan puts forward the northern part of the fields only, leaving the southern part, where there is a pond, to remain as a wildlife corridor from west to east. The site is not accessible to the public.

2686

Historic England

Site no. and name	Summary of comment	Response	Outcome
Site #463 Ruskin Field	Welcome direction of travel to undertake further investigation that informs next steps and help to understand the impact of the proposed development on the historic environment. 586 - Osney Mead (whole site)

Site no.	Site name	Summary	Response
586	Osney Mead	It needs to include residential use, even if it is just graduate accommodation.	The site allocation includes residential use.

587 - ARC Oxford

Site no.	Site name	Summary	Response

587	ARC Oxford	Although some of this site has been built on there are areas which remain vacant and has done so since the 1990's when the old Rover factory was demolished. The rate of new build has slowed down completely, and the vacant sites are very much as they were in 2016 when Policy SP10 was written. The Council provides no explanation as to why this is. There surely is a case for some increase in business rates for sites such as this to encourage the owners to progress their redevelopment. It seems pointless to designate sites like this solely for employment use when there is apparently no interest in developing them for such purposes.	We maintain a regular dialogue with various stakeholders, including landowners. The landowner for this site has been working towards a planning application, which has recently been submitted (October 2025). This planning application covers the remaining vacant plots that do not already have planning consent.
587	ARC Oxford	Do not build on Green Infrastructure. Use contributions to make the site usable by the community from Cowley in particular.	Other policies in the plan specifically address the city's green infrastructure. These policies create a hierarchical evidence-based approach for the protection of the city's green infrastructure network. Developer contributions are often needed to fund a range of infrastructure requirements, including community infrastructure. Developer contributions must also meet specific

		the Local Plan consultation, but EIT would welcome further discussions on the specific policy requirements as the Local Plan progresses to the next stage.	

613, 614, 615 – Botley Road sites around Cripley Road including River Hotel and Westgate Hotel

Site no.	Site name	Summary	Response
613-615	Botley Road sites around Cripley Road including River Hotel and Westgate Hotel	Given the committed site allocations in the adopted Local Plan that include retail floorspace (Churchill Hospital / Diamond Place and Ewert House / Island Site / Oxpens / Osney Mead / Oxford Railway Station / Kassam Stadium) together with the planning permission at the Clarendon Centre, the potential new allocation inclusive of retail floorspace at the Botley Road sites around Cripley Road is questioned given the evidence of over-supply of floorspace for purposes within class E within the city centre, endorsed by lack of capacity for new retail and leisure floorspace evidenced by the Retail and Leisure Study.	The Reg. 18 consultation document sets out the land uses proposed by the landowner (rather than setting out a policy for the site). There is already an existing retail use at the site. The main use proposed at the site is residential. Any additional retail proposed through a planning application would need to demonstrate compliance with other policies in the plan, given the site's location, just outside the city centre boundary.
613-615	Botley Road sites around Cripley Road	The River Hotel is a much-loved historic building bringing a beautiful garden and green space to Botley	Consultation with the local community is required early in the

Site no.	Site name	Summary	Response
	including River Hotel and Westgate Hotel	Road. Much of the character of the area would be lost by demolishing these buildings. Consultation with the strong community of west Oxford is essential.	planning application stage. The buildings are not considered to be of the kind of significance that means that new development would or could not be preferable.
613- 615	Support	ChCh supports the future allocation of the following sites in its ownership: SHLAA Sites 613-615: Various buildings on Botley Road, Abbey Road, Cripley Road, Mill Street and Barrett Street; SHLAA Site 616: St Thomas School House and Osney Warehouse, Osney Lane.	Support noted.

2695

Historic England

Site no. and name	Summary of comment	Response	Outcome
Site #613-615 Botley Road sites around Cripley Road	No site appraisal form published? There are heritage sensitivities that need to be considered, including impacts on the approach to Osney Town conservation area, and potentially wider views.	It appears this was erroneously missed off the published list.	We will ensure this is available for the next consultation.

616 – St Thomas School and Osney Warehouse

Site no.	Site name	Summary	Response
616	St Thomas School and Osney Warehouse	We have no in principle objections to the allocation of this site. However, the former St Thomas School building is Grade II listed and sufficient weight needs to be given to its retention and preservation within any forthcoming policy text. Built around 1870 the building is a good example of a late 18thcentury school building, whilst also providing a remnant of the historical evolution of the evolution of the St Thomas's parish and those who lived there. A respondent asked us to contact them as they have detailed information on the history.	The site is undoubtedly sensitive in terms of the potential impact of development on heritage assets. Development will need to be carefully designed with an understanding of the significance of the heritage assets and should respond carefully to that.

2696

Historic England

Site no. and name	Summary of comment	Response	Outcome
Site #616 St Thomas School and Osney Warehouse	Concur with comment on page 181 that the site possesses "heritage interest that needs further investigation". This includes any impacts on character and appearance of the Central conservation area.	Thanks for comments we will update relevant assessments where needed and where the allocation is carrying forward.	Update relevant info where applicable.

624 - Land south of Frideswide Square

Site no.	Site name	Summary	Response
624	South of Frideswide Square	The gateway from the west must be improved not destroyed and assume the historic Jam Factory is to be preserved. Wary of too much retail. City centre needs support. Failed retail in Frideswide Square. Buildings provide a distinctive and visibly C19th character to the station area.	The Jam Factory is a listed building and policies relating to design and heritage will ensure high quality development that conserves the Jam Factory. Active ground floor level frontage is important in this central location near the station, but there is not requirement for retail specifically.

	planning permission last year. We would expect to see reference to these sensitivities in any associated allocation policy.		

2698

658 - Barton 3b (Land to the rear of Harolde Close, previously included in the Barton Area Action Plan area and outline application)

Site no.	Site name	Summary	Response

658	Barton 3B (Land to the rear of Harolde Close)	When Barton Park was built, the land was raised due to the extreme flood risk of building on a flood plain in the middle of a climate crisis. This had the effect of causing back-pressure on Bayswater Brook which means that the part of Barton Village Road as marked below along the stream is now flooded regularly. The stream going along the west side of the Site is partially culverted and has existed as a natural stream before as shown on early OS Maps, this floods in storm conditions and flows rapidly due to the steep slope to Bayswater Brook.	No longer being taken forward as a site allocation
Site no.	**Site name**	**Summary**	**Response**
		Further, the site is now very overgrown with mature trees, and is a haven for wildlife, this would be contrary to all policies in the OLP2042 relating to green space, ecology and environment.	

2699

658	Land off Harolde Close	Opposition to the plan to build on the green belt north of Bayswater Brook. I do not see this development as justified when other brownfield and city sites could be found for affordable housing. The wrecking of this prime green belt land is indefensible and is motivated by landowner and developer greed.	No longer being taken forward as a site allocation

660 - 2 Harberton Mead

Site no.	Site name	Summary	Response
660	2 Harberton Mead	Possible green space loss and increase in run off must be addressed.	No longer being taken forward as a site allocation.

2700

Historic England

Site no. and name	Summary of comment	Response	Outcome
2 Harberton Mead	Clearly this needs consideration with respect to any impacts on the character and appearance of Headington Hill conservation area.	Thanks for comments we will update relevant assessments where needed and where the allocation is carrying forward.	Update relevant info where applicable.

664 - Jowett Walk (South)

Site no.	Site name	Summary	Response
664	2 Jowett Walk (South)	Concern over allocating even more land for student accommodation than already and therefore displacing other Oxford residents.	The site was put forward by the landowner as part of the Call for Site process.

Historic England

Site no. and name	Summary of comment	Response	Outcome
Site #664 Jowett Walk (South)	Clearly this lies within the central conservation area and close to multiple listed buildings, so care is needed to respond sensitively.	Thanks for comment we will update where needed and	Update relevant info where applicable.

Site no. and name	Summary of comment	Response	Outcome
	Site assessment published for the proposed allocation on Jowett Walk states that the site contains “no identified historic building constraint”; while it does not contain listed buildings, it is adjacent to numerous such designated heritage assets.	where the allocation is carrying forward.	

2701

Comments on All Site Allocations

This section contains all comments received regarding all site allocations, including public and statutory responses.

Policy	Topic	Summary	Response
General comment on site allocations	Recreation grounds, green spaces	It is wrong in principle/law to build on recreation grounds/playgrounds/pitches without alternative adequate provision being made. 'Alterative provision' will be manifestly inadequate. More houses=more people=more need for civic provision, so there should not be any houses on these needed spaces. Loss of them=degradation of quality of life. Green spaces are particularly important in dense areas and where they act as wildlife corridors. Everyone should have areas of beauty, tranquillity and wildlife within reach. Developing on these spaces will harm fragile local infrastructure, particularly water supply, drainage and sewage disposal. Many brownfield sites and underused properties should be used first and the local plan should bear down on these, not green spaces. Shouldn't be developing new sites for future needs- should only worry about present local residents' needs.	The Local Plan protects and network of green spaces, including a core network which it is important to retain in situ, and a supporting network. Within the supporting network, there may be potential for reprovision of the green space functions of the site, so development may be possible if that can be achieved. It is not assumed from the outset that alternative provision that is adequate cannot be made. The majority of the supporting network is not allocated, and even on the supporting network it may be difficult to find solutions for re-providing the green infrastructure functions. However, where there is interest in developing the site and potential means of reprovision of its functions seem to be attainable, then an allocation can be made.

2702

Policy	Topic	Summary	Response
General comment on site allocation policies	Accessibility to Oxford rail station	I notice that a lot of the Interim Regulation 18 stage site assessment forms note that a high number of proposed developments are a significant distance away from Oxford railway station. It is therefore very clear that the Cowley Branch line needs to happen ASAP, not least to fulfil the government's Oxford-Cambridge Arc – the hightech developments are in southeast Oxford, and it's just so difficult to get there from the railway station. This is a fault of geography, but needs to be factored in.	Comment noted.
General comment on site allocations	Transport connections	Proper north-south, east-west links are needed to support developments- cycle highways or even trams.	As Highways Authorities, Oxfordshire County Council has worked with us on the Infrastructure Development Plan, and needs in each quadrant of the city are listed within Chapter 8.
General comment on site allocations	Wrong to have these policies	The City Council should not be making such decisions about property. Just let them build.	Positively managing development is the purpose of the planning system.
General comment on site allocations	Too few	There are too few site allocations.	Oxford does have a shortage of available and suitable sites, due to the tightly drawn boundaries. To be allocated, there has to be some certainty a site will come

Policy	Topic	Summary	Response
			forward. However, other sites may well come forward as windfall.
General comment on site allocations	Community uses are also important	Some sites should be for community use, not just housing and there must be access to facilities and services such as community centres, entertainment, medical services.	Chapter 7 of the draft plan includes a suite of policies to ensure good access to a range of facilities important to local communities.
General comment on site allocations	BBOWT	We have also looked at the individual PDFs for the site allocations we have commented on. These however provide little detail making it difficult to assess the potential impact of development on the surrounding natural environment. For example, no information regarding the proposed development quantum is given in the site policies despite this information being essential for assessing potential impacts – e.g. it makes a big difference whether a site is proposed to deliver 10 units or 50 units. Whilst it might be beneficial for policies not to be too descriptive (e.g. if insufficient masterplanning and capacity work has been done to determine a feasible quantum) we believe that at this stage in the LP process policies should provide at least an approximate or 'up to' estimate together with a clear set of criteria against	Capacity assessment forms have been produced to inform the site allocation policies. These will be published as part of the evidence base at the next consultation stage (Reg. 19). Whereas the site assessment forms published to support the Reg. 18 consultation were produced as part of the Sustainability Appraisal. The interactive map published at Reg. 18 included a layer which showed the locations of the proposed sites in the city as well as various other layers such as green infrastructure, ecological designations,

Policy	Topic	Summary	Response
		which the development will be considered. An indication of housing numbers for residential allocations should be included at the next stage of consultation. We have not been able to find any detailed maps showing which parts of the allocated sites are considered appropriate for development, which areas are for wildlife-rich green space etc. Such maps should be provided at the next stage of consultation. to accompany the individual site allocation policies although this information is essential to help locate the site on the policies map and to provide clarity on the boundaries. We ask the Council to address this shortcoming and to provide more information and a map with its policies.	heritage considerations and flood mapping for the city. We will publish maps showing the locations of each site in the chapter and the policies map will also show their location, alongside a variety of other policy considerations that have a spatial dimension.

2705

Natural England

Topic	Summary	Response	Outcome

Site allocations	The plan should allocate land with the least environmental or amenity value (NPPF para 171). Natural England expects sufficient evidence to be provided, through the SA and HRA, to justify the site selection process and to ensure sites of least environmental value are selected. Land allocations should avoid designated sites and landscapes and significant areas of best and most versatile agricultural land and should consider the direct and indirect effects of development, including on land outside designated boundaries and within the setting of protected landscapes. *General advice is provided as part of the annex to submitted comments.*	The process for determining site allocations will be discussed across the Sustainability Appraisal and a separate background paper on site selection. We are also regularly discussing the preparation of our HRA with you and will continue to do so.	Sustainability Appraisal and site selection background paper to be published at Reg 19 along with HRA. Discussions to continue with Natural England as and when needed.
Site allocations	Natural England note that a number of site allocations are within close proximity to designated sites. Where this is the case, it will be necessary to ensure a robust assessment of impacts is undertaken and appropriate mitigation can be provided and secured. It is Natural England's advice that sites which would result in unavoidable impacts	As noted earlier, we are undertaking a Source Pathway Receptor Analysis for the SSSIs as well as Habitats Regulations Assessment for the SAC and this will help identify all the relevant sites that might impact on	Source Pathway Receptor Analysis and HRA work to be published alongside Reg 19 consultation. Key findings will be reflected in relevant allocations including sitespecific mitigation
Topic	**Summary**	**Response**	**Outcome**

2706

	and/or where mitigation cannot be secured, should not be pursued.	these designations, in line with your comment. We will ensure any recommendations from that work, including sitespecific mitigation requirements, are reflected in the relevant allocation policies.	requirements where necessary.

National Highways

Topic	Summary	Response	Outcome
Chapter 8 – site allocations	Three residential sites border the SRN. These are sites 113, 1e and 463. No employment sites border the SRN. These sites will need to pay close attention to the impact on the SRN during planning application stage and National Highways would expect to be consulted further on these sites when proposals come forward. Whilst a traffic impact assessment has yet to be performed there is an expectation for a potential	Traffic Modelling has been undertaken that looks at the impact of all development sites proposed to support the city's growth over the plan period as part of HRA work. This work shows that the impact of Oxford city's growth on the SRN (i.e., the A34), is less than 1,000AADT.	At the meeting, the City Council and National Highways agreed that the issues raised within National Highways response to the Reg. 18 Plan consultation had been satisfactorily resolved.
Topic	**Summary**	**Response**	**Outcome**

	impact on the strategic road network due to the number and proximity of sites to our network.		

Oxfordshire County Council

Topic	Summary	Response	Outcome
Proposed New Site Allocations	**Strategic Planning** The County Council has an interest in how the City proposes to address housing need as any new allocations are likely to have implications in respect of the County's statutory functions. The Local Plan will need to address the identification, provision, funding and overall deliverability of the infrastructure and County Council services needed to support sustainable development. As such, we will continue to encourage regular communication between relevant parties. For sites to be allocated outside of the City for Oxford's unmet need, the County Council's main concern is that they are well connected to Oxford and provide the best opportunities for making use of existing and proposed transport infrastructure, including enhancing and	Noted. We will continue our dialogue with the County as the site allocation process move forward.	Oxford City Action: Continue working with the County Council to draft site allocation policies
Topic	**Summary**	**Response**	**Outcome**

	making better use of sustainable public transport and active travel links into Oxford. At this stage, the proposed additional sites do not provide details regarding capacity therefore the County Council cannot comment on potential infrastructure requirements.		

Topic	Summary	Response	Outcome
Site allocations	The information contained within the new Local Plan will be of significant value to Thames Water in future infrastructure planning, but the draft allocations do not have housing numbers at this stage. Would welcome more details on the proposed developments when they become available and also an early contact from the developers.	See earlier response re: recommending developers undertake early engagement with Thames Water. Full site allocations with minimum housing numbers will be published as part of the Reg 19 consultation and we would welcome additional engagement with yourselves on them through that process or separately.	No further action – additional engagement to be undertaken in due course.

2709

Thames Water

Site Allocations from LP2036 or LP2040

This section contains queries regarding the site allocations from the previous local plan LP2036 or LP2040 which was withdrawn (see the Introduction and Local Plan Timeline sections of this report for more context).

Local Plan	Topic or location	Summary	Response
LP2040	Development sites	The OLP2040 had complete site allocation policies, now these seem to have simply disappeared without updates as already allocated, but whether already allocated or not, there are always policy updates required as circumstances change.	The Regulation 19 draft LP2045 will include detailed site allocation policies.
LP2040	Policy SPS10: Knights Road	Headington Heritage: This policy is longer included within the Reg. 18 Plan. Site should be not allocated as site is next to Cowley and East Oxford (lowest amount of green space per inhabitant in Oxford). Cumulative impact of other developments on green space. Surface flooding will lead to sewage discharge at Oxford Sewage Treatment Works.	LP2045 does not propose a site allocation for this policy.
LP2040	Policy SPS17: Edge of Playing Fields, Oxford Academy	Headington Heritage: This policy is longer included within the Reg. 18 Plan. Site should be not allocated as site is next to Cowley and East Oxford (lowest amount of green space per inhabitant in Oxford).	LP2045 does not propose a site allocation for this policy.
LP2040	SPE3 – Headington Hill	Headington Heritage: Policy now removed – previously in LP2040.	LP2045 does not propose a site allocation for this policy.

Local Plan	Topic or location	Summary	Response

	Hall and Clive Booth	Very substantial damage has been done to Headington Hill Conservation Area by thoughtless insensitive development by OBU. Cuckoo Lane, in particular has been damaged by a "welcome glade" and expansive views of ugly buildings. Much of this site boundary is in the most sensitive part of Cuckoo Lane yet this is not even mentioned. Modification Requested: Deep foundations or hard surfaces can affect ground and surface water flows. Greenfield run off be required. "...supporting the setting of the conservation areas" should be changed to "not harming" this, is IN the Conservation Area. Headington Hill has calcareous springs or surface water as map per below, showing TUFA, Fen and probable peat reserves in and around Headington Hill Park.	

2712

Local Plan	Topic or location	Summary	Response
		Modification requested: Site allocation policies should include a requirement to undertake hydrological and fen survey, and recovery where possible.	
LP2040	SPE4 – OBU Marston Campus (LP2040)	Headington Heritage: Policy now removed – previously in LP2040. No indication as to why SUDS are required here and not elsewhere, the Marston SSSI impact zone is a very wide area. Headington Hill has calcareous springs or surface water as map per below, showing TUFA, Fen and probable peat reserves in and around Headington Hill Park. Modification requested: Site allocation policies should include a requirement to undertake hydrological and fen survey, and recovery where possible.	Site is included as an allocation in the 2045 plan. The allocation policy will include requirements to mitigate the potential impacts on the New Marston SSSI.
LP2036	329 - Valentia Road	OLP2036 included a policy that allocated this site for housing (10 dwellings). The site does not feature on the list of potential policies in the new local plan. Concerned that	LP2045 does not propose a site allocation for this policy.

Local Plan	Topic or location	Summary	Response
		policy will not be carried forward as capacity is potentially less that 10 dwellings. Modification requested. Include a policy for this site backed with evidence and clear policies re groundwater catchment.	
LP2036	622 - Coolridge Close	OLP2036 included a policy that allocated this site for housing (10 dwellings). The site does not feature on the list of potential policies in the new local plan. Concerned that policy will not be carried forward as capacity is potentially less that 10 dwellings. NO further development should be permitted in the Lye Valley this is in the groundwater catchment of the Lye. Modification requested. Include a policy for this site backed with evidence and clear policies re groundwater catchment.	LP2045 does not propose a site allocation for this policy.

LP2036	629 - Wood Farm Health Centre	OLP2036 included a policy that allocated this site for housing (10 dwellings). The site does not feature on the list of potential policies in the new local plan. Concerned that	LP2045 does not propose a site allocation for this policy.

Local Plan	**Topic or location**	**Summary**	**Response**
		policy will not be carried forward as capacity is potentially less that 10 dwellings. NO further development should be permitted in the Lye Valley this is in the groundwater catchment of the Lye. Modification requested. Include a policy for this site backed with evidence and clear policies re groundwater catchment.	
LP2036	SPE10 - Hill View Farm	*(LP2040 Policy Reference)* Do not include policy as a site allocation as planning application has been approved	LP2045 does not propose a site allocation for this policy.
LP2036	SPE11 - Land West of Mill Lane	*(LP2040 Policy Reference)* Do not include policy as a site allocation as planning application has been approved	LP2045 does not propose a site allocation for this policy.

LP2036	SPE12 - Marston Paddock	*(LP2040 Policy Reference)* Do not include policy as a site allocation as planning application has been approved	LP2045 does not propose a site allocation for this policy.

Additional Site Suggestions

This section contains public queries or suggestions for site allocations.

Location	**Summary**	**Response**
Telephone exchanges across Oxford	There are at least four telephone exchanges in Oxford: Speedwell Street, Oakthorpe Road in Summertown, Headington and Cowley. Conventional landlines are being phased out. As a result, some or all of these may be decommissioned during the lifetime of the plan and may become available for development	At the current time these sites are not available, and there has been no indication from the landowners or leaseholder that they will be available in the plan period.
Butts Lane, Marston	Previously submitted in Call for Sites and previously assessed as part of wider Green Belt parcel 114a in 2023 GB assessment. Request a thorough Grey Belt and Green Belt assessment of the land in isolation from the rest of 114a. The site is Grey Belt and offers a sustainable, previously-developed site for up to 20 homes.	The majority of this site (114e) has been put forward as a site allocation policy in the draft plan and included in the SHLAA.

Pullens Lane, Headington	Carter Jonas is instructed by the Morrell Family Trust ("the Trust"). The Trust owns the Pullens Lane Allotments ("the Allotments"), which are located adjacent to Oxford Brookes University's Clive Booth Student Village in Headington. The allotments are in fact surrounded on all four sides by existing development, as shown on the plan appended	The Strategic Housing Land Availability Assessment (SHLAA) will be published as part of the Regulation 19 consultation. There is not a surplus of allotments in the city and allotments are part of the Core Green Infrastructure Network because they are important to protect in situ.

Location	**Summary**	**Response**

2717

	to this letter. The Trust (via Carter Jonas) has submitted the Allotments for the Council's consideration during "Call for Sites" exercises in 2021 and 2024. We look forward to understanding the Council's assessment of the site in the next update of the HELAA when it is published. It is disappointing that there is not an up-to-date HELAA to support the current consultation. The Trust's land interests at Pullens Lane have strong potential for future development in Oxford City Council's new Local Plan 2042. The Trust considers that the Allotments would be suitable for new residential (use class C3) or student accommodation. The Pullens Lane Allotments are far from well utilised and have only been partially used for some years. The Allotments could be made available for development within the next 5 years. The site is well located within Oxford City and benefits from being within walking and cycling distance of a range of services and facilities. Furthermore, it is within a reasonable walking distance to several bus routes, including key bus routes serving Oxford City Centre, and beyond.	

2718

Location	Summary	Response
	The Trust has access rights to the site via John Garne Way to the west, and while it is accepted that Pullens Lane might be an alternative access route and is a single lane carriageway, it is maintained to a high standard. Moreover, there is the potential in this location to consider a reduced vehicle type development like those which the Council is promoting elsewhere in the city. Therefore, in short, there is ample access to the site. Development in this location would constitute sustainable development in accordance with the presumption in favour of sustainable development, as set out in national policy. The Trust is very concerned that the Council has taken a very broad approach to managing allotments in the draft Local Plan. It states in the Local Plan, in the preamble to draft Policy G1 – Protection of Green Infrastructure that the disposal of allotments requires application to the Secretary of State and is only consented in exceptional circumstances. This is not	

2719

Location	Summary	Response
	the case in every circumstance: The Allotment Act 1925 generally does not apply to private allotments. The Act primarily focuses on allotments provided by local authorities and those created under specific statutory provisions, not privately owned or managed plots. The Trust strongly objects to the proposed 'protection' of its land for allotments through policy G1 - as shown on the consultation policies map. There is no clear justification for this approach, and as a private allotment site it is not subject to the same controls as other allotments which are owned by the Council. The Trust would urgently like to discuss the Council's proposed and currently unjustified approach to its land in the emerging Local Plan.	
Oxford Golf Club, Hill Top Road	This should be allocated- it is private lan not accessible to the public. The site is huge and sustainable. The parts of it of less landscape value should be developed.	Currently, the site is on a long lease to the golf club, with no current interest from the landowners in developing the site.

2720

Blanchfords, Headington	Surprised that the former Blanchfords building supplies depot in Headington is not listed as it seems a prime site for development.	Every effort has been made to ellicit a response from the landowner, but without any apparent interest from the landowner in bringing forward the site for development, for now we have to assume it will remain as a timber yard.

Location	**Summary**	**Response**
		The general policy approach of the plan would allow development of the site for housing, should it come forward, without an allocation being needed.
South Parade, Summertown	This could be added to the list as it is an area in need of rejuvenation, with the opportunity for land assembly and development, including improvements to the public realm.	There is no clear opportunity here at the current time, with a wide range of landowners and mix of well occupied buildings.
Ultimate Picture Palace, Cowley	Would like there to be protection for this.	General policies protect cultural uses, with some flexibility to respond to changing needs. Protecting each facility individually is not needed or appropriate.
Ellison Institute, Littlemore	Something should be said about this, restricting too much building on the site.	It is not considered appropriate to have a policy restricting development of this site.

Oxford North	Oxford plays an important role in national economy. There is significant potential for employment and housing to meet local and Oxford's needs at Science North, the area between Oxford Parkway, Oxford North and London Oxford Airport.	The Local Plan can only cover the City Council's administrative boundaries. There is a dedicated site allocation policy for Oxford North which indicates that planning permission will be granted for mixed-use development including residential and knowledge-economy employment.

All Public Responses to the Whole of Chapter 8

Draft policy	Topic	Summary of comments	Response

2722

Chapter 8	Infrastructure with new development	In the site allocations there are many mentions of new housing, but no specific mentions of schools or GP surgeries. Are current facilities expected to absorb the increase in the residential population?	Policy S3 and the accompanying evidence (the Infrastructure Deliver Plan (IDP)), set out the infrastructure needed to support development in the plan. The IDP sets out a list of specific projects identified to mitigate the impacts of planned development. As part of the plan-making process, we work with infrastructure delivery partners to identify and deliver the necessary infrastructure to support growth proposed in the Local Plan.
Chapter 8	Culture	The section on "city of culture" contained no questions on culture. What community facilities do you think contribute to Oxford's	These facilities fall under use class F2 which are considered community facilities.

2723

Draft policy	Topic	Summary of comments	Response
		mission? What is the position on concert halls, galleries, museums?	

Chapter 8	Food growing spaces	More edible plants in community areas	We agree food growing spaces can also contribute to biodiversity (and vice versa) where they are designed appropriately. Criterion i of policy G2 already sets this out as one of the benefits that should be explored.
Chapter 8	Support for golf course	Keep the golf course if you are serious about local recreational amnesties, green spaces, flood control and biodiversity. Golf keeps people fit and healthy!	The policy approach is to require re-provision of the community facilities.
Chapter 8	Sports facilities	Infrastructure for open space, sport and recreation must be informed by evidence (see paragraph 103). The Council needs to complete the review of its Playing Pitch Strategy and undertake to update its built sports facilities strategy. The new infrastructure needs identified should then be added to the Council's infrastructure development plan.	Policy S3 and the accompanying evidence (the Infrastructure Deliver Plan (IDP)), set out the infrastructure needed to support development in the plan. The IDP sets out a list of specific projects identified to mitigate the impacts of planned development. As part of the plan-making process, we work with

2724

			infrastructure delivery partners to identify and deliver the necessary infrastructure to support growth proposed in the Local Plan.
Chapter 8	NHS dental practices	More NHS dental practices.	Policy S3 and the accompanying evidence (the Infrastructure Deliver Plan (IDP)), set out the infrastructure needed to support development in the plan. The IDP sets out a list of specific projects identified to mitigate the impacts of planned development. As part of the plan-making process, we work with infrastructure delivery partners to identify and deliver the necessary infrastructure to support growth proposed in the Local Plan.
Chapter 8	Canal improvements	The remaining sections of canal towpath beyond the existing improved area should be considered for improvement to provide a	Areas within Cherwell District boundary are outside of OCCs control.

Draft policy	Topic	Summary of comments	Response
		suitable standard throughout and to join to other improvements within Cherwell district which may be forthcoming as a result of housing allocations.	
Chapter 8	Proposal for an Air Cable Transport system	An Air Cable Transport system running from Redbridge Park and Ride to Westgate shopping centre. Run by bus companies, this would provide a quicker, more reliable route for tourists and commuters into the city. By providing parking for tourist coaches at Redbridge and an attractive alternative, that is a tourist attraction in its own right, we could greatly reduce the number of tourist coaches entering the city.	Noted.
Chapter 8	Park & Ride for Cowley	One thing that would really help is a Park & Ride for Cowley. It could be on the Unipart site or the Oxford Stadium site; this would provide excellent transport links to both Cowley Road (whose businesses are dying, coincidental to not being on a Park & Ride bus route) and the surrounding business/innovation areas. It's also needed for those people who have essential but low-paid jobs and who can't	Reasons for permitted uses in Unipart policy are set out in site allocation form.

Draft policy	Topic	Summary of comments	Response
		afford to live closer and have to get to work at non-peak hours (for example, a nurse who lives in Brize Norton, for example, has to drive to the JR rather than get the bus).	
Chapter 8	Transport	Transport. We desperately need the park and rides to be further enlarged and ideally for the service to be free. In addition, smaller buses on new routes between different parts of the city, rather than as currently having to go into the centre and then out. The LTNs need to be revised - e.g. the barrier in Crowell Road should go! And proposals for bus gates or congestion charges should be scrapped.	Noted. The County Council as Highways Authority does take a lead in overall transport strategy.

Chapter 8	Safeguarding of land	EWR Co considers that the local plan could also better inform stakeholders and users of the document by providing information about the EWR route safeguarding in the local plan and on the local plan policies map. EWR Co has issued guidance for local authorities and developers on the implications of the safeguarding directions for both the determination of planning applications and the preparation of local plans. Paragraphs 24 to 29	A new Policy on safeguarding is now included in Chapter 8 of the Plan- Policy I2, which includes reference to EWR.

Draft policy	**Topic**	**Summary of comments**	**Response**

2728

		of the guidance deal with the implications for local plans and advise that: • The area safeguarded should be represented on the policies map (in accordance with regulation 9 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) • Local Planning Authorities (LPAs) should not include proposals in the local plan that conflict with the safeguarding directions • Local Plans should state that the safeguarding directions have been made by the Secretary of State for Transport, they are not proposals of the LPA and the route of EWR will not be determined through the local plan process; it will instead be subject to an application for development consent under the Planning Act 2008. As it stands EWR Co considers that the plan is deficient in that it makes no reference to the safeguarding of the EWR route, either within the local plan itself, or on the interactive policies map. This should be rectified in the submission	

2729

Draft policy	Topic	Summary of comments	Response
		version of the local plan so that all who may have an interest in the future development of sites in the city can take the potential impact of EWR into account in designing their development proposals and can take appropriate steps to avoid and/or mitigate any potential impacts which might otherwise prejudice the delivery of parts of the EWR route.	
Chapter 8	Consult with NESO (electricity)	National Energy System Operator (NESO) has taken over the electricity and gas network planning responsibility from National Grid Electricity System Operator Limited (NGESO) as of 1st October 2024. Please also consult with NESO separately from NGET. Currently there are no known new infrastructure interactions within the area, however demand for electricity is expected to rise as the way NGET power our homes, businesses and transport changes. As the nation moves towards net zero, the fossil fuels that once powered the economy will	Comment noted and database updated.

Draft policy	Topic	Summary of comments	Response
		be replaced with sources of low-carbon electricity, such as offshore wind farms. NGET need to make changes to the network of overhead lines, pylons, cables and other infrastructure that transports electricity around the country, so that everyone has access to clean electricity from these new renewable sources. These changes include a need to increase the capability of the electricity transmission system between the North and the Midlands, and between the Midlands and the South.	

2731

General Comments Collected During Consultation

Topic	Summary	Response
15-minute cities	Support for the 15-minute cities concept – it was not publicised well, but it has worked in other cities.	Noted.
Recreation grounds	These sites are used by residents, football teams and clubs from all ages and all walks of life. To lose these would be at the detriment of the area and locals, especially young people.	The detailed site allocation policies seek reprovision of sports facilities.

Clarity over how housing figures have been reached	There should be greater clarity regarding: • the capacity for housing within the city's administrative boundaries; • why the plan period start date of 2022 has been chosen; • how the housing figures from the existing OLP and the extant Local Plans for neighbouring local authorities relate to the housing requirement over the new plan period; and • the approach to be taken to meeting residual unmet need.	Since the Reg 18 consultation the plan period has been adjusted to 2025 – 2045. Policy H1 calculates housing need using the Standard Method, and latest government affordability data.
More deference to national policy	Re-stating the NPPF's contaminated-land rules, the Environment Act's 10 % biodiversity-net-gain requirement or the Future Homes Standard's net-zeroready fabric provisions does not enhance protection; it merely piles extra reports onto applicants.	The city has a local net zero target of 2040 and the national requirement is 2050. Many policies are bespoke to ensure we meet this target.
Council tax is too high	The excessive regulation enforced by the Council means Council Tax is too high. People can't afford to buy houses because they are having to subsidise social housing.	This is beyond the remit of Planning.
Transport issues	• Please could you find ways to stop cars and traffic dominating our city? • Please could you make park and ride work?	The City Council will continue to work with the County Council to identify potential solutions to these issues, with the aim of enhancing
Topic	**Summary**	**Response**

2732

	• Please could you stop stationary traffic where queues of drivers try to get into the Westgate Centre? If that continues to be the reality once the Botley Road is open again, it will be very bad. • Please could you find ways for cyclists to be able to use the roads without confronting potholes and drain covers with large gaps around them? • Please could you find a way for cyclists to go east west without having to dismount from their bikes? • Please could you stop buses driving up Queen Street? • Traffic congestion is significantly caused by private school drop-offs. • Proper cycle highways and trams needed to connect the city. • Move the coach station to the Becker street carpark next to the main station to save public transport network and pedestrian accessibility.	public realm. However, the details of this work, and implementation of schemes, will be led by the County Council as Highways Authority and are outside the realm of the Local Plan.

Sustainability Appraisal

All Public Responses

Topic	Summary	Response
Don't deter housing development	Care needed not to make things too bureaucratic when it comes to housing development. The crisis is acute and builders should not be deterred from delivering.	The Sustainability Appraisal process is a tool that helps to inform the development of the Local Plan. It does not, in of itself, create any additional burden for developers when they come to making an application.
General	It seems quite thorough	Comment noted.
More focus on environmental improvements	Needs more focus on Oxford to be green, blue, clean air, low car, big on public transport, litter free, with penalties for cars parked on curbs. Other similar comments including need for more community gardens with edible plants and food forests, as well as even greener developments (more trees for shade) and more solar panels on buildings.	The Sustainability Appraisal framework addresses these various considerations across several of its objectives (e.g. Objective 7 Green Infrastructure; Objective 8 Traffic and Air Pollution). As set out above, the SA's role is to help inform the development of the Local Plan, which in of itself has various policies across Chapter 4 and 7 which address different aspects of this comment where appropriate.
More focus on educational inputs	The sustainability appraisal has taken consideration on environmental conservation and health but is lacking educational inputs. These should cover diversity and inclusion, British culture, political systems, institutions, laws, community concepts, religions, ethnicities and local history regardless of where residents are from.	We will look to draw these considerations into the relevant underlying background papers where they are not already mentioned and where this would be of relevance to the Local Plan.

Public transport	Sustainability appraisal is lacking proposals for making public transport viable and attractive.	The Sustainability Appraisal helps to inform the development of the Local Plan. The Local Plan
		includes a range of policies intended to support access to public transport.
Sustainability issues not taken seriously	A couple of comments flagging concern that report does not take sustainability seriously and that there is too much focus on growth without due concern for climate change, protecting environment, the health/needs of local residents.	A key role of the Local Plan, which the Sustainability Appraisal helps inform, is about guiding growth to happen in the right way for the city. Nevertheless, the Sustainability Appraisal framework which is used throughout the report includes objectives that address all three pillars of sustainability (the environmental, social and economic).
Site specific scoring	Comments on sustainability appraisal scores for particular sites in their interim site assessment forms.	The Council will be reviewing the sustainability appraisal scores for all the sites being taken forward to Regulation 19 and updated forms will be published alongside this report. Scores will be updated where appropriate.

2737

Topic	Summary	Response	Outcome

SA	While the Sustainability Appraisal (SA) purports to test three housing options, the assigned SA scores, especially for the City Council's preferred Option B, lack clear and transparent justification. It is not evident why Option B consistently receives more positive scores than Options A or C in numerous instances. This appears to be based on an incomplete assessment. The SA commentary itself indicates that judgements are made without considering the full sustainability impacts of unmet housing need being accommodated outside the City's administrative boundary. Crucially,	While the assessment of cross boundary impacts does represent a part of the SA/ SEA process, when assessing the sustainability impacts of the plan, it is important that the core assessment focuses on the impacts of the strategy within the	We will take steps to ensure that the SA is legally compliant

Statutory Consultee Responses

South Oxfordshire District Council and Vale of White Horse District Council

2738

Topic	Summary	Response	Outcome

	the sustainability impacts of cross-boundary housing provision do not disappear at the border; they are displaced. These distributed impacts, particularly those associated with Option B's reliance on external provision, could be worse than those of Options A or C. For example, accommodating development across more dispersed areas, potentially distant from Oxford's public transport routes, is highly likely to lead to increased car dependency and significantly higher carbon emissions due to longer commuting distances. SA Objective 3: The testing under SA Objective 3 focuses primarily on judgements related to densities and the loss of green space. However, it fails to explicitly evaluate the impact of the options on the Green Belt, despite the Green Belt being directly mentioned within the scope of SA Objective 3 itself. This is a significant omission. SA Objective 7: SA Objective 7's conclusions are based on the identical impacts of density and green spaces already assessed under SA Objective 3. This is unnecessary duplication of testing and analysis, which raises questions about the thoroughness and efficiency of the SA process. A robust and unbiased re-evaluation of the housing options should be undertaken. Oxford Wastewater Treatment Work is mentioned in the Sustainability Appraisal as important infrastructure to upgrade to enable growth in and around Oxford (page 47). This is located within South Oxfordshire and facilitated by the adopted and emerging Plans of South Oxfordshire, but South Oxfordshire District	local authority administrative area. Any assessment of the crossboundary implications of delivering homes outside of Oxford's administrative boundary would depend on where these homes would be delivered – this is not something that is within the City Council's procedural jurisdiction. The location of the new homes delivered outside city boundary (including those to meet Oxford's unmet housing need), is a matter for each partner authority to engage with in the production of their own plans. The City Council is aware that homes previously allocated in neighbouring districts Local Plans to meet Oxford's unmet housing need were done	

2739

Topic	Summary	Response	Outcome
	Council isn't mentioned as a partner to work with on the delivery of the necessary upgrades.	so as close to the city as possible. SA Objective 3: we will look to ensure that the findings of the Green Belt assessment are incorporated into the SA report for transparency. SA Objective 7: the SA Framework provides the key SA indicators that are considered for each SA objective. Noted – Thames Water are leading on this project and they will be involving partners as appropriate.	

2740

Health Impact Assessment

All Public Responses

Topic	Summary of Comments
Future health implications	The HIA should ensure future health of Oxford and provide estimated cost for any damaging scenario to avoid future implications.
Physical and mental wellbeing benefits of open spaces	More emphasis should be given to the benefits of all open spaces and closed spaces should be open to everyone.
HIA should go further	The HIA and plan should go further to address the major known issues in Oxford.

Statutory Consultee Responses

Oxfordshire County Council

Topic	Summary	Response	Outcome
Evidence Base – HIA Screening Report	**Public Health** This document provides a useful guide and incudes some of the essential criteria for measuring the health of a population, such as life expectancy. However, it also needs to include reference to 'healthy life expectancy', which is a crucial indicator of local health inequalities and helps the assessor to uncover potential mitigative action to promote healthier lives and reduced pressure on health services. The document makes reference to Oxfordshire's HIA toolkit but with no clear link or indication of where the user can access this guidance. Please include a link to the Oxfordshire Leader's Joint Committee website where appropriate. It is useful that the document signposts the user to the JSNA, however this has now been replaced by the Oxfordshire Data Hub – Welcome to the Oxfordshire Data Hub. There needs to be a reference to this as a key data source, along with others such as Census and ONS.	Noted. Thank you for the update. We will seek to review and ensure that correct references are included. Background Papers

All Public Responses

Topic	Summary of Comments
Background Paper 001	• Urges to set a housing requirement above the Standard Methodology • Criticises the lack of reference to the PPG • Prefers option C
Permanent Residential Moorings	• Very few suitable sites for mooring but strong demand • Include better power hook-ups, conservation areas must have no moorings.

Statutory Consultee Responses

Oxfordshire County Council

Topic	Summary	Response	Outcome
009 BGP Natural Resources	**Minerals & Waste** Delete reference that states "Work is underway on a new Minerals & Waste Plan which would cover the period to 2042." It should be included that Oxfordshire County Council are the Waste Planning Authority and responsible for planning for the management and disposal of Wastewater and Sewage sludge (Policy W10)	We can delete this reference to reflect the information on the County website when we update the Background Papers. Will consider which document is best suited to include this information.	Oxford City Action: delete reference from BGP9 Oxford City Action: Consider inclusion of suggested text.
BGP 010 Health and Wellbeing	**Public Health** The Health and Wellbeing chapter of the Sustainability Appraisal is welcomed. Draft Policy HD10: Health Impact Assessments needs to be specific on the threshold for triggering the need for a developer to conduct an HIA. For example, requiring all developments which include 50 or more residential units, or over	Noted. Already covered in Policy HD10 HIA.	No Action Required

2746

	1,000sq.m if commercial, to do an HIA, as is the case in Birmingham's Local Plan. This helps to remove any ambiguity over whether or not a development requires an HIA and should actually remove some of the extra burden that has been outlined as a potential negative consequence of this approach in the SA. As such, Option A is my preferred approach for this policy, on the basis that formal thresholds are included.		

2747

Evidence Base

All Public Responses

Evidence base	The HBF note that the Council has not included a housing trajectory within the draft regulation 18 local plan, nor could we find one within the evidence base. Given that the NPPF states in paragraph 74 that strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period we would expect to see such a trajectory in the submitted local plan. The Council should also provide an annualised trajectory setting out when each site contributing to the city's housing supply will come forward and the rate at which it will deliver. Previously the HEELA provided an indication of supply rates within five-year tranches, however this lacks the detail necessary for effective scrutiny of the deliverability of the submitted plan. Only an annualised trajectory will allow interested parties to effectively scrutinise land supply over the whole plan period and by extension the level of unmet needs arising over the plan period.	A trajectory is included in the Draft Submission Local Plan. It is not realistic for the SHLAA to provide an annual breakdown against sites for those delivering in the later stages of the plan period as there are too many uncertainties.
Evidence base	Hallam considers that the evidence based studies being undertaken to support the preparation of the plan should not be simply restricted geographically to Oxford and be broadened to joint strategic studies with the neighbouring authorities, none more so than to undertake a strategic review of the Oxfordshire Green Belt. Whilst the evidence base includes Oxford Green Belt Additional Site Assessments, this will only serve to clarify the limited and constrained opportunities for the city to accommodate additional housing. A strategic Green Belt review is necessary if the city's	Although an update has been made to the Green Belt assessment following changes to the NPPF, it still broadly follows the methodology developed jointly through the Oxfordshire Growth Board. The City Council cannot make decisions on how neighbouring authorities consider Green Belt within their areas.

	unmet need is to be met whilst promoting sustainable patterns of development.	
Evidence base – Green Belt	Strongly oppose going ahead with this grey belt designation for Cutteslowe park- it is obviously inappropriate - green and	Cutteslowe Park is not being removed from the Green Belt

2749

Assessment of Additional Sites	biodiverse park (including all the sports fields hay meadow and planted trees and the allotments). Do not want to see any of the sites on the list for possible designation as grey belt to go forward in the final plan as this makes them easier in future to release for building. Would be total abdication of responsibility for the biodiversity on these sites by the council and for the experience/well-being of visitors.	designation through the Local Plan process. Grey belt is not a formal designation.

Evidence base – Lye Valley SSSI Hydrogeological Impact Assessment Report	Range of criticisms and detailed comments received in relation to the accompanying Lye Valley Hydrogeological Impact Assessment report including: • The general methodology including in relation to the range and quality of data used to inform the analysis including that it is considered to be incomplete, omitting key data points, relying on flawed assumptions – e.g. study appears to only consider SSSI and not wider LWS/habitats; • The findings and recommendations including that these are not informed by all the relevant considerations (such as climate change, the work of volunteers) or are based on flawed inputs or assumptions (e.g. monitoring years were wetter on average recently and misses drier years in past), or that they differ from or ignore findings from previous studies (e.g. Lamberth); • That the findings and recommended tests do not fully address key factors impacting the Lye Valley (e.g. groundwater protection zones), or that they are ineffective without further actions to tackle issues such as permitted development rights e.g. Article 4 direction needed; • That the report has been formulated on the basis of supporting more development or as a way to excuse previous development being permitted within the	Whilst the Lye Valley study is focused on impacts on the SSSI, as this is afforded the highest level of protection, the findings and analysis help to inform the approach to protecting the wider area including other associated designations and interconnected habitats. The study provides an additional level of analysis and understanding about the hydrogeological functioning of the areas and its key sensitivites which was not available previously. As with any study, there might be additional benefits in longer term monitoring and analysis in helping to expand evidence, however, this is not always practical within existing time constraints and resources. Whilst there may be some disagreement as to the methodologies and conclusions, the study is a considered to be a useful piece of additional evidence

2750

	• catchment. Report actually appears to support more small developments in the calculated fen catchment; That the findings should not supersede the Lamberth report which should be maintained as important baseline.	supporting the approach to handling applications that might affect the Lye Valley. It supports the ongoing protection of the wider Lye Valley but highlights that 'protection' varies in how it should be undertaken depending on the location and particular impact pathway mechanisms, which should help applicants/decision makers in meeting their responsibilities set out in national and local policy. Where practical, we will seek to explore how these additional comments can be responded to through the accompanying Technical Advice Note.

Statutory Body Responses

Oxfordshire County Council

Topic	Summary	Response	Outcome

Evidence Base – HIA Screening Report	**<u>Public Health</u>** This document provides a useful guide and incudes some of the essential criteria for measuring the health of a population, such as life expectancy. However, it also needs to include reference to 'healthy life expectancy', which is a crucial indicator of local health inequalities and helps the assessor to uncover potential mitigative action to promote healthier lives and reduced pressure on health services. The document makes reference to Oxfordshire's HIA toolkit but with no clear link or indication of where the user can access this guidance. Please include a link to the Oxfordshire Leader's Joint Committee website where appropriate. It is useful that the document signposts the user to the JSNA, however this has now been replaced by the Oxfordshire Data Hub – Welcome to the Oxfordshire Data Hub. Topic	**Summary**	**Response**	**Outcome**

2752

Evidence Base – HRA	**<u>Landscape and Nature Recovery – Biodiversity</u>** It is noted that atmospheric/air pollution has not been identified as a potential impact pathway with Little Wittenham SAC. Further justification for this decision would be requested as it is considered atmospheric pollution could still impact this site and its designated features. The HRA identifies that likely significant effects on Oxford Meadows SAC in the absence of mitigation have not been ruled out. If these impacts cannot be ruled out through Appropriate Assessment then it is recommended that these sites are removed from the Local Plan.	Natural England do not consider this an issue. NE guidance considers for air pollution associated with a plan to have an impact on a designated site, that site needs to be within 200m of a road. The Little Wittenham SAC (designated for Great Crested Newt breeding ponds), is located more than 200m from any likely source of air pollution. JNCC does not consider air quality to be an issue. Noted. A dialogue with NE is on-going. The HRA will be updated to support the forthcoming Reg. 19 consultation.	No Action Required No Action Required

Topic	Summary	Response	Outcome

ELNA	The principle of a county-wide FEMA is supported. The ELNA needs to be updated at paragraph 2.42 in respect of Cherwell's employment land needs, to align with the information found the Cherwell Local Plan 2042 submission documents. The pattern of employees travelling from neighbouring authorities will be exacerbated unless residential development is prioritised in city above providing additional employment floorspace. The ELNA suggests that industrial/warehousing space is accommodated outside the city and refers to locations within Cherwell District. There has been no formal request or agreement for	Support noted. The ELNA has been updated in respect of Cherwell's latest employment land needs position. The city's strategy is to prioritise new sites for housing. However, intensification of existing employment sites is needed in order to meet the city's identified employment needs. The ELNA describes the current situation regarding warehousing, i.e., limited demand within the city as it is not a good location for such uses. There is no request for unmet warehousing need to be taken.	
Topic	**Summary**	**Response**	**Outcome**

	unmet warehousing need. Clarity on this point would be welcomed.		

South Oxfordshire District Council and Vale of White Horse District Council

Topic	Summary	Response	Outcome
ELNA	1.We are concerned that the interim ELNA does not adequately define the city's employment needs, which means effective and informed consultation is impossible. 2.We do not recognise the collaborative Oxfordshire-wide study on the need and supply of logistics (2.17-2.19) and the assertion that past practice is for logistics need to be met outside the city is made without supporting evidence. This has potential to significantly and negatively impact the planning and development within districts. 3.Concur with the definition of Oxford's FEMA being Oxfordshire, but we strongly object to the inappropriate critique of other established local FEMA designations. The study conflates	1. The Interim ELNA did not include the city's employment land needs. This will be available as part of the Reg. 19 evidence. 2.There is no reference to an Oxfordshire-wide study on need and supply of logistics in para 2.17-2.19. 3. A review of existing FEMAs was considered a useful exercise by our ELNA consultants as it provided a useful context	No Further Action.

Topic	Summary	Response	Outcome
	the OGNA and AECOM's ELNA for S&V only and so wrongly suggests AECOM were establishing the FEMA for Oxford or Oxfordshire. 4.Reference to a HMA in para 3.36 is factually incorrect. 5.We note the intention to use 2021 Census data, but this is generally considered to have significant limitations for commuting pattern analysis. It leads to inconsistencies with evidence bases of neighbouring authorities, and this poses a risk to future collaborative planning efforts and could undermine the efficacy of joining strategic approaches across the wider Oxfordshire area if required.	for establishing Oxford city's FEMA. 4. The S&V ELNA considers that the HMA is "the majority of" Oxfordshire (para.4.28) 5. Limitations of the 2021 Census are noted however it does represent the most recent Census data.	

2756

Evidence base - Specialist housing needs assessment	1. It is a significant omission to not include households climbing out of need as part of stage 4 of the methodology, and Table 4.5. 2. The Housing Needs Assessment (HNA) needs to consider the impact of in and out migration. 3. The Housing Need Assessment HNA should provide links within the footnotes to any data used, such as Office for National Statistics (ONS) modelled income estimates and data from the English Housing Survey	1. Table 4.5 shows simply projected housing need arising per annum. Whether existing affordable homes may become available is considered in the supply section. 2. The impacts of in and out migration are considered in the demographic analysis that forms the basis of much of the assessment.	

Topic	**Summary**	**Response**	**Outcome**

2757

	(EHS) or Annual Survey of Hours and Earnings (ASHE). 4. We suggest that the HNA consider using housing benefit eligibility criteria to inform need. The current use of an income multiplier does not take account of different household circumstances and the 35% multiplier currently chosen has no justification. 5. There needs to be a reliable data source for the number of households living in unsuitable housing. 6. Paragraph 4.15 identifies that 'current need is estimated to be 2,446 households'. There should be a description provided about how this figure is arrived at. It also bears no relation to figures in table 4.3, so this should be explained. 7. Table 4.4 estimates current affordable housing need by affordability. There needs to be a reliable data source provided for this estimate. 8. Paragraph 4.19 estimates that 1,160 new households would form annually and twothirds will be unable to afford market housing, equating to 708 newly forming households of need per annum on average. The assumptions made to inform these figures needs to be explained. 9. Paragraph 4.20 should identify the period considered, and it should provide any	3. Links can become out of date. As long as it is clear what the source is, this should be adequate. 4. Using a percentage of household income to estimate affordability is a common and standard approach. Previous MHCLG guidance has recommended the use of a % of gross household income in assessing affordability and ONS continues to use this approach. 5. Table 4.3 is a collation of different types of unsuitable housing (e.g. overcrowding), compiled by Iceni from the preceding parts of the analysis, which are all sourced individually. 6. The households in unsuitable housing in Table 4.3 is a starting point, but not itself indication of the level of need- there are exclusions of those who are likely to be able to afford market housing and those already in affordable housing. Once excluded, the figure of 2,446 is	

2758

	data that has informed this section, such as the		

Topic	Summary	Response	Outcome
	additions per year to register, if that's what is used. 10. Paragraph 4.22 cites the sources used and the time period to identify supply through relets. As this is not stated for elements of need it's not possible to determine if the time periods align. The choice of a 3-year period should also be justified because the oldest figure of the 3 years has the lowest number of relets, which may inadvertently assume a lower supply. 11. Paragraph 2.45 requires a data source for the 251 homes sold below the lower quartile price. 12. Paragraph 4.33 to 4.34 indicates the need of those who can't afford to rent on the market could be meet through affordable rents. However, Policy H2, part b only requires social rents. This requires justification, particularly as the delivery of more social rents impacts viability and the thresholds for the Policy. 13. The analysis on shared ownership, first homes and rent to buy is a simplistic comparison of likely affordability of different products and it should link to data on incomes, savings, and identify the number of households able to afford.	derived. This is clearly explained in paragraph 4.15 7. This 2,446 number is derived as explained in response to point 6. 8. The second element of newly arising need is existing households falling into need. To assess this, information about existing households who have been housed in social/affordable rented sector housing over the last three years has been used to represent the expected annual flow of existing households falling into need. The analysis excludes transfers. 9. Paragraph 4.20 gives annual figures. The plan period is used for all the demographic data behind calculations. The paragraph is clear that information about households entering the social/affordable rented sector has been used to represent the expected flow of households onto the housing register over the plan period.	

2760

		10. Equally, selecting only two years, that avoids the lower year,	

Topic	Summary	Response	Outcome

		could over-estimate supply. Three years is considered a robust enough time period to give a good idea, whilst remaining recent enough to be relevant. It is in line with the PPG, which makes reference to consideration of recent trends. 11. The number is derived using Land Registry data 12. It is not correct that Policy H2 only requires social rents. Part of the tenure split includes intermediate forms of affordable housing. However, it is also the case that social rent is prioritised because it meets the needs of those in greatest housing need. Also, standard affordable rent discounts are not considered affordable in Oxford, so a greater degree of discount would be required for it to be considered affordable housing in Oxford. 13. the analysis is considered fit for purpose.	

General/Other Responses

Topic	Summary	Response
15-minute cities	Support for the 15-minute cities concept – it was not publicised well, but it has worked in other cities.	Noted.
Recreation grounds	These sites are used by residents, football teams and clubs from all ages and all walks of life. To lose these would be at the detriment of the area and locals, especially young people.	The detailed site allocation policies seek reprovision of sports facilities.
Clarity over how housing figures have been reached	There should be greater clarity regarding: • the capacity for housing within the city's administrative boundaries; • why the plan period start date of 2022 has been chosen; • how the housing figures from the existing OLP and the extant Local Plans for neighbouring local authorities relate to the housing requirement over the new plan period; and • the approach to be taken to meeting residual unmet need.	Since the Reg 18 consultation the plan period has been adjusted to 2025 – 2045. Policy H1 calculates housing need using the Standard Method, and latest government affordability data.
More deference to national policy	Re-stating the NPPF's contaminated-land rules, the Environment Act's 10 % biodiversity-net-gain requirement or the Future Homes Standard's net-zero-ready fabric provisions does not enhance protection; it merely piles extra reports onto applicants.	The city has a local net zero target of 2040 and the national requirement is 2050. Many policies are bespoke to ensure we meet this target.

Council tax is too high	The excessive regulation enforced by the Council means Council Tax is too high. People can't afford to buy houses because they are having to subsidise social housing.	This is beyond the remit of Planning.
Transport issues	• Please could you find ways to stop cars and traffic dominating our city? • Please could you make park and ride work? • Please could you stop stationary traffic where queues of drivers try to get into the Westgate Centre? If	The City Council will continue to work with the County Council to identify potential solutions to these issues, with the aim of enhancing public realm. However, the details of this work, and

Topic	**Summary**	**Response**

	that continues to be the reality once the Botley Road is open again, it will be very bad. • Please could you find ways for cyclists to be able to use the roads without confronting potholes and drain covers with large gaps around them? • Please could you find a way for cyclists to go east west without having to dismount from their bikes? • Please could you stop buses driving up Queen Street? • Traffic congestion is significantly caused by private school drop-offs. • Proper cycle highways and trams needed to connect the city. • Move the coach station to the Becker street carpark next to the main station to save public transport network and pedestrian accessibility.	implementation of schemes, will be led by the County Council as Highways Authority and are outside the realm of the Local Plan.

OXFORD LOCAL PLAN 2042

PLANNING OXFORD'S FUTURE FIRST DRAFT LOCAL PLAN 2042

We would like to hear your views on the First Draft Oxford Local Plan 2042.

OXFORD CITY COUNCIL

The new Local Plan will aim to address the key issues facing all of Oxford's residents and businesses. Based on the existing use of the land in the city, it will outline where and how new housing developments can take place in the future, whilst also ensuring the city's economic growth is managed and made more inclusive for everyone, and preserving the qualities that make Oxford unique.

THE CONSULTATION RUNS UNTIL 8TH AUGUST

The Plan will be informed by evidence we collect, by Government policy and by consultation. An early involvement survey has given an insight about what is most important to residents and businesses. We have drafted a set of policies to guide future development of Oxford.

In this leaflet we have picked out key parts of the draft. Your responses will help inform the draft Local Plan that we aim to consult on by the end of this year, before we then submit it to the Government to be examined.

THE FULL DRAFT CAN BE VIEWED HERE

www.oxford.gov.uk/localplan2042

TO RESPOND TO THE IN-DEPTH CONSULTATION:

https://consultation.oxford.gov.uk/planning-services/oxford-local-plan-2042-reg18

TO RESPOND TO THE SHORT CONSULTATION:

https://consultation.oxford.gov.uk/planning-services/local-plan-2042-reg18-short

OR BY RETURNING THIS LEAFLET

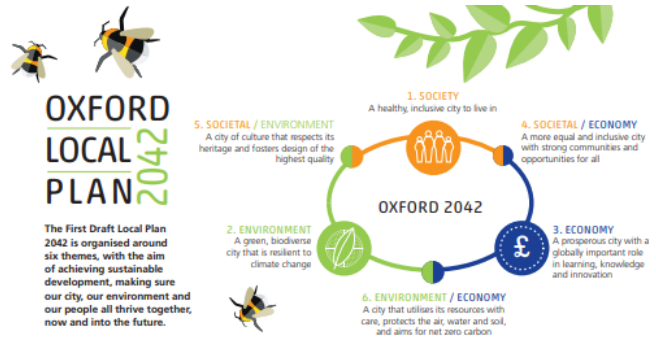
2772

This is the second stage of consultation, with one more key consultation stage to follow later in the year:

Early Engagement Survey Early engagement from residents, businesses, and other bodies to help identify the main issues being faced.	March/April 2025
First Draft Local Plan 2042 Regulation 18 Consultation (We are here) Consultation used to draft the policies in the Plan.	June/July 2025
Final Consultation (Regulation 19) This will be a consultation of the draft Plan.	Autumn 2025
Submission of the Local Plan to the Secretary of State Submission of Local Plan to the Secretary of State for Independent Examination.	April 2026
The following dates are estimates - once the plan is submitted, the timetable is in the hands of the Planning Inspectorate	
Local Plan Examination With a government inspector. Hearings will be open to the public.	November 2026
Adoption of the Plan The Plan provides the strategy for the development of Oxford to 2042 and will be used to determine planning applications.	March 2027

WE WOULD LIKE YOUR VIEWS ABOUT THE OPTIONS WE'RE CONSIDERING FOR THE LOCAL PLAN 2042...

OXFORD LOCAL PLAN 2042



OXFORD LOCAL PLAN 2042

The First Draft Local Plan 2042 is organised around six themes, with the aim of achieving sustainable development, making sure our city, our environment and our people all thrive together, now and into the future.

1. SOCIETY
A healthy, inclusive city to live in

2. ENVIRONMENT
A green, biodiverse city that is resilient to climate change

3. ECONOMY
A prosperous city with a globally important role in learning, knowledge and innovation

4. SOCIETAL / ECONOMY
A more equal and inclusive city with strong communities and opportunities for all

5. SOCIETAL / ENVIRONMENT
A city of culture that respects its heritage and fosters design of the highest quality

6. ENVIRONMENT / ECONOMY
A city that utilises its resources with care, protects the air, water and soil, and aims for net zero carbon

OXFORD 2042

WHAT IS OUR HOUSING NEED AND WHAT CAN WE DO TO TRY AND MEET IT?

There is a great need for new, affordable homes in Oxford. Our housing need is 1,087 dwellings per year. Oxford is one of the least affordable cities to live in the UK.

1 We have used up-to-date evidence of costs and profits in new developments to set an affordable housing requirement- we are proposing that 40% of new developments with more than 10 homes should be affordable, and 80% of those affordable homes should be social rented housing as this is the most affordable type to best meet needs. To what extent do you agree with this approach?

☐ AGREE ☐ STRONGLY AGREE ☐ NEUTRAL ☐ DISAGREE ☐ STRONGLY DISAGREE ☐ DO NOT KNOW

ALLOCATING SITES FOR DEVELOPMENT

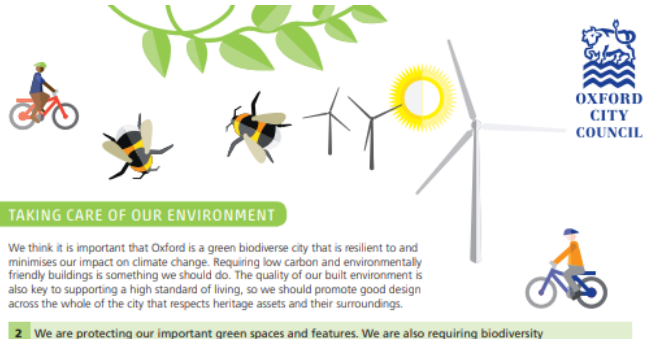
We don't have space to meet our full need in the city, certainly not without compromising other needs like open space. But we must still try to deliver as much housing need as possible. Our policies prioritise housing and we have worked hard to identify sites - contacting landowners, running a call for sites and carrying out desk-based exercises. We are also looking at the Green Belt.

We have identified sites that we are investigating to allocate for development. Nearly all of these are on previously developed land. We will continue to talk to landowners and assess impacts for example in terms of access, heritage and green infrastructure. We would welcome comments on key things to consider as we go on to draft the detailed site allocation policies. Maps of the sites can be found online by scanning the QR code.

GREEN BELT

Having unmet housing need means that the Government tells us we have to see if areas of the Green Belt could be developed for housing. At this stage, we have ruled out much of the Green Belt as not being suitable for development, for example because it is functional flood plain or because of its wildlife value. The rest of the Green Belt we have assessed against the purposes of Green Belt, and we now need to investigate landowner interest, biodiversity interest, whether there is access and whether there are any other constraints. Maps that show the area of Green Belt, the areas ruled out and the areas in scope for further investigation are available by scanning this QR code.

Maps showing the sites we're investigating are available on our website.
If wish to see them but can't view these please contact us using the details below.



OXFORD CITY COUNCIL

TAKING CARE OF OUR ENVIRONMENT

We think it is important that Oxford is a green biodiverse city that is resilient to and minimises our impact on climate change. Requiring low carbon and environmentally friendly buildings is something we should do. The quality of our built environment is also key to supporting a high standard of living, so we should promote good design across the whole of the city that respects heritage assets and their surroundings.

2 We are protecting our important green spaces and features. We are also requiring biodiversity enhancements and new green features on sites. To what extent do you agree with this approach?

☐ AGREE ☐ STRONGLY AGREE ☐ NEUTRAL ☐ DISAGREE ☐ STRONGLY DISAGREE ☐ DO NOT KNOW

3 We have drafted a policy that requires all new buildings are net zero carbon in operation from adoption of the plan. In a few exceptional cases, payment to offset carbon impacts will be allowed (for example for hospitals, which need to use more energy than it is likely can be generated onsite). To what extent to you agree with this approach?

☐ AGREE ☐ STRONGLY AGREE ☐ NEUTRAL ☐ DISAGREE ☐ STRONGLY DISAGREE ☐ DO NOT KNOW

4 Good design is about ensuring development functions positively for the people who live and work there and that it makes best use of land and respects heritage. We have also drafted a policy that requires high density development and efficient use of land first and foremost, alongside policies to ensure design respects heritage including views of the renowned skyline. To what extent do you agree with this approach?

SUPPORTING OXFORD'S SUCCESSFUL ECONOMY AND REDUCING INEQUALITIES

Oxford is a prosperous city, with a globally important role in learning, knowledge and education. However, there are inequalities across the city. Reducing these means there needs to be access to employment opportunities for all, as well as access to decent, affordable homes.

5 We have identified what we think are key employment sites in the city that we should protect. These are sites that support Oxford's internationally important role in education, research and health, and also those that support a diverse and strong economy. We are not protecting any employment sites in the city centre or district centres, to give full flexibility in those areas, for example to allow for offices to change use to housing. To what extent do you agree with this approach?

☐ AGREE ☐ STRONGLY AGREE ☐ NEUTRAL ☐ DISAGREE ☐ STRONGLY DISAGREE ☐ DO NOT KNOW

6 We propose requiring community employment plans so that work and training opportunities are given to local people. To what extent do you agree with this approach?

☐ AGREE ☐ STRONGLY AGREE ☐ NEUTRAL ☐ DISAGREE ☐ STRONGLY DISAGREE ☐ DO NOT KNOW

7 Affordable workspace is proposed as a new policy approach- the largest key employment sites will be expected to deliver an affordable workspace strategy, to ensure a range of employment types and businesses. To what extent to you agree with this approach?

	159.2				

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION

The Plan needs to recognise that there are spatial and wellbeing limitations to growth, and that striving for investment and growth in tech and science labs as a 'trickle down' panacea for the City's challenges and ills will end up harming the environmental and heritage characteristics that actually make Oxford an attractive place to live, work and invest. There are reasons why Luton or Swindon do not punch at the same weight as Oxford, and they are not solely due to the University/s and the academic melting pot here. If the Plan does not re-balance and prioritise housing the City's residents and meeting its basic service and well-being requirements over bending over backwards for the University and Science/Tech sectors, the thin thread holding these two parts of the City together will break to the impoverishment and economic detriment of all.	The Plan, and specifically Policy S1, is explicit in its aims to prioritise new homes and support the health and wellbeing of local communities. A modification is proposed in response to West Oxfordshire that also addresses this point, refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
South Oxfordshire and Vale of White Horse District Councils have made a representation relating to the vision and strategy, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The Vision for Oxford is generally supported and in particular the support for research and development in the life science and health sectors. However, this is a fairly narrow focus and the Vision for the plan should look to broaden out this to include the expected investment in AI and other innovation areas. The Objectives of the Plan (under “a fair and	The remit of the local plan is to set out policies pertaining to land use, placemaking and spatial development. A broad economic strategy with detailed treatment of specific sectors relevant to the Oxford area would be beyond the scope of the local plan as a development management document.	None

prosperous city with a globally important role in learning, knowledge and innovation" theme) pick this up, but the Vision should set this out in a clearer manner. In addition, there is currently only a cursory mention of enabling businesses to prosper and no mention at all of the strength of the local economy or more direct references to the need for housing to help sustain and encourage further investment.		
The lack of housing supply in Oxford leads to a restricted labour supply to meet the expansion of employment uses and to sustain the foundational economy. A joined-up approach with neighbouring districts to accommodate housing is essential, thus allowing Oxford's key employment areas to focus on maximising the economic benefit they can delivery.	Engagement and joint working with neighbouring districts and statutory bodies has been extensive and ongoing since the previously submitted plan, culminating in the development of statements of common ground.	None.
[T]he concerns raised through these and previous representations relate to the ability of the Local Plan, as drafted, to deliver on the Vision and Plan objectives, particularly in respect to addressing the housing and employment needs of the City – affordable housing being a central element of need that remains unmet and is growing. Lack of affordability undermines economic growth and prosperity and works against the Vision and objectives in respect to healthy and inclusive communities and equal opportunities for access to all basic needs to include homes,	The Plan does extensively identify land for housing development and economic growth as shown through the site allocation policies and various designations of employment sites. Engagement and joint working with neighbouring districts and statutory bodies has been extensive and ongoing since the previously submitted plan, culminating in the development of statements of common ground.	None.

health, employment, nature and community infrastructure. A Plan that does not deliver sufficient homes nor land for employment, whether that be within its own boundaries, or by securing a robust strategy through which needs can be met cross boundary, will not deliver on a Plan Vision that strives to achieve social inclusion and support communities that benefit from equal opportunities including as referenced – opportunities for access to housing. The Vision must be underpinned by clear strategy and policies to deliver growth to match needs – what can be achieved in Oxford and how it will continue to collaborate with neighbouring authorities to deal with unmet needs, particularly housing in a way that works spatially for Oxford to meet the Vision. The Vision is ambitious, however the Plan fails to provide an effective strategy to deliver this.		
The Vision for Oxford does not address two key aspects, namely the important role that the two Universities play in Oxford; and the acute housing need in the City. The Universities and Colleges play a fundamental role in the social, educational, tourism, and local economy of Oxford, and indeed wider Oxfordshire, as is noted in Page 1 (second paragraph), Page 15 (first bullet point) and Chapter 4 (page 1, first paragraph) of the LP45. In addition the Universities and Colleges require a functioning ecosystem. Good schools	The Plan does acknowledge the role of the Universities and Colleges within the City and more widely. Additionally, Policy C4 (Protection, Alteration and Provision of Learning and Non-residential Institutions) specifically seeks to protect and provide provision of learning institutions, including schools. Planning for the provision of schools and ensuring there are adequate school places currently falls under the remit of Oxfordshire County Council.	None.

are part of this and access to schools for children of visiting academics is important. The Local Plan must encourage and support schools to expand and enhance their facilities as needed. These points should be recognised in the Vision. It is noted the NPPF Paragraph 22 encourages Local Plans to have a Vision which looks over a longer term period (at least 30 years). In particular, where larger scale development is proposed and to take account of likely timescales for delivery. Whilst this is not a requirement for this Local Plan given the lack of large scale development proposals, having a longer term Vision for Oxford (which envisages how Oxford's housing and employment needs will be delivered over the longer term) is important given its inability to meet its identified housing need. This longer term, joined up, approach was being taken in the, now abandoned, Oxfordshire 2050 Spatial Strategy and one that the City is encouraged to take in its LP45.	The reference to paragraph 22 of the NPPF is noted but, as mentioned, the 30 year vision is intended to apply to large scale developments such as new settlements, which would not apply to Oxford City. Notwithstanding this the Plan covers the period 2025-2045 which will deliver a long term strategic vision for the City.	
Whilst the LP45 makes reference to there being a "chronic undersupply of housing" (Page 1, third paragraph), the Vision does not acknowledge this (only referring to 'access to housing') or set out any meaningful approach to addressing it. This should be a fundamental element of this Local Plan. Our response to Policy H1 makes reference to the use of the standard method and it providing a minimum figure that can be uplifted in order to recognise	The Vision sets out in broad terms the strategic objectives of the plan as a whole. It covers a wide range of topic areas which are expanded upon in the strategic policies and explored in greater detail in the individual policies of the plan. They are sufficiently descriptive as written and repetition is not considered to be necessary.	None.

additional housing need arising from an uplift in planned economic growth, in calculating the City's housing requirement in the new Local Plan.		
Suggestions made to amend Vision (P 4) to include the words 'and reducing inequalities' and to request more explicit mention of and emphasis on safety.	None of the suggestions are considered necessary to make the plan sound, instead they provide alternative versions of the existing text.	None.
Suggestions made to amend text in Objectives and Strategy table section "A liveable city with strong communities and opportunities for all."	None of the suggestions are considered necessary to make the plan sound, instead they provide alternative versions of the existing text.	None.
The plan does not deliver on the overarching threads. The overall strategy of meeting all identified employment needs arising within the city while exporting its unmet housing needs to greenfield sites in neighbouring districts does not meet the aims of the overarching threads. Reducing inequality - the plan includes a great deal more employment space than housing. Drastically increasing the number of jobs in the city will increase the demand for housing and drive up the cost of housing. Higher housing costs in oxford will increase inequality. Addressing climate change - The jobs housing imbalance will encourage car use, worsen traffic congestion, road safety and pollution. Enabling a liveable city - It will not be possible for most of the employees on the new employment sites to live within a 15 min walk of their workplace. The strategy is not consistent with NPPF, para 111 a) as it fails to support an	The plan does not include allocations for new employment sites, and there are locational restrictions on where employment generating uses will be permitted – as set out in Policy E1. The emphasis of the plan as contained in E1 is on intensification and modernization of existing employment uses, and there are provisions to allow the loss of employment floorspace to housing on meeting set policy criteria.	None.

appropriate mix of uses across an area to minimise the number and length of journeys needed for employment, shopping, leisure, education and other activities. The plan is not consistent with NPPF, para 8 on sustainable development, which seeks a range of homes to meet the needs of present and future generations. The ratio of the number of jobs created to the number of homes provided must be reduced.		
In their previous/current Local Plan, Oxford City Council designated most development land within Oxford City for employment not housing. They exported their inflated 'unmet' housing need to surrounding district councils and insisted under the 'duty to co-operate' that new houses should be built on the edge of Oxford in the Green Belt. In their 'duty to co-operate' surrounding district councils made provision of housing to meet Oxford's 'unmet' need in the Green Belt all around in Oxford. [The plan] discusses providing homes for all without assessing housing need and failed to use approved Government methodology previously. It now claims that the correct methodology has been used, but the figures are very similar to previous ones and cannot be scrutinised. Development land for employment takes priority and the assessed need is not evidence based and evidence apparently used is not available to the public.	Refer to officer responses to policy H1 representations.	Refer to officer responses to policy H1 representations.

CPRE has carried out research on the previous iteration of the Plan to show that Oxford City Council plans to create over 14,000 new jobs but provide only 714 new homes . It plans to export its deliberately created 'unmet' housing need to surrounding councils as before without any proper evidence or assessment of need.		
Oxford City Council has not solved the problem of how the current commuters can travel into Oxford City to work, yet wants to exacerbate the problem but creating 14,000 additional jobs within Oxford City while exporting more housing outside Oxford for people to fill these jobs. The transport problem, resulting pollution etc. will be greatly exacerbated by this and the County Council's proposed 'Traffic Filter' scheme which offers no alternative public transport or new cycleways for those commuting into Oxford from villages with no or little public transport. It would be preferable to create new jobs outside the City centre. There are still a number of sites for employment that have not been fully developed on the edge of the City, which are more accessible. e.g. Oxford Business Park has been in development for over 20 years and is still not fully developed, yet is not available for housing. The Botley Road should be mixed developments of housing and commercial, but the south side is primarily commercial.	The emerging approach towards employment sites differs from the current plan in a number of ways. The emerging plan limits the development of new employment generating uses through the inclusion of locational criteria, and promotes the intensification and modernisation of existing employment sites. It also makes allowances for the conversion of some categories for employment floorspace into housing use. The process for allocating a site for housing in the plan takes into consideration various factors including the size of the site, the intentions of the landowner, the likelihood for delivery on the site within the timescale of the plan, physical and policy constraints on development (e.g. flood risk, ecological designations), and the number of units that can be realistically delivered on the site. Several sites have been assessed as potential allocations which ultimately did not meet the inclusion criteria.	None.

The environment is identified as one of the six themes underpinning the Council's vision for Oxford in 2045. Figure [1.1] sets out the underlying objectives associated with each of the six themes and there is no mention of Oxford's broader landscape setting. The protection of the characteristic landscape setting of the city essential to its semi-rural identity should feature more prominently within the objectives associated with Oxford's landscape. We recommend these objectives are amended to highlight and reflect the significance of Oxford's wider landscape setting to ensure a sound and consistent approach in relation to the wider policies within the Local Plan.	The themes setting out the vision of the plan are in line with the Council's wider objectives and priorities. They are broad and cover a wide range of topic areas which are expanded upon in the strategic policies and explored in greater detail in the individual policies of the plan. We consider that the objectives are sufficiently descriptive at this point in the plan text.	None.
There are important strategic matters, for which there is no evidence of a shared approach between the local authorities in Oxfordshire. The most pressing of these is housing need. On some more detailed matters – including the conservation and enhancement of important views of the city, the City Council has missed opportunities to work effectively with its neighbours, such as with the Vale of White Horse and South Oxfordshire District Councils. We ask that the Inspector be satisfied that these matters have been effectively considered by all parties within the city and county. In particular, we ask that there is an agreed joint strategy to meet the City and County's housing needs, including the critically important requirement for affordable key worker housing.	Engagement and joint working with neighbouring districts and statutory bodies has been extensive and ongoing since the previously submitted plan, culminating in the development of statements of common ground with several bodies. A key area of joint working has been housing need, however other areas have been covered and these are referenced in various parts of the consultation statement. The agreed statements will form part of the supporting documentation in the local plan submission.	None.

Policy S1

POLICY	S1

	139.2	101.2	133.1	159.3	

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Such policies need to wait until a decision is made on Local Government Reorganisation.	The requirement for LPAs to have an up to date local plan is not impacted by Local Government Reorganisation.	None.
Policy S1 replicates the NPPF presumption in favour of sustainable development; however, repetition of national policy should be avoided and the policy should instead relate to the local context.	The West Oxfordshire District Council SoCG for Policy S1, also addresses this issue. Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The transport strategy fails to give sufficient priority to sustainable transport modes as required by NPPF paras 115 and 117.	Criterion d) of Policy S1 is explicit in supporting sustainable transport modes. Sustainable transport is also required in numerous policies	None.

The transport policies should be more forward thinking and consistent with national guidance.	throughout the Plan including Chapter 7 and as part of site-specific allocation policies in Chapter 8.	
This plan does not sufficiently demonstrate exceptional circumstances to justify the imposition of additional housing need on neighbouring councils which will result in further removal of land from the Green Belt.	Policy H1 outlines the housing requirement and unmet housing need. There is an expectation in the NPPF that local authorities collaborate across their boundaries to address unmet housing need. A formal request has been made of our neighbouring authorities for helping meeting unmet need, and the LPA is maintaining effective co-operation. Background Paper 006 (Green Belt Review) sets out the approach to Green Belt in greater detail.	None.
As it stands, the Council's approach fails to properly acknowledge the relationship and interaction between housing and economic growth. Policy S1 is contradictory to Policy E1 The wording " prioritising housing elsewhere" must be excluded from this policy if Policy E1 is to be effective. The Spatial Strategy policy should explain how the Plan will deliver the Vison and Overarching Threads outlined in the early pages of the Plan, as well as how development will be delivered over the Plan period.	The West Oxfordshire District Council SoCG for Policy S1, also addresses this issue. Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Criterion g) in the Vision sets out an absolute – preventing new development in locations where it would have a negative impact on important blue and green infrastructure	Criterion g) relates to the protection of neighbouring amenity. Criterion h) directs new development away from locations where it would have a negative impact on important blue	None.

networks, public open space, and flood plain. There should be a caveat added to say…." unless mitigated".	and green infrastructure networks, public open space, and result in loss of flood plain, also ensuring efficient use of land, helping to maximise opportunities on brownfield sites first. The detailed approach to protecting GI is set out in Policy G1.	
New employment development should be developed with housing to reduce commuting. Prioritising housing elsewhere will cause traffic congestion, pollution and prolonged travel time. This must include Green Belt countryside both within Oxford City and the surrounding districts. Without the duty to co-operate this Plan falls flat with deliberately insufficient provision for housing need ,preferring to increase jobs in the centre of Oxford, without houses nearly for people to walk or cycle to work. It deliberately ignores climate change and will not increase biodiversity and will further deplete nature significantly in the country that is already the most nature depleted in the world. The Plan will deliberately destroy Green Belt countryside both within Oxford City and the surrounding districts and the communities that live in it.	We are unable to meet the full extent of the identified housing need within the city. Whereas, we are able to meet our identified employment land needs, through a strategy of intensification and modernisation of existing employment sites. National planning policy requires us to meet both. We recognise that the current wording of Policy S1 could be regarding the plan's focus on housing delivery. Accordingly, a modification to clarify this has been suggested in the SoCG with West Oxfordshire DC. Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1. Policy H1 establishes the housing requirement and takes a capacity-based approach. There is an expectation in the NPPF that local authorities collaborate across their boundaries to address any unmet housing need. We are in the process of agreeing, with the neighbouring District Councils, how any unmet housing need will be addressed. The LPA is maintaining effective co-operation. Background Paper 006 (Green Belt Review) sets out the approach to Green Belt in greater detail.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

	The plan includes numerous policies specifically relating to biodiversity and climate change in Chapters 4 and 5 respectively.	
The Council is failing to follow its own intentions by failing to include prime brownfield sites such as the Oxford Stadium in the Plan despite knowing that it is available, achievable and deliverable within the Plan period. This failing is further exacerbated and highlighted by the fact that the draft Plan also makes a greenfield allocation at Sandy Lane Recreation Ground, just a short walk from the Stadium site. It is difficult to understand how this Plan would release the Recreation Ground for development ahead of the Stadium site. This is a prime example of how the proposed strategy is both severely lacking in ambition and is not consistent with national policy.	The Oxford Stadium is not an allocated site because since May 2022 (and after the site was previously allocated in the Local Plan 2036) the site is operating as a greyhound/racing/speedway stadium so community uses would need to cease operations if the site were to be redeveloped.	None.
Network Rail has made a representation relating to Policy S1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
South Oxfordshire and Vale of White Horse District Councils have made a representation relating to Policy S1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

West Oxfordshire has made a representation relating to Policy S1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
We support this policy in principle but we would like to see this policy specify the Council's stance in favour of applications for the change of use from commercial to residential within city and district centres, referenced elsewhere within the Local Plan (Policy C2: Maintaining Vibrant Centres). Promoting development of this type would achieve a number of the aims as well as helping to meet Oxford's unmet housing need. We would also support a policy sanctioning vacant units, both residential and commercial, within city and district centres. The repopulation of urban centres will have a significant impact on housing need, preventing the further development of Oxford's green setting.	The plan already addresses this point in Policies E1 and C2 so it's not considered necessary to amend S1 as suggested. A policy sanctioning vacant units would fall outside of the remit of planning. The City Council already endeavours to address this issue through the work of the of its Economic Development, Regeneration and Housing teams.	None.
Policy S1 (Spatial Strategy) should set out a spatial strategy which: - Meets the vision and objectives of the Local Plan - Refers to the need to maximise housing delivery in Oxford - Sets out how proposed development is to be delivered over the plan period and beyond; and	The plan's strategy seeks to be the articulation (through policy) of the plan's Vision. Policy S1 is therefore an overarching strategic policy for the city. The Oxford Local Plan 2045 includes policies which provide details of the housing target being planned for. The evidence base studies including the SHLAA and SA include a robust methodology to demonstrate the city's capacity and document	A modification to Policy S1 has been proposed to address issues raised by other respondents, which also relates to some of the issues raised.

- Follows the approach in the extant Local Plan, i.e. maximising growth in the City, including the Areas of Focus, and then adopt a hub and spokes approach, with the City being the focus for education, tourism and employment but having good infrastructure links into the surrounding Districts where housing is more readily deliverable.	how the plan's strategy was arrived at, and why it is appropriate. The City Council has fulfilled its obligations in maintaining effective cooperation (formerly Duty to Cooperate) through regular discussions with adjacent Local Planning Authorities. This work has all been documented within signed Statements of Common Ground. Policy S1 sets a locational strategy which meets the vision and objectives of the Local Plan 2045. The other policies in the Plan have been drafted to deliver the thematic objectives and align with Policy S1. There is also no need to refer to the need to "maximise housing delivery", when the plan's locational strategy is to focus on housing by supporting its delivery across the city and only allocating new sites housing. There is no need to set out how proposed development is delivered beyond the end of the plan period. Other policies in the plan are more area specific (e.g., Areas of Focus, and site allocations). Oxford City Council LPA has no administrative jurisdiction beyond the administrative boundary of the city. The IDP provides a suite of infrastructure projects needed to support the delivery of the Plan and has been produced in consultation with key infrastructure providers.	

	The spatial strategy is sound.	

Policy S2

POLICY	S2				
All respondents **supporting** policy	30.2	43.2	81.1	157.16	159.18

COMMENT SUMMARY	OFFICER RESPONSE
As set out in the Statement of Common Ground, Historic England support reference to the role of heritage in the Council's strategic approach to high quality design.	Support noted and welcomed.
Christ Church supports high quality design in the City. This should be proportionate to the location and setting of the proposed development, and also viability considerations. The Design Checklist at Appendix 1.1 sets out criteria from relevant policies. Should any policies change during the Examination then the checklist will be updated accordingly.	Comments noted.

POLICY	S2			
All respondents **raising objections** on this policy/chapter	1.2	69.2	120.4	139.3

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Time and money wasted by an authority, which will not exist after local government reorganisation.	When a new authority is vested, there will be a period of time before spatial plans for the area within the new administrative boundaries can	None.

	be developed. However this will require collating a new evidence base that is up to date and relevant, with the overall process potentially taking several years. Adopted plans will continue to apply to the geographic area until a spatial plan for the new authority area is developed, and this will ensure that there will continue to be an up to date framework for key policies to be delivered in a way that is as locally relevant as possible without having to revert to national policy only.	
The local housing need is not served by the design code nor is reducing carbon emissions to reduce climate change.	Local authorities are required to set out clear expectations and visions for design, in line with the principles for achieving well designed places contained in the NPPF. The local plan includes specific policies that address housing need and adaptations to climate change, and is to be taken as a holistic document that does not apply individual policies in isolation.	None.
It is questioned whether the checklist needs to form part of the Local Plan itself, and whether it would be more user friendly as a standalone guidance document to support the Local Plan. If the checklist is to remain in the Local Plan, it is necessary that any amendments to draft policy wording is also updated in the Appendix for consistency.	The checklist sets out the criteria by which applications are assessed, and their inclusion in the plan ensures their statutory weight. Where required guidance documents that go into more detail about the application of specific policies may be produced, although they are supporting documents to the plan and will not have statutory weight in of themselves.	None.
The policy and the supporting text should include definitions of what is meant by 'high quality design' and, in particular, 'high quality architecture'. It should also refer to the city's wider green setting and highlight the	The policy sets out the considerations and principles that form the strategic approach to design of the plan as a whole. It encourages a holistic reading of the plan which comprises of individual policies that address the natural	None.

importance of the historic views both from looking out of the city but also looking in (as highlighted in the Assessment of the Oxford Views Cones 2015).	environment, the green setting, important views and high-quality design. SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Suggest the following wording is added to paragraph 3 on p16: *The expectation will be that the necessary infrastructure will be completed before occupancy of the site for the purpose for which permission is given.*	We consider that the wording of para. 3 of Policy S3 (n page 13, (rather than page 16, as suggested by the respondent), is appropriate and enables critical infrastructure (as defined in chapter 8 of the IDP), to be delivered in a reasonable timeframe. The Infrastructure Delivery Schedule categorises each infrastructure project into one of four	None.

The reason is that too often the infrastructure to accompany development is not built in a timely manner or in some cases at all.	categories. This paragraph only relates to critical infrastructure, of which there are a limited number of schemes identified in the IDP.	
Dependence on Cowley Branch Line (CBL) and Oxford Railway Station upgrades could affect soundness. This is because the plan identifies Oxford Railway Station and the CBL schemes as transformational infrastructure, with an expectation that certain sites will contribute towards their delivery. The Plan also sets out that development proposals "which rely on the delivery of critical infrastructure projects" will only be permitted prior to completion where the Council is content that the infrastructure "will be in place within a reasonable timetable". Given that both CBL and some station works depend on external funding and decisions, this creates a potential soundness risk under NPPF's tests of effectiveness and deliverability. This is because the plan relies on infrastructure it does not control. As such Policy S3 could be used to delay, what otherwise would be sustainable development if the Council is not satisfied abut timing. This causes a potential tension with the presumption in favour of sustainable development and with the NPPF emphasis on flexibility where infrastructure phasing is uncertain. The term "reasonable timetable" is undefined. This creates uncertainty and a possible internal	Infrastructure projects are usually grouped into one of three categories, critical, essential and important. The Infrastructure Delivery Schedule included in the Infrastructure Delivery Plan (IDP) assigns the majority of infrastructure schemes to one of these categories. In Oxford, there are a handful of infrastructure projects, the delivery of which, would bring significant additional social, environmental or economic benefits in addition to the mitigation or wider benefits delivered by the traditional infrastructure categories. These projects have been categorised into a fourth infrastructure category in the IDP, that of transformational infrastructure. Both the re-opening of the Cowley Branch Line to passenger services, and the improvements to Oxford Railway Station, are in the "transformational infrastructure" category. The plan relies on a variety of third-party infrastructure providers to deliver the infrastructure needed to support the plan, Infrastructure providers include (but are not limited to), Oxfordshire County Council, Thames Water, SSE and others such as Network Rail and the East West Rail Company. Each organisation has its own plans and timeframes within which, infrastructure is to be delivered to support	None.

conflict with S1's statement that "applications that accord with the Local Plan will be approved without delay".	development. We do not consider that Policy S3 would be used to delay development. We do not consider that the phrase "reasonable timetable" creates uncertainty, as this relates to the delivery of critical infrastructure schemes only that identified within the IDP. As	
Policy S3 asks for contributions to the Cowley Branch Line project for locations within the 1500m buffer of which BMW MINI Plant is included. While Policy CBLAOF refers to "figures 8.5 and 8.6" these figures were not presented in the current proposed submission document. Due to off-peak shift arrangements, and because many employees live far from the MINI Plant due to the lack of affordable housing supply, employees are highly unlikely to use or rely on the Cowley Branch Line for transport. Unclear from policy whether the contributions towards the Cowley Branch Line will be additional to those derived from CIL, and what constitutes "trip-generating development".	There is an expectation that development sites within the buffer zone, and generate additional trips, should contribute to the Cowley Branch Line, however, the specifics of this will need to be determined at application stage when considering the merits of each individual case. Re: Policy CBLAOF: Figures 8.5 and 8.6 have been omitted in error and will be reinstated.	None.
Policy does not adequately demonstrate that the infrastructure required to support new housing will be delivered in a timely manner. Without clear infrastructure commitments, development risks placing unsustainable pressure on existing communities. Local infrastructure constraints include: - traffic congestion	The Infrastructure Delivery Plan (IDP) provides a comprehensive review of infrastructure schemes to support the Oxford Local Plan 2045. Discussions with relevant providers have taken place throughout the production of the Local Plan. Thames Water is responsible for water provision/wastewater treatment. Oxford City	None

- limited public transport capacity, particularly in rural communities on the outer edge of Oxford - pressure on schools and health & social care services - wastewater network capacity Re: wastewater, Thames Water report on their website that they are 'finalising plans for a major upgrade at Oxford STW, costing more than £435m... We plan to complete this work in early 2032.' It is our understanding that the funding for all of this work has not been secured and there is a very real risk that development will occur without the essential upgrades to protect our rivers and public health. We would like to see: - A clearer infrastructure delivery plan linked to housing phasing. - Development to be contingent on infrastructure delivery rather than assumed.	Council has been in discussions with Thames Water in relation to the amount of growth proposed in the city's Local Plan 2045 and this growth has been factored into the required wastewater treatment upgrades. Oxford's growth has also been considered in relation to water supply in the SWOX area in the Water Cycle Study and the level of growth proposed in the city can be accommodated by Thames Water. Oxfordshire County Council (as highways authority) is responsible for the local road network. The administrative jurisdiction of the Oxford Local Plan only extends as far as the city's boundary. Following on-going discussions with the County Council in their role relating to education, there are no current capacity issues at schools in the city other than those identified in the IDP.	
South Oxfordshire District Council has made a representation relating to Policy S3, which is summarised and responded to in the Statement of Common Ground. The policy is ineffective as the largest developers and infrastructure developers are the Universities, Oxford University Hospital Trust (Churchill, John Radcliffe, Nuffield, Old Road Campus (part), laboratories etc. who pay very little or no CIL contributions due to their charitable status – no effort to alter the CIL tariffs to match the unique mix of Oxford has been undertaken. A statement of intent is not a policy just a fluffy wishlist.	Developer contributions are not just limited to CIL. Section 106/Section 278 contributions also play an important role in delivering much needed infrastructure in the city. The policy sets out the framework for seeking developer contributions towards known infrastructure projects (as set out in the Infrastructure Delivery Plan). It provides the mechanisms for delivery as well as setting out appropriate delivery timeframes.	None.
Request policy wording is clarified to ensure that once the CBL (and public transport enhancements in defined 1,500m buffer zone) are delivered, no further financial contributions will be sought.	All developer contributions need to meet the required tests set out in both policy and legislation. Once infrastructure schemes have been implemented and the costs have been covered, we will not then be seeking further contributions for those schemes.	None.

Policy S4

POLICY	S4
All respondents **supporting** policy	30.4 | 106.3

COMMENT SUMMARY	OFFICER RESPONSE
We welcome the inclusion of draft policy S4 which acknowledges the need for pragmatism in decision making where development of a site is not financially viable. This is particularly pertinent for sites such as the Centre's campus sites on Marston Road which are longstanding allocations. The introduction of additional requirements on sites which have longstanding viability challenges is likely to hinder their development. Clearly it is a poor outcome for sustainable development for well-located sites to remain dormant. Inclusion of the policy is critical to the Local Plan being found sound.	Support is welcomed

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION

Oxfordshire County Council has made a representation relating to Policy S4, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Linked to comments on C8 Motor Vehicle Design Standards, while sustainable development should encourage less car journeys, the framing of the policy as blanket restrictions will undermine viability (as recognised in S4) and will have negative impacts which outweigh the potential policy benefits	The Viability Assessment includes consideration of the impact on viability of limiting parking provision in new developments, and this has informed the policy requirements.	None.
Conflict between net zero carbon targets and affordable housing viability. Step 1 & 2 of the cascade allow for the reduction of energy offsetting payments and adjustments to parking requirements, but the policy also requires development to remain free of fossil fuel use.	Policy R1 allows for energy offsetting where applicants are unable to match their operational energy demand through sufficient provision of renewable energy generation. This is to be explored only as a last resort once onsite and offsite options (i.e. on land elsewhere in the applicant's control) have been exhausted. It is a separate element to the policy which also requires that fossil fuels are not being directly utilised in the development to meet energy demands (i.e. no gas used for heating and cooking). Maintaining the requirement of no fossil fuels being directly used in the building will as a minimum help to ensure it is net zero carbon ready at least (i.e. as the wider energy grid continues to decarbonise over time).	None.
SPS8 [Land at Meadow Lane] is an example of a site that is not viable to develop without	Policy S4 sets out a cascade to ensure that policy requirements do not undermine deliverability of sites.	None.

offending sustainability and heritage policies. It should be deleted.		
This policy has considered viability only in terms of cost and profitability for the developer. Viability must also include other aspects of any development such as flooding, climate change and much wider aspects of the Plan itself. When considering viability of a development inflation both in materials and market price must be fully considered. There should be more thorough and in-depth scrutiny of the financial viability of the development in the first place and greater provision for increases in cost, reduction in market price etc. There should also be much greater scrutiny in major external factors that affect the viability of a development - flooding - this was not properly considered in the Barton Park development and has caused increased flooding in the neighbouring housing estate. Sewage - another issue affecting viability.	The Viability assessment for LP2045 applies sensitivity tests to the assumed costs, to account for estimated inflation in costs, sales values and other inputs during the plan period, to explore viability of sites both in today's terms and also future. Policy S4 is about the financial implications of policy requirements, but other impacts of development such as flood risk and climate changes, or infrastructure requirements such as waste water treatment, are covered in policies elsewhere in the plan, such as G7 Flood Risk and Flood Risk Assessments, and G9 Resilient Design and Construction.	None.
Agree that developers are expected to have considered the financial implications of policy requirements, including affordable housing and net zero carbon, and local market indicators, when purchasing the land for development. However the cumulative policy cost has not been sufficiently considered and creates unfavourable conditions for future investment in the City.	The policy requirements in LP2045 have been informed by the Viability Assessment and the cumulative impacts have also been tested for policies which may have cost implications. The Viability Assessment therefore complies with the requirement in national guidance for a comprehensive assessment of all relevant plan policies. The assessment also includes sensitivity analyses to consider growth and downside scenarios in sales values, as well as costs inflation, to help understand the	None.

Concerned that the cumulative impact of the proposed policy requirements will undermine development viability (for new developments and refurbishments) and add uncertainty to the process. This concern is amplified by the recent increases to the Community Infrastructure Levy (CIL) tariff for R&D uses, which further erode viability headroom at a time when development costs are already elevated. The Local Plan should not put in place policies that fetter development opportunities from being brought forward or that mean those tasked with major development investment decisions must operate at the margins of viability. Rapid economic changes such as the recent pandemic, conflicts in Ukraine, Iran, and the wider Middle East and increases in interest rates can have a significant, volatile and long-lasting market impact. It is important that the viability of the development plan is therefore resilient, and that the viability work supports this. sector specific challenges, including general funding and limitations in Government grants, provide further challenges on the life science and technology sectors. It is important that the viability of the development plan is therefore resilient, and that the viability work supports this. Proposed employment uses would be materially affected by the cumulative cost of proposed	implications of policy requirements both in today's terms and also in the future (section 4 of the Assessment). The Assessment tests the ability of developments to accommodation the emerging policy requirements of LP2045 alongside prevailing rates of CIL, so it takes into account the increased rates (following the Partial Review) in the viability modelling. Overall the inputs and assumptions applied in the modelling are robust and reasonable.	

2803

policies. This is in addition to amendments to the City's CIL Charging Schedule adopted in mid-August – which resulted in a fivefold increase for R&D uses from £33.74 psm to £172.28 psm. Those increased costs will ultimately be reflected in rents charged to occupiers. Increasing the cost of occupation for these companies, on top of tax rises including National Insurance and Business Rates, will reduce the funding available for their research and development activities and risks driving many away from Oxford to more competitive locations both within the UK and abroad. That would have a profound and potentially irreversible impact on Oxford's position as a leading centre for innovation. Welcome the mechanism in Policy S4 for net zero and/or affordable housing contributions to be reduced or removed entirely from employment-generating uses via a viability cascade, this very process adds further cost and uncertainty to the planning process. Request that the viability assessment prepared by BNP Paribas is robustly reviewed and the Council robustly considers the cumulative policy cost to ensure Oxford remains a favourable and attractive place to invest, without operating in the margins of viability.		
On a brownfield site like the Oxford Stadium, it is likely that viability will be an issue that affects any future planning application, and viability	The policy requirements in LP2045 have been informed by the Viability Assessment and the cumulative impacts have also been tested. The	None.

assessments will need to be undertaken under S4. This approach may discourage investment in the city as it would place a burden on applicants early in the application process. The requirement to "front load" viability work will add a significant amount of financial cost and uncertainty. If schemes do proceed, then a final position on where the City Council will land will only be after significant up front cost on the application, and land agreements as well as adding further cost to this process in the preparation of the viability assessment and in paying for the Council's assessor to review the submitted information. The effect will be an even higher development cost and greater impact on what can be delivered. The viability process will slow up the decision making process and delivery of development contrary to the overall aim of the NPPF to speed up delivery. Overall, the approach is inconsistent with Paragraph 35 of the NPPF "Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure... Such policies should not undermine the deliverability of the plan."	requirements, particularly for affordable housing contributions, are based on a 'maximum reasonable proportion' basis, to maximise community benefits without undermining the plan and accepting that this will not be universally achievable on all developments. The assessment was informed by a range of likely development and site typologies, based on real examples of recent developments across Oxford, with multiple brownfield site scenarios – to reflect that the majority of sites in Oxford are brownfield. The inputs and assumptions applied in the modelling are robust and reasonable.	
House builders are facing increasingly challenging market conditions with the costs of materials and labour increasingly rapidly, the Building Safety Levy, Biodiversity Net Gains and	The Viability Assessment uses proportionate and reasonable assumptions for the appropriate level of assessment to support a local plan. The build costs from the RICS	None

Land Fill Tax increasing the regulatory burden and higher standard required by building regulations all adding to the burden even before local plan policies are taken into account. Welcome the inclusion of policies in local plans that provide decision makers with the flexibility to consider the viability of development. However, if, as is stated in the opening paragraph of S4, it is to be assumed that development that complies with the policies in this local plan are viable then the full costs of the national and local policies within the local plan must be accurate. Concerned that not all the costs facing house builders have either been included or accurately assessed in the Council's Viability Assessment: - No allowance appears to have been made for the Building Safety Levy. For Oxford this will place an additional £23.62 per sqm on Previously Development land (PDL) and £47.24 per sqm on non-PDL1 which will need to be included in the VA. - The cost relating to BNG are based on the DEFRA Impact Assessment from 2019. The 0.7 % cost increase used is based on the Central Estimate where 25% is delivered offsite at a cost of £11,000 per biodiversity unit. This is considerably lower than the costs being experienced by the development	Building Cost Information Service (BCIS). The local circumstances adjustment is applied to reflect the Oxford context (most development types an extra 10-15% costs has been added into the modelling), and furthermore in response to feedback from stakeholders, the 'upper quartile costs' have been applied on developments in the City Centre, where proximity to heritage assets and conservation areas requires the use of high quality materials.	

	industry. The latest pricing report by Biodiversity UK from February 20262 indicates costs range from £25,000 to £30,000 per unit for the medium distinctiveness habitats with higher distinctiveness habits costs in excess of £50,000. Therefore, where there is a need to deliver more BNG offsite the cost assumed in the VA will be significantly lower than would be experienced by a developer. The cost of BNG will vary significantly from site to site. For example, an urban site may be defined as open mosaic habitat that is difficult to recreate on site and could require 100% offsite delivery at over £50,000 per biodiversity unit. Therefore, it is essential that there is significant headroom in all development to ensure that BNG requirements will not be a barrier to development in future. It ii also noted that BNG and Urban Greening Factor have been costed together. The Council will need to provide justification for this approach. - The combined impacts of Policies R1 and R2 are a concern, and the costs relating to policies R1 and R2 to have been under estimated. The Viability Appraisal estimates that the reduction in residual land values is typically 8% for operational Net Zero Carbon, whilst		

2808	achieving both embodied and operational Net Zero Carbon would reduce residual land values by approximately 23–43%. These figures represent a substantial viability burden, especially for research and development (R&D) schemes, which typically face higher construction costs and tighter operational performance specifications. The cost of achieving net zero is likely to be higher. Work undertaken by the Future Homes Hub and published in 'Ready for Zero' indicates that the costs of achieving space heating standards being proposed by the Council are likely to be 15% to 19% above those of current building regulations. These costs are based on detailed assessment made by house builders as to what it will cost and as such should be given significant weight when compared to the broad assumptions used in the Council's evidence. An additional uplift of has then been given for achieving net zero embodied carbon meaning the cost included is 15% for both R1 and R2. However, based on evidence from the Future Homes Hub this is likely to only address R1 at best and an additional uplift will be required to address costs relating to policy R2.		

The policy is not effective as the viability evidence supporting the local plan does not reflect the cost of developing new homes in Oxford. Must be amended to reflect the higher costs facing development compared to the assumptions made in the VS.		
There is a lack of alignment between this position and the conclusions of the Viability Appraisal. The Appraisal acknowledges that the cumulative impact on viability is hugely variable, and that it would be difficult to set a suite of policies that are viable for all potential developments coming forward without reducing them to a 'lowest common denominator', so instead opts for ambitious targets which may not be fully achieved in all cases to optimise delivery of policy objectives, although this inevitably comes with the downside of a higher volume of site-specific viability testing at the development management stage. This contradicts the assertion in Policy S4 that compliance with the full policy suite should generally be assumed to be viable. The Council's own evidence indicates that viability outcomes will vary significantly between schemes and that a greater reliance on site-specific viability assessments is anticipated. There is a significant strategic risk that imposing an excessive viability burden on R&D development could constrain future investment in Oxford's knowledge-based economy. This	A high reliance on site-specific viability assessments at planning application stage is not desirable for either the Council nor applicants nor communities. As such there is always a careful balance between optimising delivery of policy objectives whilst setting the policy 'asks' at a level which the majority of site typologies expected during the plan period would be able to deliver. The extensive modelling tables in the appendix to the Viability Assessment help to illustrate the tipping points, but this is not an exact science to be able to identify the exact levels of contributions which should be sought. The levels of contributions sought are reasonable and based on the evidence base. Then Policy S4 complements these policies to ensure flexibility in the event that a site cannot viably delivery the policy requirements.	None.

outcome would run counter to the ambitions of the UK's Modern Industrial Strategy (2025), which identifies science, innovation, and high-value R&D as central to national economic growth and international competitiveness. Ensuring that Oxford remains an attractive location for R&D investment is therefore critical not only for the city's economic success but also for meeting wider national priorities.		
The LP45 has set out an ambitious set of policies that if combined will lead to developers increasingly needing to engage with the City Council and undertake viability assessments under Policy S4. This will dissuade investment in the City as it is not until late in the planning application process that any certainty will be gained on where the viability of a scheme will land (as per paragraph 59 of the NPPF). This applies more to sites that have already been purchased than new proposals that can take account of the requirements and decide whether to proceed or not. The City needs to balance ambitious policies whilst also making the City an attractive location to invest. If schemes do proceed, then a final position on where the City Council will land will only be after significant up-front cost on the application, and land agreements as well as adding further cost to this process in the preparation of the viability assessment and in paying for the Council's assessor to review the submitted information.	The policies in LP2045 seek to maximise community benefits by setting ambitious targets, which the maximum reasonable proportion of sites should be able to viably deliver. This means there is an assumption that a reasonable proportion of sites can proceed on a policy-compliant basis, and would not be subject to site-specific viability negotiations (or the uncertainty or delays to decisions referred to in the comments). It is best practice to discuss key issues (which for some sites would include viability) at the earliest stage, and the NPPF also encourages pre-app discussion. As such this does not need to be re-stated in policy.	None

The effect will be an even higher development cost and greater impact on what can be delivered. It will also slow up the decision-making process and delivery of development contrary to the overall aim of the NPPF to speed up delivery. Policy S4 process should be undertaken at the pre-application stage at a high level and then refined once a planning application has been submitted. The overall ambition of policies in the plan should be re-assessed to encourage development to take place and ensure that paragraph 35 of the NPPF is met, namely that the policies as a whole do not undermine the deliverability of the plan – as is alluded to in the Viability Assessment. Amend Policy S4 to include the ability to undertake a high-level viability assessment at the pre-application stage and then refine it once an application is submitted.		
There are various emerging policies in the Plan which when combined, or indeed in some instances applied in isolation, do not support deliverable urban development and redevelopment. It cannot be said at this stage, that if all policies are complied with in the emerging Plan, this would result in deliverable development for the City.	The policy requirements in LP2045 have been informed by the Viability Assessment and the cumulative impacts have also been tested.	None.

This is unjustified as the overall goal must be to increase the number of houses, it is extraordinary that to maintain viability, car provision, and consequent loss of space for housing, is increased first and then affordable housing provision, which is nonsensical as car provision consumes, for example, one driveway and a potential downstairs room. It is clearly better to have 10 homes with two affordable, than 6 houses, 3 affordable, with space wasted for parking and car infrastructure. This is ineffective as there is no definition of viability, which would be considerably more than breakeven for a developer to proceed with the development.	Policy S4 seeks to prioritise delivery of affordable housing over and above other policy requirements, because of the significant unaffordability of homes to many people in Oxford. So the intention of the cascade approach is that if a site is not viable to deliver the full contributions, that other elements be adjusted in the first instance, only compromising on affordable housing delivery as a last resort.	None.
Concerned that the plan introduces an ambitious set of policies that, if confirmed, will lead to developers increasingly needing to engage with the Council and undertake viability assessments under Policy S4. The following modifications/ changes are sought: - The overall ambition of policies in the plan should be re-assessed to encourage development to take place and ensure that paragraph 35 of the NPPF is met, namely that the policies as a whole do not undermine the deliverability of the plan – as is alluded to in the Viability Assessment. Amend Policy S4 to include the following text:	The policies in the plan have been appraised and tested in the Viability Study. There is no need to "re-appraise the policies". Policy S4 includes a viability cascade which is aligned with the Council's priorities. The policies in the plan do not undermine its viability. We see no need to introduce a requirement for a high-level viability assessment to be undertaken at the pre-app stage. The Plan is sound and is underpinned by credible and defensible viability evidence.	None.

2812

To include the ability to undertake a high-level viability assessment at the pre-application stage and then refine it once an application is submitted.

summarised and responded to in the Statement of Common Ground.		
The estimated capacity fails to account for house extensions and subdivisions that occur in their 1000s ever year, adding bedrooms and increasing capacity. Oxford does not record development made under PD rights, so the substantial contribution made to housing need of conversions from 2-3 bedrooms is not recorded. The contribution of sites with less than 10 houses should be included. The PPG says sites of 5 units or more should be included, but the City Council only includes 10 or more.	Additions of bedrooms are not additions of housing units. Overall housing need is calculated and expressed in terms of the need for new housing units. The contribution of sites with less than 10 homes is not overlooked. There is a small sites windfall calculation to ensure an assumption about likely delivery of small sites is included in the capacity. Generally, small sites come forward quickly and often more spontaneously than larger sites, and there is a far broader range of landowners with different likely prompts to delivery, so many small sites that will deliver of the plan period to 2045 will not at this point be possible to identify. This applies to sites of 5-9 units, as well as up to 5 units. In the case of Oxford, a windfall figure for sites up to 10 is considered the best way to reflect true capacity.	None.
The Oxford housing market area extends well beyond the city boundaries. It is therefore not justified to destroy the small remaining pockets of green space.	A balance must be struck between protecting the important features and characteristics of Oxford and making the most efficient use of land within the city in order to meet needs within the city as far as possible first, before exporting them. A 'no stone left unturned' approach has been followed in identifying housing sites, but this is balanced against a need to consider whether sites are deliverable whilst being able to mitigate or compensate for any	None.

	harms, and according to the plan's overall strategy.	
The plan's economic strategy is at odds with its housing delivery capabilities. Capacity is 463 per annum, but the employment need is 412,460sqm of floorspace, which the plan admits is 'likely to draw additional workers into the city'. By aggressively supporting economic expansion the Plan may exacerbate issues with high land values and property prices and a lack of affordable homes.	The starting point for the Local Plan is that it should try to meet all needs. This is challenging within the city with many demands and many constraints. A balance must be struck. It is also important and expected that Oxford continues to play its leading economic role. However, housing supports this and is also a priority in terms of overcoming inequalities. The plan in Policy E1 does allow for housing on employment sites, and new employment sites are not permitted in many parts of the city. There are many sites in Oxford in existing commercial use where the landowner has no intention of converting to housing. By intensifying on existing employment sites, there is enough forecast capacity to meet demand. As a constrained but economically successful city, Oxford will be expected to draw people in to jobs.	None.
Reference should be made to encourage the conversion of vacant employment uses (offices, retail) into residential use where they will not compromise active street frontages within the city centre and district centres.	Policy E1 allows for residential use on employment sites. Policies C2 says: Planning permission will be granted for development of upper storeys of the Active Frontages for housing, student accommodation and other uses appropriate to a town centre, as long as the functioning of the ground floor unit(s) in the active frontage is not undermined.	None.
The plan proposes housing targets significantly above the city's deliverable capacity and relies heavily on development pressure on the urban	The housing need is above the identified capacity, but the Standard Method is used to understand the Local Housing Need. The city's	None.

edge. Lower impact growth scenarios need to be properly considered. The absence of agreed statements of common ground suggests the plan again fails to demonstrate full compliance with the Duty to Cooperate.	capacity is very constrained, and delivery of some of its needs outside the city has been something that has been necessary over time. An interim joint statement of common ground between all the Oxfordshire local planning authorities was available at the time the submission draft local plan was published. The intention is that an updated document will be provided on submission of the plan.	
The plan fails to acknowledge the interaction between housing and economic growth and that housing needs in Oxford may be higher than that established by the standard method. Housing supply is a key barrier to economic growth. Oxford's housing need should be derived from the SM LHN with a further uplift to reflect growth aspirations. There is an exceptionally strong case for a higher level of growth than is being provided for, whilst recognising Oxford itself has limited capacity. It will therefore require cross-boundary working with neighbouring Local Authorities.	The housing need is assessed by the standard method. The NPPF does make it clear that a housing requirement may be set above or below the housing need, if that can be justified. In the case of Oxford, a housing requirement below the housing need is considered to be justified because of the limited capacity.	None.
Concern is raised about how the Council has reached conclusions regarding the capacity of sites, anticipated delivery of sites, and therefore whether the proposed housing requirement is justified.	The SHLAA, Background Paper 015: Developing Site Allocations, and Background Paper 016: Efficient use of land, set out how sites have been identified, assessed and capacity identified. Dealing with unmet housing need in adjoining areas is set out in a series of Statements of Common Ground with the relevant planning authorities.	None.

The new housing needs figure covers 2025-2045. Therefore, the previously agreed figures also include homes that deal with un-met need for 2021-2025. Current provisions to meet unmet housing need have not delivered as expected, and, if relied upon, are unlikely to meet the full scale of Oxford's unmet housing need, either as arising from the standard method, or linked to the economic growth ambitions envisaged by the Oxford Growth Commission. Given nothing has been delivered so far, consideration should be given to the deliverability of the existing unmet need sites. Combining the confirmed figures (not including West oxfordshire because its figure is unknown) gives a total of 11,180. This is a shortfall of 1,293 from the unmet need of 12,473.	Dealing with unmet housing need in adjoining areas is set out in a series of Statements of Common Ground with the relevant planning authorities.	None
Oxford must clarify where the un-med need is to be met and how. Through the plan and Joint Interim SoCG it is not clear how this will be done.	The intention is to submit more information about this in a Memorandum of Understanding/final joint Statement of Common Ground with the other Oxfordshire local planning authorities.	None.
The Plan puts forward a reduced housing need figure from that in the withdrawn Oxford Local Plan 2040 and it also uses SHLAA findings to justify a capacity-based requirement. These two choices will lead to delivery of fewer homes, in contrast to the plan's aims. The approach lacks ambition and is likely to	At the time of the Oxford Local Plan 2040 (now withdrawn), the Standard Method was not framed as the only way to calculate housing need. The Standard Method was also very different to the current standard method. It was not considered that the previous standard method was a good representation of housing need in Oxford. Whilst Local Plans can set a	None.

exacerbate the existing housing supply problems in the city. The city can only demonstrate a 2.88 year housing land supply, which is proof that the Council is failing to address the housing crisis. There is no explanation of why the City Council has changed its growth ambitions in the LP45 but not changed its objectives or core themes.	housing requirement that differs from the Standard Method, the Standard Method is representative of the Local Housing Need. The current Standard Method gives a better approximation of housing need in Oxford.	
In the previous version of this Plan [withdrawn 2040 plan] Oxford City Council did not use the standard method to calculate housing need as it did not give a sufficiently large figure. This time they claim to have used the standard method, but come up with a very similar figure to the last iteration of the Plan and still claim they cannot meet it from within the City Of Oxford. So they again want to export it to surrounding Districts to develop more Green Belt countryside on the edge of Oxford and harm local communities, including those in our parish. The Plan carefully does not reveal how the figures were calculated or what background figures were used so it must be assumed they used the same ones as before. Comments are made in the representation about the HELA that supported the 2040 plan, which are not included her.	The starting point when assessing need is not to think of a figure, but to consider an appropriate methodology for assessing need. The NPPF from December 2024 (post the 2040 plan) says that 'To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning practice guidance.' The supporting text to Policy H1 is very clear that the Government's Standard Method was used to assess housing need: 'The minimum housing need figure for Oxford has been calculated by using the Government's Standard Method as set out in National Planning Policy and guidance.'	None.
Paragraph 5.11 of BP001 refers to the 14,300 homes previously apportioned to neighbouring authorities. This is the provision from 2011, agreed in the adopted OLP2036.	The interim joint Statement of Common ground set out how each district is dealing with unmet need, and an updated in a final SoCG or a Memorandum of Understanding.	None.

The Interim Joint Statement of Common Ground is not amongst the papers supporting the current consultation, and therefore the situation is opaque as to how housing provision in adopted Local Plans contributes towards meeting unmet needs over the plan period.	The interim Statement of Common Ground was available at the time the Regulation 19 plan was published.	None
The Interim Statement of Common Ground provides details on the commitments towards Oxford's unmet housing need in the adopted and emerging plans of neighbouring districts (as of January 2026). However, as these emerging plans are not adopted, it remains unconfirmed whether the City Council's unmet need will be fully met.	The level of commitment in local plans of neighbouring authorities depends on the timing and progress of those local plans, which is out of the control of the city council. However, what can be ensured is that each district has agreed and committed to taking the full amount of Oxford's unmet need. This agreement will be set out in an update to the interim statement of common ground, or in a memorandum of understanding.	None.
The policy only refers to the capacity of the city, without mentioning the housing need figure as calculated by the Standard Method, or 21,740 dwellings. It also does not set out a strategy for how the Council will be delivering the remaining 12,473 homes and there is no clear spatial strategy for this. As such, the policy is contrary to paragraph 61 of the NPPF in that it fails to meet the area's identified housing need. The Oxford Growth Commission's Interim Report refers to the lack of such a strategy stating: "Delivering on the strategic vision requires a spatial investment and land use strategy across the County that joins up economic growth with investment in transport, new housing including new	The supporting text to policy H1 does set out the level of need as calculated by the Standard Method. There is agreement with the neighbouring Oxford districts about Oxford's unmet need. It is for each district to set it own spatial strategy and determine how they deal with unmet need within their area.	None.

affordable housing, achieving net zero, nature recovery and the environment, and skills and employability. A vital element in such a strategy is aligning economic growth with requirements for new housing to improve affordability and reduce commuting pressures [...]"		

Policy H2

POLICY	H2			
All respondents **supporting** policy	30.6	43.6	57.2	124.2

COMMENT SUMMARY	OFFICER RESPONSE
Policy is sound	Support is welcomed
Support seeking to deliver affordable housing in line with local need. Also need to consider need for affordable housing for NHS staff and other health and care providers. Recommend: engaging with NHS partners (ICB, Trusts, and ICS partners); factoring need for NHS staff into housing needs assessments and other evidence base; consider site allocations for NHS staff especially sites near large healthcare providers.	Support is welcomed. The suggested measures have all been addressed through the plan preparation: there has been regular engagement with the Health Trusts and Statements of Common Ground are also being prepared to summarise key issues; housing need assessment is now replaced by Standard Method (as prescribed in national policy); there are multiple site allocations for residential close and even onsite at the large healthcare sites, some of which are also identified as suitable for employer-linked affordable housing which would prioritise homes for healthcare workers.
Support the alterations made to this Policy since the reg 18 stage, in particular the exclusion of the wording "provisional requirement, subject to further viability testing".	Support is welcomed

Vale of White Horse District Council has made a representation relating to Policy H2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The prioritisation in the cascade (in S4) of first allowing reduction of net zero offset payments, and relaxation of parking standards, and only lastly allowing reduction in affordable housing (and even then staged to protect social rent as far as possible,) may make sense in Oxford but it risks making schemes that could viably deliver a lower affordable housing % non-viable or forcing repeated viability disputes, which is exactly what NPPF and PPG seek to avoid. Ie the cascade of policy relaxation is not in practice consistent with NPPF para 35 and viability guidance.	The viability evidence base for the plan has tested individual policies and the cumulative plan requirements, and the level of contributions sought have been set accordingly so that they do not undermine the deliverability of sites. The prioritisation in the stepped approach in S4 reflects the urgent need for affordable housing in Oxford, and in particular social rent tenures. The approach in policies H2 and S4 are consistent with the NPPF.	None
Should increase the proportion of new homes for social rent to the absolute possible maximum. Bringing down the housing waiting list should be prioritised over opportunities for people hoping to get on the housing ladder. In policy H2, replace “at least 80%” (of affordable units on the site should be provided as onsite social rented dwellings) to “90%”. See discussion in question 38 for why this would make the plan sound.	The tenure split in H2 is driven by priorities of the plan (to address housing needs of those in greatest need) but must also not undermine viability. Social rent is in great demand in Oxford but is also the most expensive to build (due to the larger discounts on returns). So to raise the requirement to 90% would likely have knock-on viability impacts on sites, for example it may result in the overall target of 40% across the site not being viable and could result in fewer affordable homes overall.	None

The proposed split of 80% social rent/20% intermediate disincentivises build to rent investors due to the scale of their operations needed for viability. As many sites in the city are small to medium size, the total number of private and intermediate units to be delivered per site is lower than many investors and developers require. A more flexible position or a cascade should be included in the policy. This will result in more housing overall and therefore more affordable housing being delivered in the City. Encouraging intermediate tenures will also help to address affordability pressures in Oxford and the need to support talent retention of graduates. Amend bullet a) as follows: "At least 80% of the affordable units on the site should be provided as onsite social rented dwellings unless an alternative has been agreed with the Council, taking into account demand for all housing types in the City. The remaining element of the affordable housing may be provided as intermediate forms of housing onsite provided that they are affordable in the Oxford market".	The 80/20 tenure split reflects the priority to deliver social rent affordable housing for those in greatest housing need. The policies already allow for some flexibility to take site by site circumstances into account where applicable, but this should be only a minority of schemes, in order to not add unnecessary complexity or delays to the development management process, or uncertainty to developers and communities, and there is a cascade approach set out in Policy S4 if a site cannot viably deliver the policy requirements.	None
Oxford City policies of zoning development land specifically for employment has increased the price of land for housing and made houses even more unaffordable. The questionable assessment of development land will also result in an increase in land prices and thus housing. Make the policy allowing housing on	The plan supports the conversion of employment sites to residential in Policy E1 where the landowner is interested in doing so. Many employment sites in Oxford also qualify for permitted development rights for conversion of office to residential.	None

employment land effective by making the assessment for housing suitability fair and transparent with an aim of increasing housing on land zoned for employment.	The assessment of suitability for residential is published in the Strategic Housing Land Availability Assessment. A particular challenge in recent years is that retaining employment uses often provides a higher return to the landowner.	
Not all development typologies can meet the 40% AH target, so the opening sentence of S4 is untrue – decision makers cannot assume development that meet the policies in this local plan are viable. Amend wording to “where viable a minimum of 40% of units ...” to ensure policy is consistent with the evidence. The draft policy should recognise that affordable housing requirements will be determined through a site-specific approach.	The policies already allow flexibility to take site by site circumstances into account where applicable. It does not need to specify “where viable” or that affordable housing requirements should be determined “through a site-specific approach” because that is already addressed in Policy S4 Plan Viability, which sets out a stepped cascade in the event that policies in the plan result in a site being unable to deliver a viable development.	None
The stronger wording and definition of "truly affordable in the context of the Oxford housing market" must remain unaltered. We would seek that the word " should" would be better replaced with " Will or Must", to further strengthen this policy.	It is the intention to retain the wording about “truly affordable”. This is an important principle in the Plan to deliver affordable housing that meets needs of local people, recognising that some models of affordable housing are not actually affordable in the Oxford context. “Should” is used to allow flexibility to respond to site specific circumstances, such as viability. It is the expectation but there may be exceptions.	None
West Oxfordshire District Council has made a representation relating to Policy H2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Oxfordshire County Council has made a representation relating to Policy H1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Residential development currently faces significant delivery challenges because of reduced building efficiencies following regulatory changes, increased build costs, increasing developer contributions, falling capital values in real terms, and complex infrastructure requirements to transform large-scale brownfield sites. Templars Square is not immune to these realities and the likelihood of a scheme at the site meeting H2 requirements, as drafted, is limited. Given the Viability Assessment evidence base document refers to a 40% target (due to the significant variations on a site-by-site basis) whereas Policy H2 refers to a 'minimum' 40% and does not acknowledge the site-specificity highlighted in the evidence base document. We consider that draft Policy H2 is not adequately "justified".	The Plan allows flexibility to take site by site circumstances into account where applicable. Policy S4 Plan Viability sets out a stepped cascade in the event that policies in the plan result in a site being unable to deliver a viable development.	None
Object to this policy requirement being related to the gross number of dwellings in a development. If a gross requirement is applied to the redevelopment of sites, it will significantly affect the viability of schemes and discourage the regeneration of parts of the City. Instead, this requirement should relate solely to the net number of new homes to be provided.	The policy requirement in Policy H2 applies to all dwellings within the red line of a planning proposal. This is the same approach that has been applied and demonstrated in the current adopted and previous local plans in Oxford. If there are existing dwellings included within a red line it is usually because they are being materially altered, so the policy would apply. If	None

Amend Policy H2 to read: “On self-contained residential developments (including Use Classes C3 and C4 but excluding self-contained student accommodation, older persons accommodation and employer-linked housing) where sites* have a capacity for 10 or more homes (gross), a minimum of 40% of the *net increase in* units on the site should be provided as homes that are truly affordable in the context of the Oxford housing market. On sites in the Green Belt or released from the Green Belt, this should be a minimum of 50% *of the net increase in units on the site.*”	a property is not being altered as part of a development it would usually be outside of the red line, so would not be counted in the calculation of the gross number of units.

	105.1	112.5	114.3	129.4	130.3
	133.3	134.2	138.8	157.6	159.7

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
There is internal and NPPF viability tension because of multiple overlapping contributions (H2, H3, H4, H12). Individually, each policy may be justified, but taken together they impose high onsite affordable ratios on general housing,	The policy requirements in LP2045 have been informed by the Viability Assessment and the cumulative impacts have also been tested for policies which may have cost implications. The Viability Assessment therefore complies with	None

and contributions from employment and student accommodation even where those uses may compete for the same constrained sites. NPPF requires the cumulative impact of all policies "does not undermine the deliverability of the plan". The Plan acknowledges parking policy C8, net zero (R1) and affordable housing policies as the main viability risks but then adds strong affordable obligations on non C3 uses (H3) without clear evidence. The Reg 19 plan does not set out how this requirement meets Paragraph 58 of the NPPF. It is therefore not clear what identified harm or impact is being mitigated through the sought contributions such that the policy is not justified nor consistent with national policy, particularly on mixed use sites where the delivery of affordable housing is not prevented by the inclusion of employment generating uses. The NPPF and NPPG only make reference to seeking affordable housing from major residential developments. There are no references to such contributions or provision being sought from commercial development.	the requirement in national guidance for a comprehensive assessment of all relevant plan policies.	
Object to Policy H3 (Parts (e) and (f)) seeking affordable housing financial contributions from new commercial development (i.e. 'proposals for major employment-generating uses (defined in Glossary), or flexible E-Class uses which could be used for employment-generating use,	Commercial developments have the potential to generate demand for affordable housing. Lack of affordable housing is often referenced as a constraint on Oxford's economic potential, and employers report difficulties in attracting and retaining staff because of the lack of	None

delivering a net gain in floorspace of 1000sqm GIA or more'). Parts e) and f) of Policy H3 should be removed. Major commercial developments already deliver significant financial contributions towards delivery of infrastructure, highways improvements and public transport improvements, including towards the delivery of the Cowley Branch Line, in addition to Community Infrastructure Levy which has increased fivefold since August 2025. The requirement for a further financial contribution towards affordable housing would render investing in the City unfavourable and unviable and undermine the deliverability of the plan's economic objectives, particularly in a competitive global marketplace where economic investment in the R&D sector can be uprooted and taken elsewhere with more favourable planning and market conditions. The policy relies on a high-level assumption that employment development will generate a need for affordable housing with no evidence that it will create this need and no reference to market housing need. The level of contribution is an arbitrary figure and has not been sufficiently demonstrated to be at a level to mitigate any identified need or impact. It also assumes that employees will live in Oxford, rather than more	affordable housing. Therefore, there is a clear justification for the introduction in Policy H3 for a requirement for contributions from employment development to affordable housing. The intention when setting the level for these contributions is informed by the Viability Assessment evidence, so that it is set at a level that is easily affordable, whilst still ensuring a contribution is made to meeting the affordable housing needs generated by this kind of development. Whilst the housing would not necessarily go directly to the staff of the development site, it would generally help supply of affordable housing.	

affordable locations in the surrounding Districts or further afield. The policy also assumes that all new commercial development will generate entirely new jobs for the City (which is rarely the case in major commercial developments) and fails to take into account companies moving from one part of Oxford to another and where the old premises are no longer fit for purpose or are being redeveloped for alternative uses, such as housing – where no additional need will be generated. Policy H3 should be amended to take account of the following changes: First Paragraph: Delete references to "and new employment-generating uses". Parts (e) and (f): Delete these requirements.		
The Inspector's Report for the Westminster City Plan (March 2021) provides a directly relevant precedent. The Inspector recommended deleting Policy 10, which - like Policy H3 - sought affordable housing contributions from commercial developments of 1,000sqm or more. The Inspector concluded that the NPPF and PPG only anticipate affordable housing requirements being applied to major residential development and make no provision for securing such contributions from commercial or any other form of non-residential development. The Inspector also found that the policy would fail	The local circumstances in Oxford mean that seeking the contribution is justified for LP2045. The level of contributions has been set at a minimal level so that it is deliverable across the majority of (major) commercial sites, as indicated in the Viability Assessment modelling.	None

the statutory tests for planning obligations because it lacked a direct relationship to the development, provided no guarantee that funds would be spent near the contributing site, and relied on standardised tariffs that bore no relation to the actual cost of delivering affordable homes. Moreover, the proposed tariff was considered fundamentally flawed because it applied uniformly across all commercial uses despite clear evidence of differing viability profiles. The Inspector ultimately concluded that there was insufficient justification to demonstrate that the contributions would be fairly and reasonably related in scale and kind. The parallels with Oxford's proposed Policy H3 are clear, and the Westminster highlight the policy and legal concerns with requiring affordable housing contributions from commercial development. A similar Policy was proposed in the Westminster City Plan 2019-2040 (examined in 2020). Policy 10 of the Submission Draft included a requirement for contributions from commercial developments. The Inspectors recommended that the Policy be removed, noting that the policy requirement "would simply require financial contributions to the City-wide Affordable Housing Fund. It would not achieve the key objective of the submitted Policy 10" (paragraph 85) to ensure mixed, inclusive and cohesive communities.		

Oxford University Developments has made a representation relating to Policy H3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Seeking such a contribution would not meet the three tests for planning obligations set out under Regulation 122 of the CIL Regulations and Paragraph 58 of the NPPF as the obligation is not necessary to make commercial developments acceptable in planning terms and not directly related to the development. Employment development would be supported by other policies in the Plan and such a contribution is not needed to make the development acceptable in planning terms. Affordable housing contributions from major commercial developments do not meet the legal tests of Reg 122 of the CIL Regs 2010. Oxford has a pressing need for new commercial and employment space to support local businesses, universities and research institutions. Introducing new financial obligations on commercial schemes for residential development risks constraining delivery and pushing employment space out of the city. The first paragraph should be amended to the following: "The City Council will seek financial contributions towards the delivery of affordable housing from proposals for new purpose-built student accommodation, and new older people's accommodation."	The contribution towards affordable housing is necessary to make the development acceptable and directly related to the development in that it increases jobs and thus increases pressure on housing in the city.	None

The level of contribution is an arbitrary figure and has not been demonstrated to be at a level to mitigate any identified need or impact, and is not related in scale or kind to the proposed development. In addition, as the contribution would need to be implemented through planning obligations the requirement would fail the Regulation 122 tests. Employment development would be supported by other policies in LP45 and such a contribution is not needed to make the development acceptable in planning terms. There is no direct relationship to the proposed development and the scale of payment is no related to the actual cost of delivering affordable housing. Seeking such a contribution would not meet the three tests for planning obligations set out under Regulation 122 of the CIL Regulations and Paragraph 58 of the NPPF as the obligation is not necessary to make commercial developments acceptable in planning terms and not directly related to the development. Employment development would be supported by other policies in the Plan and such a contribution is not needed to make the development acceptable in planning terms.		
The new CIL rates (Aug 2025) include a 400% increase in the levy charges for Class E, B2 and B8 uses. The new CIL rates and the proposed Policy H3, could adversely impact the deliverability of Osney Mead. In turn, this raises risk that the deliverability of the Local Plan (as	Commercial developments have the potential to generate demand for affordable housing. Lack of affordable housing is often referenced as a constraint on Oxford's economic potential, and employers report difficulties in attracting and retaining staff because of the lack of	None

well as the current adopted West End and Osney Mead SPD) will be undermined. Although the viability assessment notes that it will have a modest impact on development, it needs to demonstrate specifically that the site allocations, particularly those of strategic scale, have been tested fully and account has been made of such sites incurring abnormal and extraordinary costs. Without this it is not possible to consider the soundness of the proposed policy. Seeking affordable housing contributions from commercial development, particularly in light of the revised CIL rate for Class E offices and R&D which has increased from £33.74 to £168.74 per square meter GIA (non-indexed), would render schemes undeliverable, especially working within constraints of complex urban development and within the sensitive heritage constraints that pertain in the city with regard to quantum of acceptable development. Major commercial developments already deliver significant financial contributions towards delivery of infrastructure, highways improvements and public transport improvements, including towards the delivery of the Cowley Branch Line, including some support already taking place outside of planning conditions/obligations attached to specific developments. The requirement for a further	affordable housing. Therefore, there is a clear justification for the introduction in Policy H3 for a requirement for contributions from employment development to affordable housing. The intention when setting the level for these contributions is that it is guided very much by the viability report, so that it is set at a level that is easily affordable, whilst still ensuring a contribution is made to meeting the affordable housing needs generated by this kind of development. Whilst the housing would not necessarily go directly to the staff of the development site, it would generally help supply of affordable housing. The viability for the site allocations has been tested through a typologies approach in the Viability Assessment, which tests a range of typologies to represent the types of sites anticipated to be developed during the plan period.	

financial contribution towards affordable housing would further increase the cumulative policy cost and create an unfavourable environment for economic investment in the City. This would undermine the deliverability of the plan's economic objectives through rendering investing in the City unfavourable and unviable, particularly in a competitive global marketplace where economic investment in the R&D sector can be uprooted and taken elsewhere with more favourable planning and market conditions.		
Policy does not give due consideration to ensuring the viability of essential employment uses, particularly where these are delivered as part of mixed-use schemes where the residential element is already subject to an affordable housing requirement. Propose a modification to Policy H3 to ensure that a more nuanced approach to securing affordable contributions from mixed use sites will be considered at the application stage.	If a mixed-use site includes both residential and commercial elements, then the affordable housing contributions would be calculated apply a pro-rata approach according to those different elements (set out in second paragraph of H3). So that the site is treated on a comparable basis to other sites bringing forward similar uses.	None
Object to Policy H3 (Parts (e) and (f)) in relation to seeking affordable housing financial contributions from new commercial development. The City Council included such a policy requirement in a previous adopted Local Plan. However, this was dropped in the extant Local Plan. There is no clear reason to re-introduce such a policy now.	Viability evidence at the time of preparing LP2036 indicated that seeking contributions was not viable, however the latest Viability evidence for LP2045 indicates that viability of commercial developments has shifted in recent years and that it is now viable.	None

The housing requirement takes into account the need for housing generally in the local area and also the level of affordable housing. There is no evidence that employment development will create an additional affordable housing need. The policy relies on a high-level assumption that employment development will generate a need for affordable housing. If this policy is taken forward this assumption should be assessed on a case by case basis. It also assumes that employees will live in Oxford, rather than more affordable locations in the surrounding Districts or further afield. The Policy fails to take account of a company moving from one part of Oxford to another and where the old premises are changed to housing – where no additional need will be generated. It assumes all jobs will be newly created which is rarely the case. In addition, chapter 3 of LP45 recognises that people will often commute to jobs within the City and that it is “easier to strengthen public and active transport systems to take people to jobs in the city rather than scatter employment to less sustainable locations." It makes no assumption for market housing need.	Whilst the housing would not necessarily go directly to the staff of the development site, it would generally help supply of affordable housing, which is often referenced as a constraint to major employers in Oxford and to economic growth.	None

There is no certainty that planning obligations under this policy will actually deliver affordable housing in the City. There is no ability to ring fence the obligations to the identified workers being generated from commercial developments, or even if those workers would qualify for affordable housing. Background paper on affordable housing (reference BGP-002 Affordable Housing Reg 19) prepared by the Council states that: "Whilst the housing would not necessarily go directly to the staff of the development site, it would generally help supply of affordable housing". The policy relies on a high-level assumption that employment development will generate a need for affordable housing with no evidence that it will create this need and no reference to market housing need. It also assumes that employees will live in Oxford, rather than more affordable locations in the surrounding Districts or further afield. The policy also assumes that all new commercial development will generate entirely new jobs for the City and fails to take into account companies moving from one part of Oxford to another and where the old premises are no longer fit for purpose or are being redeveloped for alternative uses, such as housing – where no additional need will be generated. For instance,		

Novo Nordisk is relocating from the Innovation Building in Headington to the Iversen Building at TOSP. The policy assumes all jobs will be newly created which is rarely the case in major commercial developments and evidenced by this specific example at TOSP. Policy H3 should be amended: First Paragraph: Delete references to "…and new employment-generating uses". Parts (e) and (f): Delete these requirements.		
The policy is unjustified as the economic gain or loss will be the same for existing or new campuses or institutions, further provision of student housing of itself removes students from the housing market. Student accommodation can be provided by non-University institutions (Boarding schools, Language schools). Remove applicant specific text, make effective as above, and apply contributions to all developments equitably. At each Local Plan, Oxford City Council has tried, under pressure, to give existing Universities preferential treatment, each and every time the Inspector throws it out as a policy cannot be dependent on applicant identity.	For new student accommodation, the policy does not apply to development within university campus sites or redevelopment of existing purpose-built student accommodation that is currently and will continue to be owned and/or managed by the universities. The reason for exemption is because when student accommodation developments are off-campus, then they are typically on sites that could equally be suitable for non-student homes, from which affordable housing would normally be sought. However where student accommodation is developed within existing university campuses, market housing would not usually be provided within those sites, so those sites would not be providing affordable housing.	None
Disagree with the requirement for older persons housing to provide contribution towards affordable housing, because the evidence indicates that 40% is not achievable and that	H3 does not require onsite provision of affordable housing from older persons accommodation. Section (c) indicates that financial contributions will be sought towards	None

only in the highest value areas would any affordable housing contribution be achievable. Policy should be amended to remove the requirement for specialist forms of accommodation such as older persons housing to provide affordable housing onsite.	the delivery of affordable housing as the default policy, or as an alternative the affordable housing contribution can be provided on-site where both the City Council and the applicant agree that this provision is appropriate. The Viability evidence indicates that 40% is viable in many cases, and where it is not then there are provisions in S4 which sets out a cascade of adjustments for proposals to work through. Financial contributions are required on a comparable basis [to the 40% required in H2] so that the development of sites for residential is not disadvantaged in the market or viability terms.	
The Universities do not support the inclusion of purpose-built student accommodation within Policy H3. Purpose-built student accommodation already functions as an affordable form of housing relative to the open market and plays a crucial role in reducing pressure on the wider housing stock. In addition, the number of sites suitable for new student accommodation is inherently limited. Opportunities for speculative privately-led student schemes have notably declined in recent years, reflecting both land supply constraints and the increasingly stringent location controls in Policy H8. We expect this trend to continue, and the restricted pipeline raises questions about whether the proposed contributions policy is proportionate or justified. By attempting to align the affordable housing	Many sites for student accommodation could equally be suitable for non-student homes, from which an affordable housing contribution would normally be sought. The exception to this, is where student accommodation is developed within existing university campuses, because market housing would not usually be provided within those sites. As such, it is reasonable for the Plan to include a policy which seeks affordable housing contributions from new purpose-built student accommodation. Purpose-built student accommodation is not an affordable type of housing. It is a specific type of housing that meets one type of need in Oxford. This has to be balanced so that all types of housing can be delivered within the city.	None

expectations for brownfield commercial-to-residential schemes with those for brownfield student accommodation schemes, the policy risks making new student developments financially unviable. Inevitably, any additional financial burden would translate into higher rents for students, undermining affordability and potentially reducing the availability of purpose-built stock. The City Council has not, to our knowledge, published any assessment of the policy's likely impacts on student accommodation rents or the future demand and supply balance for purpose-built student housing. A detailed impact analysis is therefore required to demonstrate that the policy is deliverable, justified, and aligned with the Council's wider objectives for affordability and housing choice.	The local circumstances in Oxford mean that seeking the contribution is justified for LP2045. The level of contributions has been set at a level so that it is deliverable across the majority of (major) commercial sites, as indicated in the Viability Assessment modelling.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Employer linked housing (H4) may undermine mixed, balanced communities and long term flexibility. Tying occupancy to employment can	There has been a similar employer-linked policy in the adopted Local Plan 2036 in place since 2020, and there is no evidence that applying	None

lead to mono tenure, employer dominated enclaves, which may not align with NPPF's objective of creating "mixed and balanced communities" and avoiding undue segregation by tenure or occupation. By exempting these sites from the usual H2 obligations, the Plan may allow large quantities of affordable provision that is not open to the wider local housing need, thereby partly frustrating the broader objective of meeting general affordable housing needs in Oxford, not only institutional staff needs. The fallback that 40% must be transferred to a RP if employer demand ceases could also be criticised as weak: it implies up to 60% of the stock could remain in a limbo or be sold on the open market, which would effectively reduce the level of affordable housing stock, which is inconsistent with the strong affordable housing priority in the overall Plan.	the similar policy has given rise to these sorts of issues. Meanwhile this period has seen development of staff accommodation on the JR and Churchill Hospital sites, which have helped to address staff accommodation and recruitment concerns. The fallback position of transferring 40% to an RP, would effectively be the same amount of affordable housing as if the site had been developed as a mainstream housing site (ie applying Policy H2 requirements).	
Oxfordshire Health NHS Foundation Trust has made a representation relating to Policy H3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
This policy does not seem to take into account the fact that for couples living together both partners will have careers/jobs with different employers in different locations.	Policy H3 requires that an affordable housing approach will need to be agreed with the Council for each proposal, setting out how the proposed affordable homes will be developed and managed by the employers (or by development partners on their behalf) to meet the housing needs of their employees.	None

Policy which allows for homes which are affordable to be provided by key employers is positive and can help stimulate essential development, particularly on sites with a longstanding allocation which has not progressed. Government Buildings and Harcourt House site SPE3 should also be included as a suitable site for employer-linked. This will improve the likelihood of delivery of development on the site, benefitting effectiveness of the Plan, and so soundness. The Centre has a need and duty to provide affordable housing for its permanent staff working in the teaching, administration, or other essential, on-site support services. The city's restricted housing market and extremely high house prices make it very difficult to recruit and retain essential staff. The same is true for early career academics who are forced to turn down positions because they cannot afford Oxford rents.	The policy is designed to enable delivery of on-site affordable housing on sites that would not be suitable for delivering housing to the usual requirements of Policy H2. It is not intended as an alternative to H2, it is a supplementary approach to be used only in specific circumstances. Site SPE3 is judged as suitable for coming forwards under the normal H2 Affordable housing requirements. That does not preclude the landowner bringing forward a proposal for 100% affordable housing should they wish to provide affordable staff accommodation, but the usual H2 requirements would still apply.	None
Ever increasing expansion of the main employers – Oxford University, OUHT and Brookes, BMW, are the root cause of housing need in the city. The Headington hospitals in particular (JR, Churchill and NOC) have capacity for 1000s of homes in highly sustainable locations, using their football fields of car parks which would reduce the need to travel and provide homes and save surrounding countryside and the few remaining green spaces in the city. Either employers provide	The policy is designed to enable delivery of on-site affordable housing on sites that would not be suitable for delivering housing to the usual requirements of Policy H2. It is not intended as an alternative to H2. Each proposal will need to have agreed with the council an affordable housing approach to set out issues such as eligibility, rent policy and rent levels, which will address queries raised in	None

housing, or pay heavy contributions to build housing based on increased staff numbers. They cannot simply create housing need, traffic problems and dump the consequences onto the taxpayer and ordinary citizen. Employment status is difficult to determine, as many may be Inside IR35 contractors, working for subcontractors and companies (eg: cleaning, catering, retail), placements, students on work experience and training, may require short term accommodation of specific projects or tasks. Vacancy periods are not covered which may provide short term accommodation for tourists etc. The policy is too complex, restrictive, and provides no incentives or penalties for nondelivery and therefore unjustified and ineffective. This is therefore not positively prepared. Better solutions such as allowing market housing or straight sale of land would provide more homes. Mandatory contributions to housing related to staff numbers, with discounts where on-site housing is provided, and further discounts where destination parking space is used. Allow market component as incentive to delivery. Some general housing should be allowed. A contribution to housing stock is valuable however delivered, and should be determined in part by the developer.	these comments about discounts, eligibility of staff, and other implementation issues. Sites which fall within the criteria of a campus site of the colleges (bullet point 1 of H4) are not individually listed but is specified in the individual site allocation policies.	

Sites should not be listed as this is not effective as the list given is not the same as the Site Policies, Headington Hall and Ruskin are both absent.

POLICY	H7		
All respondents **raising objections** on this policy/chapter	47.8	111.5	138.11

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Unsound as not effective or consistent with national policy - Potential conflict between restricted HMO supply and affordable options for key workers. Plan recognises that HMOs "offer the only available and affordable solution for many people" but seeks to prevent "over-concentration". NPPF requires plans to meet the needs of different groups. The internal logical tension is: HMOs used as an acknowledged safety valve for affordability, but Policy H7 restricts further supply in areas where there are existing high concentrations. At the same time, Policy H8	There are negative impacts of HMOs being too highly concentrated. With no thresholds in place, areas could become dominated by HMOs which would affect ability to meet other housing needs e.g. family homes. The threshold based approach applies equally in all parts of Oxford allowing flexibility for new HMO in suitable locations whilst capping further creation in others. The approach will have a greater material impact where there are already high concentrations of HMO.	None

constrains PBSA supply, and Policy H2's high affordable/ social rent requirement may reduce delivery of new low cost C3 stock. In combination, this risks under provision of low cost rented accommodation, weakening the Plan's ability to meet the NPPF requirement to address housing needs of those who rely on the private rented sector.		
Oxford Health NHS Trust has made a representation relating to Policy H7, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Not justified - Policy is ineffective as the term HMO is not defined. The statement that new build HMOs are undesirable due to social housing need is unjustified and unexplained. This could be ineffective as it may have a negative effect on student housing provision, discouraging families from renting bedrooms.	The Glossary includes a definition of HMO. The supporting text to the policy indicates the policy does not allow new **purpose-built** HMO as this type of accommodation reduces potential for delivering housing that meets greater needs (e.g. social rented housing). Further explanation on HMO is set out in BGP.3 Specialist Housing. The Plan does not discourage families from renting bedrooms. An owner occupier can have up to 2 lodgers living in the property, for the purposes of the Housing Act 2004, the property would not be considered an HMO. Owner occupier includes the registered owner and any member of their household. Any subletting in a rented family home where there are 3 or more people from 2 or more households would likely result in an HMO being formed. In most	None

	cases, summer school students who are hosted by a family are unlikely to be deemed as occupying the property as their main or only home, they are essentially guests. Further guidance is provided in Appendix 2.2 which states that buildings NOT counted as HMO include a homeowner together with up to two lodgers.

POLICY	H8				
All respondents **raising objections** on this policy/chapter	15.1	47.9	93.3	105.2	138.12
	160.1				

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The city centre is not defined by reference to a plan. This amounts to a blanket presumption in favour of student accommodation without protection on suitability of uses for residents within the city centre streets.	The city and district centres have been identified as one of the areas where student accommodation is most suitable. These are generally busier areas with a higher level of amenities within walking distance, and which are frequently served by public transport. Delivering student accommodation in only the most suitable locations can help to ensure that quieter residential streets are not subject to unacceptable changes in character or increased activity.	None

There is a contradictory stance on the benefits of purpose-built student accommodation (PBSA). On one hand, the Policy Context acknowledges that PBSA can provide "low-cost housing that takes the pressure off the private rented sector", yet also argues that PBSA could "lead to a dominance of student accommodation" that would "undermine the desire to deliver mixed and balanced communities" because there would be a high proportion of transient occupants. This, coupled with the restrictions in Policy H9 will result in the knowledge economy facing a growth ceiling not shared by other employment sectors. In combination, policies H7 (HMO cap at 20% within 100m), H8 (strong locational limits), H9 (academic thresholds) and H3 (PBSA contributions) may be internally inconsistent with the strategic intent stated earlier in the chapter – to use PBSA positively to relieve pressure on the general housing stock where more can be released to the general community due to the higher density of PBSA.	The policy seeks to strike a balance. The Policy Context section does acknowledge that student accommodation should continue to be provided to meet the needs of both universities. However, whilst provision of PBSA can free up market housing, it can also compete for sites with market housing that delivers on-site affordable housing. The policy approach is about managing the impacts of student accommodation by ensuring it is in suitable locations. For the reasons given above, the strategic intent is not to use PBSA to relieve pressure on the general housing stock. The Local Plan approach is to limit the over-concentration of HMOs (Policy H7), only allow student accommodation in the most suitable locations (Policy H8) and encourage universities to provide accommodation (in these locations) through the thresholds policy (Policy H9).	None
Additional wording should be included to address the impact of additional student accommodation on the overall mix and balance of small communities such as New Marston (where there are three site allocations that might involve student housing).	The policy seeks to ensure that new student accommodation is located within the most suitable locations and the criteria within Policy H8 should help to ensure that any potential impact of additional student accommodation to the community is minimised. For example, criterion b of the policy states that for developments which contain 25 or more	None

	student bedrooms, community amenity space will need to be included within the design, which will allow students to gather and socialise.	
Generally supportive of policy, however it is too restrictive to both universities and the delivery of student accommodation by third party providers, given its interaction with Policy H9. The wording could be adjusted to confirm that if the criteria are unable to be met, then there is a requirement to demonstrate that there are no reasonable alternatives available. Greater flexibility should be taken on windfall locations to help both universities meet the requirements of the threshold in Policy H9. Suitable locations should also include along arterial routes and those sites within a 15-minute walking distance of a campus/college. It is considered that the arterial routes in/out of Oxford present a logical and suitable option for locating new student accommodation given the frequency of public transport services along these routes and ease of access to/from both educational and social facilities and the reduced sensitivity of the residential environment. There are other policies in the Plan which address concerns relating to unacceptable changes in character to residential streets and ensuring that new development does not lead to adverse amenity impacts. With the exception of students with accessibility requirements, it would be	The policy sets out what are considered to be suitable locations, of which there are sufficient to meet anticipated needs within the thresholds set in Policy H9. The intention of the policy is to ensure a balance is struck between providing accommodation for students, but also for all other types of housing needed within the city. Allowing student accommodation along the whole length of arterial routes, many of which vary in character significantly along their length and may be very suburban and residential in character, has the potential to significantly change their character which could have a negative impact on the local community.	None

reasonable to expect that PBSA along arterial routes should also be car free.		
The draft National Planning Policy Framework (December 2025) is also relevant. Policy HO9 introduces a new location test for Purpose-Built Student Accommodation, focusing on whether residents can access their educational facilities by “walking, wheeling or public transport.” This indicates that a site served by a sustainable transport corridor can be acceptable in principle, rather than being assessed solely on its immediate adjacency to the institution. We would encourage Oxford City Council to adopt a similar approach.	The final framework has not been published to date. Furthermore, whilst provision of student accommodation can free up market housing, it can also compete for sites with market housing that delivers on-site affordable housing. The policy therefore aims to strike a balance so that all types of housing can be delivered within the city.	None
The policy is dependent on the identity of the applicant, which favours existing institutions and is an attempt to limit competition. There are not two but three universities in Oxford as University of West London owns the Ruskin Campus. Boarding/language schools are not included, neither are any institutions that don’t have a campus.	The policy is not dependent on the identity of the applicant. It refers to student accommodation throughout, including in the policy heading, and at no point makes any reference to a particular university.	None

Policy H9

POLICY	H9
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	H9			
All respondents **raising objections** on this policy/chapter	47.1	160.2	102.4	138.13

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Potential contradiction between policies H8 and H9 and the stated aim of taking pressure off the private rented sector. Policy H8 constrains new student accommodation to a narrow set of locations or on allocated sites. Policy H9 then restricts new academic development unless the universities are within thresholds for students living outside university accommodation, effectively using academic floorspace policy as a lever to control student numbers.	The intention of the policy is to encourage educational institutions to ensure there is sufficient accommodation for their students, and therefore to limit the numbers of students living in general market housing in the city. For institutions other than Oxford Brookes or the University of Oxford, and for those institutions if the thresholds are exceeded, the policy requires that there is a plan in place for managing the accommodation needs of additional students. It does not limit the number of students and it does not prevent academic facilities coming forward, it simply ensures that there is management of any potential growth of students needing to rely on	None

	the general housing market. Background Paper 003 explains further how this longstanding policy approach is intended to attempt to manage and minimise the pressures of students on the housing market and balance the needs of the student population as well as residents.	
Support policy overall and agree with the need to balance enhancements with the provision for student accommodation. However, whilst individual colleges are a constituent of the University of Oxford, they are a separate legal entity. On this basis, it would not be reasonable for the College to have facility restrictions placed upon them whilst they cannot fully control other institutions. To address this, additional wording such as; "Unless demonstrated that facilities associated with constituent colleges will have no impact on existing accommodation requirements for the relevant college" should be added to the policy.	This approach has applied to the University as a whole for decades, and the University is able to supply necessary monitoring each year across the colleges. The needs as a whole, and the expected growth in student numbers of the university, have been considered when setting the policy.	None
Cannot understand why the threshold figure for the number of full-time taught course students living in Oxford requiring accommodation outside University of Oxford-owned or managed accommodation has increased from 2,500 to 3,100, when the Council's Annual Monitoring Report (AMR) 2025 indicates that only 552 students were living outside of university-provided accommodation in Oxford.	The threshold levels for each institution have been reconsidered and have been based on the latest forecasting needs for each university, whilst ensuring they are still effective. They are set at a level that allows for the anticipated growth in students, alongside the understanding of supply and pipeline supply of student accommodation. The Council's AMR is a snapshot in time and reports on the effectiveness of policies using the latest and	None

	historic data, but it does not look ahead nor forecast growth.	
Fully approve of the intent, but unjustified as it depends on the identity of the applicant and excludes University of West London at Ruskin, and boarding and other institutions such as language colleges. Unclear if this applies to hospital students, postgraduates and trainees.	The policy is not dependent on the identity of the applicant, but applies to any higher education institution (that does not include all education facilities). The policy requires that, where there are proposals for new, redeveloped or refurbished academic, research or administrative facilities for higher education institutions, these will be acceptable either where there is a) the proposals would not facilitate an increase in students, or b) there is a plan in place for managing the accommodation needs of the additional students. In the case of Oxford Brookes and the University of Oxford, criterion b is clear that the application of the thresholds then set out in the policy will be used as a measure and to demonstrate whether this requirement is met. For other institutions, this will need to be demonstrated by the institution, rather than by the use of thresholds. Oxford Student Needs Assessment (Iceni, 2025) found no significant need for additional student accommodation for students at institutions other than the universities over the plan period, therefore thresholds can't be set and there may well be capacity within existing provision for any increases - but that will be for individual institutions to demonstrate. Further explanation can be found in Background Paper 003. Appendix 2.3 of the Plan contains more	None

	detail on how compliance with the thresholds will be calculated and which groups of students it applies to.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
This is overall sound, however, the following changes are suggested: *Care shall be taken so that the concentration on Oxford's globally important role does not inadvertently damage the wider aspects of life within the crowded city, such as the loss of entertainment venues and retail facilities, particularly such shops – specialising in supplying white-goods, electronic goods, furniture, building and DIY materials, car-and-bike accessories - as are currently only to be found within the city on the Botley Road.*	The Plan should be read as a whole and includes policies protecting cultural and community facilities, e.g., entertainment venues. The Use Classes Order enables flexibility to change between uses within Use Class E (which contains both retail and office/R&D uses). We do not consider that the suggested text is required.	None.

Balance is required, recognising the needs of the community as a whole, and not requiring journeys to be made outside the city to supply basic needs.		

Policy E1

POLICY	**E1**

COMMENT SUMMARY	**OFFICER RESPONSE**
South Oxfordshire District Council has made a representation relating to Policy E1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Vale of White Horse District Council has made a representation relating to Policy E1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Principles behind policy are supported, especially the focus on making efficient use of employment land and protecting key employment sites. The protection and intensification of existing employment sites aligns with the NPPF and will make the best use of existing developed/ brownfield sites. The flexible approach to potentially allow the development of housing on Key Employment Sites and non-designated employment sites is also considered reasonable and appropriate given the pressures on the city to provide for both economic and residential development.	Support welcomed

West Oxfordshire District Council has made a representation relating to Policy E1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Continued support for aspects of emerging Policy E1, which considers new employment generating uses within the city centre as an acceptable location for delivering new, modernised and intensified employment floorspace.	Support welcomed
Support simplification of previous categorisation of employment sites to include only Key Employment Sites and all other employment sites. Support the identification of Oxford North within the list of Key Employment Sites.	Support welcomed
Support approach to meet Oxford's employment needs No plans at this time to deliver housing on-site. Recognise housing is a key locational consideration for companies. Also recognise and support scope for allowing some housing on employment sites provided it supports their economic function as part of Policy E1.	Support welcomed
Supports flexibility of Policy E1, which protects the most important 'key' employment sites, whilst also allowing for their intensification including complementary housing to create mixed use sites. Given the scale of the city's housing requirement, it is right that all options should be considered, including employment sites.	Support welcomed

POLICY	**E1**				
All respondents **raising objections** on this policy/chapter	40.2	47.11	57.3	59.6	69.9
	81.2	82.1	89.7	92.2	101.4
	114.1	129.5	134.14	138.15	159.8

SUMMARY OF ISSUES RAISED	**OFFICER RESPONSE**	**PROPOSED ACTION**

Suggest amending the initial paragraph of this policy as follows: *'All new development ~~on employment sites~~ for employment purposes …'* The effect of this change would be to make the paragraph in question applicable to employment development more broadly rather than only being applicable to allocated/existing employment sites. This clarification and amendment would ensure the policy is effective.	This phrase of Policy E1 is very carefully and deliberately worded to refer to "employment sites" rather than for "*employment purposes*". Both Key Employment Sites and existing employment sites not designated as Key Employment sites are defined in the glossary. These sites together make up what is meant by "employment sites" which are suitable locations for "employment-generating uses", as defined in the glossary (i.e., Office/R&D/Industrial/ Storage and Distribution uses). However, the city's Key Employment Sites cover a wider range of sectors providing jobs in the city than the traditional employment sectors for land-use planning purposes, which, as set out above, are defined in the plan as "employment-generating uses". Oxford's Key Employment sites include hospitals and educational institutional sites as well as traditional sites for employment generating uses. Health and education jobs in Oxford account for around half of all jobs in the city. As such, this part of the policy, ensures that development proposals across all the city's employment sites, make the best and most efficient use of land and premises, positively promote sustainable development and do not cause unacceptable environmental impacts.	None.
Identified floorspace need not in the policy. Neither is the strong pipeline of R&D reflected in policy wording. These are only identified in the supporting text.	The Employment Land Needs Assessment (Rapleys, January 2026) sets out the employment land supply position. This sets out that Oxford's pipeline supply of R&D uses exceeds the identified need for this	None.

The policy is not positively prepared. It does not provide a clear strategy for meeting employment needs in the plan period. The Council should focus on meeting all identified employment land needs within Oxford's boundary, as it is essential to sustaining the city's economic vitality and supporting its key sectors, particularly R&D, life sciences, and advanced manufacturing. We recognise the acute need for housing in Oxford. However, this should not come at the expense of employment land. By actively investigating ways to meet employment land needs within the city, including the identification of new, appropriately located sites, it ensures that Oxford can continue to support high-value job creation, attract investment, and retain its competitive edge. A higher level of protection should be afforded to existing employment sites to prevent change of use unless there is robust evidence provided to demonstrate that it is poorly performing in employment use. Wording should also be included which allows for the redevelopment of employment sites for suitable employment uses.	employment use class. The modest identified office, industrial and storage/distribution needs can be comfortably met within the existing employment land portfolio. There is no need to set out the employment land supply position in policy as this is contextual and continuously evolving. The employment strategy results in no unmet employment need for the plan period. There is currently sufficient space and opportunity on Oxford's existing employment sites to meet the identified needs for the city. Accordingly, no new land for employment-generating uses has been allocated. Conversely, Oxford is unable to meet its housing standard method housing need (NPPF, December 2024). Accordingly, the plan's employment strategy supports housing delivery while at the same time ensuring that Oxford can attract investment and retain its competitive edge. All employment sites were assessed (see background paper 4A – Key Employment Site methodology. Those sites that performed well were designated as "Key Employment Sites". The other "existing employment sites not designated as Key Employment Sites" were poorly performing. Given the identified employment land needs for Oxford can be met through development/ redevelopment of the city's Key Employment Sites, there is no need to	

	introduce a policy requirement to prevent their change of use. Wording already exists in the policy in relation to the redevelopment of employment sites for suitable employment uses.	
The Plan's employment strategy promotes high value economic growth in R&D and knowledge sectors, but by setting an industrial floorspace need of "0 sqm" and only 46,086 sqm for storage and distribution, it offers very limited support for sectors such as manufacturing, small scale industrial services, warehousing and logistics, all of which provide a broader spread of job types and skill levels. It is not apparent from the Plan how the evidence base has: - assessed long term demand for urban industrial and logistics land within Oxford; - evaluated the implications of allowing the "complete loss" of some existing employment sites to housing, as explicitly envisaged by the strategy; and - considered the need to retain a diverse stock of employment sites, including those suitable for manufacturing, servicing, small workshops and last mile logistics.	The Plan's employment strategy is underpinned by evidence. The Oxford Employment Land Needs Assessment (Rapleys, January 2026) (hereafter "ELNA") provides a robust, PPG compliant assessment of Oxford's employment land floorspace needs for the plan period. A number of existing site allocations specifically include B2 (Industrial) and B8 (Storage/ Distribution) uses as named potential primary uses. The employment forecasts in the ELNA are for the twenty-year plan period. The "complete loss" of some of the city's employment sites to other uses, including housing only applies to "existing employment sites not designated as Key Employment Sites". These sites are generally smaller, poorly performing, employment sites that are not well-located. Given the plan's focus is to deliver new homes (for which Oxford has an identified unmet need (Standard Method, NPPF, December 2024)), it is important that the employment strategy supports the delivery of new homes in the city.	None

Without this clarity, it is difficult to conclude that the quantum and distribution of floorspace by sector are fully justified in line with NPPF para 31. If urban industrial and "last mile logistics" land is displaced out of Oxford: - service and delivery trips may need to originate from farther afield, increasing travel distances, vehicle kilometres and associated emissions; - construction, maintenance and repair industries may face longer journeys to jobs in the city; - local SMEs may struggle to find appropriately priced and located premises, ultimately leading to a loss of services and facilities in the city, and requiring residents to make longer journeys to reach the facilities and services they need. This could undermine both economic resilience and transport sustainability, given the important role of well located industrial and logistics land in supporting shorter supply chains and more efficient urban servicing, and is not fully addressed within the Plan's employment or transport strategy. By identifying 345,004 sqm of additional R&D floorspace need, 46,086 sqm of	The Key Employment Sites (i.e., those protected and retained in an employment-generating use), include a range of sites (not just R&D). A range of Key Employment Sites in the south of the city have been designated, in the vicinity of MINI Plant Oxford. These represent a diverse stock of employment sites and include small workshops, light industrial units, manufacturing, and small-scale storage and distribution uses. All of the issues discussed by this respondent are addressed in the plan's supporting evidence base (ELNA, Background papers, etc.). There is no need for the Plan to simply repeat the PPG compliant assessment of employment floorspace need which is eloquently articulated in the ELNA. As set out above, the plan protects a wide range of Key Employment Sites across a broad range of sectors to support economic diversity in the city.	

storage/distribution need and 0 sqm of industrial floorspace need, and by tightly constraining new B8 uses and allowing the complete loss of some existing employment sites, the Plan risks: - reducing the diversity of employment land within the city; - limiting the availability of sites suitable for industrial, servicing and logistics activities; and - narrowing the range of employment opportunities available locally, particularly for those not employed in high skill knowledge sectors. To better accord with the NPPF's requirements for evidence based, balanced and resilient economic planning, it is suggested that the Plan should: - more clearly demonstrate, with reference in the Plan text to the evidence base, how industrial and logistics needs have been assessed and why a 0 sqm industrial need is appropriate; - identify how sufficient land and policy support will be maintained for urban industrial, servicing and last mile logistics uses, including smaller sites and SMEs; and		

- explain how the substantial R&D pipeline and proposed additional R&D floorspace have been balanced against the needs of other sectors and the objective of providing a wide range of accessible employment opportunities for local residents.		
Fundamental concerns about significant imbalance between jobs (high) and economically active residents (much lower). This imbalanced has led to many problems, including high levels of commuting, traffic congestion, a shortage of housing and very high housing costs which exacerbate inequalities. The local plan strategy of *meeting all identified employment needs arising within the city while exporting its unmet housing needs to greenfield sites in neighbouring districts* is not sustainable and is not an appropriate strategy. The plan claims to have a flexible approach to supporting housing delivery on employment sites however it appears very reluctant and is highly constrained. It is likely that the current jobs: housing imbalance will increase over the plan period, encouraging car use, worsening traffic congestion, road safety and environmental problems. It will store up problems for the future with no effective ways of solving them. The strategy is	National Planning Policy (para. 11a) sets out that for plan-making, the application of the presumption in favour of sustainable development means that plans should promote a sustainable pattern of development that seeks to meet the development needs of their area. This is backed by Para.20 of the Framework which sets out that strategic policies (i.e., Policy E1 – as set out in Appendix 1.2 of the Oxford Local Plan 2045 Proposed Submission Document), should make sufficient provision (i.e., to meet the identified needs for), a range of uses, including employment. Given that one of the tests of soundness is "consistency with national policy", the plan should at the very least attempt to meet the identified needs for all the NPPF Para. 20 uses, within Oxford's tightly drawn administrative boundary. The plan's strategy does not identify new land as site allocations for employment uses but instead focuses new employment-generating uses towards existing employment sites. This enables both investment and the delivery of	None

not consistent with NPPF, para 111 a) as it fails to support an appropriate mix of uses across an area to minimise the number and length of journeys needed for employment, shopping, leisure, education and other activities. Neither is it consistent with NPPF, para 8 on sustainable development, which seeks a range of homes to meet the needs of present and future generations. We consider the local plan is skewed towards encouraging employment and fails to give sufficient priority to providing housing, particularly much needed social housing for rent. It should be modified to give greater priority to providing housing, for example, by i. removing the objective to provide the conditions for Oxford to meet all identified employment needs arising within the city to 2045 - an additional 412,460m2 of employment generating floorspace. This is not necessary or appropriate given the potential for very significant job increases on land in and close to the city. The Oxford Growth Commission's Interim Report, for example, gives an indicative job potential of 25,000 in Oxford Central and West End, 15,000 around the Cowley branch line, 8,000 around Oxford, Kidlington and Parkway Station ii. reducing the number of key employment sites in Appendix 3	active travel and public transport infrastructure improvements to be realised. The additional combination of the County Council's "Core Transport schemes" - a suite of demand management measures and the Local Plan 2045's firm non-residential car parking standards (the starting point of which is to seek no increase in car parking at non-residential sites, and which seek a reduction in car parking where non-residential sites are located in accessible locations), means that the plan's strategy is consistent with paragraph 111a). A detailed analysis of the possible strategies for the Oxford Local Plan 2045 is set out in the Sustainability Appraisal. The Plan's focus is on housing delivery. The Plan proposes new sites for housing, and in the highly accessible locations of the city and district centres, the plan proposes a minimum density of 100dph. Addressing each of the numbered points in turn: i. The plan's employment is primarily focused on brownfield and existing mixed-use site allocations which include both housing and employment-generating uses. We are unable to "remove the objective" to seek to meet the identified employment needs for the city as this would be inconsistent with national policy. ii. The Key Employment Sites in the plan (which include four of the main hospitals in the city)	

iii. making some site-specific allocations for housing on all or part of current employment sites – this could include, for example, land at the ARC site, the Science Park, and in Oxford's West End, Osney Mead and Botley Road areas iv. Amending policy E1 which appears to support the loss of employment floorspace to support housing delivery, but on key employment sites the loss must be fully justified, the employment use maintained and the number of jobs retained (criteria f and g). This is too inflexible and given the jobs:housing imbalance is not appropriate v. similarly, for other (i.e. non key) employment sites, E1f) indicates that the employment use should be maintained. This is inflexible, inappropriate and should be deleted vi. amending policy S1e) which indicates that housing is only a priority away from current employment sies vii. removing employment as an acceptable use at Slade House (NHS) and part of Thornhill Park as there are no business uses on the sites and they do not meet the criteria for new employment development viii. naming residential as an acceptable use on the Ozone Leisure Park (SPS13) and the Unipart site (SPS17) particularly if redeveloped in association with the Northfield strategic housing allocation in SODC's local plan ix. increasing the minimum number of homes to be provided; on some sites it seems very low –	have all been assessed using the methodology outlined in Background Paper 4a. These sites are all important to the city. iii. Where landowners have expressed an immediate interest in delivering housing on their sites, housing numbers have been included in the respective site allocation policies, i.e., Osney Mead and site allocations within Oxford's West End. The Strategic Housing Land Availability Assessment (SHLAA) provides further details. iv. We consider that the approach to protecting existing jobs on the city's Key Employment Sites, and ensuring the employment use is maintained at those sites is appropriate and supports the plan's focus on housing. The permissive approach to residential on Key Employment Sites therefore enables new homes to come forward, without jeopardising, amongst other things, the continued operation of existing businesses. v. Criteria E1f) does not apply to existing employment sites not designated as Key Employment Sites. There is a typo in the policy. The final sentence of the second paragraph under the heading "*Loss of employment floorspace and the use of employment sites to support housing delivery",* should refer to criteria h) to m). This typo has been picked up and a modification has been proposed to refer to the correct policy criteria.	

for example Ruskin Field has a minimum of 28 homes on 3.5 ha and is the only use proposed.	vi. A modification has been proposed to Policy S1e) to clarify that the plan's focus is on housing delivery. See Schedule of Main Modifications for further details. vii. Both these site allocations either contain, or previously contained employment uses, as such it is appropriate that employment uses are retained on each site. viii. See response iii) above. ix. Individual site capacities for each site have been assessed and calculated based on the specific circumstances for each site. The numbers are a minimum, so more can be provided by landowners/ developers, subject to meeting other policy requirements in the plan.	
The policy, as drafted, is ineffective and too restrictive. Criteria f and g of this policy need to be deleted. Respondent has repeatedly called for some development on various sites listed as Key Employment Sites, many of which have sat empty for decades. The worst examples, being the Osney Industrial Estate and the Unipart site but there are many others. For example, there are still empty sites available on the old British Leyland site at ARC Oxford dating from the 1990's and representing now 30 years of being effectively brownfield sites. If there is no real expectation that these sites will be actively developed then protecting them as Employment sites makes no sense. The City	We consider that the approach to protecting existing jobs on the city's Key Employment Sites, and ensuring the employment use is maintained at those sites is appropriate and supports the plan's focus on housing. The permissive approach to residential on Key Employment Sites therefore enables new homes to come forward, without jeopardising, amongst other things, the continued operation of existing businesses. It is worth clarifying that, while there are some vacant buildings at Osney Mead (e.g., Alden Press, it is an active industrial estate which is home to a variety of existing businesses, as well as an EA depot and some academic institutional buildings. Similarly, a number of businesses	None

Council have singularly failed to deal with this issue claiming quite wrongly that Oxford is full, ignoring Osney Mead and the many other vacant sites in Oxford. Policy E1 should state that: "if a site or part thereof has not been used for substantive employment purposes for a period of 10 years or more then it shall not be subject to the Proposals involving housing listed in the Employment strategy and be subject to normal planning requirements for housing development. Car or commercial vehicle storage/ parking would not be regarded as substantive employment. In relation to smaller developments (formerly Category 3 sites) the suggested proposals should not apply." Further owners should pay enhanced business rates if they fail to redevelop vacant sites.	operate out of the Unipart site, including offices used by the NHS and the Unipart Group. The other cited example is ARC Oxford. All vacant plots at ARC Oxford either now benefit from planning permission or have a planning application under consideration. We do not agree with the proposed modification to the policy as any proposals would come from the landowners/developers of a site. Local planning policy is not able to alter business rates.	
Policy E1 appears to support the loss of employment floorspace to support housing delivery, but on key employment sites the loss must be fully justified, the employment use maintained and the number of jobs retained (criteria f and g). This is too inflexible and given the jobs:housing imbalance is not appropriate similarly, for other (i.e. non key) employment sites, E1f) indicates that the employment use should be maintained. This is inflexible, inappropriate and should be deleted.	We consider that the approach to protecting existing jobs on the city's Key Employment Sites and ensuring the employment use is maintained at those sites is appropriate and supports the plan's focus on housing. The permissive approach to residential on Key Employment Sites enables new homes to come forward, without jeopardising the continued operation of existing businesses.	None

This policy excludes housing from many designated employment sites and makes it extremely difficult to include housing in the others. It deliberately creates 'unmet' housing need when there are many empty employment sites which cannot be used for much needed housing. This creates a high job vacancy rate within Oxford and an increase in traffic congestion above its current intolerable level with the increase in commuting into Oxford. Development sites should not be zoned for employment alone. It makes sense to mix housing on employment sites, which is sustainable so people can walk to work. Oxford City Council have been very unfair to local people needing housing within the City and the Districts receiving their alleged 'unmet' housing need that Oxford City has deliberately created, The Oxford Business Park on the site where Morris Motors (now BMW Mini works) used to be, was developed as a business park in approximately 1980s and still has empty plots which have not been developed. These could and should have been used for much needed housing. The site itself is having many business premises demolished and rebuilt. This causes significant and unnecessary carbon emissions	The policy does not exclude housing from designated Key Employment Sites. It allows the loss of *existing employment sites not designated as employment sites* to other uses, while supporting proposals for housing subject to certain criteria being met to ensure that any residential development proposed creates an acceptable living environment for future occupiers. The Plan seeks to meet all identified needs as established through paras 11a, and 20 of the Framework (Dec,2024). The plan's employment strategy enables the city to meet its employment needs at identified Key Employment Sites in the city. At accessible sites in the city and district centres, site allocations include both minimum housing numbers and suitable employment-generating uses (i.e., office/ R&D/etc). Oxford City Council is not able to meet its identified standard method housing need (NPPF, Dec 2024). As such, the City Council continues to work with neighbouring district councils to seek to support and deliver the city's identified housing need to 2045. This is in line with national policy. All vacant plots at the former Cowley Motor Works (ARC Oxford) either now benefit from	None

which contributes to climate change. It is a disgrace and very wasteful.	planning permission or have a planning application under consideration.	
Historic England has made a representation relating to Policy E1, which is summarised and responded to in the Statement of Common Ground. Do not support proposed employment strategy. It is not positive, justified, and will not be effective, due to its failure to identify clear requirements for employment land and how or where needs will be met. The policy, based on a more positive and effective employment land strategy, is required. It should quantify employment land and floorspace requirements, express the spatial priorities where provision can be made and ensure flexibility for the market and growth in current and emerging sectors. The approach for supporting employment growth must be aspirational and flexible and positively support and encourage the	The Oxford Employment Land Needs Assessment (ELNA) produced by Rapleys includes a comprehensive supply-side assessment which looks at extant permissions and also considers the planning pipeline of current applications being considered at October 2025. This supply-side assessment shows that the identified floorspace needs for office; R&D; industrial; and; warehousing uses, can be comfortably accommodated within the city's current employment land portfolio (focusing new employment-generating uses on the city's Key Employment Sites, and on employment sites within the city and district centres).	None

commitment and future investment into Oxfordshire that will be mobilised through the Oxfordshire Growth Commission. The Local Plan, in looking forward to 2045, must create the conditions to support, not constrain economic growth. As stated in relation to housing requirement – collaborative working across boundaries is critical to securing and supporting this process.	The supporting text to Policy E1 already quantifies the employment floorspace need. Given the plan can meet its employment needs primarily through modernisation and intensification of brownfield land, there is no reason to quantify the employment floorspace need as a land requirement. No "new" land is required to meet the city's employment needs. The policy does express the spatial priorities where provision of employment land can be made. All employment site allocations (and mixed-use site allocations containing employment uses) have been drafted in consultation with landowners/site promoters/developers to ensure a suitable range of uses for each site, has created (and is sustaining) flexibility for the market and growth in both current and emerging sectors.	
Policy E1 is confusing and contradictory. It risks undermining the efficient use of land that the Local Plan otherwise strongly promotes. Re: existing employment sites not designated as Key Employment Sites, the requirement in Policy E1 in relation to redevelopment and intensification is appropriate and aligns with the plan's wider objectives regarding optimisation of land and supporting economic growth. However, no justification is provided for requiring a sequential assessment in circumstances where a proposal is simply seeking to intensify an existing employment site, nor are any exemptions provided for sites	The Plan's employment strategy articulates paragraph 86a) of the Framework (December 2024) and sets a clear economic vision and strategy which positively and proactively encourages economic growth by supporting new employment-generating uses in the city and district centres and across the city's network of Key Employment sites. The city's Key Employment Sites were established using the methodology set out in Background Paper 4a – Key Employment Site Methodology. Accordingly, existing employment sites that are neither located in the city or district centres,	To clarify the position for Policy SPS13 and the following linked site allocation policies (Policy SPS7 and SPS11), we propose the following modifications: **Policy SPS13: Ozone Leisure Park and Minchery Farmhouse** Amend the first paragraph of the Policy SPS13 as follows: *Planning permission will be granted for mixed-use development within existing lawful Use Class E and with replacement community*

that are allocated for employment-related development within the Local Plan. This creates a clear internal conflict. On the one hand, the policy requires intensification of existing employment sites. On the other, it introduces a sequential test that may prevent or delay that very intensification, even in locations expressly allocated for employment use in the Plan. For example, the intensification of employment floorspace at the Ozone Leisure Park, despite being an allocated site, would still trigger the requirement for a sequential test, introducing an unnecessary procedural hurdle that is inconsistent with the Plan's objective of maximising efficient land use. It is therefore strongly encouraged that the wording of this policy be reconsidered to provide greater clarity and a clearer policy direction that is more conducive to the efficient use and optimisation of existing employment sites. Policy E1 states that proposals for employment generating uses outside of designated Key Employment Sites, City and District Centres and existing employment sites not designated as Key Employment Sites will be refused. However, Policies SPS7 and SPS11 both allow employment-related uses on site. This presents an internal inconsistency within the Reg 19 which could prevent the effective implementation of Policies SPS7 and SPS11. This internal inconsistency risks rendering the	nor are Key Employment Sites (some of which benefit from a site allocation), should undertake a sequential test for the introduction of additional employment-generating uses. Policy E1 sets out that the sequential test would apply to new employment-generating uses on sites in lawful use class for the proposed employment use class). Policy E1 also allows the loss of any employment site not designated as a Key Employment site, to other uses. The site in question is currently, as the name suggests, a Leisure Park, which contains a Bowling Alley, Cinema Complex (Sui Gen), and other Use Class E leisure-related uses. Although this site does benefit from a site allocation policy (Policy SPS13 Ozone Leisure Park and Minchery Farm), the site itself is neither a Key Employment site nor located within the city or district centres. The inclusion of the list of "acceptable uses" within the site allocation policy simply reflects the permitted development rights associated with uses within Use Class E. Where site allocations that are not located in the city or district centres, nor are listed as Key Employment Sites highlight that a particular employment-generating use is an acceptable use this needs to be read in conjuction with Policy E1.	*leisure/sui generis uses. Acceptable uses on the site include:* • *Research and development (in accordance with **Policy E1**)* • *Other Use Class E employment uses (in accordance with **Policy E1**)* • *Commercial leisure* • *Community and cultural facilities* • *Replacement hotel* **Policy SPS7: Kassam Stadium** Amend the first paragraph of Policy SPS7 as follows: *Planning permission will be granted for residential-led development and public open space on the Kassam Stadium site. The existing stadium provides a number of functions currently, and replacement of the local, community role of these facilities will be expected. There is also a precedent for employment-related uses, so these will be acceptable as a secondary use on the site (in accordance with **Policy E1**).* **Policy SPS11: Overflow Car Park at Kassam Stadium** Amend the second sentence of the first paragraph of the policy as follows: *Planning permission will be granted for residential-led development and public open*

allocation policies ineffective. Policy E1 should therefore explicitly recognise that employment uses are acceptable where supported by site specific allocation policies.	Two other sites are linked to site allocation policy SPS13. These are site allocation policies SPS7 and SPS11. The plan takes a flexible approach to the delivery of uses across the sites providing the minimum number of homes is delivered. Ac It is appropriate that Policy E1 ensures that sites regenerated for employment-generating uses, that do not align with the plan's strategy, should ensure that their intensification does not affect the vitality and viability of the city and/or district centres by drawing people away from them, towards less accessible locations. As such it is appropriate that a sequential test be carried out for the intensification of existing employment sites not designated as Key Employment Sites (and sites in lawful use class for the proposed employment use class). We consider that Policy E1 is clear. Policy E1 supports the modernisation and intensification of employment generating uses at Key Employment Sites, and at employment sites located within the city and district centres. As set out above, there are a variety of reasons for this, including that the city's Key Employment Sites and the city and district centres represent the main opportunity within Oxford for meeting Oxford's identified employment needs, which, as set out in the Employment Land Needs	*space on the Overflow Car Park at Kassam Stadium site. The minimum number of new homes to be delivered is 100. Other complementary uses will be considered on their merits. This site is linked to SPS7 and SPS13, and a flexible approach will be taken to how the required uses are spread across the sites (in accordance with **Policy E1** where applicable uses are proposed), but this must be led by a masterplan that shows how minimum housing numbers will be achieved overall.*

	Assessment, can be accommodated at these sites. This is the plan's clear economic vision and strategy, are clear and support the plan's overarching strategy to focus on housing delivery. However, to ensure that the approach is	
The policy is unjustified as there is no obligation for extra employment to provide extra housing, only permission to do so. The relentless expansion of the OUHT, the Universities and associated research centres is the primary driver of housing need in the city, but E1 permits expansion with no contribution to housing. If a business wants to downsize and allocate space for housing, this is specifically prohibited, which is unjustified. Work from Home leads to reduced need for space with different workgroups having office days on different days of the week. This is an economic decision taken by the employer, OCC has no role in this.	Policy E1 establishes a permissive approach to housing delivery across the city's existing employment site network. This both enables an element of housing delivery at the city's Key Employment Sites, while supporting the complete loss of the city's less well located, poorly performing, and often smaller employment sites to housing. The policy also includes specific criteria to ensure good quality residential development comes forward.	None
A mechanism should be provided in the Local Plan to review the categorisation of employment sites on a regular basis and update the list within Appendix 3.1. Policy E1 is unnecessarily restricted in scope regarding the types of employment generating which should be allowed within Key Employment Sites. This restriction comes from the current definition of 'Employment Generating Uses' in the Glossary. For example.	We consider that the most appropriate time to review the employment site categorisation is through the preparation of the Local Plan itself. The "Key Employment Sites" are listed within the Plan (Appendix 3.1) and mapped on the Policies Map. We do not consider that Policy E1 is unnecessarily restricted in scope. Policy E1 sets out the strategy for meeting the city's identified needs for, what are described as, in planning	None

the Glossary definition does not include the following uses which can generate significant numbers of new jobs: retail, financial / professional services, indoor sport / recreation, medical / health services, creches / nurseries (Use Classes E(a), E(c), E(d), E(e) and E(f)); and hotels (Use Class C). Amend Policy E1 as follows: Add wording which includes a mechanism to change the category of employment sites outside of a review of the Local Plan. This review should be undertaken regularly and the list of Key Employment Sites in Appendix 3.1 updated accordingly. Amend the Glossary to include additional employment generating uses that are suitable in a Key Employment Sites: "Employment generating uses are referred to in planning terms as employment floorspace or employment land. Employment generating uses include the sectors that make up the following Use Classes: - Use Class EG(i): Office - Use Class EG(ii): Research and Development (R&D) - Use Class EG(iii): Light Industrial - Use Class B2: General Industrial - Use Class B8: Warehousing, Storage and Distribution - <u>**Use Classes E(a): Retail</u>	terms, "employment" land uses (i.e., Use Classes Eg(i-iii), B2 and B8). The term "employment-generating uses" has been carefully defined in the glossary of the plan to reflect this. The plan includes different spatial approaches for, Hotel and Short Stay accommodation, as well as for Retail and Leisure uses, the identified needs of which have all been assessed and strategies to support the associated delivery of these needs have been addressed in separate policies (e.g., Policy E5 – Hotel and short stay accommodation). Policy E1 enables the loss of floorspace for employment-generating uses at Key Employment Sites providing specific criteria are met.	

- Use Classes E(c): Financial / professional services - Use Classes E(d): Indoor sport / recreation - Use Classes E(e): Medical / health services - Use Classes E(f): Creches / nurseries - Use Class C: Hotels**"

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Cherwell District Council has made a representation relating to Policy E2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

The draft policy wording within Regulation 18 Consultation Draft restricted new or expanded warehousing and storage uses to circumstances where they were 'essential to support the operational requirements of that Key Employment Site.' The Regulation 19 Submission Draft now seeks to allow Class B8 (Storage or Distribution) uses within existing Key Employment Sites, subject to a set criteria. Despite the amendment, Policy E2 remains restrictive and does not reflect potential for a diverse range of significant employment uses. It is, however, noted that whilst Policy E2 continues to limit Class B8 uses at Key Employment Sites, the 'Unipart Site' (which is dealt with under Policy SPS17) doesn't limit Class B8 uses. Given the nature and scale of available land at the 'Unipart Site' this lack of restriction is welcomed.	Policy E2 is aligned with the overarching employment strategy (Policy E1) which does not seek to identify new land for site allocations for employment-generating uses. As B8 uses have particular requirements, Policy E2 introduces a set of criteria which include requirements to ensure B8 uses are appropriately located in the city. Not all Key Employment Sites benefit from site allocation policies and as such, where B8 uses are required by existing businesses to ensure their continued operation, they would be supported. This is because Key Employment Sites include a wide variety of sites suitable for smaller scale B8 uses. The Employment Land Needs Assessment (ELNA) (Rapleys, January 2026) highlights that the modest warehousing requirements for the plan period can be accommodated within the city's existing employment land portfolio. Accordingly, on site allocations which specifically reference B8 uses, these uses can be brought forward "as part of a wider agreed masterplan". As the city's modest B8 needs can be delivered in this way, we consider Policy E2 to be appropriate.	None.

COMMENT SUMMARY	OFFICER RESPONSE
West Oxfordshire District Council has made a representation relating to Policy E2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
ONV supports approach to CEPP's and has established such Plans at Oxford North with great success. ONV supports the need for a range of sizes of workspace in Oxford to meet the demands of smaller businesses. ONV is delivering this at Oxford North to meet a range of needs, including incubator space and smaller co-working areas.	Support noted.
The increase in the size of the floorspace limits from 1,000sqm to 5,000sqm is welcomed as it will not unduly impact upon more modest schemes.	Support noted.

POLICY	E3				
All respondents **raising objections** on this policy/chapter	40.3	51.2	59.7	77.1	117.3
	157.8 and 157.18				

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Policy is not justified. It applies a blanket requirement for CEPPs without sufficient evidence that such plans are necessary for all qualifying developments. In practice, such obligations are typically secured through planning obligations on a site-by-site basis where they meet the statutory tests set out in Regulation 122 of the Community Infrastructure Levy Regulations 2010. A more flexible approach that allows the requirement to be considered on a case-by-case basis through Section 106 agreements would ensure that obligations remain proportionate and directly related to the development.	The policy as worded is considered to be suitably flexible. Where CEPPs are expected to be provided, the policy introduces an expectation to demonstrate consideration of all the measures listed. The absence of policy targets enables flexibility to cater for a wide range of development types. The policy supports a flexible approach. The criteria should be considered as an "a la carte" menu of choices, providing a flexible approach to policy compliance through demonstrating consideration of each of the critieria.	None.
Principle supported however policy is vague and difficult to understand what the expectations are. There are no defined targets for the amount of jobs or apprenticeships that would be expected to be delivered. The policy also asks for all criteria to be considered however some will not be able to be covered as it will depend on the context of a planning application.	The policy as worded is considered to be suitably flexible. Where CEPPs are expected to be provided, the policy introduces an expectation to demonstrate consideration of all the measures listed. The absence of policy targets enables flexibility to cater for a wide range of development types. It may well be that not all criteria are applicable for every planning application. It is for the applicant to demonstrate that they	None.

Further, paying all employees the Oxford Living Wage is right as an aspiration but should not be a policy expectation as part of a planning application. Proposed modifications: Amend the first sentence of the first paragraph of the policy as follows: *Planning ~~permission will only be granted for proposals of~~ applications should be supported by CEPP for 50 or more dwellings or 5,000 sqm of GIA…* Amend the final sentence of the first paragraph of the policy as follows: CEPPs should consider the following criteria where applicable: ~~will be expected to demonstrate consideration of all the following measures~~: Delete criteria f) and g) entirely and encourage the Oxford Living Wage rather than making it a requirement.	have considered all the measures outlined below. In relation to criteria f) and g), again the policy expectation is that the applicant demonstrates consideration of paying all employees (f), and using contractors (g), who commit to paying the Oxford Living Wage. The policy supports a flexible approach. The criteria should be considered as an "a la carte" menu of choices, providing a flexible approach to policy compliance through demonstrating consideration of each of the critieria. We do not accept these changes.	
Oxford City Council's Corporate Strategy for 2024-28 commits to "Increase the number of people paid the Oxford Living Wage to improve the minimum standard of living". The Local Plan should therefore require developers to play an important role in ensuring that the Oxford Living Wage is not only paid to workers employed during the construction phase, but	It is the responsibility of business owners to choose to become an Oxford Living Wage Employer. Policy E3 goes as far as it can in relation to ensuring control of elements of a scheme that relate to the granting of a planning permission.	None.

also those in the end user phase (i.e. those who go on to work on the site in available units once they have been constructed). Add new bullet point: "Implementation of a Living Wage Zone, securing payment of the Oxford Living Wage to all directly and indirectly paid workers who work on the site following construction"	As such, we cannot accept the proposed modification.	
It should explicitly state that construction jobs means not just the jobs required for the construction itself but also all the associated consultancy that is required to get a building on site and monitor it for health and safety and build quality. And that the best way to provide apprenticeships and training, as well as the best way to sustain the local economy is to engage local businesses, both construction firms and consultancy firms, who should be there long after the individual construction job has finished. I propose the policy is amended to specifically state: a) Securing construction jobs, including the associated consultancy roles, for local residents and businesses; b) Providing construction and consultancy apprenticeships and/or training opportunities for local residents in local businesses;	Policy E3 goes as far as it can in relation to ensuring control of elements of a scheme that relate to the granting of a planning permission. As such, we cannot accept the proposed modification.	None.

The threshold for non-residential floorspace has increased which is supported, however the policy should allow more flexibility and not make Community Employment and Procurement Plans a policy requirement for all major development proposals, as previously suggested. This will provide flexibility and ensure the policy is practicable for developers and viability. Therefore, it is recommended that the policy is amended to encourage, not mandatory require such Plans. This will provide flexibility and ensure the policy is practicable for developers and viability.	Suggest that the amendment is not required given the flexible nature of the policy which introduces an expectation for CEEPs to demonstrate consideration of the policy measures.	None.
Requiring affordable workspace to be delivered on Key Employment Sites could be counterproductive in that it will impact the overall scheme viability of workspace delivery, exacerbate supply demand imbalance and hence push up rents. Furthermore, the approach in the LP45 to seek affordable workspace on the Key Employment Sites (the most productive and important to the local, regional and national economy) runs counter to the ability to seek more affordable space elsewhere. In other areas, principally London Boroughs, new affordable workspace has been delivered most effectively via low-cost reuse and/or refurbishment of existing buildings to produce workspace at lower rents.	Policy E3 does not prevent the delivery of affordable workspaces on non-key employment sites. These comments also seem to relate to Policy E4: The Employment and Inclusive Economy Background Paper published at the Reg. 19 consultation stage, and the Local Plan Viability Study consider the implications of delivering a range of amounts of affordable workspaces at rent reductions which range from 75% reduction down to peppercorn rent. The Local Plan Viability Study showed that the typologies delivering 5000sqm or more employment-generating uses were viable typologies.	None.

This is especially relevant to non-Key Employment sites.	The policy itself requires an Affordable Workspace Strategy to be produced. It is for the applicant to produce an Affordable Workspace Strategy to support qualifying development proposals. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable.

	130.5	134.4	137.3	138.16	157.18

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
It is essential that affordable workspace requirements are clearly defined, viable, and do not unduly impact the deliverability of a scheme. The policy should set out that affordable workspace requirements will be subject to viability considerations and applied flexibly where a development is already delivering other significant planning obligations. Without such flexibility, the policy risks undermining the deliverability of employment-led development and therefore fails the test of effectiveness.	The policy itself requires an Affordable Workspace Strategy to be produced. The Employment and Inclusive Economy Background Paper published at the Reg. 19 consultation stage, and the Local Plan Viability Study have considered the viability implications of bringing forward different amounts of affordable workspace at a range of rent reductions. It is for the applicant to produce an Affordable Workspace Strategy to support qualifying development proposals. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces	None.

	Strategy), to ensure that schemes remain deliverable.	
Plan includes no reference or definition to what these 'alternative' rent models may comprise or what is considered a 'discounted' rent. Not clear what type and level of detail will be considered acceptable in respect to the size, marketing, servicing and management for affordable workspace. In addition, it is unclear which companies would qualify for affordable workspace, particularly at SME level, and what percentage of floorspace would be expected to be delivered as affordable. Clarification on these matters is critical to understand how the policy will operate in practice and the cost of the policy on future developments. Suggested change: Amend the affordable workspace definition contained in the glossary to provide greater clarity on what constitutes start-up and early-stage businesses or introduce a new definition for SMEs to enable greater clarity on who would qualify for affordable workspace.	The Employment and Inclusive Economy Background Paper published at the Reg. 19 consultation stage, and the Local Plan Viability Study consider the implications of delivering a range of amounts of affordable workspaces at rent reductions which range from 75% reduction down to peppercorn rent. The Local Plan Viability Study showed that the typologies delivering 5000sqm or more employment-generating uses were viable typologies. The policy itself requires an Affordable Workspace Strategy to be produced. It is for the applicant to produce an Affordable Workspace Strategy to support qualifying development proposals. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable. We consider that the glossary definition is sufficient.	None.
The Local Plan provides no justification for the selected list of sites in Policy E4, nor does it	The Employment and Inclusive Economy Background Paper published at the Reg. 19	None.

offer a clear definition of what constitutes "affordable workspace". This lack of clarity makes it challenging for developers to understand the potential implications of this policy at the outset of site acquisition or development planning. The Viability Appraisal models several affordable workspace scenarios. It indicates that providing 10% of floorspace at a 25% discount to market rent (in perpetuity) could reduce residual land values by around 4–6%, while a 50% discount could reduce values by 8–11%. The Appraisal further notes that "the impact may be more significant when applied to developments that are only marginally viable and a flexible approach may be required in these cases". In the context of our broader concerns about the cumulative impact of the Local Plan's requirements, as outlined under Policy S4, Pioneer is concerned that the current drafting of Policy E4 introduces substantial uncertainty. Without a clearer indication of the level of discount sought or the proportion of floorspace likely to be required, it is difficult for developers to assess viability accurately. Greater certainty is required regarding the scope, scale, and financial implications of the policy so that development proposals can be planned on an informed basis. Without clearer	consultation stage, and the Local Plan Viability Study consider the implications of delivering a range of amounts of affordable workspaces at rent reductions which range from 75% reduction down to peppercorn rent. The Local Plan Viability Study showed that the typologies delivering 5000sqm or more employment-generating uses were viable typologies. The policy itself requires an Affordable Workspace Strategy to be produced. It is for the applicant to produce an Affordable Workspace Strategy to support qualifying development proposals. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable.	

guidance, there is a risk that Policy E4 could undermine deliverability, particularly for schemes with already constrained viability or those facing multiple cumulative policy burdens, including recently increased CIL charges for R&D uses.		
Since the Regulation 18 Consultation Draft the wording of Policy E4 remains mostly unchanged. However, the inclusion of the wording 'Affordable workspace that is brought forward in accordance with an agreed site-wide masterplan is encouraged', is supported as it promotes the delivery of affordable workspace where appropriate. The policy lacks clarity on how the requirements would apply to manufacturing / research units, and logistics units for sites like Unipart. This needs to be addressed still as it is difficult for manufacturing / logistic units to integrate affordable workspaces (unlike other uses such as office space). Policy E4 needs to provide more clarity on specific uses providing affordable workspaces.	The policy is clear that it applies to "employment-generating uses". These are defined in the glossary. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable.	None.
The policy does not provide a definition of affordable workspace nor a method for establishing the quantum of affordable workspace to be provided. This does not respond the finding in the Reg 19 Viability Assessment that a flexible approach to	The definition of affordable workspaces is set out in the glossary. The Employment and Inclusive Economy Background Paper published at the Reg. 19 consultation stage, and the Local Plan Viability Study consider the implications of delivering a range of amounts of affordable workspaces at	None.

the scope of the discount may be required to ensure the viability of some developments. There is also an inconsistency with Policy H3 as E4 does not establish an approach to affordable housing contributions on non-residential uses where a proportion of that use is required to be rented at below market rate. The Council should clarify its requirements regarding affordable workspace provision on mixed use sites such that it can be confirmed this policy is justified. To be found sound and justified by the available evidence base, the policy should confirm that the level and form of provision will be determined through viability testing at application stage.	rent reductions which range from 75% reduction down to peppercorn rent. The Local Plan Viability Study showed that the typologies delivering 5000sqm or more employment-generating uses were viable typologies. The policy itself requires an Affordable Workspace Strategy to be produced. It is for the applicant to produce an Affordable Workspace Strategy to support qualifying development proposals. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable.	
Affordable workspace has a significant impact on deliverability and is a core and fundamental consideration in terms of development feasibility and deliverability. It is important for OCC to recognise the cumulative impact of all of the combined policies that would apply to landowners / developers such as Nuffield College who are seeking to bring forward major and large scale	The Employment and Inclusive Economy Background Paper published at the Reg. 19 consultation stage, and the Local Plan Viability Study consider the implications of delivering a range of amounts of affordable workspaces at rent reductions which range from 75% reduction down to peppercorn rent. The Local Plan Viability Study showed that the typologies delivering 5000sqm or more employment-generating uses were viable typologies.	None.

employment generating proposals to the City. As stated, when all draft policies are combined, it makes for a highly challenged position to enable deliverable development to come forward. Whilst the NPPF seeks for Plans to be aspirational, it also seeks for them to be prepared positively, in a way that they are deliverable. It is considered that this balance has not yet been struck when considering the draft Plan as a whole. This is apparent when reviewed against further commentary and request for amendments.	The policy itself requires an Affordable Workspace Strategy to be produced. It is for the applicant to produce an Affordable Workspace Strategy to support qualifying development proposals. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable.	
Do not support this draft policy. It is not supported by national policy. No evidence to suggest incorporating an affordable workspace strategy could be viable. No assessment/ consideration of potential cumulative impacts of an affordable workspace strategy alongside CIL liability and other planning obligations on the viability of such schemes. Such an onerous requirement would serve to frustrate schemes from coming forward that would otherwise bring significant economic and social benefits to the local community,	The Employment and Inclusive Economy Background Paper published at the Reg. 19 consultation stage, and the Local Plan Viability Study consider the implications of delivering a range of amounts of affordable workspaces at rent reductions which range from 75% reduction down to peppercorn rent. The Local Plan Viability Study showed that the typologies delivering 5000sqm or more employment-generating uses were viable typologies. The policy itself requires an Affordable Workspace Strategy to be produced. It is for the applicant to produce an Affordable	None.

including the provision of new employment opportunities for local people. It is therefore EIT's position to not support this draft policy unless the Council is able to demonstrate a robust assessment of the impact of an affordable workspace strategy on a scheme's viability and which concludes positively.	Workspace Strategy to support qualifying development proposals. The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable.	
Waffle. Ineffective, as unclear how a larger company should be expected to support a smaller rival, as policy that only included social enterprises justified, seems to be too much interference in normal market operation.	The policy enables a flexible approach to delivering affordable workspaces and does not specify an amount to be delivered. As such we consider that there is sufficient scope within the policy (i.e., that the policy is sufficiently flexible), to deliver an amount of affordable workspace (to be determined by the applicant through the production of an Affordable Workspaces Strategy), to ensure that schemes remain deliverable.	None.

Policy E5

POLICY	E5
All respondents **supporting** policy	159.22

COMMENT SUMMARY	OFFICER RESPONSE
Tourism is important to the economy of Oxford, in particular the City Centre. ChCh is a major tourist destination and as such it is important that tourist and short stay accommodation is provided to support this and maximise the length of time visitors stay in Oxford. As such ChCh supports this policy.	Support noted.

POLICY	E5			
All respondents **raising objections** on this policy/chapter	78.7	128.2	134.5	139.6

COMMENT SUMMARY	OFFICER RESPONSE	PROPOSED ACTION
NPPF requires “main town centre uses” to be located in town centres, then in edge of centre locations. Only if suitable sites are not available (or expected to become available within a reasonable period) should out of centre sites be considered. Hotels are identified as ‘main town centre uses’. Policy E5 is not consistent with with national policy. It does not set out a sequential approach. The evidence base has not applied a sequential test to confirm that out-of-centre sites, along the main arterial roads, are required.	The evidence base (Hotels Study) establishes that there are more bedspaces needed over the plan period than are likely to be able to be accommodated within the city and district centres. As such, arterial routes, all of which have very good accessibility to the city centre (where the majority of the tourism attractions are located) and the district centres, are considered to be an acceptable location for new hotel and short stay accommodation. Given Oxford’s long-standing housing issues, and the city’s inability to meet housing need within our administrative boundary, it is	None.

• Delete criterion d) from the policy • Include additional wording to confirm that proposals on out-of-centre sites on Oxford's main arterial roads will be considered favourably only where it has been demonstrated, through a sequential test, that suitable sites are not available within existing centres or edge-of-centre locations • The reasoned justification should confirm that dedicated car parking will be restricted to provision for operational and accessible purposes only.	important that sites for new hotel and short stay accommodation are supported in locations which minimise direct competition for land which could otherwise be delivered as homes. As the plan's focus is to deliver residential dwellings, it supports a locational strategy which enables the delivery of other uses in a variety of bespoke locations across the city. We do not support the proposed modifications. Other policies in the plan address non-residential car parking, and these would apply to all non-residential development in the city.	
The policy as drafted seeks to limit the location of hotel and short stay accommodation to: a) The City Centre; b) District Centres; c) Sites allocated for that purpose; d) Sites on Oxford's main arterial roads where there is frequent and direct public transport. In our view, and having regard to the particular circumstances of our client's site, it would be appropriate to amend criterion (b) to "District Centres or (appropriate) locations within up to 100 metres of the boundary of a District Centre". Amenity policies are capable of protecting neighbours. Policies should not be so rigid as to prevent good development from occurring. NPPF paragraph 86 identifies that policies should not be rigid and should be flexible to	We have produced an evidence base including a study which has worked out demand for bedspaces in the city. We recognise that delivering hotel and short-stay accommodation is one aspect of helping the visitor economy. Given Oxford's long-standing housing issues, and the city's inability to meet housing need within our administrative boundary, it is important that sites for new hotel and short stay accommodation are supported in locations which minimise direct competition for land which could otherwise be delivered as homes. As the plan's focus is to deliver residential dwellings, it supports a locational strategy which enables the delivery of other uses in a variety of bespoke locations across the city.	None.

account for change. The present policy is insufficiently flexible. There are no allocations for new hotels that we are aware of. The policy framework is not sufficiently addressing needs as expressed by visitors seeking individual experiences as opposed to larger corporate style hotels.	We consider that the policy enables sites for hotel and short stay accommodation to be delivered in accessible locations. The Plan includes a number of site allocations which refer to hotels, including Policy SPE16, SPS13, Policy SPCW2, while a range of site allocations also refer to "main town centre uses", including SPCW9, SPCW10. While Policy SPCW8 refers to complementary culture, arts and leisure uses. The site size threshold for category 2 employment sites in the city and district centres also means that there are improved opportunities to deliver hotel accommodation in the city and district centres.	
The draft Policy should make it evident that flexibility should apply with regard to the application of this policy against wider plan policies to enable development to be delivered to meet the ambitions of the Local Plan and in particular with reference to the Nuffield Sites. It is suggested that supporting text is incorporated which supports a flexible approach toward loss of short stay accommodation where site allocations are supported for comprehensive mixed use redevelopment, as well as an additional bullet point included in the policy itself regarding the list of circumstances where the loss of short stay accommodation is supported.	We consider that the wording of Policy E5 as proposed is sufficient. The policy allows the loss of larger (10+ bedrooms) hotels and short stay accommodation in the city centre (and other specified locations) provided any of the criteria are met. Criteria i) sets out that the loss "should be demonstrated through the submission of robust evidence that it is no longer viable in that use". We don't think that the wording proposed is suitable as it could potentially result in the loss	None.

This additional bullet point could be incorporated / read as follows: ▪ Or forms part of comprehensive, mixed use development scheme.	of hotel uses (for which there is an established need in the city) too easily.	
Tourism is a significant sector of Oxford's economy and brings its own pressures and problems. It is disappointing to see that whilst reference is made 'Accommodating significant numbers of day visitors to Oxford can be challenging…' there is no specific reference in the policy towards addressing these issues. We'd like to see the inclusion – either in this policy or other standalone policies – of measures to: • mitigate the impact of tourism on the city's historic core; • better enable the accommodation of large groups within the public realm; • manage tourist arrival and departure, including coach parking.	City's Economic Strategy 2022-2032 stresses the importance that the visitor economy plays int he city and provides a clear strategy for developing the visitor economy – in fact it is one of the three elements that the Delivery Plan of the Economic Strategy focuses on. The City Centre Action Plan also focuses on Visitor and Tourism Management setting out a set of progress and actions to help enable a healthy visitor economy. We consider that the policy sufficiently addresses issues that can be controlled or influenced through the plan.	None.

POLICY	Chapter 4				
All respondents **raising objections** on this policy/chapter	90.5	138.17	139.7		

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Natural England has made a representation relating to a potential omission policy, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
We consider it unsound that there is no policy relating to the Oxford Green Belt.	National policy on green belt protection does not need to be repeated at local level. Policy G1 sets out in its supporting text (second bullet	None.

The protection of the Green Belt, not least for its purpose in protecting the setting of Oxford, is consistent with national policy and this should be provided at a local level too. The Green Belt not only forms part of Oxford's wider green setting but also provides protection for a number of 'green fingers' which run into the heart of city itself. The omission of a specific policy to protect this highly sensitive land is highly concerning.	under the policy implementation section), that applications proposed within Green Belt would be determined in accordance with national policy. Policy G1 sets out levels of protection for a network of spaces within the green infrastructure network depending on the local benefits they provide and regardless of whether they are in green belt or not. Core and supporting spaces have been identified across the city as such.	
We ask that these areas of land, including Wolvercote Lakes, Larkins Lane Field, Marston Fields, be included within the areas identified as Green Infrastructure on the proposed policies map, due to the significant contribution they make to the city and its people, in terms of fully accessible green space.	Wolvercote Lakes is already identified as a Core Space under policy G1 on the policies map (site ID 178) and Marston Fields are also included in the network already (site IDs 655 and 656). We have reviewed the other suggested site against the criteria set out in the background paper which determines whether they would be designated as core or supporting spaces under Policy G1. Larkins Lane Field appears to meet the criteria of a supporting space and we propose a mod to policies map to add this.	Mod proposed to the policies map to add Larkins Lane Field as a supporting space within the Policy G1 GI network.
Pleased to see reference to fen habitats but consider that specific reference should also be made to ancient floodplain meadows and MG4 grassland within the policies in this chapter.	We acknowledge that there are a range of important habitats across the city. Policy G6 sets out a hierarchy of protection for designated ecological sites as well as natural and/or semi-natural habitats, or protected species found elsewhere. It sets the framework for protection, including the requirements that applicants will need to fulfil (e.g. applications that could impact them will need to be informed by targeted ecological surveys and	None.

	satisfactorily addressed in accordance with the mitigation hierarchy). We do not consider that it is necessary to explicitly list all potential habitats that could be encountered in the policy.	
Objections to the general approach of green infrastructure protection – including that: • No evidence/methodology as to how each green space type (e.g. Core or Supporting) is determined. • Green Infrastructure is marked incorrectly, both in area, description, and accessibility on Policies Map. If access were clearly marked, it would show much space is in fact wholly unusable. • Green space in allocated sites is often not marked or protected (John Radcliffe) • No overall assessment of green space need per "Urban Village", per habitant, or deprivation, therefore allocation is site by site with no strategic overview how much remains in each or how equality objectives will be met. • No allowance for population growth although four times the predicted rate in 2007 or assessment of local need or green deprivation (Equality) • No comprehensive strategy for sports provision when most sites are earmarked for development piecemeal. And playgrounds not marked as green space.	The Green Infrastructure Background Paper (BGP.005a) explains how the Council has classified core and supporting spaces. It also includes a table in the appendix explicitly setting out the reason a space has qualified as 'core'. The protection for green spaces is based on their identified functional benefits and is unaffected by the level of accessibility (which could change), as such it is unnecessary to identify this on the policies map. Maps of accessibility are however included in the GI study 2022. A key challenge in the city is the unequal provision of green space, some areas have access to a lot of green space (e.g. areas in proximity to the SAC), whereas other areas have limited access. The constrained nature of the city also means it is challenging to create large new areas of green space to address existing deficiencies, or population growth. As such, an assessment of green space per person, or per hectare has limited value, as would the setting of policy targets tied to this. This is why the Local Plan focuses on protecting a strong network, and enhancing the spaces within it where possible so it improves in quality and	No further change proposed.

• The 2022 Green Infrastructure Study is fundamentally flawed in methodology and input data.	multi-functionality (though G2 does seek to secure new open space on larger development sites). On sports provision, pitches are protected as part of the GI network, as well as national policy. The Council is in the process of undertaking a new Playing Pitch Strategy which will help to support the delivery of the Local Plan (e.g. it will be a key resource for applicants to consider where they propose applications that impact pitches, and it will also inform the needs for new facilities). *Comments on the Green Infrastructure study are picked up and addressed in detail in the evidence base section of the consultation report.*	
The G1-G9 policies are unsound as no protection is conferred on playgrounds which are generally unmarked and unprotected unless part of a larger green space.	The policies in this chapter deal with a range of topics, from green infrastructure (G1-G3), to biodiversity (G4-G6), flooding (G7 and G8) and climate resilience (G9). National policy already sets out that existing open space, sports and recreational buildings and land, including playing fields and formal play spaces should not be built upon unless the proposal meets particular criteria. Policy G1 provides additional protection to a range of spaces within the GI network that are of particular importance to the city and some of these include play facilities. The policy sets out that applications impacting certain types of open space within that network will need to include additional evidence considering (criterion bi.) *the role of*	No further change proposed.

	the space in supporting people to socialize, take part in informal recreation (particularly where facilities like children/youth play and outdoor gym equipment are present), or as an escape from the urban environment. We are content that there is sufficient and appropriate protection provided for playgrounds.	
Inclusion of Large Developments on Oxford's Boundary Required must be clearly marked to assist in determining the suitability of land allocations and determining the value of green space.	The Local Plan's policies map reflects the spatial extent of the policies and allocations in the plan and these do not extend beyond the city's administrative boundaries. It would not be appropriate to identify proposals outside of the boundary on the policies map.	No further change proposed.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Oxford canal should fall into the Core spaces category - due to its fundamental role in supporting the city-wide network, providing wildlife habitat and corridor functions, flood storage, intensity of use and strength of heritage or other local value. These benefits are typically intrinsic to the canal and cannot be easily re-provided elsewhere without compromising their character and/or function.	The canal and the adjoining land are designated as a city wildlife site and lie predominantly within Flood Zone 3b. There are other regulatory regimes outside of planning that would further restrict development that would impact the canal.	None.

It is not possible to take these aspirations seriously when the development policies of Oxford City Council of prioritising development land for employment, inflating housing demand and 'unmet need' and exporting inflated 'unmet housing need' to neighbouring districts has resulted in the destruction of so much Green Belt countryside, biodiversity and habitats, which can never be rectified or enjoyed by future generations.	A balance needs to be struck between the many competing priorities for land and meeting the needs of the city. All suitable and available sites with development potential need to be considered as part of our efforts to address the city's housing need. The plan also recognises the importance of open space, and other forms of green infrastructure and protects a strong network of green space across the city (as with the adopted local plan).	None.
Sport England has made a representation relating to Policy G1, which is summarised and responded to in the Statement of Common Ground. Oxfordshire County Council has made a representation relating to Policy G1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The Local Plan should ensure that there will be no net loss of playground space across Oxford unless this would have a significant or adverse impact upon public amenity or ecological interest, in the context of increasing pressures for development.	Specific wording to this effect in this policy is not considered necessary, as this is already carried out through Policy G1, C3 and NPPF provisions.	None.
The allocation for Core and Supporting arbitrarily draws a line between one and the other, without any reasonable balance being provided to a sliding scale of quality both internally within individual Green Infrastructure, or when comparing the lowest quality Core against the highest quality Supporting.	The NPPF includes a requirement for plans to distinguish a hierarchy of nationally and locally designated sites, to allocate land with the least environmental and amenity value, and to take a strategic approach to maintaining a network of green infrastructure (para 188). The proposed hierarchy in the policy is consistent with the approach required by national policy	None.

	and has a framework for how it applies to the Oxford context.	
There were comments objecting to the Core policy wording. For example, that it has no flexibility for the scale of green or blue infrastructure, scale of existing and proposed development, exceptional circumstances, or the possible wider reprovision or enhancement of the infrastructure. Another comment flagged that the assumption that Core 'spaces cannot be moved/re-provided sufficiently without compromising the overall character and function' is subject to each site's individual merits and proposals. For example, Core areas may have lower quality sub-areas within them. This conclusion should not be drawn at this stage and result in a blanket in-principle ban on development within designated areas. The proposed wording conflicts with the aim of the policy, which seeks to protect Green Infrastructure from 'inappropriate development', requiring mitigation where development comes forward.	As set out in the Background Paper (005a), core spaces are designated because they are considered to provide a range of important benefits including some which are tied to their existing location, the loss of which is considered unfeasible to be able to be mitigated through reprovision elsewhere. It is considered important that they are appropriately protected to a degree that reflects their identified value as part of the wider green infrastructure network. However, having further reviewed the approach, we propose a modification to the wording in relation to the approach to protecting core spaces. This would provide some flexibility to allow compatible uses to come forward, whilst still seeking to set a strong level of protection that corresponds with the identified value of these spaces and also retaining particular identified benefits in situ.	Modification proposed to amend wording of policy as follows: *G1A: Core spaces* *Planning permission will not be granted for development that would result in loss of, or harm to, the protected spaces identified as part of the Core GI Network unless this would be for complimentary uses that would not negatively impact upon the particular in situ benefit(s) for which these spaces are designated, and if this is accompanied by enhancement of other parts of the core space. These spaces are designated G1A on the policies map.*
Land at Old Marston: We strongly object to the downgrading of the Marston Gap sites from Core to Supporting within the Green Infrastructure Network and consider this unsound. Barton Triangle and Larkins Lane Field: We strongly object to the exclusion of Larkins Lane Field and the Barton Triangle from the Green Infrastructure Network and consider this	Core spaces are designated as such because of fundamental characteristics that make their reprovision impossible or impractical. Supporting spaces may not have the same identified benefits but still play important roles for public amenity and wellbeing, as well as environmental functions. Both Core (G1A) and supporting spaces (G1B) are afforded a higher level of protection than the minimum	Modification to policies map to designate Larkins Lane field and Barton Triangle as supporting spaces under Policy G1's Green Infrastructure Network. No further action in redesignating Marston Gap.

unsound. Larkins Lane has a high ecology value and is the subject of an ongoing valley fen restoration project. Barton Triangle is an open green space. Both are visually important elements in the setting of Old Headington Conservation Area.	mandated in the NPPF (which is applicable to G1C 'all other green/blue spaces'). We have set out in the Background Paper (BGP005a) the criteria used for identifying core space – in some cases the underlying information has been updated since the Reg 18 stage – e.g. new flood risk mapping, which has resulted in some changes to the core spaces with some changing to supporting tier, and some supporting changing to core. We have reviewed the suggested additional sites of Larkins Lane and Barton Triangle against the criteria set out in the background paper which determines whether they would be designated as core or supporting. These spaces appear to meet the criteria of supporting spaces and we propose a mod to add these to the policies map.	
The policy is unsound and ineffective, as it is mathematically impossible for a development which reduces green space, to "reprovision" elsewhere, which is also green space, further the term is not explained in the glossary. The conflict between Residential gardens in designated green space protections in Policy G1 must be resolved in favour of Green Space protection, or Core Green space could be lost where land is in both as in the Lye Valley example above.	'Reprovision' in the policy could entail either quantitative reprovision (e.g. like for like space being created) or qualitative improvements. Where space is constrained, qualitative improvements would mean that green infrastructure benefits of another area of green space could be enhanced through additional planting and other qualitative improvements which would mitigate the loss. Green space protections are not superseded by the requirements for development on residential garden land.	None.

Policy G1 sets up a hierarchy of spaces, but the criteria for classifying sites are neither objectively measured nor measurable: *Intensity of use: There is no indication how intensity of use will be quantified, or criteria for determining whether a site is surplus to requirements. *Local value: It is not clear how adequate and proportionate evidence could be collected to determine whether a site is delivering insufficient local value. *Loss will be resisted: If a local group campaigns to resist loss of a GIC site, will it be re-categorised as GIB? *Multifunctionality: If a site is both small and assessed as multifunctional, will it be placed in GIC because it is small or GIB because it is multifunctional? *Small: How will it be determined whether a site is too small?	The methodology for arriving at the criteria for categorising individual spaces in the Green Infrastructure hierarchy are set out in Background Paper 005. For supporting spaces, functions of a site and the requirements for any mitigation where a loss/harm is likely, will need to be informed by a range of information sources as outlined in the policy. The considerations will vary somewhat depending on each site however. As the policy sets out, the Council will expect applicants to review a range of relevant information such as the green infrastructure study, playing pitch strategy, local contextual info etc.	None.
* Reprovision for category GIB and GIC is to be "sufficient." This would conflict with the requirement for provision to be equivalent or better in quality AND quantity.	The policy wording specifically requires for reprovision to be at the same standard or higher, and ideally onsite.	None.
There is a requirement for applicants applying for permission to build on GIB facilities for Parks, accessible greenspace and amenity greenspaces to provide additional evidence that demonstrates consideration of needs and deficits. Policy G1 e.g. notes a deficit of playgrounds in the city centre," but it is not clear how this was determined. The criteria for	The GI study also provides an overview of areas in the city where there are particular green space deficits and will be useful in determining how these can be addressed through development.	None.

determining whether recreation spaces are surplus and can be downgraded are equally unclear.		
There is little objective assessment of needs for "other uses". "Larger developments are expected to include a proportion of the site as public open space with a mix of uses tailored to the needs of occupants and the local area," but no indication as to how those needs should be determined. There are no access standards for parks and green spaces. There is lots of research into the benefits of G1, but no mechanism for determining a quantum above which GI would be considered surplus.	There are departments within the City Council with the specific remit for the management of green spaces and much of the public realm in Oxford. Any evidence that is submitted in relation to the impacts of development will assessed on their own merits in conjunction with planning officers. This will include assessment of the suitability of approaches to meet local needs as set out in development proposals. The determination on whether or not a green space or other amenity facility is surplus to requirements is not made by planning officers but in conjunction with relevant officers within the Council that have the appropriate remit.	None.
* G1 specifies that reprovision can be delivered "quantitatively (like-for-like replacement) or qualitatively (enhancements that improve the functionality and quality of other areas - demonstrated via the Urban Greening Factor or similar methodology)." It is not clear which "similar methodology" could be used to assess the functionality and quality of recreational space.	The Urban Greening Factor methodology as set out in Policy G3 is endorsed by the Natural England GI Framework and is relatively well known and recognised by practitioners. The highlighted wording (i.e. similar methodology) was included in order not to be unduly exclude other methods that may achieve the same objective, so long as it is evidenced.	None.
It is clear that house building will be at the expense of many "well-designed, beautiful and safe places, with accessible services and open spaces." This will make it more difficult to meet	All suitable and available sites with development potential are considered as part of our efforts to address the city's housing need. The plan also recognises the importance	None.

“current and future needs and support communities’ health, social and cultural well-being.”	of public open space, and other forms of green infrastructure.	

Policy G2

POLICY	G2

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
…although point e) mentions climate change, it does not explicitly include the scope for blue infrastructure to supply renewable energy or improve energy efficiency. Water source heat pumps can potentially supply a large fraction of the city's heat very efficiently, but that potential is restricted to the blue infrastructure, where green belt policy is currently a constraint on the development of a sustainable heat source.	The local plan does not state specific preferences or restrictions on technologies in relation to renewable energy or climate change mitigation.	None.
Policy G2 does not address the needs of children and young adults. The treatment of recreation space as another sort of green infrastructure means that spaces will be more likely to be multifunctional, but recreation may	The local plan's remit is to provide a policy framework that development schemes may be assessed against when coming forward for planning permission. Policy G1 protects a network of green spaces, and sets out different	None.

be a primary function of much GI space in Oxford. In the absence of a local recreation policy, simply requiring spaces to take into account the "Health and wellbeing, including facilitating recreation and play for people of all age groups and abilities and abilities, particularly children and teenagers" is meaningless. If there is no policy, there is no way for an applicant to know what the objectively assessed needs are, and so no way to ensure that those needs are met.	levels of protection depending on if they are core or supporting spaces. It outlines that where loss/harm could occur, there could be a variety of considerations that will need to inform any mitigation, including the current role of the space. Criterion b.i. specifically identifies that some spaces have a role for socialising/recreation and flags that facilities like children/youth play could be present. This is highlighted to ensure applicants consider their impacts on such facilities particularly. Policy G2, meanwhile, sets out the considerations that should inform design of new green infrastructure. We have sought to ensure reference is made to a variety of benefits that could be incorporated into the design process (which will also need to be informed by local context). Criterion b discusses facilitating recreation and play for people of all age groups and abilities, particularly children and teenagers. Box 4.1 in the supporting text talks further about how applicants should approach design of green infrastructure, including tailoring types of open space to meet identified needs or deficiencies and flags incorporating play features for younger people as an example. A range of evidence supports the Local Plan and can help inform an assessment of need, however, this context changes over time and applicants will need to consider the most up-to-date information, which could also include policies/strategies that exist outside of the Local	

	Plan/planning system. The policies of the plan provide the relevant requirements and additional guidance which should ensure the most appropriate considerations inform the application at the time.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
At Oxford Stadium, the car park has very limited green infrastructure, confined mainly to boundary planting. Future enabling development would likely need to be delivered at high density to generate sufficient financial returns to secure the stadium's future. Applying this policy could risk sterilising the site and similar brownfield sites, potentially	It should be noted that Oxford Stadium is no longer a site allocation. The UGF is a tool intended to ensure new developments incorporate a good level of greening, which has a variety of positive impacts. The measures proposed to achieve this requirement may overlap with requirements for protection and BNG, but for example even	None

undermining wider benefits such as safeguarding the stadium and delivering housing in a highly sustainable location. Additionally, the necessity of this policy is unclear given that national Biodiversity Net Gain (BNG) requirements already exist and are reflected elsewhere in the Plan. Compared to BNG, the proposed approach offers only a simplified output, raising questions about its added value and the justification for introducing an additional layer of calculation.	where BNG is off site there should still be green infrastructure on the site, and this may be part of protecting and enhancing existing but in some cases there will be no or little existing and there are benefits to it being introduced. The measures needed by the policy have been broadly tested on the site allocations and are achievable. A whole range of creative options are available that have limited impacts on the development space, and developments without green features will not create good or attractive places that people want to work or live in. A tweak has been made to the policy regarding the baseline score on green sites, to make it more achievable.	
While urban greening is supported, applying draft Policy G3 universally could create an unnecessary technical burden, particularly for greenfield sites. Natural England guidance indicates the Urban Greening Factor (UGF) should mainly be used in urban or suburban areas, or targeted locations where greening is a key issue, such as brownfield or Green Belt sites. It is therefore suggested that Policy G3 be refined to focus on these specific contexts rather than all development. For Ruskin Field, although the Draft Plan states the site is likely to exceed UGF targets, it is unclear how this conclusion was reached	The thresholds for UGF in the plan are markedly lower than the recommended minimum contained in Natural England's GI Framework which informed this policy, in recognition of the constrained nature of development sites in Oxford. Thresholds for non-residential schemes are lower still than that for residential led proposals. The intention behind the policy is to localise as much as possible the benefits that arise from the presence of natural features in development, which will difficult to achieve if offsetting is allowed. The measures needed by the policy have been broadly tested on the site allocations and are achievable. A whole range of creative options are available that have limited impacts on the	None

without detailed landscape proposals, and whether this assumption relates to the site's proposed minimum capacity of 28 dwellings.	development space, and developments without green features will not create good or attractive places that people want to work or live in. A tweak has been made to the policy regarding the baseline score on green sites, to make it more achievable.	
Oxfordshire County Council has made a representation relating to Policy G3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Policy G3 introduces the Urban Greening Factor (UGF), requiring developments to achieve a minimum score or at least no reduction from the baseline, based on on-site green infrastructure. While acknowledging constraints on delivering new green space, this requirement may place significant pressure on sites with limited area and competing functional needs. In some cases, such as schemes on former greenfield land (e.g. Oxford North), achieving "no net loss" may be unrealistic, potentially sterilising development and preventing wider benefits such as housing delivery. It is therefore suggested that this requirement be removed.	The required score has been set to encourage as much as possible the achievability of application for constrained sites with limited developable areas. It is lower than the recommended minimum in the Natural England Green Infrastructure Framework. The UGF methodology is not intended as a replacement for detailed ecological analysis and associated metrics such as DEFRA Biodiversity metric, even though they have complementary aims. Metrics such as BNG are linked to a wider ecological context, which can allow for offsetting and off site contributions in the appropriate circumstances, whereas the intention for UGF is to localise the benefits that come from the onsite establishment of natural features including climate adaptation, mental and physical health and wellbeing and biodiversity.	None

The policy also duplicates biodiversity net gain (BNG) requirements, offering only a simpler metric, and it is unclear why this additional layer is necessary—particularly as UGF has typically been introduced elsewhere before BNG became mandatory. Furthermore, it overlaps with Policies G1 and G4 but lacks the flexibility of G4, which allows for off-site mitigation, raising concerns about its effectiveness.	As set out in the Regulation 18 Consultation Report, the scores contained in the policy are intended to be a minimum. The required score has been set at the level it has, to encourage as much as possible the achievability of application for constrained sites with limited developable areas. It has been set lower than the recommended minimum in the Natural England Green Infrastructure Framework based upon informal testing on a range of sites across the city to see what was achievable across the Oxford City context, we are comfortable with this approach. Site allocation isn't a conflict, it's flagging that its below the score currently and needs to introduce additional greening to meet the minimum score.	None
Policy G3 seeks to introduce minimum urban greening factor (UGF) scoring that needs to be demonstrated for major development proposals. The NPPF states that Local Plans should take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure (paragraph 188) and local planning authorities should take opportunities to improve biodiversity when assessing individual applications (paragraph 193). UGF is used in The London Plan and in other major cities across Europe, but there is no evidence that its use is justified in Oxford. It is considered	The UGF is a tool intended to ensure new developments incorporate a good level of greening, which has a variety of positive impacts. The measures proposed to achieve this requirement may overlap with requirements for protection and BNG, but for example even where BNG is off site there should still be green infrastructure on the site, and this may be part of protecting and enhancing existing but in some cases there will be no or little existing and there are benefits to it being introduced. The meaures needed by the policy have been broadly tested on the site allocations and are	None

that the incorporation of policy G3 will result in an unnecessary additional policy hurdle and achieving net gains in biodiversity and enhancing networks of habitats and green infrastructure as required under the NPPF, Policy G4 and Environment Act 2021 can be sufficiently achieved under existing policy requirements, which in turn will result in urban greening. It is requested that this policy be deleted as it is not justified as it will duplicate policy requirements which deliver the same outcomes.	achievable. A whole range of creative options are available that have limited impacts on the development space, and developments without green features will not create good or attractive places that people want to work or live in. A tweak has been made to the policy regarding the baseline score on green sites, to make it more achievable	
The requirement to provide new green space is acknowledged as challenging, particularly for sites with limited space and competing functional demands. However, the policy risks placing excessive pressure on applicants and could effectively sterilise development opportunities that might otherwise deliver wider benefits, such as increasing housing supply. The Urban Greening Factor (UGF) duplicates biodiversity net gain (BNG) requirements by offering a simpler metric, raising questions about the need for this additional layer, especially as UGF has typically been introduced in areas like London prior to mandatory BNG. Overall, the policy is considered ineffective, as it largely repeats Policies G1 and G4 but lacks	The required score has been set to encourage as much as possible the achievability of application for constrained sites with limited developable areas. It is markedly lower than the recommended minimum in the Natural England Green Infrastructure Framework. The UGF methodology is not intended as a replacement for detailed ecological analysis and associated metrics such as DEFRA Biodiversity metric, even though they have complementary aims. Metrics such as BNG are linked to a wider ecological context, which can allow for offsetting and off site contributions in the appropriate circumstances, whereas the intention for UGF is to localise the benefits that come from the onsite establishment of natural features including climate adaptation, mental	None

the flexibility of G4, particularly in allowing off-site mitigation. It is therefore suggested that Policy G3 be deleted.	and physical health and wellbeing and biodiversity.	
The policy is ineffective as “technically infeasible” is not defined or enforceable.	It has been set lower than the recommended minimum in the Natural England Green Infrastructure Framework based upon informal testing on a range of sites across the city to see what was achievable across the Oxford City context, we are comfortable that the scores are technically feasible. The second bullet point of the policy implementation in supporting text explains what the applicant needs to evidence to demonstrate whether it is feasible or not.	None

Policy G4

POLICY	G4				
All respondents **raising objections** on this policy/chapter	59.9	90.3	112.6	89.12	138.21

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The Local Plan policy should have been prepared with a needs assessment that takes into account a range of factors including: that losses in biodiversity in the city have been greater than elsewhere due to urbanisation; that past declines need to be addressed; that biodiversity will continue to be under pressure from development; that BNG would not impact viability/housing supply; that natural capital is important for a range of economic and social benefits as well as environmental; that residents have called for greater access to nature; and that enhanced biodiversity was central to the net zero vision of the 2019 climate emergency declaration.	The Local Plan has been prepared with careful consideration for how we can ensure that new development not only mitigates impacts on biodiversity but also delivers enhancements to improve biodiversity in the city for the range of benefits it provides. The Council is aware of the significant stresses being placed upon biodiversity in the city and the ongoing threats to the range of nationally and locally important species in the city and the bespoke background paper on biodiversity (BGP.005b) details the range of considerations that have gone into drafting the policies.	None.

Policy should be amended so it seeks Biodiversity Net Gain which exceeds 10%-- asking for a minimum of 20% BNG.	Exceeding the statutory 10% target needs to be robustly justified. Additionally, the BNG mechanism is only one way that biodiversity can be supported in the city (the metric ignores the benefit of some types of enhancement that can be particularly helpful for priority species in the city). The Council has instead opted to bring forward other policies tailored to our particular local context alongside the national 10% BNG requirement, for example, requirements to support local species through onsite ecological enhancements in policy G5 and policies encouraging more general greening such as policy G3 that can support biodiversity but also other wider health and wellbeing of residents and the environment.	None.
Natural England has made a representation relating to Policy G4, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Delivery of 10% BNG is already a statutory requirement applied post permission and the Local Plan does not need to repeat this. Opening para should be amended or deleted.	It is considered important to embed the requirement in the Local Plan because it enables us to set out some locally-specific considerations about how it is implemented. Whilst it might not be strictly necessary to repeat the percentage, in this case it is considered simpler for applicants than cross-referencing to the national requirement and not mentioning the % specifically, as it would not set the context for the locally-specific criteria.	None.

In relation to the offsite BNG delivery hierarchy. The PPG does not indicate that Councils can specify where offsite gains should be delivered. The metric already includes a spatial risk multiplier which increases the number of units required to deliver net gains the further it is delivered from the site, so there is no need to specify where it should be provided. The main focus should be identifying locations where units can be purchased within or close to Oxford. As such, this paragraph should be deleted.	Whilst it is acknowledged that the metric's spatial risk multiplier incentivises local delivery to some degree, it is important for the Local Plan to clearly communicate the preference for offsite BNG to be delivered as close to the development site as possible. Applicants are directed towards looking for opportunities as close to the development as possible before looking for options further afield, this additional local guidance is considered helpful in guiding proposals to secure the greatest local benefits for habitats and species as well as residents.	None.
Oxfordshire County Council has made a representation relating to Policy G4, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The policy is ineffective as it does not address destruction of unique habitat off-site such as the Lye Valley.	The policy is not intended to do this. The policy sets out expectations for delivery of Biodiversity Net Gain as part of new development coming forward in the city.	None
The policy must include provision for where the habitat is NOT swappable, it should not be permitted to be justified.	The requirements for responding to different types of habitat, including where these can and cannot be substituted for other habitat types, as part of calculating Biodiversity Net Gain are set out in the DEFRA guidance which accompanies the Statutory Biodiversity Net Gain Metric, which the policy refers to. Applicants will also need to accord with policy G6, which protects a hierarchy of existing habitats and species in the city and sets out clearly what is expected of an application –	None

	where habitat loss could result, that policy sets out how this should be addressed.	

Policy G5

POLICY	G5

	89.13	138.22			

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Whilst the principle of the policy is very welcome, the mandatory requirements as listed in Appendix 4.2 need to be amended to align with the requirements for integrated nest boxes as set out in NPPG Natural Environment 2025 paragraph 017. Without this, the requirement for bird boxes as set out currently in supporting Appendix are open to interpretation and could result in less preferable 'external' boxes which do not align	Whilst we do not consider this to be strictly a soundness issue, we are happy to modify as per the suggestions where this would help to clarify things.	Modifications to Appendix 4.2 are proposed as follows: **Under the section in the table *Pot 1: Mandatory requirement - Household/Minor/Major,* amend the text as follows:** *At least one integrated swift brick (preferred)~~box~~ or swift box~~brick~~*

with national guidance. Suggested modifications: • (Pot 1 Mandatory requirement - Householder/ Minor/ Major) - place the word 'bricks' first before the word 'boxes' and state 'preferred' after the word 'bricks' i.e. "at least one swift brick (preferred) or swift box". • (Pot 1 Mandatory requirement - Minor/ Major) - after "building-dependent species" add "such as swift bricks (preferred) or swift boxes".		**Under the section in the table *Pot 1: Mandatory requirement - Minor/Major,* amend the text as follows:** *At least one bird box per dwelling (resi) or per 1000m2 footprint (non-residential), including consideration of building-dependent species (such as integrated swift bricks (preferred) or swift boxes).*
The policy is not justified because it introduces a prescriptive points-based approach without clear evidence that such an approach is necessary to secure biodiversity outcomes beyond those already required through Biodiversity Net Gain legislation in the Environment Act 2021. An appropriate balance between encouraging meaningful ecological improvements and maintaining design flexibility for applicants should be achieved which takes into account varying context/constraints of sites. Policy could introduce unnecessary complexity and administrative burden, particularly for smaller or lower-impact schemes. Alternative wording should be proposed which avoids overregulation while still setting a clear policy expectation for on-site ecological enhancements – i.e. thoughtful, integrated	As is set out in the Biodiversity background paper (BGP.005b), the Statutory BNG metric primarily focuses on delivery of habitat as a way to support species. However, there are other important features that support important wildlife in the city which are not recognised/incentivised by it and relying on the statutory BNG requirement to deliver for them alone would be insufficient. The policy is prescriptive to some degree, in that a certain number of enhancements will be required depending on the scale of a proposal, and there are some limited mandatory features, however, applicants are then left with flexibility to select the most appropriate enhancements for their site in order to meet the required totals otherwise. The proposed list of ecological enhancements presented in the Appendix helps to provide clarity to applicants over the types of features (and how many) they	None.

biodiversity features rather than a checklist approach should be encouraged.	need to implement to meet the asks of the policy and support local species, but it is up to applicants which are selected based upon the context of their particular site and application.	
Requirement to deliver ecological enhancements associated with 'all' new development is onerous and unnecessary. Moreover, it exceeds the statutory requirements. On its face, it would require changes of use and minor works such as shopfront replacements to deliver onsite ecological enhancements, that would be neither reasonable nor practical to provide. Policy should be amended to exclude minor commercial developments.	The requirements do exceed statutory requirements, this is because there are additional provisions that are important to seek to deliver to support local species which cannot be satisfactorily provided for through statutory requirements like BNG. In most instances we would expect that the minimum requirements should be achievable, particularly with the flexibility afforded to which measures are selected beyond any mandatory requirement. We have reviewed the list in the appendix, however, and propose a mod to one part of the mandatory requirements to ensure that the requirement is expected only of sites with outdoor space.	**Mod proposed to Appendix 4.2 as follows:** *Where the site includes areas of outdoor space, c~~C~~hoose two of the following: insect hotel, planting for pollinators, night-flowering species*
Improvements in biodiversity are delivered though statutory Biodiversity Net Gains and as such it is unjustified to require additional ecological enhancements to buildings. It is recommended that the first sentence and third paragraphs of G5 are deleted.	As per the response above, the Statutory BNG metric primarily focuses on delivery of habitat as a way to support species. However, there are other important features that support important wildlife in the city which are not recognised/incentivised by it and relying on the statutory BNG requirement to deliver for them alone would be insufficient.	None.
Oxfordshire County Council has made a representation relating to Policy G6, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

It is ineffective as the wording is fluffy "strongly encouraged" means nothing and the outcome is not measurable.	Whilst 'encouraging' applicants to pursue certain elements of the policy may not have the same weight as requiring them, it is still considered important as a clear steer as towards how the Council would wish to see proposals addressing the topic of onsite ecological enhancements. Some aspects of the policy will be dependent upon the type of proposal, site context and other considerations and may not always be of relevance.	None.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Iffley Fields should be removed from the Local Plan.	See responses under the site allocations section of the Consultation report.	See responses under the site allocations section of the Consultation report.
Natural England has made a representation relating to Policy G6, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
It would be beneficial to include reference to the Great Crested Newt District Licence scheme to raise awareness and support sustainable development in your area where there is a risk to great crested newts. Some potential wording that could be incorporated into policy G6 is put forward.	Thank you for the suggestion. We've reviewed the proposed wording included as part of the comments submitted, as we did when submitted at Reg 18 stage. We remain of the view that the level of detail goes beyond the scope of the policy, however this would potentially be helpful to reference in some way through the supporting Technical Advice Note (TAN) we intend to prepare to support the policy. We	None. We will consider further if it is appropriate to include in the Technical Advice Note in due course and how best to do this.

	would be open to further discussion as to how best to incorporate this into the TAN in due course.	
Oxfordshire County Council has made a representation relating to Policy G6, which is summarised and responded to in the Statement of Common Ground. Sport England have made representations against policy G6, these are addressed through the Statement of Common	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Ineffective, with excessive concentration on the Oxford Meadows SAC whilst the Lye Valley SSSI, comprising of a very rare alkaline fen, is scarcely mentioned. Lye Valley and other calcareous locations, such as Headington Hill Park, Ruskin College, Dunstan Park and other adjacent areas are at risk from increasing development leading to reduced groundwater, and increased scouring from surface water via urban drainage. G6 is ineffective as the mapping on the Policy Map is derived from the defective Hydrogeological Impact Assessment Report and incorrect. Further detail is outlined in full rep. Various suggested changes put forward, including: replacing the word “demonstrate” (that they have considered information from various sources) with “addressed”.	The policy is an overarching one that protects the full hierarchy of nationally designated and locally designated ecological sites in the city, as well as protecting other types of habitat and species. Whilst specific sites are referenced, these are mainly as examples to aid the reader, however, in the case of the Oxford Meadows SAC, the additional formal assessment requirements where development could have impacts warrant further guidance than would be included for SSSIs. Comments on the Lye Valley Hydrogeological Assessment report’s impact risk zones, which are included on the policy’s map to help ensure applicant’s appropriately consider the SSSI’s sensitivities to development in the wider area, are responded to in the evidence base section of the consultation summary. Refer there for a more detailed response.	None.

	The word 'demonstrate' is an instruction requiring applicants to evidence in their application how they have considered relevant information from a range of sources in determining the potential for adverse effects. We are unclear on how the suggested amend would improve the effectiveness of this part of the policy.	
In relation to Lye Valley and other calcareous locations, such as Headington Hill Park, Ruskin College, Dunstan Park and other adjacent areas areas, the following modifications are required to make the policies effective: • Removal of permitted development rights via Article 4 Directions in the Lye Valley catchment area and all of OCC and requiring greenfield runoff rates via infiltration; • Formal identification calcareous emergence areas such as Headington Hill and Dunstan Park, Ruskin College and others; • Permitting no further development in groundwater catchment, noting that SUDS are unacceptable as they will fail/require maintenance (see Lamberth report); • Updating all site policies that impact the Lye Valley; • Removing "*Any planning applications near the Boundary Brook or Lye Valley/SSSI/LNR/LWS etc) will also need to assess the potential for additional indirect impacts on the flora and fauna of those area..*"	<u>Article 4</u> The process for implementing an article 4 direction is complex, and must be justified and proportionate. It is also a separate process to the preparation of the Local Plan. Nevertheless, with the Local Plan the Council has sought to include a range of policies for reducing surface water run-off and reducing its water quality impacts (e.g. Policy G8 and R5) as well as generally increasing green surface cover on sites to mitigate impacts of urbanisation (Draft policy G3). <u>Identification of calcareous areas</u> As set out above, Policy G6 sets out a framework of protections for designated ecological sites as well as habitats and species outside of these areas, wherever they occur. Mapping of habitats is available from various national sources and applicants will need to reference the most appropriate sources alongside other information when informing their application. We do not consider it necessary or justified to identify particular types of habitat on the policies map.	Mod proposed to improve clarity of bullet point 1 under the 'policy implementation' section of Policy G6's supporting text as follows: *It is vital that existing biodiversity and features of ecological interest which could be impacted by a development are well understood and that impacts are avoided and/or mitigated. This includes features being directly <u>or indirectly</u> impacted on a site as well as those which could be adversely affected by adjacent development <u>either directly or indirectly</u>.*

from Churchill (SPE6) policy and apply as a general statement to all development sites.	<u>Permitting no further development in groundwater catchment/SuDS not being appropriate</u> Policy G6, alongside national policy, set the framework of protection for the SSSIs, a blanket restriction on all future development in the catchment is not considered to be proportionate or justified. Whilst certain types of SuDS can be inappropriate in some areas, and policy G8 acknowledges this, this is highly dependent on site context and ground conditions which can vary. It is agreed that effective maintenance/management arrangements can be vital to the ongoing functioning of some types of SuDS, but again, this varies with the type and design of SuDS being implemented. We disagree that all SuDS are unacceptable in the catchment. <u>Site allocation wording needing to be updated</u> The wording referencing potential for impacts on the Lye Valley is included in some site allocations where these have been identified as being within the impact risk zones for the SSSI. They are intended as a helpful, additional marker for applicants to ensure that they consider these risks appropriately. The wording cross-refers to Policy G6 and will need to be read alongside this policy. We are comfortable with the wording as it is presented in the allocations.	

	<u>Suggested additional general statement relating to indirect impacts on the flora and fauna</u> Policy G6 seeks to ensure development appropriately mitigates potential impacts on designated sites as well as habitats and species located elsewhere. These impacts could be direct or indirect, and will depend upon the context of the site and the development that is proposed. The additional wording suggested is not considered necessary, although we are happy to propose a mod to amend the supporting text of the policy to highlight this a little clearer.	

Policy G7

POLICY	G7	
All respondents **supporting** policy	104.2	140.1

COMMENT SUMMARY	OFFICER RESPONSE
The Environment Agency has made a representation and would like to highlight that they are pleased with the updated Policy G7.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Thames Water generally supports Policy G7 as it is in general accordance with the NPPF and the PPG and particularly supports the reference to sewer flooding.	Support welcomed.

POLICY	G7			
All respondents **raising objections** on this policy/chapter	40.6	87.4	138.24	140.1

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Do not support part q) of the policy as where necessary, redevelopment should be allowed to encroach into Flood Zone 3b as it could still result in a decrease in flood risk through careful design, even if the overall building footprint is the same or smaller than the existing built footprint.	The Environment Agency has made it clear that this approach is unacceptable. Careful design can avoid redevelopment of a site encroaching on Flood Zone 3b. If the first floor and higher levels of the building are developed, this does not affect the built	None

Agree that there should be no increase to the building footprint in the functional flood plain at ground floor level, but the footprint should be allowed to be increased at first floor and above at sites such as Osney Mead to ensure schemes such as this are viable. A balanced and pragmatic approach is required from the Environment Agency and the Council on this point and the policy must reflect this position.	footprint of the site, and the intensification of the site may be acceptable providing that all relevant criteria in the policy are met.	
A Sequential Test has been undertaken to support the Sustainability Appraisal, and Osney Mead has been assessed through policy SPCW8. Whilst draft policy G7 is clear, it would be helpful to see sight of Background Paper 9a which deals with brownfield development within FZ3b (which is referenced within the Sequential Test) as it is not on the Council's website.	The Flood Risk Sequential Test of Sites is a piece of evidence and was published for the Regulation 19 consultation under the 'Evidence Base and Supporting Documents'.	None
Note that by their very nature, infrastructure for water and sewage treatment is located close to rivers. It is likely that these existing works will need to be upgraded or extended to provide the increase in treatment capacity required to service new development. Flood risk sustainability objectives should therefore accept that water and sewerage infrastructure development may be necessary in flood risk areas.	Comments made on water and sewage infrastructure development have been noted.	None
Flood risk policies should also make reference to 'sewer flooding' and an acceptance that flooding can occur away from the flood plain as	The policy is clear that applicants need to consider flooding from all sources, which would include sewer flooding. It also sets out that an	None

a result of development where offsite sewerage infrastructure and capacity is not in place ahead of development.	FRA should demonstrate that the proposed development would not increase flood risk offsite.	
Policy is ineffective as development in Flood Zone 1 areas has caused by run-off, repeated flooding in Flood Zones 2 and 3. All development must demonstrate net-zero greenfield runoff rates to stop downstream flooding. Increasing and intensive urbanisation including transport infrastructure is a far greater cause of floods than climate change, yet it is not even acknowledged. Requirement of a proportional FRA for all flood zones including offsite cumulative risk, as well as ensuring that sites in Flood Zone 1, that are surrounded by Flood Zone 2/3 land would still require safe access/ egress during a flood event.	All sources of flooding must be considered for any site including risk of surface water flooding in Flood Zone 1. The Level 1 SFRA considers the cumulative impact of development on flood risk within the catchment. Safe access/egress to the site would be assessed as part of the planning application.	None
No development should be allowed in Flood Zone 3b. Should be a ban on development on low-lying Flood Zone 3 land as flood defences do not protect against groundwater flooding.	This approach could restrict opportunities for utilising land for other uses, e.g. to meet the city's housing needs, which could come forward designed in a way that is safe from flooding, does not displace flood risk elsewhere, and is in accordance with the NPPF. All sources of flooding must be considered for any site, including groundwater.	None

Large commercial basements are unacceptable in any location in Oxford as they displace groundwater which floods downstream.	The policy states that proposals for basement accommodation within Flood Zone 2 or 3 will not be permitted due to the unacceptable additional risks associated with this type of accommodation.	None

Policy G8

POLICY	G8
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	G8				
All respondents **raising objections** on this policy/chapter	57.6	87.5	89.15	104.15	138.25
	140.2	157.1			

COMMENT SUMMARY	OFFICER RESPONSE	PROPOSED ACTION
Any new development planned must be able to satisfy the council that it will not need to discharge surface water to combined sewers and that there is no risk of this happening, for example, by using overflow lakes/ tanks. The exceptional circumstances in e) need to be set out in detail for this policy to be effective.	Discharging to a combined sewer (and only in exceptional circumstances) is at the bottom of the drainage hierarchy, and it is expected that applicants would need to sufficiently demonstrate why all other options would not be possible.	None
The policy is too rigid. Below ground features such as underground tanks and pipes should be allowed in situations where site constraints exist e.g., groundwater, contamination, land-use efficiency, whilst still enabling SuDS to be used where appropriate. It is not always possible or practical to include swales and ponds in higher density developments. It would	Green SuDS are often considered at too late a stage in a scheme. If they are considered in the conceptual and design stages, they are more likely to be able to be well-designed into the proposal and not result in inefficient use of land. They can provide a multitude of benefits that grey SuDS can't, including providing open space for recreation, habitats to support	None

be helpful to understand why the proposed SuDS features are the ones that are considered acceptable to the Council and for this explanation and rationale to be provided. The first line of the policy should be amended after "All development proposals will be required where feasible" to allow for flexibility and include the following additional wording: *and* to *ensure efficient use of land* manage surface water through Sustainable Drainage Systems (SuDS)." Further flexibility should also be incorporated within the policy - green SuDS should be favoured but only "wherever possible". Development potential should not be restricted by SuDS.	wildlife and adaptation to other climate hazards such as overheating.	
Oxfordshire County Council has made a representation relating to Policy G8, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The Environment Agency has made a representation relating to Policy G8, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
A Grampian condition for all development in Oxford should be required to ensure Thames Water can manage surface runoff.	It is not practical to do this - each planning application is assessed on its own merits.	None
No further development (including house extensions) should be permitted to connect to the Thames Water sewer network within the	It is not practical to have a blanket ban on development in the Lye Valley. Each planning application is assessed on its own merits.	None

Lye Valley fen catchment. Smaller extensions are only acceptable if they connect to a soakaway but not into the surface water drainage system. SuDS infiltration in Lye Valley is insufficient as a replacement for loss of natural surface cover.	Policy G8 acknowledges that infiltration will not always be the most suitable means of SuDS.	
Vague language used within policy. “Surface water runoff should be managed” does not define the actual target, which should be greenfield. Replace “should” be managed with “must”. Furthermore, “where feasible” and “where required” are not defined.	Whilst encouraging applicants to pursue certain elements of the policy may not have the same weight as requiring them, it is still considered important as a clear steer as towards how the Council would wish to see proposals addressing the topic of surface water runoff. Some aspects of the policy will be dependent upon the type of proposal, site context and other considerations and may not always be of relevance.	None
The policy is ineffective as it does not address chemical composition, a key factor in the flows into the Lye Valley SSSI and the other calcareous fen areas in the city.	This is a general policy for SuDS and is not meant to address individual areas of the city. The policy expresses that details of the SuDS must be submitted as part of a drainage strategy or FRA where required as part of a planning application submission. Furthermore, the ‘Policy implementation’ section of Policy G6 (Protecting Oxford’s Biodiversity including the Ecological Network) states that the City Council has published additional guidance in relation to the Lye Valley that applicants should refer to where applicable.	None
Support policy in principle. Highlight that it is the responsibility of the developer to make proper provision for drainage to ground,	Comment noted – the SuDS policy sets out various requirements which seek to ensure an appropriate drainage strategy is pursued	None

watercourses or surface water sewer in accordance with the drainage hierarchy. It is important to reduce the quantity of surface water entering the sewerage system in order to maximize the capacity for foul sewage to reduce the risk of sewer flooding.	including prioritising green, multifunctional SuDS features where possible before other options.	
Limiting the opportunity for surface water entering the foul and combined sewer networks is of critical importance to Thames Water. Thames Water have advocated an approach to SuDS that limits as far as possible the volume of and rate at which surface water enters the public sewer system.	Policy R5 (Water resources and Quality) sets out requirements for separating foul and surface water on new development and encourages applicants to take opportunities to separate these on existing development.	None
SuDS not only help to mitigate flooding but also improve water quality; provide opportunities for water efficiency; provide enhanced landscape and visual features; support wildlife; and provide amenity and recreational benefits.	The second bullet of the 'Policy context' section has included examples of the additional benefits of SuDS.	None

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
This is regarded as unsound with specific reference to drainage in New Marston and the impact that additional housing development will entail. It is noted in chapter 4 that reference is made to addressing flood risks and managing drainage particularly during wetter winters which are a feature of the changing climate. The current drainage system in New	There are policies in chapter 4 which seek to ensure new development takes into account flood risk from all sources and responds appropriately (Policy G7), incorporates SuDS (Policy G8), and mitigates impacts on water resources and quality (Policy R5).	None.

Marston (South) is not adequate: there is frequent flooding in winter with significant sewage overflow. During the winter of 2025/26 foul water (containing sewage) was a frequent occurrence in Ferry Road in New Marston (South), causing danger to health for those living in the road and those accessing the centre of Oxford via the busy cycle and walking route from Marston and Northway which crosses the bottom of Ferry Road. Additional housing proposed for New Marston will exacerbate local flooding problems and foul sewage will continue to cause ecological damage to New Marston Meadows SSSI, if this is not addressed.		

Policy R1

	159.11				

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The policy proposes an energy hierarchy that is outdated with respect to the City's own policy and the Government's recent Warm Homes Plan, both of which recognise that building heating needs to be very largely decarbonised on the timescales of this plan. This requires that elimination of fossil fuel use is the over-arching priority. The Policy as drafted also fails to recognise that electricity will soon be largely decarbonised and therefore that electrification	The energy hierarchy is a well-known framework for guiding the design of buildings, which seeks to limit energy use through good design before considering how energy is used and sourced. The version set out in the policy follows the recommended structure set out by others such as in the National Design Guide and the LETI. We disagree that it conflicts with the Council's own policies or national ones.	None.

and heat networks will play a key role in dense developments where provision of 100% of energy via onsite renewables is not feasible. And the reference to offsetting is unclear and potentially misleading. Suggested change needed is a formulation of paragraph a) more consistent with 'radical reductions in greenhouse gas emissions' that would read: "*new buildings should be designed to be net zero carbon in operation, by eliminating the direct use of fossil fuels, and ensuring that all energy demands are met by the use of renewable energy (including efficient use of energy from grid electricity and low-carbon heat networks). Developments should use highly efficient fabric and energy service systems, and maximise the use of onsite renewable energy with the remaining energy from low-carbon sources, including the electricity grid and low-carbon heat networks. Net energy imports should be matched by support for offsite local renewable energy projects*."	The policy is clear in criterion d) that fossil fuels should not be used to directly power the building, its position in the list of criteria does not equate to its priority and it is of equal relevance to the other parts of the policy. The policy is technology agnostic, allowing applicants to select the most appropriate technologies to meet their energy needs and the performance targets of the policy in line with the particular context of the site and their proposed development. The supporting text highlights various options that could be taken on, including referencing heat networks of various scales where these would be the most sustainable option. We respond on the topic of offsetting later in this table and refer to that for our response on this issue.	
Policy contains potential logical "escape clause" that could render its targets ineffective, specifically, the EUI targets are allowed to be exceeded if "demonstrated to be technically unfeasible". Given that the plan's primary economic driver is R&D and laboratories—which are noted as having "exceptionally high operational energy demands"—this loophole could apply to a vast majority of the new non-	The policy's targets have been guided by recommended standards being developed across industry (e.g. the Net Zero Buildings Standard) and which are considered to be technically feasible in most instances, as evidenced through the range of feasibility studies conducted by authorities across the country. Nevertheless, the Council acknowledges that the requirement for	None.

residential floorspace proposed. If the most energy-intensive new buildings are exempted from the EUI targets, the city's 2040 net-zero target may be mathematically unsound.	delivering net zero carbon buildings in operation is likely to be challenging in some situations and it is considered to be pragmattic to acknowledge that there may be cases where the targets are not feasible. This is most likely to occur with some non-residential uses, as whilst significant efficiencies can be secured through good design, the energy demands associated with operational needs can be difficult to negate (e.g.specialised equipment associated with labs/research and healthcare). Hence, the policy explicitly allows for applicants to justify higher energy targets where the policy requirements can be shown to be technically unfeasible. This was felt to be the most practical approach to framing the policy, whilst also seeking to ensure that all other elements of the policy have been met, including that efficiency measures have been maximised as far as possible.	
There is an internal tension between the "net zero by 2040" objective and the practical operation of the viability cascade, weakening the Plan's climate ambition in application. S1 and Chapter 5 text treat offsetting and net zero standards as central to strategy, but S4 structurally treats offset contributions as the first thing to be sacrificed when viability is challenging.	Whilst the viability cascade does identify that, where an applicant can demonstrate the development to be unviable, payments towards energy offsetting can be reduced incrementally, it is clear that the development itself must remain free of fossil fuel use to ensure that it is net zero carbon ready and does not conflict with Net Zero Carbon targets for the city and nationally. We feel that this is an appropriate balance between recognising that there can sometimes be exceptional costs that could not have been anticipated in the whole plan	None.

	viability assessment, whilst also ensuring that new development is still held to appropriate minimum standards so as to not conflict with local and national net zero objectives.	
Generally support the policy and welcome the metrics for space heating and energy use intensity listed. These use absolute targets and correlate closely to Passivhaus standard criteria. Flag that working to the Passivhaus standard is the best way of guaranteeing that projects achieve these desired outcomes, without the performance gap, while also delivering good comfort and indoor air quality for occupants. Without the quality assurance provided by standards like Passivhaus, projects are unlikely to deliver these performance outcomes in reality. Would suggest that projects targeting Passivhaus certification could be said to be 'deemed to comply' with the Local Plan requirements and that this could be acknowledged in the document text.	The policy seeks to ensure that proposals are highly energy efficient by meeting the minimum EUI and space heating targets set out in the policy without requiring applicants to pursue any particular wider certification over which the Council has no control/influence. We would be happy to signpost to broader certification standards and best practice such as Passivhaus through the Technical Advice Note which is intended to be published alongside the Local Plan to provide additional guidance to applicants however.	None. We will consider how best to signpost to Passivhaus certification through the Technical Advice Note in due course.
Regarding criteria (a), flag that in relation to requirement for renewables to be ideally onsite, there is not enough space on-site to generate the significant amounts of energy manufacturing requires which will force some uses to utilise offsite solutions. Suggested change to criteria a - meeting all energy needs through renewables sources, ideally generated onsite, or <u>sourcing renewables elsewhere or</u> else offsetting as a last resort.	The policy already includes mechanisms that allow for applicants to pursue offsite solutions where meeting energy demand through renewables onsite is not possible – these are set out in criterion e). The suggested additions are not considered necessary.	None.

Regarding criteria (c) the requirement is for space heating demand to be no more than 20 kwh/m2/yr. This would not be achievable in manufacturing due to the exceptionally high energy demands. Suggested change to criteria c – targets expressed should be clarified as only for non-manufacturing uses.	The review of technical feasibility studies as set out in the net zero carbon literature review indicated that the 20kwh/m2/yr space heating target should be generally achievable across residential and non-residential uses. It is acknowledged that there can be great variaiton in typologies of non-residential development which may not have been fully captured through these studies, of course. We would, however, question the concern here as it is generally expected that higher energy demands associated with an operational use like maufacturing would impact upon the ability to meet particular EUI targets (criterion b)) rather than the space heating target (hence the differing targets allowed for through criterion b). Nevertheless, where exceptional circumstances arise and a particular proposal can evidence that this particular target is not technically feasible, the policy sets out through criteria g) to i) how a case for non-compliance will need to be justified.	None.
Regarding criteria (e), concern flagged that whilst energy storage is possible, it is not always practical or cost effective, and also, maximising available onsite renewable capacity may not be practical or cost effective. Suggested changes to two parts of criteria e as follows: • Criteria e - accompanied by energy storage where possible and cost effective.	The policy does not require proposals to be accompanied by energy storage, only where possible, as such, the additional caveat about cost effectiveness is not considered necessary. On the second bullet point, it is not entirely clear what is being suggested with the additional wording proposed. Whilst the policy allows for applicants to deliver renewables offsite, it is considered important that this land is under the applicant's control and that it	**Modification proposed to bullet point 6 of the 'policy implementation' section of the supporting text to improve clarity as follows:** *There may be circumstances where certain requirements may not be technically feasible onsite. Proposals could include delivery of additional renewable energy generation offsite on land under the applicant's control in order to match any deficit of delivery onsite. As a last*

• Criteria e - applicants should seek to maximise available capacity onsite, before seeking to meet the remaining energy balance through installation or purchasing of sufficient additional renewable generation at a location offsite	would come with some certainty that they would be able to ensure these offsite renewables are delivered. If the Council were to allow for simple purchasing of renewable generation elsewhere e.g. via a separate organisation, there could be challenges with assessing the application and monitoring delivery, potentially reducing effectiveness of the approach. As such, we do not agree with this amend either, though would suggest a mod to the supporting text that could help with clarity on this point.	*resort, an element of offsetting can help deliver on the aims of the policy. Before offsetting will be accepted, the applicant must robustly justify that the earlier steps in the energy hierarchy have been exhausted and onsite/offsite energy generation is not possible to meet the development's EUI figure. Only then, will payment be accepted into the City Council's offsetting fund to mitigate remaining energy use via retrofitting of buildings elsewhere in the city.*
Strongly welcome the move for all new buildings being net zero and fossil fuel free and agree with the energy hierarchy, however, for this policy to be effective and enforceable, it is vital that wording is changed from ''All new buildings SHOULD be net zero carbon in operation'' to ''All new buildings WILL (OR MUST) be net zero carbon in operation''	In the context of the Local Plan's policies the term 'should' is generally taken to mean that applicants must follow the requirements, unless there is strong justification for not doing so, and this is the case for policy R1. The policy is worded in a way that applicants are expected to follow the requirements which would ensure a building is net zero in operation, however, it is acknowledged that that there can be circumstances where this might not be possible and the policy sets out what is expected if they cannot, e.g. where meeting a requirement is technically unfeasible as is the case under criterion b, for example. As such, we would suggest that the wording as it currently stands is most appropriate to ensure an effective policy. However, on further review, we do think that the use of the term 'must' in the following sentence (in relation to Energy Statements)	None in relation to this comment, however, **we propose a mod to the second sentence of the policy to improve consistency and clarity as follows**: *All new buildings should be net zero carbon in operation~~. This must~~and this will need to be demonstrated through submission of an Energy and Carbon Statement that details how all the criteria below have been met:*

	perhaps leads to some confusion, and propose to amend this to ensure better consistency.	
Whilst supporting the policy wording enabling higher EUI target for non-residential uses with exceptionally high energy demands, including R&D/labs/hospitals, object to the wording relating to expectations for how energy needs will need to be met (criterion e)). It is wholly unrealistic for all energy needs for lab buildings to be met on site through renewable energy. Integration of energy storage could conflict with the effective use of land and is arguably incompatible with high quality design and placemaking requirements. With Oxford's land constraints, also wholly unrealistic to deliver additional renewable energy generation at a location offsite, particularly in absence of any site allocations for renewable energy generation. Only option would therefore be payment into offset scheme, however, it continues to remain unclear from the papers available at this stage how the Council will utilise these contributions within the City and no fund, or schemes have been established to ensure that the contributions truly deliver necessary offsetting. Approach conflicts with exiting national policy/PPG, which does not require all energy needs to be met onsite, as well as the draft NPPF, which seeks to limit setting of local standards for energy efficiency due to concerns about proliferation of varying standards across	National targets as set out in the Climate Change Act require the UK to be net zero by 2050, and the city's local target aims for 2040. This means all new development needs to be net zero carbon in operation going forward to save from undergoing potentially costly retro-fitting in future. A net zero carbon building in operation meets all of its energy needs through renewable sources. There are various benefits to seeking to secure those energy needs through generation onsite (including reducing energy bills, reducing peak demands on the grid, boosting energy security), however, the policy does not require this. When coupled with energy storage, onsite generation become more efficient by being able to meet energy demands when the source of that energy generation is not available, but again, the policy does not require this. Whilst the policy is clear that offsetting is to be used as a last resort, we have sought to allow for this as a further option where meeting energy demands is not feasible through other solutions. • *We address comments on the offsetting mechanism further down this table, please refer there to a more detailed response that addressed these comments specifically*.	None.

local authorities. Council should acknowledge the Government's concern and align with the national net zero carbon agenda and timescale, in line with the principles in the proposed Future Homes/Buildings Standard. This will meet the objectives of the plan but does not put further financial obligations on high growth sectors such as life sciences. Suggest that Policy R1 should be amended to require developments to comply with Building Regulations.	• *In relation to alignment of the policy with national policy and the draft NPPF consulted on earlier in 2026, please also refer to separate response further down this table.*	
OUD has made a representation relating to policy R1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Whilst supporting the ambition, the need for flexibility is still required as the policy remains too rigid. A more flexible approach would be supported.	There is an importance balance to be struck between flexibility that can account for the variety of proposals that could come forward in the city and the need for an effective policy which ensures new development is fit for a net zero carbon future. Through the various criteria in the policy we are comfortable that we have incorporated as much flexibility as possible with various mechanisms available for circumstances, for example, where operational energy demands vary across non-residential typologies (e.g. criteria b)), where the ability to meet renewable energy generation onsite is constrained allowing for offsite solutions or payment into the offsetting mechanism (criteria e)).	None.
Linked to above point, a suggested more flexible approach would be focusing on	Omitting unregulated energy loads ignores a significant proportion of a building's total	None.

regulated energy which encourages additional measures for unregulated energy rather than it being a requirement. The alternative option would be to allow developers to focus on regulated energy, avoiding impractical on-site renewable requirements and enabling a more feasible route to net zero.	energy demand, which in turn, introduces greater risk of 'performance gap' issues (whereby the development as built performs significantly worse than predicted in terms of energy efficiency). It is considered important to ensure these are factored into the design process, thereby capturing a more accurate picture of total operational energy demand as would be measured at the meter, as this will help to drive more efficient design, with sufficient renewable energy generation to match all energy demands and thus delivering a truly net zero carbon building in operation. As noted earlier, the policy does not require all renewable energy to be generated onsite if site constraints would prevent this.	
The Council should be able to demonstrate that the Local Plan's aspirations do reflect the Government's policy for national technical standards. Others raised that it was not considered that the approach set out in R1 is consistent with the 2023 WMS, or policy PM13 of the recently consulted on NPPF, nor that the implications of such a policy have been properly assessed in the supporting evidence base. The policy should be deleted.	We are aware of the 2023 WMS and the content of policy PM13 of the draft NPPF, to which the Council submitted a strong objection during the consultation. The Planning and Energy Act currently still enables local authorities to set their own energy efficiency standards for new developments, and we feel that there remain imperative reasons for doing so. Relying on national standards alone, even with the uplift that will be brought in through the Future Homes and Buildings Standard would not deliver truly net zero buildings in operation. The local policy is therefore important for supporting the local net zero target of 2040, as well as the national net zero target.	None.

	Additionally, it will minimise the number of buildings that will require retro-fit in future; as well as reducing exposure of future occupants to risks of fuel poverty and improving local energy resilience. The background paper sets out the wider justification for the policy approach and the whole plan viability testing has ensured that viability impacts are considered alongside other policies in the Local Plan. The concerns set out by government in previous justification for the 2023 WMS as well as the draft policy PM13 in the new NPPF appear to relate to limiting the proliferation of different local standards nationally. However, the approach proposed in policy R1 is consistent with net zero carbon policies that are increasingly being tested and found sound at examination across the country and as is recommended by various national bodies.	
If the Council has the evidence to show that the policy is deliverable, they will need to ensure that all other policies in the local plan are consistent with delivering the levels of embodied carbon being proposed. The most energy efficient design will inevitably lead to less variety in the built form in order to reduce the surface area of the building. This will need to be reflected in design policies and any design codes that are produced to ensure that development is not refused for seeking to meet energy efficiency standards but, for example,	It is acknowledged that the design process will need to adapt to better accommodate performance standards of buildings that are net zero carbon in operation. We have set the policy to be as flexible as possible to enable variations in site context and needs of different proposals whilst still requiring key performance standards to demonstrate net zero in operation. We have also sought to ensure that net zero carbon considerations (as well as other sustainability objectives) are weaved through the design checklist which supports the Local	None.

not being designed in the character of the local area.	Plan's high-quality design policy, this will help to ensure that these considerations are factored in upfront alongside other design considerations. A similar approach is followed in the National Design Code which equally expected carbon reduction and energy efficiency to be a key part of high quality design.	
The policy will be a significant uplift, requiring further surveys and reports to be prepared to accompany planning applications. It will in turn require specialist officers at the Council to review and interpret the reports and the Council must be appropriately resourced for this.	Comments noted, we agree resourcing and training will indeed be important.	None.
Removal of BREEAM is disappointing as many projects are already working towards this, so consideration should be given to a phased transition as significant design changes will be needed.	As noted above, the policy seeks to ensure that proposals are highly energy efficient by meeting the minimum EUI and space heating targets set out in the policy without requiring applicants to pursue any particular wider certification over which the Council has no control/influence. We would be happy to signpost to broader certification standards and best practice such as BREEAM through the Technical Advice Note. The policy will apply for all applications validated after the Local Plan's adoption, however, the examination process takes time and applicants should have a good understanding of the direction of travel well in advance of adoption. It is generally expected	None.

	that if proposals have already begun the process of designing to BREEAM standards, this should not prevent them from being able to achieve the performance standards set out in policy R1.	
Targets set out in Criteria 2 of the Policy are completely unachievable for life science buildings such as those being built at Oxford North. Targets should be evidence based and it is unclear how the current targets have been set. A range of targets would be one way to set targets or simply seek scheme to minimise total energy use for the particular building in question. Suggested changes in relation to these points are to either delete the Energy Use Intensity targets or set a range. Also to provide more flexibility in the policy to allow for varying occupier demands.	As detailed in the carbon reduction and net zero background paper (BGP.008), in setting the specific targets for the total energy demand/EUI and space heating requirements, the Council has considered a range of sources. This includes recommendations from national industry best practice from a range of organisations. It also includes a review of technical feasibility studies produced to inform similar adopted or emerging Local Plans from local authorities across the country (as summarised in the separate Net Zero Carbon Technical Feasibility literature review), as well as previous engagement responses on the development of the Local Plan (and the withdrawn Local Plan 2040). The Council considered further breaking down targets by typologies (beyond just residential and non-residential) however this would invariably struggle to capture every potential eventuality. As such, keeping the distinction broader, with a more relaxed target for non-residential which could accommodate the potential range of different typologies of development and their higher energy demands, was considered most pragmatic.	None.

There is a difficulty in how a building is used and how that might change over time and this is a concern with post-occupancy monitoring. If data is collected how will the City Council use this to better inform other projects? Suggestion is to remove the need for post-occupancy monitoring as this is totally dependent on how each building is used by an occupier.	Specifying an approach to post-occupancy monitoring through policy is challenging and will depend upon the specifics of the application and intended future use of the building. The policy's criterion f) allows applicants to propose how this will be undertaken which leaves flexibility for them to propose the most suitable approach that will work for them. Nevertheless, it is important that some system is in place which will allow for post-occupancy monitoring of the performance of the building against the predicted performance at the design stage. This data could then be drawn upon not only to understand compliance with the policy targets, but also to investigate issues around the performance gap, as well as to provide transparency to future occupiers about the performance of the buildings.	None.
Several comments flagging need for further consideration to be given to the requirements of Policy R1 criterion e). The delivery of an on-site solution to meet all energy needs inevitably means designing a system for meeting peak demand. This is grossly inefficient given that the demand profile would rarely match the generation capacity. On most occasions therefore this would require a high proportion of the energy generated on-site to be exported to the grid. However, given the grid constraints that exist in Oxford this would result in most instances with the energy generated going to	Matching energy demand with renewables, ideally onsite, is a key element of net zero carbon buildings in operation. The policy does allow for offsite solutions where matching energy demand through renewables onsite is not fully feasible. Whilst there is invariably additional cost for designing to net zero carbon, the viability considerations have been considered as part of the Whole Plan Viability report (Dec 2025). Whilst area-wide approaches will undoubtedly play a role in supporting the city's transition to net zero carbon, every new development can	None.

waste. Additionally, the cost of implementing such technologies on site is expensive and would further add to existing challenges to financially viability. An area-wide approach, such as through Local Area Energy Plans, is the more appropriate means by which to achieve the objective of the policy.	have an impact and the policy seeks to ensure that negative impacts are mitigated as far as possible and that they are designed in a way that supports the city's transition.	
In relation to requirement for onsite energy generation, of those technologies which are most likely to be applicable (e.g. solar pv, batteries and turbines) only work best when they're sized to cover about 30–40% of a site's energy use. This is because available technologies do not perfectly match / align with a site's energy use profile. Scaling up % of generation would mean most of the energy created would be exported to the grid rather than used on site, and in many cases, that energy goes to waste because Oxfordshire is experiencing a severe lack of grid capacity, which would be needed to absorb this export. Whilst technically feasible to meet the requirement, it would also be very expensive and make some projects unviable. Additionally, trying to meet 100% of energy demand is very difficult due to variation in generating capacity (e.g. different levels of sunlight across year). This is not considered the best approach to address carbon emission reduction.It is suggested that the requirement is reworded to require a minimum of 30% of* all energy needs [(matching the development's total EUI figure)] to be met through onsite renewable energy generating technologies and that where the	As set out above, seeking to match energy demand through equivalent renewable energy production is a key element of net zero carbon building design. This also has other benefits in terms of reducing peak energy demand on the grid, and supporting occupant's bills. When coupled with energy storage this has additional versatility (which is highlighted but not required by the policy). Reducing the target to a minimum of 30% of energy needs would effectively lower the baseline target for all new developments and could result in missed opportunities where the full capacity could be achieved onsite. Of course, whilst the policy sets out that renewable energy provision should ideally be onsite, this is not the only route that is available to applicants. There are also options of exploring offsite solutions, or, as a last resort, making a contribution towards the energy offsetting mechanism.	None.

total energy need cannot be met through onsite renewables, applicants should seek to maximise available capacity onsite before looking offsite. The Energy and Carbon Statement should demonstrate that offsite provision has been fully secured and will be in operation upon completion of the development.		
Concern that costs for meeting the policy requirements alongside various other requirements of the Local Plan – e.g. affordable workspaces, increased CIL, other S106 costs - have been taken into consideration in determining the viability of the development being promoted through the Local Plan, as is required by the NPPF expectations for plan-making.	The development of the policy has been informed by viability testing alongside other policies in the Local Plan. This is detailed in the Oxford City Council: Local Plan Viability Assessment Update (Dec 2025).	None.
Not aware of any precedent for offset payments based on operational energy models.	Previously, the more common approach amongst similar policies elsewhere has been *carbon* offsetting, whereby a price per ton of carbon not mitigated through design is paid into an offsetting scheme. As the policy focuses on energy efficiency and achieving an operational energy balance as part of net zero carbon design (by matching energy demand with equivalent energy generation), the offsetting mechanism is tied to the deficit in energy generation (which in turn impacts the bulk of carbon emissions associated with a building in operation). This was considered to more closely align with the objectives of the policy.	None.

On Criteria (f), there is reference to offset payments being made, however, no evidence is provided or mechanism given for the calculation of offset payments based on operational energy models. The level of off-setting payment needs to be known to fully understand the implications on the viability of projects and more details on where the funds would be spent should be set out. An Appendix should be included in the Local Plan to provide the mechanism for the calculation of offset payments based on operational energy models.	It is expected that the offsetting fee will be published on the website and updated when necessary (e.g. to reflect inflation). This will give applicants clarity on pricing in advance. The draft process for calculating the offsetting contribution is set out in the Reg 19 carbon reduction background paper (BGP008 – pages 18/19) and would ultimately be published as part of a Technical Advice Note. The way the fund will be managed, and the fees utilised for projects, will be further developed as the Local Plan progresses towards adoption, though this is a separate workstream to the Local Plan's development itself. It will be important to ensure that the funds are utilised as effectively and transparently as possible, and to fund projects which deliver true offsetting within the city.	None.
NHS property could benefit from carbon offset funds collected where on-site carbon mitigation requirements cannot be met. This would support the NHS to reach the goal of becoming the world's first net zero healthcare provider.	Suggestion is noted – as noted above, the way the fund will be managed, and the fees utilised for projects, will be further developed as the Local Plan progresses towards adoption, though this is a separate workstream to the Local Plan's development itself.	None.

Policy R2

POLICY	R2
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	R2				
All respondents **raising objections** on this policy/chapter	15.2	40.7	86.7	87.7	105.4
	112.9	114.6	130.8	139.8	157.12

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
No recognition of the impacts of construction traffic on residents, health and wellbeing, and heritage assets. Policy should reference minimising impacts in respect of air quality, noise and vibration.	Impacts from construction are addressed separately through policy R8, there is no reason to repeat them here.	None.
Various comments raising concerns with criterion a) of the policy including that: A blanket requirement to demonstrate that reuse is unfeasible may discourage the redevelopment and intensification of previously developed land, conflicting with national policy objectives (sometimes a building's retention might be feasible but not in best interests of site's future – e.g. if intensifying uses.) Also that it is unclear what constitutes 'robustly demonstrated to be unfeasible', and that this is	It is considered important for applicants to demonstrate that some consideration has been given to reuse of existing buildings, particularly where there are clear opportunities to retain and extend the lifetime of these assets thus helping to prudently use resources and limit carbon impacts. The Council has sought to frame the policy as pragmatically as possible, indeed the requirement does not force applicants to retain buildings and the third bullet point	A modification to criterion a) as follows: a) *Re-use of any existing buildings on a site has been explored and robustly demonstrated to be ~~unfeasible~~ contrary to the long-term sustainability of the site before resorting to demolition. This should include consideration of the impacts on carbon emissions.*

a potentially open-ended policy test which leaves the final assessment down to the judgement of the decision-maker at the end of the process, and lowers confidence in the planning application process. Suggested changes included that more clarity was needed. Also, that the future TAN should acknowledge that reuse may not always be feasible.	under the policy implementation section provides additional guidance for the kinds of situations where we would accept as justification for demolition. However, we agree that the wording of criterion a) could be tightened up by focusing it more strongly towards considerations of long-term sustainability, as opposed to the broader focus of 'feasibility'. We therefore propose a mod that would help to addres this. Additionally, we would be happy to explore further how we can provide additional guidance through the Technical Advice Note in due course where this would be helpful.	Amendments to the third bullet point under the policy implementation section of the supporting text as follows: *Whilst the policy does not mandate retention of existing buildings, criterion a seeks to ensure that applicants demonstrate that they have considered opportunities ~~whether it is feasible~~ for retention and re-use of buildings on a site, before resorting to demolition. Demolition would only be acceptable where it can be shown that their retention would be contrary to the long-term sustainability of the site. In the context of this policy, this means that r~~R~~eplacing buildings may be justified where the embodied carbon impacts are outweighed by~~, for example~~:*
Another suggestion relating to criterion a) was that this should be revised in relation to efficient use of brownfield land as follows: "Re-use of any existing buildings on a site has been robustly explored and demonstrated to be unfeasible, or where it is not making the most efficient use of brownfield land, before resorting to demolition"	We disagree with the proposed modification, as, in practice, we would expect every application to be making for more efficient use of brownfield land, thus this would effectively negate the requirements of the criterion for all such applications.	None.
Whilst principle of policy is supported, further clarifications are required as it fails to balance the longer-term operational benefits of delivering more sustainable buildings, which may outweigh the carbon impact of demolition. This may impact the ability to drive innovation and deliver a more sustainable built environment in the longer term. It is suggested	It is acknowledged that there could be a range of long term benefits which might outweigh the loss of an existing building. The third bullet point under the policy implementation section expands on the considerations that relate to criterion a) of the policy and sets out a number of reasons that could justify demolition. We feel that these comfortably capture the range	None.

that this could be addressed through minor revision of wording.	of considerations that might outweigh demolition and do not propose to further modify these. However, as noted above, we do propose some refinement of the wording of criterion a) along with bullet point three of the policy implementation section.	
In light of the absence of requirements for assessing embodied carbon in national policy or building regs, the Local Plan policy approach is supported in principle and considered to be proportionate/reasonable to enable flexibility for future development in the city. However, policy should be caveated to ensure that the redevelopment of sites to make the most efficient use of land is not unduly constrained by having to retain existing buildings.	Retention/reuse of existing buildings onsite is not a requirement of the policy, it simply asks that, where there are existing buildings, applicants explore and robustly demonstrate that their re-use is unfeasible before resorting to demolition. As such, we don't agree that a further caveat is required in the policy.	None.
Planning policy at a national level does not strictly prohibit demolition, nor does it suggest that carbon saving policies should be prioritised over the growth of the economy and innovation, as does the current Draft Policy.	The policy as drafted does not prohibit demolition, nor does it suggest a priority should be granted towards either objective. The policy simply seeks to ensure applicants consider the embodied carbon impacts of their proposal and actively take actions that can limit these. Additionally, we do not accept that seeking to deliver on one of these objectives (carbon reduction or economic growth) means that the other objective must be sacrificed.	None.
OUD has made a representation relating to policy R2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Whilst the importance of reducing embodied carbon in developments is recognised, there is nothing in NPPF to support policies that require	Whole life Carbon Assessments are increasingly being undertaken across the development industry despite the fact that	None.

developers to undertake whole life carbon assessments. These are onerous assessments and there can be significant inconsistencies in the outcome of any assessment due to the fact that not all products will have Environmental Product Declaration (EPD). This makes it difficult for consistent assessments to be undertaken across the developments which could in turn lead to inconsistent decision making. Suggest that the requirement for a whole life carbon assessment as set out in the second paragraph of this policy is deleted.	guidance and understanding is still emerging. The additional resources it can take to undertake Whole Life Carbon Assessment are acknowledged and this is why the threshold for proposals which would need to undertake them has been set at a level which engages only the largest applications. It is considered important that these larger applications make efforts to quantify embodied carbon and detail the reductions that have been secured through good design as these could have particularly significant embodied carbon impacts due to the size and scale of these proposals. The Council will be publishing additional supporting guidance for applicants to assist in preparing these assessments as part of the Technical Advice Note.	
No issue with principle of policy, the flexibility of not having any targets is welcomed albeit it is questioned how the City Council will assess the feasibility of re-use vs demolition and therefore if the policy will be effective.	Our proposed amendments detailed above should help to more clearly focus the requirements. The considerations in determining whether applicants have satisfactorily demonstrated that building retention would be contrary to the long-term sustainability of the site will naturally vary with each application and will be dependent on the particular site context and the condition of the existing buildings.	None.
Requirement for Whole Life Cycle Carbon Assessment will mean additional documentation to be submitted on application. Council should consider the resource implication for officers and for applicants. There is a risk this conflicts	We have considered and acknowledge that there will be additional resource demands. The threshold for requiring Whole Life Cycle Carbon Assessment is set at a high level so that it priorities the largest developments with	None.

with Government objectives to streamline planning system.	the potential for the biggest embodied carbon impacts. National policy is seeking to streamline the planning system, but it also includes strong objectives for mitigating impacts on climate change, and we believe that the policy as drafted accords with both of these objectives.	
It should be noted that at planning application stage it is not always possible to define the source of materials with any certainty, as this does not happen until a contractor is appointed, usually sometime after planning permission has been granted. As such certain elements of this policy should be conditioned and not required up front. Policy should be amended to acknowledge that information could be supplied either with a planning application or via condition where it is not possible to provide up front.	As much information is needed up front as possible to make an informed judgement about an application. It is not considered necessary to set out what will need to be conditioned and what should be provided up front, and this would be challenging to set out in policy in a consistent way. Where information cannot be sourced this will need to be explained through the application process.	None.
Support the general aims within Policy R2, but the Council must take a stronger position on sustainable development including embodied carbon in light of the current climate crisis. Whole Life Carbon Assessment should apply to development at all scales. Given national targets and the sustainable development goals within this Plan, it is important to understand the embodied carbon implications of all development.	It is important that policies are proportionate, justified and achievable, which the policy as written is considered to be. This is a new policy for the Council and it takes a significant step forwards on the issue of embodied carbon, intended as a stepping stone to potentially stronger requirements in future as understanding and approaches to dealing with these issues continue to develop nationally. Given the additional resource demand that will be required of applications to undertake Whole Life Carbon Assessment, and of officers in assessing applications, we have sought to	None.

	prioritise it as a requirement for the largest applications with the potential for the largest embodied carbon impacts in this Local Plan. There is, however, nothing preventing smaller schemes from undertaking it, particularly where this could help them to respond to other elements of the policy.	
This policy should explicitly set out that demolition is a last resort, especially when a building has not exceeded its expected useful life.	As other reps have pointed out, there can be good reasons why buildings may need to be demolished. The policy is clear under criterion a) that proposals should explore and robustly demonstrate that re-use is unfeasible before resorting to demolition. We are comfortable that this strikes the right balance between ensuring that buildings are not demolished needlessly before the end of their usable life, whilst accepting that sometimes their replacement can garner wider benefits.	None.

Policy R3

COMMENT SUMMARY	OFFICER RESPONSE
As set out in the Statement of Common Ground, Historic England have made representations in support of policy R3, making clear that traditional buildings require a different approach to retrofit measures when compared with adapting modern buildings to improve their carbon and energy efficiency.	Support is welcomed.
Support, policy ensures that heritage assets and historic buildings are adapted sensitively to preserve significance.	Support is welcomed.
Policy aligns with Policy E1 to deliver further R&D floorspace on existing sites. However, concern flagged also in relation to not all buildings being suitable for conversion (*see summary of objections for summary of this issue raised*).	Support is welcomed.

POLICY	R3				
All respondents **raising objections** on this policy/chapter	12.3	86.8	130.9		

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION

Comments were made against policy R2, but related primarily to content of policy R1 (addressing range of issues including approach to energy hierarchy, that national grid will soon be decarbonised, approach to offsetting, and suggesting changes to wording) – these have been captured in Policy R1's summary and responded to there.	See policy R1 summary.	See policy R1 summary.
Not all buildings are suitable for conversion. Policy should be caveated to ensure site redevelopment to make the most of efficient use of land is not constrained by having to retain existing buildings.	It is acknowledged that not all buildings may be suitable for retrofitting. The policy sets out that retrofitting measures will be supported, unless other material considerations would make them unacceptable, taking into account the building's heritage significance, context, use etc. Furthermore, the policy does not require the retention of existing buildings; it aims to encourage the retrofitting of these buildings, where they are to be retained.	None.

Policy R4

POLICY	R4

COMMENT SUMMARY	OFFICER RESPONSE
Support, no comments.	N/A

POLICY	R4
All respondents **raising objections** on this policy/chapter	138.27

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
No acknowledgement of responsibility to tackle climate change by reducing factors leading to congestion and emissions. Policy and goals are ineffective without reduction of car parking provision at Headington Hospitals (JR, Churchill, NOC). Excessive staff car parking is responsible for air quality, health and environmental issues caused by daily traffic congestion in Headington. Total parking provision is double that of the entire city centre, 70% of which is for staff. Peak shift times correspond to peak traffic	Whilst addressing air quality can have important benefits for mitigating climate change by limiting transport related carbon emissions, this is not the focus of the policy. Parking provision at the hospitals, and addressing congestion more generally, are also not the focus of the policy, although measures taken to reduce air quality impacts are of course potentially related. Other policies address these topics as far as they are able to through the Local Plan (though it should be noted that the Council is not the	None.

congestion, and low-cost staff permits encourage car usage. Suggested changes: inclusion of environmental, social and health benefits of reducing traffic, not just air quality, mandatory reductions in on-site car parking, recognise negative contribution to global warming, no net increases in parking, 'mitigation' replaced by 'reduce' or net zero.	Highways Authority), e.g. policies C6-C8 in chapter 7 which address travel plans, car parking and cycle parking provision as well as site-specific allocation policies in chapter 8.

POLICY	R5				
All respondents **raising objections** on this policy/chapter	57.1	119.1	140.4	138.28	104.16

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The policy is too weakly/vaguely worded, fails the tests of soundness, and does not implement strong enough protection to at least maintain the existing state of watercourses in the city (e.g. Northfield Brook and downstream River Thames), of which the Council also has a responsibility.	The Local Plan 2036 does not include a separate water policy, but we have sought to introduce one for this new Local Plan specifically because we have identified the serious and ongoing concerns in relation to both water supplies and water quality. Water resources/quality is impacted by a variety of pressures, including new development (over which the Local Plan has a role) but also other factors e.g. the way land is managed, climate change etc. This means that the Local Plan is one of the tools for protecting watercourses, in that its policies can seek to ensure water is protected and that any potential impacts arising from new development are sufficiently mitigated, however, it is not the only one. The	None.

	responsibility is shared across multiple bodies (e.g. Thames Water, the EA, individuals). We are comfortable that the proposed policy meets the tests of soundness and responds appropriately to the need for protecting the water environment within the limits of what can be required/influenced through planning policy.	
The policy and the SA place a misguided level of trust in Thames Water to deliver on their promises, despite the ongoing uncertainty of delivering upgrades (which won't be complete until 2030) in context of their ongoing financial struggles and replacement of OFWAT. There is no justification set out as to when or how Thames Water will be able to adequately treat the increased sewage from any new development in Oxford. The policy should be based on a realistic appraisal of Thames Water's actual ability to treat sewage at the time any planning application is made and should take into account that little improvement is expected in this regard until 2027 at the earliest with 2032 the more likely completion date under current Thames Water proposals.	The Council has been regularly engaging with both Thames Water and the Environment Agency to resolve ongoing challenges facing the Oxford Sewage Treatment Works (STW), located just outside the city boundary. An announcement, published in 2025 regarding how the upgrades for the Oxford STW scheme had been agreed. The announcement set out that the Environment Agency "*ensured that Thames Water has now presented a clear, fully costed and funded programme of work, providing the confidence and certainty that water quality will be protected and communities in the area will have the water services they need, while allowing projected growth to come forward".* Thames Water publishes regular updates on the progress of the works on their website.	No further action proposed.
The Local Plan should require a Foul and Surface water drainage strategy for proposals of 10 or more dwellings (current threshold of 100 is too high).	The requirement seeks to ensure the largest developments go further to demonstrate how foul and surface water will be managed through a strategy because they could have particularly significant impacts. It is acknowledged smaller scale development can still have an impact and	No further action proposed.

	the policy still sets other requirements which seek to ensure that proposals of smaller scales of development demonstrate how they have mitigated impacts that are within their control.	
Policy R5 should set out that each planning application should be dealt with on its merits so far as the issue of likely discharge of foul water is concerned.	This is already the case for any planning application, irrespective of the policy, it does not need to be set out explicitly for this policy in particular.	No further action proposed.
All new planning applications must address the issue of water shortages which is clearly going to be a real problem during the timeline of the draft plan.	We agree that addressing future water supply is an equally important issue to water quality. The policy seeks to address both issues within the constraints of what can be influenced through the development process. The policy sets water use limits as far as is allowable through national policy restrictions on technical standards (i.e. by imposing the more stringent 110lppd water use limits). The policy also references other important water saving measures that proposals should explore, which will depend on the context of the site and what is proposed.	No further action proposed.
In relation to the improvements at Sandford Treatment works, the stages reached in the promised improvement works and the results from this should be monitored by the Council and the results made available for public inspection as part of the policy.	Whilst the upgrades to the sewage treatment works are an important step in addressing water quality concerns in the city, they are not directly in the control of this policy or the Local Plan and as such this would not be the correct mechanism through which to undertake the monitoring suggested. The Council continues to engage with Thames Water on the progress of the works separately, however.	No further action proposed.
The Policy should be revised to include wording to reflect existing legal means to restrict development where there is a likelihood of	As set out above, a scheme of improvements to the Oxford Sewage Treatment Works is in progress and this is expected to ensure that the	No further action proposed.

increasing the amount of dumping of sewage into our rivers and watercourse (e.g. by imposing suitable planning conditions at the stage where applications are approved by restricting for example the occupation of premises until certain criteria are met). The policy needs to be stronger in wording to link future development to the completion of committed upgrades at Oxford STW by Thames Water. This should include suitably worded Grampian conditions, preventing development above ground (this would allow enactment of the relevant planning permission but only to ground level) for all new planning applications discharging foul water to Oxford STW, until all committed upgrades at the works are completed by Thames Water, with confirmation provided by the Environment Agency. Without such conditions being imposed, OCC will fail to link new developments to necessary increases in sewage treatment capacity in any meaningful way, ensuring the continued decline in quality of local watercourses.	STW is able to accommodate the additional growth associated with the Local Plan. The Local Plan policy sets out that planning permission will only be granted for new development that utilises water supplies prudently and protects water quality. As with many policies in the Local Plan, if there is an impact from a development that could be mitigated through condition, the Council would consider this where appropriate. This is regularly the case with policies in the current Local Plan, such as in relation to dealing with contaminated land, it does not require this to be explicitly stated in each policy.	
Thames Water emphasize it is important to consider the net increase in water and wastewater demand to serve the development and also any impact that developments may have off site, further down the network. The new Local Plan should therefore seek to ensure that there is adequate water and wastewater infrastructure to serve all new developments. They recommends that developers engage with them at the earliest opportunity to establish the following: The developments demand for water	As set out above, where it is identified that an impact from a development could be mitigated through condition, the Council would consider this where appropriate, this does not need to be explicitly set out in the Local Plan. Equally, Thames Water, as a statutory consultee, is consulted on planning applications and is able to respond with recommended wording on conditions where a particular objection is identified.	No further action proposed.

supply and network infrastructure both on and off site; The developments demand for Sewage/Wastewater Treatment and network infrastructure both on and off site and can it be met; and The surface water drainage requirements and flood risk of the development both on and off site and can it be met. Additional wording (*see full rep from rep ID140*) has been provided as suggested mods to Policy R5 which includes: - setting out that permissions resulting in need for off-site upgrades will be subject to condition to ensure occupation aligned with the infrastructure upgrade, and - Wording to encourage developers to engage with Thames Water early, and also setting out that where capacity constraints are identified, the authority will where appropriate apply phasing conditions to ensure upgrades delivered ahead of occupation.	Following on from feedback at Reg 18 stage, we have incorporated wording into the supporting text of the policy that encourages applicants to engage with Thames Water at the earliest opportunity to establish the requirements for water supply and sewage/wastewater treatment network infrastructure both on and off site and ensure that these are planned for in due course. As such, we do not consider that these mods are necessary.	
Thames Water set out that Local Authorities should consider both the requirements of the utilities for land to enable them to meet the demands that will be placed upon them. This is necessary because it will not be possible to identify all the water and wastewater/sewerage infrastructure required over the plan period due to the way water companies are regulated and plan in 5 year periods (AMPs). Additional wording (*see full rep from rep ID140*) has been provided as suggested mod to Policy	We have reviewed the proposed wording and are unclear on what added benefit this would bring. Policy S3, which Policy R5 also cross-refers to in its supporting text, already sets out clearly that *The Council will work with infrastructure providers, developers and other key stakeholders to support the delivery of the infrastructure necessary to enable the development set out in the Local Plan.* This	No further action proposed.

R5 which would set out when development/expansion of water supply/waste water infrastructure would be permitted.	would include infrastructure associated with water supply or treatment of wastewater.	
Thames Water support the 110lppd water use limits referenced in the policy, which will help respond to the water stressed nature of the area. It is understood that this requirement is only applied through the building regulations where there is a planning condition requiring this standard. A condition should be attached as standard to all planning approvals for new residential development in order to help ensure that the standard is effectively delivered and suggest that Policy R5 should be amended to state: *"…..Planning conditions will be applied to new residential development to ensure that the water efficiency standards are met….."*	The second bullet point of the 'Policy Implementation' section already sets out that '*the requirement will be subject to a planning condition*', which addresses this comment.	No further action proposed.
Ineffective as Building Control, not Planning inspect this. A lot of this is in the Building Regulations, so pointless to repeat it here, at least as a policy.	The policy is required in order to ensure that the more stringent water use standards allowed for through Building Regs is enforced on planning applications. The policy also seeks to ensure applications consider wider measures as part of the design process that can support conservation of water resources and mitigates impact on water quality in the wider environment.	No further action proposed.
The Environment Agency have made representations against policy R5, these are addressed through the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy R6

POLICY	R6

POLICY	R6		
All respondents **raising objections** on this policy/chapter	120.9	89.16	138.29

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Soils need to be protected in a manner commensurate with their statutory status and identified quality, as such it is not considered justified to request such detail for applications at all sites.	All soils provide some level of benefit to the wider environment. The policy already recognises that quality of soil differs however, and, through criterion b, steers applicants towards avoiding impacts on higher quality soils in particular.	None.
It is questioned what the justification is for the proposed threshold of 10m³ for removal or dewater of peat and how this can be effectively monitored across the habitat.	In the absence of national policy guidance in relation to protection of peat, we previously engaged with our heritage team and Natural England to seek views on an appropriate threshold during the development of the now withdrawn Local Plan 2040. The threshold was set at what is considered to be a reasonable and pragmatic level, bearing in mind the	None.

	capacity of officers and also other requirements on applicants. After further review of the policy, including fresh consultation for the Local Plan 2045 Reg 18, we remain of the view that this is a suitable threshold in the context of these considerations. We will keep the effectiveness of the policy under review throughout the lifetime of the Local Plan	
The requirements of criteria a) to d) are often demonstrated in other parts of an application, rather than the Design and Access Statement or Landscape plans, for example, Geo-Environmental Desktop Studies, Construction Management Plans, levels plans. Amends suggested to change references from these docs to something more broad i.e. 'Application Documentation'.	For clarity and ease of reference, it is considered important that the information responding to the policy requirements can be easily located, ideally in one place. Equally, we acknowledge the concerns raised and do not want to force onerous repetition of information across application documentation. As such, we would propose a modification is made to incorporate an additional bullet point into the 'policy implementation' section of the supporting text that makes it clear that applicants can reference other documentation where the requirements are responded to.	**Mod proposed to incorporate an additional bullet point into the 'policy implementation' section of the supporting text as follows:** • *Whilst the policy seeks to ensure that all of the relevant information that would need to be referenced in order to assess how the requirements have been responded to is included in one place, applicants are welcome to make reference to other documentation in their application, such as Construction Management Plans, where applicable.*
Oxfordshire County Council has made a representation relating to Policy R6, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Lye Valley catchment is at risk from same issues that affect other areas of peat. The policy is ineffective as it states within 200m not "where peat reserves on site or downstream can reasonably be suspected". State that there	It is important to note that this is a new policy for the Local Plan, formulated in response to previous consultation feedback identifying this as an important issue for the Council to address. Peat reserves are identified on the	None.

should be identification of Lye Valley, Dunstan Park, Headington Hill north slope (along A40) (Ruskin, Larkin's Lane Field), and other peat reserves as 200m is entirely arbitrary.	policies map, these are informed by British Geological Survey mapping which had previously informed Natural England's own peat maps. This mapping includes areas of the Lye Valley and Dunstan Park. The Council is aware of potential for unrecorded peat reserves elsewhere in the city which could be impacted by development, particularly in proximity to these recorded reserves. In liaison with Natural England previously, and in the absence of best practice, or suitable national guidance, we sought to identify a reasonable precautionary buffer around the recorded peat reserves where applicants would be expected to investigate potential on any undeveloped land (where there is more potential for undisturbed deposits). 200m was determined to be the most suitable size for the context of the city.	
Once a report is written, what are the metrics to permit or not permit the development?	As with other policies in the Local Plan, the policy sets out the requirements and applications will be assessed based upon the information provided in response to these. Some of the criteria will not be of relevance to some applications, depending on the context of the site and the specifics of the proposed development – the policy clearly acknowledges this.	None.

Policy R7

No representations received against this policy.

Policy R8

POLICY	R8
All respondents **supporting** policy	140.5

COMMENT SUMMARY	OFFICER RESPONSE
Support additional text at the end of policy R8. The odour impact study would establish whether new resident amenity will be adversely affected by sewage works, and it would set the evidence to establish an appropriate amenity buffer.	Support is welcomed.

POLICY	R8	
All respondents **raising objections** on this policy/chapter	157.13	85.6

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION

General support of policy but concerns over wording which currently make it unsound and inconsistent with NPPF: - Under criterion a), 'protected' should be amended to "maintained but where any impact occurs it is offset by the benefits ... or through appropriate mitigation". - Regarding criterion b), the test set out at paragraph 116 of the NPPF is that development that results in "severe" highway impacts should be prevented; this should be set out clearly in the policy. - The second set of criteria in the policy simply comprise a generic list without any targets or standards. The policy should set out what is considered acceptable or not.	Suggested amendment to criterion a) is considered unnecessary as mitigation is covered under criterion c) where necessary. Suggested amendment to criterion b) is not considered necessary as Paragraph 116 of the NPPF refers to both "unacceptable" and "severe" impacts. Local policy is required to align with, not replicate, national policy. Regarding the second set of criteria, targets, standards, and what is considered acceptable is highly dependent upon the context of the application site, including location and type of development proposed. Each application would be considered on its own merit. Some elements of the criteria have their own specific policies which set out standards in more detail.	None.
Sport England have made a representation relating to Policy R8, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy HD1

POLICY	HD1	
All respondents **supporting** policy	157.19	159.24

COMMENT SUMMARY	OFFICER RESPONSE
This should be proportionate to the location and setting of the proposed development. Albeit there is overlap with Policy S2 which should be amended.	Comment noted.
This should be proportionate to the location and setting of the proposed development, and also viability considerations.	Comment noted.

POLICY	HD1		
All respondents **raising objections** on this policy/chapter	77.2	78.6	138.3

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION

Most of Oxford inside the ring road and outside the historic centre has good transport links and access to amenities and is therefore highly sustainable. This makes large swathes of the city suitable for much higher density development than is there now. And away from the Conservation Areas it is comprised of low density housing of no distinctive character; and should therefore be suitable for redevelopment at higher density which "creates local distinctiveness" rather than having to kowtow to local character. But we have found that planning officers use Policy HD1 and the local Character Assessments to prevent development that is different in style or scale from the (normally banal and profoundly undistinctive) context. So they use HD1 to trump HD2. The result is that the approaches to Oxford and the outer suburbs do not get developed, and if anything is built there it is low density and low quality.	Policies are not considered in isolation and the plan is to be read as a whole. Applications are also assessed on a case-by-case basis on their own merits. In deciding an application, officers consider the details of a proposal, the relevant policy requirements and the specifics of the location and setting. What may be suitable in one location does not necessarily mean it would be appropriate in another.	None.
The categories of development that are excluded from the requirements to be supported by a constraints and opportunities plan with supporting text and/or visuals to explain their design rationale, is too limited. They should be extended to exclude minor commercial developments which will have limited impacts on their context and do not need to be burdened by such requirements.	The excluded categories include householder applications and changes of use without external alterations. The policy as written allows for sufficiently broad flexibility to cover most works that would constitute permitted development for commercial uses. Comparatively, even relatively small-scale commercial development that goes beyond the criteria for permitted development will have a greater impact than householder applications.	None.

Is ineffective, as the vast majority of applications, namely, householder, are excluded from the necessity to provide even a basic rationale for the proposal.	Householder applications are usually at a scale that is small enough not to require assessment using the design checklist or would be within the scope of permitted development rights. A number of the principles are also unlikely to be applicable, e.g. urban design requirements. Making this mandatory for all householders would be an onerous approach that would not have significant value.	None.

Policy HD2

POLICY	HD2
All respondents **supporting** policy	129.7 157.2 159.25

COMMENT SUMMARY	OFFICER RESPONSE
The expectation for high density development on gateway sites is supported, specifically densities over 80dph. It be important that the policy framework allows sufficient flexibility through the masterplanning process to optimise the capacity of these gateway sites, consistent with Policy HD2 and the expectation for efficient use of land.	The support is welcomed and comment noted.
Building at appropriate densities is an important component of sustainable development. Making efficient use of any land in the City is a priority. This	The support is welcomed and comment noted.

policy must be read in relation to the HD6 on building heights and our comments on changing net zero carbon to low carbon designs to align with the NPPF.	
The aims of this Policy are supported, including building at appropriate densities as it is an important component of sustainable development. Making efficient use of any land in the City is a priority.	The support is welcomed.

POLICY	**HD2**			
All respondents **raising objections** on this policy/chapter	15.3	57.11	87.8	138.31
	47.13	77.3	114.7	

SUMMARY OF ISSUES RAISED	**OFFICER RESPONSE**	**PROPOSED ACTION**
Not effective as insufficient recognition of heritage assets and proportionality. Add to policy: Proportionate design to recognise heritage assets, listed buildings and their settings.	The plan contains numerous policies which require high quality design (HD1) and consideration of heritage assets (HD3-5) which must be considered, where relevant, alongside Policy HD2.	None.
CPRE support this policy and the need to maximise density and the proposed/ suggested density targets stated within it. However, this Policy and these densities do not seem to then translate to the housing numbers on site specific allocations given later in the Plan. An exercise is required to cross reference the density targets in this policy against the	Allocated Sites have their own bespoke policies in the plan, which contain site and context–specific guidance on appropriate type and quantum of development and design requirements – including density.	None.

density and home numbers by site allocation , with adjustments made where these are too low.		
Not justified as the policy doesn't go far enough in requiring increased density on sites. The policy should require that outside the Conservation Areas any new development should be a minimum of three storeys and any development along the arterial roads should be a minimum of four storeys.	Density figures in the plan, unless otherwise indicated, are considered as indicative and minimum levels. In the case of site allocations, each site was individually assessed through an urban design led process. Individual schemes proposing higher densities than the indicated minimum figures would be assessed on their merits.	None.
Not justified as conflicts with Policy HD6 (Views and Buildings Heights) which sets out that planning permission will only be granted for development that will retain the special significance of views of the historic skyline of the Historic Core Area. Comment encourages the Draft Local Plan to recognise that large-scale redevelopment and regeneration projects need to acknowledge existing context but also can create new transformative contexts.	Development proposals can make efficient use of land and comply with Policy HD6 (Building Heights and Views), as such there is no conflict between these policies in principle. Applications will need to be assessed on their own merits and will need to be demonstrate how policies HD2 and DH6 are met in each specific instance.	None.
Not justified and not consistent with national policy as it is not appropriate for the policy to prescribe densities solely on the basis of broad locational categories. The appropriate density of any given site should be determined through a site-specific assessment that takes full account of its spatial context, opportunities, and constraints.	Density figures in the plan, unless otherwise indicated, are considered as indicative and minimum levels. In the case of site allocations, each site was individually assessed through an urban design led process. Individual schemes proposing higher densities than the indicated minimum figures would be assessed on their merits.	None.
Not effective as the policy fails to recognise the inefficiency of car infrastructure, roads, driveways and garages. Developments in	Car infrastructure is not inherently inefficient and therefore can be considered alongside all other elements of scheme design in terms of	None.

heritage areas, or places valued by the community, must be blocked if they cause significant harm, similarly, such developments must be of scale and form appropriate to their context.	whether it represents an efficient use of land, it does not require specific wording. The plan contains numerous policies which require high quality design (HD1) and consideration of heritage assets (HD3-5) which must be considered, where relevant, alongside Policy HD2.

All respondents **raising objections** on	57.12	81.4	134.6	138.32

this policy/chapter	

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Support the intent of the inclusion of point 'e' in the policy but feel that this is not strong and specific enough. Propose the addition of the wording "both outwards from the heritage site and inwards from the surrounding countryside to the heritage site"	Point c) of draft policy HD6 already covers this, requiring proposals to "have a positive impact on important views including both into the historic skyline and out towards Oxford's green setting". It is not considered necessary to repeat this in policy HD3.	None.
Historic England has made a representation relating to Policy HD3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Modifications proposed - Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Note that the draft policy states that 'substantial harm to or loss of significance of a conservation area should be wholly exceptional'. Consider that the word 'wholly' should be removed from the policy drafting as this is not consistent with the wording of paragraph 214 of the NPPF.	The NPPF provides a national context, this wording has been accepted by Historic England. No change required.	None.
In the third paragraph of the policy the statement "Substantial harm to..... of the NPPF can be demonstrated as set out in a heritage statement" is ineffective as it states that the developer's heritage statement is the only input used for determination, not input by the public or any other body, essentially, a developer only has to show it has been through the motions "informed, assessed, responds, explored etc" and that will be sufficient.	This is one required criteria. The draft policy also requires applications affecting a designated heritage asset directly or by affecting its setting to "be considered in line with the approach set out in the NPPF (National Planning Policy Framework) paragraphs 207-221 (or updated equivalent), whereby the level of harm will be assessed and weighed against the public benefits of the	None

Conservation Areas, as Designated Heritage Assets, are not up-to-date and ineffective as many have large sections destroyed, so should be drawn to new boundaries, removing areas that no longer have anything to preserve such as Headington Hill. Almost all development in Conservation Areas will confer substantial benefit, by for example, providing more housing which will always be claimed to be a "substantial public benefit" so Policy HD3 becomes ineffective – there is no recognition that similar benefits may be realised elsewhere for less social, cultural and heritage loss. It is contrary to NPPF Para 201 which states several tests to be met which are omitted in the policy.	proposal, and the relevant test in the NPPF applied in that context". The policy wording requires compliance with the NPPF paragraph 201, stating that: *Where a proposed development will lead to substantial harm to or loss of the significance of a conservation area, planning permission or listed building consent will only be granted if all of the criteria in paragraph 201 (or equivalent in any update) of the NPPF can be demonstrated, or unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss, which should be set out in the heritage assessment.* Appraisals have been written for a number of conservation areas, some of which are currently being updated. These documents detail the locations and characteristics which contribute to each area's architectural or historic importance, as well as opportunities for enhancement. No change required.	

2996

Policy HD4

POLICY	**HD4**	
All respondents **supporting** policy	98.7	139.11

COMMENT SUMMARY	OFFICER RESPONSE
Overall policy is sound in providing a degree of protection given to assets such as the Milham Ford School building, which is on the Oxford Heritage Asset Register, is welcomed. But note with concern that protection may not be sufficient. See our comments on site SPE11 Oxford Brookes Marston Road Campus further in the New Marston (South) Residents Association submission.	Support noted.
General support.	Support noted.

POLICY	HD4			
All respondents **raising objections** on this policy/chapter	81.5	120.5	138.33	159.12

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Historic England has made a representation relating to Policy HD4, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Modifications proposed - Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Draft policy wording states that "A non-designated building or group of buildings, monument or site, place or landscape will be considered a local heritage asset if it has local interest, value, and significance." Further it states that "These assets may be identified in a number of ways such as through the Oxford Heritage Assets Register, conservation area appraisals, or the planning application process."	Details about the Oxford Heritage Asset Register and qualifying criteria are provided on the City Council's website. No change is needed.	None.

Policy would be more effective and assist developers and decision takers alike, if some criteria upon which non-designated heritage assets pertaining to be 'local heritage assets' can be classified. Suggest a similar approach could be taken to that contained at Appendix G of the Cambridge City Local Plan (2018).		
Ineffective, as the goal seems to write a report rather than define the degree of harm that would acceptable – so "due regard, informed by, recording" give NO protection at all to these, this is not justified.	Proposals are to be considered on a case by case basis, and consideration criteria are set out in the policy. No change is needed.	None.
Policy HD4 is not consistent with NPPF paragraph 216, which refers to the "effect of an application on the significance of a non-designated heritage asset … in determining the application". Amend the policy to change references to 'local heritage asset' to 'non-designated heritage asset'. Amend third paragraph of Policy HD4 to read: "In determining whether planning permission should be granted for a development proposal that affects a *non-designated* [local] heritage asset *a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset.* [consideration will be given to the significance of the asset the extent of impact on its significance, as well as the scale of any harm or	The references to 'local heritage asset' will be amended to be consistent with terminology used in national policy. The wording for the approach to assessing the impact of development proposals on non designated assets is considered to be in line with national policy and a change is not necessary.	Modification to amend references to 'local heritage asset' to 'non designated heritage asset'. No other action required on wording of policy.

loss to the asset as balanced against the public benefits]".

	87.9	105.5	120.7	157.21	159.26

objections on this policy/chapter	

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Not effective, justified or consistent with national policy as the policy does not clarify that a view is not a heritage asset and does not carry the same significance as a heritage asset does, as defined in the NPPF.	Views into and from within the city are important elements of the setting of heritage assets. The collection of buildings that make up the 'dreaming spires' are considered a heritage asset in their own right, and they do have special significance. There is sufficient detail in the supporting text that provides clarity to the policy, and there have been no objections to this specific wording from Historic England.	None.
Not justified or consistent with national policy because the policy treats any level of harm - regardless of scale, context, or mitigation - as automatically unacceptable. This approach conflicts with national policy and established heritage planning principles. This policy wording does not mention whether it can be demonstrated that the substantial harm or total loss to a designated heritage asset is necessary to achieve substantial public benefits that outweigh that harm or loss, as set out in the NPPF (Paragraph 214). Draft Policy HD6 should be amended to reflect the approach in the NPPF by enabling a proportionate assessment of harm and the weighing of that harm against public benefits.	The policy sets out guidance to inform design decisions about heights and to enable an understanding and detailed assessment of the impact of heights.	None.

Not justified as the policy make clear which part relates to sites within the Historic Core Area and designated View Cones, and which part of the policy relates to proposed 'tall buildings', or if necessary separate out the policy into 2 different policies.	The policy does not only refer to central Oxford and the dreaming spires. Although the policy is in several parts, it is considered that this is clear, especially as the second part starts 'Applications for any building that exceeds 15m...'	None.
Not justified because the policy refers to specific software (VuCity). It is not appropriate for a Local Plan to push a particular brand of software. This reference should be deleted and the policy simply refer to the use of an appropriate 3D model.	The LPA has a licence with VuCity software to view the submitted 3D models. Alternative or generic software may not be compatible with the Council's systems which is why the policy is specific in its requirement for VuCity.	None.
Not justified because we'd like to see a distinction made – either in this policy or its supporting text – between 'views' and historic 'setting'.	Policies HD3 and 4, in particular do carefully consider the setting of heritage assets and may also be of relevance, alongside Policy HD6.	None.
Not effective as it appears to only refer to central Oxford and the dreaming spires, not views for example into, and out of the Old Headington Conservation area, the language needs to be clearer that it applies to ALL of Oxford where views exist either in or out, regardless if listed as view cones or not.	The policy states that all developments will need to address their impact on character and views, not just those within the Central Core. Although the policy is in several parts, it is considered that this is clear, especially as the second part starts 'Applications for any building that exceeds 15m...'	None.

POLICY	HD8
All respondents **raising objections** on this policy/chapter	77.4

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The final sentence should be removed. The rest of the policy places measurable limits on what is permitted to prevent buildings being overbearing. Then the last sentence gives officers a subjective catch-all if they think something is a bit too big. It is unnecessary and too open to interpretation.	The impact created by a building on its adjoining environment depends on the setting and context, which is not always replicable in all situations. As written the policy makes allowance for the use of planning judgement to determine if a building is appropriate for its location.	None required.

Policy HD9

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
NHS Property Services recommend the inclusion of a comprehensive policy on healthy places with specific policy requirements to build	Having reviewed carefully the details of the requested policy, it is not considered that it adds anything to the plan that isn't already covered by another policy, and which wouldn't	None.

for healthy places, with criteria cross-referenced to other policies with appropriate level of further details in the supporting text. Extensive details of the requested draft policy are included in the representation 124.6	just add another layer of cross-referencing. The HIA policy already tries to bring together health impacts, requiring a submission that considers in the round impacts of proposals on health. The proposed policy would repeat that unecessarily, as well as simply highlighting through cross-referencing policies already in the Plan.	
The Chapter overlooks New Marston, a local centre with over 7,300 residents. New Marston has extremely limited facilities, with a pharmacy and some local shops, but no health centre, supermarket, leisure or community facilities. More housing means more people unable to access opportunities within a 15/20 minute walk. A bus at least twice an hour and within 400m should not be considered sufficient, and the destination of the service considered, as frequent changes to get to destinations are not acceptable. For example, the X3 that services New Marston and goes to the city centre does not serve the district centres of Headington or Summertown-reaching those by bus requires a change.	New Marston Local Centre is defined in Policy C1 and shown on the Policies Map and has a defined active frontage (Policy C2). This is to help protect what is there. Other policies in the chapter protect a variety of local facilities and set out criteria for where new facilities are proposed. Discussions with Oxfordshire County Council helped inform the criteria for a suitable bus service whereby car free developments would be accepted. The X3 from New Marston does serve the city centre, which has a wide array of facilities.	None.

SUMMARY OF ISSUES RAISED	**OFFICER RESPONSE**	**PROPOSED ACTION**
The area around the Ozone Leisure Centre/Kassam Stadium should be designated as a local centre as and when likely anticipated developments take place.	This site currently has some commercial leisure and town centre uses, but these are not local facilities that serve people locally and they are not currently well-connected by public transport. The uses are heavily car dependent and attract people to travel by car from a wide area. Other policies do protect leisure and cultural uses generally, but it is not considered appropriate to designate it as a town centre. As the character, accessibility and function of the area changes, this will be reviewed.	None.
Tight sequential and centre policies may constrain necessary non-central economic growth. The sequential approach is applied to all 'town centre uses'. At the same time, Policy E1 channels almost all new employment to key employment sites and city/district centres. This approach could unduly limit beneficial decentralised economic development (e.g.	The approach of focusing on town centres and requiring a sequential test outside of these is important to ensure sustainable patterns of development. If suitable sites are not available within centres, then it may be possible for use outside of the centres to be justified in accordance with Policy C1, assuming criteria a-c are met. Policy E1 does introduce further constraints on	None.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
uses) in otherwise sustainable, accessible locations, especially if suitable sites in centres are not available.	employment uses in line with the strategy, which is to limit those uses to city and district centres, or existing sites in lawful use for those uses. This is important to ensure housing can be prioritised in other locations.	
Retail impact assessment threshold is relatively low at 350sqm, and significantly below the 2,500sqm threshold in the NPPF. It is understood this maintains the same threshold as the OLP36, but no up-to-date reasoning has been provided. It should be clear it applies only where there is an uplift in retail or leisure floorspace that requires	The overall aim of the plan is to ensure sustainable development. Key to this is ensuring sustainable travel patterns. Location of uses that attract people, such as retail, is key to their accessibility. Any proposals in less accessible locations could be particularly damaging to these aims, so the requirement for retail impact assessments from small out of town units is considered justified.	None.
Provisions should be included for securing contributions from appropriate out-of-centre developments to enhance the robustness of the city centre against out of centre competition more accessible by car.	Criterion b requires that impacts on the road network can be mitigated, and notes that this is likely to include by minimal parking. Criterion a requires good accessibility by walking, cycling and public transport. Development will not be permitted where it will have significant impacts on the road network by generating significant new car use, and therefore it would not be justified to automatically take contributions to enhance the city centre. Instead, potentially harmful developments are prevented.	None.
The criteria should consider the comparative accessibility of out-of-centre locations by non- sustainable modes of transport. Accessibility to the city centre is poor, especially since introduction of the congestion charge. If higher parking is necessary in out-of-centre locations this is a	Criteria a-c are intended to ensure that the accessibility of any out-of-centre location (if it can be justified through the sequential test and is in accordance with other policies) is considered, and that impacts on the road network are mitigated. Policy C8 regarding parking will still apply and good	None

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
locations. Higher public benefits are needed to outweigh the policy conflict. There should be a clearer retail hierarch, with the City Centre differentiated as the top tier. There should be reinforcement of the provisions for resisting out of centre development that would have a comparative trading advantage due to the availability of dedicated and prximal car parking and freedom	accessibility by walking, cycling and public transport is still required. The other centres are not considered out-of-town locations and are able to support a wide range of uses. They are all locations highly accessible by sustainable modes, with limited car parking. Further more, the traffic filters do not only affect the city centre.	
Oxfordshire County Council has made a representation relating to Policy C1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Headington District Centre should not include Bury Knowle Park as most of the uses are clearly inappropriate for Core GI. The primacy of G1 must be stated or a large building could be built in the park and conform with C1 (and remove Bury Knowle Park from the district centre anyway). The centre should include the backstreet behind Windmill Road where	Bury Knowle Park is protected by Policy G1 in line with the rest of the Core GI network. This is not overridden by the district centre boundary. The park was included as it is a key attraction of the local centres and includes community facilities such as the library. The district centre does not need to expand to include any facility or shop within the vicinity of it.	None.

Policy C2

POLICY	C2
All respondents **supporting** policy	139.14

COMMENT SUMMARY	OFFICER RESPONSE
Support reference to increased residential development, including upper floors of commercial premises; it is considered that this should be echoed in other housing-related policies to reinforce the contribution that provision of residential units in city and district centres could make toward the delivery of dwellings in sustainable locations. Support reference to public realm.	Support is welcomed. It's not considered necessary to repeat parts of the plan in multiple places.

POLICY	C2			
All respondents **raising objections** on this policy/chapter	78.2	89.19	134.12	136.5

3011

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
It should be confirmed that out of centre developments will be required to contribute to criterion f) through S106 obligations. Out-of-centre developments should contribute to public realm enhancements in the centre.	There is not considered to be justification for requiring developments in other district centres to make contributions to public realm enhancements in the city centre.	None
The threshold for the % of Class E uses in the frontages will need to be clearly justified. Retention of existing threhsolds that are a snapshot of current trading profile and market circumstance may not facilitate the essential and rapid response to dynamic retail and leisure markets and could impact negatively on the prospects of the centres. The ongoing repurposing of class E floorpsace within the city	The thresholds are not set at current levels, but above them, allowing for some change. However, it is considered important to guide uses in frontages, because the type of activity is important. Ensuring there are commercial uses (use class E) that people want to visit is important to the vitality of the centres. Also, these are the locations these uses are directed to, and they should be in these accessible	None

centre demonstrates oversupply. New build retail floorspace will simply compete for existing tenants. Provision of food and drink (Class E(b)) is at saturation point. Further transitioning away from Use Class E should therefore be allowed. The permission granted for the Clarendon Centre is a manifestation of this essential process of change and renewal. Amend the policy to confirm that the development criteria will be applied flexibly and only where justified by the development proposed. It is considered that wording should be inserted into the emerging policy to reflect that, *unless otherwise agreed with the local planning authority on the basis of site specific circumstances, the provisions set out under the active frontages can be considered flexibly*. This would enable the delivery of successful active frontage through positive masterplanning and place making.	locations, with other facilities and services available to ensure vibrancy and to allow linked trips. Use Class E is very wide ranging, and that in itself allows very significant flexibility. There is no evidence that food and drink is at saturation point, because if it was there is a very wide range of other Use Class E uses it could transition to, including some employment use. Also, as the thresholds are exceeded currently, transition away from Use Class E would not be an issue). There is no need to allow free transition away from Use Class E, and this would have a potentially very negative effect on the centres. Furthermore, the active frontages apply to the ground floor only.	
Oxfordshire County Council has made a representation relating to Policy C2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Any use of thresholds is not realistic for residential mixed-use development such as Templars Square, where the ground floor will also need to serve significant residential development on upper floors. Instead, the approach should be design-led, as well as recognising that residential ground floor	Creating frontages that are 'active' from a place making perspective is one aspect of ensuring successful centres. However, it is not the only important consideration, and the mix of uses is also important. Residential entrances may create some activity, but a successful district centre cannot be made from a high proportion of	None

entrances are active. The priority should be focused on maximising active frontages to create a vibrant place through positive place making and not by prescriptive targets, which may have other unintended design consequences.	residential uses- it must have facilities and services that attract people from outside to use the centre. In the specific case of the Cowley Centre, which is to be significantly redeveloped, the areas of frontage will not remain the same, and the Policy SPS16 is clear about this. There is significant and sufficient flexibility to ensure a large amount of additional residential, whilst still protecting the basic function of the centre as a district centre.	

Policy C3

3013

POLICY	**C3**
All respondents **supporting** policy	30.13

COMMENT SUMMARY	**OFFICER RESPONSE**
Strongly support the emphasis on retaining and where possible improving facilities available for public use (would like more emphasis on these being affordable if possible).	Support is welcomed.

POLICY	**C3**		
All respondents **raising objections** on this policy/chapter	134.8	124.5	85.1

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The policy seeks to protect small shops that are considered as community assets in the use class order. It should be clearly articulated that this does not apply to city centre sites, or successful redevelopment could be prevented from coming forward, e.g. on the Nuffield sites.	To meet the definition in Use Class F2, a shop needs to be 280sqm or less and at least 1,000 metres from a similar facility. This definition will rarely, if at all, apply in the city centre (or any district centre).	
While it is unclear whether healthcare facilities are included within the Local Plan's definition of community facilities; policies aimed at preventing the loss or change of use of these facilities may have a harmful impact on the NHS's ability to ensure the delivery of essential facilities and services for the community. The NHS requires flexibility within its estate.	Most health care facilities are Use Class E or C2 (hospitals). The supporting text to this policy is clear that it relates to Use Class F2. There is enough flexibility in the plan to give flexibility to the NHS in the way its estate is managed. The important matter is that needs continue to be met and key services delivered.	None.
Sport England has made a representation relating to Policy C3, which is summarised and responded to in the Statement of Common Ground. Policy C4

POLICY	C4
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	C4

All respondents **raising objections** on this policy/chapter	89.2	160.3	85.2	138.38

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The policy and criteria is supported in principle, however academic institutions exclusively for 18+ are excluded from the policy whilst there is no alternative policy allowing objective assessment of the need for new facilities. The caveat should be removed, or a university-specific policy proposed.	Policy C4 is intended to apply to, and is only appropriate to, educational establishments that include students up to 18+. The Policy would not apply well to the universities. The types of development the universities bring are wide ranging, and often on campus sites. They include student accommodation and research and development facilities of various types, not just purely academic facilities that are self-contained. Furthermore, it is the case that the universities have a global reach as seats of learning, not just a local one. They cannot be assessed against criteria including local need and requirement. A very wide range of policies in the plan may apply to university developments, and the nature of each individual proposal will need to be considered against the relevant generic policies or site allocations. University developments often have complex and wide-ranging impacts and also very significant benefits, beyond just the local, which cannot be summed up in one policy. The Oxford Local Plan 2036 does include a policy for health and education (Policy E2), but Policy E2 is generally supportive, says that proposals should show how the wider policies of the Plan	None.

	are met, and links to the student accommodation policy. It was not considered necessary to take this forward into the Oxford Local Plan 2045.	
The City Council has, at every single local plan, attempted to block any rivals to oxford University or other institutions trading on the Oxford moniker. This exception is unjustified as essentially the universities can do whatever they want, without giving access or use to the citizens of Oxford. Remove the unjustified phrase 'the proposal will meet local needs or an existing deficiency in provision or access', a backdoor method of banning new institutions, and the exception that the universities do not have to provide benefit to Oxford.	There is no attempt in the plan to block any rivals to the University of Oxford or other institutions. The policy does not apply to educational establishments for those only 18+, as these do not meet local needs. Therefore, all institutions for those 18+ are on the same footing. There is no reason for all those for students under 18 not to meet criterion b- which refers to local needs, or a deficiency, or supporting regeneration.	None.
Oxfordshire County Council has made a representation in relation to Policy C4, which is summarised and responded to in their Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

COMMENT SUMMARY	OFFICER RESPONSE
No comment made.	Support is welcomed.
Support that new visitor and cultural attractions within the city permitted if comply with these policy requirements.	Support is welcomed.

POLICY	C5
All respondents **raising objections** on this policy/chapter	134.9

3017

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Enough flexibility is needed. Supporting text should be incorporated that is flexible towards protection and retention of cultural venues where site allocations are supported for comprehensive mixed-use redevelopment, as well as an additional bullet point included in the policy itself as a reason loss would be supported.	The site allocations comply with the plan strategy and detailed policies of the plan- they are not considered reasons for exceptions. That a site is mixed-use and comprehensive redevelopment is expected is not a reason that cultural venues become less important to retain. Mixed-use redevelopment is likely to give many opportunities for reprovision, potentially in a different way.	None.

Policy C6

POLICY	C6
All respondents **supporting** policy	30.14

COMMENT SUMMARY	OFFICER RESPONSE
Overall there should be more emphasis on encouraging the provision of improved cycle lanes especially those solely for walkers/cyclists, and not for vehicular traffic.	Noted. Policy C6 requires Transport Assessments to prioritise pedestrian and cycle movements, both within the scheme and within neighbouring areas.

POLICY	C6			
All respondents **raising objections** on this policy/chapter	12.3	59.1	89.21	138.39

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The NPPF (para 161) requires that the planning system should "shape places in ways that contribute to radical reductions in greenhouse gas emissions….and support renewable and low carbon energy and associated infrastructure". As written, the policy does not adequately recognise the importance of transport emissions to the radical reductions required by the NPPF, the national targets in the Climate Change Act and the City's own targets. These	The spatial strategy in policy S1 addresses the reduction of transport emissions, and is not considered necessary to repeat in this policy.	None.

will require almost complete elimination of direct use of fossil fuels in transport within the city on the timescales of the plan.		
Policy should be made more robust - - at the end of the first sentence add 'as soon as possible as the development proceeds and measures have been taken to ensure the need to travel by car is minimised' - references to pedestrian and cycle movements and public transport should be higher up the list of factors to be considered - they should be a) and b) not c) and d) - in existing d) after 'access to high quality public transport is facilitated 'add 'and, where appropriate, funded for a specified period'	This list is not hierarchical and all factors should be considered.	None.
Oxfordshire County Council has made a representation relating to Policy C6, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
A typical bureaucratic view of the world, plan=delivered. b) "…residual .. impact" means what? N.B. no specific change so put all in general section c) "and within neighbouring areas" is ineffective as it is outside of the developer's control. Ineffective, as none of above actually reduces anything and implies an increase in traffic is acceptable which it is not as roads are already 100% bandwidth utilised.	Policy C6 seeks to ensure that any traffic impacts from development proposals are appropriately addressed and mitigated where appropriate. The policy has been drafted to align with the wording in NPPF. The draft policy does not make any direct reference to the AQMA. The whole of the city was declared an AQMA in 2010 so the comment about the City Centre is not considered to be appropriate.	None.

Ineffective as it muddles planning with delivery of the objectives, the policy must state this must be done, not planned for. Ineffective as it states “is likely to” which is meaningless, and only applies to the City Centre AQMA not the whole city. Ineffective as no metrics given.		

Policy C7

POLICY	C7
All respondents **supporting** policy	159.28

COMMENT SUMMARY	OFFICER RESPONSE
Cycle parking provision is imperative, including parking for E-Bikes and associated charging. The policy allows for lower parking standards where this is justified. This is important as cycle parking standards can result in excessive provision, leading to inefficient use of land, a proliferation of unsightly cycle stands and adverse impact on heritage assets, particularly in the City Centre. The policy sets out a sensible and pragmatic approach to deal with the issue.	General comments and support noted.

Policy C8

POLICY	C8
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	C8				
All respondents **raising objections** on this policy/chapter	43.11 / 43.10	47.15	59.11	78.3	89.23
	138.4				

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Unsound as not justified or effective, also not legally compliant - Policy overly restricts car parking in new developments, which would have negative impacts on car access for certain groups not allowed for in the policy- e.g. older people, or families with young children. Policy also too prescriptive in its criteria, which does not account for differences in transport access requirements from the development - e.g. in relation to the routing of bus services, the variable conditions such as weather on active travel routes to shops and the use of car clubs. Restricting car parking could impact development viability and have detrimental impacts elsewhere- e.g. overflow parking and impact on house prices. Policy can be made sound by deleting the first two paragraphs under *"Residential Developments".*	The Plan aims to promote and achieve a shift towards more sustainable modes of travel. Policy C8 helps to achieve this aim and is not considered unnecessarily prescriptive. The standards align with Oxfordshire County Council's Parking Standards for New Developments. The viability impacts of low car policies have been tested and explored in the Viability Assessment for the Plan, separately and cumulatively with the other policy requirements of the Plan, to ensure that developments are not made unviable. It is not considered appropriate to remove the first two paragraphs under *"Residential Developments".*	None

Unsound as not effective, and not consistent with national policy, also not legally compliant - Policy is inflexible and not inclusive when considered against the NPPF particularly in relation to balanced sustainable development, parking standards and realistic transport choices - given its impact on those who may need access to a car - e.g. tradespeople, older people, families with children, carers. Policy is not flexible enough to account for differences in local circumstances, e.g. car ownership patterns, needs of specific groups or other circumstances where a site specific assessment may be needed to assess car parking need. Not legally compliant – unclear whether the policy can successfully manage network impacts – e.g. if the low car approach proves undeliverable, leading to displaced on street parking and enforcement problems. Policy can be made sound if it is refined to introduce explicit scope for site specific justification of limited additional parking where necessary to address accessibility needs or demonstrable risks of displacement, and better articulate how CPZ roll out, enforcement and wider transport improvements will be coordinated with the phasing of low car developments.	Comments noted and suggested amendments are not considered necessary. The County Council is ultimately responsible for the introduction/ delivery of controlled parking zones. Enforcement is beyond the scope of the Local Plan.	None
Unsound as not justified - Policy should also refer to the provision and maintenance of car	Policy encourages and allows for car clubs. These operate independently and therefore their provision or	None

clubs, should encourage low traffic neighbourhoods and car-free developments (as well as low car developments). The council should be proactive and identify sites for car-free development.	maintenance cannot be controlled. Low traffic neighbourhoods are beyond the remit of the local plan.	
Unsound as not positively prepared, justified or effective - To be consistent with the objective to sustain and enhance the vitality and viability of town centres, no dedicated parking should be allowed for out-of-centre developments, as this would give them a comparative advantage, accentuated by freedom from the congestion charge, and it will be considered to be in conflict with Policy C8 if the transport assessment indicates that dedicated parking would be necessary to make the transport impacts of the proposed development acceptable.	Criteria a-c of Policy C1 are intended to ensure that the accessibility of any out-of-centre location (if it can be justified through the sequential test and is in accordance with other policies) is considered, and that impacts on the road network are mitigated. Policy C8 works with this and, for all non-residential development, has a starting point of no additional parking except for blue badge and servicing. Any additional parking must not only be justified and minimised, but also demonstrated to have no unacceptable impacts on the transport network. It must be justified in the context of the objective of the Plan to promote a shift towards sustainable travel.	None
Oxfordshire County Council has made a representation in relation to Policy C8, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Unsound as not effective - “scheme” ("will only be granted for residential schemes* that are low car") and “frequency” are not defined. “Seek a reduction” is ineffective. Essentially policy permits an increase in traffic if the developer can prove it is necessary via its transport assessment. As extra staff or residents will be multimodal, at least some will increase traffic, therefore a net reduction is required to compensate.	The word ‘scheme’ is used in the policy in the context of landscaping. There is no reference within the policy to "will only be granted for residential schemes* that are low car", the reference is *"will only be granted for residential developments that are low car"*. The word frequency is used in the definition of criteria for low car residential developments where it is stated *“.....Where the site is located within a 400m walk to frequent (at least 2 an hour) public transport services”.* The policy wording states *“In the case of all non-residential developments, the starting point is for no*	None

	additional parking except for blue badge and servicing only. The Council will seek a reduction for highly accessible sites". No changes are considered necessary.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
A significant number of the site allocations that are made in the Plan include provision for town centre uses. None of the allocations that include town centre uses specify the floorspace quanta for those uses that it is anticipated will be delivered on the respective sites. Moreover, there is no evidence that the potential impacts, including cumulative impacts, on the city centre and other designated centres, have been assessed, nor has the sequential approach been applied. The current evidence is that there is an over-provision of floorspace in town centre uses within the city, as reflected in current initiatives to reduce it through, for example, the	The site allocation policies set out what type of land use or mix of uses is considered to be suitable on a particular site in accordance with national policy and the local plan's own requirements. It takes into account landowner intentions, deliverability and other physical or policy constraints. The emphasis is on the delivery of housing where this can come forward and where there is scope for potential complementary uses these are highlighted. Town centre uses are legally permissible development and the local plan contains appropriate location policies. There is no reason to add further policy constraints or restrictions on their provision on top what is driven by market forces.	None

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
repurposing of the Clarendon Centre. The process of adjusting to the recent events that are acknowledged in the 2023 needs study and cited above is ongoing. The even more recent events that post-date both the 2023 and 2025 needs studies pose further shocks and threats to the already precarious and volatile market circumstances. The planning policy provisions should therefore respond accordingly with a precautionary approach unless and until there is clear evidence of a positive long term outlook.	Evidence is that there is significant need or demand for town centre commercial uses within Use Class E. The Clarendon shopping centre is within Use Class E and even if there are fewer shops coming forward, the majority of the site will still most likely come forward within the lawful use (Use Class E) for commercial uses that are still town centre uses.	
Early engagement between the developers and Thames Water would be beneficial to understand what drainage requirements are on and off site, what loading/flow from the site is anticipated and water supply requirements on and off site. It can take 18mths-3 yeras for local upgrades and 3-5+ years for more strategic solutions. Thames Water offers a pre-planning services for developers to engage and understand what if any upgrades will be needed.	Following on from feedback at Reg 18 stage, we have incorporated wording into the supporting text of Policy R5 that encourages applicants to engage with Thames Water at the earliest opportunity to establish the requirements for water supply and sewage/wastewater treatment network infrastructure both on and off site and ensure that these are planned for in due course. In terms of drainage requirements, the SuDS policy G8 sets out various requirements which seek to ensure an appropriate drainage strategy is pursued.	None
The draft Plan proposes to co-ordinate development with the delivery of social, community and transport infrastructure across four 'Infrastructure Area' quadrants, within which there are 'Areas of Focus' – areas where changes are anticipated over the plan period resulting from new development at existing and	While there is continued engagement and coordination with adjoining authorities, the local plan is required to address policies, designations and allocations that are within the administrative boundary of Oxford.	None.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
proposed allocated sites - including development sites outside the city adjacent to the city's boundaries. The plan states that these are where a wider area consideration [through discussions and co-ordination with neighbouring authorities] will be needed to ensure success. [It is considered] that the draft Plan has failed to include similar opportunities that are evident within the East Infrastructure Area at Headington to build on the growth and regeneration benefits arising from development at Barton Park and strategic allocation at Land North of Bayswater Brook (STRAT13). At Headington, there is further growth potential such as through a sustainable extension to Land North of Bayswater Brook to support growth, regeneration and infrastructure delivery.		
The BOB ICB (now NHS Thames Valley) made general comments on the deliverability on a number of sites in relation to flood risk. Policy I1 Digital Infrastructure to support new development

POLICY	I1
All respondents **supporting** policy	No representations were made in support of the policy.

POLICY	I1
All respondents **raising objections** on this policy/chapter	78.4

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
This policy is too narrowly focused on broadband and data centres associated with new developments. The policy framework in the Plan should be broadened to provide support for the full range of contemporary digital infrastructure requirements, including digital screens associated with existing developments, which are essential to sustaining the vitality of contemporary city centres and ensuring inclusivity and equality. As evidenced through recent planning applications in the city centre, there is pressure for the installation of such technology, many in	The policy already includes requirements for minimising the visual and amenity impacts of digital infrastructure. In combination with other policies of the plan, there are sufficient instruments to ensure that installations are not sited in inappropriate locations or have unacceptable impacts.	None required.

inappropriate locations, which is likely to escalate. A policy approach, with identification of opportunities in key locations for the installation of digital screens working collaboratively with key city centre stakeholders, such as WOA, will ensure that such pressures are managed and this essential infrastructure can be delivered in an appropriate and coordinated manner to support the needs of existing investors and key stakeholders.		

Policy I2 Safeguarding Land for Infrastructure

The East West Rail Company has made comments in support of Policy I2, which is summarised and responded to in the Statement of Common Ground.	The City Council welcomes the support of the East West Rail Company in relation to Policy I2, which includes the requirements of the most recent (November 2025) Safeguarding Direction.
The Environment Agency has made a representation in support of Policy I2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

POLICY	**I2**		
All respondents **raising objections** on this policy/chapter	88.4	88.6	132.1

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The East West Rail Company has made a representation relating to Policy I2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
...In planning for the area the Council should: • Safeguard all existing NGET transmission assets, including overhead lines, underground cables and substations. • Support future reinforcement and expansion, including works required for the Great Grid Upgrade and other strategic national infrastructure projects. • Ensure development proposals located near transmission assets demonstrate that they will not compromise safety, operability, maintenance access, asset replacement, or future network expansion. • Safeguard existing and potential access routes required for the delivery and removal of Abnormal Indivisible Loads (AILs) associated with the construction, replacement and maintenance of transmission-scale equipment, including large transformers at strategic substations. • Resist development or highway alterations that would prejudice, constrain or render impracticable AIL access, unless suitable mitigation or alternative agreed routes can be secured.	The policy has been developed to safeguard land for specific schemes that have progressed to an advanced stage of consent regimes that are outside of the planning process. These are specified in the policy text as the East West Rail (Oxford) and Oxford Flood Alleviation Scheme (OFAS). It is not the intention for I2 to serve as a general safeguarding policy for existing or routinely delivered infrastructure assets, or to safeguard infrastructure schemes that can be delivered through the local authority planning process.	None required.

• Encourage early engagement with NGET to identify and resolve any potential impacts at the earliest possible stage of the planning process.		
Network Rail has made a representations relating to Policy I2, which is summarised and responded to in the Statement of Common Ground. Policy NEOAOF: Northern Edge of Oxford Area of Focus

POLICY	**NEOAOF**	
All respondents **supporting** policy	157.22	157.14

COMMENT SUMMARY	**OFFICER RESPONSE**
Support the policy approach / the NEOAOF policy	Support is welcomed
Support the proposal to identify "infrastructure areas" and 'Areas of Focus', in particular the North Area and Northern Edge of Oxford Area of Focus, which includes the Oxford North/wider Northern Gateway development. This Area of Focus has huge potential to help deliver the housing and economic needs of Oxford, in particular at Oxford North. This was identified in the Oxford Growth Commission's Interim Report. Oxford North is at the heart of the corridors identified and ideally situated to maximise the economic and social returns sought from further investment. Support that higher density development and exemplary buildings can be accommodated in the area of focus to celebrate the area as a gateway and area of innovation. The first phase of buildings at Oxford North, including the Red Hall and workspace buildings along with the central landscaped park have certainly taken this to heart.	Support is welcomed

It is important, as recognised in the supporting text that Oxford City closely aligns with Cherwell District Council to ensure the delivery of key active travel routes through the various allocations in each authority area.	
We support the acknowledgement that this area is adjacent to other urban extension sites in Cherwell District Council. We urge that the Council works proactively to ensure that there is a joined-up approach with neighbouring authorities, particularly in the provision of wider infrastructure.	Support is welcomed.

which is summarised and responded to in the Statement of Common Ground.		
Reference should also be made here to the close proximity of the Green Belt to this AOF and the important role it plays in providing a green gap between North Oxford and Kidlington. It should be acknowledged the Green Belt needs to be protected, to ensure that the gap is not further eroded.	Any erosion of the remaining gap would be due to development outside the Local Plan area, and therefore it would not be appropriate for the Oxford Local plan to reference the need to protect the gap north of Oxford's boundary.	None.

Policy SPN1: Diamond Place and Ewert House

POLICY	SPN1
All respondents **supporting** policy	No representations in support of the policy.

POLICY	SPN1	
All respondents **raising objections** on this policy/chapter	105.13	115.4

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Delete from the policy wording: "minimum number of dwellings to be delivered is 135" and replace with: "The development is expected to deliver around 100 dwellings on Diamond Place and 80 dwellings on Ewert House".	The number of dwellings has been determined by an assessment of the site taking into consideration the site size, physical constraints, and an appropriate level of density that is suitable for the setting. The policy wording is clear that it is a minimum requirement, therefore there is opportunity to deliver a higher number if it meets the requirements of	None

	all relevant policies in the Plan. Not splitting the requirements over the two parcels also provides more flexibility in how it can be delivered.	
The Integrated Care Board (now NHS Thames Valley) has made a representation relating to Policy SPN1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy SPN2: Elsfield Hall, Elsfield Way

No representations received against this policy.

Policy SPN3: Oxford North Remaining Phases

POLICY	SPN3

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Historic England has made a representation relating to Policy SPN3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Natural England has made a representation relating to Policy SPN3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
SPN3 moves away from the vision set in the NGAAP. The priority for Northern Gateway has always been employment first and foremost. Going back to the Core Strategy the site was allocated as a strategic location to provide "modern employment led development with supporting infrastructure and complementary amenities" (Policy CS6 of the Oxford Core Strategy). Furthermore, the NGAAP Inspector assessed the mix of uses at the site and states that the housing component (500 dwellings) "would remain a complementary use to the employment led development" (paragraph 43 of the Inspector's report on the NGAAP). The report goes on to consider if exceptional circumstances existed to remove the land from the Green Belt. The Inspector concluded that the need to provide employment led development which was critical to the knowledge spine amounted to exceptional circumstances to justify the release from the Green Belt. SPN3 goes against this by saying that the "priority use of this site is to deliver the remaining residential commitment from the	Oxford has a well-known urgent need for more housing and demand continues to outstrip supply. This has many impacts on the city and its residents. The supply of available and affordable housing, is therefore a priority of LP2045. The wider Northern Gateway area within which this site is located, is one of the largest areas for residential and specialised employment growth in Oxford, and a rare opportunity for strategic scale growth. SPN3 references that parts of the Oxford North development have already been delivered in recent years, or are under construction, with reserved matters applications to follow for the remaining phases. SPN3 sets out that a mix of uses is appropriate on the remaining phases, and leaves flexibility on the distribution of those across the plots, but it is essential that the commitment to deliver at least 161 more homes (in addition to the 319 homes already delivered at Canalside, to bring the total to 480 homes as per the outline permission,) is borne out, as part of the remaining phases, because of the huge need for more homes in Oxford. Whilst the NGAAP identified the areas for	None

hybrid Oxford North Permission". LP45 also splits up the remaining areas of the NGAAP Spatial Strategy [see NGAAP diagram in reps]. Delete the text in the policy as below: "…[Given the shortage of housing in the City a The priority use for this site is to deliver the remaining residential commitment from the hybrid Oxford North permission.]"	employment-led development, it was always set out as a mixed use development with the opportunity to deliver a strategic scale of homes (500 homes) alongside employment growth to support the knowledge economy.	
Recreational and traffic pressures from additional housing and employment may increase visitor use of nearby meadows (including dog walking) and add to air quality burdens on sensitive habitats, but SPN3 does not explicitly address recreational pressure on the Oxford Meadows SAC or set out specific mitigation (e.g. on site alternative natural greenspace, dog walking routes, or access management). Policy should strengthen Environmental and SAC/SSSI Safeguards. Require that any further residential or employment development under SPN3 demonstrate, via Habitats Regulations Assessment, that there will be no adverse effect on the integrity of Oxford Meadows SAC and nearby SSSIs, taking account of recreational pressure and traffic related air quality. Require provision of high quality on site green space and walking routes (including dog walking areas) designed to absorb recreational use and	Policy SPN3 has been assessed as part of the Habitat Regulations Assessment (stage 2: appropriate assessment). It has been considered in relation to all the conservation objectives at the site. Criterion b) of policy SPN3 sets out a requirement for an increased level of public open space for the residential component of development at the site (15% as opposed to the standard 10% open space provision). This has been agreed with Natural England as part of the stage 2 appropriate assessment contained within the Habitat Regulations Assessment (HRA). The HRA also includes an air quality assessment (which considers all development in the plan, including Policy SPN3). Natural England has also agreed that there will be no likely significant effects at the Oxford Meadows SAC in relation to air quality. While the Northen Edge of Oxford Area of Focus policy does highlight the proximity of the	Update criteria b) of Policy SPN3 to make it clear that this requirement has been included in Policy SPN3 to ensure that there will be no adverse effects on the integrity of the Oxford Meadows SAC. Amend criterion b) as follows: *b) Planning permission will only be granted for developments that provide usable, well designed and good-quality publicly accessible green open space. At least 15% of the total site area must be provided as green public open space; this must be distributed so that at least 15% of any parcel proposed for residential development is green public open space. This is to ensure that there will be no adverse effects on the integrity of the Oxford Meadows SAC.*

thereby reduce pressure on designated meadows.	SAC, we acknowledge however, that policy itself may benefit from some sign-posting to highlight that criterion b) has been specifically included in Policy SPN3 to ensure no adverse effects on the integrity of the Oxford Meadows SAC. *b) Planning permission will only be granted for developments that provide usable, well designed and good-quality publicly accessible green open space. At least 15% of the total site area must be provided as green public open space; this must be distributed so that at least 15% of any parcel proposed for residential development is green public open space. This is to ensure that there will be no adverse effects on the integrity of the Oxford Meadows SAC.* A Source Pathway Receptor Analysis (SPRA) has been carried out which considers the impacts of the development proposed in the plan on the city's network of Sites of Special Scientific Interest (SSSIs). For Policy SPN3, criterion a) sets out the requirements regarding the Wolvercote Meadow and Pixey Yarnton Meads SSSI,	
The cumulative hard surfacing and ground re profiling across all Oxford North phases may affect local hydrology, including pathways that influence groundwater fed meadows in the SAC/SSSIs. SPN3 does not clearly set out how cross phase drainage, infiltration and groundwater management will be handled to	The SFRA does not highlight any particularly high flood risk concerns for this site, neither has the EA raised any site-specific concerns for this site. So these issues would be covered by the general Policy G7 Flood Risk and Flood Risk Assessments.	None

avoid unintended impacts downstream. Given increasing extreme rainfall, there is a need for robust assurance that development will remain safe over its lifetime without increasing flood risk elsewhere and that SuDS and buffers will be sufficient in practice, not just in principle. To be fully justified and effective, SPN3 should explicitly tie remaining phases into a comprehensive site wide flood risk and drainage framework for Oxford North, demonstrating long term climate resilience and no adverse effects on sensitive hydrological receptors, in line with NPPF guidance on flood risk. Clarify Flood Risk and Drainage Strategy Tie SPN3 explicitly to a site wide FRA and drainage strategy for all Oxford North phases, demonstrating long term climate resilience and no increase in downstream flood risk, especially in relation to groundwater dependent habitats.		
Affordable Housing and Viability: The Plan's general affordable housing policy expects up to 50% affordable housing on qualifying sites, subject to viability, with tenure mixes set out in Policy H2. For a strategic site such as Oxford North, local communities reasonably expect a substantial affordable housing contribution. However: • Stakeholders including Wolvercote and Summertown & St Margaret's Neighbourhood Forums have raised concerns that viability	Policy H2 requires 40% affordable housing provision, unless the site is in the Green Belt – those sites are required to provide 50%. This level of provision has been informed by a Viability Assessment for LP2045. SPN3 does not need to reiterate affordable housing requirements because it is covered in general Policy H2 Delivering Affordable Homes. Reserved matters applications for the latter phases will be assessed against the adopted	None

assessments for later phases may lean heavily on developer profit assumptions (e.g. around 16.5%) and conservative land value benchmarks to justify reductions below policy compliant affordable housing levels. • SPN3 itself does not restate affordable housing expectations or require any specific viability review mechanism; nor does it require transparency or independent scrutiny of viability evidence at reserved matters or later phases. Guarantee and Monitor Affordable Housing Delivery Re state that later phases are expected to deliver up to 50% affordable housing in line with Policy H2, subject only to independently reviewed viability evidence. Require that viability assessments be made publicly available (subject to legitimate confidentiality) and include review mechanism clauses so that uplift in values can trigger additional affordable housing or contributions.	planning framework at that time – whether that is still LP2036 (which has the 50% requirement) or LP2045 when that is adopted (with 40% requirement). If a developer is claiming that policy requirements for affordable housing are not viable, then any negotiations will always be on an 'open book' basis and will be informed by assessment from an independent assessor. These requirements are set out in Policy S4 Plan Viability.	
The Northern Edge of Oxford Area of Focus highlights that Oxford North and adjacent sites will significantly increase demand on the A34, A40 and A44 corridors, and emphasises the need for improved walking, cycling, wheeling and public transport connections, including to Oxford Parkway and Cherwell's PR6 allocations. It also identifies the need for contributions to	General Policy S3 Infrastructure Delivery in New Development references the Infrastructure Development Plan (IDP), so this does not need to be repeated in every individual site allocation policy. is a living document that sits alongside the LP2045	None

primary school expansion and other social infrastructure. Despite this, concerns remain that: • Existing congestion and air quality issues on the A34/A40/A44 corridors could be exacerbated by cumulative development (Oxford North, Cherwell PR6 sites and Pear Tree Farm), especially if modal shift targets are not achieved. • SPN3 does not clearly specify what transport mitigations, active travel links and public transport enhancements are required from the remaining phases, or how these relate to the Infrastructure Delivery Plan and the Area of Focus requirements. • The capacity and funding of schools, healthcare and policing to absorb additional population are not spelled out within SPN3, leaving uncertainty about how essential services will keep pace with growth. Policy needs to: - Cross reference the Infrastructure Delivery Plan and Northern Edge of Oxford AoF to specify key infrastructure to be funded from remaining phases, including school capacity, health provision, active travel links and public transport enhancements to Oxford city centre and Oxford Parkway. - Require transport assessments for each major phase to assess cumulative impacts on A34/A40/A44 and local junctions and to secure	Transport Assessments are addressed in general Policy C6 Transport Assessments, Travel Plans and Service and Delivery Plans, and would include multi-modal assessments.	

3041

proportionate mitigation and mode shift measures.		
Improve Design Guidance and Community Involvement: Link SPN3 more explicitly to the High Buildings TAN and any site specific design codes, including indicative height/massing ranges and design principles for edges adjoining Wolvercote Conservation Area and nearby neighbourhoods; Encourage structured community engagement (including with neighbourhood forums) on major buildings and public spaces to ensure that future phases better reflect local character and aspirations; Acknowledge in the supporting text that the Oxford North allocation will be kept under review as the Local Plan is updated to address previous Inspectorate findings on housing need and the Duty to Cooperate, ensuring that SPN3 remains consistent with a sound strategic framework.	Policy SNP3 sets out site-specific design requirements, and general Policy HD1 sets out general principles for high quality design. The Wolvercote Conservation Area is also specifically referenced in SPN3 that proposals must take into account. The Statement of Community Involvement encourages early consultation with the local community for major developments, and this is also highlighted in Appendix 1.1 Design Checklist of LP2045. Dialogue with adjoining authorities is ongoing, and the LP2045 has been prepared fulfilling the Duty to Cooperate (since March 2026, replaced by a requirement to demonstrate collaboration).	None

Policy SPN4: Oxford University Press Sports Ground, Jordan Hill

POLICY	**SPN4**

All respondents **raising objections** on this policy/chapter	36.2	105.14	126.1	85.8	138.41

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The redevelopment would result in the loss of an established cricket facility that is actively used. The plan indicates that development could proceed with a higher number of homes if the pitch is not retained, yet there is no clear evidence this facility is surplus, nor an identified replacement option. Therefore the allocation is not justified and it is inconsistent with national policy, which seeks to protect facilities unless they are demonstrably surplus or replaced with better provision.	The allocation is very clear that the sports facilities are not considered surplus. Therefore, they would need to be retained or replaced. As there is no identified option currently for replacement, the minimum housing figure assumes retention of the cricket pitch on the site. It is only if a replacement option is found that a higher number of homes would be expected than the minimum number stated in the policy (which assumes retention of the cricket pitch).	None
The potential loss of these facilities would represent a disproportionate reduction in cricket provision within Oxford, removing a significant proportion of the infrastructure that supports youth development, women's cricket and inclusive participation. There is no clear evidence that replacement cricket facilities of equivalent quality and accessibility could be delivered within the city to offset the potential loss. Any replacement must also be delivered prior to the loss of existing facilities.	Because there is no clear replacement at the current time, the policy assumes retention of the cricket pitch on site. The site is of considerable size and capable of accommodating new development as well as retaining the cricket use. However, it is possible that a replacement will be found, which would enable development of a larger part of the site.	None
In the policy, replace "minimum number of homes to be delivered is" with "development is expected to deliver around…".	The number of dwellings has been determined by an assessment of the site taking into consideration the site size, physical constraints, and an appropriate level of density that is	None

	suitable for the setting. The policy wording is clear that it is a minimum requirement.	
This site should not be allocated because there is a lack of green space and it is in proximity to the river.	The site is not in close proximity to a river. The site is not publicly accessible open space, but the sports facilities are in use by clubs and important to retain, either within the site, or with reprovision. The policy approach assumes retention within a smaller part of the site, alongside new development.	None
Sport England has made a representation relating to Policy SPN4, which is summarised and responded to in the Statement of Common Ground. Policy SPN5: Pear Tree Farm

POLICY	SPN5
All respondents **supporting** policy	No representations were made in support of the policy.

POLICY	SPN5			
All respondents **raising objections** on this policy/chapter	81.1	88.5	123.2	135.2

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION

Historic England has made a representation relating to Policy SPN5, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Network Rail has made a representation relating to Policy SPN5, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
East West Rail has made a representation relating to Policy SPN5, which sought to clarify infrastructure delivery responsibilities. This is summarised and responded to in the Statement of Common Ground.	The Statement of Common Ground with the East West Rail Company (EWR Co) clarifies the position in relation to the EWR Co regarding infrastructure delivery.	None.
Site allocation states suitable for "other complementary uses" to residential-led development; this should be expanded to state "employment uses" alongside residential as part of the allocation to enable a cohesive cross-border development to come forward. Amend wording to: ...the addition of commercial accommodation would deliver co-location benefits, including: • Creation of sustainable communities where people can live and work locally; • Supporting co-location of flexible workspace and housing, ideal for start-ups, spin-outs and entrepreneurs; and • Encouraging active travel and public-transport use through the highly sustainable location of the site, a short distance from Oxford Parkway.	The priority use for this site is for residential development, to help contribute to meeting the city's housing needs, and as part of the vision for the wider Northern Gateway area. Therefore the site allocation policy seeks residential-led development, with complimentary uses to be considered on their merits. The Plan's strategy is to deliver any employment development through modernisation and intensification of existing employment sites, without allocating any additional new sites for employment.	None

Policy SPN6: Red Barn Farm

POLICY	SPN6
All respondents **supporting** policy	No representations were made in support of the policy.

POLICY	SPN6
All respondents **raising objections** on this policy/chapter	123.3

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
We note that the allocation continues to refer to the site as being occupied by a charity. However, we can confirm that the charity has now completed the purchase of a new site in the locality to which it will relocate to. Its lease at Red Barn Farm is due to expire on 28 June 2026 and will not be renewed. The reference to re-provision within the allocation effectively duplicates requirements	It is noted that a new site is being progressed by the landowner. Once construction of the new facility is completed and it is operational for the users, that is normally the point at which it could be assessed to confirm the reprovision requirement has been met, and if applicable amend the policy accordingly.	None

already addressed through Policy C3. Retaining this wording would therefore result in a double count for the charity's relocation, as the matter is already appropriately covered by Policy C3. The wording within the allocation requiring the reprovision of the charity's facilities should be removed, as it will no longer be relevant to a vacant site.		

Policy CBLAOF: Cowley Branch Line Area of Focus

POLICY	CBLAOF

COMMENT SUMMARY	OFFICER RESPONSE
Support, no comments received.	N/A
Support identification of South Oxford as part of CBLAOF. Significant regeneration opportunities, potential for high-density development, and public transport improvements. Focus on improving public transport is welcomed.	Support is welcomed.
Network Rail have made a representation relating to Policy CBLAOF, and this is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Support the AOF's placemaking objectives for active travel, quality design and environmental improvements. Support requirement for contributions from identified sites.	Support is welcomed.
Support identification of South Oxford as part of CBLAOF. Significant regeneration opportunities, potential for high-density development, and public transport improvements. Focus on improving public transport is welcomed.	Support is welcomed.

POLICY	CBLAOF

All respondents **raising objections** on this policy/chapter	51.4	81.11	107.6	115.5	85.9
	159.13	89.XX			

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
BMW Mini Plant support policy in principle but has concerns regarding contributions for locations within 1500m buffer, given that employees are highly unlikely to use or rely on CBL for transport. This should only be necessary where there is a direct link between the development and use of the CBL for accessing employment. Unclear whether the contributions to CBL would be additional to those derived from CIL and what constitutes "trip-generating development" we assume the reference to figures 8.5 and 8.6 refer to the Oxford Local Plan 2040 Submission Draft as these are not available in the current Submission Draft.	There is an expectation that development sites which are within the buffer zone, and generate additional trips, should contribute to the Cowley Branch Line, however, the specifics of this will need to be determined at application stage when considering the merits of each individual case. Figures 8.5 and 8.6 have been omitted in error and will be reinstated.	Mod proposed to insert figures to show the 1500m buffer zone diagram.
Historic England (HE) have made representations on Policy CBLAOF, these are addressed through the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
General agreement with the policy, but the exclusion of the Oxford Stadium from the AOF is a major oversight; a prime location for high-quality residential development.	The Oxford Stadium is included within the CBL AOF. It is not an allocated site because since May 2022 (and after the site was previously allocated in the Local Plan 2036) the site is operating as a greyhound/racing/speedway	None.

Policy SP51 from OLP2036 should be carried forward as a site allocation and amended to reflect important role of Stadium in this AOF. The Sandy Lane West station is a short walk from the stadium, further highlighting potential. Should the uses within the Oxford Stadium Conservation Area cease or relocate, the significance of the heritage asset would reduce; once the Stadium is redeveloped, the Conservation Area designation should be removed. Once the CBL and public transport improvements are delivered, no further financial contributions should be sought.	stadium so community uses would need to cease operations if the site were to be redeveloped.	
BOBICB (now NHS Thames Valley) have made representations on Policy CBLAOF, these are addressed through the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Sport England have made representations on Policy CBLAOF, these are addressed through the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The policy should include wording to confirm presumption in favour of development for a range of uses including employment and residential to maximise growth potential.	This policy presumes that development would be proposed for both employment and residential uses. Reference is made to the anticipated intensification of existing employment use and the delivery of new residential development.	None.
Oxfordshire County Council has made representations on Policy CBLAOF, these are addressed through the Statement of Common Ground. SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Errors in site description. No mention of car dealership, hotel, gym and kindergarten on site. Some of this site has been built out, there are still vacant plots which have remained so since the 1990's when the old Rover factory was demolished. The rate of new build has slowed down completely. The vacant plots are very much as they were in 2016 when the previous Policy SP10 was written. As it is proving so difficult to develop this site, the requirement to contribute to the cost of a bridge over the proposed railway nearby will discourage developers from building on the remaining vacant plots. This seems at odds with the policies in the draft Plan encouraging development of Brownfield sites. The Council provides no explanation why so much of this site has been vacant for so long. There surely is a case for some increase in business rates for sites such as this to encourage the owners to progress their redevelopment. It seems pointless to designate sites like this solely for employment use when there is apparently no interest in developing them for such purposes.	The description of the site highlights the primary uses of the site. While it is acknowledged that there are some additional complementary uses, including a car dealership, hotel, and gym. The absence of these complementary uses in the policy box does not make it unsound. All remaining plots now either benefit from planning permission (plot 2000) or are the subject of a current planning application (plots 3000, 8200, 8400 and 9200). Given that these remaining plots are all now moving forward, as well as recent applications to modernise and intensify the employment uses at the site (e.g., Plot 2700, Plot 5500, Plot 4200) as well as the recently completed Trinity House scheme, all of which are aligned with the plan's employment strategy and approach of encouraging development of this large brownfield site. Setting business rates is outside the jurisdiction of the Local Plan 2045. See response to policy E1 for further details.	No change proposed

There is an estimated 5ha of vacant land which could be used for homes. Policy E1 must be less restrictive to assist this.		
Historic England has made a representation relating to Policy SPS2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Site is in multiple ownership. Uncertainty about whether the delivery of a comprehensive masterplan covering the whole site will be forthcoming. Also, uncertainty about the status of any such masterplan. At the time, there is no overall strategy which exists for ARC Oxford, therefore, a modification to paragraph b) of the policy is proposed to clarify alignment with an overall strategy should be made 'where one exists.' Paragraph b) of Policy SPS2 should therefore be amended as follows: *b) A site-wide landscaping and public realm strategy for the site is encouraged and proposals for individual plots should then identify how they will align with/ comply with the overall strategy <u>where one exists</u>. Site-specific landscaping schemes should be prepared in accordance with Policies G2, G3, G4 and G5.*	We don't consider the additional text is required in paragraph b) of the policy. Paragraph b) already encourages a site-wide landscaping and public realm strategy to be produced, and then for individual plots to identify how they will comply with it.	No change proposed.

No building on green infrastructure as marked on map, contributions to make it useable by the community from Cowley in particular.	The GI network protections are covered in Policy G1. Development proposals need to accord with these. Contributions sought from developments are often required to mitigate a number of planning-related issues.	No change proposed.

Policy SPS3: Bertie Place Recreation Ground

POLICY	SPS3
All respondents **supporting** policy	No representations were made in support of the policy.

POLICY	SPS3					
All respondents **raising objections** on this policy/chapter	47.17	57.14	65.3	85.18	138.43	139.16

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
SPS3 requires "adequate re provision of the current recreation facilities to meet the needs of those who currently use the facilities and the new residents", stating that the playground must be re provided on site and that replacement of the MUGA may be on or off site provided it still serves teenagers in the neighbourhood. This focuses on like for like facility types but does not address the quantitative and qualitative loss of general open grassed space that currently supports informal play, casual sport, dog walking and social interaction across all age groups.	In addition to the allocation policy requirements, proposals will be assessed against other relevant policies in the plan. Policy G1 has as one of its requirements for applications affecting supporting spaces the provision of evidence that consideration has been taken of the role of existing spaces that support socialization and informal recreation, and where relevant references to up-to-date GI studies with particular attention to local need.	None

The proposed layout significantly reduces the extent of accessible, flexible green space, concentrating provision into a formal MUGA and relatively small play area. This risks undermining wider Plan objectives on promoting health, wellbeing and inclusive, flexible recreation, which rely not only on play equipment but on larger, adaptable open spaces.	This description appears to refer to a planning application on the site that is as yet undetermined. The site allocation policy does not specify a layout or prescriptive design choices. Representations on the detail of live applications can be submitted for consideration through the consultation process for planning applications.	None
The site sits within a constrained street network and Flood Zone 3b; access/egress is already sensitive in flood events, and the policy highlights the importance of safe evacuation and careful surface water management.	The policy includes a requirement for a site specific flood risk assessment that takes into consideration for onsite routes and the infrastructure needs to reach access routes. The level of vulnerability of the access/egress routes are specifically set out in the policy, along with considerations for early warnings, and requirements for designed for and more extreme flooding events.	None.
"Low car" or car free development is likely to be pursued here, but SPS3 does not explicitly address how overspill parking onto surrounding streets will be prevented or managed, or how servicing and visitor access will be handled without harming local safety and amenity. Given the flood, access and amenity context, the Plan should make clear how car free expectations will be enforced and what supporting measures (e.g. CPZs, car club provision, secure cycle links) are required to ensure that housing delivery does not simply displace parking and generate traffic pressures on neighbouring streets, contrary to NPPF	While the plan overall promotes development in sustainable locations and active and sustainable travel modes, there is no requirement for this to be a low car or car free development site.	None.

principles on safe and suitable access for all users.		
The policy does not explicitly acknowledge that building on part of an existing green, permeable and potentially biodiverse site in Flood Zone 3b is an exception to the general approach of steering more vulnerable uses away from high flood risk, and it does not clearly set out why there are no reasonable alternative sites for this scale of affordable housing.	The allocation policy includes site specific requirements for surface/ground water assessments, incorporated sustainable drainage systems and management plans to deal with surface water flooding risks. All suitable and available sites with development potential that are deliverable and sited in suitable/sustainable locations are considered as part of our efforts to address the city's housing need. The plan also recognises the importance of public open space, and other forms of green infrastructure.	None.
While LNRS alignment and SuDS are required, the Plan does not provide a clear, quantified comparison of existing biodiversity and green cover with what will exist post development, nor how any net loss in functional habitat or green infrastructure will be avoided given the reduced open space footprint.	The policy includes descriptions of key onsite ecological features that are expected to be retained (protected species, wildlife corridors) and the plan includes an urban greening factor policy (policy G3) which includes minimum requirements for green cover for development sites of this scale. The approach taken by the plan with respect to provision of green infrastructure takes into account enhancements in quality of GI as much as the quantity. The LNRS mapping tool sets out suggested measures that could potentially enhance the level of onsite biodiversity. While the details of those measures are not included in the policy for conciseness reasons, the policy clearly	None.

3055

	signposts the LNRS resource as a source for further site appropriate detail.	
This site is not appropriate and a prime example of where Policy E1 needs to be strengthened to be effective. See our comments on Policy E1. Homes should be built on vacant , brownfield sites currently allocated for employment, and not on sites such as this.	Refer to OCC responses to policy E1 representations.	Refer to OCC responses to policy E1 representations.
The 2005 Green Space Study assessed the quantity, quality, and value of all green space in Oxford. Bertie Park wasn't one of 16 play areas judged to be surplus. The 2022 GI study didn't find Bertie Park to be surplus, citing it as an example of a small, but multifunctional park. Technical Advice Note 9: Green Spaces (TAN9) states "Outdoor sport and recreation facilities shown on the Policies Map as protected by Policy G5 are in use and not surplus … Other open spaces that are not protected on the Policies Map would need to be considered on a case-by-case basis, with strong evidence that they are surplus …. It is likely this case would need to demonstrate a long-term lack of public access and/or use." Bertie Park has been removed from the list of Oxford Parks, but OCC have neither demonstrated lack of access or lack of use.	The Green Space studies are an assessment of existing open spaces, areas of deficiency etc and do not make a judgement on what spaces are surplus. Those kinds of determinations are made by the Parks and Open Spaces department, who are responsible for the management of green spaces in the city and their determination lies outside the remit of planning officers.	None
The draft plan states that the GI network "performs a vital role in supporting the health and wellbeing of our residents and the wider environment. GI sites are particularly important for the 'multi-functional' role many of them provide." Bertie Park is currently considered to be multifunctional. If shrunk to	The allocation policy does not have specific size requirements for the provision of green space, but applicants will have to demonstrate compliance with the requirements of G1 and G3 (Urban Greening Factor). The current application does not in itself indicate that what	None

20% of its current size, it will no longer be 'multi-functional.' There is potential to significantly increase housing provision at this end of Hinksey Park ward. It makes little sense to decrease open space provision at the same time.	has been submitted will be compliant with the emerging plan.	
TAN9 says the capacity of replacement pitches should fully replace what is lost in terms of amount of games that can be played, or pitch capacity and be "easily accessible to the same community." There is no evidence that this is possible because the only existing facility in Fox Crescent is significantly smaller and has no capacity whatsoever for enlargement.	Policy G1 has different requirements for proposals affecting supporting spaces (G1B) in relation to outdoor sports pitches and parks and other amenity/accessible green spaces.	None
The site capacity assessment states: "Based on current and historic uses, land contamination risks on this site are low." There is no evidence for this. It also misleadingly states that there is a live planning application for 31 homes with 're-provided' MUGA and play area on site, implying a precedent whereas this has been advertised as a departure from the local plan policy. This implies that: • Loss of the open space is acceptable, whereas the live planning application also includes mitigation for loss of open space. • Reprovision of the MUGA on site is appropriate, whereas TVP state that the MUGA too close to homes. SPS3 requires "replacement of the MUGA" with "an alternative type of facility or by improvements to the capacity of an existing one."	The site capacity assessment is produced as part of the supporting evidence, and is based on the best available factual knowledge of the site at the time it was produced. Information sources include council owned and other databases, planning records and input from officers in other council departments. The application being referenced had not been determined as at the time of writing of the assessment, and does not in itself indicate compliance with the proposed policy either way. Representations on the detail of live applications can be submitted for consideration through the consultation process for planning applications.	None

We object to the proposed allocation of this site for housing and consider it to be unsound. Whilst we are aware that the site has previously been allocated for housing, this should not come at the expense of a public playground for children and families. Other sites should be explored which does not result in the loss of a well-used community facility which has caused significant local concern.	All suitable and available sites with development potential are being considered as part of our efforts to address the city's housing need. The plan also recognises the importance of public open space, and other forms of green infrastructure. The allocation policy seeks to balance between providing housing on a suitable site and ensuring that the key function of the site as a public open air recreation ground is retained.	None.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
There should be a more strategic vision for linked sites across this area the developments proposed for south of Grenoble Road.	The draft policy CBLAOF of the Oxford Local Plan does look to steer development across this area, setting out a number of criteria to guide development to meet the needs of the area, even when it is taking place on different sites, with different landowners and timescales. Furthermore, the Cowley Branch Line Densification Study looks across the whole area around the Cowley Branch Line. Download Cowley Branch Line Densification Study Stage 2 | Oxford City Council	None.
There should be a more strategic vision for linked sites across this area the developments proposed for south of Grenoble Road.	There should be a more strategic vision for linked sites across this area the developments proposed for south of Grenoble Road.	None.
Firoka recognise that the primary objective of Policy SPS7 is the delivery of the minimum housing requirement of 290 homes and understand that, once this is achieved, employment-related and complementary uses are acceptable on site. Firoka has concerns this	The intention of the allocation of this site is that it comes forward as a housing-led development. Housing is to be the primary use of the site and other uses are secondary to that. The approach of the plan, captured in the employment strategy in Policy E1, is to protect	None.

is not strictly justified but accept it as long as employment-related uses would not be capped if following a design-led approach. Supporting text should therefore be added to recognise that 'secondary' in terms of this policy refers only to the primary requirement to deliver the minimum number of homes and other uses being secondary to that.	only key employment sites and to allow new employment on these sites and in the city and district centres. This also follows a sequential approach for these town centre uses. In addition, there are sites in lawful use for employment uses, and these could also be intensified in employment use if justified by the sequential approach. Given the lawful use of this site and the flexible approach across linked sites SPS11 and SPS13, the policy allows for employment-use on this site. But housing use is intended as the primary use of the site.	
Redevelopment of the Kassam Stadium and Overflow Car Park sites will be a large-scale multi-phase development interdependent with the stadium replacement scheme. As a result, it is possible that certain new uses will be developed across the sites before the stadium use is relocated. The ensure effective and deliverable implementation of the allocations, it is requested that the supporting text clarifies that allocated uses may be developed across the sites prior to the removal of the existing stadium, where this forms part of a masterplan strategy.	Clarification cannot be added to the supporting text, but it is agreed it would be helpful to add clarity about the stadium to the Policy and a main modification is proposed.	This site is linked to **SPS11** and **SPS13**, and a flexible approach will be taken to how the required uses are spread across the sites, but this must be led by a masterplan that shows how minimum housing numbers will be achieved overall. Full redevelopment across the sites is interdependent with the stadium replacement scheme, but allocated uses may be developed across the sites prior to the removal of the existing stadium where this forms part of the masterplan strategy.
Redevelopment of the main stadium land for housing or mixed is dependent on Oxford United FC relocating to an alternative, deliverable stadium. Until there is a secure, deliverable relocation scheme with an agreed programme, the availability of the existing stadium land for substantial redevelopment	Oxford United Football Club lease the site from Firoka. This model is not considered by the club to be a sustainable model for them as they are at the whim of the landowner as regards terms and conditions of the lease, including cost, renewal dates and how the site is used. This is why the club itself has been looking for a site	None.

within the plan period is uncertain. Although the club is 'hopeful' work can start at the Triangle this year, necessary funds are needed, and time to build it, and the issues around foul-water drainage are yet to be resolved. It should be a condition of any planning application that OUFC would be able to stay at the Kassam. The replacement of local community facilities should also be a condition of any proposed development. Treating the full SPS7 housing number as available in the early or middle years of the period may therefore introduce risk into the housing trajectory and 5 year supply.	they can bring forward. The Triangle site in Cherwell was identified, plans drawn up and planning permission granted. Regardless of the phasing and delivery of that, the landowner can choose not to renew the lease at the Kassam. The policy could prevent any development of the site until the stadium is replaced, but it can't make sure the lease is renewed. Whilst it might be considered that the landowner would choose to renew the lease rather than have an empty stadium (if the stadium had not been replaced by the time of renewal), given the other uses of the stadium as a conference centre, etc., as well as the opportunity to develop the overflow car park and Ozone Leisure Park, it is almost inconceivable that policy wording preventing any development of the site until the football club has a new home would result in a renewal of their lease if that proved to be what they desired. A large football club is a very specialised use. What the policy does do is ensure reprovision of the local community element of the facilities. Ultimately, the approach taken is considered to be the approach that will make best use of the site, which is important given Oxford's constraints.	
The policy cross-references Policy R5 in relation to contamination, but we (Firoka) believe this should cross-reference Policy R7.	Agreed that there was an error in the cross-referencing and this is correcting with a minor modification.	Minor modification to Policy SPS7 to correct cross-referencing '...and remedial works may be required (**Policy R~~5~~7**).

The Policy sets out a requirement for 10% of the overall site area to be provided as open space. This is not consistent with Policy G2, which requires 10% of the residential area (on mixed-use sites) to be public open space.	The cross-reference is considered useful as the Policy G2 will have some influence over how the site is developed. However, it is agreed that an amendment to the wording of the cross reference to avoid confusion would be useful.	Minor modification to the wording of the cross reference At least 10% of the area of residential use site~~s~~ should be provided ~~used~~ for public open space (**Policy G2**).
Policy SPS11 establishes open space and car parking as suitable uses within Flood Zone 3. For consistency, Firoka requests SPS7 includes specific reference to car parking and open space as suitable uses within Flood Zone3.	The Policy SPS11 is not affecting in any way what is or is not a suitable use in the flood zone. It is not necessary to state all the uses that would be suitable in a flood zone, and that would be impossible because it would depend on the sequential approach and so on. The reason SPS11 refers to the potential uses in the southwest corner is because the high level of flood risk in that corner requires a design response, and the policy acknowledges this, with guidance on a solution. Such guidance is less necessary on SPS7 because the pattern of flood risk does not create a need for a particular design response.	None.
It is important that sufficient parking and access is retained to keep remaining leisure uses viable and accessible for local residents and visitors.	There is a considerable amount of surface level parking around these sites currently. It is expected that this level will reduce as it is not desirable to have such a car-dominated development. Public transport contributions will be required, and the re-opening of the Cowley Branch Line for passengers will also help to ensure easier access to the site by pubic transport. Improvements to cycle and pedestrian access into and across the sites will be more important to ensuring accessibility to local residents than retention of large amounts of car parking.	None.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Site should not be allocated as the Council now has incontrovertible evidence that the LP2036 allocation of the site was a product of procedural and consultation flaws and that the site is not a suitable development site. An ecological assessment was not carried out before allocation in the OLP2036. The fact the site is in the Iffley Conservation Area was not taken into account. The Council seems determined to retain it as an allocation because of obduracy and sunk costs.	A habitat survey was carried out to inform the allocation in the OLP2036. The horse prevented the surveyor gaining full access to the site, so a best assessment was made from the edges. This was all clear in the supporting evidence for the OLP36. The intention with the surveys at local plan site allocation stage is to identify whether there is likely to be any 'showstopper' habitat interest that would likely prevent development. More detailed ecological assessment would then be needed to support any application. These will often need to include specialist species surveys. Since the allocation of the site, biodiversity assessments have taken place that have given more detailed information and have shown more ecological interest than was known about at the OLP36. The interest is particularly in terms of the specific species (invertebrates, badgers). At this point there is nothing to say conclusively that these species can't be translocated, or remaining habitats enhanced on site to make enhanced provision for them- or a combination of both.	None.
The site has no minimum housing allocation. The Council is therefore accepting that the site is so constrained that it may be unable to	The site is assumed to have a capacity of more than 10 units or it would not have been taken forward for an allocation. No minimum housing	None.

deliver any development in a sustainable and/or policy compliant manner. Allocation of the site is inconsistent with the OCC policy of not allocating sites where assessments show that they do not have the capacity for 10+ dwellings and the treatment of other sites on this basis (1 Pullens Lane, 2 Harberton Mead, Land off Harolde Close).	requirement is given in the policy to recognise the sensitivities of the site. An alternative might be to give a minimum capacity as 10, as the very least number that it is considered the site could deliver. However, there is a risk that this could be seen as harmful to the consideration of the live application, because it may be interpreted as saying that the number in that application is too high, which would be a premature assumption. Instead, no minimum number is given to enable full flexibility to respond to the sensitivities of the site in the most appropriate way should a future alternative application be brought forward.	
There are reasonable alternatives for housing in Oxford on brownfield sites designated for employment, which the draft Policy E1 allows to be brought forward for housing. It would be more effective to redesignate them for housing. There are many former retail sites that could be used for housing. Oxford does not need more hotels- make the sites available for social housing.	Policy E1 only protects Key Employment Sites, and even on these allows some housing. Known employment floorspace in the pipeline, mainly on these protected Key Employment Sites, is sufficient to meet employment needs. The Plan must consider employment land needs as well as housing. When identifying housing capacity, it is essential that this is well evidenced and each site must be considered developable, which means they are in a suitable location for housing development with a reasonable prospect that they will be available and could be viably developed for housing. When there are no indications that landowners are interested in reverting commercial sites to residential, and when viability evidence suggests many of these uses are currently of most value, an assumption that these sites will	None.

	come forward for housing can't be made. The commercial Use Class E is very broad and allows change to a lot of uses, which means policy can't simply require that these sites in lawful commercial use change to housing.	
Criteria i) and j) allow for decision-making to be made in a vacuum, enshrining a presumption in favour of development and not requiring applicants to submit adequate supporting information to allow the relevant material considerations to be identified and weighed into the decision-making process.	This comment is in reference to criteria i and j of Policy S1 and how they would impact the Meadow Lane site. These criteria simply repeat the NPPF approach, but to avoid that repetition a main modification has been proposed in response to other comments as well to delete those criteria.	Modifications made in response to comments to Policy S1.
The site is of value to the environment of the village as a whole. It will harm the amenity of existing and neighbouring uses (contrary to criterion f of Policy S1). People (from inside and outside) love the tranquility of Iffley and walk there often- please do not ruin it.	The approach to heritage in the NPPF and local plan is that the level of heritage harm must be balanced with the benefits of development. There is considered to be potential for a scheme that responds appropriately to its context and where any residual harm could be outweighed by benefits.	None.
The site is of biodiversity value. Offset requirements for loss of biodiversity and harm to protected species cannot be realistically met, given the lack of other potential ancient river meadow sites within the city. Thus development will lead to a net loss of biodiversity (contrary to policy G4). The Council now accepts it is of at least City Wildlife Site status, and that's what it should be designated and zoned as if the Council is not to depart from its own policies and objectives of the OLP2045.	The site does have biodiversity value. At the current time there is no reason to assume that it is not possible for proposals to come forward that would mitigate and compensate for any loss as a result of proposals, either onsite or sufficiently locally to preserve the features of interest.	None.
The site is an ancient meadow of local heritage significance important for biodiversity and the	It is not considered the case that a development could not come forward that	None.

conservation area. Contrary to criterion h of S1 it does not take account of local historic context or respond appropriately to heritage significance. Development would be contrary to HD3 as it will negatively affect the Iffley Village Conservation Area, especially the setting and views from Church Way noted in the Conservation Area Appraisal. The site is an extremely rare survival of East Oxford's agricultural history and use and illustrates the life of the working classes in Iffley. Agriculture was the main economy. There is intervisibility with nearby listed buildings.	responds appropriately to the heritage significance of the site. The policy gives guidance on some key considerations to ensure this, such as the need for low density and spaces between buildings, allowing views to and from the wider countryside and integrating green features as appropriate to the semi-rural character of the Iffley Conservation Area.	
The development would have a negative impact on an important blue and green infrastructure network and result in loss of flood plain (contrary to criterion g) of Policy S1. It would also be contrary to Policy G6 and Policy G3 as it would be loss of a high scoring urban greening factor area and would have inevitable negative impact on the Iffley Meadows SSSI.	Development would need to comply with policy G7 in relation to flood risk. The area of flood risk is on the western side of the site alongside the small watercourse, which requires a buffer. The area of functional floodplain cannot be developed.	None.
Reducing the area of the remaining Thames flood plain increases flood risks for existing residents in at risk zones and exposes future residents to flood risk. The site is Flood Zone 3b and will likely become more vulnerable with climate change. It is inconsistent with policy G7. There is an ongoing objection from the Environment Agency.	Sites are always classed as being in the flood zone of the highest risk area within the site. There is only a very tiny amount of Flood Zone 3b however, and this will need to be avoided by development. The policy is clear that a sequential approach should be taken to siting development and that a site-specific Floor Risk Assessment will be required.	None.
Access is difficult, along winding, narrow lanes with poor sight lines, and would endanger users	The site would not be expected to generate any notable amount of traffic, but it is agreed it's important that there is safe access and egress.	None.

of the Principal Quiet Route for Active Travel along Meadow Lane and Church Way.	Potential accesses for all site allocations were discussed with the County Council as Highways Authority and they did not raise concerns with the principle of allocation of this site, and they have not made a representation about this Policy SPS8. It is considered that the site can be accessed safely with minimal negative transport requirements. Meadow Lane is identified as an on-road quiet route in the LCWIP, but so are many other routes in Oxford that have significantly more development alongside than Meadow Lane, even if development takes place on this site.	
The low car concept is a poor solution to road traffic will give very real problems in travel to work, school or hospitals. Public transport does not cover those who work outside the ring road or those who work night shifts. It is bad for the elderly or infirm.	Iffley is well connected, with good walking and cycling routes and access to public transport. Some parking, including disabled parking, will be required.	None.
The area is currently subject to a BBOWT's bid to use Heritage Lottery funding to benefit local schools and communities as part of 'Meadow School Iffley' for outdoor education. Use of this land for housing development would preclude this initiative of significant local benefit, and remove opportunities for outdoor education from future operations. There is interest from local schools to use this biodiverse, tranquil and enclosed site for outdoor education.	The plans and intentions to use this site for a forest school or similar cannot affect a decision on whether or not it should be allocated for housing. The plans may not come to fruition and would rely on landowner agreement. The site is not in use at all by members of the public and its last use was as an enclosed piece of grazing land for horses.	None.
A further complication and limiting factor is potential contamination.	This is noted in criterion n of Policy SPS8. There are not thought to be contamination issues of a	None.

	degree that would affect the ability of housing to come forward on the site.	
Local objection to development of the site is active and well-funded. It is important to distinguish between environmentalism and NIMBYism and to avoid assuming that all Iffley residents share the desire to keep this site as a field. I understand the urgent need for more affordable housing and Iffley should do its duty in enabling development of this land, which has, for many years, been used on for grazing ponies and sheep. The nearby Iffley Mead former school playing field is already designated for 90 homes at higher density, and has much more problematic access than SPS8, so displacing the housing planned for SPS8 to Iffley Mead is unrealistic.	Comment noted. It is agreed that increasing density at the Iffley Mead site can't be considered as an alternative to this site. Each site is considered on its own merits and the minimum housing numbers carefully considered to ensure they are realistic but reflect the strong need to deliver homes. Each site with potential for housing needs to be considered in the 'no stone left unturned approach to housing'.	None.
There is an all-too-familiar policy approach- here is a housing shortage, here is an empty space- let's put the two together. This has done great and lasting damage to Iffley and Oxford. Green open spaces in Oxford need to be valued as an amenity. 15 constraints have been identified [in the SA]- the highest number of any site in the OLP2045.	It is the case that the unmet housing need Oxford has meant that all attempts must be made to identify and allocate sites for housing if they are developable. That does not mean that any open space would be put forward or considered suitable. Each must be considered carefully on its merits. Some sites are more sensitive and have more constraints than others. However, if the landowner discussion suggests the site is likely to be available for housing in the plan period and if it is considered a scheme can come forward that responds to, mitigates or outweighs harms then the site is considered for allocation.	None.

The top end of the site, the memorial Field, was for many years a village amenity, and when the site was purchased for development it was promised that the field would remain undeveloped as a village amenity. It would be particularly useful as a public green space, of which there are few, and for a children's play park. Encroachment on the Memorial Field and blockage of public access should be forbidden i any development approval.	When the site was put forward for housing to the OLP2036 by the previous landowner it included the Memorial Field, but the decision was taken not to take that part of the site forward for allocation. The site is not part of the allocation in the OLP2036 or the draft allocation in the OLP2045. The site SPS8 is not large enough to generate a requirement for public open space itself. The memorial field is designated as part of the supporting Green Infrastructure Network, but not allocated for development.	None.
The proposed development gives the perfect opportunity to build a path through the development and the Memorial Field from Meadow Lane to Church Way to carry cycle and pedestrian traffic safely towards Rose hill and Iffley Lock whilst avoiding narrow and dangerous parts of Church Way. This should be a requirement.	The feasibility of this has not been tested and it does not seem as though it would be a requirement necessary to mitigate impacts of development of site SPS8.	None.
Natural England has made a representation relating to Policy SPS8, which is summarised and responded to in the Statement of Common Ground. Policy SPS9: Littlemore Mental Health Centre

No representations received against this policy.

Policy SPS10: Mini Plant Oxford

POLICY	SPS10
All respondents **supporting** policy	No representations were received in support of this policy.

POLICY	SPS10		
All respondents **raising objections** on this policy/chapter	51.5	81.15	138.46

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The MINI Plant is a constrained brownfield site. As such, it will be challenging to meet urban greening factor requirements through new development proposals. It should not be mandatory to meet a specific amount but to show how urban greening has been considered in the development of a planning application. We suggest the following modification to bullet point a): *a) Proposals should include additional greening onsite to help meet the Urban Greening Factor target <u>where feasible</u> and maximise the other functional benefits this can provide...*	The targets set as part of policy G3 are more conservative than the recommended standards set by Natural England as the Council recognises that there can be challenges with delivering greening on some constrained sites in the city. Applicants have flexibility in how they meet the targets depending on the context of the site and can utilise a range of greening measures to meet the required score. We do not consider that this modification is justified.	None
Sensitivity around heights is an important element in this location but the MINI Plant requires certain heights of buildings to allow for the effective operation of the site. We suggest the following modification to bullet point e):	The prior criterion to this one in the allocation already sets out that building design and arrangement will need to be guided by operational needs of the site, as such, we do	None

e) Whilst there are limited constraints on the site, considerations around heights, scale and massing should factor in how the developments will be viewed from afar and on the approach, so as to reduce feelings of overbearing and dominating of the adjacent streetscape. <u>However these considerations will also need to be balanced with the operational needs of the site.</u> Variations in materials...	not consider that this needs to be repeated again.	
Historic England has made a representation relating to Policy SPS10, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
A total waffle-fest. Good identification of issues, but no targets are set. A more robust policy is required to reduce surfacewater runoff from the very large number of hard surfaces (Red), particularly as the complex is close to the Oxford Sewage Treatment Works (Thames Water). Policy should be amended to ask for reduction in surface runoff with SUDS etc.	The policies of the Local Plan need to be read as a whole and surface water run off is already addressed through overarching policy G8 (SuDS) and G7 (flood risk). Other policies like those relating to green infrastructure provision are also important for helping to reduce run off.	None

3075

Policy SPS11: Overflow car Park at Kassam Stadium

POLICY	**SPS11**
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	**SPS11**

All respondents **raising objections** on this policy/chapter	30.17	57.19	81.16	129.2	89.4

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
It is positive that the draft policy states that a flexible approach will be taken to how required uses are spread across the sites, but this must be led by a masterplan that shows how minimum housing numbers will be achieved overall. However, this is important not just in relation to housing numbers, but other considerations such as facilities available for use by members of the public at affordable prices, primary care provision and small retail outlets and ensuring there is suitable land for an integrated transport/mobility hub close to the proposed station on the Cowley Branch Line.	The proposed Cowley Branchline Station is slightly removed from and of the Kassam site allocations, and a transport/mobility hub would not be required on these sites, especially given that the closest site (the overflow car park) would essentially be a dead end for vehicles and would not be a good location for a transport hub. Other considerations are dependent. Wording in the policy says that a flexible approach will be taken to how required uses are considered across the sites, not just housing numbers.	None.
The draft policy states that planning permission will be granted for redevelopment even though Oxford United FC are currently resident at the stadium and have nowhere to move to at the current time. It should be a condition of any planning application that OUFC would be able to stay at the Kassam.	It is agreed that the car park should not be developed if it is required to support the use of the Kassam Stadium. Therefore, a modification is proposed.	Planning permission will be granted for residential-led development and public open space on the Overflow Car Park at Kassam Stadium site, if the car park is no longer needed to support the use of the Kassam Stadium.
The replacement of local community facilities should be a condition of any proposed development.	There are no local community facilities on this site to be replaced.	None.

The landowner, Firoka, supports the flexible approach to how required uses are spread across is sites in the plan, but SPS11 does not explicitly establish this approach and it is therefore requested that Policy SPS11 mirrors the wording of Policy SPS7 in relation to acceptable uses to ensure clarity regarding the distribution of uses across the two linked allocations.	The draft policy already does include the wording: 'This site is linked to SPS7 and SPS13, and a flexible approach will be taken to how the required uses are spread across the sites, but this must be led by a masterplan that shows how minimum housing numbers will be achieved overall.'	None.
Policy SPS11 identifies the potential for a restrictee access from Priorty Road. The landowner, Firoka, says taht there are many potential design solutions for reducing the dominance of private vehicle circulation and impact and current design work has not been sufficiently progressed to evidence the need for a restricted access on site. Requiring a restricted access at this stage risks pre-empting the outcome of detailed transport strategy and masterplanning.	Priory Road, beyond the eastern branch off to serve the houses to the north of the site, does not accommodate vehicles. The road at that point could not feasibly become suitable and an unrestricted vehicular route. It is extremely narrow, without obvious potential for widening, and even if that were possible outside the site, the very narrow width of the tunnel under the Branch Line would severely restrict the potential for the road to become a general access road to serve the site. Reference is only made. The assumption for main vehicular access to this site has always been that it would need to come over the bridge from the south. The draft policy is not overly restrictive but simply reflects the practical reality. The narrowness of the tunnel may rule out use by servicing vehicles, but the benefits of those mean it should be investigated as firmer proposals are developed.	None.
Historic England has made a representation relating to Policy SPS11, which is summarised	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

and responded to in the Statement of Common Ground.

Policy SPS12: Oxford Science Park

POLICY	SPS12
All respondents **supporting** policy	130.11

COMMENT SUMMARY	OFFICER RESPONSE
Support the continued allocation of the site for employment and being appropriate for development or redevelopment that modernises and intensifies the employment provision. Welcomes reference to portions of the allocation suitable for higher buildings, notably the central and eastern part of site, closest to the Kassam Stadium and Leisure Complex, while noting the need to respond to the setting of the Grade II* listed Minchery Farmhouse. There is huge potential for intensification of employment floorspace at the Park with the site uniquely positioned to deliver future employment floorspace situated adjacent to a future train station along the CBL and in close proximity residential-led site allocations able to deliver significant residential units to support local housing needs of those employed by companies based at the Park, such as the Kassam Stadium site and overflow car-park site to the east and South Oxfordshire Science Village to the south.	Support is welcomed.

POLICY	SPS12

Residential component must be mandatory or it is unjustified to increase employment without adequate contribution to housing.	Oxford Science Park is designated as a Key Employment Site, which Policy E1 defines as "Include nationally and regionally important employment sites that make a significant contribution to the knowledge economy, are significant employers or provide important local services". As such, the priority use for the site is for development of research and development and office employment uses (Class E) that directly relate to Oxford's key sectors of research-led employment, but Policy SPS12 also allows for an element of residential.	None
Minchery Farm is the location of the infamous medieval Littlemore Nunnery and has very high potential for archaeological remains. This site is adjacent to Oxford Sewage Water Treatment Plant.	SPS12 references the Minchery Farmhouse, and the need to respond to the setting of it. Amenity impacts are addressed in Policy R8, which specifically references developments in proximity to the Sewage Treatment Works.	None

Generally supportive of site allocation but propose the following amendments to facilitate the necessary delivery of new footbridges across the Brook to improve permeability from the Science Park to, for example, Littlemore House: (d) With the exception of new footbridges to improve connectivity, A 10-metre buffer to the Brook should be maintained... (e) Parts of the site are Flood Zone 3b, mainly along the Brook, and, with the exception of new footbridges across the Brook, a sequential approach should be taken to locating development on the site. Also given the nature of EIT's intended use of the Science Park, it would not be appropriate in security terms to have areas of open space which are accessible to the public, propose the following amend: (g) "Proposals should enhance and increase the public realm and landscaping of the Science Park, including, where possible, the creation of new ~~public~~ open spaces	The 10m buffer is a requirement to meet Policy G2 Enhancement and Provision of new Green and Blue Features, which is also relevant to Policy G7 Flood Risk and Flood Risk Assessments and has been supported by the Environment Agency. A footbridge has not been identified as essential by the Environment Agency, but that does not preclude an applicant making a case for a footbridge/bridges as part of a planning application.	None

	104.5				

SUMMARY OF ISSUES RAISED	**OFFICER RESPONSE**	**PROPOSED ACTION**
There should be a more strategic vision for linked areas and developments proposed for south of Grenoble Road.	The draft policy CBLAOF of the Oxford Local Plan does look to steer development across this area, setting out a number of criteria to guide development to meet the needs of the area, even when it is taking place on different sites, with different landowners and timescales. Furthermore, the Cowley Branch Line Densification Study looks across the whole area around the Cowley Branch Line. Download Cowley Branch Line Densification Study Stage 2 | Oxford City Council	None
The policy should be altered to take into account that there may be unavoidable delays to development of the new stadium for Oxford United.	This site does not affect the functioning of the football stadium and it is not considered that the policy needs to reference potential delays to the replacement stadium.	None
The replacement of local community facilities should be a condition of any proposed development.	The Policy does say: 'In accordance with Policy C5 community commercial leisure uses should be re-provided...'	None
This site is 3ha, which could be allocated for homes. Policy E1 must be less restrictive in order to allow this.	Policy E1 does not prevent this happening. The Ozone Leisure Park is not a key employment site. However, Policy E1 does also reflect that	None

	employment may come forward not only on existing sites and in the centres, but also at sites already in lawful use for the proposed employment use. The Government introduced Use Class E in 2020, which applies to a very broad range of commercial uses. That means that the Ozone Leisure park already includes Use Class E and much of it is in lawful use for many employment uses.	
The site is within close proximity of Oxford Sewage Treatment Works. Therefore, any redevelopment proposals will need to be assessed and mitigated in compliance with Policy R8 in relation to odour from sewage treatment works.	Noted that Policy R8 may apply in this case.	None
Minchery Farm is the location of the medieval Littlemore Nunnery and has very high potential for archaeological remains.	The Grade II* listed Farmhouse was the dormitory range of the Littlemore Priory. It is noted in the fact box relating to the policy that the site: *Contains Minchery Farmhouse Grade II* listed building. Potential for prehistoric, Roman and medieval archaeology.* Criterion J of the policy also requires that: *Archaeological potential will need to be explored as part of any proposed redevelopment (Policy HD5)*	None
Historic England has made a representation relating to Policy SPS13, which is summarised and responded to in the Statement of Common Ground. summarised and responded to in the Statement of Common Ground.		

Policy SPS14: Redbridge Paddock

POLICY	SPS14
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPS14			
All respondents **raising objections** on this policy/chapter	57.19	90.12	138.49	104.18

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
CPRE is concerned that this site, until recently designated as Green Belt, has considerable biodiversity value. It is rewilded and there is an undisturbed and dark riverside habitat as part of the Thames corridor.	The site was removed from the Green Belt through the Oxford Local Plan 2036 process. Criterion f) of the draft policy, carried forward from OLP36, therefore sets out that 'Compensatory improvements should be made to the surrounding areas of remaining Green belt in accordance with the identification of Opportunities to Enhance the Beneficial Use of the Green Belt Land Report (LUC 2018). A 10m buffer is required to the river. Part of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. A phase 1 habitat survey was carried out to inform the OLP36,	None.

	which did not identify significant habitat that would prevent development of the site. Further biodiversity work to inform the application has not highlighted biodiversity of a value that would be difficult to compensate for.	
The former landfill site has waste to a depth of over 6m and contaminants may be disturbed and pollute river and groundwater. There may be adverse impacts on the SSSI on the opposite riverbank.	Of course the former use as a landfill will have created contamination, which will need to be remediated. Work to understand the contamination and identify suitable remediation has taken place over a long time period to inform development of a planning application. This has confirmed there is a feasible solution to the issue. The Policy, in criterion p, is very clear that proposals '...will need to demonstrate how contamination issues arising from this former landfill site will be resolved.'	None.
The site should not be allocated as it is next to Cowley and East Oxford, with the least amount of green space per inhabitant in Oxford.	It is unclear what study is being referred to. It should be noted that the site is within the New Hinksey area of the 2022 Green Infrastructure Study (which is not identified as having a shortage). In terms of accessibility of green space, the study is concerned with distances to publicly accessible amenity green space, parks and accessible open space. This site is an inaccessible private space. Development on the site would be required to bring forward public open space.	None.
Heritage and amenity must be preserved; the paddock is a very visually attractive gateway to the city.	The key heritage consideration of this site is that it is visible from Iffley Conservation Area and that there is potential archaeology. The policy also notes that design should be sensitive	None.

	to the broader landscape setting (criterion j). The site is an important gateway site, but it is considered that a development can come forward that responds well to this context. Criterion i says: 'It is important that this gateway site into the city centre is designed to give a clear identity.	
The Environment Agency has made a representation relating to Policy SPS14, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Natural England has made a representation relating to Policy SPS14, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy SPS15: Sandy Lane Recreation Ground

POLICY	**SPS15**
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	**SPS15**		
All respondents **raising objections** on this policy/chapter	81.19	85.19	138.5

SUMMARY OF ISSUES RAISED	**OFFICER RESPONSE**	**PROPOSED ACTION**

Historic England have made representations against policy SPS15, these are addressed through the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Sport England have made representations against policy SPS15, these are addressed through the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Should not be allocated, as site is located next to Cowley and East Oxford with least amount of green space per inhabitant in Oxford and this land is required for increasing population and any replacement sport facilities from Cowley/Littlemore.	The allocation requires any development to meet requirements for new open space (as per policy G2), as well as protected green infrastructure (as per policy G1). It also sets out expectations for how reprovision of any lost sports facilities should be addressed.	No further change proposed.

Policy SPS16: Templars Square

3086

POLICY	SPS16
All respondents **supporting** policy	30.19

COMMENT SUMMARY	OFFICER RESPONSE
Particularly welcome the inclusion of community facilities and medical healthcare facilities among the range of possible uses.	Support is welcomed.

POLICY	SPS16				
All respondents **raising objections** on this policy/chapter	47.2	81.2	115.6	89.27	136.2

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
It is noted that the policy requires Templars Square to continue to function as a district centre. However, there is a risk that the combination of reduced parking, nearby LTNs and potential future congestion charging could cumulatively reduce accessibility for some user groups and undermine the centre's role. The policy does not define what level of public parking is considered 'enough' for a district centre that serves a wide catchment, nor how impacts on disabled users, older people families with children and those carrying bulk shopping will be assessed. There should be clearer safeguards and evidence to ensure the centre is supported.	Currently, there is a very large amount of public parking, some of which is not in use, and there is considerable scope to reduce this and make better use of the space. The suitable level of parking will depend on the precise nature of the proposals and will need to be determined when there are detailed proposals, on the basis of the wider transport context at the time. Quality of the public realm and movement for pedestrians, wheelers and public transport access are also important to the success of the centre.	None.
The breadth of uses supported by the policy is positive, but the policy does not give explicit guidance on retaining essential day to day services, e.g. convenience food, pharmacy, banking, post office, affordable cafes, that underpin the centres role for less mobile and lower income households. If housing and higher value commercial uses drive up rents or displace basic retain and service functions then residents may have to travel further afield for weekly shopping and essential services, potentially conflicting with the NPPF aim of supporting local centres and reducing the need to travel.	Many of the uses listed fall into the same use class in the Use Class Order. The planning system cannot control the nature of the user within the suitable use (for example it clearly can't ensure cheaper rather than dearer cafes or food outlets or supermarkets). The policy, whilst allowing a significant amount of new retail, does protect the overall district centre function of the site.	None.
The BNP Paribas Viability Assessment for the Plan recognises that there is no 'particular level	The BNP Paribas Viability Assessment simply acknowledges that there is stark variability in	None.

of affordable housing that most schemes can deliver' and it recommends a 40% target, and says 'site-specific circumstances' must be taken into account. The document does not comment on the viability implications for schemes where there is reprovision of existing affordable housing proposed. Policy SPS16 should specifically recognise that affordable housing requirements will be determined through a site-specific approach. This is in line with the viability assessment recommendations.	viability for residential depending on the location, the nature of the proposed scheme and the existing use. It is therefore necessary to apply some judgement. There is no attempt, for example, to make conversion of R&D to residential affordable, because in many cases, even with 0% affordable housing, it simply won't be. The 40% level is expected to be generally achievable for the types of schemes likely to come forward and expected in the Plan. Policy S4 already allows applicants to demonstrate particular circumstances that justify a need for a viability assessment to inform negotiations about a reduced level or different tenure split of affordable housing, working through the cascade.	
Policy SPS16 should recognise that the redevelopment will result in a reduction of retail floorspace, and residential will be the primary use. The vacant units reflect the changing consumer habits since Covid-19, which, alongside urgent housing need, no longer allows retail uses to take precedence in district centres. Their vitality depends on a suitable blend of uses. The draft policy requires active frontages at ground floor level and this could be understood as site-specific recognition that the residential frontage can also be 'active'. If this is not the case, this should be clarified. The policies map suggests internal areas of the shopping centre are 'District Centre Active Frontage' but an active frontage is an	The policy is not framed in terms of retail floorspace or retail frontages in acknowledgement of the changes to the Use Class Order to commercial Use Class E and also the changing nature of district centres. The policy says that planning permission will be granted for a 'mixed-sed development' that supports the ongoing role as a key part of the Cowley District Centre but that also delivers a 'significant amount of new residential development'. It goes on to say that alongside residential, development should include town centre uses that provide active frontages at ground floor level. Retail is listed as one of a wide range of town centre uses that may be delivered.	None.

outward and street-facing unit/frontage. Therefore, this should be aligned with outward facing active units only. The landowner (ORVIL) can assist with defining existing active frontages.	In terms of the active frontage, the policies says that active frontages will be required along 'identified principal routes'. This acknowledges that these may well be along the outside edges facing the existing main roads, but that there should be a principal route with active frontages that cuts through the middle of the development, ensuring people are drawn into and through the site. This is considered important to the successful long-term redevelopment of the centre. However, this means there is full acknowledgement that the redevelopment will not simply be expected to take forward the same placement or amount of active frontage as now, and that identifying them after redevelopment will be led by the design of the development; it is just important that that does include a principal route through the site. Being that it will be a principal route, it is not considered it would act like an 'internal' space. Within the active frontage there will be options for a wide range of town centre uses at the ground floor, far from being restricted to just retail. Also, the percentage thresholds means non-active uses can be interspersed within it (e.g. residential entrances if some of those need to be act ground floor facing the principal route/s). There is therefore no need to weaken the definition of an active frontage by including residential within it.	

The policy should acknowledge deliverability considerations that require a phased approach to be taken.	Policy SPS16 does not preclude phased development. However, it could give a more explicit acknowledgement with an amendment to criterion d.	Proposed main modification to acknowledge the potential for phased development: d) A masterplan should be produced to help organise services, access, movement routes, landscape, public realm and heights across the site. It is important that any piecemeal development or any phasing of the delivery does not prejudice the overall aim of a comprehensive regeneration across the site.
Historic England has made a representation relating to Policy SPS16, which is summarised and responded to in the Statement of Common Ground. Policy SPS17: Unipart Site

POLICY	**SPS17**
All respondents **supporting** policy	117.7

COMMENT SUMMARY	OFFICER RESPONSE
The Regulation 19 Submission Draft included Areas of Focus for development, including the Cowley Branch Line, Littlemore and The Leys Area of Focus. This area contained several of the city's key employment sites with the Unipart Site adjacent to the Area of Focus. The site's acceptability for Industrial (Class B2), and Storage or Distribution (Class B8) uses with ancillary offices, together with Research and Industrial Processes (Class E) uses and other complementary uses is supported. Logicor are also exploring measures to currently improve the use of the site and the policy principles and site-specific requirements of Policy SPS17 remain consistent and are considered acceptable.	The Reg. 19 Proposed Submission draft for the Oxford Local Plan 2045 refers to this Area of Focus (AOF) as the Cowley Branch Line AOF. The Unipart site is included within the Cowley Branch Line AOF in the Oxford Local Plan 2045. Support for mix of uses is welcomed. We note that the policy principles and site-specific requirements are considered acceptable.

3091

POLICY	SPS17	
All respondents **raising objections** on this policy/chapter	57.2	81.21

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Site has been subject to an allocation since 2016 without much change in the meantime. Most of the site is used for parking or storage. It represents a huge failure to redevelop what is effectively a Brownfield site and a large one. Oxford City Council provides no explanation as to why this is. Could have housed the proposed Oxford United Football stadium instead of building this on the Green Belt.	As part of developing the Local Plan 2045, confirmation has been sought from landowners as to their intentions for bringing forward sites that are subject to an allocation, which is important for demonstrating that the allocation is deliverable. However, while an allocation increases certainty for landowners/ developers bringing forward sites, the Local Plan itself cannot force development to come forward. The	No further change proposed.

Other options like increase in business rates for sites like this would encourage owners to progress redevelopment. Pointless to designate sites like this solely for employment use when there is apparently no interest in developing them for such purposes and an affordable homes crisis in the City. Should be stated that residential use of this site is appropriate. This site is 30.63 hectares which could all be allocated for homes. Policy E1 must be less restrictive to allow this	Unipart site itself is likely to play an important role in helping the city to meet its identified employment land needs. Business rates are governed by their own set of processes and legislation. It is not within the scope of the planning system to make changes to business rates. While Policy E1 does protect Key Employment Sites, it also introduces a permissive approach to housing delivery whereby landowners/developers can, if they choose, bring forward proposals for housing at Key Employment Sites, subject certain policy criteria being met. See officer response to Policy E1 for further details.	
Historic England has made a representation relating to Policy SPS17, which is summarised and responded to in the Statement of Common Ground. Policy MRORAOF: Marston Road and Old Road Area of Focus

POLICY	MRORAOF
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	MRORAOF				
All respondents **raising objections** on this policy/chapter	47.21	93.1	105.6	106.1	138.53

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Text of the policy emphasises the need to manage commuter parking and to expand CPZ coverage around major employment and education sites. There is limited publicly available evidence within the Plan grappling with transport implications e.g. how design of CPZ will benefit local residents/businesses; how access for patients, carers, tradespeople and those with irregular working hours will be maintained as hospital and university activity intensifies; how displacement risks will be assessed at the area wide scale; what complementary measures will be used to avoid creating new congestion or safety issues on adjacent streets etc. A stronger link between MRORAOF and supporting highway/traffic evidence would help demonstrate that this test is met. Several suggestions made relating to how to address this point, including that the policy should: – include explicit reference in the supporting text to the transport, parking and environmental evidence that underpins the AoF (e.g. area wide modelling, parking surveys, air quality assessments).	The Area of Focus policies set out broad spatial considerations relevant to the area which could be applicable to multiple development sites. Unlike the more detailed site allocations policies, it does not set out details like minimum housing numbers, or specific site requirements, and its considerations are therefore much more general as they need to apply to a much larger area and a more varied set of development proposals. As such, they are not supported by the types of assessments suggested in the comment, nor would it be feasible to undertake them at Local Plan stage. Whilst the Local Plan has limited influence over transport management, Policy C6 sets out requirements for transport assessments and travel plans which it requires to be submitted for development that is likely to generate significant amounts of movement. This policy includes criteria that require the needs of people with disabilities and reduced mobility in relation to all modes of transport to be addressed. Meanwhile, policies C7 and C8 set out standards required for cycling provision and motor vehicle parking. These policies will	No further change proposed.

– require that development proposals and any CPZ expansion in the MRORAOF area be supported by Transport Assessments that consider cumulative impacts e.g. traffic displacement to adjacent streets and effects on air quality and noise. – clarify that CPZ design must ensure adequate, affordable permit and visitor provision for local residents, carers, patients and service users, with particular regard to those with disabilities or mobility impairments.	apply to applicable development within the AoF alongside this policy and as such, they do not need to be repeated in here. We respond on the matter of CPZs below.	
On CPZ and safeguarding Community Facilities Include a criterion that CPZs and traffic measures around key community assets (such as community halls, schools, health centres and local shops) should be designed to maintain reasonable short stay and blue badge access, with time limited bays or shared use arrangements where appropriate. Encourage a phased or pilot approach to new CPZs or traffic restrictions within MRORAOF, with monitoring of traffic, parking and environmental indicators, and a clear mechanism for adjusting measures if unacceptable displacement or access problems arise.	Controlled Parking Zones (CPZs) are designed, managed and maintained by the local highways authority, which sits under Oxfordshire County Council. As such, the Local Plan has no influence on how these are designed and they are not addressed in the AoF policy. Nevertheless, applicants will need to consider the requirements of policy C6 alongside this policy and, as set out above, this policy sets requirements for transport assessments and travel plans and includes criteria requiring needs of people with disabilities and reduced mobility in relation to all modes of transport are addressed.	No further change proposed.
AoF includes, or is adjacent to, several large development sites (for example along Old Road and Marston Road) that will generate construction and service traffic as they are built out. MRORAOF does not explicitly address: implications of this (e.g. where construction	Whilst the point is acknowledged, construction management plans are a requirement of policy C6, which would be applicable in or out of the AoF, as such there is no need for this to be repeated.	No further change proposed.

workers will park, how transport will be impacted by temporary transport restrictions/measures. Additional clarity in MRORAOF on construction and servicing strategies would improve confidence in deliverability. – To address, policy should Require that major development proposals within the AoF include a construction and servicing parking strategy, demonstrating how contractor and service vehicles will be managed without causing unsafe or illegal parking on surrounding streets.		
The policy needs to address environmental health impacts more. AoF's seeks to support access to major health facilities, and refers to the need to improve active travel connections and public transport, and the Plan overall aims to improve air quality and reduce carbon emissions. If parking controls and route restrictions displace traffic or cause longer diversions, there is a risk of localised increases in: traffic volumes on certain streets, noise and air pollution, and perceived severance for pedestrians and cyclists. – Policy should include environmental and health safeguards e.g. requiring that significant changes to traffic patterns or parking controls within the AoF be subject to proportionate air quality and noise assessment, with mitigation (e.g. traffic calming, planting, low emission bus routes) where risks are identified. – Should commit to ongoing engagement with residents and stakeholders,	Similar to the above, these issues should be picked up through Policy C6's construction management plans requirements. Additionally, other policies in the Local Plan are also of relevance, including Policy R4 (which addresses Air Quality impacts and requirements for air quality assessment), and Policy R8 (which seeks to ensure development mitigates impacts on environmental health and amenity).	No further change proposed.

including hospitals, universities, parish councils and community groups, to review the effectiveness of measures and ensure they continue to support both sustainable transport and local accessibility.		
The AOF needs to better grapple with the cumulative impacts of development across the three allocations (SPE3; SPE6 and SPE11) within its boundaries and should be brought together in the plan to make clear their geographical proximity. A range of cummulative impacts that need to be considered are highlighted including: – Impact of 160 additional dwellings/or student rooms equivalent, needs to be recognised in the provision of sufficient infrastructure/facilities (e.g. additional demand on buses, local shops, pharmacies, doctors and dentists). – Impacts on the SSSI, including consideration of how mitigation in one area could impact mitigation needed/already delivered in another area. Also how this would affect sewage system and knock on impacts to SSSI. – Exacerbating already present flood risk (e.g. Ferry Road quoted as example of area already susceptible). – Also need to consider currently unknown future intentions of development on other sites such as the Clive Booth	The purpose of the Area of Focus policies is to set out broader considerations that could apply to any development coming forward within the area, including with consideration for the existing character and sensitivities of the area. Where particular site allocations are included, these then provide more site-specific requirements which are informed by evidence such as the site capacity assessments (included in the evidence base). We have sought to ensure that the MRORAOF policy references many of the sensitivities picked up in these comments, e.g. sensitivities of the SSSIs, the historic environment etc. The three allocations referenced also discuss these issues in greater detail in the specific context of those sites. There are then other policies in the Local Plan which will also apply, e.g. Policies G6 (protecting biodiversity), G7 and G8 (flood risk and SuDS), HD3-5 (heritage assets). Whilst the impacts of each proposal need to be considered on their own merits, as and when they come forward, this policy framework is also intended to help mitigate negative cumulative impacts across the wider area as far as possible through the Local Plan process.	No further change proposed.

3096

student village and how this could further impact infrastructure/services. – Impacts on the conservation area of this development (and future development), as well as on green infrastructure in the area. The three sites need to be developed in a way that reflects the character of the area described in the draft plan, and to provide a coherent – though not uniform – frontage to the Marston Road.		
Welcome the inclusion of this policy which notes the qualities of the area and seeks positive change, however, with regard to the intention to stimulate sustainable development, the policy would be improved by modifying the description of the area removing references to 'rural' character which are inaccurate. Whilst the policy's description of the area as 'green' is representative, we do not feel the reference to 'rural' reflects its character and may hinder efficient use of land desired by the Council. The area's verdant character formed by mature trees and parkland in the vicinity part of the patchwork of the city, rather than countryside. This is particularly so in the context of the redevelopment of Oxford Brookes' student accommodation adjacent to Cuckoo Lane (ref. 21/01185/FUL) which features blocks up to six storeys in height. The reference to a rural character should be omitted to ensure development policies in this area are effective	Whilst it is acknowledged that there is some subjectivity to how the area could be described, and that the nature of the area varies somewhat, our analysis and the text in criterion g) of the policy is supported by the Oxford Landscape Character Assessment (see addendum produced in 2022) which generally describes the area in and around Cuckoo Lane in this way (e.g. see 7A Headington Hill). The description of the wider AoF in the supporting text does not suggest that the entire area is 'rural' in character, however.	No further change proposed

and the plan is sound. This change will not undermine the purpose of the policy or desire to maintain the green character but will remove a potential barrier to beneficial development.		
Incorporating green spaces such as Headington Hill Park, South Park and affects the Lye Valley is unjustified and ineffective. These are also identified as core green spaces, whilst the AoF states that permission will be granted for new development within the AoF, and this leads to confusion as to which policy (either G1 or the AoF) prevails. Difficult to understand the logic of incorporating public green space unless to allow building on green spaces or to privatise it.	The policies of the Local Plan need to be read as a whole, as such both apply. The inclusion of the green spaces within the AoF does not mean they are being suggested as development opportunities. They form an important part of the wider local context for any development proposed within the AoF as such it is not considered appropriate to cut them out of the AoF boundaries.	No further change proposed.
Seeking "opportunities" to "consolidate and reduce" car parking is meaningless without clear objectives set is ineffective	It is considered important to ensure that opportunities are sought to reduce car parking in the AoF.	No further change proposed.
Policy is nonsensical linking different sites and areas that have nothing to do with each other with different constraints.	The Council considers this to be an area where change is anticipated over the plan period resulting from new developments in the locality. There are also various sensitivities – e.g. the proximity to the SSSIs and various heritage assets which need to be considered. As such, it is considered important to set out some broad considerations through the AoF policy which can help guide these changes in an appropriate way.	No further change proposed.
The policy should be amended to more clearly reflect the emphasis on densification and the more efficient use of land highlighted in the supporting text. In particular, the policy should acknowledge the opportunities identified within	There is no need to repeat this in the policy. The emphasis on efficient use of land is repeated throughout the plan, and particularly within Policy S2 (High Quality Design).	None

the Area of Focus to make more efficient use of land.		
The Site Allocation policies for Oxford Brookes; Old Road Campus; and Clive Booth Hall have disappeared. These addressed specific site constraints and this is unjustified and unsound as each site has its own constraints (e.g. Old Road Campus has recently had a nearly 500 space underground car park approved although immediately above Cowley Marsh and the Lye Valley South Fen).	Previous allocations in the existing Local Plan do not need to be automatically carried forward into the new Local Plan and their absence does not impact the function of this policy. Indeed, where allocations are present (or not), the AoF policy is a separate consideration for applications coming forward within its boundaries. For reference, development at Clive Booth Hall/Oxford Brookes is already underway and Old Road Campus is a key employment site, as such, applications on the site would be addressed through Policy E1.	No further change proposed.
Cuckoo Lane runs from Old High Street to Marston Road and is a local heritage asset, this should be incorporated into the relevant site policies (eg: John Radcliffe), Pullen's Lane, Headington Schools, Gov and Harcourt, Oxford Brookes) or be a separate policy, it extends well beyond the MRORAOF area so is ineffective and unsound, muddled.	The AoF already references Cuckoo Lane and as such this would need to be considered where relevant for any development site within the AoF boundaries. Additionally, as a non-designated heritage asset, this would need to be considered through the overarching Policy HD4 – including for applications outside of the AoF.	No further change proposed.

Policy SPE1: Churchill Hospital

POLICY	**SPE1**
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	**SPE1**

All respondents **raising objections** on this policy/chapter	90.13	105.8	138.54

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Natural England has made a representation relating to Policy SPE1, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Amend criterion b) so that other suitable uses can have an operational and/or research link to hospital healthcare and education and not just operational and/or research link to this hospital.	The policy lists a number of uses linked to the hospital which we consider to be suitable and that the proposed amendment would be inappropriate.	None
Excessive parking provision is responsible for air quality, health and environmental issues caused by daily traffic congestion in Headington. Statements re: Lye Valley should not be included in this site policy but applied generally as discussed in response to G6 and G7. Reduce parking in exchange for further development. Criterion k) should be amended to "reduce car parking with no increase permitted". Add in "operational phase" to criterion d).	The site allocation policy wording is specific to the potential impacts of development at the Churchill Hospital site on the Lye Valley SSSI. It is included in addition to Policies G6 and G7. The policy wording is explicit in identifying that the site is currently dominated by surface level car parking and requires that this is rationalised to make the most efficient use of land. Development proposals will need to demonstrate how parking and car movement has been addressed and where reductions can be made. Criterion d) refers to both construction and the design of development proposals. This could be amended to provide greater clarity.	**Mod proposed to update of Policy SPE1 as follows:** *A buffer zone should be provided during the construction period to avoid disturbance to the adjacent SSSI. ~~and a~~ Additional protective and enhancement measures for river and wetland restoration, as required around the watercourse and ecological buffers zones (minimum 10metres from bank top), should form part of development proposals.*

Policy SPE2: East Oxford Bowls Club

POLICY	SPE2
All respondents **supporting** policy	No representations were made in support of the policy.

POLICY	SPE2				
All respondents **raising objections** on this policy/chapter	82.2	91.1	89.28	85.17	138.55

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The development on greenfield land is not justified. It would bring unnecessary environmental damage to the local GI network and conflict with the plan's own Policy S1 and harm the setting of the Bartlemas Conservation area (already damaged by housing at Sinnet Court). The Conservation Area Appraisal says that the rural 'undeveloped' character of Bartlemas is paramount to the area's significance and historic elements of seclusion and isolation should be preserved and enhanced. The 'countryside' setting of the listed Farmhouse and Chapel and open views across the area to Oriel Wood and the secluded character of Bartlemas lane and the allotments will be harmed by vegetation clearance, lighting, new access and traffic. The adjacent allotments are core green infrastructure.	The allocation of this site is considered to be justified. This site is considered to meet the test of being surplus to requirements in terms of its sports function. The bowls club folded over 20 years ago due to lack of interest and there has not been recent use of the fenced off site. The Oxford City biodiversity surveys 2025 included this site and did not find there was likely to be biodiversity interest that would prevent development. The fronts Cowley Road, and a significant green buffer to the historic buildings of Bartlemas would remain in the allotments.	None.

The landowner considers the site is unlikely to be capable of accommodating 10 dwellings, due to constraints such as it being in the conservation area and the presence of trees and hedges and need for qualitative improvements to GI. This reduces the developable area considerably from 0.3ha and is as low as 0.15ha. A flatted development is at odds with the surrounding character.	The Site Capacity Assessment sets out how the minimum capacity for this site was determined. This considers the constraints and features that should influence design and concludes in summary: The minimum capacity for the site has been calculated with the following assumptions: • Imitation of the block size to the east of the site, thereby tying into the Bartlemas Conservation Area within which the site sits (approx. 35dph). • Taking into account protected green infrastructure and areas at risk of surface water flooding in the developable site size. The capacity assumed is low and reflective of the characteristics of the site and its setting. Immediately southeast of the site (the other side of Batlemas Close) is a substantial terrace of 2-2.5 storey homes. Even as houses, this terrace style frontage could be continued at provide at least 10 homes, leaving room for retention of green space. Therefore, 10 units seems very achievable as a minimum.	None.
Cowley has the least green space provision per capita in the city. Removal of yet more green space is unjustified.	It is unclear which study is being referred to. It should be noted that the site is within the St Clement's area of the 2022 Green Infrastructure Study. In terms of accessibility of green space, the study is concerned with distances to parks and accessible open space. This site is a fully enclosed and inaccessible private space.	

Sport England has made a representation relating to Policy SPE2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Oxfordshire County Council has made a representation relating to Policy SPE2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy SPE3: Government Buildings and Harcourt House

POLICY	SPE3
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPE3				
All respondents **raising objections** on this policy/chapter	57.21	81.22	90.7	98.11	106.2
	89.29	138.56			

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The two sites have remained vacant for many years, despite appearing in previous Local Plans and having high potential for redevelopment / housebuilding. A Compulsory Purchase Order should therefore be included in this policy; Policy E1 must be less restrictive to allow this.	The landowner has confirmed their intentions to develop the site. A Compulsory Purchase Order is not considered necessary and is not within the control of the Local Plan.	None.

Historic England have made a representation relating to Policy SPE3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Natural England has made a representation relating to Policy SPE3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Taken individually, sound, but the points made elsewhere regarding cumulative impact of other site allocations in the vicinity apply.	Comment on taking into account cumulative impacts of site allocations in the wider area has been addressed under the responses relating to the Marston Road and Old Road Area of Focus section of the consultation summary – refer to that section.	None
Support retention of uses set out under existing OLP2036 Policy SP16. Centre maintains aspiration to include commercial research and development use within site redevelopment.	The policy sets out that other complementary commercial uses will be considered on their merits.	None
Requirement for green space provision should be omitted as this is already addressed effectively in development management policies. Inspector of current Local Plan required removal of mandatory provision of on-site green space via site allocation policy.	Whilst the policy cross references to Policy G2, it then seeks to set out how the requirements could be achieved onsite. This is intended to be helpful to applicants in terms of what might be expected, but alternative approaches in order to meet the requirements of policy G2 would also be considered.	None.
Extensive, lengthy commentary lacks clarity and would be better expressed as supplementary guidance; this would also help differentiate between strict requirements and guidance.	The same structure is being followed across the site allocations. Whilst the criteria in the policy are more detailed in the absence of supporting text, this is generally because we have sought to include everything of relevance in the policy	None

	along with helpful guidance about how different requirements can be met.	
Oxfordshire County Council have made a representation relating to Policy SPE3, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Ineffective, as no specific amount of public space is mentioned.	The policy cross references to Policy G2 which includes requirements for the provision of new public open space for residential and mixed-use sites.	None
Unjustified, as no mention of the need to preserve the seclusion of Headington Hill Park. Watching brief required for the end of northern part of Cuckoo Lane, on the old Oxford City boundary	The urban design and heritage section of the policy sets out various requirements in terms of mitigating impacts upon the setting of the heritage assets, which includes the Headington Hill Conservation Area. Reference is made to the protection of the Headington Hill view cone and to mitigating amenity impacts on the setting of the Park. The summary box flags a range of notable heritage assets that are of relevance to the allocation, this includes Cuckoo Lane. Applicants would also need to consider impacts on this in relation to Policy HD4 (non-designated heritage assets) as it is listed on the OHAR. We have identified that it would be useful to incorporate a cross-reference to Policy HD4 alongside HD3 and propose to put this forward as a modification.	**Modification proposed to add an additional policy cross ref to non-designated heritage assets policy under criterion g), as follows:** *g) Proposals must be designed to be sensitive to their impacts on the significance and setting of the nationally listed and locally listed heritage assets on site and adjacent to it, taking opportunities to enhance these wherever possible (**Policy HD3 and HD4**).*

Peat and fen surveys are required at the site.	The policy notes that a biodiversity survey will be required to assess the ecological value of the site. Nonetheless, Policy G6 states that where there is a reasonable likelihood of harm or loss to protected species or natural/semi-natural habitats, targeted ecological surveys must be undertaken prior to the determination of any planning application.	None
A natural calcareous stream flows into Harcourt House from Headington Hill Park with water across the path after rain.	It is unclear what site-specific requirement would need to be incorporated in response to this point. Nevertheless, there are policies in the Local Plan that deal with mitigating impacts on watercourses, and for dealing with surface water flood risk (set out in chapter 4 and 5 of the Local Plan).	None

Policy SPE4: Jesus College Sports Area

POLICY	SPE4
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPE4			
All respondents **raising objections** on this policy/chapter	36.3	82.3	126.3	85.13
	71.1	90.15	138.57	

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Policy SPE4 is unsound because it could result in the loss or reduction of an established cricket	Policy SPE4 sets out in paragraph a) that the site is identified as supporting green	None.

facility that is actively used and forms part of Oxford's limited sporting infrastructure. The Local Plan does not clearly demonstrate that the loss of the playing field would be acceptable or that an equivalent replacement facility could realistically be provided within the city. The reduced sports field would not be large enough to support cricket matches. The retained sports pavilion at Lincoln College is unlikely to be sufficiently large for hosting sports matches concurrently at Lincoln and Jesus College sports grounds. The allocation may also conflict with national planning policy which seeks to protect existing sports facilities unless they are demonstrably surplus to requirements or replaced with equivalent provision in an appropriate location. Given the constrained nature of Oxford and the difficulty of delivering new playing fields, the loss of this facility could reduce opportunities for cricket participation. Retaining some of the sports provision is not sufficient as it will not be adequate to service the needs of all at peak times, which invariably will mean residents can only use them at unpopular times. The policy should be amended to ensure that the existing cricket facility and playing field are	infrastructure, therefore, development on the allocation site would need to demonstrate compliance with Policy G1 paragraph a) which relates to proposals that impact on outdoor sports including pitches. Any harm/loss will need to be mitigated by ensuring sufficient reprovision, ideally onsite, and to the same standard or higher. This approach is compliant with national policy. Policy SPE4 paragraph c) also provides some flexibility to consolidate sports provision with neighbouring sites but only where the same capacity to meet playing pitch needs can be demonstrated.	

retained unless an equivalent or better replacement cricket ground is delivered within Oxford prior to any loss of the existing facility. Also, Oxford City Council is requested to: 1. Protect existing cricket playing fields within the Local Plan framework. 2. Reconsider housing allocations that would result in the loss of operational cricket grounds unless appropriate replacement provision can be secured. 3. Work collaboratively with Oxfordshire Cricket, local clubs and Sport England to develop a long-term strategy for cricket facilities within the city. 4. Ensure that any development proposals affecting sports grounds provide replacement facilities that are: ● equivalent or better in quality ● accessible to existing users ● delivered prior to the loss of existing facilities.		
Natural England has made a representation relating to Policy SPE4, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The allocated site would bring considerable, unnecessary, environmental damage to the local green infrastructure network and to the setting of Bartlemas Conservation Area and its associated heritage assets, also conflicting with Local Plan's own strategic policy S1 criteria f), g) and h). We are concerned about the cumulative	The site allocation policies SPE4 (Jesus College) and SPE7 (Lincoln College) have been carefully considered in relation to the historic setting and the potential cumulative impacts of development on these sites. This has resulted in carefully drawn site boundaries which provide a set back from the Bartlemas	None.

impact of development at these three sites on the character and special qualities of Bartlemas Conservation Area - which has already been adversely affected by development of student Housing at Sinnet Court on its north-west fringes some years ago. The Conservation Area represents a surviving fragment of Oxford's original farmed landscape setting. The Conservation Area Appraisal, describing the vulnerability of the Area, states that "The rural 'undeveloped' character of Bartlemas is paramount to the area's significance" and that "the historic elements of seclusion and isolation should be preserved and their characteristics enhanced".	Conservation Area and specific wording in relation to urban design and heritage.	
This allocation in its entirety is part of the protected G1B green infrastructure network therefore reprovision for any loss of habitat should be delivered on site in the first instance or delivered to another part of the network.	This requirement is set out in Policy G1 and in paragraphs a) and b) of Policy SPE4.	None.
Sport England has made a representation relating to Policy SPE4/SPE7, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy SPE5: John Radcliffe Hospital

POLICY	**SPE5**
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPE5		
All respondents **raising objections** on this policy/chapter	105.9	109.1	138.59

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Amend criterion b) so that other suitable uses can have an operational and/or research link to hospital healthcare and education and not just operational and/or research link to this hospital.	The policy lists a number of uses linked to the hospital which we consider to be suitable and that the proposed amendment would be inappropriate.	None
Unsound as not justified - Policy notes the location of part of the site in the conservation area and suggests a masterplan should be available so that new developments and related issues such as green infrastructure and parking can be addressed in the context of the whole. We would support an initiative to produce such a plan. Propose that the 'Open space, nature, flood risk' section be expanded to include consideration for the conservation area. Also propose that 'i' and 'j' under the 'movement and access' section could introduce a requirement for a site wide transport plan, which should include a policy to minimise the impact of traffic on OHCA and to align with county policies to reduce overall traffic numbers.	The policy wording is not considered to require amendments. The text in the box preceding the policy makes reference to some trees being protected by their location within the Old Headington Conservation Area (OHCA); it is not necessary to refer to the OHCA again in the 'Open space, nature, flood risk' section. Point j. includes reference to both a transport assessment and travel plan. These should be submitted in support of any major development proposals and cover the whole site. Comments acknowledged on the site capacity assessment.	Capacity Assessment updated with correct site photo and correct street name references.

Further comments on inaccuracies in the Site Capacity Assessment.		
Unsound as not justified or effective – the policy has no goals or objectives and excludes the main issues of parking levels and flooding. Policy has no targets to reduce parking provision to enable a more efficient use of land or address the climate change, environment and public health issue created by the hospital. Flood mitigation is NOT sufficient, reduction must be enforced. Thames Water and the Environment Agency, to establish the appropriate drainage mitigation measures for any development. Heritage statements are factually incorrect. Amendments suggested to make policy sound relate to parking, green space, heritage and flood risk.	Comments noted. The policy wording is not considered to require amendments.	None

Policy SPE6: Land Surrounding St Clement's Church

POLICY	**SPE6**
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	**SPE6**		
All respondents **raising objections** on this policy/chapter	81.23	98.12	138.6

SUMMARY OF ISSUES RAISED	**OFFICER RESPONSE**	**PROPOSED ACTION**

Cumulative impacts and the need for coherent planning in the Marston Road should be considered. The road junction will be difficult on this congested point of the Marston Road and this will be worsened by cumulative impacts.	The scale of development expected, alongside the low level of parking expected by the parking standards (Policy C8) means that the site is not expected to cause significant traffic-generation. The site has been considered by Oxfordshire County Council, who have not raised highways concerns with the allocation. The policy carefully considers the most likely suitable access points.	None.
Care needs to be taken to avoid light-spill onto St Clement's Church at night; the illuminated church surrounded by dark woodland is a night-time features of the Marston Road. Harm should be avoided on ' Spires View' from South Parks.	The policy does refer to avoiding artificial light alongside the Cherwell and also by the church if it is found to support roosting bats. The policy notes the important heritage features that could be impacted by the development and requires design to respond carefully to these. The southern part of the site is in a view cone and this is noted. However, Historic England have also noted that the policy itself contains less detail about the heritage assets than some other policies.	Main Modification proposed to add more detail about heritage assets into the policy itself.
Adverse impact on the ecology of the Cherwell should be avoided. The site is too close to the floodplain of the Cherwell on the western side and cuts into the wildlife corridor of the Cherwell. Development should be avoided in FZ3a.	The policy says that habitats should be preserved and enhanced, with retention of trees and hedgerows where possible. The policy contains multiple criteria (a-i) relating to open space, nature and flood risk. The Policy acknowledges that: *'Part of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the*	None.

	suggested measures set out for this area. Refer to the LNRS mapping tool for further details.' In addition, a 10m buffer is required alongside the Cherwell. The area of flood risk is in the southwest part of the site, and the policy is clear that development should avoid this area.	
As the Marston SSSI is upstream of the site it is hard to understand how it could possibly affect it.	Because of the proximity to the SSSI and location immediately adjacent to the Cherwell this site is identified in the Source Pathway Receptor Analysis as having potential impacts on the SSSI. The New Marston Meadows SSSI is sensitive to changes in the flows and quality of water in the Cherwell due to being in its floodplain. It is not the case that a development can't have any upstream impacts on river flow.	None.
Historic England has made a representation relating to Policy SPE6, which is summarised and responded to in the Statement of Common Ground. SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The allocation may also conflict with national planning policy which seeks to protect existing sports facilities unless they are demonstrably surplus to requirements or replaced with equivalent provision in an appropriate location. Given the constrained nature of Oxford and the difficulty of delivering new playing fields, the loss of this facility could reduce opportunities for cricket participation. Retaining some of the sports provision is not sufficient as it will not be adequate to service the needs of all at peak times, which invariably will mean residents can only use them at unpopular times. The policy should be amended to ensure that the existing cricket facility and playing field are retained unless an equivalent or better replacement cricket ground is delivered within Oxford prior to any loss of the existing facility. Also, Oxford City Council is requested to: 1. Protect existing cricket playing fields within the Local Plan framework. 2. Reconsider housing allocations that would result in the loss of operational cricket grounds unless appropriate replacement provision can be secured.	Policy SPE4 sets out in paragraph a) that the site is identified as supporting green infrastructure, therefore, development on the allocation site would need to demonstrate compliance with Policy G1 paragraph a) which relates to proposals that impact on outdoor sports including pitches. Any harm/loss will need to be mitigated by ensuring sufficient reprovision, ideally onsite, and to the same standard or higher. This approach is compliant with national policy. Policy SPE4 paragraph c) also provides some flexibility to consolidate sports provision with neighbouring sites but only where the same capacity to meet playing pitch needs can be demonstrated.	None.

3. Work collaboratively with Oxfordshire Cricket, local clubs and Sport England to develop a long-term strategy for cricket facilities within the city. 4. Ensure that any development proposals affecting sports grounds provide replacement facilities that are: ● equivalent or better in quality ● accessible to existing users ● delivered prior to the loss of existing facilities.		
Lincoln College is surprised that the Council proposed to allocate just the eastern portion of the Sports Ground, via Policy SPE7. Ongoing pre-application discussions with the Local Planning Authority have included preliminary heritage research and assessment to inform this stage of the work and to provide appropriate context for the visual appraisal. This has included a review of the heritage significance of the adjacent Bartlemas Conservation Area, relevant listed and non-listed heritage assets, and their settings, together with an understanding of how the site currently relates to these assets. In short, the precise location of development within the allocation could be refined through the next stage of design, following more detailed analysis of townscape impact, heritage issues, access geometry and landscape relationships. The alternative red line proposed	Following discussions with the College, amendments have been agreed in the Statement of Common Ground (SoCG) in Appendix 1 – Statements of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

in the pre-application submission therefore encompasses the area within which development could reasonably be accommodated whilst allowing the final siting to respond to the key considerations.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Development is in a conservation area with many houses of historical interest. Access to the proposed site is limited and only possible by driving down narrow lanes in close proximity to houses and the church. Old Marston Village is already a poorly managed 'rat run' for commuters and school traffic with no efforts made by the council to limit volume or speed. Traffic has significantly increased in the village since the introduction of the congestion charge. Recent housing developments did not put any measures in place to manage this, so it's assumed this will be similar. Mill Lane building works have been disruptive and damaging to local roads, verges, pavements and houses. The current infrastructure of the village continues to be damaged to builders can make a profit.	Some of these comments relate to County Council transport measures outside the remit of the planning. The County Council as highways authority has reviewed all potential site allocations and had no in principle objections to the allocation of this site for 20 homes, and has not made a representation about it. The potential for access has been established by the development to the north, now completed and functioning successfully. Policies C6-C8 of the Plan ensure necessary transport-related measures are put in place and manage parking levels.	None.

Lucy Developments Ltd has an option on the site and is promoting the site for a minimum of 20 new family homes. Lucy Developments Ltd largely agree with the wording and provisions of Policy SPE9 but the point of contention is the red line area of the site. The draft allocation seeks to deliver a minimum of 20 homes on the 0.51ha site. To delivery a scheme that meets the policy criteria relating to BNG, green links, amenity green space and so on, will require use of the entire site in the control of Lucy Developments Ltd. The illustrative masterplan shows the area most appropriate for residential development, which is 0.53ha, which would provide 18-20 units at 34-38dph. The north-east section of the site, closes to the A40, is indicatively deemed most suitable for open green space and supporting blue infrastructure.	The larger site area in the control of Lucy Developments Ltd was put forward at the start of the OLP45 Plan-making cycle, and the City Council understood the intention was to bring forward 20 homes on the area of grey belt. The indicative masterplan does show some development beyond what is considered to be PDL/grey belt. The area to the east of the built-out Marston Paddock development and south of the A40 was shown on the indicative masterplan as for use for GI enhancement/an attenuation pond only. None of what was proposed for that area of land would need an allocation policy. All use for BNG enhancement required as a result of development or for SuDS and so on could take place without this area being within the allocation. Given that Lucy Developments Ltd seemed to have no intention of developing on this area, it was not included in the allocation. This seemed the most sensible approach, because the work that would need to be done to assess that area of the ownership for an allocation would be considerable and there are potential issues that would make it unsuitable, for example access and the increased amount of traffic that would be generated, and the currently unknown biodiversity interest. Furthermore, the whole site would need to be removed from Green Belt, but a potential 20 dwelling development would not justify removal of such a large area of Green Belt. The	None.

	Reg19 representation from Lucy Developments Ltd now says that this space is 'indicatively deemed most suitable for open green space and supporting blue infrastructure', which suggests that, if the red line were extended, this would be taken as showing the whole site could be developed, when at this point the wider site has not been properly considered for its suitability. The approach the City Council took was to allocate only the area of PDL it considers to be grey belt, which is the area it understood to be intended for development, and which is large enough to accommodate a minimum of 20 homes at less than 40dph, which is considerably less than the 50dph on the site to the north and which would seem appropriate to the site context. To allocate a larger site for development than seems necessary in order to achieve the development of the intended number of dwellings would not be justified, especially as that would involve removing more land from the Green Belt, and land which is not grey belt.	
Lucy Developments Ltd understands the City Council's intention to make an exceptional circumstances case, but does not consider this to be necessary as the land is considered to be grey belt. The site forms only part of the assessed Green Belt parcel 114(a). The majority of this parcel is open and development, but the site is mainly PDL and fundamentally not	It is necessary for an exceptional circumstances case to be made to remove land from the Green Belt during the plan-making process, in order that in can be allocated for development, even if the land is grey belt. All Green Belt parcels or sites put forward in the Green Belt were considered for development as part of the plan-making	None.

‘pastoral field and woodland’. The Green belt report assessed potential moderate-high harm to the Green Belt purposes if the site were to be removed. This negative assessment is considered to be in relation to parts of the parcel outside of the control of Lucy Developments Ltd.	process, regardless of whether they are grey belt or not, and regardless of how strongly they performed against the Green Belt purposes. However, the vast majority of Green Belt within Oxford is not developable for three main reasons (or a combination of the three), either it is functional floodplain, nationally protected for biodiversity interest or there is not landowner interest in developing the site. There were also found to be some other site-specific reasons that sites were not suitable, in most cases involving access. The majority of parcel 114(a) has a landowner not interested in development. Of the part in the control of Lucy Development Ltd, the reasons for not suggesting a site allocation across the whole ownership are not related to the Green Belt function or assessment, but are the reasons set out in the response above.	
We largely agree with the policy considerations and physical/environmental considerations as set out in the SHLAA but query the extent to which the site supports the function of the GI network, with its strong connection with urban form to the north, south and west and its proximity to the A40. It is not part of a wider green network, is of relatively low environmental quality and is not accessible by the public.	The site has not been assessed as being part of the core GI network, but the site does have some green infrastructure interest.	None.

Policy SPE10: Nuffield Orthopaedic Centre

POLICY	SPE10
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPE10

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The School buildings are recognised as an Oxford Heritage Asset, and the retention of the building as a significant historic feature of the Marston Road is regarded as essential. However, demolition is envisaged as a possibility in the plan, and this is not considered acceptable. There is a suggestion that the land within the internal quad might be preserved as a Local Wildlife Site if the former School and the quad itself were to be demolished around it. Although that would be better than nothing, it raises the question as to whether the wildlife habitat formed by the quad would survive the quad's demolition; that seems an unsound assumption.	The allocation policy requires that design proposals acknowledge the significance of the historic Milham Ford School buildings and the plan (Policy R2) requires that applicants demonstrate that re-use of any existing buildings on a site has been explored and robustly demonstrated to be unfeasible before resorting to demolition. The internal quad is already designated as a Local Wildlife Site, and there are requirements in the plan (policy G6) to mitigate the potential impacts of development.	None
The building has not been Milham Ford School for 23 years now and the Quad was never part of the grounds but within the building which is now 'Oxford Brookes Marston Road Campus'	The references in the policy to the Milham Ford School apply to the historic name of the main building and is clearly stated as such. The location of the Quad in relation to the building is also clearly stated.	None.
Historic England has made a representation relating to Policy SPE11, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Amend policy wording as follows: • Remove criterion (h); • Refer to treeline in criterion (d) as 'mature' rather than 'established'; • Change wording around number of units required.	Criterion (h) is consistent with the approach of the plan. Policy R2) requires that applicants demonstrate that re-use of any existing buildings on a site has been explored and robustly demonstrated to be unfeasible before resorting to demolition. As the internal quad is designated as a Local Wildlife Site, there are requirements in the plan (policy G6) to mitigate the potential impacts of development. Criterion (d) is suitability worded as part of a description of the existing condition of the site and the suggestions are not considered necessary to make the plan sound. The number of dwellings has been determined by an assessment of the site taking into consideration the site size, physical constraints, and an appropriate level of density that is suitable for the setting. The policy wording is clear that it is a minimum requirement.	None

POLICY	SPE13		
All respondents **raising objections** on this policy/chapter	103.3	109.2	138.3

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The policy is ineffective as it assumes one big development. This would not apply to say, a moderate extension to an existing building. It is unclear if residential development must be linked to academic uses.	There are a number of sites that have policies that will apply to development that comes forward over time and if a modest development is proposed then it may be that only certain aspects of the policy are relevant. It is unlikely that residential development not linked to the academic use would be feasible within the campus, but the policy does not rule that out in case it does come forward.	None.

The planning application that was approved in 2022 was for the demolition and provision of new student accommodation. This- like the fate of many previous applications for the same site for similar work- will expire in June of this year. Submissions to the OLP2040 examination from Quod on behalf of UWL showed student accommodation would be a minor component of new development on the site and suggested the campus site could be used for non-educational 'enterprise' purposes. In 2024 and subsequently, Ruskin has advertised office accommodation in Smith House	Work has commenced on the 2022 application, so it has not expired. The policy can't prevent buildings being used for their lawful use by an occupier other than the university. The Planning system cannot take account of who an owner or occupier is.	None.
Just south of the red line I've seen a flowing spring, marsh plants and peat development. How will campus development not interrupt this flow and keep it unpolluted. The zone between SPE13 and SPE14 is suggested for biodiversity enhancements. Enhancement would mean making a really wet fen habitat to reinstate what would have been there before damaging drainage. Public access would need to be restricted due to wetness. A wetland without public access sandwiched between two developed areas seems unlikely to survive or be much appreciated. It would need a wide buffer and good green connectivity.	Development proposals on both sites will need to delivery biodiversity net gain. Keeping green connectivity through the sites and important existing green features is important, as is noted in both policies. Criterion e) of Policy SPE13 says *'Due to the site's proximity to recorded peat reserves associated with Dunstan Park, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of these deposits (Policy R6). Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.'*	None.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Not legally compliant: Council will financially benefit from the sale of Council-owned land for access, in effect seeking to grant itself planning permission. The greater the number of houses, the greater the financial benefit. Also risk of Council ignoring an increasing amount of damage to the natural and historic environment in order to further the gain. At least this is a flagrant conflict of interest and	At a meeting on Cabinet approved the Heads of Terms for an Option Agreement for the disposal of land at Foxwell Drive, noting that any development was subject to planning. At the meeting it was noted that the option agreement would mean that if any relevant development gained permission the Council could then grant necessary access to land. It was noted that that meeting was not the place to discuss whether or not development on this land	None.

at worst, total misuse of power, bordering on the illegal. This situation must result in potential for judicial challenge. The fact that the Council has purchased an access route does not suddenly make what was wrong in the first place right. Policy can only be sound by removing the site allocation/policy can only be made sound by removing the option facility/planning decisions must be made by a different planning authority.	would be good or bad, as that would be tested through the planning process. The local plan will need to consider sites owned by the City Council (although this site is not, the developer has been granted an option to use City Council land to gain access. This local plan process happens independently of City Council property considerations).	
The policy wording emphasis is on the environmental considerations, yet the policy seems ultimately to advocate development. There are huge housing developments over at Bayswater and Barton that can happily satisfy the housing need in this part of Oxford. Given the considerable quantity of new housing at these nearby sites it would be an act of environmental vandalism to build on a small, sensitive site of such importance.	Housing need is calculated by local authority area, and if there is no capacity in that area then agreements must be made with neighbouring authorities about the 'unmet need'. Developments on the edge of Oxford will be partly to meet Oxford's unmet need, but also help to meet those authorities' own housing needs. When exporting need, every effort must first be made to identify potential housing capacity with Oxford.	None.
Siting development here will harm existing neighbouring uses; would impact on Dunstan Park and the children's play area in terms of noise, pollution and air quality. development would negatively a tiny forest;	Whilst the potential impacts on local amenity will be considered as part of an application with detailed proposals, there is not considered to be an intrinsic level of harm in principle that would be caused by development of housing on this site.	None.
Access roads (Old High Street and in Marston) are not sufficient to service this amount of new build – emergency vehicles in particular are hindered by existing traffic levels. Traffic congestion at the pinch points in Old Headington and Northway is a huge problem.	There are good sustainable travel links from the site. The X3 runs along Foxwell Drive into Oxford city centre every 20 minutes during the day and it runs early to late including on Sundays. There is potential for development here largely served by sustainable travel means. Any detailed application	None.

Given the council's efforts to reduce traffic around Oxford, so it would be illogical for the council to allow housing to be built on this site, which would obviously increase pressure on the already overloaded road system. Having access from Foxwell Drive would impact Copse Lane, Dunstan Road, St Andrews Road, and Ambleside Drive and Saxon Way - roads that are already overloaded at peak hours. New bus services would not significantly reduce traffic. The area does not have opportunities for sustainable travel links/public transport in the area is poor. It's a long walk to frequent services on the London Road. This will give rise to an increase in the number of cars.	would need to demonstrate the there are minimal transport impacts or that these can be limited. However, in principle it is considered that housing development on this site that is acceptable in transport terms is certainly possible.	
An access to the A40 at Foxwell Drive would be dangerous. There would be pressure to create links from the site to the A40.	A new access road to the ring road would be highly unlikely to be approved by the Highway Authority and is not suggested in the site allocation policy, assumed, or necessary for the development.	None.
New owners would use Stoke Place to park their cars, adding to an already difficult situation.	Parking provisions will need to be considered carefully as part of any detailed proposal and application, and the policies of the plan require consideration of transport impacts. Stoke Place becomes a bridleway at the north end, alongside the site, and does not have good connectivity with the site.	None.
Upgrading Stoke Place/ cycle path to ring road to make it more attractive for cycles, walking, mobility scooters and provide a link into the site from this route and retain some areas as park/ trees for communities to enjoy.	Criterion o) of the policy says: Stoke Place is not suitable for providing vehicular access, but access to it for walkers, cyclists and wheelers should be considered in order to ensure permeability.	None.

Existing infrastructure such as schools and drainage are also likely to be overloaded.	The Infrastructure Delivery Plan assesses the need for infrastructure arising from anticipated growth in Oxford. There is not anticipated to be an increase in need for school places that can't be met.	None.
Any development would represent a considerable threat to wildlife, water courses and vegetation. Any development would be on greenfield which would have negative impact on an important green infrastructure network. This doesn't comply with the need to enhance biodiversity and facilitate wildlife movement. Development will disrupt the wildlife corridor that runs from Barton triangle to Dunstan Park. The green fields provide a crucial contribution to the character of the unusual village setting within the ring road and provide a link for wildlife between Dunstan Park to the west and the Oxford Preservation Trust land to the east. Development here would undermine the environmental value and special character of the area. It would destroy the character of a much loved and enjoyed part of the city. The council surely has a duty to preserve and enhance such an asset.	The site allocation includes the northern part of the fields only, leaving the southern part, where there is a pond, to remain as a wildlife corridor from west to east. The site is not accessible to the public and is not part of the core Local Nature Recovery Network (which would not itself preclude development anyway). However, as noted in the information box above Policy SPE14, there are protected species potentially present and using the habitats including commuting bats, breeding birds, reptiles, amphibians and invertebrates. The policy responds to the likely ecological value of the site, which is likely to be focused on trees and hedgerows. Criterion a says '...*trees and hedgerows at the boundaries of the site and running through the site should be retained as far as possible, and opportunities taken for enhancement.'* Criterion b says *'New native hedge and tree planting should connect existing trees and hedgerows.'*	None.
Policy can be made sound by ensuring housing is not approved in areas that flood, upgrades to the sewerage system or keeping residential numbers low so as not to adversely impact sewage capacity	The site is in Flood Zone 1 and does not have significant areas of surface water flooding either. These occur only along the drainage course through the middle of the site and in the north parallel to the A40.	None.
Old Headington used to have 'protected open space' which strictly limited building. The	Policy SPE14, in criterion a, is clear that *'The green character of the site is important to the setting of*	None.

green belt no longer exists and allocation of the site would further diminish the remaining green areas. Development would not take account of the local historical context and respond to the heritage significance of the conservation area; would not be in accordance with para 20.d and para 202 of the NPPF (conserving and enhancing the natural, built and historic environment including landscapes and GI and protecting heritage assets). Development would significantly harm the setting of the Old Headington Conservation Area. It would completely alter the character and appearance of the wider Conservation Area and would affect views towards Old Headington from the Elsfield View Cone, the importance of which is specifically referenced in the Assessment of the Oxford Views Cones 2015. The loss of three green fields at the heart of the band of fields that run from Dunstan Park to Barton Lane, framing the village at its northern edge, would cause substantial damage to a designated heritage asset, stripping it of one of the features that give the conservation area its special character. In terms of balancing benefits it is not credible that any advantages gained by building 28 houses could outweigh the consequent environmental degradation.	*the Old Headington Conservation Area'.* However, there is considered potential for carefully designed development, which would have to be of low height and density, and most importantly retain green infrastructure and green corridors. The criterion g says: '*Significant green features should be incorporated to retain the function of the site as one of the few vestiges of the rural character of the conservation area, important to its setting and understanding history.'* The site is not within a view cone, but there is potential for it to impact views from the Elsfield View Cone. For this reason, criterion h) says that '*Buildings should be carefully placed to retain important views across the site and visual links with rural hills beyond...'* The Green Belt does still exist, but this site is not in the Green Belt. Old Headington Conservation Area ensures development is considered in terms of its impact on the identified special character of the area, and must respond to it.	
Support identification of Ruskin Field as proposed allocation but consider some of the	The land owner's suggestion that the whole field should be allocated for development is responded	None.

policy requirements are not adequately justified and the policy could be made more effective to deliver the Promoter's identified capacity of at least 130 dwellings. Have indicated the Policies Map and red line area in the allocation do not include the proposed access via Foxwell Drive and requested these are both amended to include the land for this access. Also disagree with the requirements in criterion 'd', 'h', 'i', 'j' and 'k' of the policy suggesting amendments to each of these.	to in the section about omission sites. There is not considered to be a need to extend the site boundary to include all of the area that would need to be included in works to provide an access for Foxhall Drive. Detailed proposals for this site will require careful consideration of all the points listed in the policy in order to be successful. The policy sets out how considerations relating to the generic policies of the plan are likely to be relevant, and gives indications about how development proposals will need to respond to known features and characteristics of the site. No modifications are proposed.	
Around the northern side of Headington Hill there are a number of small spring or seepage alkaline calcareous fen sites fed by the Headington Limestone and with significant peat formation, more are being discovered. SPE14 is likely to have some accumulated peat deposits present and is therefore unsuitable for any development. It would be better restored to a more biodiverse wetland. Ruskin Field contains fen valley habitats and abuts Larkins Lane Field and Dunstan Park, both ecologically rich sites and the subjects of ongoing spring fed calcareous fen (valley fen) restoration projects. The development of Ruskin Field would pose a severe threat to these rare habitats and would cause significant harm to the peat deposits contained underneath them. The adjoining fields between this site and Dunstan Park also contain evidence of these habitats.	Botanical survey notes from surveys carried out in 2017 show that the northern fields, i.e. those in SPE14 are largely semi-improved neutral grassland. The site currently allocated in the Oxford Local Plan 2036 includes a pond, an area of hard rushes, an orchard and secondary broadleaved woodland. These areas are not proposed for allocation in the Oxford Local Plan 2045. There are known peat deposits on Dunstan Park, but there are not known peat deposits on Ruskin Field. Policy R6 requires that: *'Proposals for new major developments on undeveloped land upon, or within 200m of, known peat reserves should submit an assessment, informed by borehole sampling, to allow the City Council to determine any potential impacts on reserves....".* Policy R6 would apply to Ruskin Field, so development could not take place without understanding of any potential impacts on the peat reserves. All of the site is over 100m from the known peat reserves. The following shows the	None.

The fields support an unusual array of ferns and sedges which thrive as there are important peat deposits - particularly in the line of the proposed access road. These nationally important peat deposits require a wide area of green land to survive - they would disappear for good if this development goes ahead.	buffers at 50m, 100m and 150m from peat deposits at Dunstan Park. Criterion f of SPE14 says: '*Due to the site's proximity to recorded peat reserves associated with Dunstan Park, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of these deposits (Policy R6). Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.'* Detailed biodiversity and habitat surveys will be required as part of any application, and biodiversity impacts will need to be mitigated.	

Surprised that the allocation policy does not refer to the neighbouring site (SPE13: Ruskin Campus), as the cumulative effect of both site allocations should be considered together.	The Ruskin Campus site (SPE13) is an already built-up site where intensification is proposed and likely to continue over time (permission is already granted for some development within the campus). This will happen independently of any development on the Ruskin Field site.	None.
The proposed policy fails to take into account the reasonable alternatives and is not based on proportionate evidence and is therefore not justified.	At Regulation 18 stage, various options for the plan's approach were considered, as set out in the SA and supporting background papers. In terms of site allocations, the starting point for identified sites is that they should be allocated unless there are insurmountable factors that are likely to prevent development. Uses are in accordance with landowner intentions where these are compliant with the Plan strategy.	None.
The site should not be allocated for housing. Reference should also be made to include policy plans to establish: the number of houses being proposed, the mix of houses, the traffic impact onto the Foxwell Drive immediate area, the increased traffic impact through and to Old Headington, the visual damage to the green setting of Old Headington conservation area.	Much of this describes the details that would be required alongside a detailed planning application submission.	None.
The landowner has made an extensive and wide ranging representation (ref 156.1) The basis of this representation is the assertion that the site allocation policies are heavily constraints based, overly detailed, repetitive of other policies and set out matters that would be more appropriate to pre-application discussions and management	It is a helpful approach for the site allocation policy to apply the generic policies of the plan to the site, setting out some of the considerations that are relevant and indicating how those issues may be overcome. The contribution of this site to the special character of the conservation area is something that will need to be addressed through any detailed design, and it is appropriate for the allocation policy to give some direction to how this	None.

through the development management process. Examples include The overstatement of the contribution of the site to the character of the Old Headington Conservation Area and the assertion that the development could have an impact from the Elsfield View Cone, even though none of the site is in the view cone. The site's previous contribution as a transition to open countryside has been substantially changed by the construction of the bypass and by the development of Parton Park. Therefore, the policy should more positively recognise the site as a significant and unique opportunity to meet housing need in a sustainable location.	may be done, and what may be expected in an application. It is not overly prescriptive, and scope is given for a creative design response, but the policy includes some fundamental expectations, which relate to the generic policies of the plan and apply them. Views to, from and within the site will be important to consider in terms of how development may impact on their character.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Historic England has made a representation relating to Policy SPE17, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The reduction of the car park seems difficult to achieve without a severe economic impact as it is normally at or near capacity, therefore contrary to Policy C2, Maintaining Vibrant Centres, no rationale given for allocation, therefore is unjustified further it is ineffective as it relies on a future determination.	The site is being considered for inclusion in the plan as an allocation because of developer interest in delivering residential units, and the sustainable location in the district centre. It will be a requirement in the policy that any development retains car parking on site at a sufficient level – as determined by relevant officers in the City Council - to support the district centre.	None required.

Policy SPE18: Warneford Hospital

POLICY	SPE18
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPE18			
All respondents **raising objections** on this policy/chapter	90.14	108.1	85.15	138.65

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Natural England has made a representation relating to Policy SPE18, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The approach with the Warneford policy descends to a level of detail which is both selective and unnecessary. It is not succinct; is not positively prepared; has not been shaped by effective engagement with stakeholders; and does not avoid unnecessary duplication of policies.	The comments against the particular issues summarised in the rest of this table respond to this overarching point.	No further change proposed.
Policy does not start with a clear explanation of its purpose or of the important background to the site. It should be apparent on the face of the policy that the existing hospital and its	The introduction to Chapter 8 sets out the purpose of the policies that follow on from it. Each site allocation then follows the same general structure. By including the site as an	No further change proposed.

outbuildings are in urgent need of refurbishment or redevelopment, that a new hospital is needed and that the comprehensive development of the site can achieve major benefits, which are directly consistent with the stated objectives of the Plan.	allocation, the Local Plan is identifying it as an opportunity for development. In various parts of the policy, opportunities are identified, including under criterion g) that *redevelopment of the site offers a valuable opportunity to enhance mental healthcare provision and associated research.*	
Not necessary for the site allocation policy to repeat or summarise the requirements of other local plan polices, particularly concerned that, where other policies are referenced, they are given with a partial summary or reinvention of those policies. If reference to other policies is necessary, a model approach is the current adopted policy.	As set out in the intro to chapter 8, the detail relating to other cross-referenced policies within the site allocations is intended to give detailed guidance to apply the policies of the plan to the site allocations. They are generally referenced where there are particular site-specific considerations and include examples for how applicants could meet the policy requirements. We have followed the same approach across all of the allocations.	No further change proposed.
New draft policy SP18 is 1,057 words compared with the combined total of 535 words in the existing Plan for the policy and the supporting text of SP22. Policy is not succinct and the approach is not proportionate.	The rationale for the additional guidance provided for in the policy is set out above. Whilst the policy may be longer, we do not agree that this means it is not succinct or proportionate.	No further change proposed.
The draft SP18 is negatively expressed and heavily constraints based. By contrast, the existing Policy SP22 recognises the need for planned change, including the need to construct a new hospital on the site of the former playing field (inevitably resulting in a loss of open character compared with today but consistent with, rather than contrary to policy).	It should be noted that criterion a) of the policy clearly identifies that t*he loss of the former sports facility is considered justified only due to the need for and benefits of new hospital development.* In relation to the topic of constraints, as with all the allocations, we have sought to ensure that the key considerations of relevance to the design process in the context of the site are clearly set out. Omitting these from the policy	No further change proposed.

	would not mean that these considerations are not of relevance. Wherever possible, we have then sought to set out examples of how we think design could be tailored to respond to these points, which is intended to provide further clarity to applicants as to what might be expected. Of course, these may not be the only way to respond to these topics.	
The site is not currently designated as Supporting Green Infrastructure and that proposed designation should be removed from the site allocation.	The designation of core and supporting green spaces is new for this Local Plan as part of Policy G1. As G1 sets out, supporting spaces are *designated for their important role in enhancing the* (green infrastructure) *network and its overall function.* Our assessment of the green spaces on the site indicates that they can clearly be seen to be meeting a role in supporting and enhancing the function of the wider network in the area, and as such, they meet the criteria for being identified as supporting green spaces. Nevertheless, the designation does not prevent development, it simply seeks to ensure that harm/loss to these spaces is resisted unless this can be mitigated by ensuring sufficient reprovision, ideally onsite, and to the same standard or higher.	No further change proposed.
Wording in current adopted policy, "… development of 3-4 storeys is likely to be appropriate… ", is absent from LP2045 version. This wording has proven to be not only correct (and supported by the design review process), it has also assisted in the public understanding that this site is suitable for buildings of some	The wording of criterion h) simply requires that applicants demonstrate that buildings are of an appropriate height, scale and massing when considering the wider context of the site. It does not preclude development of 3-4 storeys. It also allows for flexibility to respond to	No further change proposed.

scale. Again, the Regulation 19 wording (stating that new buildings should be of an appropriate height, scale and massing that responds to wider context) is neither helpful nor positively worded.	changing context of the wider area over the Local Plan's lifetime.	
Sport England have made representations against policy SPE18, these are addressed through the Statement of Common	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Planning permission is already in progress – See comments made against other policies (Churchill; Policy H5; R4 - (in relation to Parking), G1-G9, and Lye Valley).	No further response, comments on separate policies dealt with through the applicable sections elsewhere in the consultation statement.	No further change proposed.

Policy NCCAOF: University Area North of the City Centre Area of Focus

No representations received against this policy.

Policy WEBRAOF: West End and Botley Road Area of Focus

POLICY	WEBRAOF
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	WEBRAOF				
All respondents **raising objections** on this policy/chapter	40.9	88.3	88.7	115.7	134.10
	138.7	139.19	159.14		

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION

The approach to identifying the West End and Botley Road Area of Focus is positive. It is welcomed that the Local Plan notes the opportunity for Botley Road Retail Park to provide a contribution to Oxfords employment needs. The Botley Road Retail Park Supplementary Planning Document (SPD) already provides clear and robust guidance to support the site's coordinated regeneration. The SPD sets a strong framework to guide development in a manner that is integrated, sustainable, and responsive to the local area. Draft Policy S2 states that proposals shall align with design principles in SPDs such as the Botley Road Retail Park DB and that the Council shall be proactive in producing additional local design codes when a need arises involving the local community and landowners who wish to produce design guidance for their areas. In our view, given that there is already a Development Brief for Botley Road Retail Park, the introduction of further planning policy layers or site-specific design codes for Botley Road is unnecessary and risks creating duplication of policy and delaying emerging applications due to confusion around the correct development parameters. Any further codification through design codes or prescriptive policy would risk limiting the flexibility needed to respond to market	General comment noted. The City Council has not produced a Supplementary Planning Document (SPD) for the Botley Road Retail Park. Rather, a Technical Advice Note (TAN) in the form of a Design Brief, was produced to help guide the known potential redevelopment opportunities at the Botley Road in the absence of a formal policy framework. Draft Policy S2 states: *For Areas of Focus, the City Centre and District Centres, and other areas with more detailed guidance, proposals should refer to and align with the design principles set out in the Local Plan or in supporting documents such as SPDs and development briefs. The City Council will be proactive in producing additional local design codes or guidance when a need arises with the involvement of the local community, landowners and other stakeholders, and will support neighbourhood planning groups who wish to produce design guidance for their areas.* It is important that Policy S2 and Policy HD1, as strategic policies, provide, through Appendix 1.1, a consistent and comprehensive approach to ensuring high quality design of	No change proposed

conditions, innovative design approaches, or evolving employment needs.	developments. Given that the Botley Road Retail Park Design Brief TAN already exists, Policy S2 ensures that the principles already established through the Botley Road Retail Park Design Brief TAN are incorporated into the associated design checklist. The second part of the section quoted from Policy S2 (above) relates to the production of "additional design codes when a need arises". It is important to future proof this policy as not every part of the city benefits from locally specific design guidance.	
Network Rail has made a representation relating to Policy WEBRAOF, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The BOB ICB (now NHS Thames Valley) has made a representation relating to Policy WEBRAOF, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The following modification to Bullet point e) of Policy WEBRAOF is proposed: *e) Good quality urban design and place making including appropriate building heights for their setting ~~that do not negatively impact on key views or historic skylines~~.* This modification is suggested because the change to a view / skyline cannot in itself automatically be considered a negative impact. Given that wherever buildings are proposed over 15 metres, they should be accompanied by a visual impact assessment, which is required to	We do not accept the proposed modification to bullet point e). The policy does not in fact suggest that a change to the key views or the historic skylines would be automatically considered a negative impact. But rather, it qualifies the importance of delivering appropriate building heights for their setting. This policy is positively framed and sets out the conditions where planning permission would be granted. The policy is	No change proposed.

show how the proposal relates to Oxford's historic skyline/views and how it has had regard to the High Buildings TAN, it is considered that the words 'that do not negatively impact on key views or historic skyline' can be removed from the Policy, as this process is already captured via the High Buildings TAN.	seeking to "ensure that opportunities are taken to deliver... ...e) Good quality urban design and place making..." As a locationally specific policy, it highlights some of the specific elements of the area. The policy then and qualifies the type of impact that is acceptable, (i.e. ...*appropriate building heights for their setting that do not negatively impact on key views or historic skylines.").* This does not automatically mean that any change to the skyline is a negative impact.	
The policy does not address flooding although historically this area has flooded repeatedly. It is foolish to build to develop here. SUDS cannot work if less than one metre above the highest water table point.	Other policies in the plan specifically address flood risk and SuDS.	No change proposed
Development within the West End and the Botley Road needs very careful management to prevent harm to the: • views towards the western hills from the city centre, • views from the western hills towards the historic city centre. These are highly sensitive locations within some of the key historic defensive views out from St George's Tower to the west and from Raleigh Park, Harcourt Hill and Boars Hill looking towards the city. The policy should specifically refer to this, to ensure that new buildings are limited to appropriate heights.	Other policies in the plan (including Policies HD6 and relevant site allocations) already set out planning policy in relation to views and building heights. As the plan should be read as a whole, there is no need to repeat local policy requirements which is more accurately articulated elsewhere in the plan.	No change proposed.

The Oxford Growth Commission (OGC) Interim Report (December 2025) identifies an opportunity area that includes the western part of the city centre and Osney Mead. Annex B of the OGC Interim Report describes the area as presenting "opportunities for transformational economic growth and residential development in and near to Oxford city centre." And that there are "Significant opportunities for redevelopment of brownfield sites in a sustainable location close to Oxford City Centre, Oxford Station and existing employment sites". This area of focus it should be extended to include the land to the west of the Oxford Railway Station and current station car park as well as the proposed allocation sites covered by Policy SPCW2 – Botley Road Sites around Cripley Road. This location will play an important part in the overall redevelopment of the area as it is forms a gateway into Oxford once the River is crossed.	We do not consider that is appropriate to extend the WEBRAOF boundary to include this site allocation. This site is located in a residential area of the city, near to the city centre. This approach, given the site's allocation for a net gain of 20 residential dwellings, aligns with the OGC Interim Report. This is because it is a residential led development near to Oxford city centre. In fact, it is one of a number of opportunities involving the redevelopment of brownfield sites close to the city centre, Oxford Railway Station and existing employment sites. Given the site's suburban context, its relatively small size, and the existing uses at the site (including existing residential uses, hotels and an element of Use Class E (retail), this site plays a small, yet important role in supporting the city's overall housing delivery. Most sites that come forward in Oxford are for less than fifty dwellings, but each makes an important contribution helping Oxford deliver much needed housing (in particular, social housing). The Area of Focus is for sites within the western part of the city centre (referred to for many years as Oxford's West End), and has been extended to include the Botley Road Retail Park (which has been seeing a transition over recent years from a 1980s car-dominated retail park to	No change proposed.

	an urban science district with modern R&D space. Given the nature of this allocation, it would not actually benefit from being included within the West End and Botley Road Area of Focus. This is because the site's relatively small capacity for a net gain of 20 residential dwellings is situated in a location which is contextually near to, rather than within, the West End of the city centre, (separated by the hard physical boundary of the railway). The scale and nature of the allocation itself - a residential allocation for a net gain of 20 dwellings, that enables the replacement of existing uses, subject to compliance with the rest of the local policy framework in the plan, by virtue of its location, does not need to be within the Area of Focus. The Area of Focus does not confer additional benefits in relation to the acceptability of land-uses. We do not accept that the WEBRAOF should be extended.	

Policy SPCW1: Banbury Road University Sites – Parcel B

POLICY	SPN6

The Environment Agency has made a representation relating to Policy SPCW2, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
ChCh suggests that this Policy should include greater flexibility by the addition of a reference to student accommodation in the list of 'other suitable uses for the site' (i.e. an equivalent number of rooms to the number of dwellings which could be provided when the relevant ratio is applied). Amend the following wording in the supporting text: "Other suitable uses for the site could include: • Hotel accommodation; • Replacement retail (Use Class E); • <u>Student accommodation"</u> No other amendments sought (subject to confirmation of the changes sought to Housing Policies H2 and H3).	The City Council does not accept the inclusion of student accommodation within this policy. This is because the site is located outside the city centre and would not be align with the plan's approach regarding the location of student accommodation. As such we do not accept the proposed change to this policy.	No change proposed.

Policy SPCW3: Canalside Land, Jericho

POLICY	SPCW3
All respondents **supporting** policy	79.1

COMMENT SUMMARY	OFFICER RESPONSE
Content that policy meets soundness and legal compliance tests.	Support is welcomed.

POLICY	SPCW3	
All respondents **raising objections** on this policy/chapter	49.3	104.9

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Noted that bridge crossing is not required and connectivity improvements could be secured via financial contribution where viable; this is welcomed. Bridge crossing will need agreement of Canal and River Trust so outside of applicant's control. In 10 years, a suitable bridge position / design has not been agreed; flexibility to the policy wording re bridge or improvements over the canal should be considered.	The policy wording reflects a flexible approach, which opens possibilities for alternatives to how improved connectivity could be delivered but includes the potential for a bridge crossing, if feasible.	None.
The Environment Agency has made a representation relating to Policy SPCW3, and this is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy SPCW4: Faculty of Music

POLICY	SPCW4
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPCW4
All respondents **raising objections** on this policy/chapter	159.16

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Site Boundary: The identified red line for the property does not accurately reflect the true boundary of the property and should be adjusted to include the full extent of the Music Practice rooms and align with the western bank of the Trill Mill Stream. This correction should be carried forward within the Oxford Local Plan 2045 Policies Map, with the site area updated from 0.33ha to 0.32ha to reflect this change. Flood Zone: The site has been identified within Flood Zone 2. The Environment Agency Flood Zone map shows the majority of the site within Flood Zone 1, with only a small area of the southeast corner within Flood Zone 2. It is considered the flood zone should be updated to reflect the majority of the site and read 'Flood Zone 1'. Open space, nature and flood risk:	Site boundary: The basemap display of the site arranges the buildings into simple blocks that aren't always a true reflection of what is on the site. Aerial photography confirms that the site boundary, as is, does capture all the buildings on the site and is therefore correct. Flood Zone: Even if only a small part of the site lies within a Flood Zone, the site is still considered to be within that Flood Zone, which in this case is Flood Zone 2. Open space, nature and flood risk: The 10m buffer zone is supported by the Environment Agency and is a starting point for any development proposal. If it is considered that it would not be possible to retain this 10m buffer, proposals would need to demonstrate why this isn't the case and that the benefits of	Site boundary: No proposed change Flood Zone: No proposed change Open space, nature and flood risk: No proposed change Movement and access: No proposed change

Part b) of the policy should be amended to provide more flexibility so the 10m buffer between the edge of the development should be "considered" rather than "retained". The 10m buffer zone has the potential to provide some amenity benefit for its future occupants and could facilitate improved access to the adjacent Memorial Garden or Christ Church Meadow. Any such access (supported by part j) under movement and access), may require facilitation through appropriate and considered development within the 10m zone. <u>Movement and access:</u> Part j) of the policy states that new residential development should be car free. The policy should be amended to allow for *"provision for disabled parking and essential operational/service vehicle access may be permitted where it is demonstrated to be necessary for the functioning of the academic, residential or student accommodation uses on the site."* As an operational site for academic uses, residential and/or student accommodation, it will be necessary to retain some parking areas to ensure that there is both the opportunity to service the site and/or provide spaces for disabled parking.	not implementing this would outweigh any harm. <u>Movement and access:</u> The site is situated within a sustainable location in the city centre. Whilst part j) of the policy does state that new residential development should be car free, part g) of the policy notes that *"Opportunities should be taken to reduce the level of car parking along Floyds Row."* It is expected that the reduced level of parking will still be able to sufficiently provide enough space for disabled parking and servicing the site.

Note that the minimum number of units allocated for the site has remained at 43, which we believe represents an underdevelopment of	A site capacity assessment has considered all relevant factors to come to this figure. The site has heritage constraints which will require	None.

the site. Consider that the site has the potential to accommodate a significantly larger proportion of units given its inner-city location and proximity to campuses and suggest minimum unit threshold is increased to 90 residential units (equivalent to c. 150 PBSA units) in order to promote effective use of land in line with Section 11 of the NPPF.	sensitive design. It also lies within a view cone and within the locally designated high buildings area. The 43 is a minimum figure and does not preclude a higher number coming forward as part of a planning application.	

Policy SPCW7: Nuffield Sites

POLICY	SPCW7
All respondents **supporting** policy	No representations were made in support of this policy.

POLICY	SPCW7			
All respondents **raising objections** on this policy/chapter	81.28	88.12	104.6	134.11

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Historic England has made a representation relating to Policy SPCW7, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Network Rail has made a representation relating to Policy SPCW7, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

The Environment Agency has made a representation relating to Policy SPCW7, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
We do not support inclusion of the phrase 'net gain' in the policy as it makes the delivery of the overall aspirations for the Nuffield Sites challenging. We understand that vacant units have already been accounted for. However, the policy is not explicit.	The extant Oxford Local Plan 2036 (OLP2036) allocates minimum numbers of residential dwellings to be delivered across a number of sites in the West End of the city centre. Extant Policy SP1 – West End Sites (OLP2036) sets out minimum numbers of dwellings to be delivered at the Island site and the Worcester Street Car Park site (two of the three sites that make up the Nuffield Sites allocation policy). The total number of dwellings for the Island site and the Worcester St Car Park site, as established through extant Policy SP1 – West End Sites is 58. Policy SPCW7 Nuffield Sites, in the emerging Local Plan 2045 allocates the site for a minimum of 59i dwellings (net gain). This takes account of an additional habitable dwelling, which would need to be re-provided as part of any comprehensive redevelopment of the site. We do not consider that this would be challenging to the delivery of the overall aspirations for the Nuffield sites. We consider that the retention of the phrase 'net gain' to be an important phrase in this policy.	No proposed changes.
We suggest the following modification to part b) to ensure such opportunities are investigated and carried forward, if feasible.	We understand some of the challenges around improving access to the Castle Mill Stream from the Worcester St Car Park Site. As such we can propose a modification to this part of the policy	The following modification is therefore proposed to part b) of Policy SPCW7 to clarify the situation regarding access improvements to

b) Opportunities should be explored taken to improve access to Castle Mill Stream from the Worcester St Car Park site.	to clarify the situation, i.e., that opportunities to improve access to the Castle Mill Stream should be explored, rather than should be taken.	the Castle Mill Stream from the Worcester Street Car Park Site. b) Opportunities should be explored ~~taken~~ to improve access to Castle Mill Stream from the Worcester St Car Park site.
Part e) of the policy, relating to Flood Risk Assessment, is overly detailed. The policy requirements would form part of an FRA as required by national policy. We consider this part of the policy can be simplified.	We do not support the simplification of this policy in the manner suggested. The Level 2 SFRA for this site includes specifics, which have been included in this policy. A consistent approach has been taken to incorporating site-specifics where SFRA Level 2 assessments have been undertaken to support site allocation policies in the plan.	No proposed changes.
Part g) of the policy, which relates to landscape/visual impact assessment states that: With respect to part g) which focuses on landscape / visual impact assessment work, part g) we suggest the following modification: g) ...Special attention will need to be paid to views from the Castle Motte to manage avoid harm to the setting of Oxford Castle. This is because, while the visual impact assessment work will serve to inform and guide any scheme development, it is likely to be impossible given the immediate context to avoid harm completely. Adding this prescriptive restriction is considered unhelpful.	We do not support the proposed changes to part g) of this policy, which we consider would weaken the importance given to designated heritage assets and their setting by the NPPF. Harm to the setting of the Oxford Castle Scheduled Ancient Monument and associated Grade I and Grade II Listed Buildings should be avoided rather than 'managed'. The Plan also includes Policy HD3 – Designated Heritage Assets, which reflects paragraphs 207-221 of the Framework.	No proposed changes.
It must be ensured that the overall aspiration of the Nuffield Sites is not lost or stymied by overly prescriptive or constraining policy. By making this change, the policy requirement still	We do not support the proposed modifications to part "h)" of the policy. Part "h)" aligns with Policy HD4 – Non-designated Heritage Assets,	No change proposed.

ensures respectful and careful consideration is given to this important view. The existing scale and function of the Nuffield Sites, particularly the land south of Frideswide Square and Island Site, must be recognised for their limited contribution to the entrance of the city. To enable transformational change and to achieve the objectives set out in the draft Plan and the West End and Osney Mead SPD, we suggest the following modification to Part h) of the Policy: h) Proposals should review if demonstrate how the existing designated and non-designated, heritage assets can be incorporated into plans to redevelop the site, or justify an alternative approach.	which articulates relevant paragraphs of the Framework. Weakening the policy in this way would not be consistent with the importance given by the NPPF to heritage assets.	

Policy SPCW8: Osney Mead

POLICY	SPCW8

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
This large brownfield sites close to the centre of Oxford has been effectively vacant for many years. It should have been redeveloped years ago. If used for housing it could take all the homes required to meet Oxford's share of housing need. There are to two distinct issues; flooding and contamination. Neither of these are critical. The flood risk which it seems affects the access road, in and out of the site, could be raised and in any case, flooding should be much less once the Oxford Flood Alleviation Scheme (which is well advanced) is in place. It is quite hopeless that these large post-industrial sites continue to remain as they are when one after another sites in the Green Belt, with poor to non-existent public transport links, are identified as necessary for the growth of Oxford. The policy should address the problem of ensuring this site is redeveloped during the currency of this Local Plan and some incentive should be put in place to make this happen and the reverse if it does not happen such as compulsory purchase. This site is 17.8 hectares, the vast majority if not all of which could be allocated for homes.	While parts of the site are indeed vacant, Osney Mead remains in use as an industrial estate, with many businesses located there. The landowner has expressed an interest in bringing forward an innovation quarter, which would include a mix of uses, including residential/student accommodation, providing flood risk issues (including safe access), satisfactorily addressed. The Oxford Flood Alleviation Scheme (OFAS) once delivered will certainly improve the existing situation. However, OFAS will take a number of years to be implemented in full. We consider that the policy is sound and accurately reflects both the landowner's intentions and what is achievable at the site. All policies include minimum housing numbers. See Policy E1 officer response for further details.	None.

Policy E1 must be less restrictive to allow this.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
This policy does not mention permitting pick up/drop off at railway station by private cars. Include specific text to require such facilities to be provided.	Other policies in the plan address motor vehicle parking. For instance, Policy C8 specifically includes requirements for non-residential development. Bullet point n) of the policy seeks a reduction in car parking spaces at the site. However, changes in car parking at railway stations are subject to confirmation and approval from the Office of Rail and Road (ORR) as set out in the policy. This would include any changes to short stay pick-up and drop off parking.	No change proposed.
Historic England has made a representation relating to Policy SPCW9, which is summarised and responded to in the Statement of Common Ground. SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
The Environment Agency has made a representation relating to Policy SPCW11, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
Overall, we have no objections to the allocation of these sites. However, the former St Thomas School building should be specifically retained as a policy condition and sufficient weight needs to be given to its retention and preservation within any forthcoming policy text. Built around	The former St Thomas School is not a designated heritage asset, as such we cannot require its retention. However, bullet point h) already requires proposals to "consider retention of the St. Thomas's School building where possible because of its townscape value	No changes proposed.

1870, this is a good example of a late 19th-century school building, whilst also providing a remnant of the historical evolution of the evolution of the St Thomas's parish and those who lived there as specifically referenced within the Oxford Central (City & University) Conservation Area Appraisal.	and clear representation of past usage of the area". We consider that the policy is sufficient in this regard.	
There are no community facilities currently on site. The units are let on commercial leases, albeit one of the occupiers is a charity. The use class of the properties falls within Use Class E and not that of community facilities. Amend the following wording in the supporting text: Current Use(s): St Thomas site is a former school building now in use by [various organisations including] *charities* [and social enterprises]. Osney Warehouse site is in use *by* a[s] visual arts company including studio, exhibition, education spaces *and storage*[/community uses].	While we note the leasing agreements, we consider that the policy box setting out the current uses is an accurate representation of the organisations that occupy the site. As such, we do not accept the modifications proposed to the "Current Use(s)" in the policy box. These modifications seem to be designed to remove any notion that the occupiers of the site bring social value to the area. OVADA is a non-profit company limited by guarantee (a social enterprise) with a strong community focus, occupying the Osney Warehouse. While the St Thomas School House site is home to a local employment charity and social enterprise (Aspire), as well as being home to other not-for-profit organisations including a Community Benefit Society with charitable aims.	No changes proposed.
Propose the following modification to Policy SPCW11. *Planning permission will be granted for a mix~~ed~~ of use<u>s including employment and / or residential (market, student or specialist forms)</u> ~~development which should include retention or reprovision of community facilities~~. The*	We do not accept the modifications to Policy SPCW11. The introduction of an "and/or" clause in relation employment and housing is at odds with the policy's minimum requirement to deliver 10 dwellings, as such it is not an acceptable change.	No changes proposed.

minimum number of dwellings to be delivered on the site is 10 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.	Similarly, the removal of the requirement to re-provide the community facilities is not accepted.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
Oxford Stadium omission site. The OLP2045 does not carry forward the Site Allocation Policy SP51 in the OLP36, concluding that the site is available but development would mean current community uses would need to cease operations if the site were to be redeveloped. This assumes the site can either be retained in its current state or be redeveloped in its entirety, yet Policy SP51 is quite clear that the permitted enabling development would be residential development '...on the car park or other areas that will not affect the operation or heritage interest...'. The owner would prefer to see this more flexible approach, which would give the greyhound racing and speedway operations the best chance to survive.	The site was submitted in the call for sites for housing. This was discussed with the landowner, to explore whether there was still an interest in housing as enabling development, alongside the use of the stadium for greyhound racing and speedway. It should be noted that, at the time the OLP36 was draft the stadium was not in use for these primary uses and it was thought enabling development would help bring it back. The landowner was clear that, in the context of a stadium brought back into use and currently operating, and following further consideration and the lack of identified alternative parking options, development on the car park alongside the existing uses was not considered feasible. It is notable that the landowner, whilst requesting in their	None.

It is noteworthy that the supporting text to Policy C3 states that 'Policy C3 does not apply to places for outdoor sport and recreation (which are in the Use Class F.2), because these are dealt with in Policy G1. This approach casts doubt on whether the Council considers the site a community use at all, which renders the SHLAA conclusion even more questionable. The owner has previously questioned whether the Stadium is a community use at all, as it is a commercial enterprise and it is not feasible to protect the existing uses or re-provide similar uses within the site in the event that the existing greyhound and speedway uses become unviable. Given the chronic shortage of housing, the landowner does not understand the logic that has led to this site not being allocated in the new Plan. Having no allocation significantly reduces the potential options for the future use or redevelopment of the site should the greyhound racing and/or speedway cease operating.	representation the flexibility of a policy that supports enabling development, concludes by saying that the lack of a policy would make it difficult for housing to come forward should it not be possible to continue the speedway or greyhound racing. It does not seem to be the case that the landowner is now saying that housing development is possible or intended alongside the existing uses. There is no intention to have a policy allocation that says what could or should happen if the current use of the site ends. If it ends, the landowner can make a proposal that would be assessed against the generic policies of the Plan. In terms of the comments about community use- this relates to the explanation in the SHLAA that community uses would need to cease operation if the site were to be developed. This is not trying to give a formal definition of the uses or note which generic policy of the Plan would apply. In any event, motorsport is not included in Used Class F2 and Policy G1 does not apply either. However, the site clearly has a function that is important for the local community and there seemed to be a stark choice of allocating the site for housing which would lead to the loss of this use or not allocating the site.	
Coolidge Close The OLP36 had a policy which is not being carried forward as it is potentially less than 10 houses. No further development should be	It is assumed that the representor is concerned that, without a policy allocation, development will be able to come forward on this site that is harmful to the Lye Valley SSSI. For small sites,	None.

3163

permitted in the Lye Valley and this site is in the groundwater catchment of the Lye.	generic policies in the plan should be adequate. A site allocation does not change the general approach of the plan, it just sets out how it applies to the site and adds site-specific detail and guidance. This site was not allocated in the OLP36 but it is and has been in the SHLAA table c. Development has commenced of the approved scheme for 8 homes.	
Wood Farm Health Centre The OLP36 had a policy which is not being carried forward as it is potentially less than 10 houses. No further development should be permitted in the Lye Valley and this site is in the groundwater catchment of the Lye.	The site is vacant and is available for housing. However, the site is only 0.12ha and too small for an allocation or to be included in Table B of the SHLAA (it is instead listed in Table C). It was not allocated in the OLP36. It would come forward as windfall and would need to be assessed against the generic policies for the Plan (see comments above in relation to Coolidge Close).	None.
Old Road Campus The site policy has been removed or forgotten, although it is in the current OLP36. The policy should be reinstated because the site has issues similar to the Churchill and should have the same requirements as the Churchill. Isses include sensitivity as it is in the catchment of the lye Valley, on site parking, creating increased demand for housing, huge basements that remove water retention capacity of land.	The Old Road Campus has been a previous allocation. The site is built out. The University did at one point put the site forward for the new plan because of a possible intention to extend and add to development on the site in the later years of the plan, but there are not firm ideas at this point and there is no need to have a policy that just repeats the policies of the plan that would apply should development come forward on the site, that would be in the same use as the existing site, and that would be extensions and infill only.	None.
Headington Shark House (2 new Hight Street) This should be allocated for short-stay accommodation. Given the clear absence of	The plan does not allow for hotel and short stay accommodation at all locations because it would compete with the aim of delivering	None.

real harm from the use of the premises for visitor accommodation (noting appeal decision findings) providing an allocation for the site would allow the site to realise its potential and benefit to the local area and economy, but would not harm the wording of the present policy because that allows for allocated sites to come forward. There is no minimum size for allocation. The singular nature of this site means that it cannot be made into a bigger site. It would be an asset to oxford for the site to be able to be used as proposed.	homes as a priority and because it is not likely to be suitable in all locations. Furthermore, whilst there is nothing to prevent very small sites to be allocated, generally sites are only allocated when they are large enough to benefit from site-specific detail. This site is only one house. Generic policies of the plan should be adequate for determining an application. There is no reason to allocate the site as short-stay accommodation contrary to the general aims of the Plan and the spatial strategy.	
Ruskin Field south The failure to meet Oxford's housing needs puts pressure on the Green Belt and adjoining local authorities so it should be apparent that the plan has down everything it can to maximise capacity. Deallocating a development site suitable for housing and student accommodation without any assessment or explanation is not consistent with that obligation. The land immediately north of the Ruskin College campus is 1.19ha and has development potential for c.50 dwellings or considerably more student units. The land has consistently been found by the City Council to be suitable for development. It was allocated in the OLP2036 and assessed as suitable in the withdrawn OLP2040. At Regulation 18 for the OLP2045 (was 2042) an assessment was undertaken for the allocated	Several call for sites exercises were run to inform the drafting of the Local Plan 2045. It was clear that this was to inform the undertaking of a new plan, and affirmations of assumptions about known sites were also requested. A call for sites submission was received for the northern field only. This submission referred to the larger site and existing allocation but did not include them in the red line and none of the technical information related to the current allocation, but rather to the red line proposed. From this submission and in discussions with the landowner's consultants it was understood that the interest had shifted to the northern part of the field. This shift in focus made sense given that there had been a decision taken at the City Council's Cabinet that essentially enabled access into the site from Foxwell Drive. This really changed the	None.

site and the Field to the north, 4,69ha. The assessment concluded there were 'no significant heritage concerns' or other concerns and recommended the whole site should considered further for allocation. Most recently, only the northern field (3.51ha) was assessed and the allocated site was not looked at. The University (of West London) assumed that SP56 was excluded from the assessment because its allocation would be carried over into the new Local Plan. It did not anticipate that SP56 would be de-allocated especially without any assessment or evidence base justification. The City Council did not approach the University as landowner to explain the proposed de-allocation of its land.	ability to bring forward the northern part of the site. Previously, there was no obvious access solution to the site for any kind of market housing scheme because access would have needed to be through the campus from Dunstan Road. The changed access option and information from the landowner as well as discussions with them led the City Council to re-consider the northern part of the Field, that had previously been rejected in favour of the southern part of the field Whilst there may not be constraints that prevent the site coming forward, there are clearly a number of sensitivities that must be responded to. In particular, the site is sensitive in terms of its position in the Conservation Area and next to listed buildings. It also has a pond and wetland features, hedgerows and trees. The need for biodiversity net gain, consideration of priority habitat and Urban Greening Factor, and well as the need to respond to the heritage context, means that significant green infrastructure will need to be retained on site. The smaller site to the south, currently allocated as SP56 is more sensitive in most regards. It is closer to the listed buildings and has thicker vegetation. When other access was not possible, the allocation kept to the southern part of the site, which is also potentially less sensitive in terms of views. However, given the switch to promotion of the	

	northern part of the field, the city council carried out some LVIA work and considered the landower's call for sites submission and agree that there is potential for development on the northern part of the field, albeit very careful design and low heights and densities will still be required. . This has benefits in terms of access and What is out of the question is an allocation that stretches across the whole field. It is vital that an area of green remains in the long views and to maintain some connection with the conservation area's origin as a rural settlement. This is also likely to be necessary because of the biodiversity and green infrastructure sensitivities. It should be noted that the assumption when allocating the southern field was that it would be low density development in order to respond to the listed buildings immediately adjacent and to the conservation area characteristics. The minimum number of dwellings was 20. At no point was it evidenced that SP56 had a capacity of 50 units. At Regulation the larger site with SP56 and the area of draft Policy SPE14 was referred to. However, Regulation 18 Plan was clear that within that was considered to be two separate sites, and that consideration was being given to the northern part over the southern (allocated) part, based on apparent landowner intention:	

	There is a site allocation for housing on part of Ruskin Field. The larger area of the field to the north has been put forward for development by the landowner. The northern part of the field has potentially better access than the allocated site. However, it is potentially more sensitive in terms of the heritage setting of the Old Headington Conservation Area. There is also potential for peat reserves on the site. Further investigation of the site is needed. This in no way recommends that the whole site should be considered further for an allocation. From this wording at Regulation 18 we consider it would have been clear to the landowner that the City Council understood that the northern part of the field had been put forward and that further investigation was needed. A draft of the site allocation policy SPE14 and Ruskin Campus draft policy SPE13 the site was shared with the landowner's consultants in November 2025. Comments were received back to say that the wording was not positive enough about the highly sustainable location of the site, and that constraints were overstated. No question was asked about where the draft policy was for site SP56. It would have been evident, given that two draft policies were shared, that there was not a third one. Allocation of just the northern part of the Field as put forward by the landowner in the call for sites was a consistent approach with all discussions up to that point.	

3168

	Whatever misunderstandings led to this point, the position of the City Council remains the same- the whole field is not suitable for an allocation and, given the current context, particularly in terms of access, the northern part of the field is more suitable for development as long as it responds to the sensitivities of the site as set out in the draft Policy SPE14.	
1 Pullens Lane It is noted that this allocation has been removed from the draft Local Plan, with the Sustainability Appraisal suggesting that, as the site is unlikely to yield more than 10 residential units, it should instead be treated as windfall. However, this reasoning does not reflect the site's strategic value for institutional development. Oxford Brookes University considers that the site remains an important opportunity to support the growth of academic and associated uses in this part of the city. Oxford Brookes University therefore requests that the site is allocated specifically for academic use (Class F), with sufficient flexibility to accommodate ancillary visitor accommodation for visiting lecturers and staff. Such an allocation would provide clarity and certainty for long term planning, ensure that the site contributes positively to meeting identified needs for educational space, and align with the wider objectives for more	The suggestions as described are open ended and require a lot of flexibility without definitive commitments that could be reckoned into housing land supply or economic area calculations. It is therefore not considered that the site will benefit from the level of site-specific detail or policy requirements that would comprise the site allocation approach of this plan. The site is not of a size (i.e. of assumed housing capacity over 10) or subject to a level of complexity that would prevent an application from being determined by generic plan policies or require its own specific allocation.	None.

efficient use of land within the surrounding Area of Focus.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
SA is not justified in its lack of adequate evidence base, is not positively prepared in proposing that the Local Plan is capable of achieving sustainable development and is unlikely to be effective in in its stated goals or its ability to deliver the required results for sustainable development over the plan. As such, it is also not consistent with the NPPF.	We respond to the concerns about adequate evidence and ability to deliver sustainable development in detail in the following rows of this table. In summary, the Council considers that it has followed all the legal requirements for undertaking Sustainability Appraisal/Strategic Environmental Assessment and that this has appropriately informed the development of the Local Plan 2045.	None

Sustainability Appraisal (SA) grossly underestimates the societal, environmental and economic impacts of the Reg 19 Local Plan 2045 and is not based on proportionate evidence. Prioritising of economic growth through employment (SA topic 12), stipulated as requirements across LP policies, sends a shock wave of negative impacts across the other 11 SA topics, which the Local Plan policies frame as merely aspirational. No evidence is provided in the SA to justify the improvements in the colour coded scoring of SA topics from those in the Summary of the current situation and likely future without a plan (Table 1.2) to the Summary of overall impacts of the Local Plan (Table 1.7).	The Sustainability Appraisal is informed by a variety of data sources as well as expanded analysis of particular topics (e.g. green infrastructure, biodiversity, carbon reduction, natural resources) as documented in the supporting background papers which were published alongside the Regulation 19 Sustainability Appraisal report. The preferred growth strategy in the Local Plan is one that seeks a balanced approach to growth with a housing focus, not employment, as is discussed in Chapter 5 of the Reg 19 SA report. The SA clearly acknowledges a range of impacts across the SA objectives and this has informed the development of the Local Plan. The appraisal of the Local Plan's impacts is summarised in the non-technical summary (the tables referenced in the comment), however, more detailed versions of the appraisals are included in chapter 6. Chapter 6 appraises the impacts of the Local Plan policies (section 6.1), then the site allocations (section 6.2), then brings this together in the Whole Plan appraisal (section 6.3). The Whole Plan appraisal includes commentary (see Table 6.3) alongside the scoring which seeks to set out our reasoning for determining particular scores as transparently as possible. Whilst there is inherently some level of subjectivity/uncertainty in any such appraisal process, we are comfortable that the determined impacts against each of the SA	None

	objectives are justified and that this analysis has then appropriately informed the decisions taken in the wider Local Plan process.	
A respondent (Oxford Doughnut Economics Collaborative – Rep ID 64.1) has provided an alternative assessment of the Local Plan 2045's impacts against the 12 Sustainability Appraisal objectives. This includes suggested scores which generally indicate that the Local Plan's impact against each objective needs to be identified as more negative, or significant negative, compared to the assessment set out in the Reg 19 Sustainability Appraisal.	See response above which of relevance to this point. We would add that it is important to remember that the role of the Sustainability Appraisal process is to inform the development of the Local Plan, including helping to inform ways of mitigating any potential adverse effects that the plan might otherwise have. Sustainability impacts cannot always be avoided or entirely negated, and the SA report is as transparent about this as possible. We have reviewed the alternative scoring provided, however, we remain comfortable with the scoring of the Local Plan's impacts and the justifications as set out in Table 6.3 of the Reg 19 SA report. The SA process we've followed meets the legal requirements and has led to informed decisions which have been taken in developing the Local Plan (e.g. in relation to mitigations incorporated across the Local Plan's policies).	None
Oxfordshire County Council has made a representation relating to the Sustainability Appraisal, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
There were comments received flagging objections to the proposed monitoring framework as set out in Table 1.8. These included that the proposed framework is 'worthless' as it fails to specify any baseline	Chapter 8, paras 8.1 to 8.3 detail the rationale behind the proposed monitoring framework included in the Reg 19 Sustainability Appraisal report. It identifies that the Council seeks to report yearly on a variety of policy areas as part	None

data or targets, any means of delivery or any actions to be taken as a result of this monitoring. Another respondent suggested that the monitoring process for LP impacts should be overhauled to measure year on year genuine improvements across the 12 SA topics with data indicators to meet specific targets. It was felt that this would allow for genuine scrutiny.	of its Authority Monitoring Reports but that there are constraints in terms of resourcing to undertake monitoring, and that some data resources informing monitoring indicators are updated on longer time periods than yearly. As such, we have sought to propose a realistic and implementable SA/SEA monitoring framework that includes a mix of yearly and more long term monitoring, as set out in Table 8.1 in the report.	
The Sustainability assessment of SPS8 Land at Meadow Lane plays down the impacts of development across many different topics. Housing delivery is erroneously scored as ++ with no comment give to clarify that no housing number has been stipulated - effectively a zero allocation for housing. Erroneous assessment downplays the site's high sensitivity and cannot promise housing. This is unsustainable, not properly prepared and therefore both unsound and not legally compliant and SPS8 should be removed from the Local Plan to correct this.	The Sustainability Appraisal framework used to inform the assessment of sustainability impacts from the site allocations is published in Section 3.4.2 of the Regulation 19 Sustainability Appraisal report (and was published in the interim version consulted on at Reg 18 Preferred Options stage also). Table 3.8 in that section of the report sets out the decision-making criteria for the different scores to be assigned under the housing objective. This sets out that a ++ score should be given under the housing objective, where the sustainability appraisal for a site indicates that it has capacity for 10 or more dwellings. Where identified sites have the capacity for less than ten dwellings, the SA process would not consider them further for assessment, and they would not result in a site being allocated in the plan. Only development sites with capacity for ten or more dwellings result in a site allocation. The Sustainability Appraisal is an evidence base document, and a key decision-making tool in	None

	the plan-making process. As such, it has been used to inform the plan-making process, not the other way around.	
The sustainability assessment for SPS8 demonstrates how the site has been misunderstood, analysed insufficiently and downplays the significance of the site. Various issues flagged with the assessment (*as part of a separate submitted document – see rep ID 158.3*), including failure to identify the site as ancient meadow and thus the integral part of the Iffley conservation area. Failing to fully recognise the full heritage value of the site, including that it is historically undeveloped site and a survivor of east Oxford's agricultural history, as well as sitting in the setting of various listed buildings. Issues flagged with regard to ecology also , such as failing to recognise the ecological and/or carbon sequestration value of the hedges, of what could be considered to be 'floodplain meadows' with associated species that have the potential to be restored, also that there are various protected species present including 7 species of bats including nationally rare species nearby as well as badgers. The sustainability appraisal includes unresolved and uncertain issues including that the site is within Iffley conservation area and is within the setting of listed buildings and of non-designated heritage assets, as set out above.	The sustainability appraisal site assessment for SPS8, as well as the separate site capacity assessment form, identifies a range of constraints on the site and these have informed the allocation. In relation to the sustainability appraisal assessment for the site, the SA site assessment form as included in Appendix C of the Reg 19 Sustainability Appraisal report, already identifies potential negative and significant negative impacts against the range of heritage criteria under SA objective 11, as well as under ecology and biodiversity SA objective 10. It also picks up other constraints across the objectives. The potential for negative impacts identified through the SA assessment, alongside other work such as the separate site capacity assessment process has informed the detail of the allocation as set out in Chapter 8 of the Local Plan 2045, including a range of requirements in relation to mitigating impacts on heritage, biodiversity etc.	None
The SA does not test higher levels of growth than the Standard Method (SM), which is considered odd as it is plainly a 'reasonable	The Sustainability Appraisal has tested alternatives for setting a housing requirement at, below and above the Standard Method.	None

alternative'. The appraisal of the growth strategy alternatives identifies that whilst a case could be made for boosting greenfield/brownfield supply to either support housing or economic growth, this would come at considerable cost in terms of wider objectives. The appraisal of housing requirement policy options (option set 001) then goes on to test three options, however, option A appears to be dismissed simply because a higher level of growth could not physically be accommodated in Oxford City itself or would put pressure on other land uses. Option C (setting a requirement above SM) is concluded to also not be deliverable due to the limited capacity in the city (and acknowledging that it would result in more unmet need being generated beyond boundary). The Council's approach/preferred option is therefore based on the limited capacity of the city to ensure that the policy is deliverable and meets the tests of soundness. This approach is inconsistent with national policy (e.g. NPPF 2024 paras 24 – 28) – effective strategic planning, especially to promote growth, across local planning authorities boundaries. It is considered that in order to meet the unmet needs it falls to Oxford City to work with its neighbouring authorities to identify additional supply to meet these needs as part of their duty to co-operate, but also the requirements of the NPPF in terms of maintaining effective cooperation are relevant (as duty to co-operate	This testing was published as part of the interim Sustainability Appraisal published at Reg 18 Preferred Options stage, and then updated and published again as part of the Regulation 19 Sustainability Appraisal (e.g. to reflect the further work on the Local Plan and supporting evidence such as the Strategic Housing Land Availability Assessment (SHLAA)). Section 5.2.2 of the Regulation 19 Sustainability Appraisal report discusses this testing (see section addressing option set 001a – paras 5.40 to 5.43 and Table 5.6). The full appraisal of the options that informed this was also included in Appendix A, this includes expanded commentary on the rationale for how scores were determined in Table 5.6. The SA report details the reasoning for why the Council's preferred Option was Option B.	

about to be removed). Whilst Oxford City is constrained in terms of capacity to accommodate future housing needs, the Plan needs to be prepared in the context of overall growth taking into account the Government's new Growth Commission for Oxford which was set up in May 2025 to help accelerate growth in the city and its surrounding area.		
The Sustainability Appraisal's Options have not had due consideration to Oxford's importance to the economy, as confirmed in the Employment Land Needs Assessment (ELNA), in electing Option B when considering the Housing Requirement following the SA process. Curious that Option C was not given more consideration, as it gives greater acknowledgement of the requirement to grow beyond the LPA borders after confirming the economic significance of the settlement and surrounding area. Option C allows for a housing requirement higher than the standard method, to allow for stronger support for economic growth or affordable housing need, whilst recognising the necessity for this growth to be supported by the surrounding areas.	See response above. The options considered for housing requirement were tested equally. The rationale for selecting the preferred option is set out in the SA report (see paras 5.42 and 5.43). In this discussion, it is clearly acknowledged that the other options for setting the housing requirement (e.g. higher than the Standard Method) could have greater positive impacts in relation to delivering housing and economic growth, but that they also come at greater cost in terms of significant negative impacts against other sustainability objectives.	None

[See original letter for full rep] ... the Local Plan Viability Assessment Update (December 2025) does not include a specific allowance for contributions towards healthcare. ... In our view the S106 headroom identified as part of the site-specific testing is generally sufficient to enable financial contributions to be secured for healthcare, and therefore we consider that overall the assessment of plan-wide viability demonstrates that policy requirements in relation to healthcare infrastructure contributions are deliverable. However, we are concerned that without explicit mention of required healthcare mitigation in the viability assessment, healthcare mitigation will compete with other planning obligations or be ignored entirely. We would recommend that the viability assessment includes a separate cost input for typologies where a healthcare contribution is expected. This would ensure that healthcare mitigation is appropriately weighted when	Contributions towards healthcare provision would, where applicable, be sought under a general S106 or CIL agreement. This is addressed by general Policy S3 Infrastructure Delivery in New Development, unless there is a specific on-site requirement for healthcare in which case it is referenced in the site allocation policy. Healthcare infrastructure is also identified in the Infrastructure Delivery Plan, that accompanies LP2045. The Viability Assessment for LP2045 builds in an assumption about the total level of S106 contributions sought from developments, which was informed by reviewing recent real life S106 agreements for a range of development types in Oxford. These would have covered contributions towards a range of uses, including healthcare where applicable. For testing purposes, the assessment assumed a 'base' level of contributions amounting to £4,000 per unit (plus £1,000 for Section 278) and £25 per square metre of commercial floorspace (Viability Assessment, para 4.32).	None

evaluating the potential planning obligations necessary to mitigate the full impact of a development. A separate cost input for health would also mean that developers are adequately informed in advance, in accordance with ICB's estate strategy and the development's location and size, that they may be required to make on-site provision or off-site financial contributions to mitigate the impact on healthcare infrastructure resulting from their development. Such an approach would also support the effective implementation of Draft Policy S3 in situations when a viability assessment demonstrates that development proposals are unable to fund the full range of infrastructure requirements. We would welcome further engagement with the Council to on this issue to determine a reasonable cost assumption that could be used in future viability assessments.		
The Oxford Green Belt Additional Sites Assessment is too restrictive in focusing only on the geography of Oxford. This only serves to clarify the limited and constrained opportunities for the city to accommodate additional housing and fails to consider the possible opportunities for expansion that could be explored collaboratively with neighbouring authorities.	The methodology in the latest Green Belt assessment reflects the most recent changes in the NPPF and PPG. The PPG states that authorities must identify an appropriate scale of Green Belt assessment that delivers clear variations in contribution to the Green Belt purposes. Further details can be found in Background Paper 006 which acknowledges that there are both grey belt and Green Belt sites that merited further investigation for development potential. Further work was undertaken by the Council and resulted in the	None

	inclusion of an additional site allocation (SPE9 Marston Paddock extension). The Council cannot allocate land that is not within its jurisdiction and has taken the most pragmatic approach. This does not preclude further Green Belt work being undertaken in collaboration with neighbouring authorities in the future.	
The Green Infrastructure Study (GIS) 2022, part of the evidence base for OLP2045 and informing the Policy Map, is wholly deficient, factually wrong, presenting derived, and incorrect, information without explanation or evidence. Various concerns raised (*see full rep provided by respondent 186*) including reliance on cut and paste methodology and text, with fundamentally flawed methodology and data. Too many errors in various figures such as Figure 13 and Figure 14. This was pointed out the multiple errors in the survey consultation and ignored. The incorrect mappings are subsequently duplicated on the OLP2045 Policy Map. The Council has proceeded to build on almost all remaining accessible green space in the City, mostly in Council estates, leading to population growth and reduction in green space, creating inequalities, prior to 2001. It is also noted that the poorer suburbs are the most green space deprived, the greatest population increases and most building.	The Green Infrastructure Study is comprehensive and includes analysis covering a range of topics including accessibility, levels of deprivation, playgrounds/sports facilities etc. It provides an up-to-date picture of green infrastructure provision in the city and includes independent assessment across a range of topics. The GI study highlights various findings and recommendations based upon desktop study and site visits, many of which follow similar themes of previous studies – including the inequalities in access to different types of open space in the city (and the need for preventing this worsening where possible), the range in quality of spaces across the city, and the need for targeting greening measures in a variety of ways across the city particularly in light of Oxford's various constraints and pressures on land. As documented in Background Paper 005a, (which further contributes to the evidence base supporting the Local Plan's approaches to green infrastructure), whilst it was an important starting point informing the	No further change proposed.

Previous assessments undertaken such as the Green Infrastructure Surveys 2007/2020 are considered to be of a much higher quality. These found many "Urban Villages" in Oxford were green space deprived leading to inequality. They made various reccomendations, such as recommending standards of green space per 1000 residents, that more unrestricted green space should be found; that the Council should seek to find more open space by change of access, or new green space due to an estimated increase in population between 2001-2011 of 2.8%.	approaches in the Local Plan including the green infrastructure network protected through Policy G1 it was not the only factor influencing the approach. The Council subsequently went on and refined the network including identifying additional spaces from various sources (including previous consultations) and undertaking further analysis which went in to defining the hierarchy of Core and Supporting spaces. Where feedback from the Reg 19 consultation identifies additional issues or changes needed to the policy or the policies map, these are responded to in the relevant sections of the consultation report, the Council will propose modifications where it agrees a change could help to address a soundness issue.	
The Lye Valley Hydrogeological Impact Assessment report is considered to be extremely disappointing and full of basic errors with meaningful guidance entirely absent. Shows a very poor understanding of the Lye Valley and has clearly not grasped even the basic issues or proposed any meaningful solutions. Respondent 138 includes a detailed appendix as part of their representation with a range of specific comments (*see original rep for full detail*) including in relation to: - Objections over the methodology undertaken for the study;	A response was provided as part of the consultation summary report to the Regulation 18 consultation, this set out that the study is considered to be important as it provides an additional level of analysis and understanding about the hydrogeological functioning of the areas (with a focus on the SSSI) and its key sensitivities which was not available previously. We understand that there may be some disagreement as to the methodologies and conclusions, however, we remain of the view that this is a useful piece of additional evidence supporting the approach to handling applications that might affect the Lye Valley.	No further change proposed.

- Objections over data sources referenced in the study or not referenced; - Disagreement over the key findings and conclusions including how these have informed the impact risk zones/tests proposed for development proposed; - That the work of the previous study looking at the area, the Lamberth report, has not been given sufficient attention, or ignored. The report remains unchanged following the Reg 18 consultation, with none of the defects raised during the consultation, addressed. It is argued that any policy in the Local Plan which is reliant on the report is unsound/unjustified for this reason.	Whilst the Local Plan is not reliant on the study alone, the work further supports the ongoing protection of the wider Lye Valley through the approaches we have embedded into the Local Plan through Policy G6, as well as cross references in various site allocations in proximity to the site. For example, it helps to highlight the complex nature of the catchment and reinforces that the considerations for how to protect the SSSI and surrounding habitats varies depending on type of development, and its location within the particular impact pathways influencing the area. This context helps to ensure that interventions which applicants will need to undertake to meet their responsibilities set out in national and local policy are as targeted and effective as they can be. Alongside the study, we have developed a Technical Advice Note which will further clarify how applicants should approach mitigation of impacts on the Lye Valley.	
Sport England has made a representation relating to the Playing Pitch Strategy and general evidence base supporting sport provision, which is summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.
The Environment Agency has made representations against the Level 1 and Level 2 SFRA, which are summarised and responded to in the Statement of Common Ground.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

The Environment Agency have also made comments linked to the Water Cycle Study strongly advising the Council to continue to liaise with Thames Water to receive confirmation and assurances around ensuring enough discharge capacity will be available at the Oxford Sewage Treatment Works in the short to medium term.	Noted, the Council will continue to engage with Thames Water and the Environment Agency on this topic.	Continue engagement together.

SUMMARY OF ISSUES RAISED	OFFICER RESPONSE	PROPOSED ACTION
It is unsound that the Policies Map does not designate the Old Marston Road shops - which include New Marston's only pharmacy and	As explained in the supporting text for policy C1, designation of an area as a local centre takes into consideration the importance of the area beyond the immediate neighbourhood,	None.

post-office – as part of the New Marston local centre.	the level of connectivity and the suitability for a range of uses. The shopping parade in question does not have the scale to be considered as a local centre in its own right, and as it is located in a predominantly residential area some distance away it is too isolated from the designated Marston Centre to be considered as part of it.	
In order to improve the effectiveness of the LP and the deliverability of the site (SPE14 Ruskin Field) it is requested that the policies map is amended to include land to the west, to accommodate the proposed access, to connect to Foxwell Drive as identified at Appendix 1.	Refer to officers responses to SPE14 representations.	Refer to officers responses to SPE14 representations.
We believe that the boundary of the Headington District Centre ought to be altered to include no's 2, 2a, 4a – 4f New High Street. As well as Shark House – and the proximity of its neighbour to the north (no 2a) to the beer garden of the Royal Standard PH – the identified terrace on the western side of New High Street also includes a hairdresser and barber's shop.	The sites in question comprise of residential properties and a hairdresser. They are not part of the frontage of the district centre and do not provide amenity or importance beyond the immediate neighbourhood so do not in themselves merit inclusion within the designated district centre area.	None.
Manzil Way Resource Centre is incorrectly labelled policy SPE7 on the policies map and should be changed to policy SPE8.	This has been noted and site reference will be amended as a minor modification.	Minor modification.
The OLP Policies Map and Local Plan must be updated to: • Correct incorrect and sloppy boundary markings. • Add missing green areas with correct designations. • Visually mark restricted, semi-restricted and	The local plan is required to address policies, designations and allocations that are within the administrative boundary of Oxford, so it would not be appropriate to include development sites outside of the boundary.	None.

fully accessible green spaces • Add Development outside OCC's boundary. • Add playgrounds with a policy to resist removal Accessibility of green space must be correctly marked to avoid developer challenge and marked clearly on the Policies Map with red (inaccessible, brown (some accessibility), green (public access) as per the Green Space Survey of 2005/2007.	Efforts have been made to make the policies map as comprehensive as possible given time and resource constraints , and factual corrections when specifically identified can be made on an ongoing basis as required. On the interactive policies map the Green Infrastructure (GI) network spaces are identified by name, typology, designation in line with policy G1, and where known subtypology. The level of detail provided has been set at a level suitable to support the policy objectives and to be as user friendly as practical as possible.	
'Oxford Brookes Marston Road Campus' is indicated as site code SPE 10, not SPE 11 as in the 'Appendix 08 Infrastructure AOF and Site Allocations' document. 'Milham Ford Field and Quad LWS 50I05' seems not indicated on the map by horizontal bar green bars as are other LWS within the city.	This has been noted and site reference will be amended as a minor modification. Visibility settings on the interactive map will be adjusted to ensure that the LWS can be viewed at larger scales.	Minor modification.
South Oxfordshire DC and Vale of White Horse DC commented on the appropriate extents of the policies map in relation to designations and safeguarded land for infrastructure.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.	Refer to the copy of responses included as part of the SoCG which are duplicated in Appendix 1.

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
G1	**Policy G1 – Protection of Green Infrastructure** NE welcomes the inclusion of a Green Infrastructure (GI) policy.... NE welcome the identification and protection of those spaces forming part of the GI core network G1A and G1B as identified on the proposals map.	Support for Policy G1 and the identification of the Core (G1A) and Supporting (G1B) spaces is welcomed.	No change proposed
G2	**Policy G2 – Enhancement and provision of new green and blue features** <u>Watercourse buffer</u> The plan recognises the opportunity to enhance blue corridors and NE welcome the inclusion of a commitment to restore bankside and instream habitats, leaving an undeveloped buffer zone of at least 10m width. We would encourage you to identify those site allocations where these opportunities exist and provide details of the buffer zone requirements within each of the allocation policies to ensure that these opportunities are a requirement. This would be particularly beneficial where sites are adjacent to SSSI or SAC sites and would act to enhance and	<u>Watercourse buffer</u> Representation relates to certain site allocation policies only. See representations for SPCW6 – Manor Place, and SPS8 – Meadow Lane The proximity of development sites to SSSIs has been assessed in the Source Pathway Receptor Analysis. Any site allocations within Impact Risk Zones (IRZs) for the relevant SSSIs have been identified in the relevant site allocation policies.	<u>Watercourse buffer</u> No change proposed to Policy G2.

3190

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	strengthen the existing identified G6 ecological and G1 GI network.		
G4	**Policy G4 – Delivering mandatory net gains in biodiversity** Higher than 10% BNG target NE welcome the inclusion of a commitment to deliver the mandatory 10% net gain in biodiversity. NE encourages the City Council to be more ambitious and consider a higher percentage to align with the shared regional principles of the Oxford-Cambridge Growth Corridor – i.e., 20% Strategic approach The Plan should set out a strategic approach, planning positively for the creation, protection, enhancement and management of biodiversity networks. Off-site reprovision of BNG Where reprovision of BNG cannot be delivered on site, the plan should set out where this might be delivered across the ecological network (Policy G6) across the plan area, in a similar way that is proposed within policy G1 for GI provision.	Higher than 10% BNG Target As set out in previous discussions, whilst we have elected to maintain a 10% Biodiversity Net Gain (BNG) target, which aligns with the legislation, Policy G4 encourages a higher delivery of BNG where possible. National guidance is clear the plan-makers should not set targets that exceed 10% unless this can be justified. Setting a policy target that exceeds the mandated 10% in Oxford is likely to be challenging due to the constrained nature of many of the site allocations. A higher target could also result in additional offsetting payments for biodiversity units being delivered through offsetting into biodiversity net gain elsewhere, outside of Oxford. Instead, we have sought a locally tailored approach to boosting gains for biodiversity and the wider environment which fits with Oxford's setting, as discussed further below. Strategic approach Chapter 4 of the Local Plan 2045 provides an over-arching approach to supporting both the Green Infrastructure (GI) and biodiversity networks, which aligns with your comments. Policies G1-G6 set out a strong hierarchy of protection for existing green features through Policy G1 and more explicit requirements for ecological sites (Policy G6). The Local Plan promotes new greening with Policy G2 seeking to secure new multi-functional green features,	Higher than 10% BNG Target No change proposed Strategic approach No change proposed Offsite reprovision of BNG No change proposed

3191

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
		whilst we are also including a new policy for Oxford focussed on increasing surface greening via the Urban Greening Factor (Policy G3) - adapted from NE's own guidance. In relation to securing more space for biodiversity, the Local Plan includes specific requirements for the delivery of onsite ecological enhancements that are important for many priority species but not recognised through the BNG process (Policy G5). This would sit alongside and enhance the provisions of the Statutory BNG requirements. <u>Offsite reprovision of BNG</u> Policy G4 already prioritises the delivery of BNG onsite and sets out a hierarchy to be followed where on-site (or adjacent) delivery is not feasible, in line with Natural England's suggestion. We have sought to ensure that the LNRS is incorporated into this hierarchy, so that applicants are guided by the opportunities it identifies where onsite delivery is not possible. The policy also recognises that there will be opportunities to deliver BNG that aligns with the delivery of measures identified in the LNRS. This will be particularly relevant where development proposals are located in areas identified within the LNRS. Separately, where site allocation policies contain land that has been identified within the LNRS, a reference is included within each policy.	
G6	**Policy G6 – Protecting Oxford's biodiversity including the ecological network**		

3192

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	General comment ... Local ecological networks form part of the wider Nature Recovery Network proposed in the 25 Year Environment Plan. Ecological enhancements ...Where development is proposed, opportunities should be explored to contribute to the enhancement of ecological networks. General comment re: sites within Oxford's ecological network NE welcome the commitment to safeguard key sites within Oxford's ecological network (including Oxford Meadows SAC). Adjacent to SSSI/ SAC etc. NE encourage the City Council to identify those site allocations which are proposed on land immediately adjacent to the SAC and SSSI and stipulate within the allocation policy that appropriate buffering and delivery of habitat supporting the interest features of the designated site will be required. Irreplaceable habitats We encourage the City Council to be ambitious in terms of the protection, strengthening and enhancement of the ecological network and suggest a commitment to the protection of	General comment General comment noted. Ecological enhancements Policy G2 sets out how enhancements to the green and blue infrastructure network should be delivered, while Policy G4 sets out how BNG requirements are to be delivered prioritising on-site and then off-site delivery. Together these policies work to contribute to the enhancement of ecological networks. General comment re: sites within Oxford's ecological network General comment noted. Sites adjacent to SSSI/ SAC etc. The Local Plan 2045 does not allocate any sites immediately adjacent to the Oxford Meadows SAC. The proximity of development sites to SSSIs has been assessed in the Source Pathway Receptor Analysis. Any site allocations within Impact Risk Zones (IRZs) for the relevant SSSIs have been identified in the relevant site allocation policies. The following four policies are located immediately adjacent (or very close to) a SSSI. *Policy SPS14 – Redbridge Paddock* is separated from the Iffley Meadows SSSI by the River Thames. The policy recognises that the site lies within the identified impact risk zone for the Iffley Meadows SSSI. Policy wording has been included to ensure no adverse impacts on the SSSI. Additional policy wording has been included that relates to the incorporation of SuDS and a groundwater and surface water assessment. *Policy SPE1 – Churchill Hospital* is adjacent to the Lye Valley SSSI. The policy box for the site highlights this,	General comment No change proposed Ecological enhancements No change proposed General comment re: sites within Oxford's ecological network No change proposed Adjacent to SSSI/ SAC etc. No change proposed Irreplaceable habitats No change proposed Nature recovery network No change proposed

3193

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	irreplaceable habitats and priority habitats (such as lowland fen), in the policy wording. <u>Nature recovery network</u> NE encourage the City Council to consider the Oxford Nature Recovery Network and welcome the reference to the Oxfordshire Local Nature Recovery Strategy in the site allocation policies.	and the site's location within the identified impact risk zones for the Lye Valley SSSI. Policy wording has been included to ensure no adverse impacts on the Lye Valley SSSI. Policy wording has also been included to ensure that the applicable tests identified within the relevant risk zones in the Lye Valley Study/ TAN are satisfied. Given the site's proximity to the SSSI, additional text relating to construction buffers and watercourse buffers (Policy G2) has also been included. *Policy SPE10: - Nuffield Orthopaedic Centre* acknowledges the proximity of the site to the Rock Edge Geological SSSI, situated on the other side off Windmill Road. The policy includes policy text relating to a construction buffer. Appropriate text has also been included in the policy in relation to the site's location within the identified impact risk zone for the Lye Valley SSSI. *Policy SPCW6 – Manor Place* identifies the proximity of the site to both Magdalen Grove Geological SSSI (adjacent) and the New Marston Meadows SSSI (within the impact risk zone). Given the proximity of the site to the Magdalen Grove Geological SSSI text has been included within the policy relating to a construction buffer. Appropriate text has also been included in the policy in relation to the site's location within the identified impact risk zone for the New Marston Meadows SSSI. No other site allocations have been proposed adjacent to SSSIs. <u>Irreplaceable habitats</u>	

3194

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
		Policy G6 includes a specific section that covers *internationally and nationally designated sites and irreplaceable habitats*. This section of the policy refers to the appropriate sections of the NPPF (paras 193-195), or their equivalent paragraphs in any update of national policy. Local Plans drafted under the NPPF (Dec 2024) should be in conformity with national policy and as such the national policy position with regard to irreplaceable habitats has not been duplicated in the Oxford Local Plan 2045. <u>Nature recovery network</u> The TVERC Nature Recovery Network (NRN) has informed the development of the city's GI network (particularly the network of core (G1a) spaces. Where the Oxfordshire NRN identified a green space in the city containing a significant area of "core space" as defined by the TVERC NRN, and it was determined that space contributed to a clear green corridor function within the city, this resulted in those spaces being designated as part of the core GI network for Oxford.	
Omission poilcy	<u>Lye Valley SSSI: Further details</u> NE encourages the City Council to include the details of a policy specific to the Lye Valley SSSI and the requirements for development in relation to SuDS etc., within a Local Plan policy rather than a Technical Advice Note (TAN). NE appreciates that the evidence (hydrogeological survey) that will guide planning requirements has only just	<u>Lye Valley SSSI: Further details</u> Policy G6 provides the overarching protection for all the designated sites including the Lye Valley. The supporting text explicitly references Lye Valley as one of the SSSIs with particular sensitivities and sets out the types of adverse impacts it is susceptible to. Furthermore, we have also included on the policies map the Impact risk Zones identified through the JBA Hydrogeological Report, to assist applicants. We expect that the Technical Advice Note will then provide further guidance for applicants, informed by	<u>Lye Valley SSSI: Further details</u> No change proposed, however, we look forward to continuing to engage with you on finalising the Technical Advice Note ready for publication.

3195

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	been published and that the TAN is under development. However, if it is possible to incorporate this into the Local Plan that would be preferable to a TAN.	the JBA study, in how these adverse impacts should be addressed in each of the Impact Risk Zones. Additionally, we would flag that we have also sought to include explicit encouragement for applicants within the Marston Road and Old Road Area of Focus policy to explore opportunities for design interventions on their sites that could go further than mitigating harm and secure a betterment for the Lye Valley (e.g. reducing hard surface cover). See supporting text to that policy and also criterion C of the policy.	
SPN3	**SPN3 – Oxford North Remaining Phases** <u>Public open space delivery: HRA mitigation</u> NE advises that the GI provide as part of the development within the SPN3 allocation is mapped and included within the Core GI Network (Policy G1) as it forms part of the mitigation for recreational impacts on the Oxford Meadows SAC and should therefore be protected from development in perpetuity.	<u>Public open space delivery: HRA mitigation</u> Some of the public open space that has been provided to mitigate recreational impacts at the Oxford Meadows SAC has already been delivered on land which falls outside of the emerging Local Plan 2045 site allocation. However, the entire site areas is included within the redline boundary of the outline planning application. As the delivery of the public open space is being administered through the implementation of that application (which is ongoing), that is why it has not been formally designated as part of the GI network. The Council will consider how best to ensure that this particular public open is maintained beyond the requirements of the planning permission.	<u>Public open space delivery: HRA mitigation:</u> No change proposed
SPE1	**SPE3 –Government Buildings and Harcourt House** <u>General comment</u> NE welcome recognition that there may be hydrological impacts from development at this location on the New Marston Meadows SSSI.	<u>General comment</u> General comment noted. <u>Fragmentation of linkages</u>	<u>General comment</u> No change proposed <u>Fragmentation of linkages</u> No further change proposed

3196

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	Fragmentation of linkages However, due to its proximity to the SSSI (and the presence of open mosaic priority habitat) and the site's likely high biodiversity value, NE concerned that development here will impact on the wider ecological network to which the site is linked potentially resulting in the fragmentation of linkages of linkages. NE state that "further information should be provided to evidence whether the site is deliverable"	The policy sets out that proposals should seek to retain existing features wherever possible. Additionally, under criterion c, as part of maintaining the UGF score, the policy encourages new or enhanced features which should seek to enhance connections through the site, such as wildlife corridors. We believe this helps to address NE's concerns relating to fragmentation of linkages. Criterion e flags the presence of priority habitat on site and sets out expectations of applicants where they could impact this. As with all the allocations, we have sought to consider a range of factors (e.g. biodiversity, heritage etc) in coming to the minimum capacity of the site and the requirements set out in the policy. The narrative of this assessment is captured in the site capacity assessments within the evidence base.	
N/A	N/A - Headington Hill Hall and Clive Booth Student Village (SPE3 – policy reference refers to site no longer put forward in the Oxford Local Plan 2045)	This representation relates to a site that was not taken forward in the Oxford Local Plan 2045.	No change proposed
SPCW6	**Policy SPCW6 – Manor Place** General comment NE welcomes the recognition that there may be potential hydrological impacts from development at this location on New Marston Meadows SSSI, and that any proposals coming forward will require a hydrological assessment and SuDS. Priority habitat There are pockets of priority habitat located within this allocation which will contribute to the ecological network, and the site as a whole will likely be of	General comment General comment noted. Priority habitat Policy box for SPCW6 already notes that the site may contain S41 (Priority/Principal) habitats Watercourse buffer (Policy G2) We can insert some wording in the policy to align approach with other site allocation policies that are located adjacent to watercourses.	General comment No change proposed Priority habitat No change proposed Watercourse buffer (Policy G2) We suggest the following mod could be proposed: *f) A buffer should be retained along the watercourse* ***(Policy G2)****.*

3197

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	high biodiversity value give the habitats present here and its location next to the River Cherwell. Watercourse buffer (Policy G2) NE encourages the City Council to identify the requirement for a buffer strip to be put in place of at least 10m from the River Cherwell as per Policy G2 to ensure that this is clear within the allocation policy.		The subsequent bullet points within the policy will also need to be updated.
SPS3	**Policy SPS3 – Bertie Place Recreation Ground** General comment NE welcome the recognition of potential impacts on the Iffley Meadows SSSI and the requirement for hydrological assessment and SuDS features due to this site's proximity to the SSSI. GI Network reference The site is identified as supporting GI (Policy G1(b)) and is in close proximity to the SSSI, likely contributing to the strengthening and enhancement of the ecological network. Therefore, reprovision for any loss of habitat should be delivered on site in the first instance or delivered to another part of the network.	General comment General comment noted. GI Network reference To overcome this objection to the plan and to provide internal consistency for the policies themselves, some policy wording is suggested. This is in the form of an additional bullet point proposed to be added to Policy SPS3 under the **Open Space, Nature and Flood Risk** heading.	General comment No change proposed GI Network reference Additional bullet point proposed to be added to Policy SPS3 under the **Open Space, Nature and Flood Risk** heading. *f) The site is identified as supporting green infrastructure (Policy G1) so enhancement of remaining GI will be required to mitigate loss.* The subsequent bullet points within the policy will also need to be updated to reflect this wording.
SPS8	**Policy SPS8: Land at Meadow Lane** General comment NE welcome the recognition of potential impacts on the Iffley Meadows SSSI and the requirement for	General comment General comment noted.	General comment No change proposed

3198

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	hydrological assessment and SuDS features due to this site's proximity to the SSSI. Watercourse buffer NE encourages the City Council to identify the requirement for a buffer strip to be put in place of at least 10m from the watercourse to the west of the site as per Policy G2 to ensure that this is clear within the allocation policy. GI Network reference The site is identified as supporting GI (Policy G1(b)) and is in close proximity to the SSSI, with a likely high biodiversity value particularly in relation to the invertebrate interest present which will contribute to the strengthening and enhancement of the ecological network. Therefore, reprovision for any loss of habitat should be delivered on site in the first instance or delivered to another part of the network.	Watercourse buffer Policy SPS8 already includes reference to the retention of a buffer along the watercourse. We propose a modification to make it clear that that bullet point g) makes reference to Policy G2. GI Network reference To overcome this objection to the plan and to provide internal consistency for the policies themselves, some policy wording is suggested. This is in the form of an additional bullet point proposed to be added to Policy SPS3 under the **Open Space, Nature and Flood Risk** heading.	Watercourse buffer We propose a modification to make it clear that that bullet point g) makes reference to Policy G2, as follows: *g) A buffer should be retained along the watercourse (**Policy G2**).* GI Network reference We propose an additional bullet point to be added to Policy SPS3 under the **Open Space, Nature and Flood Risk** heading: *h) The site is identified as supporting green infrastructure (Policy G1) so enhancement of remaining GI will be required to mitigate loss.* The subsequent bullet points within the policy will need updating.
SPS14	**Policy SPS14: Redbridge Paddock** General comment NE welcome the recognition of potential impacts on the Iffley Meadows SSSI and the requirement for hydrological assessment and SuDS features due to this site's proximity to the SSSI. GI Network reference	General comment General comment noted. GI Network reference Paragraph b) of this policy already includes a reference to supporting GI. Paragraph a) of this policy already sets out that the site falls within the impact risk zone for the Iffley Meadows	General comment No changes proposed GI Network reference No changes proposed Fragmentation of linkages No changes proposed

3199

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	The site is identified as supporting GI (Policy G1(b)) and is in close proximity to the SSSI, likely contributing to the strengthening and enhancement of the ecological network. Therefore, reprovision for any loss of habitat should be delivered on site in the first instance or delivered to another part of the network. Fragmentation of linkages Due to the potential high biodiversity value of this site and potential for fragmentation of linkages impacting on the SSSI, further information should be provided to evidence whether this is deliverable.	SSSI and includes appropriate wording to ensure no adverse impacts on the SSSI. Fragmentation of linkages In relation to the point about potential fragmentation impacts, the Council has reviewed this further and consider that if a proposal were to meaningfully retain a green buffer (including mature trees) and protect the river corridor/riparian corridor as the policy sets out, then the connectivity through the landscape would be preserved and this would mitigate any potential fragmentation impacts on the SSSI. The Council has reviewed the wording of the allocation in response to NE's concern and consider that the above is addressed via the current wording in bullet points d) and e) of the policy which sets out the importance of considering the SSSI and the retention of a green watercourse buffer in accordance with Policy G2.	
SPE1	**Policy SPE1: Churchill Hospital** General comment The above allocation falls within the Lye Valley SSSI Impact Risk Zone. The Lye Valley SSSI is a lowland fen spring fed system and is highly sensitive to changes in water quantity and quality. We welcome wording within the policy which states planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon surface and groundwater flow to the Lye Valley SSSI.	General comment General comment noted. Urban Greening Factor The UGF policy is a new approach for Oxford, and the targets we have set are informed by previous testing and what we felt would be most achievable across the city to secure a range of benefits. In relation to the Lye Valley area, The JBA Hydrogeological Study sets out the complex nature of the catchment and the different risks that apply in different areas. It is likely that bespoke, specific mitigation measures will be required to address	General comment No change proposed Urban Greening Factor No change proposed

3200

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
	Urban Greening Factor NE encourages the City Council to be ambitious, particularly for those allocations which adjoin the Lye Valley SSSI. NE suggests, for site allocations adjoining the Lye Valley SSSI, a higher minimum target score for the Urban Greening Factor (set out in Policy G3), is considered. This is due to the increased importance in this area for natural surface coverage which in turn, ensures that the hydrological processes on which Lye Valley SSSI depends, are maintained.	particular surface and groundwater quantity and quality issues that may arise from development proposals. This will depend on what development is proposed and where within the locally identified IRZs for Lye Valley. Our concern, given the sensitivities of the habitats within the Lye Valley, is that setting a higher UGF target for this area could undermine the findings of the study or suggest that this is sufficient mitigation for impacts from development near by. In actuality, any measures required to mitigate the impacts on the SSSI should be specifically informed by the guidance in the site allocations and the Technical Advice Note (which builds on the recommendations of the JBA study) and carried out for that purpose. This may include higher levels of natural surface cover, but there may be other interventions/design choices which are also just as important (or more so), depending on what is proposed.	
SPE18	**Policy SPE18: Warneford Hospital** GI Network reference Policy SPE18 Warneford Hospital contains pockets of G1B green infrastructure as identified in the protected network and is in close proximity to the SSSI, likely contributing to the strengthening and enhancement of the ecological network, therefore reprovision for any loss of habitat should be delivered on site in the first instance or delivered to another part of the network Policy G1b should be referenced in policy	GI Network reference Criteria b) of Policy SPE18 already includes the following which addresses NE's objection: *... Losses of open space identified as supporting green infrastructure (Policy G1) will also need to be mitigated through enhancement of remaining GI. These requirements could be met in different ways, such as through enhancement of remaining areas of amenity grassland, additional planting such as new trees that can enhance canopy cover and the setting of the listed buildings, or improvements in linkages to nearby habitat, as well as new habitat creation.*	GI Network reference No change proposed

3201

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
SPE4	**Policy SPE4: Jesus College Sports Area** GI Network reference This allocation in its entirety is part of the protected G1B green infrastructure network therefore reprovision for any loss of habitat should be delivered on site in the first instance or delivered to another part of the network. Policy G1b should be referenced in policy	GI Network reference Criteria a) of policy already includes the following text which addresses NE's objection: *The entirety of both sites has been identified as supporting green infrastructure (Policy G1) so enhancement of remaining GI will be required to mitigate loss. This enhancement could be addressed in different ways, such as through qualitative improvements to remaining on-site, and adjacent, areas of open space by improving the functionality of these spaces in terms of wider benefits they provide people and species.*	GI Network reference No change proposed
HRA	**Habitat Regulations Assessment** HRA Natural England agree with the conclusions presented in the HRA that there will be no Likely Significant Effects as a result of the plan on the Oxford Meadows Special Area of Conservation (SAC) in terms of water quality or recreational disturbance. Provided you have followed the advice set out within Annex A regarding the assessment of air quality, we can also agree with the conclusion of no LSE set out in the HRA in relation to air quality impacts.	HRA The City Council is pleased that NE agree with the HRA conclusions relating to water (quality and quantity) and recreational disturbance. Having reviewed the advice set out in "Annex A", regarding air quality assessment, the City Council is confident that the assessment undertaken in relation to air quality impacts has followed this advice.	HRA No further work required/ no changes need to the Plan.

3202

Historic England

Policy/section	Summary of HE Reg 19 comment	HE Reg 19 suggested change	Oxford City Council response/proposed modification
Policy S2: High Quality Design	Policy is considered sound - support reference to the role of heritage in the Council's strategic approach to high quality design.	N/A	Support is noted thanks, no further action proposed.
Policy E1: Employment Strategy	HE retain concern about first paragraph on new employment generating uses because this now includes broad reference to sites within the city centre. Would prefer a qualifier indicating that intensification and modernisation may need to be handled sensitively for some sites. Suggest adding "appropriate". Alternative would be a reference to other relevant policies in the plan	Amendments to wording as follows: *Planning permission will be granted for the appropriate intensification and modernisation of any Key Employment Site or any employment site in the city centre or district centre.*	Whilst we appreciate the concern, the qualifier does not in practice add any additional specificity without defining what we mean by 'appropriate', which will of course vary depending on site context. The policies of the Local Plan need to be read as a whole and other policies of the Local Plan, such as the detail covered throughout chapter 6 should ensure that any intensification/ modernisation is appropriate for the location, including ensuring that any harm to nearby sensitive features is avoided/mitigated through careful design choices. We do not currently propose any further modifications in relation to this comment.
Policy R3: retro-fitting existing buildings	Policy is considered sound – HE support this policy, making clear that traditional buildings require a different approach to retrofit measures when compared with adapting modern buildings to improve their carbon and energy efficiency.	N/A	Support is noted thanks, no further action proposed.
Policy HD3: designated heritage assets	1. The Reg 19 Local Plan switches terminology to refer to a heritage statement rather than heritage assessment (in previous iterations). HE consider that reference to heritage	Amendments to wording, corresponding to the 3 points made: 1. Policy should reference heritage assessment rather than heritage statement.	We are happy to agree to the first two points and the modifications suggested by HE as follows: 1. **Mod proposed to amend references from heritage statement to heritage assessment throughout the Local Plan (affects multiple policies e.g. HD3, HD4 and HD5).**

3203

	assessment more accurately reflects the subsequent policy requirement and the direction of travel through the draft NPPF consultation 2026. 2. Strongly recommend that the potential for proposals to enhance significance and its appreciation is incorporated into the policy wording. The potential for proposals to deliver other heritage benefits could effectively be incorporated into criterion c. 3. There is no subsection to the policy on scheduled monuments, which is an unnecessary omission that should be rectified. HE suggest additional text for inclusion.	*2.* Amend to criterion b) as follows: *That the development of the proposal and its design process have been informed by an understanding of the significance of the heritage asset including its setting, that enhancements to significance and its appreciation have been identified where possible, and that harm to its significance has been avoided....* Amend to criterion c) as follows: ...*and that measures are incorporated into the proposal that mitigate or reduce the harm where appropriate and/or deliver other heritage benefits.* 3. Additional policy sub-section addressing considerations for Scheduled Monuments and nationally significant Archaeology – see Reg 19 response for suggested wording.	**2. Mods proposed to criteria b) and c) as per the suggestions.** **3.** Whilst we note the concern about the omission of reference to scheduled monuments in the policy, we would draw your attention to the fact these are referenced in supporting text. Within the policy wording itself, we have tried to focus only on locally specific considerations that do not repeat national policy, but at present, we are struggling to see how the additional wording suggested aligns with this approach. For example, criteria c and d seem to repeat NPPF tests. Equally, within proposed criteria c, the wording about non-designated assets seems to repeat footnote 75 of NPPF (and is already covered at end of HD4). Nevertheless, further to our catch up, we think we could propose a modification that would bring attention to scheduled monuments and cross reference to policy HD5. **Modification adding some additional wording to the policy as follows:** *Specific considerations for scheduled monuments* *Proposals within the site or setting of scheduled monuments should consider the potential for non-designated heritage assets of archaeological interest, which could be of demonstrably equivalent significance to scheduled monuments. Where present, impacts on these assets will need to be addressed in line with the requirements of Policy HD5 and the NPPF.*
Policy HD4: Non-designated heritage assets	Proposed amendment to policy cross reference.	Reference should be made to HD3 rather than HD4 in the final line.	Agree, this is an erroneous reference. **Mod proposed to update cross reference from HD4 to HD3 in final para of policy.**
Policy HD5: Archaeology	Proposed amendment to policy cross reference.	Reference should be made to HD3 rather than HD2 and HD4.	Agree, these are erroneous references. **Mod proposed to update cross references as follows:**

3204

			Proposals which would or may affect archaeological deposits or features that are designated heritage assets will be considered against the requirements of Policy HD3~~relevant policy approach (Draft Policy HD2 Listed Buildings, Draft Policy HD4 Scheduled Monuments).~~
Policy HD6: Views and building heights	Support for the policy as worded.	N/A	Support is noted thanks, no further action proposed.
Policy NEOAOF: Northern Edge of Oxford Area of Focus	Proposed amendment to policy cross reference.	Reference should be made to HD6 rather than HD9.	Agree, this is an erroneous reference. **Mod proposed to update cross reference from HD9 to HD6 under criterion g) of the policy as follows:** *Development proposals should be developed in accordance with Policy ~~HD9~~HD6 and where applicable with the site-specific allocation.*
Policy SPN3: Oxford North Remaining Phases AND VARIOUS OTHER POLICIES	Check policy cross references. Policy SPN1 includes reference to impacts on conservation areas with a cross-reference to HD3. Here, in policy SPN3 they are referenced in the context of HD1. In policy SPS9 reference is made to both HD1 and HD3.	We recommend checking that the Council is comfortable the correct policies are being cited on when considering impacts on the character of conservation areas, in this and other site allocations.	Agree, there are some erroneous references here. **Mods proposed to correct the cross references in the following policies:** - **SPN3 (HD1 to be changed to HD3 in criterion h)** - **SPS9 (HD1 ref to be removed from criterion g)**
Policy SPN5: Pear Tree Farm	Reference is made to the need for further archaeological investigation only for any "sizable redevelopment". The meaning is unclear and open to interpretation. Harm to archaeological assets is not necessarily dependent on the size of the development, but its location. A small development in a location that contains important remains will lead to harm.	The wording here needs to be reviewed by the Council's archaeological adviser and revised.	Agree this wording is unhelpful. **Mod proposed as follows:** n) *This area is of archaeological interest for potential prehistoric and Roman remains, which will require further investigation as part of any ~~sizable~~ redevelopment **(Policy HD5).***

3205

Policy CBLAOF: Cowley Branch Line area of focus	We note the different criteria that were included in the OLP2040 Regulation 19 have been dropped, presumably because of the more detailed work that has been done that is embedded in the CBL Densification Study. We look forward to the publication of that study. We highlight that impact on views and heritage significance connect with views towards the historic core, not just from the core.	Reference should be made to HD6 rather than HD9. h) Careful consideration given to the design and height of new buildings to ensure that their impact does not have a detrimental impact upon views from or to the historic core, or on surrounding low-rise residential areas. Development proposals should be developed in accordance with Policy HD69 and the site-specific allocation, where applicable ...	Agree with suggested amends. **Mods to be proposed as follows:** *h) Careful consideration given to the design and height of new buildings to ensure that their impact does not have a detrimental impact upon views from, or to, the historic core, or on surrounding low-rise residential areas. Development proposals should be developed in accordance with Policy HD9HD6 and the site-specific allocation...*
Policy SPS2: ARC Oxford	Proposed policy cross reference	The site allocation policy in OLP2024 Regulation 19 refers to the consideration of impacts within the setting of the adjacent conservation area and listed building (HD1 and HD2). These considerations remain relevant and should be reinstated with a reference to policy HD3.	**Propose a mod to add a new criterion under the Urban Design and Heritage section, before the current criterion g) relating to archaeological remains, to read as follows:** *g) Proposals should be designed in a way that is sensitive to the nearby listed building, as well as the Temple Cowley Conservation Area which lies adjacent to the site, particularly regarding heights, massing, roofscape and impacts on local character and street scene (**Policy HD3**).* **Letters for criteria that follow will need to be updated to account for new one added.**
Policy SPS6: Former Iffley Mead Playing Field	Reference is made to any sizable development requiring pre-determination evaluation.	This wording should be reviewed by the Council's archaeological adviser.	Agree this wording is unhelpful. **Mod proposed as follows:** *e) Proposals should ensure that the archaeological assets are appropriately investigated and responded to **(Policy HD5)**. Any sizable development will require pre-determination evaluation (geophysical survey and trenching).*
Policy SPS7: Kassam Stadium	Support for the policy as worded/	N/A	Support is noted thanks, no further action proposed.

3206

3207

Policy SPS10: MINI Plant Oxford	The policy omits reference to HD6 and the CBL Densification Study. While reference is made to blending into surrounding views, the policy needs to connect with both the relevant policy and the 2025 study.	Reference should be made to the CBL Densification Study and HD6	We will propose a mod adding in a reference to the CBL study and High Buildings TAN, however, we do not propose to add a cross-ref to HD6 as this is only flagged in allocations explicitly where there are particular concerns in relation to protected view cones. Whilst HD6 may be of relevance to applications elsewhere in the city, this does not need to be repeated throughout all allocations as the Local Plan's policies need to be read as a whole. **Mod to be proposed to criterion e) as follows:** *e) Whilst there are limited constraints on the site, considerations around heights, scale and massing should factor in how the developments will be viewed from afar and on the approach, so as to reduce feelings of overbearing and dominating of the adjacent streetscape. Heights should be informed by design guidance in the High Buildings TAN and the CBL Densification Study (2025). Variations in materials, including selection of materials and how they are placed, could help to add visual interest to frontages and reduce homogeneity particularly when experienced from outside the site.*
Policy SPS11: Overflow Car Park at Kassam Stadium		Reference should be made to the CBL Densification Study and HD6	We will propose a mod adding in a reference to the CBL study and High Buildings TAN, please see comment against SPS10 explaining why we do not propose to include a cross-ref to HD6 also. **Mod to be proposed as follows:** *h) There is greatest potential for higher and larger plot buildings in front of the railway embankment and in the centre of the site, building in height from the outer edges towards the centre and north of the site. Heights should be informed by design guidance in the High Buildings TAN and the CBL Densification Study (2025).*

Policy SPS12: Oxford Science Park		1. Reference should be made to policy HD6 to align with the approach elsewhere in the plan. 2. The allocation should make clear the importance of avoiding harm to any buried remains of Littlemore Priory discovered within the Science Park. 3. Suggest avoiding the implication that proposals should preserve the setting of the Farmhouse, when its significance has been harmed by development within its setting. It would be more appropriate to require proposals to "enhance" the setting.	1. Please see comment against SPS10 explaining why we do not propose to include a cross-ref to HD6. 2. Policy criterion k) does flag the potential for remains associated with Littlemore Priory and cross refers to policy HD5, which we feel addresses that part of your comment sufficiently. **3. We are happy to propose a mod to criterion j as follows:** *j) Development proposals must be designed to preserve and enhance the setting of the adjoining Grade II* listed Minchery Farmhouse, particularly plots in the east of the site **(Policy HD3)**.*
Policy SPS13: Ozone Leisure Park and Minchery Farmhouse	Welcome the newly drawn boundaries for this site.	The allocation should make clear the importance of avoiding harm to the buried remains of Littlemore Priory. Similar to agreed mods on LP2040, encourage that focus to be integrated within policy SPS13, with potential revised wording as follows: "The heritage significance of Littlemore Priory should inform the design of schemes including avoiding harm to buried remains and seeking opportunities to better reveal and appreciate the significance of those remains".	We agree some additional detail would be helpful and propose to use similar wording to that of SPS12. **We propose a mod to amend criterion J as follows:** *j) ~~Archaeological potential will need to be explored as part of any proposed redevelopment (Policy HD5).~~ Development proposals must take into consideration the potential presence of Medieval and Roman archaeological remains and remains of Littlemore Priory. Proposals should ensure that the archaeological assets are appropriately investigated and responded to **(Policy HD5)**.* **We also propose a mod to the 'Notable Heritage Assets' line in the summary box above the policy as follows:** *Contains Minchery Farmhouse Grade II* listed building. Potential for prehistoric, Roman and*

			medieval archaeology, including remains associated with Littlemore Priory.
Policy SPS15: Sandy Lane Recreation Ground Policy SPS16: Templars Square Policy SPS17: Unipart Site		We recommend referring to the CBL Densification Study (all three sites) and policy HD6 (SPS15 and SPS17).	We will propose mods adding in references to the CBL study and High Buildings TAN, please see comment against SPS10 explaining why we do not propose to include a cross-ref to HD6 for SPS15 and SPS17. **Mods to be proposed as follows:** **SPS15 – Sandy Lane – Amend to criterion i) as follows:** *i) Whilst the site is in an area of the city with fewer constraints or less sensitivity in terms of views, development proposals will need to consider and mitigate impacts on the sensitive skyline and surrounding area, particularly when viewed in combination with existing and planned development on adjacent sites. This could be achieved in various ways, such as by avoiding built forms with excessively overbearing scale or massing and avoiding roofscapes that are excessively uniform. Heights should be informed by design guidance in the High Buildings TAN and the CBL Densification Study (2025).* **SPS16 – Templars Square – Amend to criterion g) as follows:** *g) Because of the position of the site on a ridge in an elevated position relative to the city core, there is potential for development to alter views from and to the Historic Core Area (both in the foreground and background of views). Therefore, the townscape and visual impact of any development on views to, across and from the Historic Core Area must be understood, described and explained thoroughly, including with a Visual Impact Assessment, in compliance with Policy HD6. Heights should also be informed by design guidance in the High Buildings TAN and the CBL Densification Study (2025).*

3209

			SPS17 – Unipart Site – New criterion to be added under Urban Design and Heritage section after existing criterion i), (and criteria after to be re-lettered), as follows: *j) Building heights should also be informed by design guidance in the High Buildings TAN and the CBL Densification Study (2025).*
Policy SPE3: Government Buildings and Harcourt House		Reference should be made to the Headington Hill and St Clements Conservation Areas, as included in the OLP2040 Regulation 19	We have sought to list the key assets of relevance, including these conservation areas, in the info box above the policy box. **However, we will propose the following mod:** *g) Proposals must be designed to be sensitive to their impacts on the significance and setting of the nationally listed and locally listed heritage assets on site and adjacent to it, such as the Headington Hill and St Clements Conservation Areas, taking opportunities to enhance these wherever possible* ***(Policy HD3)****.*
Policy SPE6: Land surrounding St Clement's Church	Allocation is considered **unsound**. Unlikely to be effective due to its vague approach to heritage considerations and inconsistent with national policy (NPPF paragraph 203), failing to represent a positive strategy for the historic environment. The policy refers in criterion j) to the need to consider impacts on the significance of "the heritage assets listed [sic] above". This is un-necessarily vague and is open to interpretation, undermining a suitable approach to development in what is a sensitive site. Also, we note the assets referenced (presumably in	While the policy does provide a welcome steer towards limiting heights, we still recommend a cross reference to policy HD6 (noting the site intersects with a view cone). Wording changes would address our soundness concerns on this policy, making clearer the heritage considerations that need to be taken into account for this allocation.	**Mod proposed to the summary info box above the policy, in the notable heritage assets section, as follows:** *Site surrounds Grade II* listed St Clement's Church. Southern half of the site within South Park View Cone. Within St Clement's and Iffley Road Conservation Area and within setting of Headington Hill Conservation Area. The Grade I Registered Park and Garden Magdalen College lies adjacent to the site.* Current criterion n) reflects the additional specificity which we think would address your concerns relating to criterion j). **We propose a mod to correct the typo in criterion j), and then to remove and incorporate criterion n) into criterion j).**

3210

	"Notable heritage assets") do not refer to the adjacent Grade I Registered Park and Garden.		*j) Development proposals should be designed with consideration of their impacts on the significance of the heritage assets ~~ilisted~~ listed above (**Policy HD3**). Buildings should be arranged in a way that maintains the openness of the riverside setting, that does not compete with the Grade II* listed St. Clement's Church, and is sensitive to the adjacent Registered Park and Garden. Proposals should also maintain the hedge and treeline on the Marston Road and the avenue of trees south of the church that screen it and contribute strongly to the character of its setting.* We agree additional reference to the view cone and to HD6 would be useful, and **propose a mod to current criterion l) as follows**: *...Heights should drop towards the Cherwell, to be sympathetic to the relatively rural setting of the river and will also need to be designed with consideration for the view cone which passes through the site (**Policy HD6**). The green screening...*
Policy SPE11: Oxford Brookes Marston Road Campus	Given the reference to the OHAR in criterion g, it's appropriate surely to cross-refer to HD4?		**Agreed, we propose a modification (which also inserts a missing apostrophe in first sentence) as follows:** *g) Design proposals should acknowledge the Milham Ford School building's status as a local landmark in a historic, social and physical sense. The OHAR designation report highlights the elements that are distinctive to the building and its significance which will be of relevance when addressing potential impacts on this non-designated heritage asset (**Policy HD4**).*
Policy SPE17: Union Street Car Park	The OLP 2040 Regulation 19 refers to the archaeological potential of the site (though incorporating 159 –161		**Proposed mod to add detail to the notable heritage assets section in summary box before policy as follows:**

3211

	Cowley Road). If there is archaeological potential for Union Street Car Park, this should be acknowledged in the policy with a reference to HD5.		*No designated buildings, spaces or structures on site. Site is within the Crescent Hall View Cone. Some potential for archaeological remains in the area related to former uses as a clay pit and brick yard and in relation to the Civil War Parliamentarian Line.* **Additional criterion to be added under urban design and heritage section as follows:** *XX) There is also the potential presence of archaeological assets on the site, including in relation to the Civil War Parliamentarian Line. Proposals should ensure that these are appropriately investigated and responded to (**Policy HD5**).* **Criteria after the new addition above will need to be re-lettered.**
Policy SPCW2: Botley Road Sites around Cripley Road including 110 River Hotel and Westgate Hotel	Allocation is considered **unsound**. Inconsistent with national policy. NPPF paragraph 202 acknowledges that heritage assets are an irreplaceable resource, but the policy is silent on the approach anticipated to the non-designated hotels and is missing reference to HD4. The table above the policy states that River Hotel and Westgate hotel are on the Oxford Heritage Asset Register (OHAR); yet the policy does not seek to conserve or enhance the heritage significance of these buildings, it simply requires development needing to understand the significance of the site and its surrounding context.	Ref needed to HD4 Potentially, criteria f and h could be combined. Wording changes would address our soundness concerns on this policy to make explicit the approach to redevelopment of these assets on the OHAR, conserving or enhancing their heritage significance.	**We propose the following modification:** *e) Development proposals should be designed with consideration of their impacts on the setting of the Osney Town Conservation Area **(Policy HD3)**, as well as the non-designated heritage assets identified on the OHAR (**Policy HD4**).* We agree that criteria f) and h) could be consolidated. **We propose mods to delete criterion h), and update letters of criteria after, and to update criterion f) so it incorporates what was in criterion h) as follows:** *f) The Boar's Hill view cone covers the entire site allocation. Proposals should be designed in a way that responds to this protected view. Additionally, proposed development that exceeds the height*

3212

			*stated in the High Buildings TAN may have an impact on the Historic Core Area and so will be required to provide an LVIA so that the full impacts can be understood and assessed (**Policy HD6**).*
Policy SPCW6: Manor Place	Allocation is considered **unsound**. Inconsistent with national policy. NPPF paragraph 202 acknowledges that heritage assets are an irreplaceable resource, but the policy is silent on key heritage considerations. It does not represent a positive strategy for the historic environment as worded (paragraph 203).	The policy omits reference to the adjacent RPG (Grade I) and the nearby listed buildings (which also include Grade I assets). We refer to the changes to policy agreed in our signed Statement of Common Ground; implementing those changes in full would address our soundness concerns on this policy.	These additional assets are all listed in the notable heritage assets part of the summary box above the policy, however, we agree that the policy criteria could be improved upon. **We propose the following mods:** *e) The hedged boundaries are an important characteristic of the area and should be retained, as should the mature trees and areas of trees in the northern and southern corners, helping retain the green, semi-rural character of the setting as well as screening the site and providing a buffer to the highly graded designated heritage assets within St Catherine's College.* *Urban Design and heritage* *f) ~~Development should seek to preserve the special character of the conservation area within which it lies~~ Development proposals must be designed with consideration of their impacts on the setting of the Central Conservation Area, the setting of the nearby listed buildings and views, and the setting of the two adjacent Registered Park and Gardens (**Policy HD3**). The size, alignment and design of any proposed development should take account of the importance of preserving the visual and physical connections between important, surviving, historic elements.* **We also, propose a mod to make the summary box, notable heritage assets clearer:** *...It is adjacent to Magdalen College Grade I Registered Park and Garden and the Landscape at St*

3213

			Catherine's College Grade I Registered Park and Garden....
Policy SPCW7: Nuffield Sites	Allocation is considered **unsound**. Inconsistent with national policy. NPPF paragraph 202 acknowledges that heritage assets are an irreplaceable resource, but the policy is silent on key heritage considerations and risks harm to the avoidable harm to the character of the conservation area. It does not represent a positive strategy for the historic environment as worded (paragraph 203). Concerns about the lack of clarity in the vision of what's proposed for these three sites, particularly the site south of St. Frideswide Square. All buildings south of St Frideswide's Square are identified as being positive contributors to the conservation area in the Central Conservation Area Appraisal. To include them broadly in site SPCW7 as proposed makes their future very uncertain. Wording of criterion h) is not as clear as it needs to be. Aside from the conservation area, what other designated heritage assets are being incorporated into the development? The supporting Heritage Impact Assessment does not engage in assessing the impacts on significance of relevant heritage assets,	An alternative approach that we believe could resolve our soundness concerns is to separate the site south of Frideswide Square into a separate allocation, which focuses principally on the reuse of assets and acknowledges that they all contribute positively to the conservation area. We would welcome the opportunity to work with the Council on the wording for such a policy. Combining this site with the other two Nuffield sites blurs key issues in an unhelpful way. This would leave the two other sites – the Island site and the car park – which could be grouped together, as they are already. We suggest the following alternative wording for the development of those two sites: "h) Development proposals should show how the design of the scheme has been influenced by and has considered the city's heritage. Proposals should demonstrate how they conserve or enhance the character of the conservation area (in accordance with HD3) and how the existing non-designated heritage assets such as the Royal Oxford Hotel, ~~can~~ will be incorporated into plans to redevelop the site (in accordance with HD4), or justify an alternative approach."	We disagree that the allocation would benefit from being split up, or that this is necessary for soundness; however, we would be happy to propose some further modification to the criteria of the policy in line with your suggestions, as per the below. **Modification to be proposed to criteria f) and h) under the urban design and heritage section of the policy as follows:** *f) Development proposals involving taller buildings that exceed the height stated in the High Buildings TAN should be designed with consideration of their impact on views **(Policy HD6)**. In particular, views out from the historic core, views into the site (e.g., from the Raleigh Park and Boar's Hill view cones), further views, and relevant local views into, out from and across the site should all be considered. Applications must be supported by a full assessment so that the full impacts can be understood and assessed.* *h) Development proposals should show how the design of the scheme has been influenced by and has considered the city's heritage. Proposals should demonstrate how they would conserve or enhance the character of the conservation area (**Policy HD3**) and how the existing designated and non-designated heritage assets, in particular the Royal Oxford Hotel and 18-26 Park End Street, would ~~can~~ be incorporated into plans to redevelop the site, or justify an alternative approach (**Policies HD3 and HD4**).*

	presumably because maximum flexibility is sought and there are no scheme designs to consider at this stage.	Furthermore, reference should be made to HD6 in criterion f.	
Policy SPCW8: Osney Mead	In our signed Statement of Common Ground (for Local Plan 2040 preparation), we agreed reference to "the setting of Osney Abbey Scheduled Monument (in accordance with policy HD4), including through design, interpretation and/or enhanced screening, and".	Recommend this agreed wording (modified to refer to HD3) is integrated.	Upon further reflection, we are unable to identify how development on the Osney Mead site can practically be expected to bring about enhancements to the setting of the scheduled monument. We have also now sought a view from a colleague in the heritage team on this matter and they are in agreement. As such, we do not propose to carry forward this wording.
Policy SPCW9: Oxford Railway Station and Becket St Car Park	Allocation is considered **unsound**. Not justified by proportionate evidence. Given the heritage sensitivity of this prominent location at a key entry point to the city, it is vital that the allocation is informed by adequate consideration of heritage impacts. Without such work, the allocation also does not represent a positive strategy for the historic environment (in accordance with paragraph 203).	To be sound, in our opinion, this allocation needs to be informed by heritage impact assessment, and the policy revised to take account of a better understanding of heritage significance and impacts on significance. Cross references are also needed to policies HD3, HD6 and potentially HD4.	We have reviewed and updated the 'South and east of Oxford Station' section of the Heritage Impact Assessment so that the area of assessment now incorporates the railway station area more explicitly, alongside the Nuffield Sites. This has highlighted a few extra details in relation to heritage sensitivity which we propose to incorporate into the summary box for the policy and the allocation's requirements. **Mods proposed to update the 'Notable Heritage Assets' section of the summary box before the policy to improve accuracy/clarity, as follows**: *The site is located within the Historic Core Area and within several view cones (in particular, Raleigh Park and Boar's Hill). The site is in close proximity to ~~contains~~ the Central (City and University) Conservation Area to the east, as well as the Scheduled Ancient Monuments of Rewley Abbey (predominantly below ground) and Swing Bridge at Sheepwash Channel. The site is within the setting of several Listed Buildings, including Church of St Thomas the Martyr (Grade II) (directly opposite to the east) and its surrounding churchyard and*

3215

			boundary walls, Combe House (Grade II) and St Thomas Vicarage (Grade II). There are also Oxford Heritage Asset Register (OHAR) assets nearby including the Former Castle Hotel (23 Park End Street), the Sheepwash Channel, and the Westgate Hotel (Botley Road). *The southern end of this plot extends into the precinct of Osney Abbey.* **Mods proposed to update the 'urban design and heritage' section with an additional criterion, (new criterion should slot in before the existing criterion j), and subsequent criteria re-lettered) to reflect the updates to the Heritage Impact Assessment, as follows:** *XX) Development proposals should be designed to avoid or mitigate their impacts on the significance and setting of the designated heritage assets nearby including the Central (University and City) Conservation Area, the various listed buildings, and scheduled monuments, as well as the non-designated heritage assets (**Policies HD3 and HD4**).* **Mod proposed to add in cross-reference to policy HD6 in criterion i), as follows:** *i) Development proposals involving taller buildings that exceed the height stated in the High Buildings TAN should be designed with consideration of their impact on views **(Policy HD6).** In particular, views out from the historic core, views into the site (e.g., from the Raleigh Park and Boar's Hill view cones), further views, and relevant local views into, out from and across the site should all be considered. Prior to undertaking any landscape or visual assessment work (to support the masterplan-led approach, or development proposals), the key views should be discussed and agreed in advance in*

			writing with the City Council. A full assessment should accompany proposals so that the full impacts can be understood and assessed.
Policy SPCW12: West Wellington	Query the phrasing of criterion d. The site lies fully within the conservation area, so it would seem remiss not to refer to that explicitly. Is it possible to "incorporate" other designated heritage assets into the scheme? There are no other designated heritage assets within the site. We recommend rewording this criterion.		**We propose the following mod to criterion d):** *d) Development proposals should be designed with consideration for their impacts on the significance and setting of the conservation area and the nearby listed buildings ~~Proposals should demonstrate how the surrounding designated and non designated, heritage assets can be incorporated into plans to redevelop the site, or justify an alternative approach~~* ***(Policy HD3)****.*

Environment Agency

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
Policy G2: Enhancement and Provision of New Green and Blue Features	1. The second bullet of the 'Policy Implementation' section refers to "embankments" which can cause confusion as it suggests a manmade raised bank top. Replace this word with "bank tops". 2. Box 4.1 misses the opportunity to strengthen the ecological connectivity provided by rivers – suggest additional wording. 3. Acknowledge that Policy G7 contains a statement on culverts but that is in the context of flood risk and it not being seen as a requirement for the benefit of ecology within the watercourse environment. This should be included as requirement of Policy G2. 4. As per point 2 above, the strengthening of the ecological connection provided by rivers should also be reflected in the wording of Policy G2. 5. Within the Policy, more emphasis should be placed on protecting blue corridors and more detail provided on where the ecological	Amendments to wording, corresponding to the five points made: 1. Amend bullet two as follows: *"…. seeks to facilitate opportunities to re-naturalise spaces near watercourses. This could mean thinking about ways to reinstate ~~embankments~~ bank tops by removing artificial materials and 're-wilding' them which can…."* 2. Amend paragraph entitled "Strengthening linkages between area to enhance network connectivity" as follows: *"by incorporating linear features like lines of trees/hedges, creating new pockets of green space that can form 'stepping stones' between larger spaces or taking opportunities to ecologically enhance river corridors and open up and enhance access to….."* 3. Amend Policy G2 to include the following requirement: *"Planning permission will only be granted for proposals which do not involve the culverting of watercourses, and which do not prejudice future opportunities for de-culverting. Opportunities for*	1. Agree that the wording to Policy G2 can be amended as requested in the suggested change by the EA. (See Main Modifications table for full amendment.) 2. Agree that the additional wording to the supporting text can be amended as requested in the suggested change by the EA. (See Main Modifications table for full amendment.) 3. The Council considers that Policy G7 clearly states the importance of not allowing culverting of open watercourses and that the supporting text of this policy highlights the ecological benefits of not allowing culverts. This does not need to be repeated in Policy G2. 4. Agree that the additional wording to Policy G2 can be amended as requested in the suggested change by the EA. (See Main Modifications table for full amendment.) 5. Agree that the additional wording to the following header within the policy: "*Opportunities to enhance and protect blue corridors*" can be amended as suggested by the EA. However, the Council considers it more appropriate to include the reference to where the ecological buffer zones should be measured from within the 'policy implementation' section of the supporting

3218

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	buffer zone should be measured from.	*de-culverting of watercourses should be actively pursued as a valuable enhancement to rivers and streams."* 4. Amend bullet d of the Policy as follows: *"Where there is an opportunity to strengthen links between green spaces, particularly ecological sites, creating linkages with surrounding green infrastructure (e.g. by including lines of trees/hedges and river corridors to support linkages)".* *5.* After bullet j, the next header should be amended to: *"Opportunities to protect and enhance blue corridors."* Part of the text below this header should also be amended to: *"An ecological buffer zone of at least 10 metres (measured from the top of the bank) ~~with~~ should be retained, or if it is not already in place it should be reinstated where possible.*	text, rather than within the policy. (See Main Modifications table for full amendments.)
Policy G7: Flood Risk and Flood Risk Assessments	The EA are pleased to note that the two previous comments made against the Regulation 18 version of the Plan have been included/ updated in this version.	N/A	Support is noted – thank you. No further action proposed.

3219

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
Policy G8: Sustainable Drainage Systems (SuDS)	Propose additional wording to policy to highlight that deep infiltration features are generally not supported.	Amend the end of the third paragraph of the policy as follows: *"Infiltration SuDS measures would not be encouraged in areas that have shallow groundwater as these measures would not be suitable. Deep infiltration features/soakaways are generally not endorsed and not considered to be SuDS."*	Do not consider that an amendment to the policy is required. An additional bullet to include some of this information would be more appropriate within the 'policy implementation' section of the supporting text. We are happy to include the first part of the sentence but do not think it is necessary to include *"and not considered to be SuDS"* because whilst these features may not be desirable, they could still generally be described as SuDS. (See Main Modifications table for full amendment.)
Policy R5: Water Resources and Quality	Generally support the Policy but would like it to show that new developments will not use non-mains drainage where connection to the public sewer is considered reasonable.	Amend Policy R5 to include the following requirement: *"The use of private sewage disposal facilities within publicly sewered areas will only be acceptable if the applicant can demonstrate that the additional cost of connecting to the sewer would be unreasonable, connection is not practically feasible, or the proposed private sewerage system would provide additional environmental benefits that would outweigh the potential environmental risks."*	**We are happy to propose a modification to add an additional requirement under the foul and surface water drainage section (in between the two existing paras) of the policy as follows:** *Proposed development should avoid utilising private wastewater drainage systems where a public sewer connection is available, unless the necessity of this can be robustly justified.* We suggest the justification requirement should be expanded upon in the policy implementation text above the policy. **We propose an additional bullet point to be added under policy implementation as follows:** • *Relying upon private wastewater drainage methods, such as septic tanks, introduces additional environmental risks as it will typically fall on the owner to ensure that they are appropriately maintained in future, in order to avoid wider contamination due to spills/leaks. Developments are therefore expected to connect into the public sewer system for*

3220

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
			drainage of wastewater unless an alternative approach can be robustly justified, such as by showing that public sewer connection is unfeasible, or that there would be additional environmental benefits that would outweigh the potential environmental risks.
Policy I2: Safeguarding Land for Infrastructure (a - Oxford Flood Alleviation Scheme)	The EA are pleased that the Council has taken their advice about including a safeguarding policy in relation to the Oxford Flood Alleviation Scheme (OFAS) and that it is included in the Policies Map. The site boundaries of two of the allocations: Osney Mead and Redbridge Paddock lie adjacent to OFAS. It would therefore be beneficial if OFAS was referenced in these respective site allocation policies.	Amendments to Policy SPS14 (Redbridge Paddock) and Policy SPCW8 (Osney Mead) to include a reference to OFAS. To note- these sites are adjacent to the safeguarded area of the OFAS, but Redbridge Paddock is not directly adjacent to the proposed OFAS channel.	Agree that the reference to OFAS can be added as a new paragraph at the end of the "Open space, nature, flood risk" section of both site policies SPS14 (Redbridge Paddock) and SPCW8 (Osney Mead), as follows: *"Land safeguarded for OFAS is adjacent to the site (**Policy I2**)."* (See Main Modifications table for full amendments.)
SITES referred to but not in Reg 19 document	The EA has made various comments on the following 11 sites: • 1 Pullens Lane • 2 Harberton Mead • Bayards Hill Primary School Part Playing Fields • Clarendon Centre • Edge of Playing Fields, Oxford Academy • Land off Harolde Close • Old Road Campus	N/A	The Council has confirmed to the EA that these sites are not allocated in the Reg 19 version of the Plan, therefore the EA has agreed to withdraw all comments in relation to these sites.

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	• Oriel College Sports Ground and adjoining land (comprising 263 and 639) • ROQ site • Oxford Stadium • Uni of Oxford Science Area & Keble Road		
Policy SPS1: 474 Cowley Road	29% (0.12ha) of the site is covered within fluvial flood extents. No proposed number of dwellings offered currently, so unable to confirm general allocation suitability regarding floodplain compensation concerns. Concerned with safe access/egress routes having to travel within FZ3a and flashy catchment. Updated modelling will also be required to confirm site suitability.	Require minimum number of dwellings for site to ascertain if floodplain compensation can be achieved on site. A more detailed review of the access/egress to the site will still need to be undertaken within a SFRA - these routes should be provided and avoid FZ3a.	The Level 2 SFRA considers that the main access to the site does lie within the design flood event and that a site-specific FRA would need to further investigate this and likely utilise updated modelling results for Boundary Brook. **We are happy to propose a modification to include an additional requirement (at the start of the final sentence of bullet d) under the open space, nature and flood risk section of the policy as follows:** *Updated modelling of Boundary Brook will also be required to inform a ~~A~~ site-specific FRA, which should also consider in more detail the nature of the surface water flood risk to determine how quickly it occurs and the degree of hazard on site.* In respect of the other points raised, a minimum number of dwellings expected on this site allocation (14) is provided in the policy. The Level 2 SFRA undertaken for this site highlights that development is possible as the majority of the site lies within Flood Zone 1 and outside the design flood extent (so floodplain compensation may not be necessary or minimal). In addition, the areas of high surface water flood risk mirror the fluvial

3222

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
			flood extents. In this regard it should be possible to accommodate development at the site. The site allocation policy reflects the level of flood risk present at the site, particularly along the access and states that this should be considered in a site-specific FRA. We feel this is more appropriate as it is dependent on the design of the site which is unknown at this present time. Any development proposal would also have to meet the requirements of Policy G7 which addresses flood risk and FRAs and clearly sets out the criteria that need to be met before planning permission will be granted.
Policy SPCW11: St Thomas School and Osney Warehouse	Site is 0.41ha with 10 dwellings proposed (0.17ha). With 92% of the site being inundated during the design flood event, there is limited space on site outside of design flood event for suitable development/compensatory storage.	It is very unlikely that without substantial re-development that suitable floodplain compensation will be possible on this site, and without this, the site would be undevelopable. The policy should explicitly state that the development would need to not increase the footprint compared to the existing built footprint on site.	A site-specific FRA is required for this site which is located within Flood Zone 2 and currently contains development. It is made up of two parcels – one containing a former school building and the other the warehouse. The Level 2 SFRA does highlight that the parcel containing the former school is at more risk of flooding than the Osney warehouse parcel, therefore it would be expected that the more vulnerable part of the allocation, i.e. the dwellings would be located here. The site allocation policy reflects this and specifically states that a sequential approach should be taken to locating development on the site as well as highlighting that modelling will need to be undertaken to assess off-site impacts and compensatory requirements should ground raising need to be implemented. Furthermore, a significant part of each parcel already contains development, therefore it is unlikely that any new development will occupy a footprint larger than

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
			existing and therefore unlikely that compensation would be needed. The Council therefore considers that flood risk at this site has been addressed suitably in both the site allocation and flood risk policies and that no further action is required. We do not believe it necessary to include the point about not increasing the built footprint of the site in the allocation policy, as we consider that the requirements of Policy G7 already addresses this and explicitly states that proposed development should not increase flood risk elsewhere.
Policy SPS13: Ozone Leisure Park and Minchery Farmhouse	Further information is needed regarding proposed number of dwellings before confirming soundness. Large amount of space on site outside of fluvial flood extents, so expectation is that the sequential approach would have to be taken.	In order to address soundness points b and d, the number of dwellings must be confirmed and the LPA should set out that a sequential approach must be taken to site layout and ensure that development is outside the fluvial flood events.	This site is one of three sites that are linked and the relevant site allocation policies clearly state this. Policy SPS7 (Kassam Stadium) contains the minimum number of dwellings to be delivered (290) but there is flexibility to deliver across all three sites if required as long as the minimum number is achieved. All three site policies clearly state that a site-specific FRA is required and that a sequential approach must be taken to locating development on the site. This site allocation specifically states that "*development should avoid the areas of Flood Zone 3 along the brook and across the whole southwest corner,…"*. The Council therefore considers that flood risk at this site has been addressed suitably in both the site allocation and flood risk policies and that no further action is required.
Policy SPS7: Kassam Stadium	Updated modelling would be required to fully confirm suitability as we stated in our previous comments made on the level 2 SFRA.	Providing updated modelling and reflecting this in a Level 2 SFRA may overcome soundness points b and d.	As expressed for Policy SPS13 above, this site is one of three allocations that are linked. This allocation contains the minimum number of dwellings to be delivered (290) but there is flexibility to deliver across all three linked sites if

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
			required, as long as the minimum number is achieved. The allocation policy requires that a sequential approach must be taken to locating development on the site and specifically states that "*development should avoid the areas of Flood Zone 3 along the brook.*" The Council is aware that the EA's Flood Map for Planning was updated in March 2025 and contains both national flood information and local flood model outputs but that these do not contain updated modelling for the smaller watercourses in Oxford, such as for Boundary Brook, Littlemore Brook and Northfield Brook. The Council discussed with the SFRA consultants whether to update the models for these brooks in the Level 2 SFRA, balancing this against the cost and usefulness of the information the modelling was likely to present. On balance, and taking a proportionate approach, the Council determined that it wouldn't undertake further modelling for these brooks, due to the small number of allocations that would be affected but more importantly, it was considered that updated modelling of these brooks would not provide us with information that the Level 2 SFRA does not already consider. The Level 2 SFRA has indicated that this site is at low risk from fluvial (river) flooding but at moderate risk from all other sources including pluvial (surface water) flooding. Northfield Brook runs along the northern boundary of this site and based on the EA's updated RoFSW (Risk of Flooding from Surface Water) maps, it identified that that the surface water flood risk is concentrated around the southern section of the Kassam Stadium. Any site-specific SFRA undertaken will have to use the most up-to-date mapping

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
			available at the time, so this will also be flagged in any assessment and can be used to ensure that development, particularly more vulnerable development, is directed away from areas on the site that are at risk from any source of flooding. The Council therefore considers that the models for the watercourses such as Boundary Brook, Littlemore Brook and Northfield Brook do not need to be updated and that the risk has been identified in the Level 2 SFRA, especially from the surface water flood mapping, and that more detail will be available once a site-specific FRA is undertaken.
Policy SPCW7: Nuffield sites Land South of Frideswide Square (624)	Site is 0.26ha with 59 dwellings (0.98ha) proposed for the site. Currently this would far exceed the site for available space. 100% of the site falls within the design flood event levels, so there would be no room available for floodplain compensation as currently proposed. There is no confirmation of this approach being undertaken so far.	Need to ensure the number of dwellings proposed can be built on the existing footprint of the site because flood storage compensation for any increase in built footprint is not feasible on this site. The site is currently contrary to paragraph 181 of the NPPF which states that within the site, the most vulnerable development is located in areas of lowest flood risk, additionally that development must not increase flood risk elsewhere.	This parcel is one of three parcels (including the Island Site off Hythe Bridge Street, and Worcester Street Car Park and Public House) that forms this site allocation. The minimum allocation of 59 dwellings is across ALL three parcels, not just this one. The policy requires a site-specific FRA to be undertaken and states that *"a sequential approach should be taken to locating development on the site. More vulnerable development will be expected to be located away from the areas at highest risk of flooding."* This applies to all three parcels and the Level 2 SFRA clearly shows that a large part of the Worcester Street Car Park lies in Flood Zone 1, even accounting for climate change and that the area of highest surface water flood risk mirrors a similar area. In addition, most of the Island Site is already covered in built development, therefore there is an opportunity to significantly improve flood mitigation here as part of any redevelopment.

3226

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
Policy SPS12: Oxford Science Park	Would need confirmation regarding future use of land and modelling before we can confirm suitability. Available space on site for proposed allocation, but further information needed.	Must confirm the appropriate 'complementary uses' of the land and provide updated modelling to confirm the site's suitability for additional development to overcome the soundness issues. This is to ensure the development is located in appropriate areas and provides the necessary flood storage compensation if required, in line with paragraphs 170 and 174 of the NPPF which steers development away from high flood risk areas.	This is predominantly an employment site, where an element of residential would be supported and other complementary uses would be considered on their merits. The policy wording does state that *"parts of the site are Flood Zone 3b, mainly along the Brook, and a sequential approach should be taken to locating development on the site, with more vulnerable uses away from the highest flood risk."* Therefore, if an application were to come in for a more vulnerable use, such as housing, the FRA would have to demonstrate that it was sited in the lowest possible areas of flood risk within the site. This is possible as a large proportion of the site lies within Flood Zone 1 (accounting for climate change) and/ or not within an area of high surface water flood risk. It is not possible to provide more information on what will come forward as the policy provides some flexibility towards this, whilst being clear that housing would not be the predominant use on site.
Policy SPCW3: Canalside Land, Jericho	Concerned that there is insufficient space to deliver the proposed allocation without increasing flood risk elsewhere. We appreciate that the Level 2 SFRA discusses the use of the sequential approach to avoid placing new developments within FZ3b and ideally into areas of lowest flood risk in the first instance. However, 0.3 out of 0.5ha of the site is proposed to be used for development (dwellings). During the 1%+41% CC AEP design flood event, 78.3% of the site is inundated (0.39ha). In turn, there would be an	To address the soundness issues with this policy, the area of the site proposed for redevelopment would need to be reduced significantly to make suitable compensation possible. Alternatively, the existing footprint used. In this case the space available for flood storage compensation for any increase in footprint is limited and we have soundness concerns for the site's deliverability in accordance with paragraph 181 of the NPPF. Additionally, the correct climate change allowance of 41% should be	The Council acknowledges that this is a historical site where flood risk issues have become more complex over time, but also note that permission for a mixed-use scheme including residential development only recently lapsed in early 2026. This is a brownfield site where a large proportion of the site lies within Flood Zone 2, with the highest levels of flood risk more limited towards the western boundary of the site, adjacent to the Oxford canal. The site allocation does not contain a minimum number of dwellings and there is an opportunity to significantly improve the management of flood risk both on and off- site if the site is redeveloped. Much of the existing site

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	extremely limited amount of space available outside of the design flood event (0.11ha) to propose suitable level for level compensation that would mitigate the floodplain storage space lost by the new development. As it appears very unlikely to offer enough space on site to offer suitable compensation, we would object to this at the planning stage. It is unlikely that this allocation as proposed would be deliverable. The Level 2 SFRA mentions using a freeboard of 300mm above the 26% CC AEP event (57.6m AOD) to mitigate flood risk to the development, however, we would have expected the 41% CC AEP design flood event level of 57.75m AOD to have been used instead (so a minimum proposed level of 58.05m AOD). There are concerns regarding access and egress to the site. The site and surrounding area are heavily inundated during the design flood events, and safe access to and from the site appears to be limited.	used to assess the finished floor levels and a minimum 300mm freeboard imposed in addition to the design flood level (using 41% climate change allowance).	area comprises impermeable hardstanding and there is potential to provide suitable compensation on greenfield land immediately adjacent to the site. The Level 2 SFRA has identified the best route of egress which is predominantly flood free apart from a 50m section along Combe Road. The hazard rating along Combe Road is low as in this section, a maximum depth and velocity of 0.12m and 0.01 m/s is reached. In addition, the site falls within the River Thames catchment which is dominated by chalk. It has a has relatively slow river response times to storm events, being groundwater, rather than surface water dominated. This increases the time taken for inundation and for adequate warnings and preparation in an extreme flood event. The Level 2 SFRA assessed both scenarios using 26% and 41% climate change allowances to provide more detail on fluvial flooding. A site-specific FRA will provide more detail about the preferred finished floor levels at the time a planning application is submitted using the latest information. In conclusion, the Council believes that this site should still be allocated and that there will be opportunities to overcome the issues that have been raised by the EA. The allocation can make a positive contribution to Oxford's housing need, which already cannot be fully met within the city.
Policy SPS4: Cowley Marsh Depot	Concerned that the development proposed would be inappropriate at	The first soundness issue to be addressed is to clarify that there will	The Level 2 SFRA considers that the main access to the site does lie within the design flood event and

3228

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	the current scale proposed. The site is 1.7ha, with an estimated 83 dwellings (1.4ha) proposed within it. 30% of the site (0.51ha) falls within FZ3b, and in turn it is very likely that some of this area would be required to be used for the dwellings at the current scales proposed. More vulnerable development within FZ3b would be considered inappropriate. There also appears to be very limited space on site outside of the design flood event which covers 58% (0.99ha) to undertake an appropriate amount of level for level compensation that would be required for any new developments within this area. In turn there would be a significant amount of floodplain capacity lost at this site and would be considered to increase flood risk to the surrounding areas. Due to the scale of proposed development and lack of space for suitable compensation, we would likely object to this at the planning stage. Updated modelling is required as the current assessment is based of New National Model (NNM) informed data, which is suitable for high level use but not for site-specific FRAs where the risk is so high.	be no development within FZ3b, as this would be contrary to the NPPF and Table 2 of the PPG. The second soundness issue to be addressed is the area on site suitable for level for level flood storage compensation. The lack of space for compensation could result in an increase in flood risk elsewhere, contrary to paragraph 181 of the NPPF. The third soundness issue to be addressed is for the correct modelling to be used. The final soundness issue to be addressed is to ensure safe access and egress from the site. Paragraph 181 (part e) of the NPPF states that safe access and egress routes must be included for development within Flood Zones 2 and 3. Overall, it is likely that the development proposed will need to be heavily reduced in scale.	that a site-specific FRA would need to further investigate this and likely utilise updated modelling results for Boundary Brook. **We are happy to propose a modification to include an additional requirement (within the second sentence of bullet f) under the open space, nature and flood risk section of the policy as follows:** *f) A sequential approach must be taken to locating development on the site. A site-specific Flood Risk Assessment (FRA) will be required which should be informed by updated modelling of Boundary Brook. The FRA should also investigate the flood risk the presence of the nearby culvert presents and identify…."* In respect of the other points raised, we have reconsidered the site capacity and believe that the same capacity can still be achieved with a slightly higher density on the site (70 dph instead of the previously assumed 60dph) which is still appropriate for that particular location and not located within FZ3b. The open space required on the site can be located within the areas of highest flood risk and there are opportunities on green space immediately to the rear of the site to provide flood storage compensation.

3229

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	Concerns regarding access and egress to the site, as the surrounding area is heavily inundated.		
Policy SPCW7: Nuffield sites 70 - Island Site, Park End Street/Hythe Bridge Street	Concerns that there will not be sufficient space available on this site for development and not increase flood risk elsewhere. This site is 0.65ha in size and currently 59 dwellings (0.98ha) are proposed to be built. The Level 2 SFRA discusses a primary focus on re-developing the existing footprint to avoid the need for additional buildings. However, it appears unlikely considering the 59 new dwellings plus other mixed uses, would fall within the redevelopment area and we have no confirmation this would be the case. 85% (0.55ha) of the site falls within the design flood event extents, so it is very likely that level for level compensation will be required for any new developments within this area. Considering the scale of the works proposed, it appears difficult to accommodate all the development without the loss of floodplain storage area. In turn this development as proposed is likely to cause an increase in flood risk to the surrounding areas.	This development as proposed is likely to cause an increase in flood risk to the surrounding areas, contrary to paragraph 181 of the NPPF. We would need to see the scale reduced significantly and for compensation to be undertaken/possible before this site before we would consider it deliverable and compliant with national policy.	As per our earlier response in respect of Land South of Frideswide Square, we would like to reiterate that the Island Site is one of three parcels that forms this site allocation. The minimum allocation of 59 dwellings is across ALL three parcels, not just this one. The policy requires a site-specific FRA to be undertaken and states that *"a sequential approach should be taken to locating development on the site. More vulnerable development will be expected to be located away from the areas at highest risk of flooding."* This applies to all three parcels and the Level 2 SFRA clearly shows that a large part of the Worcester Street Car Park lies in Flood Zone 1, even accounting for climate change and that the area of highest surface water flood risk mirrors a similar area. In addition, most of this parcel, the Island Site is already covered in built development, therefore there is an opportunity to significantly improve flood mitigation here as part of any redevelopment.
Policy SPCW8: Osney Mead	The site is 17.8ha and considering the high portion of the site that falls	Confirmation on the total scale of the development at this stage is required	This allocation is a large and complex brownfield site involving several parties who have been

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	within FZ3b (6.94ha or 39%), we have concerns that any proposed development within this area would be considered inappropriate (both less and more vulnerable). We appreciate that a sequential approach will be undertaken and that no development other than open space and/or water compatible development will be undertaken within FZ3b. Confirmation on the total scale of the development at this stage is required. Currently we have only been given the number of dwellings that are proposed within the site at 247 (4.12ha) while the development also includes mixed less vulnerable uses as well (scale n/a). 86% of the site lies within the design flood event (15.31ha). The proposed dwellings alone would exceed the remaining space available outside of this extent (4.12ha) and therefore there does not appear to be suitable space available on site to provide level for level compensation at the scale required to avoid a reduction in flood storage capacity. This would be considered to increase flood risk to the surrounding areas and therefore unacceptable at the	to confirm that no development will be within FZ3b and that development can be appropriately compensated for. As currently proposed, unless there is a significant reduction in the scale of development at this site, we will object to the proposal at the planning stage in line with paragraph 181 of the NPPF.	working together to bring it forward for redevelopment. Detailed design work has been undertaken and reviewed but it is an ongoing process. It is therefore not feasible at this stage to provide more detail in respect of the scale of the total development proposed. At present, this site is predominantly in employment use and suffers significantly from a lack of comprehensive flood risk mitigation across the whole site. Its redevelopment provides an opportunity to significantly improve the management of flood risk both on and off-site. The allocation policy states It is expected that "*a sequential approach should be taken to locating development on the site. More vulnerable development will be expected to be located away from the areas at highest risk of flooding, with car parks and other ancillary uses in higher risk areas where possible."* Any housing on site will therefore be sited in the areas of lowest flood risk on the site and given that it is likely to be student accommodation, this can be built at a higher density than perhaps the EA is anticipating. The Level 2 SFRA highlights that development is already present on the site and that during the 1.0% AEP + 26% climate change design event, the existing development is estimated to displace 10,200 m^3 cubed of water. Therefore, depending on its design, it's feasible that the redevelopment of the site could displace less than this amount of water, together with other opportunities to improve flood risk on site. The SFRA acknowledges that significant ground raising may be required due

3231

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	planning stage (also does not consider the mixed use less vulnerable developments in that scale). Ground level raising may also be required to raise the development above the required design flood event finished floor level, which would again increase the amount of compensation required. Therefore, unless there is a significant reduction in the scale of development at this site, as currently proposed, we will object to the proposal at the planning stage.		to the amount of the site that would lie below the appropriate floor level but that would need to be assessed through as site-specific FRA once the quantum and design of the scheme is known.
Policy SPCW2: Botley Road Sites around Cripley Road including River Hotel and Westgate Hotel 613 - Sites adjacent to Osney Bridge	For the sites adjacent to Osney Bridge, concerned that there will not be enough space on site to deliver the proposed allocation without increasing flood risk elsewhere. The sites combined are 0.3ha in size and 20 dwellings are proposed across them at 0.33ha of space. Currently this would only leave 0.01ha available for flood waters/ compensation. The scale of development would therefore exceed the available space available on site outside of the design flood event and would not have suitable space to undertake appropriate level for level compensation to avoid increasing the flood risk to the	As currently proposed, it appears unlikely that this site will have suitable space to carry out the required amount of level for level compensation in accordance with paragraph 181 of the NPPF. Require confirmation of most of the site being re-developed with appropriate FFLs, and in turn a reduction in the scale of development with the design flood event for this site to be acceptable at the planning stage.	This site allocation comprises of the following three parcels: *3-15 Botley Road and The River Hotel – 0.34ha *Land to the South of Cripley Place – 0.31ha *Westgate Hotel, Botley Road and 3 - 7 Mill Street – 0.19ha with a total area of 0.84ha. All three parcels are predominantly brownfield sites that contain a mix of more vulnerable and less vulnerable uses. The site allocation policy states that *"a sequential approach should be taken to locating development on the site, with more vulnerable uses away from the highest flood risk."* Therefore, it is expected that the more vulnerable use of the mixed-use development such as the dwellings will be located in the areas of lowest flood risk within the allocation area. It is also considered that there is adequate room on site for the development to not

3232

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	surrounding areas. Re-developments and new developments would also need to accommodate an appropriate Finished Floor Level (FFL) above the design flood event. The Level 2 SFRA discusses that most of the proposed development would be undertaken using the re-development of existing development and any new developments would be located within the areas of lowest flood risk. However, no final confirmation on how this will be split. 48% (0.16ha) of the site falls within the design flood event (of which is using the 26% when the 41% should be used for more vulnerable developments).		increase flood risk on and off-site, especially due to the amount of existing development. Apart from The River Hotel parcel (located to the north of Botley Road), the other sites predominantly lie within Flood Zone 2, (even accounting for climate change), so we believe the 26% climate change allowances were the correct ones to use for the Level 2 SFRA. A site-specific FRA can assess this and the floor levels in more detail once a planning application is submitted and the layout of the scheme is known.
SFRA	**Level 1 and 2 Strategic Flood Risk Assessment (SFRA):** In the most recent versions of the Level 1 and 2 SFRAs we note that no updates were made following our previous comments made on 5 December 2025. Therefore, many of our previous comments regarding the sites and general SFRA wording remains. We have therefore reattached these comments and have also provided further information for each SFRA below: **Level 1 SFRA:**		**Level 1 and 2 Strategic Flood Risk Assessment (SFRA)** - Updates were made to both the Level 1 and Level 2 SFRA reports after the 5th December. In particular, appendices 2 and 3 were added to the Level 2 SFRA report which addresses some of the previous comments made in earlier discussions prior to and after the Regulation 18 consultation. **Flood Zone 3b** - Appendix 3 of the Level 2 SFRA contains the data review for the Flood Map for Planning and Modelling Data Review. This also provides further explanation on the 3.3% AEP event and how it has been applied. For two of the site allocations – SPS1 (474 Cowley Road) and SPS4 (Cowley Marsh Depot), we have

3233

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	We do still have some concerns with the Level 1 SFRA as currently proposed. We have provided additional comments for the sections we are concerned with and have also provided additional wording that could be used to inform and overcome our concerns. **Flood Zone 3b** – the definition provided has been updated to use the 3.3% AEP event from any detailed modelling, and then when this is not possible to undertake applicant modelling. We consider this acceptable. However, we previously requested that additional wording in the form of a definition is added to include a definition to cover the scenario where local detailed modelling is not available and needs to be undertaken. A precautionary approach would then need to be applied by using the FZ3 from the Flood Map for Planning (FmFP) as a proxy for FZ3b where local modelling is not available/feasible. **Cumulative impacts** – there is no section currently proposed to cover cumulative impacts apart from a brief coverage, within section 4.1. We were looking for a section to cover the potential cumulative impact of developments within Oxford City, particularly as many of		proposed a Main Modification seeking an amendment to ensure that any site-specific FRA submitted for those two sites is informed by updated modelling of Boundary Brook. (These two proposed modifications have been set out earlier in this Appendix.) **For all other site allocations (and relevant planning applications submitted), we are happy to propose a modification by adding a final bullet to the 'Policy Implementation' section of the supporting text of Policy G7 (Flood Risk and Flood Risk Assessments (FRAs)) as follows:** - *Site-specific Flood Risk Assessments should apply Flood Zone 3 from the Flood map for Planning as a proxy for Flood Zone 3b to ensure a precautionary approach is taken where local detailed modelling is not available or feasible.* **Cumulative impacts -** We think there is enough detail in both the relevant site allocation policies as well as Policy G7 as it is clear that flood risk cannot be increased either on or off site. **However, for clarity, we are happy to propose a modification to explicitly refer to level for level compensation at the end of the last sub-bullet of bullet three of the 'policy implementation' section of the supporting text as follows:** - *Thirdly, once avoidance has been fully explored, mitigation measures will be required, these could include:*

3234

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	the proposed sites include works within the floodplain. This can include potential mitigation methods and approaches to offering floodplain compensation. We would emphasise the need for level for level compensation, as the main method of flood storage compensation. Cumulative impacts of voids could lead to significant losses in floodplain storage across Oxford City should these voids become blocked/silted and from impedance of flows from the supporting structures. **Site Specific FRA – Guidance** – There is lack of information to support applicants when completing their FRAs. The following bullet points cover more specific sections of concern. **Freeboards/Finished Floor Levels (FFLs)** – there is no section proposed to cover the requirements for FFLs/Freeboards within proposed developments. We are looking for minimum recommendations of suitable finished floor levels against the appropriate design flood event levels, i.e. expectation of 600mm above design flood event, with 300mm as the minimum recommendation. This is important		o *flood resistance measures (dry-proofing) e.g. barriers or raised floor levels to keep water out at times of flood;* o *flood resilience measures (wet-proofing) - using materials that can quickly dry out, helping buildings to be habitable again quickly;* o *Sustainable Drainage Systems (SuDS) to reduce surface water run off by slowing and storing water (see Policy G8); and* o *flood compensation measures e.g. creating new flood storage to mitigate any loss of storage through development (i.e. level for level should be the main method of flood storage compensation).* We consider that it is preferential for the modification to be made in the Local Plan rather than the SFRA. In terms of voids, national policy already does not support this approach, and we have not referred to it in the Policy G7 or the supporting text – no further action required. **Site Specific FRA – Guidance** – whilst we agree that there is a lack of guidance in the SFRA, this does repeat national guidance, therefore it will already be considered when applicants submit an FRA – no further action required. **Freeboards/Finished Floor Levels (FFLs)** – point noted but we feel this is already sufficiently covered in Policy G7 which was informed by national guidance – no further action required. **Floodplain compensation/storage – voids** – point noted but national policy and guidance doesn't

3235

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	to ensure future developments are safe for their lifetime. **Floodplain compensation/storage – voids** – there are no sections covering floodplain compensation/storage requirements and the appropriate methods of providing floodplain compensation. We would recommend providing some wording regarding avoiding building new developments within the floodplain, but where this is not possible, floodplain compensation is undertaken to ensure available flood storage capacity is not lost. The compensation method should be level for level. Voids should be avoided, with additional wording to confirm this. Floodplain compensation/storage is another section that should be included as it will have a direct impact on the safety of not just the development but the surrounding area in terms of flood risk. We understand that this is site dependent, and in turn acknowledge the wording being shaped around the scale of the development. However, it is important to have a section which discusses this and should be included as it will be directly checked in consultation reviews.		support the creation of voids for flood storage, therefore we feel that this point is already covered, even if it is not explicitly stated in the Level 1 SFRA – no further action required. **Safe access/egress and emergency planning** – we consider that the individual Level 2 SFRAs have assessed the best route for each allocation, including the potential hazard of the route but that this would be explored in more detail in a site-specific FRA, particularly where updated modelling is required – no further action required. The Council agrees that some of these points raised in respect of the Level 1 SFRA could have been included as best practice. However, they do all already need to be considered as they form either part of the relevant national policy or guidance and to amend the SFRA would not fundamentally change any of the site allocations. If necessary, some of these details could be included in a Technical Advice Note (TAN) to assist applicants.

3236

Policy/section	Summary of EA Reg 19 comment	EA Reg 19 suggested change	Oxford City Council response/proposed modification
	Safe access/egress and emergency planning – there is no direct section covering the issue of safe access and egress to and from proposed development sites and the information that should be used to support it. We would recommend in turn including a section that covers not just emergency planning (4.4) and flood warnings (2.4) but an additional section that includes the use of hazard ratings for sites where detailed modelling is available (or proxy alternates) to best inform the most suitable access/egress routes to and from the site. This again is another SFRA section that is covered during review and would be expected to at least be considered.		

3237

Sport England

Policy/ Para	Sport England summarised comments	Sport England suggested changes	Council response
C3	Policy C3 cannot be applied effectively to built sports facilities. A separate policy for protecting (and encouraging the improvement and new types of) these type facilities is needed. The emerging NPPF reaffirms that there is a separation between the policies for sport and recreational facilities and other types of community facilities. The policy also states that the location of new facilities must be 'easily accessible by walking, cycling and public transport' and 'not result in an unacceptable environmental impact or loss of amenity.' Often sports and community facilities are built on or adjacent to playing fields which will not be in town centre locations and may not be easily accessible by public transport. Also, strongly object to the paragraph in draft policy C3 [criteria d and e] that allows for the loss of sports facilities if there are other facilities in the area that can be enhanced or the proposal is for an alternative community facility for which there is greater need or demand. This does not comply with paragraph	A separate policy for indoor and built sports facilities should be developed in order to protect these from loss and support improvements to them. The new draft policy should be consistent with national planning policy. See paragraph 104 of the NPPF and our comments on G1.	Whilst Policy G1 protects outdoor spaces in many instances within the wider GI network (see also our responses under G1), Policy C3 addresses Use Class F.2, which covers a few types of indoor sports use that we can have some control over. It is acknowledged that it does not apply to the majority of indoor sports uses because most indoor sports facilities are within Use Class E. This is a very wide-ranging use class, but planning cannot distinguish between the various uses within it or control changes between uses within that Use Class. This limits what more the Local Plan, or an additional policy, can do unfortunately In relation to comments on criterion c, the purpose of this is to help ensure that replacement provision is not located in areas with less accessibility than that being lost. The Local Plan seeks to promote active and sustainable transport in the first instance. Whilst we accept that facilities can often be located away from town centre locations, we feel it is important to seek to secure

3238

	104 of the NPPF as sports facilities could be lost that are needed by the community for sport to other uses such as education and health. National planning policy does not permit this and it could allow more school and health buildings to be built on community sports sites.		accessible replacement provision that does not rely on private vehicle ownership this in the first instance and do not propose to amend this. In relation to criteria d and e, this covers a broader range of uses than just sports provision. When it comes to impacts on sports facilities, however, the NPPF tests would still apply as you point out, and it is not necessary to repeat these verbatim in the policy. It is also unlikely applicants are going to be able to demonstrate these are surplus to requirements in most incidences, thus we do not currently think there is justification for further modifying them.
C4	The policy must be clear that any playing fields on education sites (use class F1) are protected from development otherwise the policy is not compliant with national policy.	School playing fields should be protected from development and assessed against the relevant tests set out in national policy and Policy G1.	School playing fields are generally protected by the standards that schools need to follow, separate to the planning system. Loss of playing fields needs permission from the Secretary of State. Yet there may be cases where there is a surplus of space and use of part of a playing field for an alternative use could be justified and is beneficial. It is not considered necessary for the Local Plan to intervene in this.
G1	Whilst acknowledging that amendments have been made, it has still not been positively prepared. The	The policy and the plan do not plan any new sport and recreation facilities or identify new	*Comments in relation to finalising the PPS are addressed separately further down the table.*

3239

	Council has not completed its Playing Pitch Strategy and therefore does not have the evidence to inform Policy G1 and ensure that the requirements of NPPF para 103 are met, including that ancillary facilities, such as changing rooms, artificial pitches and sports courts and MUGAs on playing field sites are also protected from development. The Council is continuing to include playing field sites within the site allocations that Sports England continue to object to, rather than protecting them through policy as both the adopted and emerging NPPF require. Playing fields should be protected from development, change of use etc. Development should only be accepted where the tests in paragraph 104 of the NPPF are met. For example, we object to the words 'whether alternative sports might better suit the local community'. The policy provides no explanation of how this might be assessed.	opportunities to meet needs. Concerned that the plan is being brought forward without appropriate evidence being presented for review so we conclude that the Plan has not been positively prepared with regard to sports facilities. The Council should also update its strategy for built sports provision and there is no policy adequately protecting indoor sports facilities. The Council will need to complete the PPS to ensure that all playing fields and their ancillary facilities are correctly identified and these will then need to be recorded. The plan should include supportive policies for new sport facility developments e.g. - *Proposals for sport and recreation facilities will be encouraged and supported in line with other policies in the Plan and Sport England guidance.* - *The Council will seek to protect, maintain and where possible enhance existing open space, sport and recreation, play facilities and land including playing fields to ensure their*	In relation to protection of playing fields – the Council has sought to protect a significant number of playing fields through its protected green infrastructure network. These are typically protected as supporting GI (G1B spaces) as a minimum – which assigns the protections of the NPPF for open space as you set out, but also requires reprovision of any lost green infrastructure. It should be noted that, whilst the GI network is primarily made up of 'green' spaces, it can include other open spaces linked with recreation, including artificial surfaces. We would be happy to propose a modification to the glossary under the definition for green infrastructure to make this clearer in terms. **Modification to be proposed to the glossary as follows:** *Green Infrastructure: A network of spaces and features including parks, playing fields, woodland, allotments, private gardens, green roofs and walls, street trees. The term also incorporates 'blue infrastructure' such as streams, ponds, canals, and the rivers and can include other types of open space that contribute to*

3240

		continued contribution to the health and well-being of the community.' Proposals affecting sports facilities should be considered against the tests set out in the NPPF para 104.	*health and leisure, such as artificial pitches and play spaces for children/young people.* Additionally, we agree that some extra wording setting out our support for new sport and recreation facilities could be helpful and are happy to put forward a mod, though we would suggest a better place for it would be as part of Policy S1. **We propose the following mod to add an additional criterion under policy S1 as follows:** *To help achieve this it will aim to ensure development is located to: ...* *j) Support the health and wellbeing of local communities such as by delivering new sports and recreation facilities or enhancing existing provision.* The protection-related wording of your second proposed bullet is not considered necessary, as this is already carried out through Policy G1, C3 and the NPPF.
Evidence - PPS	More evidence is required for sport to consider the needs of the existing and new residents for existing, expanded and new sports facilities in Oxford. Tennis and padel should be included.	The Playing Pitch Strategy should be completed to inform the Local Plan and Infrastructure Delivery Plan. Tennis and padel also need to be covered within the Council's evidence base.	As soon as the Local Plan 2040 was withdrawn and we began working on the new Local Plan 2045, we identified the need for an updated Playing Pitch Strategy and have worked hard to commence this work as quickly as possible. Earlier

3241

	It is welcome that the Council is progressing a playing pitch strategy (although this should have been commissioned much earlier to properly inform the plan). However, strongly object to the inclusion of the KKP interim report Oxford City Playing Pitch Strategy Local Plan Interim report within the evidence base. This includes premature conclusions, (some of which Sports England disputes), as the data has not been checked and signed off by the national governing bodies, nor has the demand from all of the sports been assessed – e.g. Stage B has not yet been completed. Sport England is concerned that the emerging Playing Pitch Strategy is being used to justify a loss of playing field rather than providing an independent assessment of the need for playing pitches within Oxford City in line with Sport England's recommended methodology and the NPPF. The Playing Pitch Strategy is also required to inform the Council's Infrastructure Delivery Plan.	The interim report should not be relied upon as its findings are premature.	commissioning was not possible, and speeding up the work is equally impractical due to the seasonal nature of some survey work, as Sports England will be aware. The scope of the PPS work, including sports covered, was agreed with the steering group as part of the Stage A meeting, and Sport England were a part of this. As discussed in our catch up, it is not considered reasonable to have delayed preparation of the Local Plan entirely whilst waiting for the PPS to be finalised, we have however tried to ensure the preparation of the two documents are as aligned as possible and that emerging analysis is informing our approach as it emerges. The rationale for publishing the interim note was to share as much as we could to inform the Reg 19 consultation, whilst acknowledging that this picture can still change as the PPS continues to develop. **We intend to ensure the PPS informs future updates of the IDP (which is a live document) in due course.** In relation to concerns about the new PPS being used to justify losses in pitches, we strongly disagree. The city

3242

			is indeed under immense pressure to explore all areas of land for potential housing, including pitches, as is well documented. However, whilst securing more housing is an important objective of the Local Plan, another is to protect a network of green spaces for health and wellbeing, and this includes pitches. We see an updated PPS as not only an important tool in helping to identify current/future needs for pitches and associated facilities, but also in helping to justify the balance we are trying to strike in maximising land for housing whilst also protecting spaces like pitches through policies such as G1.
G2	The information that has been collected for the Council's new Playing Pitch Strategy (and as highlighted in its existing PPS) identify that there is a need to improve existing playing field and other sports facilities in Oxford City. For example, there are playing fields with in Oxford City that have no toilet facilities on site which can discourage women and girls from taking part in sport. Whilst Policy G2 mentions many other types of open space, it is silent on seeking to improve playing fields and	Please also see comments on Policy G1. The Council needs to complete its evidence base for sports facilities and update its policies accordingly, responding to the recommendations flowing from that work. As a minimum the policy text should include text to explain that the Council will protect, maintain and where possible enhance existing open space, sport and recreation, play facilities and land including playing fields to ensure their continued contribution to the health and well-being of the community.	Criteria b) of the policy sets out that one of the benefits applicants should seek to secure is *Health and wellbeing, including facilitating recreation and play for people of all age groups and abilities...* This would include improving formal and informal pitches as well as providing new or enhanced facilities that are intrinsic to the function of those spaces. **We are happy to propose a mod to make this clearer as follows:** *b) Health and wellbeing, including facilitating recreation and play for*

3243

	other sports facilities which does not accord with NPPF para 103.		*people of all age groups and abilities, particularly children and teenagers (e.g. play equipment, pitches and associated facilities);* It is acknowledged that the policy is covering a broad range of considerations. Our intention would be to bring forward a Technical Advice Note (TAN) that supports this policy. The Green Infrastructure and Biodiversity TAN could expand on various criteria in the policy such as this one and lay out various examples of how applicants might fulfil it including some additional focus on ways to improve associated sports facilities. As highlighted elsewhere in this table, we also intend to update our IDP as and when the PPS is finalised. This is where we can identify specific improvements to facilities that are needed of the plan period, based on the PPS findings. We can also continue to keep this updated where needs change in future as the IDP is intended to act as a live document.

3244

G6	Concerned about what this policy means for any playing fields or other sports facilities within these designated areas. It is not unusual for grass pitches to be located next to or within local wildlife sites (or similar designations). With reference to the playing pitch strategy and other documents that record playing fields and recreation facilities, the Council must carefully balance any new policies that could prevent Oxford's residents from enjoying the outdoors and keeping physically active. Often natural areas can benefit humans and nature so encouraging policies that support but must be given appropriate consideration in an urban environment.	Amendments are required to Policy G1 (please see other comments) or this policy to confirm that the City Council will support proposals for sport/rec, and that any proposals for new pavilions or improvements to existing sports facilities will be supported e.g. *Proposals for sport and recreation facilities will be encouraged and supported in line with other policies in the Plan and Sport England guidance'*	The comments here seem to be looking for a level of certainty in decision making which we are unable to be explicit about at plan-making stage. Particular issues in relation to biodiversity impacts or health and wellbeing, and which one weighs heavier than the other, will be different with every site and location. Policy G6 sets out a hierarchy of protection which aligns with the level of designation that different sites have in the city. Some of these protections exist regardless of the local plan (e.g. national designations), some are assigned through the Local Plan because sites have locally significant biodiversity value. Our proposed mod set out earlier to add to Policy S1 would introduce more explicit support for sport and recreation facilities, which we believe would respond to your concern here, however.
R8	Where new sports facilities are proposed this may mean additional traffic. But there is no explanation of 'unacceptable transport impact' is.	The plan does not acknowledge the benefits lighting can bring to active travel and outdoor sports facilities, or considers agent of change. This could be rectified with additional wording to acknowledge the benefits	The requirements of the policy are of relevance both to protecting the amenity of the new development (the occupiers) as well as the amenity of existing development nearby (communities and neighbours). It

3245

	Concerned that the policy applies to applications for sports lighting, yet the policy gives no acknowledgement of the benefits of outdoor sports lighting or street lighting to providing health communities. The policy strongly favours 'the amenity of communities, occupiers, neighbours and the natural environment' (see bullet point a). Not clear how the policy will be applied. The same applies for new outdoor sports facilities. The policy offers no context for applicants as to when a noise assessment will be needed, so it may be required for very minor planning applications. Sport England's planning guidance on 'Artificial Grass Pitches Acoustics Planning Implications may be helpful, though it needs updating. The agent of change principle also works the other way, for example, housing development should not be located near existing 'noisy' uses such as existing MUGAs, artificial pitch facilities or playing fields with sports lighting. There does not appear to be a policy that takes into account the themes of paragraph 200 of the NPPF so it is recommended that this is also developed.	that these types of proposals can bring to the health and wellbeing of the community.	does not favour one over the other and we have tried to make this clearer in response to your previous comments on the Reg 18 through the policy context bullets before the policy box. Therefore, the example you flag, about a proposal for housing being located near noisy uses, would engage these considerations, in the same way that a proposal for a 'noisy' use near an existing residential area would also. The supporting text also references the Agent of Change. The definition of what is an unacceptable transport impact will vary depending on the local context including what is proposed, what the current transport network is like etc. It is not possible to define what will be considered unacceptable at the plan-making stage. This is also true of requirements for noise assessment. **We would be happy to look at whether there is a way to incorporate some additional helpful guidance/considerations to assist applicants into the design checklist that sits in Appendix 1.1 if you think this would be helpful, though this will still need to be high-level.**

3246

			In relation to lighting, the policy needs to set out the broad considerations that may need to be factored into decisions when it comes to impacts on amenity. Considerations about appropriate levels of lighting for the needs of occupiers and the impact on neighbours are an important element of the design process regardless of what use is proposed. Of course, the needs of the proposed use are an important factor in helping to determine what is an appropriate level of lighting and we accept that a sports facility could have quite different needs than other uses. **Again, we would suggest that a good place to expand on considerations for lighting would be the design checklist in Appendix 1.1 of the Plan and we would be happy to propose something if you think this would be helpful?**
NEOAOF	Sport England objects to this policy text and advises amendments should be made to acknowledge the sport and recreation facilities within this area and their importance to the local community for sport. Sport England is concerned that the policy does not acknowledge that sports facilities are within the Area of Focus and does not include any requirements to protect	The policy should be updated to seek improvements to Five Mile Drive Recreation Ground, the Oxford University Press sports ground and other playing fields and sports facilities within this area of focus. For example, Five Mile Drive is an important site for youth football with improvements need to the quality of the pitches. In its current form Sport	In practice, each AoF covers a broad range of uses and we have not sought to acknowledge all of these exhaustively. Other overarching policies protect pitches (e.g. policy G1) and community facilities (e.g. policy C3). Relevant allocations within the AoF also set out their own specific requirements where proposals could impact a sports site.

3247

	them or improve them. Planning permission should not be granted for development that will affect existing sport and recreation facilities (including playing fields). The NPPF (paragraph 103 and 104) expects local authorities to set policies within their development plan that will protect and improve their open spaces, sport and recreation facilities regardless of ownership.	England considers the policy is not consistent with national policy and it is not justified or effective with regard to sport and recreation.	The AoF policy does not need to repeat these requirements as the Local Plan needs to be read as a whole. We don't agree that particular improvements to sites and facilities need to be identified through the AoF policies to be consistent with national policy. The need for enhancements to existing facilities is likely to change and evolve over the lifetime of the Local Plan. It will also need to be informed by the PPS (and future iterations). We would suggest the better place for identifying these needs is through the Infrastructure Delivery Plan – which is intended to be kept as a live document. As the PPS continues to emerge, we will ensure the IDP is updated to reflect any key improvements to facilities that are identified as part of future updates.
SPN4 OUP Sports Ground	This site is actively used by local community sports teams, including Oxford Cricket Club. It has a cricket pitch and 2 adult pitches. These community clubs will be displaced if this site is allocated for development. The Council has not completed its Playing Pitch Strategy and it cannot be concluded that this site is surplus to requirements, please see also Sport	This site allocation should be removed from the Plan.	This site has been allocated since the Sites and Housing Plan, and is a current allocation in the OLP36. For the new Local Plan, as part of our capacity assessment informing the minimum housing number for the allocation, we have assumed the retention of cricket onsite. The allocation then sets out clearly that:

3248

	England's comments on the evidence base. The proposal to develop a playing field is not consistent with national policy (paragraph 104) or the policies in the draft NPPF and is not justified.		*a) The capacity of the sports provision must be retained unless it can be demonstrated that it is surplus (which is not the case at the current time) or the loss of the sports provision can be otherwise compensated for (Policy G1).* We feel that the allocation as worded sets out an appropriate framework of requirements to ensure any potential impact arising from development on the sports uses of the site are fully considered and mitigated.
CBLAOF	This site area includes a number of sport and recreation facilities that are important to the local community. For example, the playing fields at Sandy Lane are still used by the local community (in spite of its allocation in the past Local Plan). The NPPF (paragraph 103 and 104) expects local authorities to set policies within their development plan that will protect and improve their open spaces, sport and recreation facilities regardless of ownership. Sport England considers the policy is not consistent with national policy and it is not justified or effective with regard to sport and recreation.	The policy should be updated to seek improvements to the playing fields and sports facilities within this area. The policy mentions seeking new public open space but instead the Council should consider identifying within the plan those existing open spaces. Infrastructure contributions should be collected to improve these existing community spaces.	Please see our response above, against your comments on NEOAOF, which is of relevance to these comments also. In relation to Sandy Lane specifically, the allocation sets out expectations for how impacts on the existing pitches should be approached and these do not need to be repeated in the broader AoF.
SPS4 Cowley Marsh Depot	Sport England requests amendments are made to this policy to protect use of adjacent community playing field.	The following wording is suggested; 'The adjacent site is used for sport including cricket. The proposed	The adjacent green space to the north is protected as core green infrastructure under Policy G1

3249

		development (including proposals for connection to the adjacent recreation ground) support the continued use of the site for sport. Appropriate mitigation (such as ball stop fencing) should be provided to ensure use of the site for cricket can continue.'	already, which affords a high-level of protection to the green space. Policy discusses the adjacent cowley marsh rec ground but **further mods could be made to criterion b as follows**: *b) Public open space will be required onsite **(Policy G2)**. The location of the public open space should take into account opportunities to provide connections and enhancements to the adjoining Cowley Marsh Recreation Ground including supporting the existing sports uses accommodated there.* **And an additional criterion under 'additional details' as follows**: *XX) The site is adjacent to a playing field used for sports including cricket and as such design proposals should give consideration to the need for appropriate ball stop fencing at the boundary of the site to mitigate risks of ball strikes so that those uses can continue to be supported there.*
SPS6	Planning permission for this site has been submitted (25/00813/OUT). This site could provide an extension to the	Pending the outcome of the Playing Pitch Strategy, it is recommended that the opportunity for this site to	This site is currently allocated in the OLP36. On submission of that plan, the policy required compensation for

Former Iffley Mead Playing Field	adjacent community playing field to meet the increase in demand from that site.	provide community playing field is reconsidered. For example an area of the site could provide for an extension to the adjacent community playing fields.	loss of the pitch. At hearings, Oxfordshire County Council as landowner argued that this was not justified as the site had not been needed as a playing field for some time. The City Council and Sport England attempted to justify the requirement, but the Inspector agreed with the county that the site was surplus and that requirement had to be removed as a mod. There is no relevant change in circumstance. However, new public open space is required, and it is noted that this could be an extension of the adjacent playing field.
SPS7 Kassam Stadium	The Kassam stadium has an existing playing field and this will need to be addressed in the policy. The stadium cannot be redeveloped until a new stadium for Oxford United has been provided. Whilst the replacement Oxford United ground has been permitted in Cherwell, it will take time for a new ground to be constructed. It is therefore important that the Council retains its existing local plan requirement to protect the stadium (Policy SP14);	The following text could be added to the policy; 'Development of the Kassam Stadium football pitch, stands and access shall not be commenced until the replacement stadium (insert Cherwell planning application reference) has been implemented and made available foruse.' Otherwise the football team could have a period of years without a stadium, other examples where this has occurred include Truro City (returning to their ground this year after a period of 3-4 years) and Newport FC on the Isle of Wight	Policy SPS7 currently says: *The existing stadium provides a number of functions currently, and replacement of the local, community role of these facilities will be expected.* It is not considered justified to go as far as your suggested amendment, however, we would be happy to propose a mod that adds a requirement for the applicant to show consideration for how existing users of the stadium could be accommodated should there be a delay in a new venue coming forward if this would help to alleviate your concerns, for example:

3251

		(whose plans for a new ground have stalled).	*XX) Proposals should include details setting out how existing users of the stadium site could be accommodated elsewhere if alternative facilities are not yet available.*
SPE7 Lincoln College Sports Ground (And SPE4 Jesus College Sports Area)	This site is adjacent to Jesus College sports area (SPE4). Sport England also objects to the inclusion of these playing fields within the Local Plan, particularly as the Council has not completed its Playing Pitch Strategy (see also comments on evidence base under G1) and the PPS document currently does not cover tennis.	The policy is not consistent with national planning policy, positively prepared or justified (NPPF paragraph 103) and should be removed from the plan.	As we mentioned in our catch up, the Policy assumes replacement on site, and currently says: *c) There is potential to consolidate and share sports provision with the neighbouring Jesus College Sports Area (Policy SPE4). If sports provision can be shared and still provide the same capacity to meet playing pitch needs, then a larger area of the site(s) could be developed. Contributions could be made to improving a local facility such that its capacity increase replaces what is lost on the site(s).* We feel this appropriately responds to your concerns.
SPE16 Thornhill Park	This site is adjacent to Risinghurst Cricket Club and there is potential for ball strike from cricket balls used on the playing field. The proposals also appear to support the loss of the pavilion used by the sports clubs on adjacent playing field (d) https://risinghurstandsandhills-pc.gov.uk/wp-content/uploads/2025/09/RPFCIO-Annual-Report-and-Accounts-24-25.pdf	Criteria (d) should be amended to; 'Proposals for development must include a replacement pavilion for the adjacent playing fields' The policy should also include; 'Consideration be given to any issues resulting from ball strike from the adjacent cricket ground if ball stop fencing is required along the site boundary this should form part of the planning application'.	The site does contain a disused playing field although Sports England comments on the previous planning application for the site (21/01695/FUL) were that the site is not considered to form part of, or constitute a playing field as defined by the Town and County Planning Order and had not raised an objection.

3252

	It is not clear from aerial images but the proposal site may be existing playing field and its existing use should be reviewed through work on the Council's playing pitch strategy. Sport England objects to criteria (d) as this has not been evidenced by the Council and is not compliant with paragraphs 103 or 104 of the NPPF.	Currently Sport England considers the policy does not meet the soundness tests.	When the previous permission was granted for the site, a contribution towards a replacement pavilion for the pitch to the south of the site was agreed in order to satisfy requirements of LP2036 policy G5 on outdoor sports which protects the open space at present. Criteria d of the LP2045 policy carries forward this requirement and we are therefore unclear on the justification for the alternative wording you propose, but are happy to discuss further. In relation to your other points, we suggest an additional criterion could be added under the 'additional requirements' to respond to your point about ball strikes. **Additional criterion to be proposed through a mod as follows:** *n) The site is adjacent to a playing field used for cricket and as such design proposals should give consideration to the need for appropriate ball stop fencing at the boundary of the site to mitigate risks of ball strikes so that those uses can continue to be supported there.*
SPE18 Warneford Hospital	This site contains a former playing field that may be needed by the community. A planning application is in progress on the site. The national planning policy	As new housing is being proposed within this location, the Council should work with the applicant to retain the playing field within the	LP2036 established (and LP2045 carries forward) that: *loss of the former sports facility is considered justified only due to the need for and*

3253

	framework is clear that playing fields should be protected from loss.	wider site to provide a sports facility that will benefit the wider community.	*benefits of new hospital development.* Nevertheless, the open space is identified as supporting GI through Policy G1 and that policy sets out requirements for mitigating losses more generally which would come into effect.
SPCW10 Oxpens	Sport England objects to this policy as whilst it refers to granting permission for leisure development it does not reference retaining the ice rink and should be amended to make it clear in the text that the ice rink will be retained. Sport England is further concerned about the impact of this development on the ice rink. This is a regionally important facility and parking may therefore be required to support events. The viability of the ice rink as a venue may also be adversely impacted by development adjacent to it (for example, construction). The impact could potentially be so significant that these considerations should be explored and evidence presented before such a large allocation is made. As currently drafted, Sport England considers that the policy does not adequately protect the ice rink facility. The proposed wording as written also appears to suggest that development on the existing open space in this	The following text should be added with the following heading – 'Existing sports facilities': 'Development proposals for the site should ensure that the ice rink is retained within the site and information should be provided by the applicant to demonstrate that the operation of the ice rink will not be adversely affected by the proposals.' The existing open space that will be retained should be shown on the proposals map if it is affected by the development.	The ice rink is an in use facility and other policies protect this use (although there is no justification for protecting it as it is and on the site). The other policies could be cross-referenced if that would be helpful, although this is not considered necessary. **Proposed mod would be to add an additional criterion as follows:** *XX) The ice rink is a regionally important facility and proposals which could impact upon this venue will need to accord with the requirements of* ***Policy C3.***

3254

	location is acceptable. Policy is contrary to NPPF paragraphs 103 and 104 and therefore fails the relevant soundness test and the lack of evidence provided in relation to indoor sports facilities within the plan means that it has not been positively prepared or adequately justified.		
General planning for sports infrastructure	The Council has not undertaken any new work looking at existing (or the need for new) indoor sports facilities in Oxford. This work is needed to inform the Council's infrastructure delivery plan and decisions about the community infrastructure levy in Oxford. There will also be needs arising from city residents for indoor sports facilities and to support policies such as SPCW10: Oxpens. Iti is recommended that with the increase in residents expected in Oxford, this important work is started without delay.		As touched upon earlier, the Local Plan has limited control over many types of indoor sports facilities, however, where we can, the approach is to seek to protect what we have through policies such as Policy C3. Where a particular allocation could impact a use – the impact has been considered and wording incorporated into the allocation to deal with any reprovision requirements. Whilst there is not a specific new study focused solely on indoor sports, the evidence base includes the Oxford Retail, Leisure and Town Centre Needs Study and this did look at a high level at commercial leisure needs including indoor sport.
SPE2 East Oxford Bowls Club	It is proposed to develop this former bowls club site. The Council has not provided evidence within the local plan to demonstrate that the bowls site is no longer needed for bowls but also to investigate whether alternative sport	Evidence should be provided that considers whether the bowls provision is still needed in this area and if not then what alternative sports and recreation provision could be accommodated on this site.	This site is considered to meet the test of being surplus to requirements. The bowls club folded over 20 years ago due to lack of interest and there as been no use of the site since. The pavilion it once housed burnt down It

3255

	and recreation could be accommodated on the site.		has been entirely closed off and unused during this time.
SPS3 Bertie Place	This recreation ground has amenity and play value for the local community, it's place on the site allocations list should be reviewed. The planning application 23/00988/FUL remains undecided.	In light of the community representation on planning application 23/00988/FUL, the Council may wish to consider whether to deallocate this site.	Policy sets out that a public playground and MUGA should be re-provided on site at Bertie Place. The open space is also designated as supporting GI through policy G1 and as such any proposal that results in loss/harm will need to be mitigated in line with that policy's requirements.
SPS15 Sandy Lane Recreation Ground	Sport England objects to the allocation of these community playing fields which are actively used by local sports teams (principally football) and Sport England has had a number of residents contact us raising concerns about the allocation of this site who weren't aware of its allocation in the previous Local Plan. Sport England welcomes the inclusion of criteria (a) and (c) but these are insufficient to secure the protection of these playing fields from development which provide for community sport in the city in addition to recreation use. If the Council means that the playing field will be moved and replaced elsewhere then the policy should state this and an alternative site should be allocated within this Local Plan. Sport England does not support criteria (b). The current site functions as one whole with the ability to move pitch layouts within it and support multiple	Sport England recommends that the site is removed as an allocation in the Local Plan unless a new allocation can be introduced that shows where the community playing field can be replaced in Oxford.	The policy has been drafted on the assumption that pitches are to be relocated, however, the requirements are worded in a way that allows both situations to be addressed (pitches are relocated or retained) and sets out what is expected (specifically that reprovision of pitch capacity on or offsite will be needed where existing pitches are lost). An allocation for new pitches is not considered necessary to ensure that these requirements are carried out, the policy includes the requirements which will need to be demonstrated by the applicant through the application. On your point about retaining quantity and the concerns about the wording of criterion b, we have generally worked to date on the understanding that in our constrained context, the key requirement in looking for any

3256

	teams from the same club (different age groups) on site together. Whilst Sport England would support quality improvements to the existing playing field this would not be sufficient compensation for the loss to community football. Improving quality without retaining the same quantity means that there is less space for play to take place on. It is preferable to have a large site playing field rather than a single pitch site as these are expensive to maintain. Page 25+ of our Playing Fields Policy contains more information about what to consider when seeking to replace playing field.		reprovision is about ensuring existing capacity of a site's pitches is not lost, rather than a like for like replacement in terms of size/number of pitches. That is the rationale behind the criterion setting out that there could be opportunities to enhance quality to improve capacity where the overall quantity of pitches is consolidated (though it does not state this is the only way the pitches could be addressed). Of course, the applicant would need to explore this further through the planning application process and demonstrate that their approach to reprovision sufficiently mitigates any losses. We're happy to discuss this further however if Sports England disagree with this stance.

3257

Oxfordshire County Council

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
S1	General comment highlighting the County's expectation to agree developer contributions in respect of development proposed in the plan.	Policy S3 sets out more information about developer contributions.	No change proposed
S3	Policy should be strengthened to ensure proportionate contributions can be adequately secured for the delivery of the line, stations and placemaking elements that unlock new development.	Policy S3 already includes a bespoke reference to the Cowley Branch Line and how contributions are expected to be sought. The County's proposed amendment is in a different part of the policy, which relates to infrastructure contributions more widely. The County Council Representation does not accurately reflect the existing text in policy S3. The correct articulation of the County Council Reg. 19 representation is set out below (the underlined text below shows the full extent of the Couty's proposed amendment). *Planning permission will be granted subject to the provision of (or appropriate funding towards) the required level of infrastructure to support the development through an appropriate financial contribution prior to, or in conjunction with new development.* This additional text would appear to seek financial contributions only from new development. It is unnecessary and potentially confusing to include this additional text as the policy is already clear that the granting of planning permission is subject to the	Add the following additional text to the second sentence of the second bullet point of the supporting text of Policy S3 under the "Policy context" heading. *...Developer contributions and the delivery of infrastructure will be sought through the most appropriate mechanism available, ~~using the Community Infrastructure Levy (CIL) and planning obligations (e.g., Section 106 (S106) or S278 agreements).~~ including through the use of pooled contributions and/or forward-funding, where appropriate.* Then insert the following text and create a new (3rd) bullet point within the "Policy context" section. *Developer contributions are currently secured in Oxford using the Community Infrastructure Levy*

3258

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		provision of the required infrastructure (or an appropriate financial contribution) to support the level of development proposed. However, the City Council acknowledges that S106 contributions can be secured through a variety of mechanisms and as such is proposing an amendment to the supporting text to clarify that position.	*(CIL) and planning obligations (e.g., Section 106 (S106) or S278 agreements).*
S4	The County Council does not support this policy as it is not in line with the County Council's policies on low carbon and the LTCP objectives in relation to reducing car trips. The County Council would like to see developers encouraged to make the best use of land, creating sustainable buildings at good densities and not using land wastefully on car parking. Although discussions with the City Council have taken place, it is the County Council's view that this policy undermines County policies and this matter should be left to specific negotiations between developers and Councils on a case-by-case basis.	Policy S4 introduces a cascade for housing sites and for employment generating uses. The County Council response is only concerned with the housing viability cascade. Policy S4 is included in the Plan to ensure that (in accordance with the NPPF, paragraph 35), the policies for contributions do not undermine the deliverability of the Plan. The supporting text for Policy S4 sets out that that it provides the basis for negotiations relating to viability, the City Council's priorities for contributions, and the evidential expectations required to demonstrate the viability of an individual scheme. The cascade approaches provide a standardised approach to ensuring development viability. The supporting text of the policy highlights that the viability assessment prepared for the Local Plan 2045 identifies a suite of policies likely to have the greatest potential impacts on site viability.	No change proposed

3259

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		As such, the cascade approaches would seek to reduce a scheme's offsetting payments in the first instance, followed by, in the case of residential schemes, the low car element of the policy (low car development is defined in Appendix 7.6 as follows: *0.2 car parking spaces per 20 units should be provided on site for working drivers, service and delivery vehicles, pooled cars/car clubs and visitor spaces.* As such, where viability issues exist for residential schemes, Policy S4 provides an approach to firstly increase allocated spaces, and then increasing the number of spaces incrementally up to the maximum parking standards (as set out in Appendix 7.6). The Local Plan Viability Assessment Update (BNP Paribas, December 2025) provides evidence to support the viability cascade involving car parking as set out in this Policy.	
H1	<u>General comment</u> The County Council has an interest in understanding how the city is meeting its housing need (and any unmet housing need arising) as any new strategic housing allocations are likely to have transport, education and other implications for the County's statutory functions.	<u>General comment</u> General comment noted.	<u>General comment</u> No action required

3260

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	General comment: Infrastructure costs The County Council is particularly concerned about growth leading to increased vehicle trips (counter to LTCP targets) and whether the cost of necessary infrastructure to serve housing growth can be met as it may be unaffordable to developers and government and therefore lead to a reduction in quality of life or services. General comment; location of sites for Oxford's unmet housing need The County Council's position is that any site allocations should be well-located in relation to the people they are intended to accommodate. Oxford's unmet housing need should be met on sites close to Oxford, either with good existing walking cycling and public transport links or the ability to provide such links funded from development. Density/ site capacities The County Council is also of the view that the housing capacity of the city needs to be carefully reviewed. This is to ensure the maximum level of housing provision within the city boundary. In particular, areas such as Cowley	General comment: Infrastructure costs General comment re: infrastructure costs noted. General comment; location of sites for Oxford's unmet housing need General comment re: location of sites to meet Oxford's unmet housing need noted. Density/ site capacities The City Council has done extensive work looking to maximise densities of residential developments and the residential component of mixed-use developments within the city. Site allocation policies contain minimum numbers of dwellings, all of which have been confirmed with landowners that they are deliverable. We are confident that our density assumptions are realistic and deliverable. The Background Papers BGP 015 Developing Site Allocations and BGP 016 Efficient Use of Land set out the approach to identifying sites	General comment: Infrastructure costs No action required General comment; location of sites for Oxford's unmet housing need No action required Densities/ site capacities No change proposed

3261

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	Templars Square (Cowley Centre) and Headington where environmental and heritage constraints are less than in other areas. Policies HD1 and HD2 and relevant Areas of Focus must be reviewed to ensure maximum densities can be achieved. <u>Housing at employment sites</u> A number of proposed site allocations (e.g., SPS12 Oxford Science Park) recognise a level of housing could be acceptable however no capacity study or indicative minimum has been undertaken. This comment is repeated later in the representation. <u>Kassam Stadium assumed density</u> Another site allocation, where the minimum density is questioned is the Policy SPS11 Overflow Car Park at Kassam Stadium (allocated for a minimum of 100 homes). The County questions the assumed density of 80dph and suggests that, given the urban nature of the site's location should be applied, in order to maximise the use of the site under Policy HD2,	involving residential development and provide the methodology for identifying appropriate density typologies and for identifying site capacities. <u>Housing on Employment sites</u> See response below for Policy SPS12/E1 <u>Kassam Stadium assumed density</u> Background Paper 016 Efficient Use of Land sets out the methodology for identifying appropriate density typologies and for identifying site capacities. We are confident in our density typologies and the evidence that has underpinned them. It would not be appropriate to simply apply an alternative density assumption to this site.	<u>Housing on employment sites</u> See response below for SPS12/E1 <u>Kassam Stadium assumed density</u> No change proposed

3262

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	thereby reducing the amount of housing need in Oxford.		
H2	Oxford's need for affordable housing is well-known and it is disappointing that the requirement is proposed to be reduced to 40%. Various sites adjoining the city (in neighbouring district council areas) have a requirement for 50% affordable housing, which aligned with the plan requirement at the time they were allocated (i.e., extant Local Plan 2036). Would the current requirement for 50% affordable housing on sites in neighbouring districts be undermined by having a lower (i.e., 40%) affordable housing requirement in Oxford?	The Local Plan viability study provides evidence for affordable housing and other proposed policy requirements.	No changes proposed
H4	The County Council welcomes the recognition of the need for employer-linked affordable housing for key workers.	General comment noted.	No change proposed
E1	(Strategic Planning) Policy E1 indicates the circumstances in which new employment uses will be favourably considered. It also includes a part which provides for residential development on employment sites subject to criteria. The criteria include matters of particular interest to the	General comment noted	No change proposed

3263

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	County Council such as being well connected to public transport and active travel opportunities.		
E1	(OCC Estates and Property) Policy objective (para.1) Paragraph 1 and definitions The County Council supports the objective of the first paragraph of the policy. Employment site categories (paragraph 3/ supporting text) The County Council considers the phrase *Existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class)* to be lengthy and consequently, impractical and confusing. The County Council suggest re-wording this phrase both within the policy and supporting text as follows: *Existing Non-Key employment sites* Paragraph 3 The County Council supports the aims of paragraph 3, however has proposed some minor modifications to improve clarity and overall application of this paragraph in line with the above suggested changes.	Policy objective (para.1) Support noted. Employment site categories (paragraph 3/ supporting text) The City Council does not support this proposed modification. The suggested phrase 'Non-Key employment sites" could be open to a very wide interpretation. For instance, it could be interpreted that the phrase 'non-key employment site included any other site in the city that was not a Key Employment site. This would mean that any site in the city could be a potentially suitable location for new employment generating uses. While the phrase is lengthy, the City Council considers that it is one which benefits from being precisely worded so as not to create unnecessary loopholes which could be used to deliver increased floorspace for employment-generating uses, when the identified needs for these uses can be met through the current policy approach.	Policy objective (para.1) No change proposed Employment site categories (paragraph 3/ supporting text) Suggest the following modification to Policy E1 (paragraph 3 Amend 3rd paragraph of the policy as follows: ~~Outside these locations:~~ On existing employment sites or those in lawful uses for the proposed employment use class, which are outside the city or district centres, and which are not designated as Key Employment sites, proposals for regeneration and/or additional floorspace with employment-generating uses will only be supported if: a) ~~Existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class),~~

3264

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		The City Council has put forward a modification, to highlight that the phrase should be read as a singularity, and to make it less confusing for the County Council.	~~can only be regenerated with employment generating uses if~~ better and more intensive use is made of the site through the redevelopment, up-grading or re-use of existing under-used buildings; and b) ~~Proposals for additional floorspace for employment generating uses on existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class), outside the city and district centres must follow~~ the sequential approach is followed for new town centre uses as set out in Policy C1. No change proposed for supporting text
E1	(OCC Property) Paragraph 2: *Planning permission will be granted...* The County Council has previously expressed their concerns about the use of the phrase "*planning permission will be granted*", as it could confuse the decision-maker by giving them the impression that proposals should be permitted without taking into account	Paragraph 2: *Planning permission will be granted...* The City Council notes that it is only within Policy E1 where the County Council has expressed concern about the use of the phrase "*planning permission will be granted*", causing potential confusion to decision-makers. The City Council does not accept any of the proposed changes from the County Council, which we believe	Paragraph 2 No change proposed

3265

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	instances where material considerations could exist that substantially outweigh the benefits of permitting such a use. The word 'support' is considered more appropriate as it would provide a greater level of flexibility. The County Council proposes that all references to "Planning permission will be granted" within Policy E1 (only) be replaced with general supportive/non-supportive statements to be applied to development proposals.	would serve to undermine the plan's focus to support housing delivery. The suite of proposed changes by the County Council to Policy E1 serve collectively to weaken the plan's Employment Strategy by enabling employment-generating uses to come forward across a wider range of sites than the Reg. 19 version of the policy allows for. Whether or not the plan supports or does not support a planning application does not give a clear steer to planning officers in making their report recommendations or elected members when determining planning applications. The County Council's proposed changes could enable employment-generating uses to proliferate across the city.	
E1c	Paragraph 4 The County Council considers the fourth paragraph to be confusing due to repeating matters addressed in earlier paragraphs and therefore does not add value to this policy. Accordingly, it is recommended to be deleted. Proposed amendment to paragraph 4 is as follows: ~~Planning permission will not be granted for~~ **Development** proposals for employment generating uses outside	Paragraph 4 ***Original Reg. 19 Plan policy text*** *Planning permission will not be granted for proposals for employment generating uses outside the following locations:* *c) Key Employment Sites;* *d) the city and district centres;* *e) existing employment sites not designated as Key Employment sites (or those in lawful use for the proposed employment use class).*	Paragraph 4 No change proposed

3266

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	the following locations **will not be supported**: c) Key Employment Sites; d) the city and district centres; e) existing **non-Key** employment sites ~~not designated as Key Employment sites (or those in lawful use for the proposed employment use class)~~.		
E1d	Paragraph 5 The clarification given in the fifth paragraph is also not considered appropriate for inclusion in the policy text, as the classification of employment sites is provided in the supporting text. The County Council suggests retaining the first sentence and deleting the rest of the text. *Proposed modification* *Key Employment Sites are listed in Appendix 3.1 and are shown on the Policies Map.* ~~*All other employment sites are existing employment sites not designated as Key Employment Sites.*~~	Paragraph 5 ***Original text as follows:*** *Key Employment Sites are listed in Appendix 3.1 and are shown on the Policies Map. All other employment sites are existing employment sites not designated as Key Employment Sites.* It is unclear which test of soundness this proposed modification is based on as the representation in relation to this paragraph suggests that this distinction is covered in the supporting text. While the supporting text frames the categorisation of the two types of employment sites, it does not provide the level of detailed differentiation provided within the policy itself. The City Council does not accept the proposed modification as the policy text provides clear articulation about the specific types of employment sites.	Paragraph 5 No change proposed
	Paragraph 6 The sixth paragraph highlights that development proposals for the	Paragraph 6 *Original policy text*	Paragraph 6 No change proposed

3267

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	conversion of Key Employment sites to residential will only be permitted when the employment use can be maintained and the number of jobs be retained. The County Council raised significant concerns about this part of the draft policy in the Regulation 18 stage, as it was considered too restrictive and lacking the necessary proportionality to ensure there is consistency in decision-making. The Council's position to not permit any loss of jobs is acknowledged and respected. Nonetheless, it is essential to consider adding a degree of proportionality to ensure that this draft policy is effective, and decision-makers make consistent decisions. As previously suggested, a "percentage" instead of number of jobs is considered a more appropriate metric as different economic circumstances and needs apply to small, medium and large businesses. Given the aspiration of the Council to retain most, if not all of the jobs, a high percentage could be justifiable and help with unlocking Key Employment Sites for development	***Loss of employment floorspace and the use of employment sites to support housing delivery*** *Planning permission will not be granted for development that results in a net loss of employment floorspace on Key Employment Sites unless it can be fully justified where:* *f) The employment use can be maintained; and* *g) The number of jobs in employment generating uses is retained.* The County Council has not suggested a precise percentage of jobs that should be retained or lost should there be a corresponding loss of employment floorspace at Key Employment Sites. Neither was a precise percentage expressed previously. The City Council's position is that the number of jobs in employment generating uses should be retained.	

3268

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	proposals that deliver similar levels of employment. Proposed modifications: ***Loss of employment floorspace and the use of employment sites to support housing delivery*** *Planning permission will not be granted for d**D**evelopment **proposals** that results in a net loss of employment floorspace on Key Employment Sites **will not be permitted/supported** unless it can be fully justified where:* *f) The employment use can be maintained; and* *g) ~~The number~~ **At least x%** of jobs in employment generating uses is retained.*		
	Paragraph 7 The seventh paragraph refers to objectives c) and f) which are currently absent from the draft policy. Accordingly, this will need to be corrected. This paragraph echoes the requirements set out in paragraph eight. It is therefore considered to result in unnecessary duplication. Therefore, it is	Paragraph 7 Original text of paragraph 7 is as follows: *Planning permission will be granted for the loss of any existing employment sites not designated as Key Employment Sites to other uses, including proposals for housing which, will be supported (subject to a satisfactory assessment of objectives c) to f)).* The City Council agrees that there was a drafting error in this paragraph and proposes a minor modification to overcome it.	Paragraph 7 Update Paragraph 7 to reflect the correct objectives (i.e., objectives h) to m)) Planning permission will be granted for the loss of any existing employment sites not designated as Key Employment Sites to other uses, including proposals for housing which, will be supported (subject to a satisfactory

3269

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	recommended that it is merged with paragraph eight. County Council suggest deleting paragraph 7 in its entirety. ~~Planning permission will be granted for the loss of any existing employment sites not designated as Key Employment Sites to other uses, including proposals for housing which, will be supported (subject to a satisfactory assessment of objectives c) to f)).~~	This paragraph does not unnecessarily duplicate paragraph eight of the policy. Instead, it sets out that planning permission will be granted for the loss of any existing *employment sites not designated as Key Employment Sites* to other uses, while proposals for housing will be supported subject to a satisfactory assessment of specified objectives (see proposed minor modification to correctly reference these objectives).	assessment of objectives h) to m)~~c) to f)~~).
	Paragraph 8 Paragraph eight sets out the material planning considerations that will be taken into account when considering development proposals for the redevelopment of Key and non-Key employment sites. OCC recommends a number of modifications to improve clarity, usability of each objective, and make the decision-making test more transparent. **Development P**~~p~~roposals involving housing **and other uses** at Key Employment Sites and on existing **non-Key** ~~employment sites not designated as Key Employment Sites~~ **will only be permitted where they can**	Paragraph 8 Original text of Paragraph 8 sets out that: *Proposals involving housing at Key Employment Sites and on existing employment sites not designated as Key Employment Sites will be assessed by a balanced judgement which will take into account the following objectives:* *h) Meet as much housing need as possible in sustainable locations....* Objectives h) to m) of the policy are specifically tailored towards supporting housing delivery and ensuring the continued operation of existing businesses and employment sites. The objectives have been specifically drafted to ensure that, where housing is proposed across the city's employment site network,	Paragraph 8 No change proposed

3270

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	demonstrate that they have regard to ~~will be assessed by a balanced judgement which will take into account~~ the following objectives: h) Meet as much housing need as possible in sustainable locations...	this results in an appropriate living environment for future residents. The phrase "will be assessed by a balanced judgement..." was introduced by the Local Plan 2036, Planning Inspector to ensure that consideration was given to a suite of objectives which would deliver a suitable environment for any future residents. The LP2045 has retained this extant phrasing to ensure that proposals involving housing across the city's existing employment site network are considered consistently. Paragraphs 6-8 of Policy E1 work together to establish the conditions where employment floorspace can be lost on Key Employment Sites (para.6), and on existing *employment sites not designated as Key Employment Sites* (para.7). The policy finally sets out a suite of objectives specifically drafted for proposals involving housing that come forward on sites within the city's exiting employment site network. The policy, as originally drafted, establishes the principle that the complete loss of existing *employment sites not designated as Key Employment Sites* is allowed, while proposals for housing are supported (subject to a satisfactory assessment of specified objectives). The County Council's proposed changes would effectively make it harder to redevelop existing	

3271

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		employment sites not designated as Key Employment Sites for housing (and also introduce unnecessary requirements for other uses proposed on these sites). For Key Employment sites, the County Council's proposals would serve to support "other uses" on Key Employment Sites while making it harder to bring forward "proposals involving housing" at Key Employment Sites. The County Council's proposal to delete paragraph seven and merge its contents with paragraph eight would result in 'in principle' support for "other uses" on Key Employment Sites.	
G1	(Landscape and Nature Recovery – Biodiversity / Landscape) <u>G1 layer extends beyond city boundary</u> The G1 layer appears to cover some designated wildlife sites both inside and outside the city boundary but not all, for example Littlemore Brook Oxford City Wildlife Site which connects multiple areas currently designated within the green infrastructure network.	<u>G1 layer extends beyond city boundary</u> The example given is of an "Oxford City Wildlife Site" - Littlemore Brook. This is an Oxford City Council local ecological designation. As such, its extent does not extend beyond the City Council administrative boundary – in fact no G6 Oxford City Wildlife Site extends beyond the city's administrative boundary. There are two instances where the G1 layer extends beyond the City Council's administrative boundary. In both instances, part of the site is located within the city council boundary, and part of the site is located within a neighbouring district council's administrative boundary. This is a mapping error. The Core GI network	<u>G1 layer extends beyond city boundary</u> Amend policies map to accurately reflect the extent of coverage of sites in the city.

3272

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		policies only apply in Oxford city and not outside our administrative boundary.	
	Inclusion of all designated wildlife sites in Core GI network The inclusion of all designated wildlife sites in the core area of the green infrastructure network is encouraged to help ensure the aims of this policy are realised.	Inclusion of all designated wildlife sites in Core GI network The Core GI network includes sites which meet specific GI criteria (as set out in the GI Study). All sites in the city were assessed and included within the Core GI network when sites met specific criteria. Designated sites (i.e., the SAC, SSSIs, LWSs, OCWSs, LNRs) are included within the core GI network.	Inclusion of all designated wildlife sites in Core GI network No change proposed
	Connecting GI features A focus on connecting green infrastructure features not currently mapped would be welcomed.	Connecting GI features Supporting text to Policy G2 makes reference to strengthening linkages between areas to enhance network connectivity.	Connecting GI features No change proposed
	Mitigation hierarchy Reference to the mitigation hierarchy within this policy regarding G1B and G1C areas would be welcomed where avoidance and mitigation are currently mentioned.	Mitigation hierarchy Policy G6 (supporting text) sets out that the mitigation hierarchy needs to be followed when considering Policy G6 ecological designations.	Mitigation hierarchy No change proposed
	Trees and woodland With regards to impacts on trees and woodland, ecological enhancement of existing trees and woodland should also be considered for inclusion. It may also be important to refer to onsite	Trees and woodland Ecological enhancements are covered in Policy G2.	Trees and woodland No change proposed

3273

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	compensation in advance or as soon as possible after the impact being preferable in this section through following the mitigation hierarchy including temporal and spatial considerations. Canopy cover (net gain) Inclusion of the requirement for a net gain in canopy cover, over a no net loss, is encouraged where it can be demonstrated that this is ecologically appropriate. Right tree in the right place Urban settings can present challenges for new planting with the right species and habitat choice and ongoing management are crucial. The principle of the right habitat in the right place should be applied and reflected in this policy.	Canopy cover (net gain) The policy approach broadly aligns with national policy. We have sought a broader green surface cover target through the UGF policy (G3) which could include new trees but also other types of greening depending on what is best for the site. Right tree in the right place The principle of the right tree in the right place is already included with the Council's Urban Forest Strategy. Policy G2 sets out maintenance and management requirements.	Canopy cover (net gain) No change proposed Right tree in the right place No change proposed
G1	(OCC Property) General comment The County Council manages a large number of school playing fields and other sites used for recreational purposes, which are currently designated as "Supporting Green and Blue spaces" under this draft policy.	General comment General comment noted.	General comment No change proposed

3274

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	G1b requirements The County Council is concerned that the requirement for the reprovision of similar or higher quality green infrastructure on site can restrict the County Council from discharging its public protection and education duty by improving and expanding recreational spaces and school fields. Paragraph 104 of the NPPF already sets out the circumstances when development proposals for the loss of existing open space, sports and recreational buildings and land will be considered acceptable. These criteria are also currently being proposed to be retained in the draft version of the NPPF, which is currently in consultation. Therefore, and for the sake of enabling sustainable development and adopting a Local Plan that is in general compliance with national policy, the following minor modification is recommended to ensure the tests of soundness are met. Proposed modification:	G1b requirements Original text of Policy G1 – G1B: Supporting spaces, states: *Planning permission will only be granted for proposals which affect spaces identified a part of the Supporting GI Network where any harm/loss is mitigated by ensuring sufficient reprovision, ideally onsite, and to the same standard or higher. These spaces are designated G1B on the policies map.* It is important to replace GI/ BI that needs to be re-provided close to where it was lost – the wording guides applicants towards this in the first instance but does not force them to do this. We are not proposing to change this part of the policy.	G1b requirements No change proposed

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	"G1B: Supporting spaces Planning permission will only be granted for proposals which affect spaces identified a part of the Supporting GI Network where any harm/loss is mitigated by ensuring sufficient reprovision, ~~ideally onsite,~~ and to the same standard or higher. These spaces are designated G1B on the policies map."		
G2	<u>LNRS Reference</u> Reference to the use of Oxfordshire's Local Nature Recovery Strategy (LNRS) to inform design and decisions is considered key for this policy. <u>Maintenance and management</u> The maintenance and management arrangements of this policy also link to biodiversity net gain. It may be useful to clarify that the management period of 5 years would be a minimum with longer encouraged and if BNG is being delivered a minimum of 30 years would be required. <u>Right tree in the right place</u> Urban settings can present challenges for new planting with the right species and habitat choice and ongoing	<u>LNRS Reference</u> Policy G4 Delivering Mandatory Net Gains in Biodiversity and its supporting text refer to the LNRS. <u>Maintenance and management</u> BNG is discussed in detail in Policy G4. <u>Right tree in the right place</u> The principle of the right tree in the right place is already included with the Council's Urban Forest Strategy.	<u>LNRS reference</u> No change proposed <u>Maintenance and management</u> No change proposed <u>Right tree in right place</u> No change proposed

3276

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	management are crucial. The principle of the right habitat / tree in the right place should be applied and reflected in this policy. <u>General comment</u> Larger growing trees that are suitable for the local conditions should be chosen where space permits as these have the potential to offer greater environmental and visual benefits than small trees in the long-term. <u>Additional percentage targets</u> Targets such as percentage canopy cover and a net increase in green infrastructure should be considered for inclusion and would be welcomed.	<u>General comment</u> General comment noted <u>Additional percentage targets</u> Consideration was given to the inclusion of a canopy cover target within the plan. The difficulty for Oxford is that tree canopy cover is not evenly spread across the city, with some areas benefitting from more cover than others. Setting a percentage canopy cover target for a city with such diverse tree canopy cover would mean that some areas exceeded the target and others fell below it. Given the diverse range of existing tree canopy cover it was considered more appropriate to ensure no net loss of trees. A policy target for a net increase in GI (in addition to the mandatory 10% net gain in biodiversity and the 10% public open space requirements for qualifying residential developments), was not considered	<u>General comment</u> No change proposed <u>Additional percentage targets</u> No change proposed

3277

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		appropriate for Oxford given its constrained nature and the inherent difficulties	
G3	General comment The County Council believes that the Urban Greening Factor (UGF) has potential to deliver benefits in delivering green infrastructure across the city, and we welcome its inclusion in the policy framework. UGF mandatory for all developments We note however that the policy is that the UGF is not mandatory for all developments. However, we wonder whether greatest green infrastructure benefits could be achieved if it was mandatory for all developments, especially if located in areas of existing GI deficiency unless particular circumstances and reasoning are demonstrated. Definition of major development Major development should be defined.	General comment General comment noted UGF mandatory for all developments It is a requirement for larger developments and encouraged on smaller ones. Larger (major) developments can offer the most scope for a wide variety of improvements. Definition of major development Major development is defined in the NPPF (10 or more homes or 1,000 sqm non-residential floorspace). It was also included in the Glossary of the Reg. 19 version of the Oxford Local Plan 2045 following comments from Oxfordshire County Council made at the Reg. 18 consultation stage.	General comment No change proposed UGF mandatory for all developments No change proposed Definition of major development No change proposed

3278

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	UGF for non-major developments The application of UGF for non-major developments should be considered here as a way for smaller developments to demonstrate a measurable net gain in biodiversity to satisfy NPPF and local planning policy when they are exempt from the mandatory BNG requirement.	UGF for non-major developments Policy G3 already encourages smaller (minors/ householders) to apply the UGF.	UGF for non-major developments No change proposed
G4	20% BNG A minimum BNG requirement of 20% is encouraged in line with other emerging local plans in Oxfordshire. Alternative prioritisation It is recommended that prioritisation should be given to delivering ecological habitat enhancement and creation within the LNRS before delivering habitat enhancement and creation outside of the LNRS within Oxford. Encouragement should also be given to using offsite offset areas outside of the LNRS mapped areas within Oxfordshire as a step before considering sites further afield. It should be clarified that	20% BNG Oxford is a small, constrained city with limited opportunities to deliver the mandatory 10% net gains. Increasing the requirement to 20% would not result in more biodiversity net gain in the city but rather an increase in delivery outside of Oxford. District Plans already propose 20% BNG across Oxfordshire. It is important that BNG impacts are received locally. Alternative prioritisation See response above.	20% BNG No change proposed Alternative prioritisation No change proposed

3279

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	purchase of BNG units from a habitat bank is preferred to the purchase of statutory credits. It is considered that this approach would be more aligned to the LNRS. The encouragement of delivering more technically offsite difficult habitats that may deliver lower BNG units (due to the application of the difficulty multiplier within the metric) where feasible is welcomed and this approach should also be considered for onsite habitats where feasible.		
G5	<u>Reference to LNRS</u> Reference to the use of Oxfordshire's Local Nature Recovery Strategy (LNRS) to inform appropriate ecological enhancements is considered key for this policy. <u>Encourage native tree planting</u> The requirement to include an element of native planting is encouraged.	<u>Reference to LNRS</u> Reference to the LNRS is made in individual site allocations and within Policy G4 and supporting text. <u>Encourage native tree planting</u> Fourth paragraph of Reg. 19 policy includes a reference to "native planting".	<u>Reference to LNRS</u> No change proposed <u>Encourage native tree planting</u> No change proposed
G6	<u>Application of LNRS</u> Consideration should be given to how regard will be given to Oxfordshire's LNRS and in particular safeguarding of the priorities of the LNRS within this policy including how the LNRS interacts	<u>Application of LNRS</u> Reference to the LNRS is made in individual site allocations and within Policy G4 and supporting text. The background paper (005b Biodiversity) that was published for Reg 19 includes a full section on how we have had regard for the LNRS.	<u>Application of LNRS</u> No change proposed

3280

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	with the ecological network currently referred to. SSSI buffer zone 'Development proposed on land immediately adjacent to any SSSI **designated wildlife site or priority habitat** must be designed with a buffer to that site **or habitat'** Local sites Similarly, the text 'Where proposals result in habitat loss within a LNR or LWS, they must retain and enhance the interest features for which the site was selected' could be expanded to ensure other types of designated site are included. Road Verge Nature Reserves Reference to Road Verge Nature Reserves (RVNRs) as a type of designated wildlife site would be welcomed within this policy, particularly as RVNRs are present within Oxford. Further information regarding RVNRs and RVNRs within Oxford city can be found at	SSSI buffer zone The SSSI buffer zone was developed and evidenced through the Source Pathway Receptor Analysis (SPRA). The City Council does not consider that it is appropriate to arbitrarily widen its application to all designated sites/ priority habitats. The considerations for mitigating impacts from development will vary with every site (based on species and habitats present). Local sites No alternative text provided for consideration. City Council considers that the policy is sound as drafted. Road Verge Nature Reserves Supporting text already includes a link to Oxfordshire County Council biodiversity guidance.	SSSI buffer zone No change proposed Local sites No change proposed Road Verge Nature Reserves No change proposed

3281

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	https://www.oxfordshire.gov.uk/sites/default/files/file/countryside/RVNRSurveyReport.pdf.		
G8	**Urban design** Design guide The policy refers to the City's Design guide and other standards, it is not clear if these are already in place or are part of this Local plan and will subsequently be adopted. **Landscape and Nature Recovery – Biodiversity** Biodiversity and SuDS It should be clearly stated that SUDS design should aim to maximise biodiversity value as far as feasible.	Design guide The policy wording simply relates to the most recently published standards (and future proofs them for when new standards are published). Biodiversity and SuDS Policy already references green infrastructure and the supporting text highlights additional benefits including... "providing habitats to support wildlife".	Design guide No change proposed. Biodiversity and SuDS No change proposed
R6	Highest quality soils It would be useful to define what is considered 'highest quality soils' in the context of this policy. For example, nutrient poor soils would have a high value for biodiversity and creating species rich grassland habitats but a lower value for activities such as agriculture that would value a high nutrient soil content.	Highest quality soils This policy seeks to protect soils. The highest quality soils are often considered to be those in the higher categories of the Agricultural Land Classification system (i.e., grades 1-3a) - but it could vary depending on the specific context of the site (e.g. the profile of soils will look quite different in more rural parts of the city compared to more urban areas). Consideration was given to including a definition however it was considered that using a narrow definition (such as the above), may not provide contextually specific support for a range of soil types.	Highest quality soils No change proposed.

3282

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
HD7	<u>Definition of major development should be included in policy</u> It is supported that Policy HD7: Health Impact Assessment contains the wording that HIA is 'required' for major planning applications, although it would be strengthened by making it clear in the policy wording exactly how Oxford City Council defines 'major'. Other local authorities are increasingly using quantifiable thresholds in their HIA policies. Appendix 6.2 contains further information on how to complete an HIA, directing the user to OCC's HIA Toolkit as well as specifying the thresholds for an HIA to be undertaken (10 or more dwellings or 1000m2 or more of non-residential development. This is strongly supported in principle, but would be more enforceable if this advice were included within the wording of Policy HD7 in the main body of the Local Plan. The County Council requests that the term 'major development' is defined	<u>Definition of major development should be included in policy</u> Major development is defined in the Glossary of the Reg. 19 version of the Oxford Local Plan 2045 and in National Policy (NPPF, December 2024). There is no need to re-define the term major development in this policy.	<u>Definition of major development should be included in policy</u> No change proposed

3283

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	within Policy HD7 itself (rather than just in Appendix 6.2)		
C1	Mobility hubs The first bullet point under the 'Policy context' section states: "The city and district centres are highly accessible mobility hubs that include a broad range of facilities including shops, hospitality, community and leisure facilities." The opening sentence is not clear on the definition of mobility hub. It reads that the city and district centres as a whole are mobility hubs. This sentence should be reworded and provide clearer language. One example could be: The city and district centres include a range of mobility hubs (refer to Mobility Hub Strategy) helping to create places which are highly accessible. Modification: clarify definition of mobility hub. For example: "The city and district centres include a range of mobility hubs (refer to Mobility Hub Strategy) helping to create places which are highly accessible."	Mobility hubs The intention is to set the context that district centres and the city centre are all highly accessible locations. Without adding a long (and potentially convoluted) explanation in the plan setting out the different types of hubs (major interchange hubs, linking hubs, suburban hubs), we consider that it might actually be more confusing to amend the supporting text in the manner that has been suggested. This is because it would not necessarily be obvious that there are different types of hubs, and it is not necessary for understanding that the city and district centres are highly accessible locations. However, a modification is proposed to add additional explanation to the Glossary.	Mobility hubs Amend the definition of Mobility hub in the glossary as follows: *Mobility Hub: An area in which a variety of transport modes and community assets are co-located for seamless interchange. In Oxford these vary from major interchange hubs, to linking hubs to suburban hubs. These facilities provide added benefit to communities and combined they make up an easy-to-use transport network*
C2	The County Council requests the following modifications to Policy C2: Modifications:		

3284

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	OCC's Street Design Code • At the end of the first paragraph of Policy C2, after the phrase "[...] and this should be low car" please add "and have incorporated OCC's Street Design Code." Delete "well-located from bullet point e) • In sub-paragraph 'e)', please remove the word "well-located". It could be interpreted in a variety of ways. Include references to cycle parking in bullet point f) •In sub-paragraph 'f)' please add the following after "Public realm improvements for cyclists: "-by providing cycle parking in convenient locations which benefit the public realm using thoughtful inclusive design and materials, catering for standard and non-standard bikes, including children's bikes." Public space • While the text mentions tree planting, including incorporation of small greenspaces, it is important to still ensure there is some big open/public	OCC's Street Design Code As the County's most recent Street Design standards is not yet published, we have not referenced it in the plan. However, Policy C6 includes a reference to the published Street Design standards. Delete "well-located from bullet point e) This change weakens the policy as it does not support "well-located" public car parking. Include references to cycle parking in bullet point f) The amendments proposed seem to prioritise public realm improvements for cycling only focusing solely on cycle parking and neglecting other users, i.e., pedestrians and public transport users. Policy C7 already covers cycle parking requirements. Public space Bullet point h) states: *h) Enhancement and new opportunities for public realm and landscaping such as tree planting, including incorporation of small green spaces where people can stop, dwell, socialise and play;*	OCC's Street Design Code No change proposed (as agreed at Reg. 18) Delete "well-located" from bullet point e) No change proposed (as agreed at Reg. 18) Include references to cycle parking in bullet point f) No change proposed (as agreed at Reg. 18) Public space No change proposed

3285

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	space for people to dwell, rather than expect everyone to pass through.	Bullet point h) already provides advice about the enhancement of existing and the creation of new public realm and landscaping in the city and district centres.	
C4	Local Education Authority reference In the first bullet point under 'Policy context' in Policy C4, the text makes reference to the 'Local Education Authority' which is no longer in use. Please update the term to 'Local Authority with responsibility for Education'.	Local Education Authority reference We have proposed the following changes to the supporting text of Policy C4 and the Glossary to accommodate this terminological clarification.	Local Education Authority reference Amend second sentence of first bullet point as follows: *The City Council has worked closely with partners including the County Council as the Local Authority with responsibility for Education Local Education Authority to plan the educational needs of the city...* The phrase "Local Education Authority" also appears in the Glossary within the definition of "Keyworker". Bullet point ii) of the Key worker definition to be amended as follows: *ii) Schools: qualified teachers in any Local Authority with responsibility for Education Local Education Authority school....*

3286

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	General comment re: joint user agreements Policy C4 states that planning permission will be granted for new / redeveloped learning institutions if (inter alia) where possible, joint user and shared use agreements are made. This is an appropriate phrasing: as set out previously, in the case of new schools it will not be possible at the point of granting planning permission to make joint use agreements, as there is not at that time a responsible body in place. Redevelopment projects at existing schools vary greatly, and will not necessarily result in any change in facilities which could be made available to the community. Accessibility requirements for new learning and non-residential institutions The requirement that school developments will be accessible to those who will use it by walking, cycling and public transport should allow for some flexibility as a matter of equality of access, as, for example, if the project is an expansion of a special school, depending on the needs of the pupils it	General comment re: joint user agreements General comment re: joint user agreements noted. Accessibility requirements for new learning and non-residential institutions The policy itself applies to all schools and not just SEND schools. Both new SEND schools, and the expansion of existing SEND schools should be accessible by a range of different modes of transport including public transport (which includes taxis). Given the accessible nature of Oxford, most schools in the city are accessible by a range of different modes.	General comment re: joint user agreements No change proposed Accessibility requirements for new learning and non-residential institutions No change proposed

3287

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	may not be possible for them to travel by walking, cycling and public transport. Loss of learning institutions The restriction that the loss of learning institutions will only be permitted where (inter alia) it can be demonstrated that the use can no longer feasibly be provided in its location could be changed to "feasibly and viably", to the financial viability of provision is one element of feasibility.	Loss of learning institutions We don't see that there is a need to explicitly reference viability as stated in the representations, it is already one element of feasibility.	Loss of learning institutions No change proposed
C6	(Transport Policy) Reference to improving health outcomes In the first bullet point under 'Policy context' it would be positive to add a reference to improving health outcomes along with the other outcomes mentioned here. Reference to County policies/strategies The County Council suggests Policy C6 references the following County policies: the County's Freight Strategy and the OxRail 2040: Plan for Rail. It is also worth recognising the County are working on delivering an integrated transport policy which will be	Reference to improving health outcomes Policy HD7: HIA already focuses on Health outcomes and requires a Health Impact Assessment. Reference to County policies/strategies The IDP and other policies in the Plan (e.g., West End and Botley Road Area of Focus - WEBRAOF) already include references to OxRail 2040: Plan for Rail. Having reviewed the County's Freight Strategy in relation to the sphere of influence for the Local Plan 2045, the Freight Strategy appears to be concerned more with freight movements and routing rather than with specific land use planning issues. Given the city's location in	Reference to improving health outcomes No change proposed (as agreed at Reg. 18) Reference to County policies/strategies No change proposed

3288

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	incorporated into LTCP, this will build upon the Oxfordshire Metro Concept. Vision Led Transport Planning The County Council recommends that C6 incorporates Vision Led Transport Planning as a requirement to ensure Oxford City has the highest quality developments, showing how developers have used Vision Led Transport Planning to achieve sustainable transport infrastructure. Paragraph f) In paragraph 'f)' please replace "Street Design Guide" with "Street Design Code".	relation to the SRN, it is unlikely that sites exist within the city boundary that are likely to meet road/rail freight distribution centre requirements. As such, we do not consider that a reference to it within Policy C6 is required. Vision Led Transport Planning The NPPF (December 2024) already sets out that a vision-led approach to transport planning should be considered. Having considered whether to make a reference to this in the plan, the City Council considers that National Policy and existing Policy contained within the LTCP is sufficient and does not need to be repeated in the city's Local Plan. Paragraph f) It is our understanding that the Street Design Code has not yet been published. However, when it is it will replace the adopted Street Design Guide. Suggest a minor modification to clarify that any equivalent future standards" should be followed.	Vision Led Transport Planning No change proposed Paragraph f) Update references to Oxfordshire County Council Street Design Guide to future-proof to ensure the most up-to-date standards are referred to. Policy C6 para. f) *...and respond to local character and design standards as set out in the Oxfordshire County Council Street Design Guide (or future equivalent standards);*

3289

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	Paragraph h) Within Draft Policy C6, outcome h) including e-bike/e-cargo bike charging would support the growth of e-bikes and e-cargo bikes. LTCP policy reference It would be helpful in Draft Policy C6 if it also references how this policy will support LTCP policy to remove 1 in 4 car trips by 2030 and 1 in 3 by 2040 and reduce vehicle mileage. Travel Plans and TA's should actively show how they will be supporting this policy, this will also support the monitoring of Travel Plans. Travel Plans and health benefits The County Council recommends the following addition to Draft Policy C6: "Travel Plans should incentive sustainable travel and support the delivery of cycle training for children, adults and families to support positive travel choices and provide health benefits to local communities."	Paragraph h) The plan already includes a policy which references electric vehicle charging. LTCP policy reference The LTCP is the statutory transport plan for Oxfordshire. As such, there is no need to duplicate its content. Especially as this may be subject to change/ review as and when future iterations are delivered. Travel Plans and health benefits The Plan already includes Policy HD7 – Health Impact Assessment to assess impacts of development proposals. The proposed text does not impact the soundness of the plan.	Paragraph h) No change proposed (as agreed at Reg. 18) LTCP policy reference No change proposed (as agreed at Reg.18) Travel Plans and health benefits No change proposed.
C6	**Place Planning and TDM Teams (Central)** General comment	General comment	General comment

3290

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	The County Council fully supports the requirement for transport assessments to assess the multi-modal impacts of development proposals. The County Council's LTCP includes a transport user hierarchy to ensure future schemes consider walking, cycling, public and shared transport before the private car. It is important that development proposals also consider development impacts and any mitigation in this order too. <u>Inclusion of reference to LTCP Policies</u> The County Council notes "*The requirements for the transport assessment and travel plans are set out in Oxfordshire County Council's document Implementing Decide and Provide in Transport Assessments.*" Whilst this is helpful, it doesn't include this text in the policy wording itself. We think it would be incredibly helpful if specific reference to the County's Implementing Decide and Provide was included and worded as follows: *All major development proposals must demonstrate that the methodology in Oxfordshire County Council's Implementing Decide and Provide:*	General comment noted <u>Inclusion of reference to LTCP Policies</u> The LTCP is the statutory transport plan for Oxfordshire. As such, no need to duplicate its content. Especially as this may be subject to change/ review when the next iteration is delivered.	No change proposed (as at Reg. 18) <u>Inclusion of reference to LTCP Policies</u> No change proposed (as at Reg. 18)

3291

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	Requirements for Transport Assessments document has been used to assess the need for infrastructure and provision of transport services. Vision-led approach to transport planning Further to this, the glossary at Annex 2 (p.80) of the NPPF describes a vision-led approach as: *…an approach to transport planning based on setting outcomes for a development based on achieving well-designed, sustainable and popular places, and providing the transport solutions to deliver those outcomes as opposed to predicting future demand to provide capacity (often referred to as 'predict and provide').* When these changes to the NPPF were initially proposed it was stated in the supporting text for the accompanying consultation that (Chapter 8, paragraph 7, MHCLG), "*To support the implementation of this updated policy, we will publish updated guidance alongside the policy coming into effect.*" At the time of writing, this guidance remains forthcoming. Thus, in the	Vision-led approach to transport planning The NPPF (December 2024) already sets out that a vision-led approach to transport planning should be considered. Having considered whether to make a reference to this in the plan, the City Council considers that National Policy and existing Policy contained within the LTCP is sufficient and does not need to be repeated in the city's Local Plan.	Vision-led approach to transport planning No change proposed.

3292

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	context of this description of the vision-led approach and in lieu of the updated guidance, the Implementing Decide & Provide document should be seen as the methodology that development proposals within Oxfordshire must follow in order to meet the requirement set out in paragraph 118 of the NPPF. However, it is expected that, once the updated guidance is made available, the County's Implementing Decide & Provide will be complementary to the national guidance and will remain necessary in setting out local requirements to ensure that a vision-led approach to transport planning has been followed.		
C7	**County Councillors** County Parking Standards The County Council welcomes the reference to the Oxfordshire County Council parking standards however we would like to request that the wording of the policy is such that it can reflect that these standards will be reviewed on a regular basis. Therefore, we encourage the City Council to make reference to the	County's Parking Standards As the city's parking standards are required to support decision making, it is helpful for them to be included within an adopted Local Plan. While standards do change from time to time, we need to produce a new local plan every five years so we would be review and update the standards as appropriate.	County's Parking Standards No change proposed (as agreed at Reg. 18)

3293

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
3294	County Council parking standards with an open wording, noting the need to refer to the County as the Highway Authority for the latest standards, instead of including them as an Appendix to the City Plan. **Transport Policy** <u>Importance of well-lit and inclusive cycle parking</u> Incorporating the importance of lighting should be added. The paragraph relating to bicycle parking ("Cycle parking should be well designed and well-located, convenient, secure, covered (where possible enclosed) and provide level, unobstructed external access to the street.)" should also include that cycle parking must be "inclusive" and "well lit". Modification: add the following text (in bold) to the policy: *"Cycle parking should be well designed,* ***<u>inclusive</u>*** *and well-located, convenient, secure,* ***<u>well-lit,</u>*** *covered (where possible enclosed) and provide level,*	<u>Importance of well-lit cycle parking</u> The policy already makes reference to "well designed", "well-located", and "secure" cycle parking. We consider that the addition of the phrase "well-lit" to the policy is superfluous. Well-lit cycle parking, along with a range of other cycle parking design considerations such as natural surveillance and overlooking are key components of well designed, well-located and secure cycle parking facilities. As such the policy does not need to explicitly make reference to "well-lit" cycle parking. It is worth noting that the County Council's Street Design Guide also highlights that not all streets require street lighting, providing examples of where the provision of lighting may be detrimental. Examples relevant to Oxford city relate to wildlife and/or bat corridors. <u>Importance of inclusive cycle parking</u> Policy C7 already sets out that cycle parking should be designed to accommodate cycle parking for a wide	<u>Importance of well-lit cycle parking</u> No change proposed <u>Importance of inclusive cycle parking</u> No change proposed

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	unobstructed external access to the street".	range of users. There is no need to include the word "inclusive" in the preceding paragraph given the range of user groups to which the policy already applies.	
C8	General comment The current car parking policy for non-residential uses within LP 2036 (policy M3), in the case of the redevelopment of an existing or previously cleared site, was that: *"there should be no net increase in parking on the site from the previous level and the Council will seek a reduction where there is good accessibility to a range of facilities".* Increase of Parking This requirement, in the case of the redevelopment of an existing or previously cleared site, appears to no longer remain with the level of car parking to be demonstrated through the TA. Retain current policy The County Council fully supports no net increase in car parking in the case of the redevelopment of an existing or previously cleared site and given these can often be in locations which are	General comment General comment noted. Increase of Parking Any increase in parking would need to be justified in accordance with a submitted TA. Retain OLP2036 policy The principles set out within Policy C8 (i.e., no additional car parking (except for blue badge and servicing) and to seek a reduction in car parking at accessible sites) apply to all non-residential sites (and factor in their accessibility). We could include a reference to a TAN to provide further technical advice for this policy.	General comment No proposed changes (as at Reg. 18) Increase of Parking No proposed changes (as at Reg. 18) Retain OLP2036 policy We proposed the following minor modification to the supporting text. Create new (final) bullet point under Policy Implementation Heading:

3295

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	congested and sensitive to changes in traffic flow. Therefore, the existing policy should be retained. Modification: Retain existing policy that requires no net increase in car parking and for this to be demonstrated through the TA.		• *Further details may be provided in a Technical Advice Note.*
I2	Support of this Policy	Support noted	No change proposed
CBLAOF	Typos/ Clarifications/Syntax etc. Amend the following bullet points as follows: c) A reduction of car parking in line with Policy C8 o) Financial contributions from trip-generating uses within a 1,500m buffer zone of the proposed CBL stations (where it falls within the city's boundaries) towards achieving public transport enhancements in this area, including, among other sustainable transport measures, **and** the delivery of the CBL.	Re: bullet point c), this looks like a missing word. We will update with an appropriate word. o) the addition of the word "and" in this context is not an acceptable change as it seems to unintentionally disaggregate CBL from "other sustainable transport measures…" Change not accepted in this instance	Minor modification proposed to clarify the syntax of bullet point c): *c) A reduction of car parking in line with Policy C8* No proposed change to bullet point o)
SPS3	**Policy SPS3 – Bertie Place Recreation Ground** LNRS mapping extent It is noted that only part, rather than all, of this site is within the mapped area of the LNRS.	LNRS mapping extent Having reviewed both the extent of the site allocation and the LNRS mapping, the whole of the Bertie Place LP2045 Site Allocation area is contained within the	LNRS mapping extent No change proposed

3296

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	Modification: update policy box to reflect that part of site is included within the LNRS <u>Consistency with published LNRS</u> Reference to the LNRS should be reviewed now it has been published and updated as appropriate across all allocation sites. <u>Site-specific ecological considerations</u> Suitability for slow worms has been identified for this site. Bats may also be present within the buildings present along with other species such as otters due to the close proximity of a number of watercourses. It is requested that all sites are assessed in this way for their suitability to support protected species if this approach is used here for consistency.	mapped area of the LNRS mapping. As such, the policy box is accurate. <u>Consistency with published LNRS</u> All site allocations have been reviewed against the final published version of the LNRS. Appropriate references have been included within relevant policies in the Plan. This was done as part of the preparation for Reg. 19. <u>Site-specific ecological considerations</u> All sites were reviewed by relevant city council specialist officers as part of the site allocation process, and their findings incorporated as part of the policy drafting process. We are confident in our approach.	<u>Consistency with published LNRS</u> No change proposed <u>Site-specific ecological considerations</u> No change proposed
SPS7	<u>Policy SPS7 Kassam Stadium</u> Reference should be made to all documents that make up the LNRS as well as the mapping tool for all sites, including this one, where applicable.	We consider that the references to the LNRS contained within the site allocation policies to be sufficient.	No change proposed
SPS11	<u>SPS11 Overflow Car Park at Kassam Stadium</u>	See response to H1 (above)	No change proposed

3297

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	The Overflow Car Park at Kassam Stadium (Policy SPS11) refers to a minimum capacity of 100 new homes however this is based on a capacity study which assumes as density between 60–80dph. Given the site's location and urban nature, the County questions if a density of 80dph on the overall should be applied, in order to maximise the use of the site in line with Policy HD2, thereby reducing the amount of housing unmet need.		
SPS12/ E1	SPS12 Oxford Science Park It is noted that a number of the proposed allocations in the plan, such as SPS12 (Oxford Science Park) recognises that a level of housing could be acceptable within the site however no capacity study or indication of minimum capacity has been undertaken.	Housing at employment sites Some site allocations (e.g., SPS12 Oxford Science Park), are allocated for employment-generating uses. However, Policy E1 – Employment Strategy introduces a permissive approach to residential development across the city's employment site network. While landowners of employment sites generally welcomed the ability to deliver residential uses at their sites, they also supported the flexibility that the permissive approach provided. The City Council considers that the permissive approach to housing on employment sites is the correct approach. This is because it allows landowners to respond quickly to changing economic circumstances (NPPF para. 86(e)). Where housing numbers are included within site allocation policies,	No change proposed

3298

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		these have been through a process in accordance with national policy to ensure that the homes are deliverable within the plan-period. The Housing Requirement already includes a "windfall" allowance for additional homes that are delivered on sites outside of those specifically identified for residential development in the plan. In terms of the anticipated supply calculations for the plan-period, any new homes coming forward on sites identified within the city's employment site network would be captured as windfalls. The Strategic Housing Land Availability Assessment (SHLAA) sets out how the windfall housing allowance has been factored into the overall capacity calculations. Both small (1-9 dwellings) and large (10+ dwellings) sites make up the overall windfall allowance. The windfall allowance is based on past trends, which have been extrapolated forward. One source of housing within the windfall allowance is conversions from commercial land to housing (including permitted development rights for office to residential conversions). The assumption therefore is that a portion of the windfall housing allowance, both from small and large sites, will come from commercial conversions. We consider that this approach is defensible, justified, and PPG compliant.	

3299

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
SPS16	Site capacity Although the capacity study prepared for this site acknowledges that there is possibility for additional heights within the site, it is unclear if the defined capacity reflects this potential. Policy should contain a reference to supporting a library In addition, consideration should be given to the explicit mention of supporting a library relation into this site as part of the required "Community facilities". Modification: *"Development should include residential development and town centre uses that provide active frontages at ground floor level. The range of town centre uses could include the following:* *• Retail;*	Site capacity The capacity assessment for this site sets out how site capacity (no. of dwellings) has been arrived at. In calculating the residential capacity of the site, higher residential density assumptions have been used than those contained within Policy HD2 (i.e., 100dph for city/district centres). The capacity assessment clearly sets out the assumptions for block heights and massing that have been used in coming to the residential capacity for the site. Given the site is less than 4ha and is allocated for a mix of uses including residential, the 500 dwelling (net gain) in residential dwellings at the site represents a very high-density development. Policy should contain a reference to supporting a library The Infrastructure Delivery Plan (IDP) sets out the required infrastructure needed to support the growth identified in the plan. We question the need for library provision on-site, especially given the proximity of the site to Cowley Library (less than 800m away). If improvements to Cowley Library are needed to mitigate the impacts of new development, these should be costed (and identified) in the IDP. However, we can suggest a modification to Policy SPS16 to include the phrase 'and services', to the Community facilities bullet point, if this would be helpful.	Site capacity No change proposed Policy should contain a reference to supporting a library Amend Policy SPS16 to include the phrase 'and services' in relation to the community facilities use: *"Development should include residential development and town centre uses that provide active frontages at ground floor level. The range of town centre uses could include the following:* *• Retail…* *• Community facilities and services;*

3300

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	• *Commercial leisure;* • *Financial and professional services;* • *Learning and educational uses;* • *Evening economy uses such as cafes, restaurants and pubs;* • *Community facilities;* ***including the potential for library provision****.* Policy should cross-reference Policy HD2 *The minimum number of dwellings to be delivered is 500 (net gain)".* ***Maximised densities, including for higher buildings, should be demonstrated in line with policy HD2.***	Policy should cross-reference Policy HD2 There is no need to cross reference Policy HD2 in this policy.	Policy should cross-reference Policy HD2 No change proposed
SPE2	It is stated that this site has potential for conservation interest. Further detail should be provided to explain this.	A phase one habitat survey was carried out for this site in 2025 and is included in Oxford City Biodiversity Surveys 2025 document. The initial survey found limited biodiversity interest of low distinctiveness. There seem to be no showstoppers to prevent allocation or to influence design, but a more detailed survey will be needed to support any application.	No change proposed
SPE3	A biodiversity survey is stated as required for this site, but this has not been stated as a requirement for all sites. For consistency and in compliance with policy G6, without knowing the details of what is proposed and present at each site allocation, all site allocations may have the suitability	For the draft plan we need to be satisfied that a development is likely to be able to come forward in a way that meets the requirements of the site allocation policy. Ecology officers have carried out a desktop survey of all the site allocations and flagged things that may affect how the sites are delivered, and also cases where further survey work may be needed.	No change proposed

3301

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	to support protected and notable species. It is therefore requested that an ecological assessment is undertaken for all site allocations.		
SPCW6	It is stated that the site contains 'Section 41 (Priority/Principal) habitats'. An ecological assessment of will therefore be required to determine the extent of these habitats and help determine whether the target minimum number of dwellings is achievable in line with policy G6.	We are satisfied that we have understood the constraints on this site in drafting the policy. To accompany an application, a detailed ecological assessment will be required.	No change proposed
SA	Potential for legally protected species Regarding SA objective 10 criteria included in Table 3.14 it is noted that 'Potential for legally protected species to be present' is included in the minor negative section. It should be assumed that all site allocations have the potential to support legally protected species until detailed ecological surveys have been undertaken. This would mean that almost all sites would fall in at least the minor negative category. Individual SA site assessment scoring (SA Objective 10) It is noted that a number of site allocations including SPN1 have been	Potential for legally protected species As part of the plan-making process, proposed site allocations have been reviewed by specialist officers at the City Council. Where specialist officers considered that sites had the potential for legally protected species to be present, these sites were highlighted, along with a rationale as to why certain species could be present. Individual SA site assessment scoring (SA Objective 10) The scoring system (SA Framework) that was developed to inform the SA site assessments was	Potential for legally protected species No change proposed Individual SA site assessment scoring (SA Objective 10) No changes proposed

3302

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	assessed as a minor positive impact regarding SA10 despite it being identified that the site may have suitability to support protected species.	consulted on at Reg. 18. (See Interim SA Report – Part One (Scoping) for further details. Table 5.11 of the Interim SA Report sets out the SA decision-making criteria supplements this with site scoring criteria in relation to SA Objective 10. The County Council made no comments on the proposed SA Framework for sites at Reg.18. At the Reg. 19. Consultation Stage, the Reg. 19 SA Report references the SA Framework for sites at Section 3.4.2. The Reg. 19 SA Framework for sites relates decision-making criteria to each SA Objective and then provides scoring criteria that are in turn related to the decision-making criteria. Section 5.3 of the Reg. 19 SA Report includes an account of the SA process involved in the allocation of sites in the plan. Not all sites fall neatly into one of the SA Scoring criteria (e.g. there may be some potential for protected species on a site, but also opportunities for improving wildlife linkages to neighbouring sites). As such, in some instances, City Council planning officers have needed to apply a degree of professional judgement when assessing each site against the decision-making criteria. In fact, the pro-formas were specifically designed to enable City Council planning officers to be able to set out a short narrative to accompany the scores attributed to relevant SA objectives.	

3303

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
		The SA site assessment scoring undertaken by City Council planning officers, was informed by additional information from a range of sources. This included in-house advice from specialist officers (including archaeology, land contamination, ecological features and biodiversity potential). The scores, in some instances were also informed by more detailed site-specific information, where this was publicly available.	
	Reference to priority and irreplaceable habitats Reference to priority and irreplaceable habitats as well as priority species would be welcomed when defining the criteria included in Table 3.14 regarding SA10.	Reference to priority and irreplaceable habitats As set out above, the pro-forma was consulted as part of the Reg. 18 Interim SA Report. We are not proposing to update the SA Framework at this stage. It should be noted that these forms are intended to support developing the policies alongside other tools such as the site capacity assessments. Where particular areas of recorded habitat/biodiversity value were identified on sites as drafting of the allocations took place, officers have sought to flag this through the allocation's requirements as something applicants will need to consider.	Reference to priority and irreplaceable habitats No changes proposed
	Reference to LNRS Reference to the LNRS would be welcomed when defining the criteria included in Table 3.14 regarding SA10 and consideration should be given as to whether inclusion of developments within mapped areas of the LNRS are considered positive or negative.	Reference to LNRS The individual site allocations policies were reviewed to take account of the LNRS opportunity areas. These have been highlighted in relevant site allocation policies. We do not consider that a site's location within an opportunity area would significantly alter a site's SA score in relation to this objective. Elements of the LNRS layer (i.e., designated ecological sites which	Reference to LNRS No changes proposed

3304

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	Where site allocations fall outside of the mapped areas of the LNRS, the unmapped measures within the LNRS still present an opportunity for ecological enhancements to be delivered in line with strategies' priorities. <u>Various site scores questioned:</u> <u>Policy SPS8</u> It should be clarified whether SPS8 allocation is a proposed Local Wildlife Site and/or Oxford City Wildlife Site. <u>Policy SPS14</u> SPS14 is located within 100m of a nationally designated wildlife site and should therefore be assigned minor negative impact regarding SA10. <u>Policy SPE3</u> SPE3 is located within 200m of a Local Wildlife Site and should therefore be assigned neutral impact regarding SA10. <u>Policy SPE5</u> It is noted that the extent of priority lowland deciduous woodland habitat is	are identified as existing sites of biodiversity importance) have already been captured within the assessment process. We are not proposing to alter the SA Framework. <u>Various site scores questioned</u> On various sites, the County Council appears to be disputing the scores attributed through the SA site assessment process. This is not something that is normally debated through the examination process. As such, we acknowledge the response made on this issue however, no changes are proposed.	<u>Various site scores questioned</u> No changes proposed

3305

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	not yet known within the SPE5 allocation site. This should be confirmed. Clarification should also be provided to explain the phrase 'The site boundary contains Section 41 (Priority/ Principal) habitats that fall within the LPA Biodiversity Duty'. <u>Policy SPE16</u> Under site allocation SPE16 a number of ecological enhancements are listed which appear to be from the LNRS. A consistent approach outlining suitable/possible mapped and unmapped priority measures from the LNRS for each site would be welcomed.		
HRA	<u>Pollutants</u> While it is appreciated that nitrogen oxides and ammonia are important pollutants affecting vegetation, it is requested that other pollutant gases such as sulphur dioxides, ozone and particulates are also acknowledged and considered. This approach also applies to water quality pollutants where only two pollutant types have listed. <u>West Oxfordshire District Council Plans</u> Justification should be provided to explain how West Oxfordshire plans	<u>Pollutants</u> The HRA Screening Report sets out the rationale for assessing the identified pollutants (both in relation to air and water quality). <u>West Oxfordshire District Council Plans</u> In terms of air quality (traffic modelling) impacts, as the County Council is aware, the development proposed in	<u>Pollutants</u> No change proposed <u>West Oxfordshire District Council Plans</u> No change proposed

3306

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	have been considered when assessing in combination effects of air quality and water quantity.	the extant West Oxfordshire Local Plan is already contained with the Oxfordshire County Council Transport Model. A detailed explanation is provided in the HRA Screening Report (published at Reg. 18 and Appendix A of the Reg. 19 HRA Report). In terms of water quality, the most recent publicly available water cycle studies for all surrounding districts were reviewed as part of the Reg. 19 HRA Report.	
	<u>Further Justification – Screening Decisions – other SAC's with 10km</u> Further justification should be provided to explain the scoping decision regarding Cothill Fen SAC and Little Wittenham SAC.	<u>Further Justification – Screening Decisions – other SAC's with 10km</u> The HRA Screening Report already provides evidence as to why these two SACs have been screened out from further assessment.	<u>Further Justification – Screening Decisions – other SAC's with 10km</u> No change proposed
	<u>Further evidence – Recreational impacts buffer zone</u> Further evidence should be provided to justify the scoping decisions made regarding recreational impacts and the distance used of 1,900m, particularly considering how residents may choose to travel to greenspaces through other types of transport other than walking from within Oxford.	<u>Further evidence – Recreational impacts buffer zone</u> The 1,900m buffer zone is considered suitably precautionary. It was based on a historic study which suggested that people in Oxford were willing to travel to large greenspaces on foot. As *A. repens (creeping marshwort)* is not sensitive to trampling but is sensitive to increased nutrification associated with dog-fouling, it was considered that most dog-walkers associated with new development choose to walk their dogs (rather than to take their dogs on other modes of transport). This is all set out in the Reg. 19 HRA Report.	<u>Further evidence – Recreational impacts buffer zone</u> No change proposed
	<u>Further evidence – visitor numbers</u>	<u>Further evidence – visitor numbers</u>	<u>Further evidence – visitor numbers</u> No change proposed

Policy/ para	Summary of Oxfordshire County Council Representation (Reg. 19)	Oxford City Council Response	Change proposed
	Further evidence should be provided to justify the conclusion made that 'There is no indication that current visitor numbers are having a detrimental effect on the condition of Apium repens at the Oxford Meadows SAC'. <u>Section 8.22 - conclusions</u> Justification and explanation should be provided for the conclusion made in section 8.22.	We consider that the evidence provided in the HRA is sufficient to justify these conclusions. <u>Section 8.22 - conclusions</u> Paragraph 8.22 considers the water quality 'in-combination' effects and provides a high-level review of published Water Cycle Studies for each of the other Oxfordshire districts. While WWTW capacity issues are noted in all districts, each Oxfordshire district authority has been working with Thames Water to resolve development constaints. <u>Final note on HRA</u> We have involved Natural England at every stage of our HRA and we have a signed statement of common ground with Natural England to support the conclusions presented in the Reg. 19 HRA Report that the Oxford Local Plan 2045 is not likely to have significant effect on the integrity of the Oxford Meadows SAC, either 'alone' or 'in-combination' with other relevant plans and programmes.	<u>Section 8.22 - conclusions</u> No change proposed

South Oxfordshire District Council and Vale of White Horse District

Summary of Comment in South Oxfordshire DC and Vale of White Horse's representation	Oxford City Council response
Policy S1 Criteria e says "Focus new employment development on existing sites, redeveloping and intensifying to make best use of those sites and prioritising housing elsewhere". 'Prioritising housing elsewhere' is quite ambiguous. Also as written this criterion could apply to all current employment sites, whereas Policy E1 which distinguishes between the two types of employment sites, and it permits some housing on Key Employment sites. Also, we believe that a criterion for delivering housing is an omission within the policy. Change from "e) Focus new employment development on existing sites, redeveloping and intensifying to make best use of those sites and prioritising housing elsewhere". To "e) Focus new employment development on Key Employment sites, redeveloping and intensifying to make best use of those sites and permit housing delivery where justified". Add new criteria "x) Prioritise housing across the city, redeveloping and intensifying centres and densifying the suburbs, to make best use of land".	Modifications are proposed to S1 to make it clearer that housing is prioritised. A new bullet point (e) is proposed that says 'prioritise new homes in all suitable and sustainable locations'. The last part of bullet point (e) (that will become f)) was intended to make this clear, but we agree on reflection that it would be clearer as its own bullet point. Proposed modifications as follows: ...To help achieve this it will aim to ensure development is located to: ... e) Prioritise new homes in all suitable and sustainable locations; ~~e~~f) Focus new employment development on existing sites, redeveloping and intensifying to make best use of those sites and prioritising housing elsewhere; ...
Policy S3 At the Preferred Options stage we raised concerns about the lack of justification for the 1,500m buffer zone for collecting financial contributions related to the Cowley Branch Line. No new justification has been provided. The policy is also not effective because it does not state clearly that it applies within	It is agreed that a change to the wording of S3, to bring it in line with the CBLAOF Policy wording, would be helpful. Proposed Modification to S3: Supporting existing public transport and the reopening of the Cowley Branch Line to passengers would enable a reduction in car use to this area. Financial contributions from new trip-generating development within a 1,500m buffer zone of the proposed CBL stations (where it falls within the city's boundaries) will be expected in order to achieve public transport

3309

the City administrative boundary, which leads to uncertainty. To make the policy effective, the clarity contained within Policy CBLAOF (Cowley Branch Line Area of Focus) "where it falls within the city's boundaries" should be added to Policy S3 as follows: "... Financial contributions from new trip-generating development within a 1,500m buffer zone of the proposed CBL stations (where it falls within the city's boundaries) will be expected in order to achieve public transport enhancements in this area, including, amongst other sustainable transport measures, the delivery of the CBL."	enhancements in this area, including, amongst other sustainable transport measures, the delivery of the CBL.
Chapter 1 Vision and Strategy The Vision is generally positive, however it provides limited support for delivery new homes and affordable housing within the city. As a result, the protection of assets appears to be prioritised over delivery of homes.	The very start of the Vision talks about healthy and inclusive communities and access to housing. Furthermore, the first two objectives are: • Maximise capacity for delivering homes across the city and set a housing requirement that seeks to meet the needs of different groups as far as possible. • Provide access to affordable, high-quality and suitable accommodation for all. Therefore, the City Council does not agree that there is limited support for delivery of new homes and affordable housing or that protection of assets is 'prioritised' over delivery of new homes. It is acknowledged that there are many elements of creating a successful city, some of which will involve protections. The City Council proposes no modifications in response to this comment.
Policy H2 Delivering Affordable Homes At the Preferred Options stage, we raised several concerns with the Specialist Housing Needs Assessment. The consultation statement dismisses many of our requests for data and sources. As a result, we have a number of concerns about the transparency of data sources and methodology used in the assessment which remain unresolved.	South Oxfordshire and VWHDC have confirmed that their concerns raised at Regulation 18 largely still stand. The concerns are set out in a separate table for South Oxfordshire and VWH DC in the 'Supporting documents, general and other comments' section of the Regulation 18 Consultation Report, with responses to each listed concern from the City Council. The City Council does not propose further changes to this piece of evidence.

3310

Policy H1 Page 2 of this chapter includes some policy implementation bullet points. The final bullet point should be amended to reflect that the City Council and neighbouring authorities are working together to deliver housing, rather than the sites themselves. We recommend the following modification: Change from "The council is continuing to work with adjoining authorities to deliver sites in adjoining districts to help meet Oxford's housing needs to address the unmet housing need." To "The Council is continuing to work with adjoining authorities to deliver housing in adjoining districts to help meet Oxford's housing needs to address the unmet housing need."	The City Council continues to think the reference to sites is relevant and appropriate. In most cases, unmet need is intended to be delivered on specific and known sites. The City Council liaises with district councils about those sites. Reference to sites in this context is not considered unsound.
To make the map effective, no policy designations should appear outside the Local Plan area. The plan's policies do not apply outside the plan area. Currently, both the interactive and PDF maps indicate that policies I2 (East West Rail) and I2 (Oxford Flood Alleviation Scheme (OFAS)) are safeguarded in neighbouring districts and that Policy G6 (Local wildlife sites) applies outside Oxford's boundary. The map shows significant tracts of land within the Vale of White Horse district between Kennington, South Hinksey, and North Hinksey safeguarded for OFAS, as well as numerous local wildlife sites in both South Oxfordshire and Vale of White Horse.	A modification is proposed to the Policies Map to cut layers off at the city boundary.
In the Infrastructure Delivery Plan, the section related to water supply and wastewater ends abruptly at paragraph 7.57, which appears to be a publishing error. The missing information may be relevant to our districts as we share the same Oxford Sewage Treatment Works catchment. We ask that this	The last sentence from paragraph 7.57 of the IDP should read as follows: However, should rates of house-building increase in the area serving the Oxford WWTW (in line with national Government ambitions to deliver 1.5million homes), this could result in a need

3311

section is reviewed and shared with us as soon as is possible.	for the "additional upgrades" (i.e., the upgrades that are required to accommodate the level of growth proposed after 2041) to be delivered sooner.

3312

Cherwell District Council

Summary of Comment in Cherwell District Council's representation	Oxford City Council response
Housing need and requirement We would welcome a clear table with the number of homes to be delivered and when. The capacity-based context of the OLP should also be explained within the Local Plan, including delivery or the housing requirement and the housing trajectory.	This trajectory was included in the Plan in support of H1 . This will be updated as the SHLAA is updated, ahead of submission. Considering some additional text about unmet. The SHLAA does provide greater details on delivery, not all of which need to be in the Plan. A mod is proposed to add information about unmet need to the 4th bullet of the Context section of H1, as follows: Oxford's unmet housing need is therefore 12,473. The surrounding Oxfordshire districts have formally agreed to meet this need, with the following distribution:

3313

Employment need Policy E1 would benefit from greater clarity in the interest of usability and to ensure that appropriate opportunities are not overlooked. The approach to B8 in Policy E2 should be more flexible to sustainably support logistics operations within the city boundary to meet Oxford's needs.	A modification is proposed to Policy E1 to make it clearer (no change to meaning, just presenting it differently): ~~Outside of these locations:~~ On existing employment sites or those in lawful use for the proposed employment use class, which are outside the city centre or district centres, and which are not designated as Key Employment Sites, proposals for regeneration and/or additional floorspace with employment-generating uses will only be supported if: a. ~~Existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class), can only be regenerated with employment generating uses if~~ better and more intensive use is made of the site through the redevelopment, upgrading or re-use of existing under-used buildings, and b. ~~Proposals for additional floorspace for employment generating uses on existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class), outside the city and district centres must follow~~ the sequential approach is followed for new town centre uses as set out in Policy C1.
Employment Land Needs Assessment (ELNA)	We will update the dates of the ENA in the ELNA.

3314

It should be noted, for accuracy, that in Table 2.1 of the ELNA the period which is covered by Cherwell's ENA is 2020-2042, rather than 2021-2042. The ELNA recognises that may of Oxford's employees travel in from neighbouring authorities and this pattern will be exacerbated, and community will increase unless significant residential development is delivered within the city and land suitable for housing development is not unreasonably lost for employment. The large pipeline of R&D (recognised in the ELNA) in advance of housing will impact commuting levels. Paragraph 5.60 suggests that industrial/warehousing space is accommodated outside the city and refers to locations within Cherwell. It is not clear if it is being indicated that Oxford's warehousing need is being met by these locations, but we anticipate that Policy E2 will address this.	Paragraph 5.60 is in the Property Market Analysis section. This paragraph is simply noting the current situation, which is that there is not demand in the city and the because the city does not see any large strategic warehousing, due to the lack of available suitable sites, with these requirements accommodated outside of the city in places such as Symmetry Park, Bicester and Central M40 at Banbury. Paragraph 5.88 concludes this section and notes that the city's industrial/warehouse market is relatively small. Paragraph 8.21 summarises the overall need for employment floorspace in the city as follows: *we do not recommend a need to identify land for the modest office, industrial and warehousing need because growth in these uses can be absorbed in the existing portfolio. The considerable minimum need for R&D/lab space (the 345,000 sq m) can be met from within the committed and potential supply that has been promoted to the Council.* The City Council is therefore making no request for any neighbouring district to take any kind of employment need.
Areas of Focus (NEOAOF) We would welcome greater clarity on the sites within Cherwell that are allocated in the Cherwell Local Plan Partial Review to meet Oxford's housing needs (PR6a, PR6b, PR7a, PR7b, PR8 and PR9). A correction is also needed to the supporting paragraph to Policy NEOAOF as site PR6c (Land at Frieze Farm) is not a housing site	Modification suggested to the reference to Frieze Farm in the supporting text of Policy NEOAOF: The area adjoins several large housing allocation sites, which fall within Cherwell District (PR6a Land East of Oxford Road, and PR6b Land West of Oxford Road ~~and PR6c Land at Frieze Farm~~) but nonetheless adjoin existing communities in Oxford...

3315

is reserved only for the potential construction of a golf course should this be required as the result of the residential development of Land to the West of oxford Road under Policy PR6b (North Oxford Golf Course). A criterion should be added to make clear that any development within the AoF will be expected to support (and not undermine) the delivery of nearby sites PR6a, PR6b, PR7a and PR7b and not delay their delivery in meetings Oxford's housing needs.	Amendment to bullet point f of Policy NEOAOF **High quality design which capitalises opportunities for growth** e. Good urban design and place making across the AoF, including the introduction of new public open space; f. Successful integration of new development into the existing built environment, consideration of longer-term potential for integration with unmet need sites in Cherwell (without harming their delivery) and enhanced facilities for both new and existing communities.
Open space, recreation and playing pitches It is not clear how the assessment of open space, recreation and playing pitch needs within the city has been used to inform the assessment of sites in the HELAA 2026 and the allocation of sites in the OLP2045. Further clarity may be helpful. We note that there is not evidence on golf needs in the interim PPS 2026. It is important that this gap in the evidence is addressed considering the allocation of the North Oxford Golf Course by Cherwell for housing development and the reservation of Frieze Farm for an	It is not considered that the lack of golf in the PPS means there is a gap in the evidence that needs to be addressed. The PPS focuses on pitches, which host sports with various associations and clubs, and in some case may be able to be turned over to alternative pitch use depending on demand. Golf is very different. The City has only one golf course and one driving range that is not within a private school or college. At the current time, the landowners have not put these site forward for development and there is no intention for them to be lost and therefore to need to be reprovided elsewhere (or shown to be surplus). It is also highly unlikely that there could be potential within the City for another golf course.

3316

alternative golfing facility should this be required to meet need.	The Playing Pitch Strategy does not suggest an excess of sports pitches, and these sites are not considered surplus. They are allocated for housing because a detailed consideration of the site and discussion with landowners suggests that there is potential to re-provide sports provision (in nearly all cases within the site, intensifying it into a smaller area) allowing housing to come forward on the remaining space that has been freed up. At the current time the landowners of the OUP sports ground and Jesus and Lincoln College do not have alternative, suitable off-site provision that they have identified. However, this could potentially be identified over the course of the plan, which would increase the capacity of the sites. The capacity assumptions for the plan though need to be on the basis of what is known to be achievable and deliverable, rather than what it may be hoped could happen by the end of the plan period.
Green Belt The Green Belt assessment of additional sites 2025 carried out by LUC and published alongside the consultation focuses on whether any of the previously assessed sites meet the criteria for 'grey belt' The starting point for this study appears to be the earlier work, also undertaken by LUC. Therefore, there might be other opportunities within your area of the Green Belt (e.g. to	It is not the case that the 2025 Green Belt assessment of additional sites focuses on sites previously assessed by LUC. The latest assessment does revisit previously assessed sites, to ensure the assessment is up-to-date according to the revised NPPF, and it identifies which of these previously assessed sites are grey belt. In addition, there are also a number of new sites assessed, which had not previously been assessed. New sites were included to ensure compliance with the intention of the NPPF- sites were only

3317

provide affordable housing). Bearing in mind the development pressure on adjoining authorities, it would be helpful if the circumstances in which Oxford would consider meeting its development needs within its parts of the Green Belt could be clearly set out.	excluded from review if they were greenfield sites where the amount of Flood Zone 3b means they are intrinsically not developable, or where they have national biodiversity protections, which also makes them intrinsically not developable. Sites with local wildlife protection or other designations were not excluded from review, as they had been previously, and so there are additional sites assessed. A few sites were identified where development may have the potential to have a fundamental impact on the Green Belt purposes. A number of parcels (some newly assessed and some revisited) were found to be grey belt. Whatever the outcome of the Green Belt assessment, all sites (other than those already identified as having intrinsic constraints) were still considered further. However, on application of the plan's strategy and other further considerations, such as landowner interest, very little potential was found in the Green Belt, with only one site being allocated. The Evidence Base has been assessed but this does seem to be set out in the Green Belt Assessment 2025 and this is set out clearly in Background Paper BGP006: Green Belt, which says in paragraph 3.2: *The first stage of the most recent assessment required Oxford City Council to determine the location, scale and most appropriate parcel size as set out in the Paragraph 003 (Reference ID: 64-003-20250225) of the PPG. All green sites including those in the Green Belt are already in the Council's Strategic Housing Land Availability Assessment (SHLAA), therefore it was considered that any SHLAA*

3318

	site which contained any Green Belt would be looked at in the first instance. This resulted in an initial 121 parcels of or including Green Belt (one was subsequently split into two for allocation purposes), which can be found in Appendix 1 of this background paper

3319

Summary of Comment in West Oxfordshire District Council's representation	Oxford City Council response
Policy S1- spatial strategy and presumption in favour of sustainable development Whilst generally supportive of Policy S1, we suggest that the Local Plan should avoid unnecessary repetition of national policy regarding the presumption in favour of sustainable development. This will also avoid Policy S1 becoming quickly out-of-date against the new NPPF. Also concerned Policy S1 does not reference the importance of maximising the delivery of new homes in suitable and sustainable locations. Given the capacity-based housing requirement, there must be explicit commitment to maximising delivery of new homes.	Modifications are proposed to S1 to avoid repetition of the presumption in favour of sustainable development. Also, a new bullet point (e) is proposed that says 'prioritise new homes in all suitable and sustainable locations'. The last part of bullet point (e) (that will become f)) was intended to make this clear, but we agree on reflection that it would be clearer as its own bullet point. Proposed modifications as follows: Amend policy title on page 10 and heading on page 9 as follows: Spatial Strategy ~~and Presumption in Favour of Sustainable Development~~ Policy S1: Planning permission will be granted where development proposals accord with the policies of the Plan taken as a whole. Where there are no policies relevant to the application, or relevant policies are out of date at the time of making the decision, then the Council will grant permission unless material considerations indicate otherwise. The Council will work proactively with applicants with the aim of finding solutions that mean that proposals can be approved wherever possible, to secure development that improves the economic, social and environmental conditions in the city The City Council, through its policies and decisions, will positively pursue sustainable development and achieve sustainable growth in the delivery of homes, jobs and services to create a network of healthy, well-connected, high-quality areas where people want to live, play, learn and work in line with the vision and objectives of the Local Plan. To help achieve this it will aim to ensure development is located to: ... e) Prioritise new homes in all suitable and sustainable locations;

3320

	~~e~~f) Focus new employment development on existing sites only, redeveloping and intensifying to make best use of those sites and prioritising housing elsewhere; [Re-number what were criteria f, g, h, i and add new criterion j:] j) Support the health and wellbeing of local communities such as by delivering new sports and recreation facilities or enhancing existing provision. When determining development proposals, the Council will take a positive approach that reflects the presumption in favour of sustainable development contained in the National Planning Policy Framework (NPPF). ~~The Council will work proactively with applicants with the aim of finding solutions that mean that proposals can be approved wherever possible, to secure development that improves the economic, social and environmental conditions in the city.~~ ~~All new proposals for development must conform with the principles of securing sustainable development, which ensures that the city is ready for a net zero carbon future, natural resources and raw materials are used prudently and considerately, the air quality of the city is improved, and human health is safeguarded.~~ ~~Planning applications that accord with the policies in this Local Plan (and, where relevant, with policies in any neighbourhood plans adopted in the future) will be approved without delay, unless material considerations indicate otherwise.~~ ~~Where there are no policies relevant to the application, or relevant policies are out of date at the time of making the decision, then the Council will grant permission unless material considerations indicate otherwise, considering whether:~~ ~~i) The application of policies in the National Planning Policy Framework that protect areas or assets of particular importance provides a clear reason for refusing the development proposed; or~~ ~~j) Any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the National Planning Policy Framework taken as a whole.~~

3321

Policy H1- Housing requirement No concerns with the principle of a capacity-based housing requirement, but note that the per annum supply assumptions fell from 481 homes per year in the withdrawn OLP2040 to 463 homes per annum in the OLP2045. The supporting text should be expanded to make the position on overall need, including why the assumed supply has fallen, and in turn the 'unmet need' much clearer. The level of unmet need, and that it is lower than 2011-2031, should be explained. The Plan should be unequivocal in terms of the quantum of unmet need and the period that applies to. Acknowledgment of provision previously made for Oxford's unmet need (e.g. in Salt Cross and West Eynsham) should also be referenced.	We do not think that it is appropriate in the emerging plan to compare the housing capacity to that in a previously withdrawn plan. We think that it does need to be clear how the capacity has been assessed, and we consider this is set out clearly in the SHLAA. We do agree that the context section above policy H1 could be used to set out the unmet need position and we propose modifications to include this information, with an additional 4th bullet point: Oxford's unmet housing need is therefore 12,519. The surrounding Oxfordshire districts have formally agreed to meet this need, with the following distribution: .
Policy H2- Delivering Affordable Homes Whilst we are largely supportive of the proposed approach to delivering affordable housing, including the priority being given to social rented tenures, we note the reference to the provision of 'genuinely affordable' housing and would simply observe that there is no such definition within the NPPF.	Comment noted. The City Council considers that affordability and housing costs in Oxford are such an issue that this approach is necessary in order to assure affordable housing needs are being met by the products provided as affordable.

3322

Oxford Health NHS Foundation Trust

Appendix 2: Detailed comments and responses

Summary of Comment in ICB's representation	Oxford City Council response	Final position
NEOAOF The usage of health care services in this infrastructure area is 100%. Therefore, it is appropriate to explore the opportunity to create additional capacity at or near existing facilities by the use of developer contributions or CIL fundings. A new bullet point should be added to require the commissioning of a feasibility study looking at extension or reconfiguration of the existing practices in the area. A second bullet point should require a further feasibility study around the onsite delivery of healthcare provision. A turnkey facility is expected to be delivered by the developers for the ICB (or other relevant body). If the outcome of either feasibility study sets out that provision of a medical centre is not viable the offsite mitigation measures should be funded by developer contributions, to ensure the primary healthcare provision can support the new population growth.	There are six Primary Care Networks (PCN) serving Oxford, which cover 26 GP practices, and these practices are generally well distributed across the city. These PCNs are more relevant to healthcare than the infrastructure areas or indeed areas of focus in the Local Plan. In our research for the IDP we found that surgeries in this infrastructure area are accepting new patients. We are aware that there are capacity issues preventing expansion of some GP surgeries, but this does not seem to be universally the case. Whilst most infrastructure providers are able to indicate what infrastructure is required to support development, we realise this is harder for primary care. The Local Plan does not generally set out exactly how CIL receipts will be prioritised and spent. CIL will be collected, and there will be opportunities to spend it on a variety of infrastructure projects. This may well include primary healthcare projects if any have been identified. It is not considered appropriate therefore to specifically mention primary healthcare in relation to CIL in this Area of Focus. Similarly, no particular healthcare project has been identified for this area that S106 agreements could be required for. It would not be appropriate for the Local Plan to	ICB's objection remains.

3323

	set out a blanket requirement for S106 for primary healthcare within this Area of Focus, when firstly it is within a wider infrastructure area and indeed PCN, secondly there are surgeries accepting patients, thirdly there is no evidence that capacity can't be increased at existing sites (many seem to be on relatively large sites at low densities), fourthly, there is no identified infrastructure project these S106 agreements would be funding (including because the ICB has said that there is limited capacity at many GP surgeries for expansion, and has not identified any that could be expanded, so wording to ask for contributions towards an possible extensions or reconfigurations (specifically in this AOF) would not have a sound basis). It should be noted as well that the Area of Focus is not a development site itself, but an area in multiple ownerships, with multiple expected developments.	
CBLAOF The usage of health care services in this infrastructure area is 100%. Therefore, it is appropriate to explore the opportunity to create additional capacity at or near existing facilities by the use of developer contributions or CIL fundings. Two bullet points should be added to say infrastructure needed includes a feasibility study looking at extension or reconfiguration of GP practices in the area and another bullet requiring provision of onsite healthcare	See response in relation to NEOAOF.	ICB's objection remains.

3324

provision bringing forward a 'turnkey' facility delivered by developers to the ICB. If the feasibility study sets out that the provision of a medical centre is not financially and/or operationally viable, other offsite mitigation measures should be provided funded by developer contributions.		
WEBRAOF The usage of health care services in this infrastructure area is 100%. Therefore, it is appropriate to explore the opportunity to create additional capacity at or near existing facilities by the use of developer contributions or CIL fundings. One bullet points should be added to require commissioning of a feasibility study looking at extension or reconfiguration of GP practices in the area.	See response in relation to NEOAOF.	ICB's objection remains.
SPN1 Diamond Place and Ewert House The ICB welcomes the provision of an onsite medical centre. However, the policy does not provide any details of the medical centre provision, including the site area and whether parking will be provided to support the facility, although the ICB fully understands it is not feasible to have such details during the plan-making stage. Developers should be required to submit a feasibility study of provision, which primary healthcare service providers can be involved in commissioning, and which should include size of facility, project costing and delivery timescale. The	The policy is supportive of the potential for new medical facilities in this location, and the developer is supportive of this. However, it does not seem reasonable to expect the developer to be able to undertake feasibility work to find the best way for primary health care facilities to be delivered in this area. If a need to combine the facilities and a way of doing this is identified, then the policy allows these to come forward on this site, and the developer supports the positive wording the Plan. Details such as parking will be guided by other policies of the plan, although it should be noted that this site is in a district centre	ICB's objection remains.

3325

ICB expects that a 'turnkey' facility can be delivered for the ICB at nil cost and the facility would have similar contractual and rental arrangements to the existing premises. If the feasibility study shows the facility is not viable then other offsite mitigation should be required to ensure the primary healthcare provision can support the new population growth.	with public car parking available. However, the feasibility needs to be led by the body that oversees primary health care provision and understands how this fits together within the wider context of the city and beyond. Furthermore, it will need to be led by the body that understands mechanisms for these facilities both coming forward and being run, which is complex and likely to be depended on the interest and ability of GPs to take risks and bring this forward. Furthermore, it is not proportionate for the developer of this site to have the burden of the feasibility study, simply because their site has been identified as a potential opportunity site to enable the closure of two GP surgeries to be merged into one.	
SPS16 Templars Square There is an identified opportunity to merge the existing provision and to provide new medical premises at Templars Square. However, the policy does not provide any details of the medical centre provision, including the site area and whether parking will be provided to support the facility, although the ICB fully understands it is not feasible to have such details during the plan-making stage. Developers should be required to fund a feasibility study of provision, which primary healthcare service providers can be involved in commissioning, and which should include size of facility, project costing and delivery timescale. The ICB expects that a 'turnkey' facility can be delivered for the ICB	The policy is supportive of the potential for new medical facilities in this location, and the developer is supportive of this. However, it does not seem reasonable to expect the developer to be able to undertake feasibility work to find the best way for primary health care facilities to be delivered in this area. If a need to combine the facilities and a way of doing this is identified, then the policy allows these to come forward on this site, and the developer supports the positive wording in the policy. Details such as parking will be guided by other policies of the plan, although it should be noted that this site is in a district centre with public car parking available. However, the feasibility needs to be led by the body that oversees primary health care	ICB's objection remains.

3326

at nil cost and the facility would have similar contractual and rental arrangements to the existing premises. If the feasibility study shows the facility is not viable then other offsite mitigation should be required to ensure the primary healthcare provision can support the new population growth.	provision and understands how this fits together within the wider context of the city and beyond. Furthermore, it will need to be led by the body that understands mechanisms for these facilities both coming forward and being run, which is complex and likely to be depended on the interest and ability of GPs to take risks and bring this forward. Furthermore, it is not proportionate for the developer of this site to have the burden of the feasibility study, simply because their site has been identified as a potential opportunity site to enable the closure of two GP surgeries to be merged into one.	
Chapter 8 omission policy There is a missed opportunity to set out the provision of health infrastructure. The recently published NHS 10-year Health Plan is introducing neighbourhood health centres to provide a 'one stop shop. For patients. There is a need to include this in the draft Local Plan as this will be a major infrastructure as set out in the NPPF, and the NPPF emphasises that local plans should set out the contributions expected from development. Clearly, the current draft OLP2045 does not provide any details as required by the NPPF about the contributions expected from development towards health. There should be a draft policy on Health Infrastructure in Chapter 8, that says (amongst other things) that development proposals will be supported if they comprise a new GP facility funded by developer	Policy S3 in Chapter 1 relates to 'Infrastructure Delivery in New Development' This policy refers to the Infrastructure Delivery Plan, say that that is where projects required to support the Local Plan strategy are identified. The IDP can be reviewed and updated more frequently and easily than a Local Plan and is therefore more responsive to changing needs. Policy S3 also says that developers will be expected to engage early with the City Council and infrastructure service providers to discuss their requirements. It is wholly unrealistic that a policy could be included that says development proposals should include a new GP facility/neighbourhood health centre unless a feasibility study is carried out that shows onsite provision is not viable or the scale of proposals to do not merit an onsite facility.	ICB's objection remains.

3327

contributions or CIL and that development proposals that are not providing a neighbourhood health centre will only be supported if the onsite provision is not viable or the scale of the proposals do not merit an onsite facility.	Presumably this would apply to residential accommodation only, although that is not clear in the rep. Nearly all development that comes forward in Oxford is small, and too small to generate the need for additional health facilities by itself, or even any discernible need for any improvements. This is especially the case when nearly all facilities in Oxford are accepting new patients. Once the likely implications of a change in how primary health care is delivered is worked through an applied to Oxford, then the IDP can be updated to reflect this, but at the current time there is no certainty about what this means that can be reflected in the IDP (or Local Plan itself).	

3328

ICB (NHS Thames Valley)

Summary of Comment in Cherwell District Council's representation	Oxford City Council response
NEOAOF The usage of health care services in this infrastructure area is 100%. Therefore, it is appropriate to explore the opportunity to create additional capacity at or near existing facilities by the use of developer contributions or CIL fundings. A new bullet point should be added to require commissioning of a feasibility study looking at extension or reconfiguration of Cutteslowe Surgery and Wolvercote Surgery in the area. A second bullet point should require a feasibility study for onsite delivery of healthcare provision. A turnkey facility is expected to be delivery by developers to the ICB (or other relevant body). If the outcome of the feasibility study sets out that provision of a medical centre is not viable the other offsite mitigation measures should be provided funded by developer contributions, to ensure the primary healthcare provision can support the new population growth.	There are six Primary Care Networks (PCN) serving Oxford, which cover 26 GP practices, and these practices are generally well distributed across the city. These PCNs are more relevant to healthcare than the infrastructure areas or indeed areas of focus in the Local Plan. In our research for the IDP we found that surgeries in this infrastructure area are accepting new patients. We are aware that there are capacity issues preventing expansion of some GP surgeries, but this does not seem to be universally the case. Whilst most infrastructure providers are able to indicate what infrastructure is required to support development, we realise this is harder for primary care. The Local Plan does not generally set out exactly how CIL receipts will be prioritised and spent. CIL will be collected, and there will be opportunities to spend it on a variety of infrastructure projects. This may well include primary healthcare projects if any have been identified. It is not considered appropriate therefore to specifically mention primary healthcare in relation to CIL in this Area of Focus. Similarly, no particular healthcare project has been identified for this area that S106 agreements could be required for. It would not be appropriate for the Local Plan to set out a blanket requirement for S106 for primary healthcare within this Area of Focus, when firstly it is within a wider infrastructure area and indeed PCN, secondly there are surgeries accepting patients, thirdly there is no evidence that capacity can't be increased at existing sites (many seem to be on relatively large sites at low densities), fourthly, there is no identified infrastructure project these S106 agreements would be funding (including because the ICB has said that there is

3329

	limited capacity at many GP surgeries for expansion, and has not identified any that could be expanded, so wording to ask for contributions towards an possible extensions or reconfigurations (specifically in this AOF) would not have a sound basis). It should be noted as well that the Area of Focus is not a development site itself, but an area in multiple ownerships, with multiple expected developments.
CBLAOF The usage of health care services in this infrastructure area is 100%. Therefore, it is appropriate to explore the opportunity to create additional capacity at or near existing facilities by the use of developer contributions or CIL fundings. Two bullet points should be added to say infrastructure needed includes a feasibility study looking at extension or reconfiguration of GP practices in the area and another bullet requiring provision of onsite healthcare provision bringing forward a 'turnkey' facility delivered by developers to the ICB. If the feasibility study sets out that the provision of a medical centre is not financially and/or operationally viable, other offsite mitigation measures should be provided funded by developer contributions.	See response in relation to NEOAOF.
WEBRAOF The usage of health care services in this infrastructure area is 100%. Therefore, it is appropriate to explore the opportunity to create additional capacity at or near existing facilities by the use of developer contributions or CIL fundings. One bullet points should be added to require commissioning of a feasibility study looking at extension or reconfiguration of GP practices in the area.	See response in relation to NEOAOF.

3330

SPN1 Diamond Place and Ewert House The ICB welcomes the provision of an onsite medical centre. However, the policy does not provide any details of the medical centre provision, including the site area and whether parking will be provided to support the facility, although the ICB fully understands it is not feasible to have such details during the plan-making stage. Developers should be required to submit a feasibility study of provision, which primary healthcare service providers can be involved in commissioning, and which should include size of facility, project costing and delivery timescale. The ICB expects that a 'turnkey' facility can be delivered for the ICB at nil cost and the facility would have similar contractual and rental arrangements to the existing premises. If the feasibility study shows the facility is not viable then other offsite mitigation should be required to ensure the primary healthcare provision can support the new population growth.	The policy is supportive of the potential for new medical facilities in this location, and the developer is supportive of this. However, it does not seem reasonable to expect the developer to be able to undertake feasibility work to find the best way for primary health care facilities to be delivered in this area. If a need to combine the facilities and a way of doing this is identified, then the policy allows these to come forward on this site, and the developer supports the positive wording the Plan. Details such as parking will be guided by other policies of the plan, although it should be noted that this site is in a district centre with public car parking available. However, the feasibility needs to be led by the body that oversees primary health care provision and understands how this fits together within the wider context of the city and beyond. Furthermore, it will need to be led by the body that understands mechanisms for these facilities both coming forward and being run, which is complex and likely to be depended on the interest and ability of GPs to take risks and bring this forward. Furthermore, it is not proportionate for the developer of this site to have the burden of the feasibility study, simply because their site has been identified as a potential opportunity site to enable the closure of two GP surgeries to be merged into one.
SPS16 Templars Square There is an identified opportunity to merge the existing Donnington Medical Centre and Temple Cowley Health Centre and to provide new medical premises at Templars Square. However, the policy does not provide any details of the medical centre provision, including the site area and whether	The policy is supportive of the potential for new medical facilities in this location, and the developer is supportive of this. However, it does not seem reasonable to expect the developer to be able to undertake feasibility work to find the best way for primary health care facilities to be delivered in this area. If a need to combine the facilities and a way of doing this is identified, then the policy allows

3331

parking will be provided to support the facility, although the ICB fully understands it is not feasible to have such details during the plan-making stage. Developers should be required to submit a feasibility study of provision, which primary healthcare service providers can be involved in commissioning, and which should include size of facility, project costing and delivery timescale. The ICB expects that a 'turnkey' facility can be delivered for the ICB at nil cost and the facility would have similar contractual and rental arrangements to the existing premises. If the feasibility study shows the facility is not viable then other offsite mitigation should be required to ensure the primary healthcare provision can support the new population growth.	these to come forward on this site, and the developer supports the positive wording in the policy. Details such as parking will be guided by other policies of the plan, although it should be noted that this site is in a district centre with public car parking available. However, the feasibility needs to be led by the body that oversees primary health care provision and understands how this fits together within the wider context of the city and beyond. Furthermore, it will need to be led by the body that understands mechanisms for these facilities both coming forward and being run, which is complex and likely to be depended on the interest and ability of GPs to take risks and bring this forward. Furthermore, it is not proportionate for the developer of this site to have the burden of the feasibility study, simply because their site has been identified as a potential opportunity site to enable the closure of two GP surgeries to be merged into one.
Chapter 8 omission policy There is a missed opportunity to set out the provision of health infrastructure. The recently published NHS 10-year Health Plan is introducing neighbourhood health centres to provide a 'one stop shop. For patients. There is a need to include this in the draft Local Plan as this will be a major infrastructure as set out in the NPPF, and the NPPF emphasises that local plans should set out the contributions expected from development. Clearly, the current draft OLP2045 does not provide any details as required by the NPPF about the contributions expected from development towards health. There should be a draft policy on Health Infrastructure in Chapter 8, that says (amongst other things) that development proposals will be supported if they comprise a new GP facility funded by developer contributions or CIL and that development proposals	Policy S3 in Chapter 1 relates to 'Infrastructure Delivery in New Development' This policy refers to the Infrastructure Delivery Plan, say that that is where projects required to support the Local Plan strategy are identified. The IDP can be reviewed and updated more frequently and easily than a Local Plan and is therefore more responsive to changing needs. Policy S3 also says that developers will be expected to engage early with the City Council and infrastructure service providers to discuss their requirements. It is wholly unrealistic that a policy could be included that says development proposals should include a new GP facility/neighbourhood health centre unless a feasibility study is carried out that shows onsite provision is not viable or the scale of proposals to do not merit an onsite facility. Presumably this would

3332

that are not providing a neighbourhood health centre will only be supported if the onsite provision is not viable or the scale of the proposals do not merit an onsite facility.	apply to residential accommodation only, although that is not clear in the rep. Nearly all development that comes forward in Oxford is small, and too small to generate the need for additional health facilities by itself, or even any discernible need for any improvements. This is especially the case when nearly all facilities in Oxford are accepting new patients. Once the likely implications of a change in how primary health care is delivered is worked through an applied to Oxford, then the IDP can be updated to reflect this, but at the current time there is no certainty about what this means that can be reflected in the IDP (or Local Plan itself).

			respecting the character, appearance and significance of the Conservation Area. Gaps between buildings should be sufficient to retain the sense of openness and views of the green backdrop which enhance the setting of the Conservation Area (Policy HD3).	

3337

Network Rail

Policy/ para	Summary of Representation	Oxford City Council Response	Change proposed
Policy S1: Spatial Strategy	Support for Spatial Strategy Network Rail supports the Local Plan Spatial Strategy, notably the reference that seeks to locate development in areas well served and close to public transport, including rail. Detailed comments re: Criterion f) Amed criterion f) as follows: *f) Ensure new uses are in locations where they will not harm the amenity **or operation** of existing neighbouring uses.* This will help to ensure that development, including residential uses, close to the railway does not restrict existing or likely future operational rail requirements in line with the 'agent of change' principle established in Paragraph 200 of the NPPF.	Support for Spatial Strategy Support noted Detailed comments re: Criterion f) Paragraph 200 of the NPPF establishes the 'Agent of Change; principle. While Policy R8 - Amenity Impacts of Development and its supporting text does embody the Agent of Change principle within the plan itself, we do acknowledge that bullet point f) of the Spatial Strategy could also refer to the continued operation of existing neighbouring uses as well as their amenity. As such, a modification is proposed to criterion f) of Policy S1.	Support for Spatial strategy No change proposed Detailed comments re: Criterion f) Insert the following words into criterion f) *f) Ensure new uses are in locations where they will not harm the amenity or continued operation of existing neighbouring uses;*
Policy S3: Infrastructure Delivery in New Development	Support for Policy S3 We welcome the Plan's recognition of the critical role of rail in supporting sustainable growth, particularly through the safeguarding of land for East West Rail, improvements to	Support for Policy S3 Support Noted	Support for Policy S3 No change proposed

3338

	Oxford Station, and the reopening of the Cowley Branch Line (Policy S3). Network Rail supports the intent of Policy S3 which outlines how the Council will work with infrastructure providers to support the delivery of infrastructure. <u>Rail infrastructure narrative within the Plan</u> A key concern is that the rail infrastructure narrative as set out within the Oxford Local Plan 2045 appears to stop at the completion of currently defined schemes (notably East West Rail Phase 2 and Cowley Plus), despite the Plan itself clearly anticipating continued population, employment and visitor growth beyond these interventions. The supporting text refers to longer-term growth pressures and endorses initiatives such as OxRail 2040, yet the implications of this ambition for rail infrastructure within Oxford are not fully articulated. While it is understood that this Local Plan is not the appropriate document for detailed station masterplans or full route alignments, there is a notable absence of acknowledgement that further rail capacity enhancements within	<u>Rail infrastructure narrative within the Plan</u> The (introductory) supporting text to the West End and Botley Road Area of Focus section of Chapter 8 (page 246, CSD001), highlights that the "transformation of Oxford Station is fundamental, not just to improve user experience, but to facilitate additional capacity to help deliver East West Rail and the re-opening of the Cowley Branch Line to passenger services". Policy WEBRAOF bullet point k) in the infrastructure section of the policy includes a direct reference to OxRail 2040: Plan for Rail (see page 248, CSD001) While the Local Plan 2045 captures the most important rail infrastructure projects, the Infrastructure Delivery Plan (IDP) includes a range of infrastructure projects that have been identified by stakeholders	<u>Rail infrastructure narrative within the Plan</u> No change proposed <u>Supporting growth beyond the mid-2030s</u> No change proposed <u>Future enhancements</u> No change proposed

3339

	Oxford will be required beyond currently committed schemes. Given repeated engagement with both City and County Councils on the constraints of the existing rail corridor and station capacity, this omission risks creating a strategic disconnect between growth aspirations and infrastructure realism. We consider it important that the Plan explicitly recognises that: <u>Supporting growth beyond the mid-2030s</u> • Supporting growth beyond the mid-2030s will require additional rail infrastructure interventions within Oxford itself, not solely at its periphery.	as being required to support the plan's delivery. The IDP represents a snapshot in time and is updated throughout the plan-making process. This is to ensure that it captures the most up-to-date infrastructure projects. If Network Rail considers there are any specific infrastructure projects that should be included and are not, these can be added to the delivery schedule when the IDP is next updated. <u>Supporting growth beyond mid-2030s</u> The County Council's adopted Rail Plan - OxRail 2040 supports wider rail-related growth in the county. Oxford's Local Plan 2045 makes appropriate references to OxRail 2040. There is no need to duplicate its contents. The City and County have worked and continue to work closely on rail-related plans. In the specific example, city and county colleagues worked closely to ensure an appropriate level of coverage commensurate to each respective document was contained within it. Discussions have been on-going since 2021 about re: the Oxford Station redevelopment and the	

3340

	Future enhancements • Future enhancements may necessitate changes to existing rail alignments, junctions, station layouts and operational land, some of which could have implications for land use, heritage assets and environmental designations. These requirements should be acknowledged now to avoid future conflicts with policies that otherwise seek to constrain development in sensitive locations.	city's Infrastructure Delivery Plan (IDP) appropriately references known publicly available delivery timescales. Future enhancements Where future enhancements require planning permission, these will need to be assessed against, the Policies in the Plan as a whole. Finally, it is worth noting that (introductory) supporting text for the West End and Botley Road Area of Focus highlights that "there is likely to be a degree of tension in delivering development that protects and enhances Oxford's iconic dreaming spires and the ambitions of delivering certain development types".	
Policy WEBRA OF: West End and Botley Road Area of Focus	Network Rail supports the identification of the West End and Botley Road as an 'Area of Focus'. However, we note that the Draft Local Plan no longer refers to the Area's "significant opportunity to create high density urban living with good provision and access to open space and a vibrant mix of uses, and also to make a significant contribution to the knowledge economy."	The plan does refer to these aspects however, they are now set out as "key considerations for infrastructure and design across the wider Central and West Infrastructure Area, which contains two Areas of Focus – the University Areas North of the City Centre Area of Focus; and the West End and Botley Road Area of Focus.	No change proposed

3341

	These qualities were previously set out as key reasons for designating this area as an Area of Focus, and we consider it important that future policy continues to acknowledge this potential and actively support the area in realising it.	These exact phrases are now found in the (introductory) supporting text to the *Central and West Infrastructure Area* section of Chapter 8 of the Plan. (See page 242 of CSD001).	
Policy I2: Safeguarding Land for Infrastructure	<u>General comment</u> Policy I2 aims to safeguard the land required to deliver the specific strategic infrastructure schemes in the Plan to support their delivery. Notably, land has been safeguarded to deliver the East West Rail (Oxford) railway link. The East West Rail Safeguarding Directions (November 2025) confers specific requirements in relation to development proposals involving the land safeguarded for East West Rail (Oxford). <u>Latest operational requirements</u> Whilst the safeguarding of land is supported by Network Rail, the safeguarded boundary shown may not reflect the latest operational and construction requirements, particularly given that East West Rail's safeguarding limits continue to evolve as the project progresses. <u>Re: construction compounds, etc.</u>	<u>General comment</u> General comment noted <u>Latest operational requirements</u> We have had separate discussions with EWR. We can update to inform the progression of EWR as the plan progresses. Any changes to the land contained within the EWR Project that take place while the Oxford Local Plan 2045 is being progressed can be updated. Policy I2 already sets out the following (**bold text** highlights future proofing within policy itself) *Planning permission involving land safeguarded for East West Rail (Oxford) will not be granted until the East West Rail Company has been consulted and the procedure set out in the East West Rail Safeguarding Directions **(or the***	<u>General comment</u> No change proposed <u>Latest operational requirements</u> No change proposed <u>Re: construction compounds, etc.</u> No change proposed

3342

	The current safeguarding boundary may not fully account for temporary and permanent construction compounds, access arrangements, and ancillary infrastructure, and this is something that will need to be considered.	***requirements of any future equivalent or consenting legislation)*** *has been followed.* <u>Re: construction compounds, etc.</u> We have consulted with EWR and they are content with the extent of the safeguarding.	
Policy I2 – Safeguarding Land for Infrastructure	There appears to be a potential land use conflict in the Oxford Parkway area, specifically involving agricultural land between the A34 and Oxford Parkway Station (postcode OX2 8JQ). The land is identified within the Plan as having development potential and is also understood to be of interest or potential importance to East West Rail for operational or construction-related purposes. Without clearer policy alignment, there is a risk that development proposals could come forward that compromise rail infrastructure delivery, or that safeguarding requirements could undermine allocated development sites. This issue would benefit from clearer cross-referencing between site allocation policies and rail safeguarding policies to ensure consistency and certainty.	We have discussed the potential implications of site allocations within Oxford's administrative boundary which included land that is included within the provisions of the EWR Safeguarding Direction November 2025. In the area described in the representation from Network Rail, the nearest site allocation within Oxford city is SPN5 Pear Tree Farm. Where development sites that are allocated in Oxford city are impacted by the Safeguarding Direction, text has been included both with Policy I2 and the relevant site allocation policy. It is worth noting that the Safeguarding Direction applies irrespective of whether there is a local development plan policy in place.	No change proposed

3343

		It is also worth noting that policies contained within Oxford's Local Plan only apply within the city's administrative boundary.	
Policy WEBRA OF: West End and Botley Road Area of Focus	<u>Support for OxRail2040</u> The Plan's support for OxRail2040 is welcomed. <u>General comment</u> However, there is a possible conflict between the aspiration for OxRail2040 and some of the protections within the document. <u>Scale of service enhancement (OxRail 2040)</u> Delivering the scale of service enhancement associated with OxRail 2040 is likely to require increased railway land take in certain locations, potentially including areas currently within floodplain or protected environmental designations, as well as possible construction within Oxford's protected view cones including views of the historic skyline. While the protection of Oxford's landscape and heritage is fully recognised and supported, it is important that risk to future rail schemes necessary to deliver the Plan's growth and sustainability objectives are not conflicting with policy.	<u>Support for OxRail2040</u> Support noted <u>General comment</u> General comment noted. <u>Scale of service enhancement (OxRail 2040)</u> OxRail 2040 recognises that the 'transformation' of Oxford Rail Station is a longer-term ambition (circa. 2037). Given the heritage significance of the location of the railway station, design considerations will be key to delivering a successful scheme See response to Policy S3 for more details however it is important to re-iterate that where development proposals require planning permission, these will need to be assessed against, the Policies in the Plan as a whole.	<u>Support for OxRail2040</u> No change proposed <u>General comment</u> No change proposed <u>Scale of service enhancement (OxRail 2040)</u> No change proposed

3344

3345

Omission Policy:	<u>Rail Freight</u> We strongly support a policy approach that protects existing rail freight facilities, infrastructure and operational capability within Oxford and its immediate areas. While the Plan safeguards land for East West Rail and other strategic infrastructure, it does not explicitly protect existing rail-served sites, sidings or rail freight access arrangements from being compromised by adjacent development. We recommend that the Plan acknowledges safeguarding of existing rail freight facilities and rail-served sites to ensure development does not prejudice their continued and future use.	<u>Rail Freight</u> Policy I2 specifically highlights infrastructure schemes which are delivered through consenting regimes that lie outside the Local Plan's jurisdiction. The purpose of the policy is not to safeguard existing facilities but rather to acknowledge that the two named infrastructure schemes (i.e., OFAS/ EWR Project) are coming forward in parallel with the Oxford Local Plan 2045. Any development proposals that are within 10m of existing railway infrastructure must consult NR and are advertised in a different way to standard planning applications. We consider these existing requirements to be sufficient.	<u>Rail Freight</u> No change proposed
Policy SPCW9: Oxford Railway Station and Becket St Car Park	Network Rail are supportive of the works to Oxford Railway Station and proposed mixed use development for Becket Street Car Park with a number of residential, retail and commercial uses proposed. However, we believe the policy should also incorporate the need for education facilities and this should be reflected in the policy wording. Proposed	We do not accept the proposed inclusion of "education facilities" within the suite of named primary uses which are supported within this policy. Following a meeting with Network Rail and the City Council on 30 March 2026, Network Rail clarified that there may be an opportunity to bring forward some Use	No change proposed

	Modifications to the first paragraph of Policy SPCW9 are set out below: *Planning permission will be granted for a new station and associated public realm alongside a mix of uses including residential and/ or student accommodation, employment* ***and education uses*** *(Use Class E), and complementary town centre uses including retail, cafés and evening economy uses, which activate ground floor frontages and help to create a vibrant city quarter.*	Class E(f) uses (e.g., day nursery), as complementary uses at the site. The City Council considers that the policy, as drafted, already enables complementary uses to come forward at the site. The final sentence in the third paragraph of the policy states: *"Other complementary uses will be assessed on their merits".* As such, there is no need to make a specific reference to Use Class E(f) uses within this policy.	
Policy SPCW2: Botley Road Sites around Cripley Road including River Hotel and Westgate Hotel	With the potential inclusion of the western side of the station and the proposed allocations set out in SPCW2, consideration should be made for the subsequent impact of the proposals on one another. The proposal for residential development should consider compatibility with the aspirations of the station's redevelopment.	The City Council acknowledges that this site is in close proximity to the railway and other potential noise sources. Given the site's location nearby to sources of noise, Policy R8 would apply. Where other sites are located near a potential noise source, this information is highlighted in other site allocation policies. Therefore, to ensure a consistent approach, a minor modification has been proposed (see "change proposed" column for details).	Create an additional heading in bold font under bullet point k) and then create an additional bullet point which states: ***Additional requirements*** *l) Due to the potential impacts of noise from a number of sources (including the railway), development proposals should be informed by an acoustic design statement that addresses the*

3346

			*potential for significant environmental noise (**Policy R8**).*
Policy SPCW7: Nuffield Sites	The parcel of land adjacent to Beckett Street which is identified within Policy SPCW7 lies opposite the station redevelopment allocation and can easily be impacted by the forthcoming proposals subject to what is proposed within the Nuffield site. Consideration within this policy should be made against the station redevelopment proposals. The allocation allows a mix of uses across the three sites that delivers residential and/or student accommodation, employment uses, and appropriate other uses including retail, cafés/restaurants and other uses that support the evening economy. A minimum number of 59 dwellings (net gain) (or if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). These could conflict with the Becket Street proposals on an amenity harm basis.	The City Council acknowledges that part of the site (Land South of Frideswide Square) is in close proximity to the railway and other potential noise sources. Given the site's location nearby to sources of noise, Policy R8 would apply. Where other sites are located near a potential noise source, this information is highlighted in other site allocation policies. Therefore, to ensure a consistent approach, a minor modification has been proposed (see "change proposed" column for details).	Create a new bullet point under the "additional requirements" heading which states: *r) Due to the potential impacts of noise from a number of sources (including the railway), development proposals should be informed by an acoustic design statement that addresses the potential for significant environmental noise (**Policy R8**).*
Policy CBLAOF: Cowley Branch Line Area of Focus	Network Rail welcomes the inclusion of the Cowley Branch proposal and policy to maximise development value in and around the two proposed stations.	Support noted.	No change proposed

3347

	Network Rail supports the approach set out in this policy in favour of sustainable travel modes. NR notes that any offsite works will need to be promoted and delivered by the Local Authority. In order the proposed stations (as referenced in the policy) to be delivered, NR set out that Mallams footpath level crossing must be formally closed. It currently forms part of the PROW network, and the nearby Spring Lane Level Crossing requires upgrades as an alternative to Mallams (as part of the Cowley Branch project). The closure of these level crossings is acknowledged within the plan document which is supported by Network Rail.

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	6. **Race & Ethnicity**
2. **Disability**	7. **Religion or Belief**
3. **Gender Reassignment**	8. **Sex**
4. **Marriage & Civil Partnership**	9. **Sexual Orientation**
5. **Pregnancy & Maternity**	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.

3352	7. Provides clear **justifications** for your decisions. 8. It is written in **plain English** with simple short sentence structures.

Section 1: General overview of the activity under consideration

1.	**Name of activity being assessed.**	Oxford Local Plan 2045	**2.**	**The implementation date of the activity under consideration:**	The plan is expected to be formally adopted in May 2027.
3.	**Directorate/Department(s):**	Planning and Regulation	**4.**	**Service Area(s):**	Planning Services, Planning Policy
5.	**Who is (are) the assessment lead(s):** **Please provide:** -Name -Email address	Gabriella Barnes gbarnes@oxford.gov.uk Tara Sutherland Tsutherland@oxford.gov.uk	**6.**	**Contact details, in case there are queries:** **Please provide:** -Name -Email address	Gabriella Barnes gbarnes@oxford.gov.uk Tara Sutherland Tsutherland@oxford.gov.uk
7.	**Is this a new or ongoing EqIA?**	Ongoing	**8.**	If this is an extension of a previous EqIA, please indicate where the previous EqIA is located and share the link to the said EqIA.	N/A
9.	**Date this EqIA started:**	09/06/2026			
10.	**Will this EqIA be attached to** Corporate Management Team (CMT) **reports/updates, which will be published online?**	Will be attached to the cabinet report and therefore published.	**11.**	**Give a date (tentative or otherwise) when this assessment will be taken to the** CMT.	N/A

Section 2: About the activity, change, or policy that is being assessed.

12.		☐ Budget	☐ Decommissioning	☒ Commissioning	☐ Change to an existing activity

	Type of activity being considered: Check the most appropriate.	☒ New activity		☐ Others. Please specify:		
13.	**Which priority area(s) within Oxford City Council's Corporate strategy (2024-2028) does this activity fulfil?** Please check as needed.	☒ Good, affordable homes	☒ Strong, fair economy	☒ Thriving Communities	☒ Zero Carbon Oxford	☒ Well run council
14.	**Which priority area(s) within Oxford City Council's Equality, Diversity & Inclusion Strategy (2022) does this activity fulfil?** Please check as needed.	☐ Responsive services and customer care.	☐ Diverse and engaged workforce.	☐ Leadership & organisational commitment.	☒ Understanding and working with our communities.	
15.	**Outline the aims, objectives, & priorities of the activity being considered.**	The Oxford Local Plan 2045 (the 'Local Plan') will be the fundamental development framework for the city of Oxford. The Local Plan will have a material effect on the amount and type of housing (including affordable housing); the number and type of jobs; the location and nature of future development; and the protection of open space; across the city, among other aspects. The scope of the Local Plan and the 20-year time span mean that this document will have a significant impact on the lives of those who live and work in or visit the city. Important choices will be made between competing demands, and limited resources will be allocated. The Local Plan will seek to address inequalities, but the policies will need to be assessed for unintended consequences regarding equality issues.				

www.oxford.gov.uk
OXFORD CITY COUNCIL

16.	**Please outline the consequences of not implementing this activity.** **For example,** -Existing activity does not fulfill Corporate Objectives, -existing activity is discriminatory and not fulfilling Council's PSED, … to name a few.	Producing a Local Plan is a statutory requirement. The Local Plan 2036 is still in place as the statutory development plan, but it will become more out of date over time, especially 5 years after adoptions, which was in June 2025. That makes it easier to argue that nation planning policy should be relied upon, rather than the locally set policies that attempt to address issues in Oxford.

Section 3: Understanding service users, residents, staff and any other impacted parties.

17.	**Have you undertaken any consultations in the form of surveys, interviews, and/or focus groups?** **Please provide details—** -when, -how many, and -the approach taken.	Early Engagement Survey (17/03/2026-28/04/2026) - Short questionnaire published on Oxford City Council's consultation portal regarding the new Local Plan. Preferred Options Consultation (27/06/2026-08/08/2026) - A leaflet questionnaire was distributed to all households and businesses through the city to gain people's views on the First Draft Oxford Local Plan 2045 Consultation Document. - In addition, there were two online questionnaires (one short form and one long form). - Representations were also accepted by direct email. - Multiple face-to-face sessions and online sessions were held with officers of the Planning Policy team, including drop-ins and sign-ups.
18.	**List information and data used to understand who your residents or staff are and how they will be impacted.** **These could be-** -third-party research, -census data, -legislation, -articles, -reports, -briefs.	The policies of the Local Plan are based on an evidence base comprised of studies on topics such as housing and employment (e.g. the Housing and Economic Land Availability Assessment), transport (e.g. the Central Oxfordshire Travel Plan and advice from the County Council as the Highway Authority), site analysis (e.g. the Green Infrastructure Assessment and the Green Belt Study update) and others including conversations with, and the strategic plans of, infrastructure and service providers. In addition, the most up-to-date available demographic information was taken from sources such as the Census data 2011 and 2021 releases, population estimates (Office for National Statistics), 2019 Indices of Multiple Deprivation (DCLG), Experian data, Oxford City Council Housing Information System Database and other national, regional, and local sources of data.

		The process for producing a Local Plan places great weight on the quality of the evidence supporting policy decisions. The evidence base will be tested through public examination by a Planning Inspector before the Local Plan can be adopted.
19.	**If you have not done any consultations or collected data & information, are you planning to do so in the future?** **Please list the details –** -when, -with whom, and -how long will you collect the relevant data.	N/A

Age	☒				Several of the policies in Chapter 2 (which specifically deals with housing) of the Local Plan explicitly address the diverse needs of the different age groups in Oxford. In the preparation of the Local Plan, the Council has considered the housing requirements of many different age groups (students, young people, families, adults, elderly people, etc.). Chapter 2 includes specific policies relating to student accommodation (H9 and H10), boarding school accommodation (H16), shared housing/Houses in Multiple Occupation (H8), family-sized housing (H6) and older persons and other specialist accommodation (H13), as they relate specifically to different age groups. These policies are considered to have positive impacts upon the cohorts for which they are relevant, without costing others or negatively affecting other demographic groups, as they all strive to contribute towards establishing a	

www.oxford.gov
OXFORD CITY COUN

3358					mixed and balanced community which facilitates a healthy environment for the success of all people at all stages of their lives. Whilst policies H6, H8 and H9 include restrictions upon the free-market proliferation of specific housing types, it is not considered that these restrictions negatively impact the relevant target groups (particularly young adults/students through policies H8 and H9), as the aim and function of the restrictions is to ensure mixed and balanced communities in which all cohorts of age groups benefit from a healthier social mix. The potential self-segregation/selection of communities by age group through the unfettered forces of market demand is considered to be more likely to have a negative effect on specific age groups than ensuring their healthy mix throughout the city as a whole. Chapter 7 focuses on movement and specifically works to facilitate sustainable transport modes as alternatives to private car use; which will make the city more accessible to people of all ages. Further policies in Chapter 7 of the Local Plan relating to communities, facilities, and the vibrancy of Oxford's city and district centres, are specifically targeted at protecting, retaining, and encouraging facilities needed for the general health and wellbeing of all age demographics (policies C2, C3, C4 and C5).	

www.oxford.gov.uk
OXFORD CITY COUNCIL

					Overall, the effect of the Local Plan on the age equality strand is considered to be positive.	
Disability **(Visible and invisible)** 3359	☒				The thrust and ambition of the Local Plan strives to focus development in locations which are accessible by public transport & non-car modes to make the city more accessible to people of all abilities. This ambition forms one of the overarching threads within the document, which seeks to foster a liveable city in which residents have access to the basis of their daily needs within an easy walking distance of their homes. In doing so, the document works to protect provision of to community and recreational facilities. In the preparation of the Local Plan, the Council has considered the need for accessible and adaptable dwellings, and the need to ensure that services and facilities are accessible to all. Chapter 6 on design includes Policy HD14 - Accessible and Adaptable Homes - which adopts optional Building Regulations requirement M4(2) to provide enhanced accessibility and adaptability for all new affordable dwellings and for a minimum of 15% of new general market dwellings. This policy also adopts Building Regulations requirement M4(3) for dwellings for wheelchair users, for a minimum of 5% of all dwellings for which the City Council is responsible for allocations or nominations, on sites of more than 20 dwellings. It is considered that this policy will result in some positive effects for housing quality for people with disabilities.	

www.oxford.gov.uk
OXFORD CITY COUNCIL

					Furthermore, the policies contained in Chapter 7 focus on movement and work to support a range of sustainable transport modes, which will provide residents and users of Oxford with a greater range of movement options and make the city more accessible to people of all abilities. Overall, the effect of the Local Plan on the disability equality strand is considered to be positive.	
Gender re-assignment			☒		No equalities impact identified.

3362

Section 5: Conclusion(s) of your Full Impact Assessment

22.	**Conclusions.** The Local Plan seeks to deliver specific types of development and at specific locations. As such, there is the potential for the policies to have differential impacts on different equalities groups. Development at any site could have equality implications both for new residents and users/workers within the site, and for communities in adjacent areas. The extent to which control over these potentially different impacts can be exercised varies. Overall, Local Plan policies have been designed to attempt to improve the relevant equality strands where possible, and to otherwise have a neutral impact. More specifically, it is not anticipated that there will be a direct impact on equality issues related to gender reassignment, sex, sexual orientation, pregnancy and maternity, or

		religion and beliefs as a result of the policies and development proposed in the Local Plan; whilst it is considered that the policies and resulting development patterns of the Local Plan are likely to have some positive effect on the age, disability and socio-economic equality strands.						
	☐	Stop and reconsider the activity.	☐		Adjust activity before beginning the activity and continue to monitor.	☒	No major change(s) or adjustments and continue with activity but continue to monitor.	☐	No major change(s) or adjustments and continue with the activity. No need to monitor in the future.

23.	**Please explain how you have reached your conclusions above.**	The conclusions have been reached by careful consideration of the equality strands against the Local Plan policies.	**Benefits of Implementation**: Morally the right thing to do; Enhance social cohesion; Identify and eliminate biases. **Promotes Equity**: Ensures everyone has equal opportunities. **Enhances Diversity**: Encourages mixed and balanced communities. **Improves Representation**: Enables different voices to be part of decision-making.

Section 6: Monitoring and review plan.

The responsibility for maintaining a monitoring arrangement of the EqIA action plan lies with the service/team completing the EqIA.
These arrangements must be built into the performance management framework such as KPIs or Risk Registers.

To:	**Cabinet**
Date:	**8 July 2026**
Report of:	**Director of Housing**
Title of Report:	**Local Authority Housing Fund - Round 4**

Summary and recommendations	
Decision being taken:	The report seeks the required budget provision and the necessary project approval and delegations to enable the Council to proceed with entering into the national Local Authority Housing Fund Round 4.
Key decision:	Yes
Cabinet Member:	Councillor Linda Smith, Cabinet Member for Housing and Communities and Councillor Mike Rowley, Cabinet Member for Regulation of the Private Rented Sector and Preventing Homelessness
Corporate Priority:	Deliver good, affordable homes and thriving communities
Policy Framework:	Housing, Homelessness and Rough Sleeping Strategy 2023 – 2028

Recommendation(s): That Cabinet resolves to:

1. **Approve** receipt of the Local Authority Housing Fund Round 4 (LAHF R4) funding of £1,719,354 to deliver 4 temporary accommodation units and 4 units for resettled Afghan families
2. **Recommend** to Council, to approve the allocation of £808,000 of the LAHF R4 grant funding in substitution of approved HRA borrowing for the delivery of the temporary accommodation element of LAHF R4.
3. **Recommend** to Council, to approve the allocation of £898,500 of the LAHF R4 grant funding to a new General Fund capital budget for the payment of a capital grant of 898,500 to a Registered Provider to deliver the 'resettlement' element of LAHF R4.
4. **Delegate** authority to the Director of Housing in consultation with; Cabinet Member for Regulation of the Private Rented Sector and Preventing Homelessness, the Group Finance Director and the Director of Law Governance and Strategy, to select a Registered Provider delivery partner and enter into a grant agreement with them to part fund the purchase of 4 units for resettled Afghan families.

Appendices	
Appendix 1	Risk Register

Appendix 2	Equality Impact Assessment (EqIA)

Introduction

1. The Ministry of Housing, Communities and Local Government (MHCLG) has launched a national £950m Local Authority Housing Fund - Round 4 (LAHF R4), to support local authorities to increase the supply of good quality temporary accommodation to reduce homelessness pressures and provide accommodation to Afghan families settling in the UK legally under the government resettlement scheme following the Taliban takeover of Afghanistan.
2. The Council has seen a significant increase in demand for homelessness services in recent years and this in turn has increased the demand for emergency temporary accommodation (TA) including expensive hotel accommodation, required to meet the Council's statutory duties. Cabinet received a report in April 2026, which confirmed that in financial year 2025-26 the Council had placed over 500 households into TA and has currently around 320 households in TA, with a substantial number in hotels and nightly charged accommodation, as of April 2026.
3. The UK has welcomed around 37,000[1] Afghans nationally who have fled the country following the Taliban takeover, due to the risk they will be persecuted for supporting the former government and the British presence in the country.
4. Locally, Oxford City Council has now directly supported 65 families under refugee resettlement schemes from Syria, Afghanistan, and other countries and in doing so those families have successfully made Oxford their home. Supporting refugee resettlement is aligned to the Council's strategy, and taking part in these government schemes helps ensure grant funding is received to adequately house and support these families as they settle in the city.
5. Oxford City Council have previously received funding for Local Authority Housing Fund (LAHF) – Round 1,2 and 3 and progress to date has been very positive. As part of the previous rounds of LAHF, the Council purchased 15 properties (6 under R1,4 under R2 and 5 under R3) through a combination of central government grant funding and Council investment. In total 22 properties have been delivered through Rounds 1-3 of LAHF, exceeding the central government target with the programme delivery now complete.
6. The Government announced the creation of LAHF R4 and gave an initial allocation offer to Local Authorities who were in scope for a grant allocation in November 2025.

Local Authority Housing Fund Round 4 investment

7. Oxford City Council have been allocated further grant funding for LAHF Round 4 to purchase 8 properties. There are two elements to the grant, the temporary accommodation ('TA') element for 4 units, with properties used for homeless households and the 'resettlement' element for 4 units to support Afghan households in need of resettlement under the Afghan Resettlement Programme (ARP). As a prerequisite to enter the fund, Council officers were required to sign a Memorandum of Understanding (MoU) with MHCLG.
8. The 8 properties will be acquired from the local housing market through a combination of Council led delivery for the TA element, and in partnership with a local Registered Provider of Social Housing, for the resettlement element. MHCLG has approved this proposal and agreed to release the grant funding, subject to the Council and delivery partner making the necessary part investment and meeting the terms of the fund.

[1] https://www.gov.uk/government/publications/afghan-resettlement-programme-operational-data/afghan-resettlement-programme-operational-data

9. Cabinet has agreed the acquisition of up to 150 additional TA units via £32m investment in March 2026 and this report proposes that the four 4 ‘TA’ units are delivered under the wider TA programme. The properties purchased for the ‘TA’ element will be good quality self-contained accommodation and let at temporary accommodation rent charges. Officers are proposing to utilise the grant funding for the ‘TA’ element to support the delivery of the wider TA programme reducing the demand on the Housing Revenue Account (HRA), providing value for money for the Council. For the ‘TA’ element the government grant will be £808,000 and will replace some HRA borrowing.

10. In regard to delivery of the four ‘resettlement’ properties, the proposal is to work with a local Registered Provider rather than direct deliver through additional HRA borrowing. This partnership approach will deliver the same benefits of new social housing, without adding further borrowing burden on the Housing Revenue Account (HRA) which can instead be used on other priorities like more general needs housing. As part of the terms of the partnership arrangement, it is proposed the Council will be entitled to nomination rights.

11. Access into the private rented sector will be the most important option for many refugee households and work across Oxfordshire is underway to support access into the sector with support with deposits and rent in advance, but the opportunity from LAHF R4 is that it will allow the Council to work with deliver partner to offer affordable housing at an affordable rent for Afghan refugees from the ‘resettlement’ element of the fund, which also reduces homelessness demand.

12. The fund guidance sets out that if a resettlement property becomes available within a 3 year period of the home coming into use, the government expects that home to be offered to another resettled family. Beyond that the fund brings the benefit that the homes can be available to support wider housing and homelessness responsibilities after the needs of the eligible cohort have been addressed.

13. LAHF R4 will help the Council achieve its corporate priorities, to deliver good, affordable homes and support thriving communities, and allow the Council to access funding to both increase the supply of good quality temporary accommodation, address the immediate pressures of supporting refugee communities to find accommodation, as well as adding to our stock of council housing for the future.

14. Regarding the properties the government have directed that 6 properties should delivered in year 1 (2026-27) and 2 properties in year 4 (2029-30) of the programme. Due to the gap between delivery years, Officers have sought dispensation from central government to deliver the 2 units for year 4 (2029-30) at an earlier point. See Table 1 for a breakdown of the programme’s delivery as per the current delivery timetable:

Table 1

Property type	Year 1 delivery target (2026-27)	Year 2 delivery target (2027-28)	Year 3 delivery target (2028-29)	Year 4 delivery target (2029-30)	Total delivery target
TA element (2-4+bed)	3	0	0	1	4
R4 resettlement element (2-3 bed)	2	0	0	0	2

R4 large resettlement element (4+bed)	1	0	0	1	2
All property types	6	0	0	2	8

Alternative Options

15. Deliver the resettlement properties directly through the HRA – This would result in additional Housing Revenue Account borrowing as the grant money is insufficient on its own to acquire the required units.

16. Do nothing – Under this option, the Council would not accept the grant funding that has been made available and therefore would not be able to deliver the properties, for the eligible cohort, with substantial contribution by the government and this would not support the existing TA deliver programme and would not reduce pressure on the HRA. Under the 'do nothing' option, the potential benefits referenced in this report will not be realised. The Council would need to consider other accommodation offers to support refugee groups.

Implications of Local Government Reorganisation

17. Government guidance concerning LGR has been considered in relation to this report. Entering into the fund will ensure the Council receives grant funding to deliver additional housing to reduce homelessness which will continue to be required post LGR, ensuring that essential service delivery continues as well as providing value for money.

Carbon and Environmental

18. There are few environmental considerations arising directly from this report. Any property purchased into the HRA or by an RP will need to comply with the Decent Homes Standard, Housing Health & Safety Rating System (HHSRS) and meet EPC rating of C or above. The properties will go through voids process to ensure they are brought up to a lettable standard in line with other allocations of housing.

19. Officers will ensure through agreement that the RP will independently maintain and apply its own stock standards and that the approach meets the terms of the MHCLG prospectus. Appropriate governance and regular reporting arrangements will be put in place to provide assurance that these requirements are being met on an ongoing basis.

Financial implications

20. The total approved grant to be received from government is £1,719,354 which comprises a capital grant of £1,706,500 and a revenue grant of £12,854. This is to be received in the tranches as per the LAHF R.4 prospectus.

21. As stated earlier in this report, the 'TA' element will be delivered as part of the wider TA programme to deliver 150 units via £32m investment which was approved by cabinet in March 2026. Therefore, the grant received for the 'TA' element of £808,000 will reduce HRA borrowing and no additional HRA borrowing is requested as part of this report.

22. For the 'resettlement' element, the Council will receive £898,500 in grant and the Council will enter in an agreement that will allow for the transfer of grant to a RP to purchase the required resettlement properties with RP funding a portion which the grant does not cover. Officers will create a new budget line in the General Fund so the grant of £898,500 can be received from central government and then paid out to the RP, the delivery overall will be cost-neutral to the Council. This report seeks delegated approval to enter into an agreement with a RP in line with the government guidance for the programme.

23. It should also be noted that delivery and payment timings will remain subject to MHCLG agreement and approval. As such, timescales and funding drawdown profiles may be subject to change, including in circumstances where the acquisition programme is completed earlier than currently anticipated.

Legal issues

24. Under Parts 4.5 (4) and 4.5 (26) of the Constitution Cabinet is responsible for the decisions set out in the recommendation. Under section 9E (3) (c) of the Local Government Act 2000 Cabinet is empowered to delegate its functions to officers.

25. Any delegated decision to award a grant of £750,000 or greater will be a Key Decision and will need to comply with the procedure for taking Key Decisions set out in the Council's Constitution.

26. The MOU between the Council and the Ministry of Housing, Communities and Local Government has not been referred to legal for review and has already been signed by the Council. Whilst it states it is not intended to create legal or binding obligations this does not automatically prevent MHCLG being able to recover the grant. The Council should ensure it complies with the obligations set out within it. The Council also needs to be confident that the proposed use of the grant for an already existing TA scheme is acceptable to MHCLG.

27. Legal advice must be sought in respect of the proposal partnership working with a Registered Provider including how a partner is chosen and to draft the agreement between the Council and its chosen partner.

Level of risk

28. See Risk Register attached, under Appendix 1

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. Age	**6. Race & Ethnicity**
2. Disability	**7. Religion or Belief**
3. Gender Reassignment	**8. Sex**
4. Marriage & Civil Partnership	**9. Sexual Orientation**
5. Pregnancy & Maternity	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents,

3376	employees, partners, council suppliers & contractors, and Council Members 5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact. 6. Offers **mitigations or adjustments** if a PSED has been impacted. 7. Provides clear **justifications** for your decisions. 8. It is written in **plain English** with simple short sentence structures.

Section 1: General overview of the activity under consideration

1.	**Name of activity being assessed.**	Entering into Local Authority Housing Fund ("LAHF") – Round 4	**2.**	**The implementation date of the activity under consideration:**	13 July 2026
3.	**Directorate/Department(s):**	City and Citizens' Service	**4.**	**Service Area(s):**	Housing Services
5.	**Who is (are) the assessment lead(s):**	Stephen Cohen, scohen@oxford.gov.uk	**6.**	**Contact details, in case there are queries:**	Stephen Cohen, scohen@oxford.gov.uk
7.	**Is this a new or ongoing EqIA?**	New X	**8.**	If this is an extension of a previous EqIA, please indicate where the previous EqIA is located and share the link to the said EqIA.	n/a
9.	**Date this EqIA started:**	5 June 2026			
10.	**Will this EqIA be attached to Corporate Management Team (CMT) reports/updates, which will be published online?**	N/a	**11.**	**Give a date (tentative or otherwise) when this assessment will be taken to the** CMT.	n/a

www.oxford.gov.uk
OXFORD CITY COUNCIL

Section 2: About the activity, change, or policy that is being assessed.

12.	**Type of activity being considered:**	X **Budget**	☐ Decommissioning	☐ Commissioning	

					☐ Change to an existing activity.	
		☐ New Activity	X **Others – project approval**			
13.	**Which priority area(s) within Oxford City Council's Corporate strategy (2024-2028) does this activity fulfil?**	X **Good, affordable homes**	☐ Strong, fair economy	X **Thriving Communities**	☐ Zero Carbon Oxford	☐ Well run council
14.	**Which priority area(s) within Oxford City Council's Equality, Diversity & Inclusion Strategy (2022) does this activity fulfil?**	X☐ **Responsive services and customer care.**	☐ Diverse and engaged workforce.	☐ Leadership & organisational commitment.	X **Understanding and working with our communities.**	
15.	**Outline the aims, objectives, & priorities of the activity being considered.**	Oxford City Council have been allocated grant funding for LAHF Round 4 to purchase 8 properties. There are two elements to the fund, the temporary accommodation ('TA') element for 4 units, with properties used for homeless households and the 'resettlement' element for 4 units to support Afghan households in need of resettlement under the Afghan Resettlement Programme (ARP). LAHF R4 will help the Council achieve its corporate priorities, to deliver good, affordable homes and support thriving communities, and allow the Council to access grant funding to both increase the supply of good quality temporary accommodation, address the immediate pressures of supporting refugee communities to find accommodation, as well as adding to our stock of council housing for the future.				

www.oxford.gov.uk OXFORD CITY COUNCIL

		The objectives of the fund and delivery plan are set out in the attached cabinet report.
16.	**Please outline the consequences of not implementing this activity.**	If the Council did not implement this activity, it would not be able to take advantage of the grant funding available and not support wider corporate objectives regarding increasing affordable supply and supporting households who are seeking sanctuary.

Section 3: Understanding service users, residents, staff and any other impacted parties.

17.	**Have you undertaken any consultations in the form of surveys, interviews, and/or focus groups?**	LAHF R.4 is a governmental grant programme for Local Authorities to deliver housing. Central government prescribe the delivery timeline alongside property type and the Council must follow the fund's guidance and prospectus rules. The delivery of housing will add to the Council housing stock for homeless households in need and also support resettlement families.
18.	**List information and data used to understand who your residents or staff are and how they will be impacted.**	The Council has seen a significant increase in demand for homelessness services in recent years and this in turn has increased the demand for emergency temporary accommodation (TA) including expensive hotel accommodation, required to meet the Council's statutory duties. Cabinet received a report in April 2026, which confirmed that in financial year 2025-26 the Council had placed over 500 households into TA and has currently has around 320 households in TA, as of April 2026. Delivering temporary accommodation units will help to support homeless households needs by delivering good quality self-contained accommodation. The UK has welcomed Afghans who have fled the country following the Taliban takeover, due to the risk they will be persecuted for supporting the former government and the British presence in the country. Supporting refugee resettlement is aligned to the Council's strategy, and taking part in these government schemes helps ensure funding is received to adequately house and support these families as they settle in the city.

		Access into the private rented sector will be the most important option for many refugee households and work across Oxfordshire is underway to support access into the sector with support with deposits and rent in advance, but the opportunity from LAHF R4 is that it will allow the Council to work with a delivery partner to offer affordable housing at an affordable rent which also reduces homelessness demand.
19.	**If you have not done any consultations or collected data & information, are you planning to do so in the future?**	n/a

Section 4: Impact analysis.

20.	**Who does the activity impact?**	**Service Users**	**Yes** X	No ☐	Don't Know ☐
		Members of staff	**Yes** X	No ☐	Don't Know ☐
		General public	**Yes** X	No ☐	Don't Know ☐
		Partner / Community Organisation	**Yes** X	**No** ☐	Don't Know ☐
		City Councillors	**Yes** X	**No** ☐	Don't Know ☐
		Council suppliers and contractors	**Yes** X	No	Don't Know ☐

21.	Does the activity impact positively or negatively on any protected characteristics as stated within Equality (Act 2010)?

Protected Characteristic	Positive	Negative	Neutral	Don't know	Data/information/evidence supporting your assessment	Analysis & insight Mitigations
Age	X	☐		☐	In financial year 2025-26 the Council placed over 500 households into TA and currently has around 320 households in TA, with a substantial number in nightly paid accommodation as of April 2026. There is a significant need for good quality self-contained accommodation. The government has committed to supporting Afghans arriving on the government backed resettlement scheme and entering into the fund will help to support this aim by utilising grant funding and working with an RP partner with the benefit of increasing the supply of social housing.	The activity is about improving outcomes for homeless household and resettled refugees through utilisation of government grant funding to deliver accommodation. No negative impacts of these proposals have been identified and the proposal seeks to have a positive impact.

23.	**Please explain how you have reached your conclusions above.**		Entering into the fund ensure the Council receives grant funding to deliver temporary accommodation and helps meet a corporate commitment on support government backed resettlement schemes

Section 6: Monitoring and review plan.

The responsibility for maintaining a monitoring arrangement of the EqIA action plan lies with the service/team completing the EqIA.
These arrangements must be built into the performance management framework such as KPIs or Risk Registers.

24.	**Who or which team or service area will be responsible for monitoring equalities impact**?		All temporary accommodation properties will be let according to general policies on temporary accommodation allocation for households the Council has a homelessness duty towards (under Housing Act 1996, Part 7). Data is collected by central government (MHCLG) quarterly for all homelessness cases and this includes equalities data which is then monitored by the Housing Service. All resettlement properties are let in conjunction with the Home Office and the South East Strategic Partnership for Migration (SESPM). The Council will record these cases as part of the corporate refugee resettlement commitment, monitored by Housing Services.
25.	**Who (individual, team, or service area) will be responsible for carrying out the EqIA review?**		Housing Services

26.	**How often will the equality impact be reviewed for this activity?**	No planned review	**27.**	**Date when the EqIA will be reviewed again.**	x

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	**8 July 2026**
Report of:	**Director of Housing**
Title of Report:	**Annual review of the Council of Sanctuary Framework, 2025-2028**

Summary and recommendations	
Decision being taken:	To provide an update on the progress made in Year 1 of the Council of Sanctuary Framework 2025-28 and to seek approval for the implementation of the Year 2 Action Plan
Key decision:	No
Cabinet Member:	Councillor Linda Smith, Cabinet Member for Housing and Communities
Corporate Priority:	Support Thriving Communities
Policy Framework:	Thriving Communities Strategy 2023-27, Council of Sanctuary Framework 2025-2028

Recommendation(s): That Cabinet resolves to:	
1.	**Note** the progress made in Year 1 to implement the Council of Sanctuary Framework and Action Plan and the emerging risks and challenges for delivery over the next year and beyond
2.	**Approve** the adoption of the new Framework Action Plan for Year 2 (26-27); and
3.	**Delegate authority** to the Director of Housing, in consultation with the Cabinet Member for Housing and Communities, to update the Action Plan when required to respond to emerging risks and challenges.

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Council of Sanctuary Framework	No

Appendix 2	Risk Register	No
Appendix 3	Equalities Impact Assessment (Updated)	No
Appendix 4	Year 1 Action Plan with rag rating	No
Appendix 5	Year 2 Draft Action Plan	No
Appendix 6	KPI table	No

Introduction and background

1. The Council has a proud track record of welcoming people seeking sanctuary who make Oxford their home and achieved Local Authority of Sanctuary award status in November 2024 which delivered a key action within the Council's Thriving Communities Strategy 2023-27. The *Sanctuary Awards* are provided by the network of local groups and City of Sanctuary UK, to recognise and celebrate the commitment by institutions to the charity's values and vision and enable those institutions to be become active participants in the City of Sanctuary network.
2. Officers presented the Council of Sanctuary Framework and Action Plan 2025-2028 to Cabinet in January 2025 for approval. The Framework was developed with residents, staff and external partners and sets out how the Council will seek to support people seeking sanctuary over the next 3 years.
3. It was agreed by Cabinet that officers would report back annually on progress made against the action plan. This report sets out progress and challenges against the planned actions over the past year. The report also seeks approval for the updated action plan to be approved for year 2, updated to address emerging challenges.
4. The Council continues to provide support to people arriving on government backed refugee resettlement schemes through its corporate commitment, as well as visa schemes such as Home for Ukraine to settle and rebuild their lives. The Council has developed additional programmes to facilitate move on for people residing in and exiting from Home Office accommodation, supporting wider corporate aims to prevent homelessness.
5. To ensure this report is inclusive of the broad range of legal statuses, living circumstances and experience of migration, the Council has chosen to use the interchangeable term 'people seeking sanctuary' in this report which represents people that are from a forced displacement background including asylum seekers, refugees and vulnerable migrants.

Council of Sanctuary Framework and Action Plan

6. The Framework committed the Council to work in collaboration with the sanctuary community to inform and develop a Local Authority City of Sanctuary Action Plan and ensure the Council meets its commitment to become an accredited local authority of sanctuary.
7. As part of the process to achieve the *Council of Sanctuary Award*, the Council developed an Action Plan and commissioned a needs assessment which was produced in early

2024 which engaged over 100 people seeking sanctuary and support agencies and can be found via this web link. The full Framework document and action plan can be found at **Appendix 1.**

8. Whilst there have been challenges, most acutely linked to nation-wide protests and community cohesion in summer 2025, there has been a lot of progress towards meeting the Year 1 actions embedded within the Action Plan which could be found in **Appendix 4** with a full rag rating**.**
9. Below is a summary of the thematic Action Plan areas and Year 1 progress and updates:

- **Wellbeing, Education and Employment**

10. Employment is a key driver in improving financial and housing prospects and the Council have been involved in several work strands to boost employability prospects for people seeking sanctuary. The Council's Youth Ambition Team is delivering employability advice for people moving on from Home Office accommodation including a drop in service and one to one support including CV writing, confidence building and job searches with at least 40 people engaging with the service which will continue into financial year 2026/27.
11. Addressing structural barriers has also been a clear objective. The Council has worked with the Oxfordshire Inclusive Economy Partnership (OIEP) which has developed its webpage to include improved guidance for employers when hiring refugees and are also working with an Oxford based academic (from the University of Southampton) to produce a policy briefing for the evaluation for the Refugee Employment Support Project (RESP).
12. Health and wellbeing is a key area of focus, with the Council utilising grant funding to support improved health outcomes. Examples include the Resettlement Team providing support for households who have arrived under government backed schemes to access therapeutic counselling for individuals via local health charity Refugee Resource.
13. The Council is also part funding an Oxfordshire Asylum Seeker Care Co-ordinator (ASCC) whose role supports improved early intervention for asylum seekers in Oxfordshire with 277 individuals supported in 2025/26 on key areas such as GP registration, vaccination catch up, health checks, NHS app registrations and advocacy to support access to required health care.
14. English for Speakers of Other Languages (ESOL) is a programme that addresses critical need and supports access to employment, volunteering and other education courses. All families resettled by Oxford City Council (in Oxford through the government backed resettlement schemes) are offered ESOL support under the commissioned wraparound support contract that Oxford City Council commissions with Asylum Welcome which is in its 3rd Year, delivering over 200 hours of ESOL to resettlement families. The City Council has also worked closely with Oxfordshire County Council to promote ESOL helping to facilitate learning across Oxford.
15. The Council has supported the Schools Advocacy Programme (delivered by Asylum Welcome) since 2021 which provides support for families to engage with local schools, helping children thrive and empowering parents to participate meaningfully in their children's education using volunteer mentors who work with families to help them navigate the UK school system. Below is a case study from a participant in the programme demonstrating the impact that it can have:

Case Study – Parent participating in the programme

"The Schools Advocacy Programme has given us the gift of hope and opportunity, by helping us to support our children's education and wellbeing in school. Every week, we are greeted with welcoming smiles and taken through the doors of the schools to meet mentors and teachers; people and surroundings that in the beginning were scary and unfamiliar, soon felt welcoming and safe."

- **Housing and Homelessness**

16. The Council continues to utilise grant funding to support the prevention of homelessness in line with the Council Strategy and the Housing, Homelessness and Rough Sleeping Strategy. The Council's Housing Services provides support for households to move on from Homes for Ukraine hosting, transitional accommodation and Home Office contracted contingency and dispersal accommodation, accepting homelessness duties in 100 cases.

17. The Council has supported at least 54 households in year 1 to move on successfully into independent housing from Home Office managed accommodation. This has been supported by the Council's Procurement and Placement Team and Voluntary and Community Sector (VCS) partners who work with private landlords to increase the supply of private sector housing and also provide support to homelessness applicants the Council have a duty towards, who self-find private sector accommodation and the Council provides support via the first month's rent and deposit.

18. Work is on-going to improve the quality of information provided to Oxford's residents to assist them to navigate the UK housing system. For example housing advice leaflets that have been translated into 9 languages and produced alongside videos with translation; this can be found via the Council's Youtube channel: Finding a home if you are homeless

19. The Council has delivered the Local Authority Housing Fund (LAHF) which, in the last 3 years has delivered 22 properties through direct purchases for temporary accommodation usage for homelessness households and resettlement groups including Ukrainian and Afghan households, adding to the Council's wider housing portfolio and helping to prevent homelessness.

20. There has been a strong focus by the Council on rough sleeping with work to better track individuals who may come from a sanctuary background and are found to be rough sleeping by the Council's commissioned outreach team. The Council's Rough Sleeping Team is now recording this information in monthly reports, with overall reported numbers remaining low however spikes have occurred over the past year. Officers plan to analyse this data in year to understand if any further mitigations can be put in place.

- **Building Communities & Amplifying Voices**

21. A key objective of the Framework Action Plan has been to work in partnership to build community resilience and amplify voices. To facilitate this aim, the Council has continued to hold internal and external stakeholders group meetings quarterly to provide accountability to the Action Plan and improve the reach of the Action Plan across the Council and partner organisations.

22. Improved communication from updates to the refugee, asylum seeker and migrant web pages on the Council's website, and an enhanced translation tool has been implemented to aid navigation. There here have been intranet updates and lunch and learn interactive

sessions for staff where people with lived experience have shared their experiences, including at the recent all staff conference.

23. Supporting residents to access positive activities has led to strong engagement with Council backed projects. For example, over 1000 people have accessed sporting sessions led by the Council's Communities Team to improve wellbeing, foster friendships and engagement with the local community. The Resettlement Team has worked with the Dancing Oxford project (organised by the Culture and Community Development Team) working with Pegasus Theatre company, Chameleon, to bring a refugee led dance show to Oxford with the focus on young sanctuary seekers.

24. The Museum of Oxford has several semi-permanent exhibitions which bring to life various groups' journeys to Oxford. Big Ideas grants have also recently been awarded to various sanctuary seeking support organisations e.g. Asylum Welcome, EMBS, Oxford Community Action, Oxford Hub, Refugee Resource, whilst recent small grants went to Damascus Rose Kitchen, Iranian Community Network, Oxfordshire Asian Women's Voice, Syrian Community Oxfordshire, Syrian Sisters, Iraqi Women Art and War and Tandem Oxford

Shaping Services

25. A key area within the needs assessment was to encourage people with lived experience to be more involved in the development of Council policy. Officers have undertaken several initiatives to put this into practice. A dedicated co-production section was incorporated into the new Citizen Engagement Policy. Several teams are actively involved in co-producing policies and initiatives, including the No Recourse to Public Fund (NRPF) protocol with Oxfordshire County Council and partners to develop a toolkit for advice if staff are working with individuals who have the NRPF condition which can be a significant barrier to accessing services. It is expected that this protocol will be finalised in autumn 2026.

26. Other key programmes include the NRPF Co-Production Group, which brings together residents who have the NRPF immigration condition to help create a resource for other residents. This is currently in development and expected to conclude in autumn 2026.

27. The Community Champion programme, made up largely of individuals who have sought sanctuary in Oxford, demonstrates exceptional expertise in co-production. It has been instrumental in amplifying underrepresented voices through achievements such as creating multilingual resources (including a GP receptionist animation in six languages and a Healthwatch video on language support), leading community events like Black History Month and a Men's Health football tournament, and producing a Community Cookbook showcasing lived experiences. In addition, it has influenced key consultations on NHS plans, the Council's anti-social behaviour policy, and citizens' experience surveys, contributing 223 insights into health barriers and engaging 2,845 individuals across diverse communities.

Supporting Integration

28. The Council continues to support resettlement from government backed resettlement schemes namely the United Kingdon Resettlement Scheme (UKRS) and Afghan Resettlement Programme (ARP). In 2025, the Council resettled 8 new families (15 adults

and 21 children). A total of 32 families were supported during the year. Delivery includes end-to-end coordination, procuring suitable and affordable accommodation, which is predominantly in the private sector, to commissioning intensive wrap-around support through Asylum Welcome.

29. The Council continues to support residents under the Homes for Ukraine scheme. There are now around 44 hosting arrangements and many other households have moved onto independent accommodation. A specialist Early Intervention and Triage Officer delivers statutory housing support alongside upstream prevention and post-tenancy sign-up assistance. The Homes for Ukraine Rematching Team works county-wide to prevent homelessness and ensure residents are connected to appropriate, holistic support.

30. The Council continues to commission holistic support for people granted refugee status and moving on from dispersal accommodation. For example, from January – March 2026, the Council's commissioned partner saw 221 clients (including 56 new arrivals) across 24 drop-in sessions to support with upstream housing advice, health and wellbeing referrals, signposting to legal advice and practical support. The Council attends drop-in sessions to support homelessness applications and housing advice for people moving on from Home Office contracted accommodation and saw 219 individuals in 25/26.

31. The Helping Hands initiative is a regular litter pick around the contingency hotel, which houses people claiming asylum and managed by Home Office contractor, increasing engagement with the local community. Volunteers at the Oxford Homeless Project Hotel have regularly served meals, packed food parcels, and offer services such as free haircuts. The Council has also commissioned. The Sundial Centre has also undertaken cultural awareness workshops for people seeking sanctuary.

Working in Partnership & Innovating

32. A key element of the Action Plan is to work in partnership with local organisations, leveraging skills and capacity to widen reach and outcomes for people seeking sanctuary. The Council is currently working with Oxford Brookes University and the University of Oxford on two research projects with a focus on welcoming

33. The Council is developing a "*Basics of Sanctuary"* e-learner module, in partnership with Oxfordshire County Council and Oxford Brookes University, and the aim is for it to be a stand-alone training module on the county wide Oxfordshire Safeguarding Board platforms in perpetuity. This can then be accessed by all agencies within Oxfordshire.

34. The Council continues to engage with local partners via the county-wide Oxfordshire Migration Partnership. It is noted that other local authorities in Oxfordshire such as Oxfordshire County Council and West Oxfordshire District Council have passed Council motions and have also committed to becoming Local Authorities of Sanctuary and grow the sanctuary movement locally. The partnership includes statutory partners such as the NHS and Thames Valley Policy and other voluntary and community sector partners such as Connection Support which deliver the Homes for Ukraine wraparound support contract commissioned by Oxfordshire County Council.

Sanctuary KPI's

35. One of the accepted recommendations from the Scrutiny Committee when it considered the Framework, was to set clear performance measures as part of the Action Plan. Officers have developed individual measures of success against the actions and created overarching KPI's for this Action Plan. These can be found in **Appendix 6**.

Year 2 Framework Action Plan

36. In light of progress against the Year 1 Action Plan, and respond to new challenges, a new Year 2 Action Plan has been developed, updating the current Action Plan after consideration of progress and to ensure the priorities are adapted to the emerging challenges. The new Action Plan for Year 2 can be found in **Appendix 5 and cabinet are asked to adopt the new Action Plan to progress the work for the financial year 26/27.**

37. The Action Plan will be reviewed regularly to monitor and report on progress against commitments in the Framework. To ensure it can respond quickly to emerging priorities and risks, approval to revise the plan throughout the Year as required in consultation with the Cabinet Member for Housing and Communities is sought.

Financial implications

38. This report is not requesting any additional budget allocation to deliver the Framework and funding has been set aside to support this from a historic grant programme which support migrants and this will be used alongside other existing government grants to the Council to support people seeking sanctuary to deliver the direct aspects of the Framework over 3 years.

39. The Council estimates that the grant funding mentioned above will be sufficient for the direct delivery of aspects of the Framework that the Council is responsible for. If additional costs are forecast, through regular financial management and monitoring or otherwise, then these will be considered as part of the normal Council budget governance process. Other elements of the Framework may require applications to be made for external investment from partnership organisations from other parts of the public sector.

Legal issues

40. The Council is committed to upholding the principles of the Public Sector Equality Duty (PSED) as outlined in the Equality Act 2010. To fulfil this commitment, the Council will have due regard for the need to:

- Eliminate discrimination, harassment and victimisation and any other conduct that is prohibited by or under the Act;
- Advance equality of opportunity between people who share a relevant protected characteristic and those who don't share it;
- Foster good relations between people who share a relevant protected characteristic and those who do not (which involves having due regard, in particular, to the need to tackle prejudice and promote understanding.

41. The Council of Sanctuary Framework document and Action Plan aim to fulfil the principles set out in the Equality Act relating to the PSED. Any required improvements to

the Framework or the Action Plan will be implemented to ensure the Council creates a supportive environment where all residents can feel secure, respected, and empowered to thrive.

42. The proposed Framework and Action Plan aim to support individuals of all backgrounds, collaborate with local organisations and communities, and the Council will actively consider the diverse needs of all residents to foster a city that is inclusive, welcoming and supportive.

Level of risk

43. See Risk Register attached under **Appendix 2**.

Equalities impact

44. An equality impact assessment was completed as part of the Council of Sanctuary Framework 2025-2028, and this has been updated for this cabinet paper and can be found in **Appendix 3**.

45. A number of actions in the Year 2 Action Plan were set in relation to improving the delivery of the Strategy and in relation to individuals or groups with a protected characteristic and in relation to delivering actions related to equalities, diversity and inclusion (EDI).

Implications of Local Government Reorganisation

46. Government guidance concerning LGR has been considered in relation to this report and there are no significant implications noted at this time. In future, strategy and framework documents will need to be considered by the successor Council to ensure alignment with Council priorities and requirements

Carbon and Environmental Considerations

47. There are few environmental considerations arising directly from this report. There is a need to continue to support residents to reduce their carbon imprint and support the corporate ambition to become a zero carbon Oxford. Any households that are resettled or helped into accommodation within private rented properties within the city which will be registered with the Council's selective licensing scheme which takes into consideration environmental impact.

Background Papers: None

Table 1: Glossary of terms:

Term	Description
Migrant	A person who moves from one country to another, for the primary purpose of work or study, or to reunite with family
Asylum Seeker	Individual who applies for protection as a refugee and who is still waiting for a decision on their claim for refugee status
Refugee	Someone who has had a positive decision on their asylum claim; they have been recognised as a refugee under the United Nations Convention. This means that they are recognised to have a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group, or political opinion in their country and are entitled to protection.
Resettled Refugee	a refugee who has been offered a permanent home in a country while still outside that country. The United Nations High Commissioner for Refugees (UNHCR) identify vulnerable refugees, who they deem in need of resettlement. Local authorities and community sponsors assist in resettlement.
Undocumented Migrant	Someone who does not possess the required (and correct) documents to enter, or remain, in the country
UASC or Unaccompanied Asylum-Seeking Child	A child who is outside their country of origin to seek asylum. They are separated from parents and relatives and are not in the care of someone who has parental responsibility. Locally, they are looked after by Oxfordshire County Council.
A Person on No Recourse to Public Funds (NRPF)	Someone who is not entitled to benefits because of their immigration status, e.g. an international student, someone on a spousal visa, a visa overstayer.
A Person Seeking Sanctuary/ Sanctuary seeker	A collective term that we use refer to everyone who is a refugee, asylum seeker, undocumented migrants, survivors of modern slavery or a person with a precarious immigration status e.g. on No Recourse to Public Funds (NRPF) and others who may not fit into any of these categories but are seeking safety and a place to rebuild their lives. In Oxford, we use this more inclusive term when talking about our sanctuary work.

FOREWORD BY COUNCILLOR LINDA SMITH

Oxford is a global City which has a proud history of migration adding a rich diversity to the City and I am proud that Oxford has been a *City of Sanctuary* for various groups over many years. There is a sense of solidarity and community, and the Council works tirelessly to create a thriving community which is inclusive and welcoming.

Since the first Council motion in 2019 where Councillors pledged support to make Oxford a *City of Sanctuary*, the Council has been on a journey to become an accredited Local Authority of Sanctuary. This has culminated in this framework and action plan which sets out the Council's plan for the next 3 years.

Our goal is to build on the Council's strengths while proactively identifying areas of need and addressing any gaps with effective solutions alongside our partners. The Council is fortunate to receive support and work in partnership with statutory and non-statutory partners from across the County via the Oxfordshire Migration Partnership.

A key aim of the Thriving Communities Strategy is the ethos of 'doing with, not to' residents. This framework builds on this philosophy, aiming to develop solutions alongside people with lived experience of seeking sanctuary, statutory services, voluntary and community partners as well as a range of Council services. We have identified the actions laid out in the action plan, across six priority areas. The priorities reflect both key areas of need and opportunities to empower people seeking sanctuary in line with our local strengths and existing strategies.

Unfortunately, in recent times, global conflict, and instability in places like Syria, Afghanistan and Ukraine has led the Council to redouble our efforts to provide an inclusive and welcoming environment to people seeking a safe place to call home. As the need has increased, so have issues such as central government asylum processing backlogs, and the block booking of budget hotels by the Home Office to provide basic accommodation for asylum seekers.

The Council has consistently supported programmes to support vulnerable groups in Oxford including refugees who have been resettled, ensuring that we play our part to support households in need. Whilst there is much more to do, I hope you will see from reading through this framework that there are many stories of success.

Cllr Linda Smith - Cabinet member for Housing and Communities

3401

INTRODUCTION AND BACKGROUND

This framework document has been developed through engagement with residents and key stakeholders, drawing on real-life experiences and learning from commissioned research. Our aim is to shape a comprehensive plan that enables Oxford City Council to work with partners to improve the outcomes for local people seeking sanctuary and the wider community. The document is organised into key sections, offering insights into the Council's efforts to support this area of work and the journey the Council has been on.

Many people come to Oxford in search of sanctuary, support, or a warm welcome. To ensure we are inclusive of the broad range of legal statuses, living circumstances and experience of migration held by these residents we choose to use the term 'people seeking sanctuary' throughout this framework. Where certain conditions, criteria or experiences only apply to subsections of this population we include specific reference to this in the pages below.

Our vision for Oxford City Council as a local authority of sanctuary is to create a welcoming and safe environment where those seeking sanctuary feel supported, accepted, and embraced as part of the broader community. A city where all residents can thrive, contribute, and actively participate in the community, helping to shape the future and enrich the life of Oxford for all.

Windows painting created by the residents of local asylum hotels, supported by Iraqi Women Art and War, hosted by the Museum of Oxford and displayed at Oxford Town Hall for Refugee Week, 2024

Oxford has long been a destination for international migrants, be it for work or study, bringing valuable skills and knowledge and making the city diverse and global. Two world reputed universities, globally renowned science parks, sizeable teaching and practicing hospital systems, and large technology and automobile industries provide opportunities for economic and social mobility for many far and wide.

Oxford has also been a place where people have settled after seeking safety and security. Oxford City Council has consistently supported refugee resettlement and integration against a backdrop of growing need both locally and internationally. **Oxford City Council passed the first motion to be a *City of Sanctuary* in 2019, followed up in 2022 when the Council passed a further motion to consider the support on offer to people seeking sanctuary in the light of recent global conflicts.**

Oxford City Council committed to becoming a local authority of sanctuary in 2023 and develop an action plan to set out how it will work with people seeking sanctuary over the next three years. This is set out in this framework document alongside key areas of progress, challenge, as well as quotes from community voices detailing their experience of sanctuary in Oxford.

OUR PROGRESS - KEY HIGHLIGHTS

Oxford City Council has made notable progress and reached significant milestones on its journey to becoming a local authority of sanctuary in recent years, achievements made possible through the continued support from partners as outlined below:

2016

In 2016 Refugee Resource was commissioned to provide additional mental health support for resettlement families, offering specialised counselling and therapeutic mentoring. This vital service has been continuously maintained to ensure ongoing support for those in need.

2017

In 2017 The Museum of Oxford hosted the Journeys to Oxford exhibition telling migrants' tale of how they got here. This included the testimonies of about 115 Oxford City residents of 45 different nationalities, from Poland to Pakistan and China to the Caribbean.

2018

In 2018 the Council secured funding through the Controlled Migration Fund which led to a number of projects including commissioning local charities to establish a local mentoring and volunteering program for people seeking sanctuary, work based-ESOL classes, further human trafficking and modern slavery research and a project supporting rough sleepers.

2020

The **Schools Advocacy Programme**, run by Asylum Welcome and funded by Oxford City Council since 2020, helps families and schools by improving engagement, access to educational services, and understanding of the UK school system. So far, 105 children from 35 families across 25 schools have benefited, with schools describing the service as "invaluable" and "pivotal."

Oxford is the most welcoming place for people seeking sanctuary, and we are lucky to have very rich and wide cultures. Also, I feel very fortunate to be hosting those people in need. I have learnt a lot from them, and I admire their resilience

Community Voice: Kate has hosted and supported 25 sanctuary seekers in her home since 2015 under a charity run hosting scheme

For me Oxford is a place of safety and empowerment

Community Voice: Lubna, a mother from Iraq who came to Oxford in 2022 with her children to join her husband who was already in the UK. Since then, alongside bringing up her family, she has volunteered tirelessly in the community and become a community artist.

2022

The Oxfordshire Migration Partnership was established in 2022 in response to the Ukraine crisis to coordinate the Homes for Ukraine (HfU) scheme across local stakeholders. Oxford City Council collaborated with Oxfordshire County Council, along with district authorities and other partners. Key successes include pooling resources to expand housing options, preventing homelessness and commissioning projects for people seeking sanctuary and local residents.

2023

In 2023, Oxford City Council commissioned Aspire Oxford, Asylum Welcome, Refugee Resource and EMBS college to run the **Refugee Employment Support Programme** (RESP). Since then, 24 refugees have been supported and 51 employers engaged.

2022

Since 2022, around 200 resettled individuals have undertaken ESOL tuition as part of the resettlement programmes and many more have been signposted to local mainstream community provision.

2022

In 2022, the City Council, in partnership with NHS services, launched the Community Health Champions initiative to support COVID-19 vaccination rollout for vulnerable communities. Ten people seeking sanctuary have been trained as Community Health Champions to improve healthcare access and promote wellbeing.

2024

In 2024 the Council funded the **Health Access Project**, run by Asylum Welcome, which has supported people seeking sanctuary with health and dental services and has developed a multilingual healthcare hub.

KEY CHALLENGES

Oxford has a resilient economy, world renowned higher education, science and research sector. However, there are high levels of inequality and Oxford has several areas of high deprivation where most local people seeking sanctuary reside. People seeking sanctuary face many barriers and challenges as they endeavour to rebuild their lives and make a new home. These challenges are exacerbated by global or national policies and pressures and are summarised below:

Global conflict / increased migration

United Nations statistics estimate over 120 million people were forcible displaced by 2024. The majority are displaced internally or flee to neighbouring countries. A small percentage make their way to the UK. People seeking sanctuary arriving in Oxford are fleeing conflicts and persecution as well as environmental disasters, driven by climate change, alongside economic challenges, worsened by the COVID-19 pandemic.

National policy challenges

In 2022, Oxford became an expanded asylum dispersal area, leading to the use of temporary housing for asylum seekers. Government legislation has sought to act as a deterrent for people arriving through irregular routes and increased the requirements for an individual to claim asylum. There is variation in how the UK's responds to different crises, which has led to the creation of bespoke visa and resettlement schemes affecting rights and entitlements.

Cost of Living crisis

People seeking sanctuary in Oxford are deeply affected by the cost-of-living crisis, with rising energy costs pushing many into "fuel poverty." Limited income forces choices between essentials like heating and food. Language barriers and unrecognised qualifications make it hard to find stable jobs, while competition for low-wage work increases hardship. Children face difficulties as families struggle with school expenses whilst local charities struggle to meet the growing need.

Housing demand & supply/homelessness

Oxford is one of the least affordable UK cities, with high rents and a shortage of affordable housing. People seeking sanctuary, with limited financial resources, struggle to secure housing due to long social housing waitlists, lack of credit history, and private rental market access issues. After receiving refugee status, they must leave asylum support accommodation within 56 days, often risking homelessness.

For this initiative, I will hire refugees with limited experience and support them in starting their careers and improving their language skills. From my experience, language barriers are their biggest challenge. It's crucial to raise awareness of these issues and create more job opportunities so they can become self-sufficient and give back.

Community Voice: Hamza is keen to empower refugees by opening doors to work, language, and a brighter future.

Health inequalities

People seeking sanctuary face unique health challenges and barriers to healthcare due to lack of documentation, language difficulties, and confusion about eligibility. This limits access to primary care, mental health services, and preventive healthcare. Language barriers can lead to miscommunication, misdiagnoses, and inadequate treatment, especially for mental health needs. Poor housing and food insecurity contribute to health problems and women and children, particularly, face additional challenges.

No Recourse to Public Funds (NRPF) / vulnerable migrants

People with No Recourse to Public Funds (NRPF) in Oxford face severe challenges due to high living costs and limited support. Unable to access public housing or benefits, many risk homelessness or live in unsafe conditions, relying on overstretched charities. Employment can be restricted due to immigration status which can lead to exploitation in low-paying jobs without labour protections. Financial hardship is common, often leading to debt. Children in NRPF families also face barriers to accessing school meals and educational resources, affecting their well-being.

PARTNERSHIPS AND GOVERNANCE

The Council has set clear objectives outlined in the *Taking Action* section below. However, it remains impacted by broader financial challenges, as constrained local government finance has been impacted by tight central government settlements and rapidly rising costs. It is clear that the Council is not able to deliver on all its aspirations without working in partnership. This is very much the model the Council aspires to, as Oxford is fortunate to have a thriving voluntary and community sector and the Council also works in close collaboration with other statutory agencies including local Oxfordshire County Council, District Councils, and other partners such as the NHS via the Oxfordshire Migration Partnership.

Partnership work via the Oxfordshire Migration Partnership has increased the level of inter-agency working and allowed a more co-ordinated response to tackle emerging issues related to migration within Oxfordshire. The Council is keen to work in partnership with other agencies such as Oxfordshire County Council who have recently become an accredited Local Authority of Sanctuary and who lead on co-ordination for the Oxfordshire Migration Partnership.

Strong partnerships with different organisations like Asylum Welcome, Refugee Resource, Aspire Oxford and Connection Support and other community groups, have helped Oxford City Council widen its impact as it works together with its partners on new and innovative projects. The action plan embedded within this framework identifies key actions for the Council, other statutory agencies and the voluntary and community sector. It has been developed in partnership and reflects the understanding that better outcomes will be achieved if we work together to pool resources, knowledge, and expertise.

Based on close collaborations with lived experience organisations the Council has been actively involved in providing more inclusive and holistic support for people seeking sanctuary. We are proud to celebrate refugee experiences through Refugee Week celebrations and the annual Sanctuary Fair. So, while we aim to do better with regards to our statutory duty, our overall approach and plan is to go beyond business as usual.

Oxford Sanctuary Fair 2025: Community as a Superpower.

Photograph courtesy of Refugee Resource

The Council will continue to show leadership by using grant funding to invest in staffing and new projects to support people seeking sanctuary. Alongside the Council's operational role, Oxford City Council officers will also advocate for a fair funding settlement from central government and seek to influence the direction of national policy.

Accountability for this action plan is important and Oxford City Council officers will be reporting back to Oxford City Council Cabinet on yearly progress. Progress will be tracked routinely through the Council's internal governance structures, reporting to the Communities Change Board monthly. Officers have developed internal and external sanctuary partnership groups who will also be meeting periodically to jointly assess progress and identify new key actions.

TAKING ACTION

Oxford City Council has explored the views of people seeking sanctuary and the local community and what the Council can do to improve their experience. We began with the Thriving Communities Strategy Consultation where the voices of many local people sanctuary were recorded. The following year in October 2023, we commissioned Asylum Welcome to deliver a needs assessment for our Council of Sanctuary project and more recently carried out community engagement work, meeting local residents.

The needs assessment and our research explored the views of people seeking sanctuary including their experiences, and opinions on Oxford City Council services. Many positives were highlighted including the safety, beauty and reputation of the city, alongside the availability of cultural activities, outdoor space and friendly communities.

However, a number of barriers emerged, often linked to an individual's immigration status and support needs, but they were connected by the common thread of trying to settle and rebuild lives in a new environment and place with different cultural, legal and societal norms.

The report grouped the key areas of challenge into four key themes: transport; health and wellbeing; education and employment; and accommodation. As the Council is not a unitary authority, some issues raised in the research fall within the remit of other partners we will work with partners to address these.

Where work cuts across other organisations provision, we have indicated in the action plan how we will work together to action the recommendations in the ethos of the partnership model. We have identified the actions across 6 priority areas, to be reviewed regularly with partners. The priorities reflect both key areas of need and opportunities to empower people seeking sanctuary in line with our local strengths and existing strategies and are listed below:

- Wellbeing, Education & Employment
- Housing and Homelessness
- Building Communities & Amplifying Voices
- Shaping Services
- Supporting Integration
- Working in Partnership & Innovating

1. Wellbeing, Education and Employment

What are we going to do?	*Service*	*By end of year*
Educate and empower Oxford City Council teams and local businesses about opportunities to employ people seeking sanctuary and how to offer placements and apprenticeships, including through myth-busting on migrant entitlements with businesses as well as job brokers.	Regeneration and Economy	2025-2026
Evaluate the Refugee Employment Support Programme (RESP), its findings and respond to the recommendations. Explore opportunities for further work around employment, business support and social enterprise.	Housing Services	2025-2026
Work with the anti-slavery coordinator and local modern slavery network to promote understanding around rights and safeguarding risks faced by people seeking sanctuary locally.	Community Safety	2026-2027
Work with key partners to develop and extend the existing schools advocacy project, subject to project viability.	Housing Services	2025-2026
Improve access to wellbeing and leisure facilities for local people seeking sanctuary to improve health outcomes and reduce health inequalities.	Community Services	2026-2027
Work with partners including Refugee Resource to improve therapeutic outcomes for people seeking sanctuary.	Housing Services	2026-2027

2. Housing and Homelessness

What are we going to do?	*Service*	*By end of year*
Expand education and support for local people seeking sanctuary to help them navigate the housing system, especially for those experiencing homelessness, those at risk of homelessness, and those with limited experience of independent living (including UASC) in line with the Housing, Homelessness and Rough Sleeping Strategy.	Housing Services	2026-2027
Provide training as appropriate for housing colleagues on how to support people seeking sanctuary, e.g. residents with varying immigration status including victims of domestic abuse with no recourse to public funds.	Housing Services	2026-2027
Develop further training on working with refugees (cross cultural communications and trauma informed practice) and offer it to colleagues.	Housing Services	2026-2027
Increase engagement and support for landlords who wish to house people seeking sanctuary, including information and communication on the Oxford City Council's private rented housing access schemes.	Housing Services	2026-2027
Provide appropriate support to sustain tenancies as part of the Oxford City Council's approach to homelessness prevention and in line with the Housing, Homelessness, and Rough Sleeping Strategy.	Housing Services	2025-2026
Improve monitoring of the number of people seeking sanctuary who are sleeping rough and use intelligence to target support.	Housing Services	2025-2026

3. Building Communities and Amplifying Voices

What are we going to do?	*Service*	*By end of year*
Empower and support local institutions to become registered places of sanctuary including libraries, surgeries, arts organisations, community groups, colleges, and faith organisations.	Housing Services	2027-2028
Act as a lead Local Authority on joined-up campaigning for migrant rights, share learning and expertise through sanctuary networks at a local, regional, and national level including the City of Sanctuary Local Authority Network.	Housing Services	2027-2028
Continue to convene the Oxford City Council of sanctuary internal and external stakeholders' meetings to meet regularly to facilitate the Thriving Communities vision of "Doing with, not to" and advocate for an ethos and practice of 'Co-production'	Housing Services	2025-2026
Support refugee partners and community groups to access opportunities in arts, culture, and community activity via the use of our facilities, grants, and external funding. • Collaborate with the local voluntary and community sector to build capacity and participation of local lived experience groups via funding advice and support. • Develop effective pathways into volunteering and participation via social and cultural activities.	Community Services	2026-2027
Build capacity of local sanctuary seeking community via Sanctuary Ambassadors programme and access to the Sanctuary in Politics course.	Housing Services	2027-2028
Support refugee community groups to access spaces and places where they can come together to enjoy common interests and create new friendships.	Community Services	2026-2027

3414

4. Shaping Services

What are we going to do?	*Service*	*By end of year*
Develop/co-produce and share a sanctuary framework to support people seeking sanctuary and promote independent living for those staying in the City and beyond.	Housing Services	2025-2026
Review incorporation of sanctuary principles into services when strategies, policies or services are changed.	Corporate Strategy	2026-2027
Develop online resources to be more accessible for people seeking sanctuary including the Council's web page, the Communities Toolkit and information regarding accessing housing and other support	Housing, Communities and Customer Services	2026-2027
Create opportunities and space for people seeking sanctuary to have their voices heard and their stories told, so that their experiences can inform how services are delivered in the city. Ensure people seeking sanctuary can feed into Council activity through existing mechanisms.	Housing Services	2025-2026
Promote sanctuary informed practice across local strategic partnerships where Oxford City Council is key stakeholder.	Housing Services	2025-2026
Via the community health champions programme improve advocacy for people seeking sanctuary and access to primary health care for vulnerable and undocumented migrants.	Community Services	2025-2026

5. Supporting Integration

What are we going to do?	*Service*	*By end of year*
Grow and publicise wider migrant-specific information, advice and guidance for all residents such as a Sanctuary Door initiative (Single Point of Contact), embedding opportunities for people with lived experiences to lead on service support.	Housing Services	2025-2026
Continue to support local people seeking sanctuary who settled under government schemes including UK resettlement scheme (UKRS), Afghan Resettlement schemed (ARAP, ACRS), Asylum Dispersal Scheme and Homes for Ukraine scheme in line with statutory duties, corporate objectives and viability requirements.	Housing Services	2025-2026
Support the Council's ambition to achieve the Domestic Abuse Housing Alliance (DAHA) accreditation and feed in from sanctuary seeking groups perspective.	Regulatory Services and Community Safety	2027-2028
Via sanctuary ambassadors programme and the external stakeholders group review availability of legal advice services for people seeking sanctuary. Alongside community partners, explore opportunities to support expansion of provision as well as pathways to access, and to provide residents with information about their rights.	Housing Services	2026-2027

What are we going to do?	Service	By end of year
Work alongside the Oxford Food Hub and other local charities to raise awareness of free or low-cost food options for people seeking sanctuary, in relation to accessing food, and engaging in the wider local food system and increasing communication to ensure people seeking sanctuary are aware.	Housing services supported by Communities	2026-2027
Produce a joint calendar of events which promote integration and support sanctuary events such as during Refugee week.	Housing services supported by Communities	2025-2026

Photograph courtesy of Refugee Resource

6. Working in Partnership and Innovating

What are we going to do?	*Service*	*By end of year*
Support local research bodies to (a) create and develop a body of evidence demonstrating the positive impact of people seeking sanctuary locally and (b) analyse the benefits and opportunities they bring.	Council of Sanctuary external stakeholders' group	2027-2028
Support Oxfordshire County Council and other key partners to increase English language provision (ESOL) accessibility to those with different immigration status, ages, childcare provision needs or access needs in a wide range of both statutory and community settings across the City.	Oxfordshire County Council	2026-2027
Support the Getting Oxfordshire Online Digital Inclusion network, to bring together partners to identify digital barriers for refugees and asylum seekers in the City / county and promote greater digital inclusion for this group.	Oxfordshire County Council supported by the CoS external stakeholders' group.	2025-2026
Collaborate with local partners and individuals seeking sanctuary to develop culturally appropriate and accessible health initiatives, with a strong focus on expanding access to mental health support. Engage with relevant charities and public services to explore and enhance support networks and resources.	Council of Sanctuary external stakeholders' group	2027-2028

What are we going to do?	Service	By end of year
Review existing support available to people with No Recourse to Public Funds (NRPF) via the establishment of an NRPF working group with Oxfordshire County Council and local VCS.	Council of Sanctuary external stakeholders' group	2025-2026
Alongside partners, work to ensure asylum seekers have access to low affordable public transport and travel around the city.	Oxfordshire County Council	2026-2027

If you hardly speak English and you are a stranger in a foreign culture it's like being blind and deaf when you want to talk to someone. Before they helped me, I felt powerless and invisible. Now I have a voice, and I can help others like me.

Community Voice: HB from Syria

SANCTUARY DATA

The 2021 Census showed that 35% of Oxford's population was born outside the UK, compared to 28% in the 2011 Census. Most of the foreign-born population have come to Oxford for work or study. There have been significant changes in the demographic population of Oxford City recently especially since 2022. A combination of wide-ranging changes to national policy and external factors (e.g., the war in Syria and Ukraine, political unrest in Afghanistan and Hong Kong) have facilitated this.

As a Council we have had to respond quickly not only to an increasing number of people seeking sanctuary living locally, but also to understand how the different immigration statuses these individuals hold affect their experiences and their entitlements. We have had to adapt our services accordingly and we have recorded some key sanctuary data for Oxford:

Data on people seeking sanctuary in Oxford can be limited or held by different authorities. People seeking sanctuary are not continuously tracked or recorded in the wider system beyond their initial grant of status, making their needs as trauma-affected, newly arrived individuals often unrecognised and unmet. For those who work with them, gathering reliable information is challenging due to instability in their lives, long asylum processing times, frequent relocations, and homelessness.

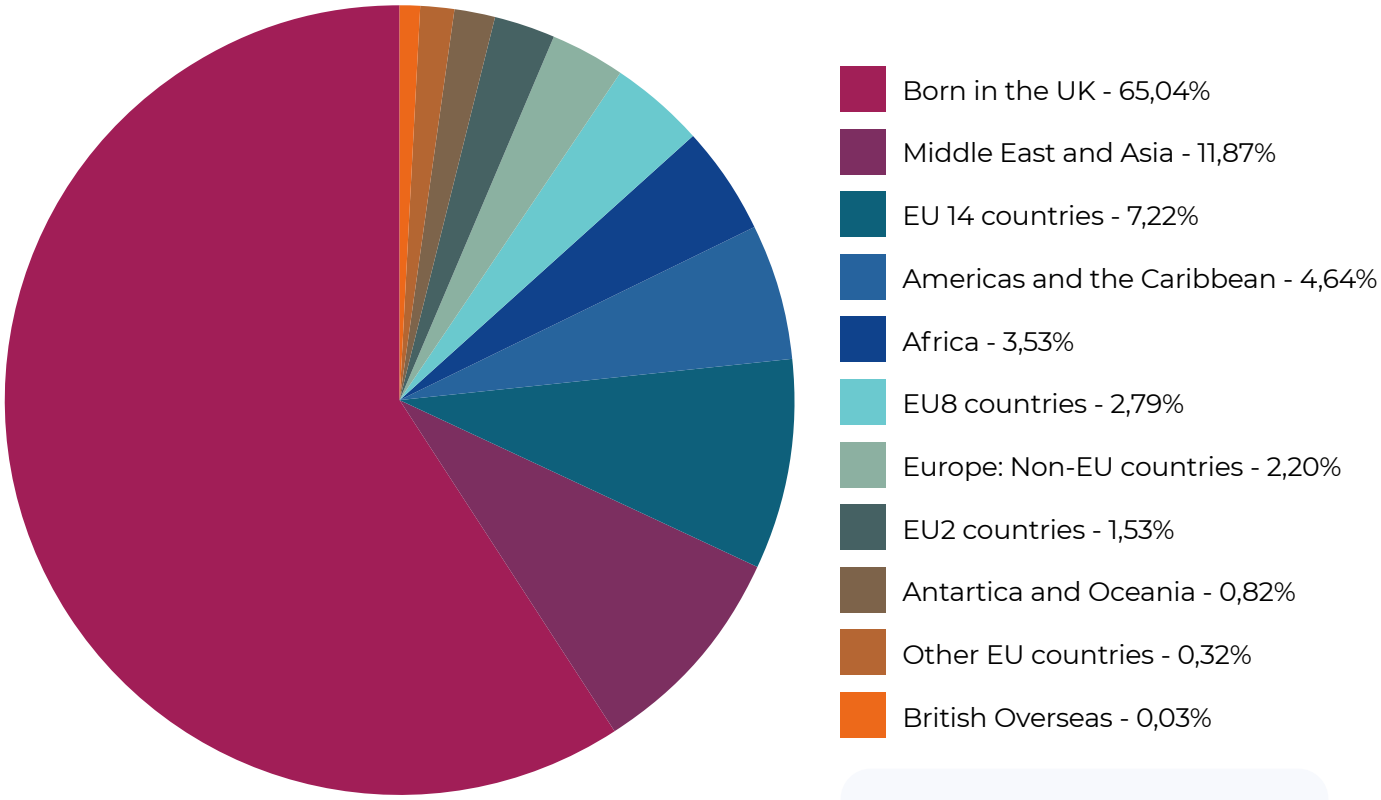
Some groups are particularly under-documented, including no recourse to public funds (NRPF) women on spousal visas, students claiming asylum because of a well-founded fear of persecution, and those trapped in domestic servitude or debt bondage. This lack of data hampers effective support, service provision and requires work with other agencies to understand data on marginalised groups residing in Oxford which we intend on progressing as part of the council's action plan.

Photograph courtesy of Refugee Resource

Oxford City Council has access to general data sets and the below information was compiled by the council's Business Intelligence Unit for this framework document taken from the Census 2021, Office for National Statistics (ONS).

Oxford Resident's Country of Birth

A way of understanding the composition of Oxford's residents, regarding ethnicity and nationality is the resident's place of birth. The following graph shows the distribution of countries of birth.



Source: Census 2021, ONS.

Note: The EU14 includes the member countries of the European Union before the 2004 expansion: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, and Sweden. The EU8 refers to the countries that joined the EU in 2004, which are Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Slovakia, and Slovenia. Lastly, the EU2 consists of Bulgaria and Romania, which joined the EU in 2007.

Considering only the 34.92% of people that was not born in the UK and British Overseas (taking aside the 65.04% and 0.04% respectively), the following visual shows the distribution among the rest of the countries where Oxford Residents were born.

3422

KEY TERMS

- **Asylum seeker:** In the UK, a person who is seeking asylum or sanctuary is known as an asylum seeker because they have:
  - fled their home
  - arrived in another country, whichever way they can
  - made themselves known to the authorities
  - submitted an asylum application
  - a legal right to stay in the country while waiting for a decision
- **Refugee:** Refugees are people who have fled war, violence, conflict or persecution and have crossed an international border to find safety in another country. The 1951 Refugee Convention is a key legal document and defines a refugee as: "someone who is unable or unwilling to return to their country of origin owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group, or political opinion."
  In the UK a refugee:
  - has proven that they would be at risk if returned to their home country
  - has had their claim for asylum accepted by the government
  - has permission to stay in the UK either long term or indefinitely
- **Migrant:** A migrant is a person who moves from one country to another, this could be for several reasons, for example to work, study or to reunite with family.
- **No recourse to public funds:** This is a condition for a person that is subject to immigration control, and it means that they are not entitled to most public benefits due to their immigration status, for example a student, someone on a spousal visa or a visa overstayer.
- **Separated or Unaccompanied children:** Separated children and young people seeking sanctuary is an alternative to using the acronym UASCs (Unaccompanied Asylum-Seeking Children) or UAM (Unaccompanied Minors).
  Unaccompanied can imply a deliberate decision to send lone children into danger and does not reflect the fact that many lose their families in the chaos of fleeing war and other dangers. In the UK, they are usually looked after by the local authority.

- **Indefinite Leave to Remain:** This is an immigration condition that gives a person the right to live indefinitely and is also called 'settlement'. It gives a person the right to live, work and study and apply for benefits. It can also be used to apply for British citizenship.
- **Forced migrant:** A term commonly used for a person subject to a migratory movement in which an element of coercion exists, including threats to life and livelihood, whether arising from natural or man-made causes, e.g. movements of refugees and internally displaced persons as well as people displaced by natural or environmental disasters, chemical or nuclear disasters, famine or development projects or those who have been trafficked or enslaved.
- **A Person Seeking Sanctuary:** An umbrella term for someone seeking safety irrespective of immigration status.

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **Foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	6. **Race & Ethnicity**
2. **Disability**	7. **Religion or Belief**
3. **Gender Reassignment**	8. **Sex**
4. **Marriage & Civil Partnership**	9. **Sexual Orientation**
5. **Pregnancy & Maternity**	

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.
7. Provides clear **justifications** for your decisions.
8. It is written in **plain English** with simple short sentence structures.

Section 1: General overview of the activity under consideration

1.	**Name of activity being assessed.**	**Council of Sanctuary Framework** • To assess the impact of adopting the Council of Sanctuary framework on different protected characteristics and ensure it promotes equality and inclusivity. • **Objectives**: o Identify and remove potential discrimination. o Advance equality of opportunity. o Foster good relations between different community groups.	**2.**	**The implementation date of the activity under consideration:**	April 2025-March 2028 (3 years)
3.	**Directorate/Department(s):**	City and Citizens' Directorate	**4.**	**Service Area(s):**	Housing Services
5.	**Who is (are) the assessment lead(s):**	Stephen Cohen Refugee and Resettlement Manager Housing Services scohen@oxford.gov.uk	**6.**	**Contact details, in case there are queries:**	Stephen Cohen Refugee and Resettlement Manager Housing Services scohen@oxford.gov.uk
7.	**Is this a new or ongoing EqIA?**	**New** Extension to existing EqIA X	**8.**	If this is an extension of a previous EqIA, please indicate where the previous EqIA is located and share the link to the said EqIA.	Web link to previous EQIA: Equality Impact Assessment
9.	**Date this EqIA started:**	18 October 2024 (Updated 18/05/2026)			
10.	**Will this EqIA be attached to** Corporate Management Team (CMT) **reports/updates, which will be published online?**	No	**11.**	**Give a date (tentative or otherwise) when this assessment will be taken to the** CMT.	Not applicable

Section 2: About the activity, change, or policy that is being assessed.

12.	**Type of activity being considered:**	☐ Budget	☐ Decommissioning	☐ Commissioning	☐ Change to an existing activity.
		☐ New Activity	☒ **Others. To seek the Cabinet's approval of the Council of Sanctuary Framework annual update.**		
13.	**Which priority area(s) does this activity fulfil?** [within Oxford City Council's Corporate strategy (2024-2028)]	☐ Strong, fair economy.	☐ Good, affordable homes.	☒ **Thriving communities**	☐ Zero Carbon Oxford.	☐ Well-run council.
14.	**Which priority area(s) within does this activity fulfil?** [Oxford City Council's Equality, Diversity & Inclusion Strategy (2022)]	☐ Responsive services and customer care.	☐ Diverse and engaged workforce.	☒ **Leadership & organisational commitment.**	☒ **Understanding and working with our communities.**
15.	**Outline the aims, objectives, & priorities of the activity being considered.**	**Aims:** The Council of Sanctuary Framework sets out how the Council will support local people seeking sanctuary and work with stakeholders and the local community in line with the Thriving Communities Strategy, The Thriving Communities Strategy 2023-27 committed	**Objectives:** Within the Thriving Communities Strategy, the Council committed to work in collaboration with local residents including refugees, asylum seekers and the migrant community to inform and develop a Local Authority City of Sanctuary Action Plan and ensure the City Council meets its commitment to become an accredited local	**Priorities:** • Working in partnership with communities, organisations, and agencies to reduce inequalities and create thriving communities • Championing diversity and inclusion in our own work and community partnerships	

DRAFT

		Oxford City Council to champion Equality, Diversity and Inclusion and engage with and facilitate conversations about equality throughout the city, and work to make Oxford an anti-racist city through the Council's Anti-Racism Charter. The Thriving Communities Strategy outlined the Council's approach to coordinating preventative services, reducing inequalities and improving residents quality of life. This activity is intrinsically linked to Oxford City Council's corporate strategy as laid out in the three key corporate priorities which fall within the *Thriving Communities* section.	authority of sanctuary which is achieved in November 2024. As part of this commitment, the Council has developed the Council of Sanctuary Framework and action plan to be implemented over a 3 year period and also a plan that is publicised. The Plan is currently at the beginning of year 2 and the linked cabinet report sets out year 1 progress.	• Helping people live healthily by providing services, support, and facilities to prevent and manage physical and mental health conditions[1]
16.	**Please outline the consequences of not implementing this activity.**	If the Council of Sanctuary Framework is not implemented: 1. There may be an adverse impact on some of the most vulnerable members in the city. 2. The Council's commitment within the Thriving Communities to support refugees and asylum seekers establish successful lives in Oxford would not be met.		

Section 3: Understanding service users, residents, staff and any other impacted parties.

17.	**Have you undertaken any consultations in the form of surveys, interviews, and/or focus groups?**	A key objective was to engage key stakeholders (internal and external), as far as reasonably practical, in the development and implementation of a Council of Sanctuary framework. Officers set up an internal officer's project group in 2023, overseen by senior managers and an internal and external sanctuary group set up in 2024 and are now established groups meeting at least 3 times per year. In 2026 the external group will merge with Oxfordshire County Council's group, reducing duplication and

[1] https://www.oxford.gov.uk/policies-plans-strategies/strategy/6

extended reach to all partners. The internal and external group meets regularly to review the action plan progress and routine updates will report into the Community Change Board which sits under the Thriving Communities section.

An email address (COS@oxford.gov.uk) is now established for feedback and communications to and from residents and stakeholders.

In terms of key historic interactions in June 2023 the Council of Sanctuary Award, process and task and finish group arrangements were taken to the internal Policy Officers Group as a key agenda item.

In October 2023, the Council commissioned a local refugee support charity with experience of policy and research, Asylum Welcome, to conduct a needs assessment for local residents in Oxford. The survey aimed to engage residents with lived experience and stakeholder groups who were working with local residents.

Sixty-six interviews were conducted between October and December 2023 with research conducted face-to-face, either in English or using translation, either one-to-one or in pairs.

The individuals interviewed were of different immigration status including:

- 27 asylum seekers who live in asylum accommodation
- 10 people with refugee status
- 7 people on resettlement schemes (ARAP, ACRS or UKRS).
- 8 Ukrainians on specific Ukraine visas
- 3 unaccompanied asylum seeking children
- 4 EU migrants with indefinite leave to remain in the UK
- 5 naturalised British citizens.

Eighteen different nationalities participated with two thirds of respondents identifying as male and one third female with the majority falling with the 25-34 age category. Asylum Welcome reported back in February 2024 and detailed their findings including the needs, barriers, and opinions of residents within a report.

Alongside the above individuals, thirty service providers also contributed to the needs assessment research either through one-to-one interviews or by attending two group-based virtual interview sessions. The stakeholders work in a range of context in the city including faith-based, youth work, health and medical provision, education and employment support, hosting arrangements and other services.

The Council was able to use the first-hand experience alongside other stakeholder engagement work to help inform the development of the Council's action plan and framework document.

The Council of Sanctuary project team has sought to consult and engage internal staff from across the Council. Staff were therefore informed of the project objectives through internal communications including lunch and learn engagement meetings, Council newsletter, leadership briefings through the Council's staff conference attended by over 200 staff and there has been a number of further internal stakeholder communications including within the 2026 staff conference attended by over 300 staff, sanctuary newsletter, intranet and website updates and through lunch and learn events.

DRAFT

		There have also been extensive discussions with external stakeholders including group discussions with representatives from statutory and non-statutory agencies such as from the voluntary and community groups. The sanctuary project team have also engaged the general public and local businesses via spontaneous interviews and documented case studies of people seeking sanctuary and local residents.
18.	**List information and data used to understand who your residents or staff are and how they will be impacted.**	Data has been collected from a number of sources including commissioning and subsequent analysis of primary research and data between October and December 2023 which local residents with lived experience and external stakeholders were interviewed. Analysis has taken place of internal Council policies including key linked policies; the Thriving Communities Strategy, Equalities Diversity and Inclusion (EDI) Strategy, Housing, Homelessness and Rough Sleeping Strategy and the Council Strategy. Other data sources including internal Council data bases, data from the Office of National Statistics, Census data, published data from central government including Home Office migration statistics and other national policies to analysis the information. **Other strategic/ equalities considerations** • Safeguarding/ Welfare of Children and Vulnerable adults • Mental Wellbeing/ Community Resilience • The Council Strategy 2024 to 2028 • Thriving Communities Strategy 2023 to 2027 • Equality, Diversity and Inclusion Strategy • Housing, Homelessness and Rough Sleeping Strategy • The Council's voluntary adoption of the socio-economic duty.
19.	**If you have not done any consultations or collected data & information, are you planning to do so in the future?**	Not applicable, please see section 17.

Section 4: Impact analysis.

					Immigration law) and promoting good relations between groups. Some asylum seekers may have fled regimes which did not afford rights to people in same sex relationships and they will benefit from different social attitudes living in the UK.	
Other (voluntary consideration) **For example:** Migrant, refugee, or asylum seekers	☒	☐	☐	☐	The data on this group is confounding mostly because this is a highly mobile group. However, it is estimated that 1 in 3 people in Oxford are some form of migrants. Refugees and asylum seekers are particularly vulnerable groups who often face significant barriers to accessing services and opportunities. These barriers can include language difficulties, lack of recognition of qualifications, and trauma from past experiences. Ensuring their inclusion in the City of Sanctuary framework involves: • Providing tailored support services to address specific needs. • Promoting access to education, healthcare, and employment. • Ensuring that policies do not inadvertently discriminate against these groups.	This framework seeks to positively improve the service offer to residents who are affected by war and conflict and it aims to improve integration of local communities and therefore will have a positive impact on groups from backgrounds which contain a protected characteristic. The Council through the internal and external partnership groups will seek to mitigate any concerns raised by stakeholder groups. Adopting a Council of Sanctuary framework in Oxford involves creating a welcoming environment for all, particularly those seeking refuge. This includes: • Building community awareness and understanding of the challenges faced by refugees and asylum seekers. • Encouraging local businesses and services to become more inclusive. • Developing partnerships with organisations that support refugees and

DRAFT
www.oxford.gov.uk

						asylum seekers to enhance service provision. The ongoing work will have a positive impact on this group if the actions take on a targeted, strategic, informed and joined-up approach.
Other (voluntary consideration) **For example:** Socio-economic status (income, wealth, etc.)	☒	☐	☐	☐	Census 2021 Inward migration is likely to place increased pressure on an already limited housing supply. The socio-economic duty under Section 1 of the Equality Act 2010 requires public bodies to consider how their decisions can reduce the inequalities of outcome caused by socio-economic disadvantage. This is particularly relevant for refugees and asylum seekers, who often experience higher levels of poverty and social exclusion. Research shows that Migrant workers make important contributions to the labour market in both high- and low-skilled occupations. However, those seeking asylum have limited rights, do not have access to full benefits and will be surviving on low incomes. The Council of Sanctuary framework can help overcome some of the disadvantage experienced by increasing access to networks and advocacy as well	Adopting a City of Sanctuary framework in Oxford involves creating a welcoming environment for all, particularly those seeking refuge. This includes: • Building community awareness and understanding of the challenges faced by refugees and asylum seekers. • Encouraging local businesses and services to become more inclusive. • Developing partnerships with organisations that support refugees and asylum seekers to enhance service provision. The ongoing work will have a positive impact on this group if the actions take on a targeted, strategic, informed and joined-up approach.

Section 5: Conclusion(s) of your Full Impact Assessment

22.		**Conclusions.**						
	☐	Stop and reconsider the activity.	☐		Adjust activity before beginning the activity and continue to monitor.	☒	**No major change(s) or adjustments and continue with activity but continue to monitor.**	☐	No major change(s) or adjustments and continue with the activity. No need to monitor in the future.

23.	**Please explain how you have reached your conclusions above.**	This framework and actions seeks to positively improve the service offer to residents who are affected by war and conflict, and it aims to improve integration of local communities and therefore will have a positive impact on groups from backgrounds which contain a protected characteristic and the Council to not expect any negative impacts on residents with individual protected characteristics. Its primary focus has therefore been to try to gain further insight into the relevant needs of local residents with lived experience and to work with them and builds on the key aim of the Thriving Communities Strategy to design programmes in conjunction with local residents and not to them. The Council has been working closely with local stakeholders including internal staff, the voluntary and community sector, inter-faith groups, business and education organisations and other key stakeholders to harness the skills and knowledge, show leadership and work together to provide the most impact and incorporate their views into the final framework document.

Overall, this has led to a comprehensive framework and action plan to be implemented over 3 years (2025-2028) which incorporates the EqIA.

The Council's plan to work with colleagues and external stakeholders across the life of the framework implementation period to deliver on the Council's commitments as set out in the Equalities, Diversity and Inclusion Strategy[2]:

- *providing inclusive services: understanding and addressing barriers to accessing our services, community assets and community engagement*
- *promoting partnership working: use our relationships to work together and connect different communities so that we can jointly address issues and celebrate strengths; this approach is embedded in our new Community Impact Fund*
- *empowerment: building community capacity to lead and participate in projects that benefit or affect their communities. In practice, this means doing "with" rather than "to" and, where possible, focusing on what is strong in communities rather than what's wrong- this approach is often termed **asset-based community development** (ABCD). ABCD approaches show that connecting people and creating more resident-to-resident relationships builds interdependence and reliance on each other. Connecting people to their shared interests, and enabling them to exchange skills and resources, helps communities identify and take action on the issues that are most important to them.*

The Council plan to ensure information and communication is accessible, using a range of mediums both written and verbal and utilising translation services where required.

There are plans within the framework document to improve data collection so the Council can better understand some cohorts issues where there is limited public data and use this data to inform service development.

There are plans and on-going work to address gaps in understanding regarding marginalised groups such as individuals with no recourse to public funds (NRPF), who face acute barriers to accessing housing, money and other basic provisions. This can be especially problematic for women who are dependent on their spouses for their immigration status e.g. spousal's visa's or where they are sponsored by a family member. This will involve working with key partners to leverage support, especially for cases where the Council does not have a statutory duty. Overall, this framework seeks to positively improve the Council's service offer in this regard.

The framework outlines plans to ensure all staff are upskilled to deliver services and improve accessibility to services in a trauma informed and culturally sensitive way and to work with People Team partners to have a workforce that as a whole reflects Oxford's diverse population. The Council through the internal and external partnership groups will seek to mitigate any concerns raised by the stakeholder groups.

[2] https://www.oxford.gov.uk/equality-diversity-inclusion/oxford-equality-diversity-inclusion-edi-strategy/6#:~:text=The%20Council's%20Strategy%20for%202020,the%20opportunities%20for%20disadvantaged%20groups.

Section 6: Monitoring and review plan.

The responsibility for maintaining a monitoring arrangement of the EqIA action plan lies with the service/team completing the EqIA.
These arrangements must be built into the performance management framework such as KPIs or Risk Registers.

24.	**Who or which team or service area will be responsible for monitoring equalities impact**?	The Council of Sanctuary Cabinet report was approved in January 2025 and the report committed to an annual review to report back to Council members regarding the progress of the framework including a review of equalities considerations which has been completed as part of this updated EQIA. Two sanctuary partnership forums with internal staff and external partners and residents with lived experience have been set up to provide accountability to the action plan and meet quarterly from 2025-2028. Individual action owners report back on progress via automated Smart Sheet reporting functions set up by the Council of sanctuary project team. The framework action plan can be updated regularly and informed by what data tells us and if there any changing circumstances. Routine updates will report into the Community Change Board which sits under the Thriving Communities section. The Council will monitor related data where we have access to it and seek to work with partners organisations where we don't have access to the data to see trends and put in place mitigations if we discover that any measures introduced under this framework is adversely affecting certain groups in Oxford's communities.
25.	**Who (individual, team, or service area) will be responsible for carrying out the EqIA review?**	Stephen Cohen Refugee and Resettlement Manager Housing Services scohen@oxford.gov.uk
26.	**How often will the equality impact be reviewed for this activity?**	Annually
27.	**Date when the EqIA will be reviewed again.**	May 2027

Taking Action

This report provides an overview of progress against the Year 1 (April 2025 – March 2026) actions set out in the Council of Sanctuary Action Plan 2025- 2028, as approved by Cabinet in January 2025. The programme was originally designed as a phased three-year plan, with actions allocated across Years 1 to 3. The Action Plan is structured around six priority areas, reflecting the key themes identified through engagement, research, and partnership working. These priorities (see below) provide a clear framework to guide delivery and ensure a coordinated approach to supporting people seeking sanctuary across the city.

Since adoption, a number of actions have been brought forward into Year 1 (2025-26) in response to emerging business needs and local priorities. In such cases, actions may be recorded as year 2 or 3 within the overall programme; however, progress relevant to Year 1 delivery has been assessed using the standard RAG rating to ensure transparency.

A small number of Year 1 actions have not yet commenced due to competing operational priorities, but these have been reviewed and are being actively prioritised for delivery in Year 2. More detailed operational commentary and live progress tracking for all actions is maintained within the programme's dedicated Smartsheet.

Oxford City Council, Local Authority of Sanctuary

Action Plan Priorities

1. Wellbeing, Education & Employment

2. Housing and Homelessness

3. Building Communities and Amplifying Voices

4. Shaping Services

5. Supporting Integration

6. Working in Partnership & Innovating

1. Wellbeing, Education and Employment

What are we going to do?		Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Progress Green - on track Amber - minor issues and/or delays Red - significant issues and/or delays Blue - completed Blank – Scheduled/Not Yet Started
1.1.	Educate and empower Council teams and local businesses about opportunities to employ people seeking sanctuary and how to offer placements and apprenticeships, including through myth-busting on migrant entitlements with businesses as well as job brokers.	Regeneration and Economy	Year 1	A number of employment projects on-going, see cabinet report for further details.
1.2.	Evaluate the Refugee Employment Support Programme (RESP), its findings and respond to the recommendations. Explore opportunities for further work around employment, business support and social enterprise.	Housing Services	Year 1	RESP evaluation to be produced in Year 2, minor delays due to developing evaluation project work.
1.3.	Work with the anti-slavery coordinator and local modern slavery network to promote understanding around rights and safeguarding risks faced by people seeking sanctuary locally.	Community Safety	Year 2	
1.4.	Work with key partners to develop and extend the existing schools advocacy project, subject to project viability.	Housing Services	Year 1	Schools Advocacy Project extended into 26/27
1.5.	Improve access to wellbeing and leisure facilities for local people seeking sanctuary to improve health outcomes and reduce health inequalities.	Community Services	Year 2 *(brought forward to Year 1 because of local need)*	A number of wellbeing and community projects implemented, see cabinet report for further details.
1.6.	Work with partners including Refugee Resource to improve therapeutic outcomes for people seeking sanctuary.	Housing Services	Year 2 *(brought forward to Year 1 because of local need)*	A number of health related projects supported, see cabinet report for further details.

2. Housing and Homelessness

What are we going to do?		Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Progress Green - on track Amber - minor issues and/or delays Red - significant issues and/or delays Blue - completed Blank – Scheduled/Not Yet Started
2.1.	Expand education and support for local people seeking sanctuary to help them navigate the housing system, especially for those experiencing homelessness, those at risk of homelessness, and those with limited experience of independent living (including UASC) in line with the Housing, Homelessness and Rough Sleeping Strategy.	Housing Services	Year 2 *(brought forward to Year 1 because of local need)*	A number of housing projects on-going, see cabinet report for further details
2.2.	Provide training as appropriate for housing colleagues on how to support people seeking sanctuary, e.g. residents with varying immigration status including victims of domestic abuse with no recourse to public funds.	Housing Services	Year 2	
2.3.	Develop further training on working with refugees (cross cultural communications and trauma informed practice) and offer it to colleagues.	Housing services	Year 2	
2.4.	Increase engagement and support for landlords who wish to house people seeking sanctuary, including information and communication on the Council's private rented housing access schemes.	Housing Services	Year 2	
2.5.	Provide appropriate support to sustain tenancies as part of the Council's approach to homelessness prevention and in line with the Housing, Homelessness, and Rough Sleeping Strategy.	Housing Services	Year 1	A number of housing projects on-going, see cabinet report for further details
2.6.	Improve monitoring of the number of people seeking sanctuary who are sleeping rough and use intelligence to target support.	Housing Services	Year 1	Improved monitoring now in place working in partnership with the rough sleeping team.

3. Building Communities and Amplifying Voices

What are we going to do?	Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Progress Green - on track Amber - minor issues and/or delays Red - significant issues and/or delays Blue - completed Blank – Scheduled/Not Yet Started
3.1. Empower and support local institutions to become registered places of sanctuary including libraries, surgeries arts, community, colleges, and faith organisations.	Housing Services	Year 3 *(brought forward to Year 1 because of local need)*	The Council is supporting a number of partners including Local Authorities and a local University to being registered places of sanctuary
3.2. Act as a lead Local Authority on joined-up campaigning for migrant rights, share learning and expertise through sanctuary networks at a local, regional, and national level including the City of Sanctuary Local Authority Network.	Housing Services	Year 3	
3.3. Continue to convene the Oxford City Council of sanctuary internal and external stakeholders' meetings to meet regularly to facilitate the Thriving Communities vision of “Doing with, not to” and advocate for an ethos and practice of ’Co-production’	Housing Services	Year 1	Stakeholder meeting groups successfully launched and convened.
3.4. Support refugee partners and community groups to access opportunities in arts, culture, and community activity via the use of our facilities, grants, and external funding. • Collaborate with the local VCS to build capacity and participation of local lived experience groups via funding advice and support. • Develop effective pathways into volunteering and participation via social and cultural activities.	Community Services	Year 2 *(brought forward to Year 1 because of local need)*	See progress update in cabinet report – action on-going
3.5. Build capacity of local sanctuary seeking community via Sanctuary Ambassadors programme and access to the Sanctuary in Politics course.	Housing Services	Year 3	
3.6. Support refugee community groups to access spaces and	Community	Year 2	See progress update in cabinet

places where they can come together to enjoy common interests and create new friendships.	Services	*(brought forward to Year 1 because of local need)*	report – action on-going

4. Shaping Services

What are we going to do?		Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Progress Green - on track Amber - minor issues and/or delays Red - significant issues and/or delays Blue - completed Blank – Scheduled/Not Yet Started
4.1.	Develop/co-produce and share a sanctuary framework to support people seeking sanctuary and promote independent living for those staying in the City and beyond.	Housing Services	Year 1	Action complete, updated framework completed and updated onto OCC website.
4.2.	Review incorporation of sanctuary principles into services when strategies, policies or services are changed.	Corporate Strategy	Year 2 *(brought forward to Year 1 because of local need)*	The Council has incorporated sanctuary principles into a number of strategies
4.3.	Develop online resources to be more accessible for people seeking sanctuary including the Council's web page, the Communities Toolkit and information regarding accessing housing and other support.	Housing, Communities and Customer Services	Year 2 *(brought forward to Year 1 because of local need)*	The OCC website has been updated and made more accessible for example through enhanced translation icon to aid navigation
4.4.	Create opportunities and space for people seeking sanctuary to have their voices heard and their stories told, so that their experiences can inform how services are delivered in the city. Ensure people seeking sanctuary can feed into Council activity through existing mechanisms.	Housing Services	Year 1	A number of co-production projects implemented, see cabinet report for further details.
4.5.	Promote sanctuary informed practice across local strategic partnerships where Oxford City Council is key stakeholder.	Housing Services	Year 1	OCC continue to promote sanctuary informed practice across a number of partnerships

			including the Oxfordshire Migration Partnership.
4.6. Via the community health champions programme improve advocacy for people seeking sanctuary and access to primary health care for vulnerable and undocumented migrants.	Community Services	Year 1	Programme completed, see cabinet report for further details

5. Supporting Integration

What are we going to do?	Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Progress Green - on track Amber - minor issues and/or delays Red - significant issues and/or delays Blue - completed Blank – Scheduled/Not Yet Started
5.1. Grow and publicise wider migrant-specific information, advice and guidance for all residents such as a Sanctuary Door initiative (Single Point of Contact), embedding opportunities for people with lived experiences to lead on service support.	Housing Services	Year 1	See progress update in cabinet report – action on-going
5.2. Continue to support local people seeking sanctuary who settled under government schemes including UK resettlement scheme (UKRS), Afghan Resettlement schemed (ARAP, ACRS), Asylum Dispersal Scheme and Homes for Ukraine scheme in line with statutory duties, corporate objectives and viability requirements.	Housing Services	Year 1	Resettlement activities successfully met corporate commitment in 2025.
5.3. Support the Council's ambition to support the Domestic Abuse Housing Alliance (DAHA) accreditation and feed in from sanctuary seeking groups perspective.	Regulatory Services and Community Safety	Year 3 *(brought forward to Year 1 because of local need)*	Action completed
5.4. Via sanctuary ambassadors programme and the external stakeholders group review availability of legal advice services for people seeking sanctuary. Alongside community partners, explore opportunities to support expansion of provision as well as pathways to access, & to provide residents with information about their rights.	Housing Services	Year 2	
5.5. Work alongside the Oxford Food Hub and other local charities to	Housing	Year 2	

	raise awareness of free or low-cost food options for people seeking sanctuary, in relation to accessing food, and engaging in the wider local food system and increasing communication to ensure people seeking sanctuary are aware.	services supported by Communities	*(brought forward to Year 1 because of local need)*	
5.6.	Produce a joint calendar of events which promote integration and support sanctuary events such as during Refugee week	Housing services	Year 1	To be produced in Year 2, delays due to prioritisation of other action plan objectives

6. Working in Partnership and Innovating

What are we going to do?		Organisation/ Group	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Progress Green - on track Amber - minor issues and/or delays Red - significant issues and/or delays Blue - completed Blank – Scheduled/Not Yet Started
6.1.	Support local research bodies to (a) create and develop body of evidence demonstrating the positive impact of people seeking sanctuary locally and (b) analyse the benefits and opportunities they bring.	Council of Sanctuary (CoS) external stakeholders' group	Year 3	
6.2.	Support Oxfordshire County Council and other key partners to increase English language provision (ESOL) accessibility to those with different immigration status, ages, childcare provision needs or access needs in a wide range of both statutory and community settings across the City.	Oxfordshire County Council (OCC)	Year 2	
6.3.	Support the Getting Oxfordshire Online Digital Inclusion network, to bring together partners to identify digital barriers for refugees and asylum seekers in the City / county and promote greater digital inclusion for this group.	OCC supported by the CoS external stakeholders' group.	Year 1	Action delayed to Year 3 due to prioritisation of other action plan objectives
6.4.	Collaborate with local partners and individuals seeking sanctuary to develop culturally appropriate and accessible health initiatives, with a strong focus on expanding access to mental health support. 	services to explore and enhance support networks/resources.			
6.5.	Review existing support available to people with No Recourse to Public Funds (NRPF) via the establishment of an NRPF working group with Oxfordshire County Council and local VCS.	CoS external stakeholders' group	Year 1	The Council is working on a number of key projects related to NRPF individuals, see cabinet report for further details.
6.6.	Alongside partners, work to ensure asylum seekers have access to low affordable public transport & travel around Oxford	Oxfordshire County Council	Year 2	

Summary of Year 2 Action Plan Refresh

This report presents the refreshed Year 2 priorities for Oxford City Council's Local Authority of Sanctuary Action Plan (2025–2028), building on progress made during Year 1 and responding to emerging needs across the city.

Between January and May 2026, the Council of Sanctuary undertook a structured review process, gathering feedback from internal services, external partners, voluntary and community organisations, and people with lived experience of seeking sanctuary. This reflects the Council's commitment to co-production and ensuring that its approach is informed by both internal operational experience and city-wide lived realities.

The review identified strong progress to date, particularly in partnership working, community engagement especially co-production activities, and increasing awareness of sanctuary principles across services. However, it also highlighted a need to strengthen delivery in several key areas. As a result, the Action Plan has been updated to place greater emphasis on:

- Improved coordination and system-wide working
- More equitable access to provision across all parts of the city
- Stronger progression routes, particularly in employment, housing and skills
- Increased involvement and leadership of people with lived experience
- Greater sustainability, moving from pilot activity to longer-term delivery models
- Enhanced communications and community cohesion, including positive narrative and myth-busting work

The refreshed plan also streamlines completed actions and introduces targeted new actions, including a coordinated Sanctuary Pathway and a strengthened approach to community cohesion. Overall, Year 2 represents a shift from initial framework development to a stronger focus on delivery, impact, and system change, ensuring that Oxford continues to be a welcoming, inclusive city for people seeking sanctuary.

Oxford City Council, Local Authority of Sanctuary

Action Plan Priorities

1. Wellbeing, Education & Employment

2. Housing and Homelessness

3. Building Communities and Amplifying Voices

4. Shaping Services

5. Supporting Integration

6. Working in Partnership & Innovating

1. Wellbeing, Education and Employment

What are we going to do?	Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Notes
1.1. Educate, engage and partner with Council teams, local businesses, and anchor institutions to expand employment opportunities for people seeking sanctuary, including promoting placements and apprenticeships, addressing misconceptions about migrant entitlements, and developing sustainable pathways into sector-based roles and long-term employment.	Regeneration and Economy	Year 2	On-going action
1.2. Evaluate the Refugee Employment Support Programme (RESP), its findings and respond to the recommendations. Explore opportunities for further work around employment, business support and social enterprise.	Housing Services	Year 2	On-going action
1.3. Work with the anti-slavery coordinator and local modern slavery network to promote understanding around rights and safeguarding risks faced by people seeking sanctuary locally.	Community Safety	Year 2	

2. Housing and Homelessness

What are we going to do?	Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Notes
2.1. Expand education and support for local people seeking sanctuary to help them navigate the housing system, especially for those experiencing homelessness, those at risk of homelessness, and	Housing Services	Year 2	On-going action

	those with limited experience of independent living (including UASC) in line with the Housing, Homelessness and Rough Sleeping Strategy.			
2.2.	Provide training as appropriate for housing colleagues on how to support people seeking sanctuary, e.g. residents with varying immigration status including victims of domestic abuse with no recourse to public funds.	Housing Services	Year 2	
2.3.	Develop further training on working with refugees (cross cultural communications and trauma informed practice) and offer it to colleagues.	Housing services	Year 2	
2.4.	Increase engagement and support for landlords who wish to house people seeking sanctuary, including information and communication on the Council's private rented housing access schemes.	Housing Services	Year 2	
2.5.	Provide appropriate support to sustain tenancies as part of the Council's approach to homelessness prevention and in line with the Housing, Homelessness, and Rough Sleeping Strategy.	Housing Services	Year 2	On-going action
2.6.	Continue to monitor the number of people seeking sanctuary who are sleeping rough and use intelligence to target support.	Housing Services	Year 2	Updated*

3. Building Communities and Amplifying Voices

What are we going to do?	**Service**	**By end of year** **1- 2025 - 2026** **2- 2026 - 2027** **3- 2027 - 2028**	**Notes**
3.1 Empower and support local institutions to become registered places of sanctuary including libraries, surgeries arts, community, colleges, and faith organisations.	Housing Services	Year 3	On-going action
3.2 Act as a lead Local Authority on joined-up campaigning for migrant rights, share learning and expertise through sanctuary networks at a local, regional, and national level including the City of Sanctuary Local Authority Network.	Housing Services	Year 3	

3.3 Work in partnership with Oxfordshire County Council to convene a joint Council of Sanctuary stakeholder group, bringing together shared external partners to improve coordination, reduce duplication, and strengthen a collective approach to delivery, while continuing to promote co-production and the Thriving Communities vision of “doing with, not to.” Internal stakeholder group will continue to meet.	Housing Services	Year 2	New*
3.4 Support refugee partners and community groups to access opportunities in arts, culture, and community activity via the use of our facilities, grants, and external funding. Collaborate with the local VCS to build capacity and participation of local lived experience groups via funding advice and support. Develop effective pathways into volunteering and participation via social and cultural activities.	Community Services	Year 2	
3.5 Build capacity of local sanctuary seeking community via Sanctuary Ambassadors programme and access to the Sanctuary in Politics course.	Housing Services	Year 3	
3.6 Support refugee community groups to access spaces and places where they can come together to enjoy common interests and create new friendships.	Community Services	Year 2	

4. Shaping Services

What are we going to do?	Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Notes
4.1 Review incorporation of sanctuary principles into services when strategies, policies or services are changed.	Corporate Strategy	Year 2	On-going action
4.2 Develop online resources to be more accessible for people seeking sanctuary including the Council's web page and information regarding accessing housing and other support.	Housing, Communities and Customer Services	Year 2	On-going action
4.3 Create opportunities and spaces for people seeking sanctuary to have their voices heard and their stories shared, ensuring their experiences inform service design and delivery, while also supporting community cohesion through positive storytelling, myth-busting, and greater understanding across communities. Ensure people seeking sanctuary can feed into Council activity through existing mechanisms and co-production approaches.	Housing Services	Year 2	Updated*
4.4. Increase the visibility and understanding of the Council of Sanctuary approach across Oxford, communications campaigns, and partnership promotion to ensure residents, organisations, and businesses understand and engage with the initiative.	Housing Services	Year 2	New*
4.5. Strengthen the collection and use of data on people seeking sanctuary across council services, including housing, homelessness, employment, and community engagement, to better understand needs, track outcomes, and inform service design and policy decisions.	Housing Services	Year 2	New*

5. Supporting Integration

What are we going to do?		Service	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Notes
5.1.	Grow and publicise wider migrant-specific information, advice and guidance for all residents such as a Sanctuary Door initiative (Single Point of Contact), embedding opportunities for people with lived experiences to lead on service support.	Housing Services	Year 2	On-going action
5.2.	Facilitate a co-production process with sanctuary-seeking groups to gather insights on their unique experiences and needs related to domestic abuse and ensure learning informs council working practice which will improve response to other women	Regulatory Services and Community Safety	Year 3	New*
5.3.	Via sanctuary ambassadors programme and the external stakeholders group review availability of legal advice services for people seeking sanctuary. Alongside community partners, explore opportunities to support expansion of provision as well as pathways to access, & to provide residents with information about their rights.	Housing Services	Year 2	
5.4.	Work alongside the Oxford Food Hub and other local charities to raise awareness of free or low-cost food options for people seeking sanctuary, in relation to accessing food, and engaging in the wider local food system and increasing communication to ensure people seeking sanctuary are aware.	Housing services supported by Communities	Year 2	On-going action
5.5.	Produce a joint calendar of events which promote integration and support sanctuary events such as during Refugee week	Housing services	Year 2	On-going action

6. <u>Working in Partnership and Innovating</u>

What are we going to do?		Organisation/ Group	By end of year 1- 2025 - 2026 2- 2026 - 2027 3- 2027 - 2028	Notes
6.1.	Support local research bodies to (a) create and develop body of evidence demonstrating the positive impact of people seeking sanctuary locally and (b) analyse the benefits and opportunities	Council of Sanctuary (CoS) external	Year 3	

they bring.	stakeholders' group		
6.2. Support Oxfordshire County Council and other key partners to increase English language provision (ESOL) accessibility and employment opportunities to those with different immigration status, ages, childcare provision needs or access needs in a wide range of both statutory and community settings across the City.	Oxfordshire County Council (OCC)	Year 2	Updated*
6.3. Support the Getting Oxfordshire Online Digital Inclusion network, to bring together partners to identify digital barriers for refugees and asylum seekers in the City / county and promote greater digital inclusion for this group.	OCC supported by the CoS external stakeholders' group.	Year 3	Action year updated*
6.4. Collaborate with local partners and individuals seeking sanctuary to develop culturally appropriate and accessible health initiatives, with a strong focus on expanding access to mental health support. Engage with relevant charities & public services to explore and enhance support networks/resources.	Council of Sanctuary external stakeholders' group	Year 3	
6.5. Review existing support available to people with No Recourse to Public Funds (NRPF) via the establishment of an NRPF working group with Oxfordshire County Council and local VCS.	CoS external stakeholders' group	Year 2	Action year updated*
6.6. Alongside partners, work to ensure asylum seekers have access to low affordable public transport & travel around Oxford	Oxfordshire County Council	Year 2	
6.6 Support the development of a coordinated "Sanctuary Pathway" offer across Oxford, which maps out the relevant support required i.e. housing, employment, ESOL, health, and community support into a clear, accessible and equitable pathway for people seeking sanctuary	CoS external stakeholders' group	Year 2	New*
6.7 Develop a coordinated approach to responding to community tensions related to migration and sanctuary, including cross-council collaboration, communication planning, and engagement with local communities to promote safety, cohesion, and trust.	CoS external stakeholders' group	Year 2	New*

Priority Area and Key Performance Indicator (KPI)	Measure of success (if applicable)	Rag rating 25/26 EOY	Measure outcome
1.Wellbeing, Education and Employment		Green - on track Amber - minor issues and/or delays Red - significant issues and/or delays	
Support to access employment	50 people benefiting from support		• 15 people leaving Home Office accommodation supported with employability support through the Council's Youth Ambition Team • 20 people leaving Home Office accommodation supported with employability support through the Council's Community Team • 16 people supported who have been resettled via government backed resettlement schemes by commissioned parter
Support access to wellbeing, leisure facilities and therapeutic outcomes	100 people accessing wellbeing & leisure activities. At least 100 people supported to access counselling or other health services		• Over 1000 people attended wellbeing and sport sessions residing in Home Office accommodation supported by the Council's Community team • 6 people who have been resettled by the Council accessed counselling • 277 people residing in Home Office accommodation accessed health support through the Asylum Seeker Care Co-ordinator role
2. Housing and Homelessness			
Support access to housing advice	Deliver 100 face to face housing advice drop in sessions		• 219 people seen by the Council at the Home Office housing advice drop in

Improve housing outcomes for people seeking sanctuary	Deliver 50% positive housing outcomes for prevention & relief cases		• 42.5% successful outcomes for prevention & relief cases for households under HFU & leaving Home Office accommodation. • Move on period increases challenges to help resolve cases, the Council has plans to increase % success rate through increased homeless prevention activities in 26/27
3. Building Communities and Amplifying Voices			
Working with residents to co-produce information	Co-produce at least 5 housing advice leaflets and translated housing information videos		• 9 translated leaflets produces and translated videos available via the Council's YouTube channel giving guidance and housing advice
Lead and bring together stakeholders	Hold at least 3 internal and external stakeholder meetings		
4. Shaping Services			
Increase accessibility of information available	Make updates to the OCC website and produce sanctuary newsletters		• The Council's website updated, newsletter produced and produced Council of Sanctuary Framework document
Increasing resident feedback and co-production work	At least 50 people sanctuary seekers to participate in co-production groups or feedback on Council services through surveys, groups or interviews		• Engagement activities include: ○ Lunch & Learns (6) / Staff conference (4) / External stakeholder groups (12) / Sanctuary Fair planning (6) / Sanctuary Door planning and training (12) / Lived experience groups (16)
5. Supporting integration			
Support successful resettlement work	Support resettlement of 8 families		
Work with resident to co-	Hold at least 2 co-produced		

produce events	events		
6. Working in Partnership and Innovating			
Supporting access to English classes	At least 100 people participating in ESOL classes		• 31 people supported who have been resettled via government backed resettlement schemes by commissioned parter • 55 ESOL learners supported through partnerships with colleges • 14 learners supported via Oxfordshire County Council supported schemes
Improving outcomes for people with No Recourse to Public Funds (NRPF)	Co-produce a County wide NRPF protocol		• Currently in production and aim to deliver in 2026 • NRPF co-production group on-going and will produce a resource for other people with NRPF condition

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	8 July 2026
Report of:	Director of Housing
Title of Report:	HRA Property Services Policies

Summary and recommendations	
Decision being taken:	To request that Cabinet recommend that Council approve the following policies: complaints, lifting equipment and lifting operations, voids.
Key decision:	Yes
Cabinet Member:	Councillor Linda Smith – Housing and Communities
Corporate Priority:	Good, affordable homes
Policy Framework:	HRA Asset Management Strategy 2025 -2028

Recommendation(s): That Cabinet resolves to:

1. **Recommend** full Council to approve the draft Complaints Policy
2. Recommend full Council to approve the draft Lifting Equipment and Lifting Operations Policy
3. **Recommend** full Council to approve the draft Voids Policy

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Complaints Policy	No
Appendix 2	Equality Impact Assessment – Complaints Policy	No
Appendix 3	Lifting Equipment and Lifting Operations Policy	No
Appendix 4	Equality Impact Assessment – Lifting Equipment and Lifting Operations Policy	No
Appendix 5	Voids Policy	No

Appendix 6	Equality Impact Assessment – Voids Policy	No
Appendix 7	Risk Assessment	No

Introduction and background:

1. Further to the Cabinet and Council approving a series of Housing Revenue Account (HRA) policies, further policies are being presented to the Cabinet to ensure the safety of residents and ensure the good management of the housing stock.

2. The policies being presented to the Council fall into two broad categories – ensuring the safety of all residents and secondly, ensuring the good management of the housing stock and the need to treat residents with dignity and respect when, in extreme circumstances, tenants have to leave homes temporarily for urgent maintenance work to be undertaken.

3. Making sure residents have a safe, affordable and decent place to call home is the core purpose of this work. Successive Governments have been working to strengthen the voice of residents and introduce legislation to ensure the quality of homes.

4. In 2018, the then Government published the Social Housing White Paper to ensure residents of social housing are safe, listened to, live in good quality homes and have access to help when things go wrong. Consequently, the Social Housing Regulation Act ("the Act") received Royal Assent in July 2023. The Act forms a new regulatory framework for the social housing sector, aiming to give residents greater powers and improve access to quick and fair solutions to problems.

5. The Act aims to ensure Registered Social Landlords (RSLs) are compliant with the consumer standards by giving the Regulator of Social Housing new powers to address RSLs who are not meeting their commitments to residents.

6. The Social Housing Charter detailed what social housing residents should expect from their landlords, including feeling safe in their homes, knowing how their landlords are performing and having their complaints solved quickly.

7. The Act sets out to deliver against each of these commitments:

- Residents to be safe in their home.
- Residents to know how their landlord is performing.
- Residents to have their complaints dealt with promptly.
- Residents to be treated with respect.
- Residents to have their voice heard by their landlord.
- Residents to have a good quality home and neighbourhood to live in.

8. Technical policies are therefore required to adhere to this regulatory regime. They are also key to ensure the effective operation of the Housing Revenue Account (HRA) property service as it ensures that asset management services and the development of the social housing programme are set within a sound operating framework such as meeting key performance criteria, as well as ensuring sustainability objectives are met and monitored.

9. The ability to refresh policies ensures key KPIs can be refined to meet the contemporary needs of tenants and of the wider city in respect of the role of housing in attaining economic growth.

10. At the same time, the need to ensure high standards are maintained, such as guaranteeing gas safety standards are met and there is constant action to monitor and act on radon levels, can be attained by clear technical policies which ensures consistent follow through with operational work in addressing health and safety objectives.

11. The Council recognises its compliance responsibilities as well as the critical need to listen and act on the lived in experiences of our residents. There has been a series of meetings with the Residents Policy Review Group and survey work with residents which has amended and approved the policies which are being presented to Cabinet for approval with this report.

12. There is a need for a suite of other policies to be considered and approved by the Cabinet to meet these regulatory standards. It is envisaged that further policies, once they are considered by residents, will be presented to the Cabinet for approval.

Complaints Policy

13. This policy sets out the Council's approach to delivering an effective complaint handling service that meets both the regulatory requirements set out in the Regulator of Social Housing's Transparency, Influence and Accountability Standard and the Housing Ombudsman's Complaint Handling Code 2024.

14. This policy aims to:

- Provide residents with a clear, accessible and efficient complaints process.
- Ensure residents understand how to make a complaint and their right to access the Housing Ombudsman Service.
- Ensure complaints are investigated fairly, consistently and impartially.
- Promote a positive culture of learning from complaints to improve landlord services provided by or on the behalf of the Council.
- Ensure compliance with all relevant legislation and regulatory requirements.

15 The Social Housing (Regulation) Act 2023 empowered the Housing Ombudsman to issue a code of practice about the complaints procedures that social housing providers should follow.

16. The policy stipulates a two-stage process where complaints are assessed and considered impartially in the interests of providing a good service to all residents.

17. The Council will look beyond the circumstances of individual complaints and consider whether service improvements can be made as a result of any learning from complaints. Using the complaint process in this way enables the Council to learn from the issues that arise for customers and to take steps to improve the services it provides.

18. The drafting of this policy has been undertaken in partnership with the Housing Ombudsman Service who have provided detailed guidance which has led to this draft policy being tabled to the Cabinet for consideration.

19. The Cabinet is asked to approve the draft Complaints Policy and commend the policy for approval to Full Council.

Lifting Equipment and Lifting Operations Policy

20. The Council is responsible for maintaining passenger lifts and for carrying out examinations and inspections to ensure those lifts operate safely. In addition to lifts, the Council has a responsibility to maintain stair lifts and hoists to ensure the safety of their tenants in their homes.

21. The Council must establish a policy which meets the requirements of the Health and Safety at Work Act 1974. In addition to this, the policy must provide assurance that measures are in place to ensure compliance with the Lifting Operation and Lifting Equipment Regulations 1998 (LOLER) and to identify, manage and/or mitigate risks associated with relevant lifting equipment.

22. The Council will endeavour to ensure that all lifts and lifting equipment in properties it owns and manages will be in full working order at all times. Where the Council becomes aware that lifts or lifting equipment are not operating as they should, emergency repairs orders will be issued to remedy faults as quickly as possible within the timescales as stated below:

Repair Type	Target response times following work order issued	Target fix time following work order issued	Comments
Emergency	Entrapment 1 hour	Fix where possible or make safe within 24 hours	Repairs needed to avoid danger to health, or that pose a risk to the safety of the safety service users.

			“Make safe” repairs may require a follow up visit to complete the repair.

Repair Type	Target response times following work order issued	Target fix time following work order issued	Comments
Emergency	Breakdown Within 4 hours during between 8am – 8pm – Monday to Sunday	Fix where possible or make safe within 24 hours For stairlifts where there is not a complete breakdown but faults are appearing, the response time is within the first 48 hours of the report of the fault having been made	Repairs that are a major cause of discomfort or inconvenience. “Make safe” repairs may require a follow up visit to complete the repair.
Emergency	Breakdown Within 4 hours – Out of Hours	Fix where possible or make safe within 24 hours	Repairs that are a major cause of discomfort or inconvenience. “Make safe” repairs may require a follow up visit to complete the repair.
Urgent	Within 24 hours	Fix within 5 days	These repairs do not cause immediate damage to the building, its occupiers, or neighbouring properties or user inconvenience
Routine	Appointment to be confirmed within 24 hours	Timescale to be agreed with the Council	This is for further works that may be required following a repair, Thorough Examination or Planned Preventative Maintenance (PPM) where the Council will advise of the target fix time

23. The Cabinet is asked to approve the draft Lifting Equipment and Lifting Operations Policy and commend the policy for approval to Full Council.

Voids Policy

24. This policy outlines our approach to managing empty properties ('voids'), to minimise the length of time a property stays empty. This will consequently reduce the loss of rental income and maximise income for the Housing Revenue Account (HRA), while ensuring that applicants in housing need are allocated a suitable property as soon as possible.

25. A property is defined 'void' when no tenancy exists following vacation by the previous occupant, and no rental income is being received. The 'void period' exists between a tenancy ending and a new tenancy beginning.

26. The Council recognises the importance of working to specific timescales in handling voids as part of performance monitoring and ongoing review of operations. The contractor work targets are as follows:

- Minor works (assessed at inspection stages): 5 working days
- Standard Void: 15 working days
- Major Void: 25 working days
- Exceptional Voids; 90 working days

27. These contractor works targets do not represent the full end-to-end void turnaround target. The overall end-to-end relet period includes all stages of the void process, including tenancy termination, key return, inspection, specification, compliance checks, works, advertising, allocation, viewing, acceptance and tenancy sign-up.

28. The Council's indicative end-to-end standard void relet target is 35 calendar days, measured from the previous tenancy end date to the start of the new tenancy, excluding properties formally classified as major, exceptional, complex, or deliberately held for operational reasons. This target will be monitored alongside stage-based performance indicators to ensure that delays are identified and addressed across the full process.

29. A minor void is defined when minimal work such as minor cleaning, compliance checks and minor and or internal works lasting no more than 5 working days are required.

30. A standard void is defined a property requiring cleaning and routine repairs with no capitalised elements. This is distinct from a major void which requires significant work such as structural repairs, electrical rewiring, installation of kitchens and bathrooms or major adaptations as well as disability adaptations.

31. A major void refers to a vacant property that cannot be easily or quickly re-let, often requiring extensive, long-term, or specialised intervention before it can be brought back into use. Unlike a standard void (routine turnover), these properties are generally not habitable in their current condition, leading to higher maintenance, security, and renovation costs.

32. A major void includes:

- Structural repairs – these are works that are essential to maintain stability and weather resistance in the main structural elements of a dwelling ie floors, walls and roofs as determined by the surveyor. Major works to these elements will involve replacement or substantial reconstruction of the component or element.
- Site works – this is work around and specific to the dwellings involved and is essential to the safety, security and protection of tenants (eg the replacement or substantial reconstruction of unstable boundary walls, footpaths etc)
- Consequential and other works – these are works that are required as a consequence of major repairs such as reinstatement or making good finishes and fittings.
- Any works that significantly improve the dwellings (ie capitalised repairs) should only be classified as major repairs if they could not reasonably be carried out with a tenant in occupation.
- Emergency repairs constitute any defect that puts the health, safety or security of the tenant or a third party at immediate risk; or that affects the structure of the building adversely. These would qualify as reasons for classifying the property as needing major repairs.
- Asbestos removal – Notifiable asbestos works should be counted as major works. Non-notifiable asbestos works should be counted as standard void works.

33. An exceptional void refers to a property that is vacant but is excluded from standard re-letting performance targets due to specific, long-term, or non-routine circumstances. Unlike standard voids (short-term turnovers), these properties are often undergoing major, complex, or strategic work that prevents them from being occupied. This includes installation of components such as, for example, air source heat pumps.

34. The Cabinet is asked to approve the draft Voids Policy and commend the policy for approval to Full Council.

Financial implications

35. There are no financial implications for these policies, any work required under these policies will be funded from existing budgets and monitored in accordance with current financial management processes.

Legal issues

36. The policies being presented for approval are required under the Consumer Standard as set by legislation and the Regulator for Social Housing.

Level of risk

37. The failure of the Council to have these asset management policies would go against the Corporate Plan to keep residents safe and could lead to regulatory

infringements further to the requirements of the Regulator for Social Housing, the Health and Safety Executive and the Building Services Regulator.

Equalities impact

38. Equality Impact Assessments (EqIA) has been carried out to determine whether the policies being presented to the Cabinet for approval would have an impact on any member of staff, tenants, or contractor workforce, which unfairly discriminates or disadvantages them in the context of the Equality Act 2010.

39. Whilst the EqIA has identified that there are no particular groups who will be unlawfully disadvantaged by these policies, it is identified that there are certain groups at increased risk from safety infringements. These groups are:

- children
- adults with learning difficulties
- oxygen users
- people taking certain medication
- those suffering the effects of drugs and alcohol
- adults aged 65 and older
- people with disabilities
- Individuals being supported by the Community Safety team and related support services

40. These policies aim to reduce the risks to these groups of people through proactively identifying these risk factors, raising awareness and education further to the Public Sector Equality Duty (s.149).

Conclusion

41. By approving these policies, this will help establish the framework to maintain the housing stock and further ensure the safety of our residents. This approval would also help meet the expectations of the Regulator of Social Housing that the Council is meeting its regulatory obligations. Further HRA policies will be presented to the Cabinet for its consideration after residents have been able to assess and, if necessary, amend draft proposals.

Policy statement

1.1 This policy sets out the Council's approach to delivering an effective complaint handling service that meets both the regulatory requirements set out in the Regulator of Social Housing's Transparency, Influence and Accountability Standard and the Housing Ombudsman's Complaint Handling Code 2024.

1.2 This policy aims to:

- Provide residents with a clear, accessible and efficient complaints process.
- Ensure residents understand how to make a complaint and their right to access the Housing Ombudsman Service.
- Ensure complaints are investigated fairly, consistently and impartially.
- Promote a positive culture of learning from complaints to improve landlord services provided by or on the behalf of the Council.
- Ensure compliance with all relevant legislation and regulatory requirements.

Policy scope

1.3 This policy applies to complaints about the Council's housing services in its role as a landlord.

1.4 This policy applies to complaints from any person defined as a 'resident' below, and their representatives.

1.5 This policy will be published on the Council's website.

Definitions

2.1 For the purposes of this policy, the term 'residents' means any of

(i) Applicants for social housing,
(ii) Tenants of any type,
(iii) Shared owners,
(iv) Leaseholders,
(v) Former tenants,
(vi) Anyone else affected by the landlord services provided by or on the behalf of the Council, including those delivered by third parties.
(vii) Representatives of any of the above (please see paragraph 5.3 for more information on representatives).

Complaint:

3.1 A complaint is defined as 'an expression of dissatisfaction, however made, about the standard of service, actions or lack of action by the landlord, its own staff, or those acting on its behalf, affecting a resident or group of residents.'

3.2 A resident does not have to use the word ‘complaint’ for it to be treated as one. Where a resident expresses dissatisfaction, they will be given the choice to make complaint. Where they choose to do so, it will be recorded as a stage on complaint in line with this policy. Complaints submitted by a third party or representative will be handled in line with this policy.

3.3 We will presume any expression of dissatisfaction as defined is 3.1 above is a ‘complaint’ unless the resident or representative explicitly declines the choice to engage the complaints policy.

Service request:

4.1 A service request is defined as ‘a request from a resident to the Council requiring action to be taken to put something right’. Examples of service requests include:

- raising a repair for the first time
- asking for information or clarification about their home or tenancy
- reporting an incident of anti-social behaviour.

4.2 Where a resident expresses dissatisfaction with how a service request has been handled or the response they received, they will be given the choice to make a complaint. Where they choose to do so, it will be recorded as a stage one complaint in line with this policy even if the service request is ongoing. The Council will continue its efforts to address the service request alongside the complaint.

4.3 An expression of dissatisfaction shared through a survey is not defined as a complaint, though wherever possible, the person completing the survey will be informed how they can make a complaint if they wish to do so. Where the Council asks for wider feedback about its landlord services, details of how to complain will be provided.

Exclusions

5.1 The Council will accept complaints that fall within its definition in this policy unless there is a valid reason not to do so. Circumstances where a complaint will not be accepted may include:

- If the matter being raised is considered as a service request.
- Where the issue giving rise to the complaint occurred over twelve months ago, if it is fair and reasonable to do so.
- Where legal proceedings have started. This is defined as details of the claim, such as the Claim Form and Particulars of Claim, having been filed at court.
- Matters that have previously been considered under this policy, unless there is substantially new information that may warrant further consideration.

- Reports of anti-social behaviour which will not be treated as complaints, however, the Council will accept complaints about the handling of such reports.
- Complaints relating to the Council's wider housing services that do not relate to its role as a landlord, for example, homelessness applications, housing allocations, housing benefit or private sector housing.
- Complaints relating to non-housing services.
- Complaints about councillors, which are subject to a different process and should be reported to standards@oxford.gov.uk.
- Complaints about the outcome of a Freedom of Information request, Subject Access Request, or Environmental Information request which have a separate review process with escalation to the Information Commissioner's Office.
- Objections to planning applications.
- Complaints raised by employees (unless they are raising it as a qualifying resident), which will be dealt with under the relevant employment policy.
- Complaints about other local authorities or organisations that are not acting on behalf of Oxford City Council.

5.2 Some complaints from leaseholders relating to service charges are better suited to being handled through the First Tier Tribunal, although the Council will always try to resolve these concerns in the first instance.

5.3 Each complaint will be considered on its own merits, taking account of the individual circumstances. The Council will not take a blanket approach to excluding complaints.

5.4 Where the Council does not accept a complaint, a response will be provided to the resident setting out the reasons why the matter is not suitable and inform them of their right to take that decision to the Housing Ombudsman Service.

5.5 Where a matter falls outside the scope of this policy, the Council will explain why and, where appropriate, direct the resident to the relevant service, process or procedure. If the matter meets the definition of a complaint but is not about the Council's housing services in its role as a landlord, the resident will be referred to the Council's corporate complaints procedure.

Making a complaint

6.1 Complaints can be made in any way and with any member of staff by:

- completing the online customer feedback form on the website
- phoning the Customer Service Centre on 01865 249811
- writing to Complaint HUBs, Oxford City Council, Town Hall, St Aldate's, Oxford, OX1 1BX
- emailing OCCLSComplaints@oxford.gov.uk
- in person.

6.2 The Council is committed to treating everyone fairly. Where a resident requires support to make or pursue a complaint, they are advised to let the Council know and state what assistance is required. This may include providing information in alternative formats such as large print, interpretation or translation services or communication through a representative.

6.3 Residents may authorise a representative to deal with a complaint on their behalf and to be represented or accompanied at any meeting with the Council. A representative maybe a friend, family member, carer or a third party such as a voluntary organisation, councillor or Member of Parliament. The Council will require appropriate consent before sharing information with a third party in line with data protection requirements.

6.4 Anonymous complaints will be considered in line with this policy, however there may be limits where there is insufficient information or where the complainant cannot be contacted.

6.5 Where a complaint is received via social media, the Council will contact the resident requesting them to re-submit the complaint via the complaints process set out in this policy. Complaints will not be dealt with on public social media platforms.

Complaint process and timescales

7.1 Information about the complaints process will be made available in the Council's Residents Voice quarterly magazine and on the Council's website. This will include how to contact the Housing Ombudsman Service and information about the Housing Ombudsman Service's Complaint Handling code.

Stage one:

7.2 Stage one complaints will be acknowledged, defined and logged within five working days of the complaint being received. The acknowledgement letter will include the outcome the resident is seeking and what aspects of the complaint Oxford City Council are and are not responsible for. A full response will be issued within ten working days of when the complaint was acknowledged.

7.3 Where a complaint is complex, additional time may be required to fully investigate a complaint. Where this is the case, the resident will be informed of the expected timescale for response and receive regular updates. Any extension will be no longer than ten working days without good reason, and the reason will be clearly explained to the resident. When an extension has been agreed the resident will be provided with the contact details of Housing Ombudsman Service.

7.4 A complaint response will be provided to the resident when the answer to the complaint is known, not when the outstanding actions required to address

the issue are completed. Outstanding actions will be tracked and actioned promptly with appropriate updates provided to the resident.

7.5 Where a resident raises additional complaints during the investigation, these will be incorporated into the stage one response if they are related and the stage one response has not been issued. Where the stage one response has been issued, the new issues are unrelated to the issues already being investigated or it would unreasonably delay the response, the new issues will be logged as a new complaint.

7.6 All responses will confirm the following in writing to the resident at the completion of stage one in clear, plain language:

- the complaint stage
- the complaint definition
- the decision on the complaint
- the reasons for any decisions made referencing the relevant policy, law and good practice where appropriate
- the details of any remedy offered to put things right
- details of any outstanding actions
- details of how to escalate the matter to stage two if the resident is not satisfied with the response including details of the Housing Ombudsman Service.

7.7 Where complaints relate to repairs and maintenance carried out by Oxford Direct Services (ODS), these complaints are referred ODS who will undertake stage one of the complaints process in line with this policy. Where a resident is not satisfied with the response at stage one and escalates the matter to stage two, the Council will investigate the matter at stage two.

Stage two:

7.8 Stage two complaints are an escalation from stage one, where all or part of the complaint is not resolved to the resident's satisfaction at stage one.

7.9 Requests for stage two will be acknowledged, defined and logged within five working days of the escalation request being received. The acknowledgement letter will include the outcome the resident is seeking and what aspects of the complaint Oxford City Council are and are not responsible for. A full response will be issued within 20 working days of when the complaint was acknowledged.

7.10 Residents will not be required to explain their reasons for requesting a stage two consideration. The Council will make reasonable efforts to understand why a resident remains unhappy as part of its stage two response.

7.11 The person considering the complaint at stage two must not be the same person that considered the complaint at stage one. Stage two is the Council's final response and will involve a review of the stage one

investigation and response, alongside an assessment of any additional information and further investigation with appropriate staff.

7.12 Where a complaint is complex, additional time may be required to fully investigate a complaint. Where this is the case, the resident will be informed of the expected timescale for response and receive regular updates. Any extension will be no longer than 20 working days without good reason, and the reason will be clearly explained to the resident. When an extension has been agreed the resident will be provided with the contact details of Housing Ombudsman Service.

7.13 A complaint response will be provided to the resident when the answer to the complaint is known, not when the outstanding actions required to address the issue are completed. Outstanding actions will be tracked and actioned promptly with appropriate updates provided to the resident.

7.14 All responses will confirm the following in writing to the resident at the completion of stage one in clear, plain language:

- the complaint stage
- the complaint definition
- the decision on the complaint
- the reasons for any decisions made referencing the relevant policy, law and good practice where appropriate
- the details of any remedy offered to put things right
- details of any outstanding actions
- details of how to escalate the matter to the Housing Ombudsman Service if the resident remains dissatisfied.

External escalation:

7.15 Residents with a tenancy agreement, lease agreement, license to occupy, or similar agreement to live within a Council property can contact the Housing Ombudsman Service at any time for advice on complaint handling while a complaint is going through the Council's complaints process outlined in this policy. The Housing Ombudsman Service will not normally accept a complaint for formal investigation until the Council's internal process has been completed. The Housing Ombudsman Service contact details are:

- Telephone: 0300 111 3000
- Address: Housing Ombudsman Service, PO Box 1484, Unit D, Preston, PR2 0ET
- Email: info@housing-ombudsman.org.uk
- Web: www.housingombudsman.org.uk

7.16 Complaints relating to building safety may be directed to the Building Safety Regulator. The Building Safey Regulator contact details are:

- Telephone: 0300 790 6787

- Address: Redgrave Court, Merton Road, Bootle, Merseyside, L20 7HS
- Web: https://www.gov.uk/guidance/contact-the-building-safety-regulator

7.17 Complaints about our landlord function from residents without a tenancy or lease with the Council, or complaints relating to our homelessness duty, allocations and other local authority functions not covered by the Housing Ombudsman Service can be referred to the Local Government and Social Care Ombudsman

- Telephone: 0300 061 0614
- Address: Local Government & Social Care Ombudsman, PO Box 4771, Coventry, CV4 0EH
- Website: https://www.lgo.org.uk/how-to-complain

Putting things right

7.18 The Council will work collaboratively with residents, where something has gone wrong, the Council will acknowledge this and set out the actions already taken, or those it intends to take, to put things right. Potential remedies can include:

- apologising
- acknowledging where things have gone wrong
- providing an explanation, assistance, or reasons
- taking action if there has been delay
- reconsidering or changing a decision
- amending a record or adding a correction or addendum
- providing a financial remedy
- changing policies, procedures, or practices.

7.19 Any remedy offered will reflect the impact on the resident as a result of any fault identified. The remedy offer will clearly set out what will happen and by when, in agreement with the resident where appropriate.

7.20 The Council will follow Housing Ombudsman Service guidance when deciding on appropriate remedies.

Roles and responsibilities

Member Responsible for Complaints:

7.1 A member of the governing body will be appointed to have lead responsibility for complaints to support a positive complaint handling culture. This person is referred to as the Member Responsible for Complaints ('the MRC').

7.2 The MRC will be responsible for ensuring the governing body receives regular information on complaints that provides insight on the landlord's complaint handling performance. This person must have access to suitable information and staff to perform this role and report on their findings.

Senior Lead:

8.3 The Director of Housing is the senior lead person accountable for complaint handling. The Director of Housing will oversee the assessment of complaint data, including identifying themes and trends to highlight potential systemic issues, serious risks, and any policies or procedures requiring review or revision.

Complaint Officers:

8.4 The Council's Housing Customer Care & Complaints Team will take responsibility for complaint handling, including liaison with the Housing Ombudsman and ensuring complaints are reported to the governing body.

8.5 The Council's Housing Customer Care & Complaints Team will have access to staff at all levels to facilitate the prompt resolution of complaints. They will also have the authority and autonomy to act to resolve disputes promptly and fairly.

8.6 Where complaints relate to repairs and maintenance carried out by Oxford Direct Services (ODS), staff at ODS will undertake stage one complaints in line with this policy.

8.7 All relevant staff will be suitably trained in the importance of complaint handling.

All staff:

8.8 The Council will have a standard objective in relation to complaint handling for all relevant employees or third parties that reflects the need to:

- have a collaborative and co-operative approach towards resolving complaints, working with colleagues across teams and departments
- take collective responsibility for any shortfalls identified through complaints, rather than blaming others
- act within the professional standards for engaging with complaints as set by any relevant professional body.

8.9 All staff will be aware of the complaints process and be able to pass details of the complaint to the Council's Housing Customer Care & Complaints Team.

Continuous learning and improvement

9.1 The Council will look beyond the circumstances of individual complaints and consider whether service improvements can be made as a result of any learning from complaints. Using the complaint process in this way enables

the Council to learn from the issues that arise for customers and to take steps to improve the services it provides.

9.2 The Council will publish an annual complaints performance and service improvement report, which will be made available to residents on its website. The Council will also share learning from complaints with residents through forums such as the Tenant and Leaseholder Board and on its website.

9.3 The Member Responsible for Complaints ('the MRC') and the governing body will receive:

- regular updates on the volume, categories and outcomes of complaints, alongside complaint handling performance
- regular reviews of issues and trends arising from complaint handling
- regular updates on the outcomes of the Housing Ombudsman's investigations and progress made in complying with orders related to severe maladministration findings
- the annual complaints performance and service improvement report.

9.4 Oversight measures for complaint handling include quality checking cases handled by the Council and ODS, and regular performance reporting, as well as in depth reviews of the complaint handling and decision making of any cases that escalate to stage two.

Equalities Assessment

10.1 An Equality Impact Assessment (EqIA) has been carried out to determine whether the policy would have an impact on any member of staff, tenants, or contractor workforce, which unfairly discriminates or disadvantages them in the context of the Equality Act 2010. The EqIA has identified that there are no particular groups who will be unlawfully disadvantaged by this policy.

Related Legislation and Regulation

11.1 The Council will adhere to all relevant legislation and regulatory obligations as they apply, including but not limited to:

- Localism Act 2011
- Housing Act 1996
- Equality Act 2010
- Data Protection Act 2018
- Building Safety Act 2022
- Social Housing (Regulation) Act 2023
- The Housing Ombudsman Service Complaint Handling Code (a statutory code that the Council is required to comply with.

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

3487

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	**6. Race & Ethnicity**
2. **Disability**	**7. Religion or Belief**
3. **Gender Reassignment**	**8. Sex**
4. **Marriage & Civil Partnership**	**9. Sexual Orientation**
5. **Pregnancy & Maternity**	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.

3488

7. Provides clear **justifications** for your decisions.
8. It is written in **plain English** with simple short sentence structures.

OXFORD CITY COUNCIL

Lifting Operations and Lifting Equipment Policy

Purpose of the Policy

1.1 The Council owns and manages properties that have passenger lifts. It also owns and lets a number of domestic properties adapted with lifting equipment and assisted living aids such as stairlifts and hoists to enable tenants to continue to live independently within their homes.

1.2 The Council is responsible for the inspection and maintenance of passenger lifts to ensure they operate safely. This duty also extends to stairlifts and hoists, which the Council must maintain and inspect to ensure the safety of their tenants within their homes.

Policy Objectives and Scope

2.1 The Council must establish a policy which meets the requirements of the Health and Safety at Work Act 1974. In addition to this, the policy must provide assurance that measures are in place to ensure compliance with the Lifting Operation and Lifting Equipment Regulations 1998 (LOLER) and to identify, manage and/or mitigate risks associated with relevant lifting equipment

2.2 The Council must also ensure that compliance with lift safety legislation and performance against this policy is formally reported to the Council's Corporate Leadership Team and Cabinet (where appropriate), including details of any non-compliance, associated risks and planned corrective actions.

2.3 This policy is relevant to all Council employees, tenants, contractors and other persons or other stakeholders who may work on, occupy, visit, or use its premises, or who may be affected by the Council's lifs.

2.4 This policy should be used to ensure all relevant stakeholders understand the Council's obligations to maintain a safe environment within the home of each tenant and within all non-residential premises or communal buildings.

Key terms and definitions

Thorough Examination	A systematic and detailed examination of the equipment and safety critical parts, carried out at specified intervals by an independent competent person who must then complete a written report

Competent Person	Person with appropriate knowledge, experience and training
LOLER	Lifting Operations and Lifting Equipment Regulations 1998 Lifting accessories Items used to attach a load (or person) to a lift and lifting equipment, e.g., ropes, chains, hooks, in-situ, and transfer slings etc.
Lifting Equipment	Equipment for lifting or lowering loads (including people) and includes its attachments used for anchoring, fixing or supporting it. It includes any lifting accessories that attach the load to the equipment in addition to the equipment which carries out the actual lifting function
Lifting Operation	The lifting or lowering of a load, including a person

Legal/Regulatory Framework

3.1 The application of this policy will ensure compliance with the regulatory framework and consumer standards (Home Standard) for social housing in England, which was introduced by the Regulator of Social Housing.

3.2 The principal legislation applicable to this policy is the Health and Safety at Work Act 1974 and the Lifting Operation and Lifting Equipment Regulations 1998 (LOLER).

3.3 The principal codes of practice applicable to this policy are:

- ACoP L113 - Safe use of lifting equipment: Lifting Operations and Lifting Equipment Regulations 1998
- INDG422 - Thorough examination of lifting equipment: A guide for employers
- INDG339 - Thorough examination and testing of lifts: Simple guidance for lift owners

3.4 The Council acknowledges and accepts its responsibilities in accordance with the regulatory standards, legislation and codes of practice and that failure to discharge these responsibilities properly could lead to a range of sanctions including prosecution by the Health and Safety Executive under the Health and Safety at Work etc Act 1974, and/or prosecution under the Corporate Manslaughter and Corporate Homicide Act 2007 and via a serious detriment judgement from the Regulator of Social Housing.

3.5 In addition, the Regulator of Social Housing has powers to proactively intervene where landlords are performing badly on consumer issues (including non-compliance with building safety measures) and may conduct routine inspections to investigate systematic issues.

3.6 The Council will use the legal remedies available to it, including seeking an access injunction from the Court, should any tenant, leaseholder or shared owner refuse access to carry out essential lift safety related inspection and remediation works.

3.7 This policy also operates in the context of the following additional legislation:

• The Management of Health and Safety at Work Regulations 1999
• The Provision and Use of Work Equipment Regulations 1998 (PUWER)
• The Workplace (Health Safety and Welfare) Regulations 1992
• The Building Regulations 2004 – Part M • Construction (Design and Management) Regulations 2015
Control of Asbestos Regulations 2012
• Equality Act 2010
• Housing Act 2004
• Landlord and Tenant Act 1985
• Data Protection Act 2018
• Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) 2013
• Homes (Fitness for Human Habitation) Act 2018

3.8 This policy is in also in accordance with the (LEIA) Lift and Escalator Industry Association (LEIA) – Asbestos Safety Information Sheet, in relation to lift motor rooms, brake pads, which if containing asbestos and are left in place wear down and release asbestos fibres. This policy will follow LEIA advice that asbestos will be removed rather monitored to achieve high standards of compliance.

Obligations

4.1 The Council is responsible for maintaining passenger lifts and for carrying out periodic thorough examinations and inspections to ensure those lifts operate safely. Section 3 of the Health and Safety at Work Act 1974 requires employers, such as landlords, to take responsibility for the health and safety of employees and other people using or visiting their premises so far as reasonably practicable.

4.2 Passenger lifts in workplaces (for example, offices and communal blocks), which are primarily used by people at work, are subject to the Lifting Operations and Lifting Equipment Regulations 1998 (LOLER) and the Provision and Use of Work Equipment Regulations 1998 (PUWER) as well as the 1974 Act referenced above.

4.3 The Council is required to ensure that all passenger lifts, when in use, are thoroughly examined after substantial and significant changes have been made, at least every six months if the lift is used to carry people (or in accordance with an examination scheme) and following “exceptional circumstances” such as damage to, or failure of, the lift, long periods out of use or a major change in operating conditions which is likely to affect the integrity of the equipment.

4.4 Where stairlifts, hoists or through floor lifts have been provided in communal areas, the Council has responsibilities for the safety of all users under Section 3 of the Health and Safety at Work Act 1974. These may be adequately discharged by undertaking regular maintenance and inspection, (6-monthly, done to the standard of a thorough

examination). LOLER (thorough examination) and PUWER (maintenance and inspection) apply only to stairlifts provided as work equipment for use by employees.

4.5 Stairlifts in domestic properties are not subject to LOLER inspections, however, the council will ensure that these are maintained and inspected, at a minimum, every 6 months, subject to the condition of an individual stairlift, where the Council has installed the stairlifts.

4.6 Insurers may impose demands for similarly stringent levels of risk management to cover public liability

Statement of Intent

5.1 The Council acknowledges and accepts its responsibilities with regard to lift safety and the inspection and maintenance of lifts, stairlifts and hoists.

5.2 All lift, stairlift or hoist equipment in communal areas and any equipment in tenant's homes that was installed by the Council is the responsibility of the Council.

5.3 The Council will hold accurate records against each property it owns or manages, identifying where there is a lift, stair lift or hoist together with the written examination scheme for each installation.

5.4 The Council will appoint/train competent 'responsible persons' who will be responsible for the operation, condition and compliance with all relevant statutory requirements. This includes taking action (within the advised timescales) to remedy any faults or defects identified through routine inspections or insurer's thorough examinations.

5.5 The Council will ensure that it meets all of its legal requirements in regard to lift safety operations through a combination of regular inspections, thorough examinations (in conjunction with the organisation's insurers) and periodic routine maintenance of all relevant lifting equipment within properties it owns and manages.

5.6 The Council will ensure that all lifts in properties it owns and manages will be fully accessible for disabled users (as per the requirements of the Equality Act 2010, and to the specifications outlined in Part M of the Building Regulations 2004). The Council will work to remove asbestos from old lift motor rooms and brake pads.

5.7 The Council will endeavour to ensure that all lifts and lifting equipment in properties it owns and manages will be in full working order at all times. Where the Council becomes aware that lifts or lifting equipment are not operating as they should, emergency repairs orders will be issued to remedy faults as quickly on the timescales as stated below:

Repair Type	Target response times following work order issued	Target fix time following work order issued	Comments
Emergency	Entrapment 1 hour	Fix where possible or make safe within 24 hours	Repairs needed to avoid danger to health, or that pose a risk to the safety of the safety service users. “Make safe” repairs may require a follow up visit to complete the repair.
Emergency	Breakdown Within 4 hours during between 8am – 8pm – Monday to Sunday	Fix where possible or make safe within 24 hours For stairlifts where there is not a complete breakdown but faults are appearing, the response time is within the first 48 hours of the report of the fault having been made	Repairs that are a major cause of discomfort or inconvenience. “Make safe” repairs may require a follow up visit to complete the repair.
Emergency	Breakdown Within 4 hours – Out of Hours	Fix where possible or make safe within 24 hours	Repairs that are a major cause of discomfort or inconvenience. “Make safe” repairs may require a follow up visit to complete the repair.
Urgent	Within 24 hours	Fix within 5 days	These repairs do not cause immediate damage to the building, its occupiers, or neighbouring properties or user inconvenience
Routine	Appointment to be confirmed within 24 hours	Timescale to be agreed with the Council	This is for further works that may be required following a repair, Thorough Examination or Planned Preventative Maintenance (PPM) where the Council will advise of the target fix time

5.8 All lift repairs should be carried out in accordance with approved standards and the manufacturer’s instructions. Thorough Examinations should be undertaken by engineers who are UKAS accredited to ISO/IEC17020 standard. All lift and lifting equipment work will be undertaken by engineers with a minimum of a Level 3 industry

recognised qualification in lift servicing and repair, supported by appropriate practical and theoretical knowledge and experience.

5.9 Where it is not possible to return the equipment to working order or it must be turned off for safety reasons, the contractor will inform the Council immediately. For lifts in communal areas used by multiple residents Property Services will advise the Director of Housing and site staff so that residents can be kept informed.

5.10 The Council will ensure that all prescribed maintenance and relevant inspections is carried out on all known aids and adaptations designed for lifting operations, including platform lifts, stairlifts and hoists, in properties it owns and manages. These checks will take place every six months across all lifting equipment types and may be carried out more frequently where required in line with manufacturers' recommendations or following any void works which may impact the installation (provided the lift is not to be removed prior to a new tenancy commencing).

5.11 The Council will respond and take remedial action for any defects to aids and adaptations designed for lifting operations identified during routine use in line with the standard provisions for repairs and maintenance. All requests of this nature will be addressed.

5.12 Where access is required to a residential dwelling to carry out an inspection or planned preventative maintance (PPM) visit (such as, for example, a stairlift or hoist or through floor lift) this will be managed in accordance with the Council's No Access policy.

5.13 Access attempts will start 8 weeks ahead of the due date for the inspection to ensure all reasonable and practical efforts have been made to complete the examination/maintenance visit before the due date, with a full and detailed audit trail maintained.

5.14 Access efforts will include appointment letters, phone calls and property visits by the contractor and their Tenant Management Officer, with further support from Landlord Services if required. The procedure should allow sufficient flexibility to accommodate residents' needs and circumstances.

5.15 The Council will ensure that there are clear procedures in place and these procedures are communicated to, and understood by, all relevant staff for appropriate action in the event of any persons becoming trapped in lifts the Council owns or manages.

5.16 The Council staff cannot release any persons trapped in lifts, as they are not competent to do so safely, but may provide reassurance until such time as the relevant lift maintenance contractors and/or emergency services arrive, as appropriate.

5.17 The Council will have a service level agreement with lift maintenance service providers that ensures an emergency response in cases of entrapment.

5.18 The Council will aim to ensure all passenger lifts have an intercom fitted that dials directly to a dedicated call centre. In cases of entrapment, call handlers will follow a

scripted risk assessment to determine the medical condition of any persons trapped. If there is an urgent concern for a person's welfare the emergency services will be called and asked to attend immediately.

5.19 The Council will ensure that all lifting equipment used on sites it owns or manages is thoroughly examined by a competent person before it is commissioned into use and is then subject to periodic examination in accordance with the equipment's examination scheme.

5.20 The Council will ensure that only suitably competent consultants, and engineers undertake works for the organisation in respect of lifts, stairlifts and hoists. Consultants will be employed to undertake visual inspections and audits, for quality assurance purposes, and liaise with the engineers as appropriate.

5.21 The Council will ensure that robust processes and controls are in place to ensure that all remedial works identified through routine maintenance, inspections and insurer's inspections are completed within a reasonable timescale commensurate with the risk identified. This will include removing asbestos from old lift motor rooms and brake pads.

5.22 The Council will ensure robust processes and controls are in place to ensure that any health and safety incident relating to lift safety is properly reported as required under RIDDOR. These include defects classed as 'immediately dangerous'.

5.23 The Council will ensure that robust processes and controls are in place to manage works to void and occupied properties that may affect existing lifts, stairlifts or hoists.

5.24 The Council will implement a robust process to deal with all changes to housing stock, including new property acquisitions, disposals and stock transfers, in order to ensure that properties are not omitted from the compliance programme, and to ensure that records remains up-to-date.

5.25 The Council will ensure contracts and service level agreements are in place with the contractors delivering the compliance service and ensure that all contractors' employee and public liability insurances are up to date on an annual basis..

Compliance Risk Assessment/Inspection Programmes

6.1 The Council will establish and maintain a risk assessment for lift safety operations. This risk assessment will set out all of the organisation's key lift safety risks together with appropriate mitigations.

6.2 To comply with the requirements of the Construction (Design and Management) Regulations 2015 (CDM) a Construction Phase Plan will be completed for all repairs work to void and tenanted properties (at the start of the contract and annually thereafter), component replacement works and refurbishment projects. This plan will detail any lift installations that may be affected by the works and detail all necessary work required to make safe and reinstate lift installations to ensure that they are safe to use and continue to comply with all relevant legislation and any relevant written examination scheme, including any testing and maintenance.

6.3 The Council will carry out a programme of maintenance visits by competent persons to all properties that have a lift, stairlift or hoist and a written examination scheme in place where the Council has installed the stairlifts. These programmes will ensure that all maintenance and testing set out in the written examination scheme is fully completed at the times and intervals stated. This will include the removal of asbestos from old motor rooms and brake pads.

6.4 The Council will oversee a programme of thorough examinations of passenger lifts by competent contractors appointed by the Council's insurers. This is to ensure that the organisation's responsibilities towards lift safety are being discharged and provide its insurers with adequate assurance around the quality of lift safety management.

6.5 The Council will carry out a programme of independent third-party quality assurance audits annually to 10% of written examination schemes for lifts (where not included within the insurer's inspection programme). This is to ensure that all examinations and planned maintenance activities are being fully and robustly implemented and completed. This is additional to inspections carried out by the Council's insurers.

Compliance

7.1 The Council will ensure there is a robust process in place for the management of any follow-up works required following the completion of routine maintenance inspections, or where identified by a competent person, when undertaking required maintenance activities.

7.2 The Council will ensure there is a robust process in place for the management of any follow-up works required following the completion of inspections by the organisation's insurers.

7.3 The Council will ensure that there is a robust process in place to collate and record details of all remedial works completed against individual installations.

7.4 The Council will ensure there is a robust process in place to investigate and manage all RIDDOR notices issued with regard to lift safety.

7.5 The Council will maintain a core asset register of all properties with lifts, stairlift or hoist and written examination scheme in place. This register will also hold data against each property asset of the type, age and condition of lift plant in place.

7.6 The Council will establish and maintain accurate records of all written examination schemes and any associated remedial works completed and keep these for a period of not less than 5 years. Records should include the person or people responsible for conducting the inspection; any significant findings of inspections; the written examination scheme and its implementation; and the results of any inspection, test or check carried out, together with the dates. This should include details about the state of operation and condition of the installation.

7.7 The Council will establish and maintain accurate records of all inspections carried out by its insurers, the findings of these inspections, and records of completed remedial works, where identified by insurer's inspections; including dates.

7.8 The Council will ensure that records of all inspections and thorough examinations will be available to the Competent Person at all times and that hard copies of records can be produced, if required by the local enforcement authority.

7.9 The Council will keep a record of any entrapment incidents and will use these to inform future revisions of Examination Schemes.

7.10 The Council will hold and maintain accurate records on the qualifications of all consultants and engineers undertaking lift inspection and maintenance works for the organisation.

7.11 The Council will ensure robust processes and controls are in place to provide and maintain appropriate levels of security for all lift safety related data.

7.12 Robust performance indicator measures will be established and maintained to ensure the Council is able to report on performance in relation to lift safety.

7.13 Performance measures will be produced and provided at Corporate Leadership Team (CLT) as part of the reporting cycle, as required. As a minimum these measures will include reporting on:

• Compliance with written examination schemes for lift plant;
• The number of entrapments within lifts (in month and year to date);
• The number of outstanding high- and medium-level risk actions as identified in insurer's inspection reports;
• The number of RIDDOR notices issued with regards to lift safety.
• Communal (passenger) lifts with a valid insurance check (LOLER).

7.14 Performance will be monitored by Property Services and may also include:

• lifts with a completed service;
• Communal (passenger) lifts with a valid insurance check;
• Domestic (individual) lifts with a completed service.

7.15 In addition, performance reporting may also include (where necessary) written narrative on the current position, mitigating circumstances and/or progress on corrective action. The standard operating procedure for out of office hours maintenance can be found in Annex A to this policy.

7.16 The Council will carry out independent third-party quality assurance audits annually to a minimum of 10% of written examination schemes for lifts (where not included within the insurer's inspection programme) to ensure that all examinations and planned maintenance activities are being fully and robustly implemented and completed. This is in addition to inspections carried out by the Council's insurers.

7.17 The Council will carry out an independent audit of lift safety at least once every two three years. This audit will specifically test for compliance with the regulation, legislation and codes of practice and identify any non-compliance issues for correction action.

Non-Compliance/ Escalation Process

8.1 The definition of non-compliance in relation to this policy refers to any incident which results in a potential breach of legislation or regulatory standard, or which causes or has the potential to cause a significant risk to health or safety.

8.2 Any non-compliance issue identified at an operational level will be formally reported to the Council's Director of Housing.

8.3 The Council's Director of Housing will agree an appropriate course of corrective action to address the non-compliance issue and report details of the same to the Corporate Leadership Team.

8.4 The Director of Housing will ensure Corporate Leadership Team (CLT) and the Council's Cabinet Member for Housing is made aware of any non-compliance issue so they can consider the implications and take action as appropriate.

8.5 In cases of a serious non-compliance issue the Corporate Leadership Team and the Council's Monitoring Officer will consider whether it is necessary to disclose the issue to the Regulator of Social Housing in the spirit of co-regulation, or any other relevant organisation such as the HSE, as part of the Regulatory Framework.

Training

9.1 The Council will ensure that all operatives working for, or on behalf of, the organisation have the relevant training required for their role which will include asbestos awareness training. This policy and the procedures that support it will be subject to a range of training across the Council and will involve all relevant stakeholders. The training will be bespoke and tailored to the individual stakeholders and refresher training will be provided as appropriate.

9.2 Training will include team briefings for those employees who need to have a basic understanding and awareness of lift safety but who may not be directly involved in the delivery of the lift safety policy. This will be basic lift safety awareness training.

9.3 On-the-job training will be provided to those employees who will be responsible for managing the programme of lift inspections, planned maintenance and repair works as part of their daily job. The Council will have a designated lead Officer responsible for operational delivery who would have undertaken appropriate training and have sufficient experience to meet the criteria of a 'competent person' as stated by the Health and Safety Executive (HSE).

Equality, diversity, inclusion, and vulnerability (including most at risk groups)

10.1 An Equality Impact Assessment (EqIA) has been carried out to determine whether the policy would have an impact on any member of staff, tenants, or contractor workforce, which unfairly discriminates or disadvantages them in the context of the Equality Act 2010.

10.2 Whilst the EqIA has identified that there are no particular groups who will be unlawfully disadvantaged by this policy, it is identified that there are certain groups at increased risk from malfunctions of lifting equipment. These groups are:

- children
- adults with learning difficulties
- oxygen users
- people taking certain medication
- those suffering the effects of drugs and alcohol
- adults aged 65 and older
- people with disabilities

10.3 This policy aims to reduce the risks to these groups of people through proactively identifying these risk factors, raising awareness and education and making Safe and Well referrals to Oxfordshire Fire and Rescue Service where appropriate. Keep safe and well | Oxfordshire County Council

10.4 We will assess the needs of residents who inform us they have a disability such as a hearing impairment, visual impairment, and mobility issue, and will provide appropriate equipment or support.

Communication of the policy

11.1 This policy will be communicated internally to Oxford City Council staff and key stakeholders.

Resident communication

12.1 We regularly share information with residents. This is done through our resident community strategy which includes sharing regular safety messages through resident emails, letters, leaflets, and social media.

12.2 Key content from this policy will be included in the Oxford City Council Welcome Pack and Oxford City Council webpage.

12.3 A full copy of this policy will be made available via the Oxford City Council website

Resident Engagement

13.1 Oxford City Council is committed to providing a high level of customer care and positive communication.

13.2 Further monitoring of feedback will take place through resident surveys and this intelligence will be used to inform future reviews of this policy.

13.3 Periodic engagement with residents will take place to ensure that this policy, along with other policies, remain customer facing.

13.4 Residents who are wanting to report a non-urgent safety concern can do so by using the link below: Report a Building Safety Concern with council housing | Instructions – Oxford City Council

13.5 All emergency and urgent safety reports should be made to 01865 249811.

Policy review

14.1 A full policy review will take place in response to any changes in legislation, significant events that may impact on the policy, or at periods not exceeding 2 years.

Annex A

Standard Operating Procedure for After-Hours Lift Maintenance

Purpose

This Standard Operating Procedure (SOP) outlines the steps to be followed when carrying out lift maintenance outside regular operating hours. The objective is to ensure safety, compliance, and minimal disruption to building occupants.

Scope

This SOP applies to all maintenance personnel and contractors responsible for lift servicing in the premises during evenings, nights, weekends, and public holidays.

Procedure

1. **Pre-Maintenance Preparation**
2. Obtain written authorisation from building management for out-of-hours access.
3. Notify security and relevant stakeholders of scheduled maintenance, including estimated start and end times.
4. Ensure all required tools, PPE, and lift maintenance documentation are available.
5. **Site Access and Safety**
6. Sign in at security and collect access keys or passes.
7. Display warning signage at lift entrances and on the affected floors to inform occupants of maintenance work.
8. Ensure the lift is taken out of service and locked off before commencing work.
9. **Maintenance Activities**
10. Follow manufacturer's guidelines and safety protocols during all maintenance tasks.
11. Record all actions, parts replaced, and observations in the maintenance log.
12. Report any hazards or defects identified during maintenance to management immediately.
13. **Completion and Handover**
14. Test the lift thoroughly to confirm safe operation.
15. Remove signage and restore lift service for occupants.
16. Sign out with security and submit maintenance reports to building management.

Emergency Procedures

If an incident occurs during maintenance, immediately contact building security and emergency services. Follow established protocols for evacuation and reporting.

Documentation

All maintenance records should be completed and filed with the HRA Assets Team within 24 hours of the work being conducted.

Review

This SOP should be reviewed annually or following any major incident or regulatory change.

(TM 04 June 2026 81150)

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

3519

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	6. **Race & Ethnicity**
2. **Disability**	7. **Religion or Belief**
3. **Gender Reassignment**	8. **Sex**
4. **Marriage & Civil Partnership**	9. **Sexual Orientation**
5. **Pregnancy & Maternity**	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.

3520

7. Provides clear **justifications** for your decisions.
8. It is written in **plain English** with simple short sentence structures.

OXFORD CITY COUNCIL

	Corporate Objectives, -existing activity is discriminatory and not fulfilling Council's PSED, … to name a few.	problems. This includes a full equalities and diversity assessment is undertaken to meet the needs of all tenants. Over the course of its 2025/26 financial year, the housing service has demonstrated a clear commitment to equalities and diversity across its services. Policies have been developed to ensure that all individuals, regardless of background, have fair and equitable access to housing opportunities. Service user data has been collected and reviewed to monitor representation and identify any potential gaps in service provision. This analysis has highlighted areas of strength, such as the successful accommodation of residents from a range of ethnic, age, and ability groups. However, it has also revealed opportunities for further improvement, particularly in reaching underrepresented communities and ensuring that all communication is accessible for people with disabilities or those for whom English is not a first language. Feedback from residents has been used to shape service delivery, with regular consultations helping to ensure that diverse voices are heard and acted upon. In summary, this policy has been drafted to meet the needs of all residents taking full account of all equalities provisions.

Section 6: Monitoring and review plan.

The responsibility for maintaining a monitoring arrangement of the EqIA action plan lies with the service/team completing the EqIA.
These arrangements must be built into the performance management framework such as KPIs or Risk Registers.

24.	**Who or which team or service area will be responsible for monitoring equalities impact**? **For example-** - team, -directorate, -service area,		Housing

	-Equalities Steering Group,etc.				
25.	**Who (individual, team, or service area) will be responsible for carrying out the EqIA review?**	HRA Team			
26.	**How often will the equality impact be reviewed for this activity?** **For example-** -quarterly, -yearly, etc.	Yearly	**27.**	**Date when the EqIA will be reviewed again.**	May 2027

Voids Policy

Purpose

1.1 This policy outlines our approach to managing empty properties ('voids'), to minimise the length of time a property stays empty. This will consequently reduce the loss of rental income and maximise income for the Housing Revenue Account (HRA), while ensuring that applicants in housing need are allocated a suitable property as soon as possible.

1.2 A property is defined 'void' when no tenancy exists following vacation by the previous occupant, and no rental income is being received. The 'void period' exists between a tenancy ending and a new tenancy beginning.

1.3 There are several reasons that lead to the initiation of the void process, which are outlined below:

- Termination: The resident supplies formal written notice.
- Death of resident: The resident dies and there is no successor to the tenancy.
- Transfer: The resident moves to another City Corporation owned property. Abandonment: The resident has vacated the property without proper notice.
- Eviction: The Council has completed court action and obtained authority to evict the resident/s
- Decants: Residents being re-housed following plans to redevelop, dispose of or demolish housing stock

1.4 This policy sets out the Council's approach to the effective management of void properties, ensuring that homes are brought back into use as quickly as possible whilst meeting required standards of quality, safety and compliance.

1.5 The policy aims to balance the need to minimise the length of time properties remain empty and the associated loss of rental income to the Housing Revenue Account (HRA), with the delivery of homes that are safe, decent, and fit for occupation at the start of a new tenancy.

1.6 It provides a clear framework for managing the void process from tenancy termination through to re-let, clarifying responsibilities, standards and decision-making to ensure a consistent, transparent and value-for-money approach.

1.7 A property is defined as 'void' when no tenancy exists following vacation by the previous occupant and no rental income is being received. The 'void period' is the period between a tenancy ending and a new tenancy beginning.

Duties of the Council as a Landlord

Homes (Fitness for Human Habitation) Act 2018

2.1 The Homes (Fitness for Human Habitation) Act 2018 states that landlords have a duty of care when it comes to meeting their existing responsibilities

relating to property standards and safety, and making sure their property is fit for human habitation at the beginning of the tenancy and throughout.

Regulator for Social Housing – Safety and Quality Standard

2.2 Registered providers must have an accurate, up to date and evidenced understanding of the condition of their homes that reliably informs their provision of good quality, well maintained and safe homes for residents.

Decent Homes Standard

2.3 Registered providers must ensure that residents homes meet the standard set out in section five of the Government's Decent Homes Guidance and continue to maintain their homes to at least this standard.

Health and safety

2.4 When acting as landlords, registered providers must take all reasonable steps to ensure the health and safety of residents in their homes and associated communal areas.

Repairs, maintenance and planned improvements

2.5 Registered providers must provide an effective, efficient and timely repairs, maintenance and planned improvements service for the homes and communal areas for which they are responsible.

2.6 During the void period we will ensure the Council will meet all our legal responsibilities under the relevant and current compliance legislation for the quality, health and safety of incoming occupants in their homes.

2.7 These include gas, water and in-situ electrical installations, including all smoke and fire alarms, will be tested and certified to say that they are in good working order and comply to current legislation. Fire doors and fire prevention mechanisms will be checked and if necessary, replaced to the current relevant legislative standard.

Fitness for Human Habitation

2.8 Under the Homes (Fitness for Human Habitation) Act 2018, the Council has a duty to ensure that its homes are fit for human habitation at the start of a tenancy and throughout its duration. This includes ensuring that properties are safe, in good repair, and free from serious hazards.

Regulatory Standards

2.9 The Council will comply with the Regulator of Social Housing's consumer standards, including requirements to maintain an accurate, up-to-date and evidenced understanding of the condition of its housing stock, which informs the delivery of safe, decent and well-maintained homes.

Decent Homes Standard

2.10 The Council will ensure that its properties meet the requirements of the Decent Homes Standard, as set out in the relevant government guidance, and will continue to maintain homes to at least this standard or any successor standard that may apply.

Health and Safety Compliance

2.11 When acting as a landlord, the Council will take all reasonable steps to ensure the health and safety of residents and occupants in its homes and associated communal areas. The void period represents a critical point at which compliance with health and safety requirements must be assured prior to re-let.

Repairs, Maintenance and Compliance During Voids

2.12 During the void period, the Council will ensure that all statutory safety checks and inspections are completed and that properties meet the Council's letting standard before a new tenancy begins. This includes, but is not limited to, compliance with gas safety, electrical safety, water safety, fire safety measures, alarms and other safety-critical systems, in line with current legislation and regulatory requirements.

Associated Policies and Procedures

2.13 This policy operates alongside the Council's wider suite of housing safety, compliance and asset management policies and procedures, including those relating to gas safety, electrical safety, asbestos management, fire safety, repairs and planned maintenance. These documents set out the detailed standards, processes and responsibilities that support delivery of this policy.

Objectives

3.1 The Council's objectives are to:

- To minimise void rental loss, void periods and void repair costs through effective coordination of repairs and maintenance operations to re-let properties within agreed target times.
- Ensure that properties are managed efficiently throughout the void process by supplying transparency of tasks and responsibilities.
- Ensure that residents are aware of their tenancy obligations in relation to ending the tenancy such as the requirement to give 4 weeks' notice, to return all keys promptly and to fully clear the property and leave it in a clean condition.
- Minimise the rechargeable repairs costs through clear and effective communication with residents

- Ensure that repairs to properties are undertaken to enable properties to be re-let and that where appropriate rechargeable repair costs are met by the outgoing resident or pursued post termination.
- Make effective use of void periods to carry out upgrades or major repairs as appropriate
- Make effective use of the void period to consider possible works which would improve the energy efficiency and thermal comfort of the property, to help meet the Council's net zero carbon targets.
- Prevent end of tenancy arrears wherever possible.
- Effectively meet housing need in the city through quick return of use of properties.
- Achieve high levels of resident satisfaction with the condition of properties at the beginning of the tenancy
- Minimise rental loss to the Housing Revenue Account by reducing void periods and managing void repair costs, through effective planning and coordination of repairs and maintenance to achieve re-let within agreed target timescales.
- Ensure that properties are managed efficiently and consistently throughout the void process, with clear accountability, defined responsibilities and appropriate oversight.
- Ensure that properties are brought back into use at an appropriate standard, meeting the Council's letting standard and all relevant safety and compliance requirements prior to re-let.
- Ensure that residents are aware of, and meet, their obligations at the end of a tenancy, including notice requirements, property clearance, key return and rent payments, supported by clear and timely communication.
- Minimise avoidable and rechargeable repair costs, and ensure that recharge processes are fair, transparent and proportionate, with costs recovered where appropriate.
- Make effective and proportionate use of void periods to carry out necessary repairs, planned works or upgrades where this represents value for money and supports the long-term sustainability of the housing stock.
- Make appropriate use of void periods to consider energy efficiency and thermal comfort improvements, in line with the Council's wider decarbonisation and net zero carbon objectives and associated policies.
- Prevent end-of-tenancy arrears wherever possible through early intervention and coordination between services.
- Achieve high levels of resident satisfaction with the condition and quality of properties at the start of a new tenancy.

Roles and Responsibilities

4.1 The Director of Housing will have overall responsibility for the implementation of the Voids policy.

4.2 The Head of HRA Assets, Landlord Services Lead and the Housing Needs and Strategy Manager will have responsibility to develop, implement, and monitor the effective management of Void management, including appropriate management of repairs contracts and service level agreements with

partnering contractors, to ensure the Council delivers an efficient and value-for-money service, by exceeding key performance indicators (KPI's) and financial targets.

4.3 This will be achieved by ensuring voids are re-let on time and that our stock is maintained to the highest possible standard to meet our residents' needs. The HRA Assets Lead will ensure all property related health and safety legislation and regulations are adhered to.

4.4 Council staff and Contractors will follow the Voids Policy and related associated procedures and have an awareness of property-related legislation and regulations to ensure the operational delivery is fair and consistently delivered across our services. Staff and contractors are aware of their roles and responsibilities and regularly carry out mandatory and personal development training offered to them.

Termination of Tenancy

5.1 A resident must give four weeks' written notice of their intention to end their tenure. On receipt of the written notice, the Council will send a letter to confirm the vacant possession date and remind the outgoing resident of their end of tenancy responsibilities, including:

- Confirming arrangements for a pre-void inspection of the property to be completed during the notice period.
- The property, including the garden (if any) is to be left in a clean, tidy condition, and clear of all resident belongings and items.
- The removal of improvements, fittings and fixtures must result in the property being left safe and not detrimental to the condition of the property. Improvements installed without permission or repairs being carried out due to resident neglect, will be subject to recharges
- Pay all rent owed up to the end of the tenancy.
- Return keys on or before the end of tenancy date.
- Provision of a forwarding address.

5.2 A resident must give at least four weeks written notice of their intention to end their tenancy unless a mutual agreement had been reached with a deed of surrender.

5.3 On receipt of written notice, the Council will confirm the vacant possession date and remind the outgoing resident of their end of tenancy responsibilities, including:

- Confirming arrangements for a pre-void inspection of the property to be carried out during the notice period. A Housing Officer and an HRA colleague would form the inspection team.
- Leaving the property, including any garden (where applicable), in a clean and tidy condition and clear of all personal belongings.
- Ensuring that any alterations, improvements, fittings or fixtures are managed in accordance with the Council's policies and the terms of any permissions

granted. Where improvements have been authorised and deemed suitable to remain, they should not be removed unnecessarily. Unauthorised alterations, or damage arising from neglect, may be subject to recharge in order to reinstate the property to an acceptable standard.

- Paying all rent and other charges owed up to the end of the tenancy.
- Returning all keys on or before the tenancy end date.
- Providing a forwarding address to support final account reconciliation and any post-tenancy correspondence.

Pre-Void Inspections

6.1 Carrying out a Pre-Void inspection is beneficial to minimise the void period of a property and to identify any problems that can be discussed with the resident and resolved prior to the tenancy end date.

6.2 The Pre-Void inspection will include the resident's home, and any sheds/garages licensed to the resident. When the inspection is carried out, a checklist is completed and any rechargeable repairs and required clearance of possessions will be discussed with the resident or their representative (should they be present).

6.3 If the resident is not present at the time of the inspection, the Council will write to the resident setting out what rechargeable repairs were identified during the inspection.

6.4 HRA Assets Team will order the necessary void works (which shall include any rechargeable repairs), and a letter will be sent to the resident confirming the amount to be charged and payment process and timescale.

6.5 If a resident leaves either prior to an inspection, or after the inspection but prior to us writing to the resident explaining the recharges, the rechargeable repairs will be ordered and a letter and invoice sent to the forwarding address advising that the repair work will be recharged and explaining how those charges will be recovered.

6.6 The Council considers the pre-void inspection to be a critical and essential step in the void management process. A robust pre-void inspection supports the timely re-letting of properties, minimises avoidable void repair and clearance costs, and provides outgoing residents with clear expectations of what is required to leave the property in an acceptable condition.

6.7 Where notice of tenancy termination is received, the Council will endeavour to carry out a pre-void inspection within the first two weeks of the notice period, wherever practicable. This allows sufficient time for the outgoing resident to address identified issues whilst the tenancy remains active.

6.8 The pre-void inspection will comprise a full walk-through of the property, including any gardens, sheds or garages licensed to the resident. The inspection will record the condition of the property and clearly identify:

- Repairs or remedial works required to bring the property to an acceptable standard for re-let.
- Any alterations or improvements and whether these are authorised in line with the Council's policies
- Any items, furniture or possessions that must be removed by the outgoing resident prior to the end of the tenancy.
- Any potential rechargeable repairs, clearance or remedial costs that may be incurred if actions are not completed.

6.9 Findings from the pre-void inspection will be clearly communicated to the outgoing resident or their representative, setting out the actions required before the tenancy ends and the potential consequences if these are not addressed.

6.10 The Council will provide outgoing residents with clear written guidance, including information on how to leave the property, expected standards at termination, and the circumstances in which charges may be applied. This may include the use of standard information leaflets or appendices to support consistent understanding and reduce avoidable disputes.

6.11 A record of the completed pre-void inspection, including any supporting photographs or documentation, must be saved against the property record within the Council's housing management system. A copy of the inspection outcomes will also be shared with the relevant Council officer or team responsible for coordinating and instructing void works, to support early planning and mobilisation of works in advance of keys being returned.

6.12 Where the resident is not present at the time of the inspection, the Council will write to the resident to confirm the outcomes of the inspection, including any actions required and any potential rechargeable items identified.

6.13 Where a resident vacates the property prior to a pre-void inspection or fails to complete required actions identified during the inspection, the Council may arrange for works, repairs or clearance to be undertaken. Any costs reasonably incurred as a result may be recharged to the outgoing resident in accordance with the Council's recharge processes, with details provided to the forwarding address.

Return of keys

7.. The keys should be returned by the resident or the resident's representative on or before the agreed vacant possession date.

7.2 The rent account for the outgoing resident will be terminated on the date that the keys are returned. This ends the outgoing resident's rent obligation and starts the void accrual period from the following day.

7.3 Should keys not be returned on, or before, the agreed termination date, rent will continue to be charged on the property until the keys are received.

Death of Resident

8.1 When a resident dies and there is no succession, it is compulsory that the tenancy is formally ended through a four-week notice being served on the next of kin or the Public Trustee once notified.

8.2 The Council will advise the deceased resident's next of kin or Public Trustee of the process to formally end the tenancy, supplying the end of tenancy and vacant date.

8.3 The Council recognise that the loss of a family member or friend is a difficult and sensitive period and therefore extra time will be provided, if required, to clear the property past the expiry date of the notice.

8.4 The property must be left empty and in good condition. The estate of the deceased is responsible for settling any outstanding charges in respect of the property. The estate should also ensure that all supplies are turned off.

Abandonment

9.1 Abandonment will be decided following an investigation when there has been evidence or information supplied that the registered resident has left the property with no intention to return, and no termination of the tenancy has been received.

9.2 The Council will make reasonable enquiries to prove whether a property has been abandoned and record their findings.

9.3 The Council will consider:

- If the property is secure
- If possessions have been left in the property
- Speaking to family and friends on contacts list
- Information neighbours can provided
- Unauthorised occupants
- Collaborating with the Fraud Investigation team.

9.4 Legal action should be taken to recover the property once adequate evidence has been gained to confirm the abandonment.

9.5 Images should be taken to also act as a record to any items left by the previous resident and utilised as an inventory.

Eviction

10.1 Following an eviction - when receiving the property back via the courts and execution of the warrant - pictures and/or videos will be taken to also act as a record to any items left by the previous resident and utilised as an inventory within 24/48 hours of the repossession date. The Council will arrange removal of any items that are left to be placed in storage. The items would be left in

storage for one month where the Council is aware where the owner is and can serve notice on the tenant(s) to collect the items. Where the Council is unaware where the tenant(s) is, the period would be six months storage. After these periods, the Council would dispose of the items. This is in line with s41 of the Local Government (Miscellaneous Provisions) Act 1982.

Repairs

11.1 After the property has been vacated by the outgoing resident, the Council will organise a property inspection which will be undertaken by Council surveyors and staff from Oxford Direct Services or any equivalent organisation. The inspection records the condition of the property, notes property characteristics and records any work to be completed before re-letting. Information and costs about any recharges will be sent to the outgoing resident by letter or email.

11.2 The Council will complete all repair works before the property is re-let and within a clearly specified timescale During this period, an Energy Performance Certificate (EPC) assessment and where required a landlord gas safety record (LGSR) will be completed.

11.3 Once a property has been vacated, the Council will arrange for a post-termination inspection to be carried out by appropriately qualified Council officers and/or representatives of the Council's contracted repairs service. The inspection will record the condition of the property, confirm key characteristics, and identify all works required prior to re-letting.

11.4 The outcome of the inspection will inform a specification of works, which will be prepared in line with the Council's approved void and letting standards. These standards may vary depending on property type, tenure, or intended use, and are set out in the Council's associated policies and technical documents. The specification will ensure that properties are returned to an appropriate, consistent and compliant standard prior to re-let.

11.5 Where applicable, information gathered during the pre-termination inspection will be used to support early planning of works, reduce avoidable delays, and minimise void periods.

11.6 Details of any rechargeable repairs identified during the inspection process will be communicated to the outgoing resident in accordance with the Council's recharge procedures, and with reference to the outcomes of the pre-termination inspection where applicable.

11.7 The Council will ensure that all required repair works are completed before the property is re-let and within clearly defined and monitored timescales. During the void period, the Council will also ensure that all relevant statutory safety checks and certifications are completed as a matter of course prior to re-occupation. This includes, but is not limited to:

- A valid Landlord Gas Safety Record (LGSR), where gas is present
- Electrical safety certification in line with current legislation

- An Energy Performance Certificate (EPC), where required

11.8 No property will be re-let unless it meets the Council's letting standard and all required safety and compliance obligations have been satisfied.

Major Voids

12.1 Where a void property requires major works, and therefore a high level of investment is needed in order to bring it up to an appropriate standard, then an options appraisal may be undertaken in order to assess whether the works should be completed, or if the property should be taken out of use.

12.2 Consideration will be given to:

- Level of rent loss if the property is not occupied and the impact on the Housing Revenue Account
- The level of demand for the property type and area
- The overall cost of the works required. If the assessment finds that the works are financially viable they will be completed.

12.3 Decisions on potential disposals will follow the process as stipulated in the Disposals Policy.

12.4 Where a void property requires significant or non-routine works, and a high level of investment is likely to be required in order to bring the property up to an appropriate letting standard, the Council will apply enhanced oversight and control to ensure that works are justified, properly specified, and aligned with approved budgets and asset investment priorities.

12.5 In such cases, the Council may undertake an options appraisal to determine the most appropriate course of action. This may include consideration of whether works should proceed, be phased, be incorporated into planned investment programmes, or whether the property should be taken out of use.

12.6 The options appraisal will consider, where relevant:

- The level of rental loss associated with the property remaining void and the impact on the Housing Revenue Account.
- Demand for the property type and location.
- The nature, scope and overall cost of the works required to achieve the required standard.
- Whether proposed works include replacement of major components (such as kitchens, bathrooms, heating systems, electrical installations or other lifecycle items) that may be more appropriately delivered through approved capital or planned investment programmes.

12.7 Where major works are approved, the Council will ensure that:

- The scope of works and associated costs are clearly defined and agreed in advance.

- Works are raised against the appropriate budget headings and cost codes, in line with the Council's financial controls and asset management arrangements.
- Replacement of key components is recorded accurately within the Council's asset and property systems to support lifecycle planning, compliance and future investment decisions.

12.8 This approach ensures that high-cost voids are managed in a controlled and transparent manner, supports value for money, and prevents unplanned or inappropriate expenditure being incurred without appropriate visibility and approval.

12.9 Where it is determined that the works required are not financially viable, or that the property is no longer suitable for its intended use, decisions on disposal or alternative use will be taken in accordance with the Council's Disposals Policy.

Adapted Properties

13.1 Properties which are already adapted when they become void will be considered in line with the Aids and Adaptations Policy with the priority being to ensure best use of the adaptations.

13.2 In some instances, where a property has major adaptations, the Council may choose to leave the property void for a longer period until a suitable resident, who requires the adaptations, can be identified. A property will be advertised with the appropriate adaptions listed in order for those on the housing register to identify a suitable tenant. A mobility report would be produced to show those individuals who have a need for adapted properties.

13.3 Decisions to remove major adaptions from properties will be made by the HRA Assets Lead based on all available information on the demand for the property and compliance with the Aids and Adaptations Policy.

13.4 Where a property contains adaptations, these will be considered in line with the Council's Aids and Adaptations Policy, with the primary objective of ensuring the best and most appropriate use of adapted housing stock to meet identified need.

13.5 In some cases, where a property has significant or specialist adaptations, the Council may choose to hold the property void for a longer period in order to identify a suitable incoming resident whose needs match the adaptations provided.

13.6 Information relating to adaptations within a property, including those identified during the pre-termination inspection process, will be used to inform decisions about re-let, suitability, and allocation. The Council will seek to maintain accurate records of adapted properties and the nature of adaptations provided, to support effective matching, asset management and strategic planning.

13.7 Decisions to remove, alter or replace adaptations will be made by the Council's HRA Assets team and Landlord Services taking into account demand, suitability, value for money, and compliance with the Aids and Adaptations Policy. Where adaptations have been authorised and are suitable to remain, they should not be removed unnecessarily.

13.8 This approach supports the effective use of adapted housing stock, reduces avoidable waste, and ensures that adaptations are managed in a coordinated and strategic manner.

Advertising Properties

14.1 Void properties will be advertised once the pre voids property inspection during the notice period or when the tenant has left the property unexpectedly has confirmed their condition, including any existing adaptations. The details of the inspection would be on a pro forma template before advertisement. All available properties will be marketed in line with the Council's established weekly advertising cycle. Shortlisting will be completed promptly, and nominations will be made within the agreed key performance indicators to ensure an efficient and transparent allocations process. All offers will be made in accordance with the Councils Allocations Scheme.

New Tenancies

15.1 New residents will be invited to sign the Tenancy Agreement. The terms of the Tenancy Agreement will be explained to ensure that the resident(s) is fully aware of the landlord and resident's responsibilities, and the consequences if conditions are breached. The new resident will also be provided with appropriate advice about:

- Paying their rent
- Applying for benefits, if required
- Setting up utilities
- Reporting any repairs
- Property information in the form of the property pack

15.2 All new residents will be given the opportunity to provide feedback relating to the voids and allocations process by completing a New Tenancy Survey at sign up. Feedback and satisfaction will be monitored and reported in accordance with the council's performance management framework.

Performance Management and Benchmarking

16.1 The Council is committed to ensuring its voids work offer excellent value for money and will therefore ensure that a range of mechanisms are in place to demonstrate value.

16.2 The mechanisms used will include:

- Benchmarking against peers. This is defined as local authority social housing providers and Registered Providers who have a housing stock of up to 10,000 dwellings
- Market testing against other providers
- Reviewing internal cost and performance data
- Internal business reviews

16.3 Operation of the Voids Policy and its procedures and subsequent data will be recorded monthly and reported on a quarterly basis. Details of procedures for gathering information and recording each stage of void processing and this information will be used to provide the following performance monitoring indicators:

- Average void time (standard voids) (days)
- Average void time (major voids) (days)
- Average void turnaround time (contractor only) (days)
- Total voids (number)
- Voids pre-handover inspections completed (%)
- Average void to advertising time (days)
- Voids meeting Letting Standard at handover
- Properties let after one offer (%) (YTD)
- Number of properties let
- Number of properties let (management transfer/direct offer)
- Properties offered within 10 days of handover (%) (YTD)
- Properties refused due to quality or condition (number - YTD)

16.4 Teams will work together within the Council and the Local Authority Trading Company (Oxford Direct Services) to ensure the efficient delivery of void properties to the market.

16.5 The following approach would be followed if targets are being missed to ensure void properties are not re-let in a timely period.

Stage	**Action**	**Responsible Party**	**Outcome / Next Step**
1. Ongoing Monitoring	Void performance will be reviewed through regular void meetings involving the Council, Oxford Direct Services (ODS), and Allocations. Progress against agreed target timescales will be monitored, including emerging risks, revised completion dates and barriers to re-let.	HRA Assets Team / Voids Manager	Live oversight of void performance and early identification of delay risks
2. Operational Management	Where a void is forecast to exceed target, the Voids Manager will review the	Voids Manager	Revised timescales and actions agreed

	reasons for delay, liaise with the relevant contractor or service area, and agree revised timescales and required actions to support delivery.		
3. Management Intervention	Where delays continue, or where specific issues are affecting delivery, the Voids Manager will work with the relevant contractor, service area or delivery partner to review progress, clarify expectations, and monitor the actions required to progress the void. This may include agreeing a recovery plan, revised timescales, and enhanced monitoring arrangements.	Voids Manager / HRA Assets Team	Recovery plan in place and progress monitored
4. Senior Escalation	Where delay presents a material risk to void performance, rental income, customer outcomes or reputation, the matter will be escalated by the Voids Manager to the HRA Operations Manager for review and direction. The Head of HRA Assets will be informed through reporting and escalation arrangements where delays are prolonged, high-risk, or otherwise significant.	Voids Manager / HRA Operations Manager	Senior management oversight applied, with Head of HRA Assets visibility where required
5. Reporting and Assurance	Void performance, including prolonged delays, emerging trends and high-risk cases, will be reported through the Council's management and governance arrangements. This will ensure appropriate oversight by the Head of HRA Assets and wider senior leadership as required.	HRA Operations Manager / Head of HRA Assets	Organisational oversight, reporting assurance and service improvement

16.6 Timely escalation helps minimise income loss and ensures properties are re-let efficiently.

16.7 Regular monitoring and communication between teams is essential throughout the process.

Key Targets

17.1 The Council recognises the importance of working to clear and measurable timescales in the management of void properties. For the purposes of this policy, a distinction is made between:

a) contractor works targets, which relate to the period from works commencement to completion of void works; and
b) end-to-end relet performance, which relates to the full void period from the previous tenancy end date to the start date of the new tenancy.

17.2 - The following contractor works targets apply once the void works have commenced, subject to property classification, specification, statutory compliance requirements, access, availability of materials and any approved exceptions:

- Minor void works: 5 working days
- Standard void works: 15 working days
- Major void works: 25 working days
- Exceptional voids: target timescale to be agreed on a case-by-case basis, with enhanced monitoring and review

17.3 These contractor works targets do not represent the full end-to-end void turnaround target. The overall end-to-end relet period includes all stages of the void process, including tenancy termination, key return, inspection, specification, compliance checks, works, advertising, allocation, viewing, acceptance and tenancy sign-up.

17.4 - The Council's indicative end-to-end standard void relet target is 35 calendar days, measured from the previous tenancy end date to the start of the new tenancy, excluding properties formally classified as major, exceptional, complex, or deliberately held for operational reasons. This target will be monitored alongside stage-based performance indicators to ensure that delays are identified and addressed across the full process.

17.5 - In respect of decant properties, adapted properties awaiting a suitable match, properties held for operational reasons, or properties requiring options appraisal, disposal consideration, structural works, fire / flood reinstatement or other complex intervention, the Council may classify these separately so that they do not distort standard void performance reporting. These properties will remain subject to management oversight, review and appropriate reporting.

17.6 - It is important to note that all targets are intended to support effective performance management and service improvement. Staff, contractors and partner teams should always seek to minimise avoidable delay, reduce rent loss and return homes to occupation as quickly as possible, while ensuring that homes are safe, compliant and meet the Council's letting standard.

17.7 A major void includes:

- Structural repairs – these are works that are essential to maintain stability and weather resistance in the main structural elements of a dwelling ie floors, walls and roofs as determined by the surveyor. Major works to these elements will involve replacement or substantial reconstruction of the component or element
- Site works – this is work around and specific to the dwellings involved and is essential to the safety, security and protection of tenants (eg the replacement or substantial reconstruction of unstable boundary walls, footpaths etc)
- Consequential and other works – these are works that are required as a consequence of major repairs such as reinstatement or making good finishes and fittings.
- Any works that significantly improve the dwellings (ie capitalised repairs) should only be classified as major repairs if they could not reasonably be carried out with a tenant in occupation
- Emergency repairs constitute any defect that puts the health, safety or security of the tenant or a third party at immediate risk; or that affects the structure of the building adversely. These would qualify as reasons for classifying the property as needing major repairs
- Asbestos removal – Notifiable asbestos works should be counted as major works. Non-notifiable asbestos works should be counted as standard void works.

17.8 An exceptional void refers to a property that is vacant but is excluded from standard re-letting performance targets due to specific, long-term, or non-routine circumstances. Unlike standard voids (short-term turnovers), these properties are often undergoing major, complex, or strategic work that prevents them from being occupied. This includes installation of components such as, for example, air source heat pumps.

17.9 If an extension is needed due to individual circumstances within a property, the contractor can seek permission from the Council in advance of these timescales being potentially breached.

Training

18.1 The Council will ensure that all staff involved in the void process will have the required skills, training and detailed understanding of this policy and related procedures.

Policy Review

19.1 This policy will be reviewed on a regular basis to ensure it remains current, effective and aligned with legislative, regulatory and organisational requirements.

19.2 The policy will normally be reviewed every three years, or sooner where there are significant changes to legislation, regulation, service delivery arrangements, or the Council's strategic priorities.

Equalities Assessment

20.1 An Equality Impact Assessment (EqIA) has been carried out to determine whether the policy would have an impact on any member of staff, tenants, or contractor workforce, which unfairly discriminates or disadvantages them in the context of the Equality Act 2010.

20.2 The EqIA has identified that there are no particular groups who will be unlawfully disadvantaged by this policy.

Associated Policies and Documents

21.1 This policy should be read in conjunction with the Council's wider suite of housing, safety, compliance and asset management policies and procedures, including (but not limited to):

Gas Safety Policy
- Electrical Safety Policy
- Fire Safety Policy
- Asbestos Management Policy
- Aids and Adaptations Policy
- Disposals Policy

21.2 Associated operational documents and guidance may include:

- Pre-termination inspection procedures and templates
- Void and letting standards
- Resident guidance and information provided at end of tenancy, including expectations for property condition, clearance of possessions and potential recharges

21.3 These associated documents set out the detailed standards, processes and guidance that support delivery of this policy.

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

3553

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	**6. Race & Ethnicity**
2. **Disability**	**7. Religion or Belief**
3. **Gender Reassignment**	**8. Sex**
4. **Marriage & Civil Partnership**	**9. Sexual Orientation**
5. **Pregnancy & Maternity**	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.

7. Provides clear **justifications** for your decisions.
8. It is written in **plain English** with simple short sentence structures.

3554

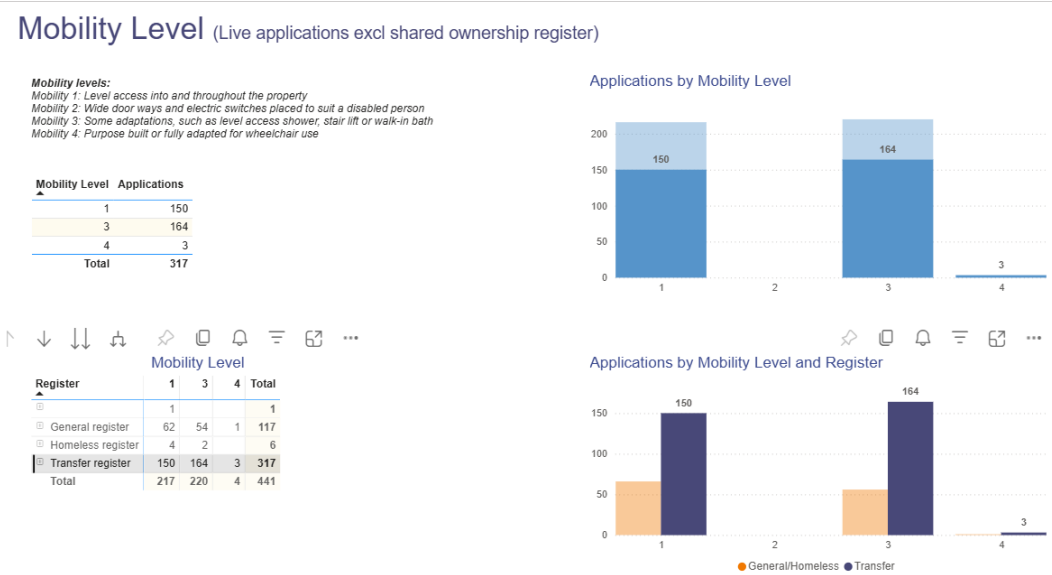
12.	**Type of activity being considered:** Check the most appropriate.	☐	☐ Decommissioning	☐ Commissioning	☐	
		X ☐	x Others. Please specify: HRA Policy			
13.	**Which priority area(s) within Oxford City Council's Corporate strategy (2024-2028) does this activity fulfil?** Please check as needed.	X Good, affordable homes	☐ Strong, fair economy	X☐ Thriving Communities	☐ Zero Carbon Oxford	☐ Well run council
14.	**Which priority area(s) within Oxford City Council's Equality, Diversity & Inclusion Strategy (2022) does this activity fulfil?** Please check as needed.	X☐ Responsive services and customer care.	☐ Diverse and engaged workforce.	☐ Leadership & organisational commitment.	x Understanding and working with our communities.	
15.	**Outline the aims, objectives, & priorities of the activity being considered.**	This policy sets out Oxford City Council's (OCC) approach to dealing with voids (empty residential properties). The objectives of the policy are to: • Provide clear information relating to the voids process • Ensure that aids and adaptations are factored into the voids process • Process voids within published timescales				

www.oxford.gov.uk
OXFORD CITY COUNCIL

		• Support and facilitate residents in obtaining suitable alternative housing where a transfer through the Allocations Scheme is considered to be the best provision in line with Occupational Therapist (OT) recommendations.. • Ensure that appropriate servicing contracts are in place for any relevant equipment such as, but not exclusive to, track hoists, stair lifts and through floor lifts.
16.	**Please outline the consequences of not implementing this activity.** **For example,** -Existing activity does not fulfill Corporate Objectives, -existing activity is discriminatory and not fulfilling Council's PSED, … to name a few.	In 2018, the then Government published the Social Housing White Paper to ensure residents of social housing are safe, listened to, live in good quality homes and have access to help when things go wrong. Consequently, the Social Housing Regulation Act ("the Act") received Royal Assent in July 2023. The Act forms a new regulatory framework for the social housing sector, aiming to give residents greater powers and improve access to quick and fair solutions to problems. This includes a full equalities and diversity assessment is undertaken to meet the needs of all tenants. The following is also in line with this policy: • The Chronically Sick and Disabled Persons Act 1970 • The Housing Grants Construction and Regeneration Act 1996 • Children Act 1996 • Equality Act 2010 • The Care Act 2014 • Mental Capacity Act 2005 • Regulatory Reform (Housing Assistance) Order 2002 • The Housing Act 1985 • The Housing Act 2004 - Housing Health and Safety Rating System (HHSRS) • Home Adaptations for Disabled People 2013 • Social Housing (Regulation) Act 2023 • Disabled Facilities Grant (DFG) delivery: Guidance for local authorities in England

Section 3: Understanding service users, residents, staff and any other impacted parties.

17.	**Have you undertaken any consultations in the form of surveys, interviews, and/or focus groups?** **Please provide details—** -when, -how many, and -the approach taken.	Yes – Residents Involvement Programme The Council recognises its equalities responsibilities as well as the critical need to listen and act on the lived in experiences of our residents. The policy has the potential to affect the majority of tenants who, due to age related conditions, can endure disabilities with a significant proportion of tenants aged between 55 to 84.
18.	**List information and data used to understand who your residents or staff are and how they will be impacted.** **These could be-** -third-party research, -census data, -legislation, -articles, -reports, -briefs.	- Legislation - Risk assessment for vulnerable groups - Equalities assessment exercise - Engagement with residents The statistics from the Council's *Know Your Tenant* data demonstrates that 36% of tenants, as of 2 April 2026, has disabilities. A further breakdown of figures from the Council's General, Homelessness and Transfer Registers are as follows:



This data demonstrates the consistent rise in demand for aids and adaptations.

Therefore this assessment has informed the development of the Voids Policy in ensuring the needs of all tenants are met to ensure independent living for all tenants while continuing to meet existing needs.

19.	**If you have not done any consultations or collected data & information, are you planning to do so in the future?** **Please list the details –** -when, -with whom, and -how long will you collect the relevant data.	N/A

Protected Characteristic	**Positive**	**Negative**	**Neutral**	**Don't know**	**Data/information/evidence supporting your assessment**	**Analysis & insight** **Mitigations**

Age	x	☐		☐	Age related disabilities have been identified with the *Know Your Tenant* data and consequently the equalities assessment has shaped the draft policy to meet the needs of older residents	An Equality Impact Assessment (EqIA) has been carried out in compliance with the Council's Public Sector Equality Duty under the Equality Act 2010 in order to determine whether the policy would have an adverse impact on persons with protected characteristics. Whilst the EqIA has identified that there are no adverse impacts anticipated by this policy on any person with protected characteristics, nevertheless, it is identified that there are certain groups who may be affected by this policy. These groups are: • children • adults with learning difficulties • oxygen users • people taking certain medication

www.oxford.gov.uk
OXFORD CITY COUNCIL

3561

3562						• those suffering the effects of drugs and alcohol • adults aged 65 and older • people with disabilities • Individuals being supported by the Community Safety team and related support services The policy is designed as a proactive measure to assist the affected groups so that all tenants can be supported with independent living. This is also in line with the Regulator of Social Housing's Consumer Standard where the needs of tenants leads the prioritisation of housing service provision.
Disability **(Visible and invisible)**	x	☐		☐	The significant level of disabilities amongst tenants have been identified with the *Know Your Tenant* data and consequently the equalities assessment has shaped the draft policy to meet the needs of older residents	According to the Council's *Know Your Tenant* data that the Council has collated there are, as of 2 April 2026, 3909 household members who have disabilities who could benefit from this policy. If the figure is considered of direct tenants who have disabilities, as of 2 April 2026,

www.oxford.gov.uk
OXFORD CITY COUNCIL

3563						this relates to 2809 tenants. This, as of this date, is out of 7786 tenancies. Therefore, at the time of the production of this assessment, 36% of all tenants could benefit from this proactive policy. With the ageing profile of tenants within the housing estate, it has been assessed there would be an increase in age related disabilities in the near term thereby making this policy a key feature of the Council's housing service provision for its tenants.
Gender re-assignment		☐	X	☐		
Marriage & Civil Partnership	☐	☐	X	☐

Risk Assessment:

HRA Complaints Policy, Lifting Equipment and Operations Policy, Voids Policy

This assessment considers the risks to Oxford City Council of not having a formal complaints policy, voids policy, and lifting equipment and lifting operations policy. The assessment is based on the legal requirements for social landlords, including the statutory Complaint Handling Code issued by the Housing Ombudsman, wider consumer standards for social housing, and health and safety duties under LOLER and PUWER for lifting equipment used.

This risk assessment presents a risk register in relation to three material policy gaps: complaints, voids, and lifting equipment. The purpose is to provide assurance on the nature of the risks, their current severity, and the actions required to reduce exposure.

Risk Register

Risk title	Risk description	Key controls in place	Further mitigation actions
No complaints policy	Absence of a formal complaints policy creates inconsistent complaint handling and increases the risk of non-compliance with complaint handling expectations for social landlords.	Informal complaint handling arrangements may exist, supported by case-by-case management oversight.	Draft, approve, and implement a complaints policy; establish a clear two-stage process; assign accountability; define timescales, accessibility requirements, remedies, learning, and board reporting.
No voids policy	Absence of a formal voids policy creates inconsistent management of empty homes, increases rent loss risk, and weakens assurance over lettable standards and turnaround performance.	Operational practices may exist within teams, but these are not supported by a formally approved policy framework.	Draft, approve, and implement a voids policy covering inspections, repairs, lettable standards, turnaround times, health and safety checks, contractor management, approvals, and performance reporting.

No lifting equipment policy	Absence of a formal lifting equipment policy creates material health and safety, legal, and operational risks in relation to inspection, maintenance, examination, and defect escalation.	Reactive servicing or contractor arrangements may be in place, but they do not provide sufficient formal assurance without a documented control framework.	Implement immediate interim safety controls; draft, approve, and implement a lifting equipment policy; confirm inspection regime, asset list, contractor competence, defect escalation, record-keeping, and assurance reporting.

Risk Appetite Statements

These statements set out the proposed tolerance for risk in each area using a formal appetite scale of **Very Low**, **Low**, **Moderate**, and **High**. They are intended to support decision-making, prioritisation, and oversight of mitigating actions, and should be read alongside the current and target risk scores in the register above.

Appetite level	**Practical meaning**
Very Low	Only minimal exposure is acceptable. Strong controls, close oversight, and prompt corrective action are expected, particularly where safety, legal, or regulatory compliance is involved.
Low	Limited exposure may be tolerated for a short period, but risks should be actively managed and reduced through defined controls, monitoring, and timely action.
Moderate	Some exposure can be accepted where it supports operational delivery or service objectives, provided risks are understood, monitored, and kept

	within agreed control limits.		
High	A greater level of exposure can be accepted where there is a clear strategic or operational benefit, provided the risk is deliberate, transparent, and subject to proportionate oversight.		
Complaints policy and complaint handling		Low	The organisation has a low appetite for risks arising from ineffective complaint handling. It is willing to tolerate only limited short-term exposure while a compliant policy and operating framework are put in place, because failures in this area can lead to regulatory criticism, loss of resident trust, and reputational damage.
Voids policy and void management		Moderate	The organisation has a moderate appetite for operational risks associated with void performance and delay, recognising that some short-term exposure may arise from repairs demand, market conditions, or resource constraints. However, it has a low tolerance for uncontrolled void loss, unsafe reletting, or the absence of clear standards, compliance checks, and accountability.
Lifting equipment and Lifting operations policy		Very Low	The organisation has a very low appetite for risks relating to lifting equipment safety and statutory compliance. It does not accept avoidable exposure that could result in injury, fatality, enforcement action, or serious service disruption, and therefore expects immediate controls, clear accountability, and full compliance arrangements to be in place.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	8 July 2026
Report of:	David Butler, Director of Planning and Regulation
Title of Report:	Private Sector Housing Enforcement Policy

Summary and recommendations	
Decision being taken:	To approve the Private Sector Housing Enforcement Policy for adoption
Key decision:	Yes
Cabinet Member:	Councillor Mike Rowley, Cabinet Member for Regulation of the Private Rented Sector and Preventing Homelessness
Corporate Priority:	Good, Affordable Homes
Policy Framework:	Housing and Homeless Strategy 2023-28

Recommendation(s): That Cabinet resolves to:

1. **Approve** the Private Sector Housing Enforcement Policy (at Appendix 1) for adoption.
2. **Delegate authority** to the Director of Planning and Regulation, in consultation with the Director of Law and Governance and the Portfolio Holder, to approve future updates to the policy where such changes are consistent with the overall policy approach and reflect changes to legislation or relevant case law.

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Private Sector Housing Enforcement Policy	No
Appendix 2	Risk Register	No
Appendix 3	Equality Impact Statement	No

Introduction and background

1. The Housing Act 2004 places a duty on local authorities to keep housing conditions in their district under review with a view to identifying any action that may need to be taken. The Renters' Rights Act 2025 (RRA) has significantly extended the Council's statutory enforcement responsibilities in the private rented sector. New duties under the RRA include a requirement under section 107 to enforce what the Act terms the "Landlord Legislation", a defined set of provisions covering tenancy reform, unlawful eviction and harassment, and landlord obligations under the Housing Act 1988. A further duty under section 110 requires the Council to report to the Secretary of State on the exercise of those functions.
2. The Council's Corporate Enforcement Policy sets out the broad principles underpinning the Council's approach to enforcement across all service areas. That policy remains in force and unchanged. However, private sector housing enforcement operates under a distinct and technically complex legislative framework, involving a wide range of specialist powers and obligations under the Housing Act 2004, the RRA and associated legislation. This requires a dedicated policy to guide officer decision-making and ensure enforcement action is taken in a consistent, transparent and legally defensible way.
3. The Council operates full property licensing across the city, including mandatory and additional HMO licensing and selective licensing. This gives it an established enforcement baseline and an experienced Residential Regulation Team. The introduction of a dedicated enforcement policy reflects the scale of the Council's regulatory responsibilities in this area and aligns Oxford's approach with sector best practice.

The Policy

4. The Private Sector Housing Enforcement Policy (Appendix 1) sets out the Council's approach to enforcing its duties under the relevant legislation. It covers the full range of enforcement tools available, including Improvement Notices, Prohibition Orders, Emergency Remedial Action, civil financial penalties, Rent Repayment Orders, Banning Orders and entry to the Rogue Landlord Database.

5. In practice, the policy sets out what landlords, letting agents and tenants can expect when the Council investigates a complaint, identifies a breach of housing law, or considers whether to take formal enforcement action.

6. Much of this policy reflects and formalises existing practice. The Council has operated an experienced enforcement function in the private rented sector for a number of years and the policy largely codifies the approach officers already take. The principal changes reflect the new duties and powers introduced by the RRA, including the duty to enforce the Landlord Legislation and the expanded investigatory powers available to officers.

7. The policy incorporates the investigatory and entry powers introduced by the RRA, including powers to require information and enter premises, and sets out the circumstances in which formal action will be taken in the first instance.

8. The policy has been developed in line with the model policy published by the Association of Chief Environmental Health Officers (ACEHO), the professional body

for housing enforcement authorities in England. Several local authorities have already adopted dedicated housing enforcement policies on this basis.

9. The Regulators' Code sets out principles of good regulation that public bodies are expected to follow when exercising certain enforcement functions, including acting proportionately and being transparent with those they regulate. The RRA and the Landlord Legislation as defined by section 107 sit outside the scope of the Code, meaning those enforcement functions are not subject to its principles. The policy makes this distinction explicit, as it affects how officers approach enforcement decisions under different parts of the legislative framework.

Alternative options considered

10. The alternative would be to continue relying solely on the Corporate Enforcement Policy as the framework for private sector housing enforcement. This was not considered appropriate given the technical complexity of the Council's housing enforcement responsibilities, the new statutory duties introduced by the RRA, and the increased risk of legal challenge to enforcement decisions in the absence of a specialist, publicly available framework.

Implications of Local Government Reorganisation

11. In preparing this report, regard has been given to Government guidance on financial decision-making in advance of Local Government Reorganisation.
12. The adoption of this policy does not involve capital expenditure, borrowing or long-term financial commitments. It is a framework document that enables the Council to carry out its existing statutory enforcement functions. Any successor authority would retain the ability to review, amend or replace the policy in accordance with prevailing legislation and guidance.
13. Adopting the policy at this stage ensures continuity and legal defensibility in enforcement decision-making during any transition period.

Financial implications

14. The adoption of this policy has no financial implications for the Council's General Fund. It does not require additional expenditure above that already committed to private sector housing enforcement.
15. Civil penalty income generated through enforcement activity is applied to fund enforcement work in the private rented sector, in accordance with Regulation 4 of the Rent Repayment Orders and Financial Penalties (Amounts Recovered) (England) Regulations 2017. A robust, legally defensible enforcement framework reduces the risk of successful appeals against civil penalty notices, which supports the sustainability of that income stream.
16. If our policies become outdated and do not reflect current best practice there is a risk that more challenges could be made and that more of those challenges would be successful, which would result in additional costs and a reduction in income from financial penalties.

Legal issues

17. Section 107 of the RRA imposes a duty on the Council to enforce the Landlord Legislation as defined in that section. Section 110 imposes a further duty to report

to the Secretary of State on the exercise of those functions. The policy provides the framework against which enforcement decisions can be made and scrutinised.

18. Officers are required to have regard to the policy when making enforcement decisions. This enables the Council to demonstrate that action has been taken in accordance with an approved, publicly available framework. Where the Council cannot demonstrate it has followed its own policy, defendants are entitled to cite that failure as part of any challenge or appeal. Having a clear, up to date policy therefore reduces both the number and success rate of appeals against enforcement action.

Level of risk

19. The updated risk register is attached at Appendix 2. The principal risk associated with this decision is the legal and reputational risk of enforcement decisions being successfully challenged in the absence of a formal framework. Adoption of the policy directly mitigates that risk.

Equalities impact

1. The Equality Impact Assessment is attached at Appendix 3. Private sector housing enforcement is primarily directed at improving property conditions and management standards. The Council's enforcement activity is largely focused on protecting vulnerable people and has a neutral or positive equality impact.

Carbon and Environmental Considerations

20. Many enforcement actions taken in the private rented sector result in improved property standards, which can contribute to improved energy efficiency and reduced carbon emissions. Adoption of this policy supports a consistent and proactive approach to enforcement, which is likely to have a positive environmental impact over time.

Conclusion

21. The Renters' Rights Act 2025 has significantly expanded the Council's statutory enforcement duties in the private rented sector. Adopting a dedicated Private Sector Housing Enforcement Policy ensures the Council has a specialist, publicly available framework that reflects those duties, aligns with sector best practice and supports legally defensible decision-making. Cabinet is therefore recommended to approve the policy for adoption.

Background

This policy sets out the Council's principles for enforcing and executing its duties as a Housing Authority under the relevant statutes.

S3 Housing Act 2004 imposes a duty on Councils to keep housing conditions in their district under review with a view to identifying any action that may need to be taken by them.

S107 Renters' Rights Act 2025 imposes a duty on the Council to enforce the Landlord Legislation. The Landlord Legislation is comprised of the following:

- Chapters 3 and 6 of Part 1 of the Renters' Rights Act 2025,
- Part 2 of the Renters' Rights Act 2025,
- Sections 1 and 1A of the Protection from Eviction Act 1977, and
- Chapter 1 of Part 1 of the Housing Act 1988.

S110 Renters' Rights Act 2025 imposes a duty on the Council to report to the Secretary of State on the exercise of its functions under the Landlord Legislation.

In this policy, the term 'landlord' should be read as including letting agents, managing agents, licensors, property owners, directors of corporate landlords and any other person involved in the letting or management of privately rented accommodation.

In this policy, the terms 'House of Multiple Occupation' or 'HMO' are defined by the Housing Act 2004.

Aims of the Policy

The purpose of this enforcement policy is to provide guidance for Housing Authority officers to ensure enforcement action is taken in line with the provisions of Acts and regulations covered by this policy and mandatory guidance to local authorities.

Legislation within this policy

The Renters' Rights Act and the 'Landlord Legislation' (as defined by S107) sit outside of the Regulators' Code, and its provisions do not apply.

Part 1 of the Housing Act 2004 is also outside of the Regulators' Code's scope.

Notwithstanding this, the following legislation and its enforcement does come within the Legislative and Regulatory Reform (Regulatory Functions) Order 2007 and is therefore within the scope of the Regulators Code and the principles of good regulation:

- Parts 8, 9 and 10 of the Housing Act 1985
- Part 8 of the Housing Act 1996
- Parts 2 to 5 of the Housing Act 2004

This policy document sets out what owners, landlords, their agents or any other person involved in the letting or management of privately rented accommodation, and tenants of private rented sector properties, can expect from officers when dealing with non-compliance.

All enforcement action taken will be in accordance with relevant statutory Codes of Practice, Council procedures and protocols, and official guidance from central and local government bodies.

As a public body under the Human Rights Act 1998, the Council will apply the principles of the European Convention for the Protection of Human Rights and Fundamental Freedoms.

Legislation outside this policy

The legislation relating to letting or management of private rented properties is complex. All other legislation is covered by our Corporate Enforcement Policy and outside the scope of this policy, for example:

- Protection from Eviction Act 1977
- Part 2 Housing and Planning Act 2016
- Tenant Fees Act 2019,
- Smoke and Carbon Monoxide Regulations 2015,
- Efficiency (Private Rented Property) (England and Wales) Regulations 2015,
- Redress Schemes for Lettings Agency Work and Property Management Work (Requirement to Belong to a Scheme etc) (England) Order 2014

Approach to Enforcement

The Council wants to support responsible landlords to raise housing standards. However, the Council expects landlords to have a good understanding of the housing standards and management issues that should be met in privately rented accommodation.

Council officers will often investigate and identify the need to take enforcement action through a range of routes, including (but not limited to): proactive inspections of dwellings through licensing provisions; in response to a complaint or request for assistance; and referrals from other public bodies. All investigations will be carried out in accordance with the relevant statutory requirements. The Council will ensure that appropriate governance is in place to ensure that action is taken in accordance with appropriate policies.

The Housing Act Section 5 2004 places a duty on Councils to take appropriate enforcement action where a Category 1 hazard exists.

The Housing Act Section 7 gives Councils a discretionary duty to take action where a Category 2 hazard exists. The Council will usually take action where a medium band Category 2 hazard exists.

The Council may commence enforcement with formal action instead of informal action in the first instance. In deciding whether to do so, the circumstances of the case will be taken into account. Relevant factors may include, but are not limited to:

- Where there is a risk to public health
- Where there is a blatant or deliberate contravention of the law
- Where there is history of non-compliance

The Council will usually take formal action in the first instance if there has been:

- Non-compliance with previous formal or informal action
- Offences in relation to the licensing of privately rented properties

The Council will take formal enforcement action in the first instance for breaches of the Landlord Legislation.

Investigatory Powers

In addition to the Council's informal and formal powers of enforcement, there are investigatory powers relating to the collection of information and relating to the entry of premises including, but not limited to, the powers detailed below.

Power to Investigate

S114 Renters' Rights Act 2025 gives the Council power to issue a notice to a relevant person to require the person to provide specified information to the Council.

This notice may be given to any person with an estate or interest in the land; the licensor; their agents; or a marketer of a property. It may be given in regard to any offence under the following Legislation:

- Sections 1 and 1A of the Protection from Eviction Act 1977;
- Chapter 1 of Part 1 of the Housing Act 1988;
- Section 83(1) or 84(1) of the Enterprise and Regulatory Reform Act 2013;
- Sections 21 to 23 of the Housing and Planning Act 2016;
- Chapter 3 of Part 1 and Part 2 of the Renters' Rights Act 2025.

Failure to comply with a S114 notice is an offence under S131 Renters' Rights Act 2025, as is being obstructive and intentionally or recklessly making false or misleading statements in response to a S113 notice.

S115 Renters' Rights Act 2025 permits the Council when it reasonably suspects a breach of the Rented Accommodation Legislation to issue a notice to any person requiring them to provide the information specified. This may only be done to investigate whether a breach has occurred under the Rented Accommodation Legislation, or to determine the amount of a penalty. For the purposes of this section, the Rented Accommodation Legislation means:

- Sections 1 and 1A of the Protection from Eviction Act 1977
- Chapter 1 of Part 1 of the Housing Act 1988
- Parts 1 to 4 and 7 of the Housing Act 2004
- Section 83(1) or 84(1) of the Enterprise and Regulatory Reform Act 2013
- Sections 21 to 23 of the Housing and Planning Act 2016
- Chapter 3 of Part 1 and Part 2 of the Renters' Rights Act 2025.

Where an individual has not complied with a S115 notice, S116 Renters' Rights Act 2025 enables the Council to make an application to the Court to enforce the provisions of the notice and seek reimbursement for the costs of the application.

S131 Renters' Rights Act provides that, in addition to the offence of non-compliance with a S114 notice, it is an offence for an individual without reasonable excuse to obstruct a Council officer seeking to exercise their powers. It is also an offence to fail without reasonable excuse to give an officer any additional assistance or information which they reasonably require.

S235 Housing Act 2004 allows the Council to issue a notice to relevant individuals, including occupiers, directing them to provide specified documents under their control for the purpose of exercising the Council's functions under Parts 1 to 4 of the Housing Act 2004, or investigating whether an offence has been committed under Parts 1 to 4 or 7 of the Housing Act 2004 in relation to qualifying residential premises.

S16 Local Government (Miscellaneous Provisions) Act 1976 also permits the Council to issue a notice to an occupier, manager, or individual with an interest in the land to compel them to provide the Council with information on the nature of their interest and the names and addresses of current occupiers and of any others with an interest in the land.

Entry to Premises

S118 Renters' Rights Act 2025 permits Council officers to enter business premises of relevant people (including landlords, letting agents, and marketers) if it is necessary for the production or seizure of documents under s122-s123 Renters' Rights Act 2025. This power will be exercised without a warrant.

S121 Renters' Rights Act 2025 allows a Council officer named in a warrant to enter premises used for a rental sector business which is not mainly accommodation if there are documents on the premises which the officer could require under S122 or seize under S123. In addition, for this power to be exercised, one of the following conditions must be met:

- That access to the premises has been or is likely to be refused, and the Council has provided notice of their intention to apply for a warrant to the occupier;
- Those documents on the premises would likely be concealed or interfered with if notice of entry were to be given; or
- That no occupier is present, and waiting for their return might defeat the purpose of the entry.

Following a S118 or S121 Renters' Rights Act 2025 entry, S122 allows an officer at any reasonable time to require a relevant person on the premises to produce any documents relating to the business and to take copies of them. This may only be exercised to ascertain whether there has been a breach of the Rented Accommodation Legislation where an officer reasonably suspects there has been a breach or an offence; or to ascertain whether the documents may be required in evidence for proceedings regarding a breach or offence.

Following a S118 or S121 Renters' Rights Act 2025 entry, S123 authorises Council officers to seize and detain documents that the officer reasonably suspects may be required as evidence in proceedings relating to a breach of, or an offence under, the Rented Accommodation Legislation. When doing so, the officer will provide evidence of the officer's identity and authority if reasonably practicable. The officer will take reasonable steps to inform the person from whom documents have been seized that they have been seized, and will provide that person with a written record of what has been taken.

S126 Renters' Rights Act 2025 permits the Council to enter residential premises used for a tenancy at a reasonable time if the officer considers it necessary as part of an investigation into potential offences specified in subsection 1(b). Where required, the Council will give at least 24 hours' notice of this entry to the occupier and individuals with an interest in the property as per subsection 1(c), detailing in writing why the entry is necessary and the suspected offences. Where there are occupiers found on the premises, the officer will provide evidence of the officer's identity and authority to at least one of the occupiers if reasonably practicable.

In addition, S239 Housing Act 2004 permits Council officers to enter, if necessary and at a reasonable time, a property in order to carry out a survey or examination. This may be done if any one of the following is met:

- to determine if any Part 1-4 or 7 enforcement functions should be exercised;
- the premises are part of an Improvement Notice or Prohibition Order;

- a management order is in force under Chapter 1 or 2 of Part 4 on the premises.

In certain circumstance the Council may obtain a warrant to enter, by force if necessary, under S240 Housing Act 2004.

No action

In certain, but limited, circumstances it may be appropriate to take no action. For example: when we decide that the health and safety risk is sufficiently low; where there are extenuating circumstances regarding the person against whom we would take action on; taking legal action would be disproportionate or inappropriate taking into account the circumstances of the case; where the tenant does not want us to take action and we consider it is appropriate not to take action in the circumstances.

We may however make recommendations which are above the legal minimum requirements, advise if there are legal avenues open to persons to resolve the issues themselves or refer to another appropriate regulator or advice service.

Informal action

Informal action taken by the Council may be written or verbal advice. Additionally, a visit may be made at the outset by Council Officers in cases where the initial complaint or contact indicates that an immediate investigation by a Council officer is warranted.

In cases where officers visit an address, whether this is a result of a landlord's failure to adequately resolve a highlighted issue or as part of an audit or other investigation, written or verbal advice may be deemed sufficient should the inspection highlight minor deficiencies.

Where written advice is deemed appropriate by the Council and is provided, timescales will normally be included to undertake any specified work or actions.

While the Council will use its discretion on whether to carry out informal action for a Category 2 hazard, it does not need to provide written or verbal advice before commencing formal action.

Formal action

If formal action is considered appropriate, the following options are available to the Council.

Housing Act 2004 Part 1

- Issue an Improvement Notice in respect of any Category 1 hazards and any Category 2 hazards on the property. This requires the person to whom it is served to undertake the remedial action specified on the Notice within a given timeframe. The mandated work and the timeframe will be determined by the Council depending on the nature and scale of the work.
- Issue a Prohibition Order in respect of any Category 1 hazards and any Category 2 hazards on the property. This prevents occupation of whole or part of the property, or can be used to limit occupant numbers, within a specified time frame.
- Issue a Hazard Awareness Notice in respect of any Category 1 hazards and any Category 2 hazards on the property. This makes the owner and occupiers aware of

the hazards identified; however, it does not require remedial action. As a result, and because it does not secure risk-reducing works within a specified timeframe, a Hazard Awareness Notice will not usually be the most appropriate course of action where remedial works are necessary to reduce the risk of harm to occupiers or potential occupiers.

- Make an Emergency Prohibition Order in respect of Category One hazards only. This immediately prohibits the use of all or part of a dwelling if there is an imminent risk of serious harm to the health or safety of the occupants or others.
- Undertake Emergency Remedial Action in respect of Category One hazards only without prior notice where there is an imminent risk of serious harm to the health or safety of the occupants or others.
- The Council also has the power to suspend action taken under Part 1 Housing Act 2004 in situations where it has the power or duty to take enforcement action through the service of an Improvement Notice or Prohibition Order. This will be at the Council's discretion and will normally be considered for the purpose of minimising inconvenience to the current occupiers. Evidence may be requested to demonstrate occupiers' wishes.
- Demolition and Clearance are options for both Category 1 or Category 2 hazards.
- S30 Housing Act 2004 provides that failure to comply with an Improvement Notice is a criminal offence, which will normally be followed by prosecution or the issuing of a civil penalty.
- S32 Housing Act 2004 provides that failure to comply with a Prohibition Order is a criminal offence, which will normally be followed by prosecution.
- Other formal notices served by the Council may not relate to the landlord undertaking remedial works but may cover a range of other matters including, but not limited to, exercising a right of entry under S239 of the Housing Act 2004 and a request to provide information or the need to abate or avoid overcrowding.

Work in default

The enforcement options for non-compliance with formal Notices include the carrying out of works specified in the Notice. This power may be exercised in addition to other enforcement proceedings taken for non-compliance. The Council has no duty to undertake works in default and it will be at its discretion.

HMO Licence Conditions

Conditions can be added to HMO licences to require work to meet specified standards or to address HMO Management Regulation requirements. This power may be exercised in addition to other enforcement proceedings taken for non-compliance.

In general, authorities should seek to identify, remove or reduce category 1 or category 2 hazards in the house by the exercise of Part 1 functions and not by means of licence conditions however this does not prevent the authority from imposing licence conditions relating to the installation or maintenance of facilities or equipment even if the same result could be achieved by the exercise of Part 1 functions.

Failure to comply with these conditions is a is a criminal offence, which may result in prosecution or the issuing of a civil penalty.

Prosecution

Where a Civil Financial Penalty is an available alternative to prosecution, the Council will only consider using its power to prosecute in more serious cases.

The decision to prosecute will be determined by the evidential strength of the Council's case and the relevant public interest factors set down by the Director of Public Prosecutions in the Code for Crown Prosecutors.

In many circumstances, where an offence is committed by a body corporate, legislation enables local authorities to pursue persons involved with the body corporate in addition to, or instead of, the body corporate. These include company officers and, where applicable, company members.

The Council will determine, on a case-by-case basis, whether to take enforcement action against any person or persons that they consider fall within the scope of this category in addition to prosecuting the body corporate.

Civil (Financial) Penalties for specified offences

The Council is empowered to discharge a wide range of housing law breaches and offences via the imposition of Civil (Financial) Penalties.

Imposition of Civil (Financial Penalties) is in accordance with the evidential strength of the Council's case.

The Council's approach to determining and issuing financial penalties operates according to the standalone Housing Civil Penalties Policy.

Rent Repayment Orders

Part 2 of the Housing and Planning Act 2016 permits the Council to seek a Rent Repayment Order (RRO) at the First-tier Tribunal (Property Chamber) to require the landlord of the property where the offence(s) has been committed to refund rent to the tenants or the Council. S48 of the Housing and Planning Act 2016 places a duty on the Council to consider applying for Rent Repayment Orders.

Where a landlord has been convicted or received a Civil Financial Penalty in respect of the offence, the Tribunal must award the maximum applicable amount, except in exceptional circumstances.

This power will be considered in response to all qualifying offences and where there is sufficient evidence for a successful application to the First Tier Tribunal.

The qualifying offences are:

- Unlawful eviction and harassment of occupier as defined under the Protection from Eviction Act 1997
- Failure to comply with an Improvement Notice [s30 Housing Act 2004]
- Offences in relation to unlicensed HMOs [s72(1) Housing Act 2004]
- Offences in relation to unlicensed houses [s95(1) Housing Act 2004]
- Failure to comply with an Improvement Notice [s30(1) Housing Act 2004]
- Failure to comply with a Prohibition Order [s32(1) Housing Act 2004]
- Breach of a Banning Order [s21 Housing and Planning Act 2016]
- Using Violence to secure entry [s6(1) Criminal Law Act 1977]
- Knowingly or recklessly misusing a possession ground [s16J(1) Housing Act 1988]

- Letting or marketing of a property within twelve months of using the ‘moving in’ or ‘selling’ ground of eviction [s16J(2) Housing Act 1988]
- Continuous breach of certain tenancy reform requirements [s16J(3) Housing Act 1988]

An application for an RRO may be in addition to other formal action, such as prosecution proceedings or the imposition of a Civil Penalty. Where the Council has issued a Civil Financial Penalty or pursued prosecution, it will usually apply for a Rent Repayment Order where public funds have been paid to a landlord who has committed a qualifying offence.

S49 of the Housing and Planning Act 2016 enables the Council to assist tenants in applying for Rent Repayment Orders. The Council will usually assist tenants by referring or signposting them to a relevant organisation. Where the offence relates to unlicensed properties, a statement can be provided confirming presence / absence of an application for a licence (or temporary exemption) and associated dates.

Banning Orders

Part 2, Chapter 2 of the Housing and Planning Act 2016 permits a Council to apply for a Banning Order against a person who has been convicted of one or more of the relevant offences. This would prevent the landlord from:

- Letting housing in England;
- Engaging in English letting agency work;
- Engaging in English property management work; or
- Doing two or more of those things.

The Council may consider a Banning Order for the more serious offenders. It will take into account the seriousness of the offence(s), whether the landlord has committed other offences (or received any Civil Penalty in relation to a Banning Order offence) and any history of failing to comply with their obligations or legal responsibilities. It will also take into account other relevant factors, including but not limited to:

- The harm, or potential harm, caused to the tenant;
- The need to punish the offender;
- The need to deter the offender from repeating the offence;
- The need to deter others from committing similar offences.

The Council’s approach to application for a Banning Order operates according to the standalone Banning Order and Rogue Landlord Database Policy. This forms an appendix to this Policy.

Rogue Landlord Database

Part 2, Chapter 3 of the Housing and Planning Act 2016 states:

- An Authority must make a database entry if a banning order is granted by the First-tier Tribunal;
- An Authority may make an entry if the person was convicted of a banning order offence or has received two financial penalties in respect of specified offences in the previous twelve (12) months.

The purpose of the Rogue Landlord Database is for the purpose of sharing information with other Housing Authorities and there is no current public access.

The Council's approach to application for entry to the Rogue Landlord Database operates according to the standalone Banning Order and Rogue Landlord Database Policy. This forms an appendix to this Policy.

Fit and Proper Person Policy

Under the Housing Act 2004, if the Council is to issue a Selective or an HMO licence ("licence"), it must be satisfied that the proposed licence holder is a fit and proper person and is the most appropriate person to hold the licence. The Council must also be satisfied that the proposed manager of the house is a fit and proper person to be the manager of the house.

An existing licence may also be revoked where the Council no longer considers that the licence holder is a fit and proper person to be the licence holder, or where the Council no longer considers that the management of the house is being carried out by persons who are (in each case), fit and proper persons to be involved in its management.

The Council's approach to determining Fit and Proper Person Status operates according to the standalone Fit and Proper Persons Policy. This forms an appendix to this Policy.

Costs and Charges

The Council incurs costs in carrying out its functions. Where legislation allows, the Council will seek to recover reasonable costs and expenses associated with its enforcement, licensing and wider regulatory activity. This may include (non-exhaustively) costs arising from inspections, investigation, evidence gathering, notices and other statutory documentation, follow-up action, compliance monitoring, and works or other interventions.

Recovery may be pursued using all available lawful routes, which may include civil action, local land charges, and enforcement against the property. The Councils' Debt Recovery Policy applies for this purpose.

Where permitted, interest may be applied to outstanding sums until paid.

Notices under other Legislative alternatives

There may be other legislative alternatives available to remedy problems which an authority may choose as a more appropriate enforcement approach. Other legislative alternatives include, but are not limited to, the Smoke and Carbon Monoxide Regulations 2015, Building Act 1984, Prevention of Damage by Pests Act 1949, Public Health Act 1936 and Environmental Protection Act 1990. These options fall under the Council's Corporate Enforcement Policy.

Delegation of Authority

The Council's Constitution and Scheme of Delegations specify the extent to which enforcement powers are delegated to officers.

Authorisation, training and appointment of officers

All enforcement officers will be appropriately authorised by the Director of Planning and Regulation.

All enforcement officers are required to carry identification in the form of an “Authority to Enter” card bearing their photograph. If an officer does not show their card, they may be asked to show it by anyone who is requested to allow entry. If no card is produced, entry may be legitimately refused and no punitive enforcement action will result. If a member of the public has any doubt about the officer’s identity, they may telephone the Council 01865 259811.

All enforcement officers will be suitably trained and qualified to ensure officers are fully competent to undertake their enforcement activities.

Publicising offences

Verdicts and sentences in criminal cases are given in open court and are a matter of public record. The Council will normally publicise sentences following a prosecution, however decision whether to publicise will be made on a case by case basis. Publicising guidance has a presumption in favour of publicising outcomes of criminal cases and personal information about convicted offenders.

Financial penalties are a civil matter. The Council will periodically publish a list of penalties, consisting of offence, date and fine.

Complaints

Contact may be made with the Council about any matters listed here by website form, telephone 01865 259811 or in person at one of our customer advice centres.

https://www.oxford.gov.uk/comments-compliments-complaints/make-comment-compliment-complaint

A service user can still make a complaint in cases where the Council has instigated legal proceedings. However, making a complaint will not stop any impending legal action.

Where statutory notices have been served, making a complaint does not replace the statutory rights of appeal or the right to make representations. It also does not allow extra time to comply with any notice or order.

If a service user disagrees with a statutory notice, they should take action as specified in the notice or order to make an appeal, if any exists. Reference should be made to any notes that may accompany the notice or order for more detail.

Policy review and updates

To ensure this policy stays up to date with changes in legislation and relevant caselaw, this policy authorises the Director of Planning and Regulation with the Director of Law and Governance, in consultation with the Portfolio Holder for Housing to approve updates to this policy where such changes are consistent with the overall policy approach.

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

3597

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	**6. Race & Ethnicity**
2. **Disability**	**7. Religion or Belief**
3. **Gender Reassignment**	**8. Sex**
4. **Marriage & Civil Partnership**	**9. Sexual Orientation**
5. **Pregnancy & Maternity**	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.

3598

7. Provides clear **justifications** for your decisions.
8. It is written in **plain English** with simple short sentence structures.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	8 July 2026
Report of:	Carolyn Ploszynski, Director of Regeneration, Economy and Sustainability
Title of Report:	Temporary reduction in advertised fees and charges at Park and Rides for combined parking and bus tickets

Summary and recommendations	
Decision being taken:	Introduce temporary discounted combined ticket charge funded by Oxfordshire County Council
Key decision:	Yes
Cabinet Member:	Councillor Ed Turner, Deputy Leader (Statutory) - Finance and Asset Management.
Corporate Priority:	Strong, fair economy, A well run council
Policy Framework:	Council Strategy 2024-2028

Recommendation(s): That Cabinet resolves to:

1. **Approve** amending the fees and charges schedule as it relates to the Park and Ride 16 hour combined bus and parking tickets as set out in Appendix 1 to be implemented as soon after this decision as practicable and to run until 31 March 2027.

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Changes to the Fees and Charges for Park and Ride Combined Tickets	No

Introduction and background

1. In 2023 the City Council brought in a permanent combined ticket to its fees and charges for Park and Rides alongside the County Council. This followed a trial period and was aimed at increasing patronage at the park and rides, which had struggled to recover following the pandemic. The charge was set at:
    - £4 - 16 hours combined parking & bus ticket - car plus 1 adult
    - £5 - 16 hours combined parking & bus ticket - car plus 2 adults

2. The City Council retain circa 30% of the ticket income for parking under the combined ticket. The rest goes to the bus operators. It was made clear in the 2023 report that these charges would be reviewed and set through the budget process annually alongside other fees and charges.

3. The 2025/26 consultation budget report, set out that work was being undertaken between the City Council, County Council and bus companies to look at the impact on viability of the combined ticket price, taking account of the government's decision to increase the national bus fare cap from £2 to £3. As a result, the P&R combined bus and parking ticket needed to increase by up to £1. This increase was agreed to be covered by funding that the County Council had available as highway authority and so the County Council paid the City Council and bus operators the difference which meant the increase was never passed to the consumer. It therefore did not need to be reflected in the fees and charge schedule. This continued into the 2026/27 budget period.

4. In October 2025, Oxfordshire County Council brought in a temporary congestion charge. Using income generated from that, they introduced free return bus travel for up to two adults and three children with consumers only having to pay the existing £2.50 parking charge. This did not require a City Council Cabinet decision as parking charges reverted to the existing 16 hour parking only charge and the County Council made arrangements directly with the bus operators to pay for the bus tickets.

Proposal

5. At its May 2026 meeting, the County Council Cabinet agreed that the free bus travel will continue to be funded from congestion charge income until 15 August. After that a £3 combined ticket covering 16 hours parking and return bus travel for up to five people will be funded from their income from the temporary congestion charge until 31 March 2027. This is instead of reverting to the combined ticket charges within both councils' fees and charges schedule. Pricing from 1 April 2027 will then be set through the City and County Councils' 2027/28 budgets. Unless other funding becomes available beyond the end date of this offer, the price for the consumer will need to revert to a level that is financially sustainable for the City Council and that may mean increases beyond the permanent advertised fees of £4 and £5.

6. As set out in the County Council Cabinet report, they want this to apply to all park and ride sites, which requires a City Council Cabinet decision to make the amendments at City Council operated sites.

7. Officers are working with County Council officers to prepare for the new £3 combined ticket so that if the recommendation is approved the decision can be enacted as quickly as possible. There is an 8-10 week lead time for ticket machine, signage and parking app changes, so to meet the target date of mid-August preparations started at risk before the City Council decision. However, as made clear in the County Cabinet report if the City Council do not approve the recommendation the County Council will cover any abortive costs (expected to be under £10,000).

8. Notwithstanding the City Council's proposal in this paper to charge £3, with appropriate financial contribution from Oxfordshire County Council, this does not constitute an endorsement of the wider policy framework on bus fares. In particular, the City Council will continue to press for similar levels of discount for bus passengers within the city, as the £3 fare (which includes parking) contrasts unfavourably with the £9 price without parking for a group ticket within the city.

Alternative Options Considered

No alternative options were considered by the City Council as this is a request from Oxfordshire County Council who are seeking to use surplus income from their temporary congestion charge. The option is to accept or reject this at our sites. Given there are benefits from the base position for the City Council and customers the recommendation is to accept the proposal from the County Council.

Implications of Local Government Reorganisation

9. Local Government Reorganisation will mean the need to align decisions on park and rides within the Oxford ring road across different local government ownerships will no longer be necessary in future years as they will sit with a single unitary in all scenarios.

Financial implications

10. Although the temporary £3 combined parking and bus ticket charge being paid for by the consumer will be less than the current advertised charges the County Council will cover the cost of the temporary scheme. It will not leave the council financially worse off. Under this temporary scheme the City Council will retain the same amount as it does under its parking only tariff[1] from rather than 30% as under the existing parking and bus combined ticket charges (see paragraph 1 and 2 for the existing combined ticketing arrangements).

[1] The parking only tariff is £2.50, of which £0.42 is paid in VAT to HMRC leaving £2.08 income per ticket.

11. In summary, the City Council will receive £3 per ticket, the City Council will pay £0.50 VAT to HMRC[2] and £0.42 to the County Council. City Council will then have £2.08 income per ticket to retain. Since the County Council will take on all responsibility for bus operator payments under the temporary scheme, the City Council will therefore effectively be collecting the extra money towards bus travel on the County County's behalf at its sites, which is why the City Council will need to transfer £0.42 to the County Council per combined ticket sold at its three Park and Ride sites.

12. This is the same level it retains under its parking only tariff after VAT is paid, which is more than it retains under the existing combined tickets. This betterment will help offset some of the adverse impacts seen in the parking portfolio elsewhere since the introduction of the congestion charge in Oxford.

Legal issues

13. Although the fees and charges schedule will be amended the City Council parking order remains unamended, the parking fees apply as stated, however the decision is to set a combined fee for travel and parking, which is not a parking fee in terms of setting parking charges and the need to follow the statutory process under the Road Traffic Act 1984 and associated legislation.

14. Whilst the travel element of the combined ticket is zero rated for VAT, the parking element is, however, subject to the standard rate of VAT. In light of the judgment in the case of The Purple Parking C-117/11; [2012] STC 1680, HMRC takes the view that where the transport service is ancillary to the parking service, there is a single standard-rated supply.

15. Under 4.5 of the constitution the setting of fees and charges outside of the budget process is reserved to Cabinet.

Level of risk

16. The only identified risk is that there is a larger jump in price for consumers in April 2027 when the permanent arrangements revert with any inflation increases reflected as part of 2027/28 budget setting. If there is no other funding available to prevent passing the full increase onto consumers this may receive some negative feedback or affect patronage. This will all be considered as part of budget setting as it is each year and it is not considered that this risk outweighs the benefit of offering a reduction for the period proposed using funding that is available.

Equalities impact

---

[2] HMRC's internal manual states that park and ride car parking is subject to VAT at the standard rate of 20%, and that combined tickets are also subject to the same (scenario 5 in the manual). For a £3 combined ticket, the VAT payable is £0.50

17. An Equalities Impact Assessment is not considered necessary. The implication of this decision is making the park and rides cheaper for a period of time, and this is considered beneficial and imposes no new barriers or discriminatory impacts.

Carbon and Environmental Considerations

Officers anticipate this promotion to have a positive impact on usage at Park and Rides. Officers understand this to be supported by bus operators and there has been no indication from them that it would have a negative impact on bus patronage from source. Therefore, this is anticipated to have some environmental benefits from getting private car users onto public transport at the city's edge. The benefit will be limited to the capacity of Redbridge Park and Ride, which we understand from enforcement officers to be busy most days already.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	08 July 2026
Report of:	Director Planning & Regulation
Title of Report:	Thames Valley Spatial Development Strategy (SDS) Development and Governance

	Summary and recommendations
Decision being taken:	To note the development of, and governance arrangements for, a Thames Valley SDS
Key decision:	No.
Cabinet Member:	Councillor Railton, Cabinet Member for Planning and Zero Carbon
Corporate Priority:	Good, affordable homes; Strong, fair economy; Thriving Communities; Zero Carbon Oxford.
Policy Framework:	The SDS is a new statutory planning document that sits above the Local Plan.

Recommendation(s): That Cabinet resolves to:

1 **Note** the governance and development of the Thames Valley Spatial Development Strategy

2 **Agree** to officer and member involvement in the early programme stages as outlined in this report, in particular with regards to the governance model and assisting in the development of the Thames Valley SDS.

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Resourcing	No
Appendix 2	High level programme	No

Appendix 3	Governance and resources	No
Appendix 4	Risk Assessment	No

Introduction and background

1. This paper seeks Cabinet approval to participate in a joint Thames Valley partnership with councils covering Oxfordshire, Berkshire and Swindon to progress the pre-inception phase of work for a Thames Valley Spatial Development Strategy (SDS). The SDS is a new strategic planning statutory requirement and is intended to provide a high-level spatial framework setting the scale and distribution of growth, investment opportunities and supporting Place infrastructure across multiple local planning authority areas
2. Work to date has focused on establishing a shared understanding of the SDS requirement, engaging with Government on the emerging geography as in the consultation in February 2026 and legislative timetable and developing early programme outputs (including a pathway/statement of readiness and a strategic spatial baseline). Government grant funding has been made available to the Thames Valley area to support this early work, alongside defined expectations for transparency and quarterly monitoring and evaluation reporting.
3. As the statutory Strategic Planning Board (SPB) for the Thames Valley is expected to be established through secondary legislation due Autumn 2026, interim governance is required to provide clear decision-making, financial accountability and programme oversight during the pre-inception period. This paper proposes a joint partnership model with agreed monitoring, assurance and dispute resolution arrangements, with Bracknell Forest Council (on behalf of all authorities) as the accountable body and host authority for any dedicated staff resource.

Background

4. The Planning and Infrastructure Act 2025 introduces a duty on designated strategic planning authorities to prepare a Spatial Development Strategy (SDS). SDSs are intended to be high-level strategic plans which set out, amongst other matters, the scale and broad distribution of development and associated infrastructure across multiple local planning authority areas. The Government is targeting all areas of the country to have an examined SDS in place by mid-2029.
5. Government consultation on SDS geographies has indicated a preferred Thames Valley SDS area including Bracknell Forest, Reading, Oxfordshire, Slough, Swindon, West Berkshire, Windsor & Maidenhead, and Wokingham (with the final geography to be confirmed summer/Autumn 2026). Government has also indicated that bespoke secondary legislation will establish a statutory Strategic Planning Board for the Thames Valley, with consultation expected in Autumn 2026 and the board intended to take on formal functions once established.
6. Partner authorities include Bracknell Forest, Reading, Oxfordshire, Slough, Swindon, West Berkshire, Windsor & Maidenhead, and Wokingham. The option is there for Buckinghamshire to join but they have indicated they do not want to work

together at present. The partner authorities have progressed preparatory work to ensure the sub-region is ready to move quickly once the statutory framework is in place. Key activity has included:

- engagement with Government on the emerging Thames Valley SDS geography and the anticipated timetable for secondary legislation;
- submission of an expression of interest for SDS preparation funding and agreement in principle to quarterly monitoring and evaluation reporting;
- early development of draft governance and operational framework proposals for a shadow Strategic Planning Board, including work on a draft constitution and operating model;
- scoping of key pre-inception outputs, including a “Pathway to the Thames Valley SDS” (statement of readiness, programme plan and timetable) and a strategic spatial baseline (including mapping of planned growth, constraints and opportunities). Noting the programme plan and timetable is indicative pending clearer direction through further legislation and firming up governance arrangements, including the statutory Strategic Planning Board.

7. Undertaking pre-inception work ahead of the statutory SDS duty will ensure the Thames Valley partnership is ready to mobilise at pace once secondary legislation establishes the Strategic Planning Board. By agreeing the programme plan, workstreams, decision points and engagement approach in advance, partners can reduce lead-in time, make early commissioning decisions efficiently and avoid duplication of effort across authorities.
8. Early joint working will also create a shared baseline and narrative for the SDS, including a statement of readiness and an initial strategic spatial baseline (“spatial portrait”). This provides a common understanding of what the SDS is intended to do, how it relates to local plans, and the key issues, opportunities and constraints across the area, supporting alignment between partners and clearer communication with communities and stakeholders.
9. Finally, collaborative pre-inception activity enables proportionate interim governance, financial accountability and assurance arrangements to operate transparently during the grant-funded period, including quarterly monitoring and evaluation reporting. Establishing these working arrangements now will strengthen relationships, improve risk management and provide an auditable platform for transition to the statutory board when it is constituted.
10. The partnership is proposed to comprise the strategic planning authorities across Oxfordshire, the Berkshire authorities and Swindon Borough Council (together, “the Partner Authorities”). For the avoidance of doubt, the expectation is to co-opt district councils (where relevant) and other stakeholders may be engaged through co-opted or consultative arrangements as set out under the interim governance arrangements up until the Local Government Reorganisation in Oxfordshire has been completed. Moreover, other external stakeholders may also be engaged through co-opted or consultative arrangements.

Objectives and deliverables for the pre-inception period

11. The partnership will oversee delivery of the pre-inception programme, including (subject to further scoping and agreement with Government):

    - a programme plan and timetable for development of the SDS, including workstreams, decision points and engagement approach;
    - a “Pathway to the Thames Valley SDS” / statement of readiness describing what the SDS is, why it is needed, governance arrangements, how it relates to local plans, and how it will be prepared and kept under review;
    - A Thames Valley growth vision and strategic spatial baseline (“spatial portrait”), including mapping of planned growth, constraints, opportunities and relationships to other strategies (e.g. infrastructure, economy, nature recovery);
    - draft governance and operating model proposals to inform the statutory secondary legislation and to enable a shadow SPB to operate effectively in advance of the statutory board;
    - procurement and commissioning activity needed to support the above (e.g. baseline mapping, specialist technical support), in compliance with procurement law and each authority’s governance.

Governance, monitoring and assurance arrangements

Proposed governance model (interim period)

12. During the interim period (prior to establishment of the statutory Strategic Planning Board), it is proposed that governance is provided through a shadow partnership structure that mirrors the expected statutory arrangements as far as practicable, while remaining proportionate to the pre-inception scope. The model comprises:

    - Thames Valley SDS Partnership Board: with Leader representation from each Partner Authority, responsible for oversight of the direction, endorsing the work programme and budget, and making recommendations within the scope of the pre-inception interim arrangements.
    - The Chief Executive group made up of all constituent authorities along with the Place Directors of all councils to oversee the programme, delivery, manage risks and ensure alignment with each authority’s governance.
    - Programme Management Office / Strategic Planning Unit (hosted): the operational team responsible for day-to-day delivery, commissioning and coordination.
    - Workstreams: time-limited workstreams (e.g. governance/legislation, spatial baseline/evidence, engagement/communications, programme planning), each with a lead authority/officer.

13. Interim Accountable Body arrangements to hold regional funds granted by Ministry for Housing Communities and Local Government (MHCLG) to support this interim development phase and commission on behalf of the region.

14. Where decisions require formal authority (e.g. entering into contracts above delegated thresholds, committing expenditure, appointing staff, or approving material changes to scope), these will be agreed by the interim governance arrangements for the SDS prior to a formal Strategic Planning Board. The

accountable authority will ensure these decisions and procurement comply with the Accountable Authority's constitution and decision-making arrangements, supported by a clear recommendation and audit trail from the partnership bodies.

15. The interim arrangements will be in place until the formation of the statutory Strategic Planning Board. The Strategic Planning Board will become the Strategic Planning Authority for the Thames Valley area on a geography set out by central government.

16. If a Foundation Strategic Authority (FSA) is established, the Strategic Planning Board will be dissolved, and its legal responsibilities will pass to the FSA.

17. If the geography of the SDS area and FSA footprint are misaligned, joint working and governance arrangements will be put in place.

18. The partnership will operate on a transparent "open book" basis for the use of Government grant and partner contributions. Monitoring and reporting in the interim period and formal arrangements will include:

    - Quarterly reporting on progress against agreed milestones, key risks/issues, and a summary of expenditure;
    - Interim updates between quarters where required (e.g. where Government requests updates, or where material risks emerge);
    - Expenditure records maintained by the accountable body and made available to partner authorities for assurance purposes;
    - Evaluation returns as required by Government, including completion of any end-of-grant evaluation summarising outcomes and expenditure.

19. Funding has already been received from the MHCLG of £764,000 to fund the pre-inception work to develop governance and working arrangements for the next stage. Oxfordshire County Council is currently acting as the accountable body and holding the first tranche of funding outlined in table Appendix 1. MHCLG has indicated that there will be further tranches of funding and a 3-year settlement to fund the development and production of the SDS, which includes resources, evidence and studies.

20. Oxfordshire councils are subject to the current round of Local Government Reorganisation (LGR) and it is therefore recommended that a council not subject to these reforms takes on Accountable Body status for the next phase. Bracknell Forest Council has agreed to undertake this role if agreed by partners councils and will act as the Accountable Body for funds received/held on behalf of the partnership for the Thames Valley SDS programme. This will include responsibility for receiving grant and/or partner contributions, maintaining proper accounting records, administering payments in accordance with the agreed programme and budget, and providing the required financial and performance monitoring returns to Government and to partner authorities. This will be reviewed on an annual basis through the Strategic Planning Board.

21. Further funding sources are expected to include government SDS preparation grant funding and where required, partner authority contributions (monetary and/or in-kind). An outlined draft budget, including the proposed allocation by workstream and the basis for partner contributions is attached as Annex 1. It should be noted that this may be subject to change as the final SDS legislation and guidance has not yet been issued.

Programme resourcing and hosting of staff

22. To date Oxfordshire County Council has provided the majority of resource to develop the programme and fund strategic advisors with assistance from a core team of senior staff from Oxfordshire, Berkshire and Swindon authorities.

23. Going forward the partnership will require dedicated officer capacity to manage and deliver the pre-inception programme (including programme management, strategic planning and technical support). It is proposed that any dedicated staff funded through the programme will be hosted by Bracknell Forest Council as Accountable Body. Staffing may be delivered through direct recruitment, secondment, or inter-authority arrangements, subject to agreement by the partner authorities and compliance with each authority's HR, finance and governance requirements (see Annex 2 & 3).

Working arrangements and data sharing

24. The SDS pre-inception programme requires regular data sharing among authorities, including local plans, growth projections, constraints, opportunities, infrastructure, and demographic, economic, and environmental datasets. Data will be shared based on necessity and proportionality, with aggregation used where possible. The partnership aims to establish unified data and digital standards for a common evidence baseline and efficient updates.

25. Partner Authorities are asked to agree to the principle of data sharing and joint use of data. An inter-authority agreement will detail the use and management of data and compliance with Freedom of Information and Environmental Information Regulations. When processing personal data, partners will conduct Data Protection Impact Assessments and adhere to UK GDPR and the Data Protection Act 2018.

Alternative Options Considered

The Cabinet could choose not to engage in the SDS process. However, this will lead to the Council being unable to help shape the strategic growth of both Oxford and the wider area. Therefore this option has been discounted.

Implications of Local Government Reorganisation

The creation of SDSs is being led by central government, and the development of the Thames Valley SDS will become mandated by secondary legislation. There are no financial implications for the Council, albeit that human resource will need to be directed to help guide the emerging workstreams. The creation of a Thames Valley SDS will continue irrespective of LGR outcomes and programmes.

Engagement and consultation

Engagement with authorities has been integral to development of the SDS pre-inception programme and will continue once the partnership is formalised. There has been close working with Government on the emerging SDS geography, legislative timetable and grant expectations, and collaborative working between the Partner Authorities to agree the initial scope, deliverables, governance and resourcing proposals set out in this report. The Partner Authorities have already collaborated to respond to the SDS geography consultation and the response to the National Planning Policy Framework (NPPF) consultation. As the programme progresses, the partnership will develop and implement a proportionate engagement and communications plan, including early engagement with key stakeholders (such as infrastructure providers,

neighbouring authorities, statutory agencies and relevant sub-regional bodies) and arrangements for formal public consultation at the appropriate stages once the statutory SDS process is confirmed.

Sustainability implications

26. Sustainability considerations will be embedded through the SDS programme, including early agreement of sustainability objectives and the approach to assessment (including any statutory sustainability appraisal and related environmental assessment requirements), and through ongoing engagement with relevant partners and evidence holders. As the SDS content is developed, further detail will be provided on how proposed strategic approaches are expected to contribute to local and national climate and environmental commitments, and how potential adverse impacts will be avoided, mitigated or compensated.

27. The SDS is intended to provide the strategic framework to integrate housing and economic growth with the delivery of supporting infrastructure, climate mitigation and adaptation, and environmental enhancement across the Thames Valley. Developing and delivering the SDS therefore has positive sustainability implications by enabling partners to plan for sustainable patterns of development (including prioritising locations that support public transport, walking and cycling), set strategic expectations on energy efficiency and carbon reduction, and coordinate cross-boundary measures for green infrastructure, biodiversity and nature recovery.

Financial implications

28. The financial implications of participating in the partnership fall into three categories: (i) receipt and use of Government grant funding (where applicable), (ii) any partner authority contributions (cash and/or in-kind), and (iii) staffing and commissioning costs required to deliver the pre-inception outputs.

29. A detailed budget and resourcing plan will be maintained and reported through the partnership governance. Any financial commitments by the Council will be subject to approval through the Council's normal financial governance (including delegated authority limits) and will be captured within the formal inter-authority agreement(s) including provisions on payment schedules, treatment of underspends/overspends, liabilities, audit access and exit/termination arrangements.

Legal issues

30. Through the Local Government Acts 1972 and section 1 of the Localism Act 2011, local authorities have the power to enter into joint arrangements with other local authorities, delegate functions to other local authorities and do anything that individuals may generally do (the general power of competence).

31. This is reflected in Parts 3.8 (Joint Arrangement) and 3.9 (Delegation to and from other local authorities) of the Council's Constitution which set out that the Council or the Cabinet may establish joint arrangements with one or more local authorities to exercise functions that are not executive functions in any of the participating authorities. Such arrangements may involve the appointment of a joint committee with these other local authorities and the delegation of functions to the joint committee. The Council may delegate non-executive functions to another local authority or, in certain circumstances where these are local choice responsibilities, the executive of another local authority.

32. The Leader may establish joint arrangements with one or more local authorities to exercise functions which are executive functions. Such arrangements may involve the appointment of joint committees with these other local authorities and the delegation of functions to the joint committee. The Leader may delegate executive functions to the executive of another local authority or, in certain circumstances where these are local choice responsibilities, another local authority. The decision to accept a delegation of executive responsibilities from another local authority is reserved to Cabinet.

33. The interim partnership is intended to enable collaborative programme delivery and joint oversight during the pre-inception period. The legal mechanism(s) to give effect to this may include a memorandum of understanding, a collaboration agreement, and/or arrangements under the Local Government Act 1972/Local Government Act 2000 for the discharge of functions (including the establishment of a joint committee) where needed. The chosen mechanism will reflect (i) whether any functions are being formally delegated, (ii) the extent of decision-making powers required during the interim period, and (iii) the anticipated transition to a statutory Strategic Planning Board established by secondary legislation. Further reports will be prepared for consideration in the future as needed as the programme develops.

Level of risk

34. Risk Register is attached at Appendix 4.

Equalities impact

35. The pre-inception phase is primarily programme set-up and evidence development. Equalities considerations will be embedded in the design of the SDS programme and engagement approach, including ensuring inclusive consultation and assessing impacts as the SDS content develops. Further equality and inclusions assessments will be developed alongside the development of the SDS.

THE RISK REGISTER IS FORMATTED AS A TABLE. PRESS TAB ON THE LAST TABLE CELL TO INSERT A NEW ROW.

Description of the headings within the risk log

Reference: A reference number to identify the risk.

Description: The situation or event that the recommendations to Cabinet, or the information in the report, expose the Council to.

Consequence: The likely outcomes or consequences if the risk materialises.

Name of the risk owner: The name of the person who is responsible for the risk

Control/mitigation: How the Council is choosing to respond to the risk. What is it doing to reduce probability and/or impact, or what will it do to reduce it, so that it is within the Council's risk appetite?

Control due date: The date by which the control/mitigation should be in place.

Progress on control/mitigation: A description of the progress that has been made in implementing the risk control/mitigation.

Action Owner: The person who is responsible for implementing the risk control/mitigation.

Risk Appetite

The Council's risk appetite is the amount of risk that it is willing to take to achieve its priorities, provide sevices as planned and deliver its statutory services. When considering risk staff must take into account the Council's appetite for risk which differs according to the type of risk. How low, medium and high are defined is shown at the bottom of the page.

- **Strategic**

3.2 Where the council needs to innovate to make transformative change happen so that it can achieve its 2024 to 2028 priorities, the council will accept a medium risk appetite. Examples of this might be housing development and climate change initiatives where projects might be supported that are innovative, have a degree of uncertainty but are aligned with the Council's priorities.

- **Economic, finance and markets**

3.3 It is a legal requirement for the Council to set a balanced budget. The Council operates against a challenging economic and financial backdrop in which it only knows what resources it will have for one year at a time. It has finite financial reserves and must be sustainable in the long term. These will be considered by the Group Finance Director on an annual basis, but in the context of a medium risk appetite. Where there is the possibility of investing to achieve a priority through development or economic growth, the risk appetite will tend towards medium risk, whilst maintaining rigorous oversight of delivery.

- **Customers and Citizens - Providing services as planned and delivering statutory duties**

3.4 For core services that are delivered to vulnerable people the Council will have a low-risk appetite to avoid a failure in service delivery that might harm vulnerable people.

- **Reputation**

3.5 The Council must maintain the trust of citizens and consequently has a low-risk appetite.

- **IT and information**

3.6 Information Technology plays a critical role in the delivery of Council services, including to the most vulnerable in the city and consequently the Council has a low-risk appetite to failure of systems. The Council will prioritise having the correct IT systems, which are dependable and will provide continuity of service, whilst at the same time are secure and provide data confidentiality in order that all GDPR requirements are met. The risk appetite may increase to medium if digital transformation projects are undertaken in line with Council priorities but only after rigorous risk assessment, with contingency plans for the continuity of service.

- **Legal, regulatory and compliance, both internal and external**

3.7 These risks are about ensuring the Council complies with its constitution, policies, regulatory requirements, legal obligations and statutory guidance

policies, regulatory requirements, legal obligations and statutory guidance. The Council will take a risk-based approach where there are decisions which, though they may be in compliance with these areas, could be open to challenge or subject to regulatory action. The Council has a low-risk appetite relating to compliance, ensuring all obligations and requirements upon it are met, whilst taking decisions and delivering its services and functions. However, in relation to the risk of legal challenge (both defending and taking), the Council will have a medium risk appetite. Decisions around regulatory and legal action will be taken in light of many considerations, including priorities, resources, commercial factors, timing, future impact and reputational impact.

- **Organisational, management and people (including health and safety and equalities)**

3.8 Organisational and management risk is about the structure, leadership, governance, processes, and culture of the Council. These can undermine the delivery of services, cause inefficiencies and damage the Council's reputation. The Council's risk appetite is low.

People risk concerns staff and includes recruitment and retention, staff engagement, training, health and safety and equalities. Risks include not being able to obtain the right staff or retain them, a lack of engagement and low morale. These can severely impact delivery of services. The risk appetite is low.

The Council is committed to the health and safety of its staff and members of the public, not only because it fulfils its legal responsibilities, but because it has a moral duty not to cause harm. The Council has a low-risk appetite and will have effective health and safety practices that help prevent death, injuries, and illness.

The Council is committed to building a fairer city by ensuring its services, investments, and policymaking addresses Oxford's social and financial inequalities. A medium risk appetite is appropriate when the Council is driving positive change.

- **Environmental and sustainability**

3.9 The Council will have a low-risk appetite for environmental and sustainability risks that might damage health and wellbeing in the community, and which might result in legal liabilities and fines. This includes areas such as long-term environmental damage like climate change impacts, pollution, and a loss of biodiversity. Laws and regulations must be adhered to. A medium risk appetite is acceptable when environmental and sustainability projects can result in long term benefits to the city through Zero Carbon Oxford.

- **Commercial**

3.10 The Council is responsible for spending public funds, providing efficient public services over the long term, and maintaining the trust of the community. Expenditure with some commercial aspects will be made that can provide a return on investment so that these resources can be used to help it achieve its priorities, deliver services as planned and meet its statutory duties. However, the investments should align with the priorities of the Council, be medium risk, and focus on stable returns.

and focus on stable returns.

- **Political**

3.11 Political risk is about change, instability or disagreements that can make the delivery of the Council's priorities more difficult. This may include changes in national leadership priorities and resource allocation, shifts in public opinion or outside pressures. Generally, the Council's risk appetite is low because unexpected change can impact service delivery, but it may be medium when the pursuit of priorities requires working within a changing political environment.

- **Partnerships**

3.12 Partnerships are important because they enable the Council to access additional resources and expertise that can drive change and innovation leading to the more efficient delivery of priorities and services. Due to the potential benefits, including improved service delivery, whilst delivering efficiencies and savings, the Council will have a medium risk appetite, but the risk must be underpinned by sound governance structures.

- **Technical, operational and infrastructure**

3.13 Technical risks are about the adoption of new ways of completing tasks and the reliability of existing methods. The risks include implementing a new way of working and it fails to deliver the expected results. Operational risks arise from the day-to-day activities of the Council and might include process inefficiencies or a failure in supply chains. Infrastructure risks concern the physical assets that the Council needs to deliver its services, such as buildings and utilities. In these areas the council has a low-risk appetite as it must reliably deliver services to citizens.

Low	The Council is unwilling to expose itself to risks, particularly if by doing so there could be significant negative consequences and the possibility of failure. It will minimise its exposure to risk and prioritise certainty, security, adherence to regulations, and prudence. Key aspects of a low-risk appetite are prioritising compliance with laws and regulations, safety, conservative decision making, financial prudence and minimising actions that could lead to adverse impacts on citizens.
Medium	The Council will take considered risks when they help it successfully deliver the Council Strategy 2024 to 2028, provide the services identified in its business plans and deliver its statutory duties, but it will only do so after it has given the matter careful consideration through risk assessment, and there are plans in place to implement risk controls. The Council is open to opportunities that could lead to improved public services, and it may allocate resources to higher risk projects if they align with 2024 to 2028 priorities. The Council is willing to take these risks when the potential rewards align with its priorities and risks can be managed.
High	The Council is willing to take significant risks to achieve ambitious goals, drive innovation or deliver transformative projects where there is uncertainty about the outcome, including the possibility of failure. It is characterised by bold decision making and innovative approaches to the delivery of public services with the goal of delivering significant improvement.

Risk Scoring

Once risks have been identified, the risk matrix serves as the primary tool for prioritisation. It enables the Council to determine which risks are most significant and therefore require greater attention and resources. The matrix also provides a consistent framework for comparing different types of risks across the organisation

Each risk should be analysed using a five by five matrix for (1) the probability it will happen and (2) the impact if it did occur. This assessment should be made on three different basis:
• Gross risk – risk level if existing key controls and mitigations were not in place or not effective.
• Current risk – risk level after existing controls and mitigations are taken into consideration.
• Target risk – anticipated risk level, within the Council's risk appetite, following the introduction of planned controls and mitigations.

Assessing gross risk helps the organisation understand its reliance on existing key controls and supports decisions on risk treatment and the appropriate target risk level. A useful approach is to first consider the current risk, then ask: what would the impact and likelihood be if those key controls were removed?

It is the risk owner's responsibility to ensure the controls they believe are reducing the risk are effective and are working in practice. Controls that are not yet in place should not be considered within the current risk.

Each identified risk should then be plotted onto the risk matrix.

Probability						
Highly likely	5	5	10	15	20	25
Likely	4	4	8	12	16	20
Possible	3	3	6	9	12	15
Probably not	2	2	4	6	8	10
Unlikely	1	1	2	3	4	5
		1	2	3	4	5
	Impact	Insignificant	Minor	Moderate	Major	Severe

When assessing the likelihood of a risk occurring, select a score from 1 to 5 on the risk matrix that best reflects what you think. This rating involves an element of professional judgement, so consider how probable the event is and take into account the following factors:
• Has this event happened before in the Council? (How frequently?) Has this event happened elsewhere? (How frequently?)
• How likely is it that one or more of the causes/ triggers of the event will occur?
• Has anything happened recently that makes the event more or less likely to occur?

The following tables provide some support in quantifying the risk in terms of probability and impact.

Risk Probability Assessment Criteria

Risk Probability Assessment Criteria

Scale	Description	Probability of Occurrence	Description
1	Unlikely	0 to 19%	The event may occur in certain circumstances
2	Probably not	20% to 39%	The event will probably not occur
3	Possible	40% to 59%	The event may occur
4	Likely	60% to 79%	The event is likely to happen
5	Highly likely	80% to 100%	The event is highly likely to happen

When you select the impact you should give consideration to the factors outlined in the risk matrix. For example, if the risk you are scoring has a low financial impact but a high impact on our reputation then you would select the most appropriate number between 1 and 5 that relates to the level of reputational impact. Once again, this score will have an element of judgement.

Risk Impact Assessment Criteria

Risk Impact Assessment Criteria

	Insignificant	Minor	Moderate	Major	Severe
[illegible]	Little or no impact on the delivery of the	May have a minor impact on the delivery of	Would impact the delivery	Would require a significant shift from	It would require a fundamental change in

Strategic	organisation's priorities	the organisation's priorities	of the organisation's priorities	current strategy to enable the Council to achieve its priorities	strategy and priorities. Failure to deliver a 2024 to 2028 priority
Economic, Financial & Markets	Minor financial impact <£50k per annum	Financial impact contained within the service area £50k - £250k per annum	Budget adjusted across service areas £250k - £500k per annum	Some corporate budget realignment £500k - £750k per annum	Significant corporate budget realignment >£750K per annum
Customers & Citizens	No impact on service quality, limited disruption to operations	Minor impact on service quality, minor service standards are not met, short term disruption to operations	Significant fall in service quality and standards	Major impact on service quality, multiple service standards are not met, long term disruption to operations	Catastrophic fall in service quality and key service standards are not met, long term catastrophic interruption to operations
Reputation	local complaints that do not attract adverse publicity	Adverse publicity locally and regionally on social media	Adverse publicity locally and regionally in mainstream media	Adverse UK wide publicity	Prolonged negative perception in the UK
IT & Information	Minimal impact on the Council's infrastructure, information management and service delivery	Brief disruptions and inconvenience, but no long-term consequences	Moderate IT and information risks that cause noticeable disruptions or delays in services. They may affect a specific group of users	Significant disruption to the delivery of services or financial loss, including fines. Large sections of the Council's operations impacted	Catastrophic IT risks that have widespread, severe consequences, that threaten the Council's ability to function

	Insignificant	Minor	Moderate	Major	Severe
Legal, Regulatory & Compliance	Breaches of local procedures or standards Unlikely to cause litigation	Breach of statutory regulations or standards Litigation possible	Breach of major statutory duty or internal regulations leading to disciplinary action Litigation to be expected	Significant breach of external regulations leading to intervention, sanctions, or fines Litigation almost certain and difficult to defend	Major breach leading to suspension or discontinuation of business and services or breaches of law punishable by imprisonment. Litigation is certain and impossible to defend
Organisational, Management and People, including Health and Safety and equalities	Minor issues within teams with no major impacts on service delivery Minor injury Minimal impact on the Council's ability to promote equality and diversity	Difficulties that cause short lived disruptions or inefficiencies. Less serious injury causing one-month recovery Minor equalities risks that cause brief disruptions or dissatisfaction, but no long-term harm to service delivery	Noticeable disruption and delays to operations requiring significant effort to resolve Serious injury to a person causing a six-month recovery An impact on certain groups or services, with operational inefficiencies and complaints	Significant disruption and inefficiencies that affect the Council's ability to deliver a service or priority Death or life changing injury to a person Equalities risks that significantly affect the delivery of services or reputation	Disruptions that threaten the Council's ability to operate. Long term consequences for service delivery. A failure to deliver a 2024 to 2028 priority. Death or life changing injury to more than one person A systemic breakdown in the Council's efforts to uphold equality and fairness particularly impacting those from a protected characteristic group.
Environmental & Sustainability	Environmental impact that disperses within a short time Minor delays in implementing sustainability initiatives	Environmental impact that is contained and rectified easily Small disruptions or inefficiencies but no long-term impact on sustainability strategy or service delivery	Environmental impact on a small area or a wider area with limited damage Noticeable delays or inefficiencies in the delivery of sustainability projects	Persistent environmental damage The Council's ability to meet its sustainability goals are undermined and key targets are missed leading to regulatory consequences	Large-scale irreversible environmental damage A complete failure to meet sustainability obligations and targets resulting in large fines, and legal action with long term damage to the Council's reputation

	Insignificant	Minor	Moderate	Major	Severe
Commercial	Negligible impact on the Council's operations, finances, or reputation	Small financial losses with manageable consequences. No critical services or strategic priorities are affected	May cause disruption but does not cause long term harm to the Council's reputation or ability to meet its budget	A significant disruption to the Council's operations, financial position and a long-term impact on reputation	Large scale financial loss, with the potential to result in the Council issuing a Section 114 notice
Political	Small scale political disagreements that do not affect decision making or lead to reputational damage	Minor disruption or reputational damage but can be managed without a significant impact on the Councils ability to perform its duties	Noticeable disruption or delays in Council decisions and reputational damage	A significant disruption to the Council's ability to operate effectively and deliver its priorities due to political conflict, public protest, or a shift in political power	A severe event that threatens the existence or legitimacy of the Council. Long term instability and irreparable damage to its reputation
Partnerships	Issues arising from the partnership are managed and have no significant impact	Some inconvenience but no long-term impact on the Council's priorities and services	More significant disruption to operations and financial position but they can be managed with appropriate resources. Active intervention required	Significantly disrupts Council services and financial stability. There are delays to the delivery of services and a loss of reputation	There is a threat to the Council's ability to function effectively, and core services cannot be delivered
Technical, Operational & Infrastructure	Little impact on the Council's functions. Any problems are minor and easily addressed	Minor issues that cause short disruptions or inconvenience. No long-term effects and resolved quickly	There are more significant disruptions or delays. Service delivery may be impacted but can be resolved with additional resource	A significant disruption to Council operations affecting key services and causing substantial delays, financial loss and inconvenience to the public	The Council's ability to continue functioning is threatened. Significant long-lasting disruption, financial losses, or public safety concerns

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	08.07.2026
Report of:	Carolyn Ploszynski, Director of Regeneration, Economy and Sustainability
Title of Report:	**Delegate authority to the Deputy Chief Executive - Place to Direct Award the Council's Water Supply and Wastewater Contract to Anglian Water Business (National) Limited t/a Wave Utilities on a 2+1+1 contract term.**

Summary and recommendations	
Decision being taken:	To give Delegate authority to the Deputy Chief Executive - Place to Direct Award the Council's Water Supply and Wastewater Contract to Anglian Water Business (National) Limited t/a Wave Utilities on a 2+1+1 contract term, subject to final contract price; and delegate authority to the Deputy Chief Executive - Place to make non-substantive changes to the framework should they become necessary.
Key decision:	Yes
Cabinet Member:	Cllr Anna Railton, Deputy Leader & Cabinet Member for Planning & Zero Carbon Oxford
Corporate Priority:	None
Policy Framework:	None

Recommendation(s): That Cabinet resolves to:

Approve Delegate authority to the Deputy Chief Executive - Place to Direct Award the Council's Water Supply and Wastewater Contract to Anglian Water Business (National) Limited t/a Wave Utilities on a 2+1+1 contract term, subject to final contract price; and delegate authority to the Deputy Chief Executive - Place to make non-substantive changes to the framework should they become necessary.

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Exempt Appendix 1 – Not for publication	Yes This information is exempted from publication under Schedule 12A to the Local Government Act 1972 on the following basis: • Information in respect of which a claim to legal professional privilege could be maintained in legal proceedings
Appendix 2	Appendix 2 -Risk Register	No Please note legal risks are held in Appendix 1 and are confidential
Appendix 3	Appendix 3 – Equality-Impact-Assessment-Water Supply & Wastewater Contract Cabinet	No
Appendix 4	Appendix 4 – Background Paper – Utilities Procurement 2024-2028	No
Appendix 5	Appendix 5 – LASER Framework	No

Introduction and background

1. The Council is required to secure ongoing provision of non-domestic water supply and wastewater treatment services for its corporate estate in which it pays the utility bill.
2. Since deregulation of the non-domestic water market in 2017, the Council has procured these services under Kent County Council t/a LASER Water Supply and Sewerage Services framework. Kent County Council /LASER is a recognised Public Buying Organisation, and the Council has used LASER established frameworks for utilities for over 20 years.
3. The Council's current water supply and wastewater contract with Anglian Water Business (National) Limited t/a Wave Utilities (WAVE) will expire on 14 September 2026. This report seeks approval to award the replacement contract to WAVE under Lot 1 of Kent County Council's framework for the Supply of Water and Sewerage Services, ensuring continuity of service and value for money during the period leading up to Local Government Reorganisation (LGR).

Reasons for Direct Award

4. The proposed contract has been procured through the framework via a direct call off process meaning no specific competition has been held by the Council to select the

recommended supplier. For this specific contract the direct approach represents the most robust and value for money procurement route available to the Council at this time.

5. The non-domestic water market is highly constrained with wholesale water prices set regionally and regulated nationally, meaning suppliers do not compete meaningfully on water tariffs. Most of the price organisations pay per unit is set by the wholesaler and only approximately 7% of the total cost goes to the retailer. The Council contracts with a retailer for its water provision and under the framework agreement, the retailer's prices are fixed for the duration of the contract and have already been market-tested and benchmarked through a competitive procurement exercise in order to be appointed to the framework.
6. Under the framework agreement there are two suppliers on Lot 1 eligible for Direct Award. Which supplier is selected depends on the criteria chosen. Within this exercise it LASER advised that any marginal difference of costs between the two suppliers would not amount to any substantial cost savings because of the retail costs are a very small percentage of the total water bill. For example, even if a retailer offers 'half' the price of another this likely constitutes a 1-2% price difference.
7. Any marginal difference in retailer fees would be far outweighed by the additional costs and risks associated with a supplier change. Switching supplier would require estate-wide closing meter reads, which cannot be undertaken with existing staff resources and would require short-term additional capacity at an estimated £25,000 revenue cost. Incomplete or delayed meter reads would result in estimated billing, increasing the risk of overcharging and generating avoidable disputes and additional officer time.
8. WAVE is the Council's current supplier and to award a new contract to them avoids the above costs and risks entirely. WAVE already hold validated consumption data, understands the Council's estate, and provides established billing accuracy. WAVE was independently ranked as the highest-scoring supplier for service quality when appointed to the framework. This combined with the cost savins identified above provides assurance that the appointment WAVE will secure best value service for the Council.
9. Additionally, the Council has been impressed with the level of service WAVE has delivered throughout the current contract period. A direct call off procurement to appoint also avoids a time and resource intensive competition which will likely deliver no service benefit and no or negligible price benefit given the environment of the water market.
10. The proposed contract term ensures stability while organisational responsibilities and assets are transitioning under LGR but also allows flexibility in term length while future arrangements are being determined.

Alternative Options Considered

11. **Mini competition via the LASER Framework:** The Council could opt for LASER to run a mini competition on the Council's behalf. This would involve LASER building a tender pack, based upon the Council's specified weighting requirements for service, social value and price, and any additional requirements. Within this option the tender would be made available to four suppliers. Running a mini competition under the LASER Framework, was rejected for the following reasons:

a) Undertaking a mini-competition or standalone procurement would duplicate work already completed at sector level, require additional LASER and internal resource and associated costs, and introduce timing risk, with the potential for exposure to deemed rates if award timelines slipped. This approach would cost more money with no benefit. For reference LASER charges 1.5% of annual water chargers under their management fee for the Direct Award route and 3% to run a mini competition

b) Resource burden – a mini competition would require more internal resource

c) Time constraint and risk of deemed rates – given Cabinet timelines if this option were to be taken the process would not be complete until after the date of the current contract end, meaning the Council would be subject to deemed rates with its current supplier whilst sorting out the new contract

d) Higher cost – LASER would require an increased rate to run this option when compared to the Direct Award option

e) Little value added – LASER has already undertaken a full competitive procurement exercise to refresh the framework, during which WAVE scored the highest on service. Running a separate Council-level competition would likely duplicate effort with minimal value due to the cost environment outlined above

f) Operational disruption - a Mini competition may have resulted in a change of supplier, which would trigger the need for closing meter reads across a large number of sites. Completing this manually would require substantial Council resource

g) Risk avoidance during LGR - introducing a supplier change immediately before LGR could cause avoidable billing and service continuity issues

12. **Running a full standalone procurement** (outside the framework): This was rejected for the following reasons:

    a) Excessive time and administrative cost compared with using an established public sector framework agreement

    b) LASER's framework agreement already provides market-tested, competitively tendered pricing, ensuring compliance and value for money

    c) A standalone procurement would be particularly impractical during the pre-LGR period and would duplicate work already undertaken at sector level by LASER

13. **Switching supplier through a direct call off to the alternative Supplier under the LASER Framework**: This was rejected for the following reasons:

    a) LASER’s recent full procurement ranked WAVE as providing the best service of all Lot 1 framework agreement suppliers

    b) Switching supplier would trigger significant operational workload relating to meter reads, onboarding, and data validation

    c) The risk of overcharging through estimated reads is higher if the Council switches supplier

    d) No evidence demonstrated that an alternative supplier would offer material financial or service improvements relative to WAVE.

Implications of Local Government Reorganisation

14. A limited 2+1+1-year contract has been selected specifically to avoid binding the successor authority to a long-term arrangement, allowing the new authority freedom to review and procure services strategically once established. The +1 options have been included to be flexible given the unknown timelines associated with LGR.

15. Awarding a contract to the incumbent supplier, WAVE, also prevents the significant operational burden that a competitive exercise or supplier change would create. Undertaking closing meter reads for a large number of sites immediately before LGR would require considerable resource and carries a substantial risk of incorrect estimated billing, which could introduce avoidable financial pressure.

16. To note, this is an essential service of which there is not an option not to enter a new contract.

Financial implications

17. Since the current contract was awarded, water industry costs have risen. Ofwat has approved a £104bn national investment programme (2025–2030), with early industry estimates indicating that water costs will increase from April 2026. These increases apply regardless of supplier, as wholesale costs are regulated regionally and make up the majority % of the unit fees.

18. Use of the LASER framework agreement provides financial benefit due to portfolio scale and aggregated buying power. Historically, the Council has secured water pricing below the national average through LASER. Importantly, the retail prices under the new contract will remain fixed for the full contract term, providing cost certainty during a period of rising market prices.

19. The Direct Award route avoids avoidable transition costs (estimated at c. £25,000) associated with a necessary extra resource to conduct meter reads and supplier change and therefore represents the lowest whole-life cost option available to the Council.

20. The water contract is an essential service required for the daily operation of Council buildings. Existing approved budgets are in place to meet these costs.

21. Until LASER have finalised the arrangement with WAVE on our behalf the exact water costs are unknown, however, it is understood that OCC annual water costs for the new contract will sit at £300k which is in line with our current annual chargers.

Legal issues

22. Under 4.5 (11) of the Council's Constitution Cabinet is the decision-making body for the award of contracts in excess of £750,000. The estimated value of the contract means the decision to award the contract is a key decision.

23. Additional legal comment is provided in Appendix 1.

    10.6.26 / JW / 81537

Level of risk

24. The main financial and operational risks relate to supplier change, billing accuracy, internal capacity and timing pressures. These risks are minimised through an award to the incumbent supplier, use of a framework, and a short, flexible contract structure aligned to LGR. A detailed Risk Register is attached as an appendix.

Equalities impact

25. Attached as an Appendix 2.

Carbon and Environmental Considerations

26. The proposed contract award supports the Council's environmental objectives by retaining a supplier that has clearly articulated and externally recognised sustainability credentials. WAVE operates under a comprehensive Social and Sustainability Framework, with a focus on water efficiency, environmental management and carbon reduction. During 2024–25, WAVE enabled customers to save over 10.4 million cubic metres of water, exceeding its stated targets and reducing associated emissions. WAVE also maintains ISO-accredited environmental management systems (ISO 14001) and has committed to achieving Net Zero carbon emissions by 2030, ahead of the national 2050 target and in line with the broader UK water industry. Its Carbon Reduction Plan, prepared in accordance with PPN 06/21 and the GHG Protocol, sets out a science-based pathway covering Scope 1, 2 and 3 emissions, with clear interim reduction targets and a hierarchy focused on reducing emissions before procuring or offsetting residual impacts.

27. Retaining Wave avoids the carbon impacts associated with supplier transition, including estate-wide meter reading activity and data re-validation, while maintaining continuity with a supplier that actively supports customers' own decarbonisation journeys through water efficiency, demand reduction and engagement on the role of water in achieving Net Zero.

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3. An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	6. **Race & Ethnicity**
2. **Disability**	7. **Religion or Belief**
3. **Gender Reassignment**	8. **Sex**
4. **Marriage & Civil Partnership**	9. **Sexual Orientation**
5. **Pregnancy & Maternity**	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.

3654

7. Provides clear **justifications** for your decisions.
8. It is written in **plain English** with simple short sentence structures.

Section 1: General overview of the activity under consideration

1.	**Name of activity being assessed.**	Procurement of the Council's water supply and wastewater contract for its corporate estate.	**2.**	**The implementation date of the activity under consideration:**	08.07.2026
3.	**Directorate/Department(s):**	Regeneration, Economy & Sustainability	**4.**	**Service Area(s):**	Environmental Sustainability
5.	**Who is (are) the assessment lead(s):** **Please provide:** -Name -Email address	Alice Jones (Carbon Reduction Project Manager) - ajones@oxford.gov.uk	**6.**	**Contact details, in case there are queries:** **Please provide:** -Name -Email address	
7.	**Is this a new or ongoing EqIA?**	New ☐ ☐	**8.**	If this is an extension of a previous EqIA, please indicate where the previous EqIA is located and share the link to the said EqIA.	No
9.	**Date this EqIA started:**	14.05.2026			
10.	**Will this EqIA be attached to Corporate Management Team (CMT) reports/updates, which will be published online?**	It will be attached to report going to Cabinet in July.	**11.**	**Give a date (tentative or otherwise) when this assessment will be taken to the** CMT.	Going to Cabinet in July.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	**18 October 2023**
Report of:	**Head of Corporate Strategy**
Title of Report:	**Utilities Procurement 2024 - 2028**

Summary and recommendations	
Purpose of report:	To seek delegated authority for the Head of Corporate Strategy, in consultation with the Head of Financial Services / Section 151 Officer, to approve contracts for gas and electricity and agree to extend the current contract for water utilities.
Key decision:	Yes
Cabinet Member:	Cllr Anna Railton, Cabinet Member for Zero Carbon Oxford and Climate Justice
Corporate Priority:	Pursue a Zero Carbon Oxford
Policy Framework:	Corporate Strategy 2020 - 2024

Recommendations: That Cabinet resolves to:

1. **Delegate authority** to the Head of Corporate Strategy, in consultation with the Head of Financial Services / Section 151 Officer, to:
    - decide the procurement route for purchasing the supply of gas and electricity from October 2024
    - agree to enter into contracts for gas and electricity, subject to a maximum term of four years from October 2024;
2. **Approve** the extension of the Council's water contract with Wave for a further two years; and
3. **Note** the proposal to undertake an Energy Procurement Review to inform the Council's longer-term approach (from 2027 onwards).

Appendices	
Appendix 1	The LGA's list of Public Buying Organisations offering energy service frameworks
Appendix 2	Risk Register

Introduction and background

1. Since 2004, LASER (Local Authority South East Region), has provided energy procurement services for the Council. LASER is a Public Buying Organisation offering energy services and is part of Kent County Council. Since 2017 the Council has also accessed LASER's Water Framework to secure contracts for water and wastewater services.
2. The Council utilises LASER's services through a compliant framework via an access agreement. In the last financial year (22 – 23) the Council spent £2.8m on electricity, gas and water. Taking into account increases to unit rates in October 2022, it is estimated that this will increase to £3.7m in this financial year (2023 – 2024). Expenditure (for 23-24) is split approximately as follows:
    - Gas: £1.1m
    - Electricity: £2.4m
    - Water: £0.2m
3. The current energy framework agreement with LASER runs from 1 October 2020 until 30 September 2024. The Council's water contract runs from 15 September 2021 until 14 September 2024, with the option of a 2-year extension.
4. In order to benefit from a hedged approach involving forward purchasing to mitigate against high energy prices and volatile markets, the Council is considering using a new framework agreement with a Public Buying Organisation, to provide as long as possible a window for energy procurement prior to the contract delivery date (1 October 2024).

Energy procurement options

5. The energy market is a highly specialised field of procurement. The complexity of the procurement options can create a risk if not appropriately managed. The Pan Government Energy Project recommends that all public sector organisations adopt aggregated, flexible and risk-managed energy procurement.[1]
6. In seeking to review and renew the Council's energy contracts the following options are presented:
    a. Do nothing (which means do not re-procure and allow the current utilities contracts to run over at higher rates)
    b. Run a procurement process in-house
    c. Use a Public Buying Organisation (PBO) or Third Party Intermediary (TPI).

[1] https://www.gov.uk/guidance/buying-energy-options-for-public-sector-buyers

7. Doing nothing is problematic in terms of cost as this would mean that once the current contracts expire, the council would pay expensive and volatile deemed rates with its energy suppliers without an energy contract in place.
8. Running a procurement process in-house, with a collective procurement value of ca.£3.7m per annum, would be time-consuming and expensive, requiring specialist energy purchasing expertise to run a compliant tendered process. Further, the Council does not have sufficient volume or buying power itself to purchase in advance on the wholesale energy market and effectively negotiate supplier management fees.
9. Entering into contract with a TPI (i.e., an energy broker) would be time consuming and resource intensive. There are c.2000 brokers operating in the UK market primarily serving small- and medium-sized organisations and some councils. A procurement process would need to be run by the Council to select the broker, requiring significant resource and expertise.
10. Procuring energy through a PBO is currently considered best practice. A PBO is a distinct organisation or part of an existing public body set up to facilitate the procurement of items, goods or services commonly purchased by local authorities. Due to the potential aggregated volume of their users, PBOs are normally able to secure preferential rates. Use of a PBO for utilities procurement is regarded as a best practice approach to mitigate energy price risk in a volatile and complex energy market. PBOs often take delegated authority to purchase gas and electricity on behalf of public sector organisations, creating an aggregated committed volume to take to the wholesale market. By aggregating customers' energy volumes into procurement rounds, PBOs are able to purchase energy on the wholesale market. PBOs offer a low-risk procurement compliant route to market. For information, the LGA's list of PBOs offering energy service frameworks is provided in Appendix 1.

Statutory consultation with leaseholders and shared owners

11. Under Section 20 of the Landlord and Tenant Act 1985 (amended by section 151 of the Commonhold and Leasehold Reform Act 2002) the Council has an obligation to consult with leaseholders who pay a service charge where:
    a. The Council is looking to contract for the supply of services included in the service charge; and
    b. The contract will be for more than 12 months; and
    c. The cost to any one leaseholder is greater than £100 a year
12. The Council is currently in the consultation period and letters have been sent to the relevant leaseholders setting out the preferred option (see below) of using a PBO. The final decision taken on the procurement route will need to take account of any responses received from the consultation (the first phase closes on 21 October 2023).

Preferred option and procurement review

13. Currently the preferred option is to use a PBO for the reasons set out in paragraph 10.
14. Due to the ongoing S20 consultation and the need to review and prepare documentation for the chosen procurement route, it is recommended the decision

on how to procure and the subsequent contract award is delegated to the Head of Corporate Strategy in consultation with the Section 151 Officer.

15. Due to the volatility of the energy market and the need to have as long as possible a purchasing window to secure lower rates, decisions will need to be taken quickly following the conclusion of the S20 consultation, requiring delegation as set out above.

Renewable energy procurement

16. Following Cabinet decision in December 2021, the Council does not purchase green gas and directs this funding to the Net Zero Transition Fund, which funds additional decarbonisation projects. This decision was in line with advice from the Council's Scientific Advisor.

17. The Council is not currently purchasing green electricity due to high premiums and similarly this funding is best used to deliver projects that decarbonise the Council's operations.

Longer term energy procurement

18. It is proposed that the Council undertake an Energy Procurement Review to conclude by June 2025 - to enable the development of a longer-term procurement strategy.

19. As set out in the Carbon Management Plan the Council is currently exploring potential opportunities to secure Power Purchase Agreements (PPAs). PPAs are long term contracts between a generator and a buyer of that electricity.[2] Many organisations sign PPAs to benefit from price certainty over the long term and to purchase energy from a specific renewable energy project, which is regarded as a good practice approach to green electricity procurement. If it proves possible to negotiate a PPA on attractive terms for the Council, then this may provide a significant proportion of its energy needs, requiring adjustments to the contracts placed through a PBO

20. If the new provider of the Council's Leisure Services can demonstrate it can access energy at more competitive rates than the Council, then this may provide another procurement option for a significant proportion of the Council's energy needs and may also require adjustments to the contracts placed through a PBO.

21. Any such future decisions would look at overall value to the Council – including total cost and price certainty – and would be subject to further Cabinet approval.

Water procurement

22. Since April 2017, businesses, charities and public sector organisations in England have been able to switch suppliers for water services. Since 2017, the Council has accessed LASER's Water Framework to secure contracts for water and wastewater services

23. The Council's current Water and Wastewater Retail Services contract with Wave runs from 15 September 2021 to 14 September 2024, with the option to extend to 14 September 2026.

---

[2] https://www.local.gov.uk/publications/national-energy-category-strategy-local-government-2022-energising-procurement

24. Wave were selected via a mini competition carried out by LASER for the Council in 2020, where they ranked highest overall. Wave's response showed a good level of customer service and they scored well in the added value section.

25. The options available to the Council are to:

    a. Extend the current contract for two years

    b. Sign a separate access agreement with LASER to:

        i. Run a mini competition, to assess all suppliers on LASER's framework to respond with quality service offerings and pricing to meet the Council's requirements. The process for a mini competition from initial draft of the tender pack to awarding the winning retailer will take around 3 months.

        ii. Direct award another supplier under LASER's LOT 1 route based upon the rationale of either Overall Top Scorer, Price, Quality of Services, Added Value Services and Social Value

26. It is recommended that the Council extend the current water contract for a further two years (total value ca.£416,000). This is because:

    a. The contract was only recently agreed via a mini-competition (2020), where Wave ranked highest overall.

    b. The current retail uplift applied by WAVE and LASER's fees would continue with the 2-year extension. If the Council did not extend and decided to run a mini competition or direct award to an alternative supplier, based on current market conditions this uplift would increase by ca.3% (inclusive of LASER fees), likely increasing overall costs to the Council.

    c. Re-procurement is a time and resource intensive process, for little likely benefit (due to the current market conditions).

Financial implications

27. Energy is a volatile market and energy prices have risen significantly in the last 18 months. Preferential rates are most likely to be secured by purchasing as far as possible in advance as part of an aggregated volume.

28. In the last financial year (22 – 23) the Council spent £2.8m on electricity, gas and water. Taking into account increases to unit rates in October 2022, it is estimated that this will increase to £3.7m in this financial year (23 – 24). Expenditure (for 23-24) is estimated to be split approximately as follows:

- Gas: £1.1m
- Electricity: £2.4m
- Water: £0.2m

29. If the Council decides to run a mini competition or direct award to an alternative water services supplier, based on current market conditions the retail uplift would increase by ca.3% (ca.10k) per annum.

Legal issues

30. Under Parts 4.5(10) 4.5 (11) and 19 (22) of the Constitution Cabinet is empowered to take the decisions set out in the recommendation. Under section 9E (3) (c) of the Local Government Act 2000 Cabinet is empowered to delegate its functions to officers.

31. The procurement of any contracts to be awarded under the officer delegations will need to be comply with the Council's Constitution and the Public Contract Regulations 2015. Following a procurement any decision to award a contract of £1 million or greater will be Key Decision and will need to comply with the procedure for taking Key Decision set out in the Council's Constitution.

32. The Council's current contract for water does provide for the recommended extension period and to agree the proposed extension is lawful.

Level of risk

33. A risk register is attached in Appendix 2. The main risk is that Cabinet decides not to delegate powers (as set out above) to the Head of Corporate Strategy, which would delay the Council entering into contracts by a month.

Equalities impact

34. There are no equalities impact issues with this decision.

Carbon and Environmental Considerations

35. The Council's Carbon Management Plan sets out how the Council will achieve net Zero by 2030 for scope 1 and scope 2 greenhouse gas emissions as well as scope 3 emissions associated with the transmission and distribution of standard grid electricity, business travel and water use.

36. The Council's procurement of electricity, gas and water will have minimal positive or negative impact on this target. In December 2021, Cabinet took a decision – advised by the Council's Scientific Advisor – to reverse the previous Council commitment to purchase "green" gas. The rationale was to prioritise expenditure according to the following hierarchy:

    a. 'Additional' emissions reduction by the Council from its own activities

    b. Insetting (i.e. support for emissions reduction by others in Oxford).

    c. Offsetting actions outside the City, including the purchase of green gas credits

37. As a result, a Net Zero Transition Fund was established, which receives funds annually that would otherwise be sent on offsetting, green gas (RGGOs) and green electricity (REGOs). These funds are used to support additional carbon reduction projects in the City.

38. The Council's approach to offsetting and renewable energy purchase is in line with best practice advice and supports the Council's 2040 and 2030 net zero goals.

Section 1 - Using the Framework

1 Introduction

Kent County Council LASER has renewed their Framework agreement for the supply of water and sewerage and additional services. The Framework is available for use by local authorities and other public sector bodies nationally.

The Procurement Services Group of Kent County Council Commercial Services was commissioned to support LASER in designing and procuring the Framework.

The Framework is designed to provide a compliant procurement route to arranging water supply, sewerage and dealing with effluent as well as providing opportunities to investigate potential innovative approach to capital investment delivering efficiencies and savings.

An open tender process was conducted in accordance with the Public Contract Regulations 2015; inviting bids in relation to supply and additional services. The tender process assessed Quality of Service/Account Management, Added Value, Social Value and Pricing across 3 lots:

LOT 1 - Supply of Water and Sewerage via Mini Tender or Direct Award

LOT 2 - Supply of Water and Sewerage via Direct Award for Small Portfolios

LOT 3 - Supply of Water and Sewerage Innovation via Competitive Dialogue

The framework commenced on 1st February 2022 and is in place for a period of 4 years, with the option to extend for a further 2 years. Contracts put in place under the framework may extend beyond the end date of the Framework.

Contract Notice (2021/S 000-023169) and Award Notice (2022/S 000-008249) can be obtained by contacting psg@commercialservices.org.uk or by calling 01622 236767, quoting reference Y22013.

The formally awarded suppliers for each of the framework lots can be found in Section 2 of this document.

2 Establishing the Framework

2.1.General

The Framework Agreement provides compliant access to water and sewerage supplies in the newly opened market. There are three Lots to provide a range of options to customers wishing to access the water market.

LOT 1 provides customers with the ability to choose from a selection of suppliers who have met the specification of the Framework and are prepared to participate in further mini competitions. This allows the mini tender process to consider individual requirements of the Participating Authority by adjusting mini tender weightings. In addition, Direct Award is possible to the top scoring supplier, designated Primary Supplier, in each of the following categories or circumstances:

Top Overall Score

Top Quality of Service

Top Added Value

Top Social Value

Top Price

Continuity of Supply

There is a process to review Primary Supplier position during the framework term.

LOT 2 is designed for smaller water consumers (for example schools or District Councils) with simple water supply requirements. It provides a Primary Supplier selected by overall scores at framework tender. Supply contracts will be called off by Direct Award to the Primary Supplier.

LOT 3 provides customers with a flexible approach to arranging future water and sewerage supplies, with extra scope to work in partnership with the supplier towards innovative projects that may deliver efficiencies. This is suitable for a Participating Authority who has the ability to specify their requirements and also accommodate innovative suggestions from suppliers.

In establishing this framework, a standard set of terms, conditions and requirements was included (see Section 3) and these will apply to any work undertaken under this framework agreement. Successful suppliers have been advised that these conditions will be the default conditions accompanied by their conditions of contract for any additional services or innovative projects beyond supply of water and sewerage.

2.2 Evaluation of Tender Submissions

An evaluation was conducted in relation to each Lot, resulting in the Award to suppliers covering each Lot. All suppliers were evaluated against pass / fail evaluations, such as financial checks. The highest scoring organisations (as a result of the most economically advantageous tender) were awarded a position on the framework within the relevant category, and primary suppliers were identified for Direct Award.

Tenders submitted in response to this market engagement were evaluated by officers from Kent County Council LASER against a set of pre-determined evaluation criteria, as detailed below:

Quality of Service

Added Value

Social Value

Pricing

The highest scoring supplier in each category was awarded Primary Supplier status for the purposes of Direct Award.

3 Using the Framework

3.1 Benefits of Using the Framework

Using the framework can bring a number of benefits to clients:

1. The established Framework Y22013 is fully compliant with the Public Contracts Regulations 2015.
2. Terms and conditions are established to underpin the framework and are shown in Section 3.
3. The Framework will be managed and monitored by Kent County Council LASER. In managing this contract on behalf of our clients, your views and requirements will be taken into account when reviewing and developing the contract.
4. The Framework is designed to offer maximum flexibility and a choice of options to suit a variety of Participating Authorities.

3.2 Using the Framework

There are two primary routes for accessing the Framework:

- LASER Tender Analysis
- DIY Tender Analysis

LASER Tender Analysis

Under the LASER Tender Analysis route, Kent County Council LASER will act as the Contracting Authority assisting with Lots 1 and 3. LASER will manage the contract, supporting the end user to get maximum value from the Framework and deliver the best possible outcomes.

Responsibility of LASER:-

Lot 1

- To understand the customer's needs;
- Assist with compilation of schedules
- Assist with finalising requirement
- Submit mini tender to framework suppliers and manage returns
- Analyse tender returns, calculate scores and costs.
- Provide a Ranking and Recommendation Report to the Participating Authority
- Ensure Supply Contract is issued to Participating Authority.
- Schedule renewal

Lot 2

- Assist with compilation of schedules
- Submit portfolio data and service requirements to Primary Supplier for Pricing
- Update customer with pricing received
- Ensure Supply Contract is issued to Participating Authority
- Schedule renewal

Lot 3

- Assist with compilation of schedules
- Assist with finalising requirement
- Facilitate beginning of competitive dialogue
- Provide additional support on a consultancy basis if required.
- Monitor progress of negotiations

- Monitor innovations such as return on investment or efficiencies
- Schedule renewal

While the steps above are typical of the LASER customer support approach there is flexibility to create bespoke arrangements for differing levels of support from LASER dependent on customer requirements.

Contracts under this framework will be made between the Participating Authority and the Supplier, NOT Kent County Council LASER. The participating Authority shall be solely responsible for monitoring the supply under the individual contract.

Kent County Council LASER take no responsibility or liability for contracts placed under this Framework Agreement.

DIY Tender Analysis

Customers who wish to manage their own mini tender may choose to access the Framework directly. Under this option the customer is responsible for handling all stages of the procedure.

In order to access the agreement directly and prior to placing orders with the suppliers the customer must request an Access Agreement (Appendix 1).

Suppliers to the framework will be notified that access has been granted to the relevant Participating Authority and an Access reference number will be allocated by the Contracting Authority.

After access has been granted the organisation may access the framework to procure from Lot 1, Lot 2 or Lot 3.

Contracts under this framework will be made between the Participating Authority and the Supplier, NOT Kent County Council LASER. The participating Authority shall be solely responsible for monitoring the supply under the individual contract.

Kent County Council LASER take no responsibility or liability for contracts placed under this Framework Agreement.

3.3 Pricing Information

Lot 1 - Prices will be agreed via mini tender or Direct Award request to Primary Supplier.

Lot 2 – Prices will be agreed via Direct Award request to Primary Supplier

Lot 2 - Prices will be agreed via competitive dialogue

3.4 LASER Recovery

LASER's recovery for placing and operating the framework will be transparent and made available to the Participating Authority prior to commencing Mini Tender or competitive Dialogue. The recovery will be paid by the supplier to LASER.

4 Monitoring the Framework Agreement

LASER will monitor overall performance of suppliers under this framework and consider invoking Poor Performance Remedies if appropriate.

5 Additional Information

Kent County Council Commercial Services hold all the tenders submitted by suppliers. If there is a requirement to view any additional information provided by the Supplier during the tender process or subsequent updates e.g.: Policies, Insurance certificates, please contact the Procurement Services Group as follows:

E-mail: psg@commercialservices.org.uk

Tel: 01622 236767

Please quote the framework reference number on all enquiries:

Y22013

Section 2 - Awarded Suppliers for Each Lot

Lot 1 – Supply of Water and Sewerage (Mini Competition)

- Advanced Demand Side Management

  Direct Award Primary Supplier in category of Price

- Anglian Water Business (National) Limited

  Direct Award Primary Supplier in categories of Quality of Services and Added Value

- Business Stream

  Direct Award Primary Supplier in category of Social Value and Overall Top Scorer

- Water Plus Limited

Lot 3 – Supply of Water and Sewerage with Innovation (Competitive Dialogue)

- Advanced Demand Side Management
- Anglian Water Business (National) Limited

  Direct Award Primary Supplier in category of Quality of Service

- Business Stream

  Direct Award Primary Supplier in categories of Added Value and Social Value

- Water Plus Limited

  Direct Award Primary Supplier in category of Price

Section 3 – Conditions of Agreement

Below are the Terms and Conditions of the Framework Agreement to which suppliers listed in Section 2 are party.

Call off Terms and Conditions

This document sets out the terms and conditions of supply, applicable to all Call off Contracts under LASER Framework reference Y22013. It sets the obligations of the Retailer and Participating Authority and forms part of the overall Call Off Contract and Order. Any variation to the Call Off Contract and Order will be carried out in line with Clause 19 Variation Procedures and will be copied to the Contracting Authority. The other parts of the overall Agreement are:-

- **Call off Contract and Order**
- **Terms and Conditions of Supply**
- **Framework Agreement**

These Terms are agreed between:

(1) **the Participating Authority**, and

(2) The water Retailer

1. INTERPRETATION AND DEFINITIONS

1.1 Unless the context otherwise requires, the following words and expressions shall have the following meanings in these Terms and Conditions only and not in relation to any document that these Terms and Conditions may sit within or alongside:

Additional Charges	Services provided by the Retailer beyond the scope of the Participating Authority's Specification of this contract
Agreement	Means Framework Agreement
Authorised Representatives	means officers nominated by the Parties to manage and supervise the provision of the Goods, Works and/or Services.
Award Criteria	means the award criteria to be applied to tenders for Services to be procured under this Framework as set out in Clause 6.
Business Day	the period of 08:00 to 18:00 hours on any day other than a Saturday or Sunday, or Christmas Day, Good Friday or any day which is a bank holiday in England and Wales under the Banking and Financial Dealings Act 1971;
Call-off Contract	means the contract which sets out the Terms and Conditions of Supply these Terms, any other terms and conditions stated and obligations through which Goods, Works and/or Service are provided by the Supplier to the Participating Authority and is Ordered following a mini-competition or Direct Award under this Framework.
Call-off Contract and Order	Means the Call-off Contract
Call-off Terms and Conditions	means the Terms and Conditions of Supply and any special terms and conditions noted in the Call-off Order and Contract.
Chargeable Additional Services	Services provided by the Retailer beyond the scope of the Participating Authority's Specification of this contract.
Contracting Authority	means Kent County Council acting through Commercial Services Kent Ltd (Commercial Services AKA LASER).
CMOS	means the Central Market Operating System
Commercially Sensitive Information	means any Confidential Information comprised of information:- (a) which is provided in writing by the Supplier to the Contracting Authority in confidence and designated as Commercially Sensitive Information; and/or (b) that constitutes a trade secret.

Controller	means a person, public authority, agency or other body which, alone or jointly with others, determines the purposes and means of the processing of personal data.
Customer	Means the Participating Authority
Customer Detail Sheet	*means the document relating to the order form containing customer detail and specification requirements*
Data Loss Event	*means a breach in security leading to the accidental or unlawful destruction, loss, alteration, unauthorised disclosure of, or access to, personal or commercial data. This includes breaches that are the result of both accidental and deliberate causes.*
Data Protection Impact Assessment	*otherwise known as a "DPIA", this is a process that organisations use to identify data protection risks and put procedures in place to reduce them. A DPIA will; (note this list is not exhaustive) include information about the nature, scope, context and purposes of the processing; assess how necessary the processing is and what compliance measures are in place to keep data safe; identify and assess risks to individuals; identify measures that can be put in place to reduce those risks.*
Data Protection Legislation	means all applicable laws and regulations relating to processing of personal data and privacy, including Data Protection Act 2018
Data Subject	means the identified or identifiable living individual to whom personal data relates.
Data Subject Access Request	enables individuals to find out what personal data is held about them, why it is held and who it is disclosed to
Default Tariff	the maximum tariff that can be applied by the Retailer for the provision of the Services as set out in documentation issued by a Regulator from time to time;
FOIA	means the Freedom of Information Act 2000 and any subordinate legislation made under such Act from time to time together with
Framework	Refers to Framework Y22013 or Framework Agreement

GDPR	means the Regulation (EU) 2016/679 (General Data Protection Regulation) and any subordinate legislation made under such regulation from time to time together with any guidance and/or codes of practice issued by the Information Commissioner or relevant Government department in relation to such legislation.
Goods/ Works/Services	shall mean the goods/services/works to be provided by the Supplier in accordance with the terms of the individual Order/Individual Call-off Contract under this Framework.
Information	has the meaning given under Section 84 of the Freedom of Information Act 2000.
Information Commissioner's Office	means the UK's independent authority set up to uphold information rights in the public interest, promoting openness.
Insolvency Event	means: (a) a party is unable or is deemed unable or admits inability to pay its debts as they fall due; or (b) a party enters into a composition, compromise, assignment or arrangement with any of its creditors, being a substantial creditor, (whether by way of a voluntary arrangement, scheme of arrangement, deed of compromise or otherwise); or (c) a moratorium is sought or declared in respect of a party or any indebtedness of a party or an application is made to court for protection from the creditors of a party; or (d) an administrator, liquidator (compulsory or voluntary other than a liquidator appointed in a solvent winding up for the purposes of amalgamation or reconstruction), provisional liquidator, receiver, administrative receiver, receiver and manager, voluntary arrangement supervisor, compulsory manager or other similar officer is appointed to or in respect of a party or the whole or a substantial part of the property, assets or undertaking of a party; or

	(e) a petition or application is presented or documents are filed or faxed with a court for the appointment of an administrator, liquidator or receiver to a party provided that if a party is contesting the winding-up petition in good faith and with due diligence the notice shall not be treated as having being given until a period of twenty days has expired since the presentation of the petition or application without it having been either discharged or struck out; or (f) a meeting is convened, a resolution is passed or notice is given of the intention to appoint an administrator, liquidator or receiver (including an administrative receiver and a receiver and manager) to a party; or (g) an order is made for the winding-up, administration or dissolution of a party; or (h) possession is taken of the whole or any substantial part of the property, assets or undertaking of a party; or (i) any other analogous step, process or procedure is taken in relation to a party in any jurisdiction, or a party becomes subject to the laws relating to insolvency, bankruptcy or liquidation in any jurisdiction.
Margin	means the percentage margin referred to in Part 3 (Charges);
Market Arrangements Code	means the code of that name designated by the Ofwat ;
Ofwat	means the Water Services Regulation Authority
Operational Code	means the code named under the Water Services (Codes and Services) Directions 2007 (or any other direction which amends, replaces or adds to, or is made for the same subject matter as that direction), as in force from time to time;
Order	means an order for Goods, Works and/or Services served on the Retailer in accordance with the Ordering Procedures
Order Form	means a document setting out details of an Order to lead to Call-off Contract

Ordering Procedures	means the ordering and award procedures specified in Framework Schedule 6.
Participating Authority	means all public sector bodies permitted under the Public Contracts Regulations 2015 who access and use this Framework (including the Contracting Authority) via Contracting Authority and who shall take full responsibility for their own individual contracting processes. Those organisations who may wish to access this Framework Agreement include local authorities, the Police Service, the Fire Service, the NHS & NHS Trusts, port authorities, third sector organisations, academic centres (including Academies), publicly funded organisations and publicly owned private companies, operating within the geographic boundaries of the United Kingdom, Channel Islands and Northern Ireland (together referred to in this tender document as Participating Authorities or End Users)
Party or Parties	refer to the Retailer and/or the Participating Authority
Personal Data	means any information relating to a person (a 'data subject') who can be identified, directly or indirectly, in particular by reference to an identifier such as a name, an identification number, location data, an online identifier or to one or more factors specific to the physical, physiological, genetic, mental, economic, cultural or social identity of that person.
Processor	means a person, public authority, agency or other body which processes personal data on behalf of the controller.
Property	(a) the premises which are (or are to be) connected to the public water supply system; and (b) in terms of providing sewerage or sewage disposal, means the premises which are (or are to be) connected to the sewerage system, both as set out in the Property Schedule of the Call off Contract Order and as may be amended or supplemented by agreement between the Retailer and the Customer in writing from time to time (and "Properties" shall be construed accordingly);
Property Schedule	means the list of Properties set out in the Appendix to the Call off Order;
Protective Measures	means appropriate technical and organisational measures to ensure the security of any data processing.
Regulator	means Ofwat or other regulatory body

Request for Information	means a request for information or an apparent request under the FOIA or the Environmental Information Regulations.
Retailer	means the appointed retailer of water and wastewater services in respect of the Properties under this Call off Contract and Order.
Retailer's Charges	means the Retailer's Charges for Services will be as set out in the Retailer's mini tender offer.
Services	means the retail services for the supply of water and sewerage services and meter services to, or the removal of any associated waste including surface water and trade from any Properties that the Participating Authority own, lease or otherwise occupy and / or the provision of any services in respect of new connections to any Property;
Staff	means all persons employed by the Retailer together with the Retailer's servants, agents, contractors and sub-contractors used in the performance of its obligations under these terms and any Call-off Contracts
Sub processor	means when a processor sub-contracts all or some of the processing to another processor, that processor is referred to as a sub-processor.
Term	means the term of the Call off Contract and Order
Terms and Conditions	means these terms and conditions of supply;
Transfer Date	means the date on which the relevant supply points for the Properties are effectively transferred to the Retailer on CMOS (for properties in England).
Unplanned Event	means any of the following: (a) breakdown, blockage, defect, fault or failure of plant equipment, apparatus, pipes, structures, or facilities forming part of a Wholesale's network; (b) shortage of, or limitation on the use of, water arising from weather or environmental conditions; (c) deficiency in the quality of water available for supply; (d) a water quality incident; or (e) any pollution from sewage, any unplanned discharge or flooding; or any other emergency;
Variation Procedure	means the procedure set out to present and progress changes.

Wholesale	means any wholesale supplier of water and wastewater services in respect of the Properties.
Wholesale Chargeable Services	means one off charges levied by the wholesaler to the retailer related to the provision of water services and the metering of this.
Wholesale Charges	means the amount(s) charged by a Wholesaler to The Retailer
Wholesale Contract	means the contract between the Retailer and a Wholesaler;
Wholesale Retail Code	means the code of that name issued by the Authority under sections 66DA and 117F of the Water Industry Act 1991;
Working Days	means any day other than a Saturday, Sunday or public holiday in England and Wales.

2 Services

2.1 The Retailer shall provide the Services to the Participating Authority from the Transfer Date for the duration of the Term in accordance with the Call off Contract and Order.

2.2 The Retailer shall provide the Services with reasonable skill and care and in accordance with applicable law at all times.

2.3 The Retailer has the right to make changes to the Services subject to the provision of reasonable written notice to the Participating Authority which are necessary to comply with

2.3.1 any laws;

2.3.2 the Market Arrangements Code and the Wholesale Retail Code;

2.3.3 safety regulations and the directions of a Regulator.

2.4 The supply of Services may only be interrupted or suspended for the purposes of the relevant Wholesaler carrying out necessary maintenance, repair, replacement and inspection works. Where reasonably practicable the Retailer or Wholesaler will notify the Participating Authority in advance of such works.

2.5 The supply of Services may only be interrupted or suspended without notice if there is an Unplanned Event.

3 Charges

3.1 The Retailer's Charges for Services will be as set out in the Customer Detail Sheet, the Retailer's mini tender offer

3.2 Where the Retailer's Charges are based on the volume of water used:

3.2.1 if AMR services are provided, this will be used to calculate the volume of water used;

3.2.2 if AMR services are not provided:

3.2.2.1 the Retailer will read the water meter at the Participating Authority's site to calculate the volume of water used, or the Retailer will accept meter reads provided to them by the Participating Authority;

3.2.2.2 The Retailer will take at least one actual reading in each year of the Contract or more if required by either the Participating Authority's tender specification, or Relevant Laws;

3.2.2.3 If the Retailer does not obtain an actual meter reading, the retailer will be entitled to estimate the volume of water used and an estimated meter reading may be used as the basis for calculating charges;

3.2.3 where estimated meter readings are used to calculate charges, an adjustment should be made to charges when an actual meter reading is next used to calculate the charges;

3.2.4 where accurate meter readings are not available (e.g. due to a fault with the meter), the Retailer may calculate charges by reference to average daily consumption recorded at the relevant Site during periods that they reasonably believe to best reflect consumption over the affected period and during which accurate meter readings are available

3.3 Where the Retailer's Charges are based on the rateable value of a Site, the Participating Authority will inform them of any change in the assessment of the rateable value of the Site and the date the change came into effect. The Retailer should adjust charges to take into account any change of this assessment from the date the change came into effect.

3.4 Regional Wholesalers may from time to time impose one off charges or claim money from the Retailer for Wholesale Chargeable Services. For example, a Regional Wholesaler may charge if the Participating Authority requests a change of meter or it may claim money from Retailers if damage is caused to their meter. The Participating Authority agrees to reimburse the Retailer for any charges or claims that a Regional Wholesaler may rightfully impose in relation to the Services provided to the Sites. The Retailer may add the agreed retailer uplift to these pass through charges to cover their administrative costs.

3.5 The Participating Authority may wish to procure Chargeable Additional Services from the Retailer. These services are outside of the Participating Authority's specification of this contract, and the charging structure will thus be settled by a separate agreement.

3.6 The Retailer is required to revise erroneous historic invoices up to either the maximum of stipulated in the Limitation Act of 1980 or the maximum permitted by the Water Regulator, whichever is shorter. This should be in the form of crediting erroneous invoices before invoicing on a new invoice, with new unique reference numbers.

4 Changes to Pricing

4.1 The Retailer shall be permitted to vary Wholesale Charges in line with the market changes agreed by the Regulator having first served the Participating Authority with prior written notice of no less than 28 days of its intention to do so.

4.2 Where any Wholesale Charges which relate to a Property are varied as a consequence of any price review initiated or required by a Regulator, the Retail Charge should vary only in line with the fixed percentage of Wholesale charges set in the completed Customer Detail Sheet

4.3 Without prejudice to clauses 4.1 to 4.2, the Retailer may only alter the Charges to the minimum extent necessary to cover the increased costs if there shall have occurred a material adverse regulatory or HM Government mandated change which has resulted from circumstances outside the Retailer's control, but excluding any increases arising from any negligence or failure on their part, including but not limited to fines or penalties or remedial action. The Retailer will provide the Participating Authority with no less than 30 days' written notice of their intention to do so.

5 Payment

5.1 If the Participating Authority query part of an invoice the Participating Authority is still liable to pay the Retailer the undisputed amount. Save in respect of any amounts which are disputed, all other amounts due under the Call-off Contract and Order from the Participating Authority to the Retailer shall be paid in full without any set-off, counterclaim, deduction or withholding (other than any deduction or withholding of tax as required by law).

5.2 Without prejudice to clause 5.1, any payments that the Participating Authority make to the Retailer will be used to pay the oldest outstanding undisputed Charges first (if any).

5.3 Subject always to the provisions of clause 5.1, if the Participating Authority do not pay an invoice on time, the Retailer may contact the Participating Authority to inform the Participating Authority of the Participating Authority's payment default and ask the Participating Authority to make prompt payment of outstanding sums.

5.4 If the Participating Authority do not pay an invoice on time; the Retailer may elect to charge the Participating Authority interest at the rate of up to 8% per annum above the Bank of England's base interest rate, from the due date for such undisputed sum until the date of payment of such sum or otherwise in accordance with the Late Payment of Commercial Debts (Interest) Act 1998.

6 Meter Readings

6.1 If the Participating Authority think that the meter in any Property is not working correctly, the Participating Authority may ask the Retailer to arrange a test with the Wholesaler. If such test shows that the meter is working incorrectly (that is operating outside the prescribed limited of error) then the Retailer will request the Wholesaler adjust the Participating Authority's Charges in respect of any metered elements based on consumption in a comparable period where metering was believed to be accurate. Weekly reporting to the Participating Authority on progress between the Retailer and Wholesaler is expected to ensure contact to resolve is maintained.

7 Warranty

7.1 The Participating Authority warrants that they are (a) the owner of, (b) the occupier of or (c) a third party, who is otherwise entitled to be invoiced in respect of the Services at, each Property. The Participating Authority warrants they have the right and authority to enter into this Call Off Contract and Order in respect of the water utility bills, to the exclusion of all others.

7.2 In addition to Clause 7 of the Framework Terms and Conditions, The Retailer warrants it will supply the Services in a reliable and professional manner, will engage a sufficient number of competent personnel with appropriate skills, qualifications and experience and has, and will at all times have, the ability and capacity to meet such requirements to perform the Services in compliance with all applicable law and regulations.

8 Liability

8.1 Nothing in the Call Off Contract and Order shall limit or exclude a party's liability for:

8.1.1 death or personal injury caused by its negligence, or the negligence of its employees, agents or subcontractors;

8.1.2 fraud or fraudulent misrepresentation; or

8.1.3 any other liability which cannot be limited or excluded by applicable law.

8.2 Subject to clause 8.1 neither party shall have any liability to the other whether in contract tort, negligence, breach of statutory duty, or otherwise:

8.2.1 for any loss of revenue, loss of profit, loss of contract, business interruption or for any indirect or consequential loss arising under or in connection with the provision of Services to the Participating Authority, howsoever it is caused, even if it could have reasonably been foreseen, and whether it is caused by negligence or breach of contract or not.

8.3 The Retailer's total liability to the Participating Authority howsoever arising under or in connection with the Call Off Contract and Order shall be limited to the lower of (i) total amount of Charges paid by the Participating Authority to the Retailer in the previous 12 month period and (ii) the sum of £5,000,000.

8.4 Subject to clause 8.3 if any act or failure to act by a Wholesaler other than as a result of The Retailer's act or failure to act causes any loss or damage to the Participating Authority, The Retailer's liability to the Participating Authority (if any) is limited to the amount (if any) that the Retailer may claim from that Wholesaler.

8.5 This clause 8 continues to apply following termination of the Call off Contract and Order, and Framework Agreement.

9 Access to The Participating Authority's Premises

9.1 The Retailer (or any Wholesaler) may require access to the Property in relation to the provision of the Services or in relation to the metering equipment. The Retailer will provide the Participating Authority with reasonable notice when such access is required, with the exception of meter reading at non-sensitive sites when notice would not typically be provided. Sensitive sites, including but not limited to schools providing special needs learning and blue light properties such as police or ambulance stations, are likely to allow entrance by appointment only and this requirement must be accommodated for all access requests at these sites, including meter reading. The Participating Authority agree to take reasonable steps to allow the Retailer (or any Wholesaler) with such access required.

9.2 The Participating Authority shall allow a Regulator (or any other network operator) access to the Participating Authority's premises and the Participating Authority acknowledge that in an emergency the Participating Authority may be required to stop using water or disposing of waste.

10 Moving or Leaving

10.1 The Participating Authority may end this Call Off Contract and Order with the Retailer for individual supply points if the Participating Authority are leaving a property, by informing the Retailer in writing at least 14 days before the Participating Authority move. If the Participating Authority do not do so, this Call Off Contract and Order will continue in force for the property, and the Participating Authority will continue to be liable for the Charges until the date falling 14 days after either (i) the Participating Authority inform the Retailer in writing that the Participating Authority have left the property; or (ii) the Retailer become aware that another person has taken a supply at that property, whichever is earlier or when this Call Off Contract and Order terminates.

10.2 If reasonably requested and subject to clause 10.1 The Participating Authority should attempt to give the Retailer an accurate final meter reading, which the

Retailer will check. If the Participating Authority do not provide an accurate final reading the Participating Authority will be responsible for payment of Charges relating to any difference between the meter reading upon which the Retailer based the final invoice or estimated invoice and the next meter reading.

11 Data Protection (GDPR)

11.1 The Parties acknowledge that for the purposes of the Data Protection Legislation, the Customer and the Retailer are independent Controllers, whereby as Controllers they shall be responsible for complying with the data protection principles in the UK and take appropriate technical and organisation measures to ensure processing is carried out in line with UK Data Protection Legislation.

11.2 The Retailer shall notify the Customer without undue delay if it considers that any of Customer's instructions infringe the Data Protection Legislation.

11.3 The Retailer shall provide all reasonable assistance to the Customer in the preparation of any Data Protection Impact Assessment prior to commencing any processing. Such assistance may, at the discretion of the Customer include:

11.3.1 a systematic description of the envisaged processing operations and the purpose of the processing;

11.3.2 an assessment of the necessity and proportionality of the processing operations in relation to the Services;

11.3.3 an assessment of the risks to the rights and freedoms of Data Subjects; and

11.3.4 the measures envisaged to address the risks, including safeguards, security measures and mechanisms to ensure the protection of Personal Data.

11.4 The Retailer shall, in relation to any Personal Data processed in connection with its obligations under the Call off Contract and Order:

11.4.1 process that Personal Data only in accordance with such agreement as stated in Clause 11,1, unless the Retailer is required to do otherwise by Law. If it is so required the Retailer shall promptly notify the Customer before processing the Personal Data unless prohibited by Law;

11.4.2 ensure that it has in place Protective Measures, which have been reviewed and approved by the Customer as appropriate to protect against a Data Loss Event having taken account of the:

a) nature of the data to be protected;

b) harm that might result from a Data Loss Event;

c) state of technological development; and

d) cost of implementing any measures;

11.4.3 ensure that:

a) its Staff do not process Personal Data except in accordance with the Call of Contract and Order;

b) it takes all reasonable steps to ensure the reliability and integrity of any Staff who have access to the Personal Data and ensure that they:

I. are aware of and comply with the Retailer's duties under this Clause 11;

II. are subject to appropriate confidentiality undertakings with the Retailer or any Sub-Processor;

III. are informed of the confidential nature of the Personal Data and do not publish, disclose or divulge any of the Personal Data to any third party unless directed in writing to do so by the Customer or as otherwise permitted by the Call Off Contract and Order; and

IV. have undergone adequate training in the use, care, protection and handling of Personal Data; and

11.4.4 not transfer Personal Data outside of the EU unless the prior written consent of the Customer has been obtained and the following conditions are fulfilled:

a) the Customer or the Retailer has provided appropriate safeguards in relation to the transfer (whether in accordance with GDPR Article 46 or Article 37) as determined by the Customer;

b) the Data Subject has enforceable rights and effective legal remedies;

c) the Retailer complies with its obligations under the Data Protection Legislation by providing an adequate level of protection to any Personal Data that is transferred (or, if it is not so bound, uses its best endeavours to assist the Customer in meeting its obligations); and

d) the Retailer complies with any reasonable instructions notified to it in advance by the Customer with respect to the processing of the Personal Data;

11.4.5 at the written direction of the Customer delete or return Personal Data (and any copies of it) to the Customer on termination of the Call Off Contract and Order unless the Retailer is required by Law to retain the Personal Data.

11.5 Subject to Clause 11.4, the Retailer shall notify the Customer without undue delay if it:

11.5.1 receives a Data Subject Access Request (or purported Data Subject Access Request);

11.5.2 receives a request to rectify, block or erase any Personal Data;

11.5.3 receives any other request, complaint or communication relating to any Party's obligations under the Data Protection Legislation;

11.5.4 receives any communication from the Information Commissioner or any other Regulator in connection with Personal Data processed under the Call Off Contract and Order;

11.5.5 receives a request from any third party for disclosure of Personal Data where compliance with such request is required or purported to be required by Law; or

11.5.6 becomes aware of a Data Loss Event.

11.6 The Retailer's obligation to notify under Clause 11.5 shall include the provision of further information to the Customer in phases, as details become available.

11.7 Taking into account the nature of the processing, the Retailer shall provide the Customer with full assistance in relation to any Party's obligations under Data Protection Legislation and any complaint, communication or request made under Clause11.5 (and insofar as possible within the timescales reasonably required by the Customer) including by promptly providing:

11.7.1 the Customer with full details and copies of the complaint, communication or request;

11.7.2 such assistance as is reasonably requested by the Customer to enable the Customer to comply with a Data Subject Access Request within the relevant timescales set out in the Data Protection Legislation;

11.7.3 the Customer, at its request, with any Personal Data it holds in relation to a Data Subject;

11.7.4 assistance as requested by the Customer following any Data Loss Event;

11.7.5 assistance as requested by the Customer with respect to any request from the Information Commissioner's Office, or any consultation by the Customer with the Information Commissioner's Office.

11.8 The Retailer shall maintain complete and accurate records and information to demonstrate its compliance with this Clause 11. This requirement does not apply where the Retailer employs fewer than 250 staff, unless:

11.8.1 the Customer determines that the processing is not occasional;

11.8.2 the Customer determines the processing includes special categories of data as referred to in Article 9(1) of the GDPR or Personal Data relating to criminal convictions and offences referred to in Article 10 of the GDPR; and

11.8.3 the Customer determines that the processing is likely to result in a risk to the rights and freedoms of Data Subjects.

11.9 The Retailer shall allow for audits of its Data Processing activity by the Customer or the Customer's designated auditor.

11.10 The Retailer shall designate a data protection officer if required by the Data Protection Legislation.

11.11 Before allowing any Sub-Processor to process any Personal Data related to the Call Off Contract and Order, the Retailer must:

11.11.1 notify the Customer in writing of the intended Sub-Processor and processing;

11.11.2 obtain the written consent of the Customer;

11.11.3 enter into a written agreement with the Sub-Processor which give effect to the terms set out in this Clause 11 such that they apply to the Sub-Processor; and

11.11.4 provide the Customer with such information regarding the Sub-Processor as the Customer may reasonably require.

11.12 The Retailer shall remain fully liable for all acts or omissions of any Sub-Processor.

11.13 The Participating Authority may, at any time on not less than thirty (30) Working Days' notice, revise this Clause 11 by replacing it with any applicable Controller to Processor standard clauses or similar terms forming part of an applicable certification scheme (which shall apply when incorporated by attachment to this Call-off Contract and Order) or where there is a change in the Law necessitating such a change.

11.14 The Parties agree to take account of any guidance issued by the Information Commissioner's Office. The Customer may on not less than thirty (30) Working Days' notice to the Retailer amend this Call-off Contract and Order to ensure that it complies with any guidance issued by the Information Commissioner's Office.

12 FREEDOM OF INFORMATION

12.1 The Retailer acknowledges that the Participating Authority (where applicable) are subject to the requirements of the FOIA and the Environmental Information Regulations and shall assist and cooperate with the Participating Authority to enable the Participating Authority to comply with their Information disclosure obligations.

12.2 The Retailer shall and shall procure that its sub-contractors shall:

12.2.1 Transfer to the Participating Authority all Requests for Information that it receives as soon as practicable and in any event within two Working Days of receiving a Request for Information;

12.2.2 Provide the Participating Authority with a copy of all Information in its possession, or power in the form that the Participating Authority requires within five Working Days (or such other period as the Participating Authority may specify) of the Participating Authority request; and

12.2.3 Provide all necessary assistance, as reasonably requested by the Participating Authority, to enable the Participating Authority to respond to the Request for Information within the time for compliance set out in section 10 of the FOIA or regulation 5 of the Environmental Information Regulations.

12.3 The Participating Authority shall be responsible for determining in their absolute discretion and notwithstanding any other agreement whether the Commercially Sensitive Information and/or any other Information is exempt from disclosure in accordance with the provisions of the FOIA or the Environmental Information Regulations.

12.4 In no event shall the Retailer respond directly to a Request for Information unless expressly authorised to do so by the Participating Authority.

12.5 The Retailer acknowledges that (notwithstanding other provisions) the Participating Authority may, acting in accordance with the Secretary of State for Constitutional Affairs Code of Practice on the Discharge of the Functions of Public Authorities under Part 1 of the Freedom of Information Act 2000 ("the Code"), be obliged under the FOIA, or the Environmental Information Regulations to disclose information concerning the supplier or the Goods, Works and/or Services:

12.5.1 In certain circumstances without consulting the Retailer; or

12.5.2 Following consultation with the Retailer and having taken their views into account

13 Non-Discrimination and Modern Slavery

13.1 The Retailer shall not unlawfully discriminate within the meaning and scope of any law, enactment, order or regulation relating to discrimination (whether in race, gender, religion, disability, sexual orientation or otherwise).

13.2 The Retailer shall take all reasonable steps to secure the observance of Clause 13.1 by all servants employees or agents of the Retailer and all suppliers and sub-contractors employed in the execution of any Call Off Contract and Order.

13.3 The Retailer shall comply with the Modern Slavery Act 2015

13.4 The Retailer undertakes, warrants and represents that neither the Retailer nor any of its officers, employees, agents or subcontractors:

13.4.1 has committed an offence under the Modern Slavery Act 2015 (a "MSA Offence");

12.4.2 has been notified that it is subject to an investigation relating to an alleged MSA Offence or prosecution under the Modern Slavery Act 2015;

12.4.3 is aware of any circumstances within its supply chain that could give rise to an investigation relating to an alleged MSA Offence or prosecution under the Modern Slavery Act 2015;

13.5 The Retailer shall notify the Contracting Authority immediately in writing if it becomes aware or has reason to believe that it, or any of its officers, employees, agents or subcontractors have breached any requirement noted above.

14 Term and Termination

14.1 The Term of the Call Off Contract and Order is fixed. On expiry of the Term (or any agreed extension of this Call Off Contract and Order), if a new contract is **not** in place then supply will continue with the Retailer under a deemed contract, the preferential terms of this Call Off Contract and Order expire and the Retailer is entitled to charge on a Default Tariff.

14.2 On termination of the Call Off Contract and Order (however arising), the following clauses shall survive and continue in full force and effect:

14.2.1 Clause 4 (Charges);

14.2.2 Clause 10 (Liability);

14.2.3 Clause 13 (Data Protection);

14.2.4 clause 14 (Term and Termination); and

14.2.5 clause 16 (General).

14.3 If the Participating Authority is subject to an Insolvency Event, the Retailer may immediately end Call of Contract and Order with the Participating Authority without further liability by notice and from the day on which the Participating Authority underwent an Insolvency Event.

14.4 The contract may be terminated by either party if the other party is in material breach of their obligations under this Call Off Contract and Order contract.

14.5 The Retailer is permitted to terminate the contract 60 days following the issue of a final notice for payment of an outstanding charge, when payment is not received from the Participating Authority and the charge is not in query.

15 Notices

15.1 Any notice or communications between the parties about or pursuant to the Call Off Contract and Order shall be in writing and must be sent by pre-paid recorded first class post or by email :

15.1.1 to The Retailer's registered office or such other address as may be notified to the Participating Authority by the Retailer from time to time; or

15.1.2 (in the case of communications to the Participating Authority) to the address or email address set out in the Call off Contract .

15.2 If communications are delivered in accordance with this clause 15 they shall be deemed to have been delivered, if sent by first class post or recorded first class post, two days after posting and if delivered by email (in the case of the Retailer only), on the day of delivery.

16 General

16.1 By signing the Call Off Contract the Participating Authority warrant that the Participating Authority have capacity to enter into the Call Off Contract and Order and full power and authority, and has taken all action necessary (including obtaining all necessary consents or approvals) to enter into and perform the Call Off Contract and Order and any other deeds, agreements or documents to be entered into pursuant to the Call Off Contract and Order.

16.2 The Call Off Contract and Order and the documents referenced in the definition of Agreement constitutes the entire agreement between the Participating Authority and the Retailer and supersedes all previous agreements, understandings and arrangements between the Participating Authority and Retailer, whether in writing or oral, in respect of its subject matter. Each party acknowledges that it has not entered into this Call Off Contract and Order in reliance on, and shall have no remedies in respect of, any representation or warranty that is not expressly set

out in this Call Off Contract and Order except in the case of fraudulent misrepresentation. No party shall have any claim for innocent or negligent misrepresentation on the basis of any statement in this Call Off Contract and Order.

16.3 If any provision or part-provision of the Call Off Contract and Order is or becomes invalid, illegal or unenforceable, it shall be deemed modified to the minimum extent necessary to make it valid, legal and enforceable. If such modification is not possible, the relevant provision or part-provision shall be deemed deleted. Any modification to or deletion of a provision or part-provision under this clause shall not affect the validity and enforceability of the rest of the Call Off Contract and Order.

16.4 A person who is not a party to the Call Off Contract and Order shall not have any rights to enforce its terms.

16.5 Failure or delay by either party in enforcing or partially enforcing any provision of these conditions against the other shall not be construed as a waiver of any rights under these conditions.

16.6 Neither party shall assign or subcontract the Call Off Contract and Order to another person without written permission from the other party, not to be unreasonably refused.

16.7 In this Call Off Contract and Order:

16.7.1 references to any applicable laws (including to the Data Protection Laws and each of them) and to terms defined in such applicable laws shall be replaced with or incorporate (as the case may be) references to any applicable laws replacing, amending, extending, re-enacting or consolidating such applicable law (including the GDPR and any new Data Protection Laws from time to time) and the equivalent terms defined in such applicable laws, once in force and applicable; and

16.7.2 a reference to a law includes all subordinate legislation made under that law.

17 Jurisdiction

17.1 The Call Off Contract and Order and any dispute or claim arising out of or in connection with it or its subject matter or formation (including non-contractual disputes or claims) shall be governed by and construed in accordance with the laws of England and Wales and the parties submit to the exclusive jurisdiction of the English Courts.

18 DISCONNECTION

18.1. In the event that any of the scenarios in Clause 18.2 arise, the Retailer will contact the Participating Authority as soon as reasonably possible if it is intended that they intend to stop providing services and disconnect the water supply. An explanation will be provided of the reasons for doing so.

18.2. The retailer reserves the right to stop providing the Services and disconnect the Participating Authority's water supply at any, or all, of the Premises, if:

18.2.1 Requested because any, or all, of the premises no longer require any water and/or sewerage services (as appropriate).

18.2.2 The Participating Authority is in breach of any legislation, including the Water Industry Act 1991 and any regulations made pursuant to, or consents issued under, that legislation;

18.2.3 Payment of the Charges is not made following notice in line with 14.5;

18.2.4 Disconnection is required in order to perform works on the network; or

18.2.5 Disconnection is required in order to prevent contamination.

18.3. The Retailer shall not be entitled to disconnect your supply if your Premises are of a type set out at Schedule 4A of the Water Industry Act 1991, which includes for the avoidance of doubt, premises used for the provision of medical or dental services, hospitals, care homes, educational establishments and prisons.

19. Variation Procedure

19.1 INTRODUCTION

"Variation" shall mean any change (including revision of any dates or alterations or additions to the Call off Contract (or any part thereof) in the performance or delivery of the Goods, Works and/or Services (Original Call Off Contract and Orders) that does not arise consequent upon a failure by the Retailer properly to carry out the Goods, Works and/or Services in accordance with the original Call Off Contract and Order and shall be without prejudice to the generality of the Retailer's obligations under the original Call Off Contract and Order.

19.2 PROCEDURE FOR PROPOSING A VARIATION

Either party may in writing, request a Change setting out a detailed description of the Change sought ("Change Request Form.

Within ten Working Days (or sooner if the urgency of the situation so dictates) of sending the written Change Request, a response may be made confirming the effect such Change will have on the Goods, Works and/or Services and what adjustment, if any, will be required to the charges and any dates specified for performance or delivery of the Goods, Works and/or Services or any part or aspect of them.

Either party shall consider the Change Request at its own costs and without having any impact on the provision of the Goods, Works and/or Services.

In effecting the Change the Parties shall take the following into consideration:

(a) A description of any further impact analysis work to be undertaken together with anticipated time scales and costs, if any.

(b) A description of the impact of the Change or new requirement (as appropriate) quantified in terms of input required from each party, timescales, performance and cost.

No Change shall invalidate the Original Call Off Contract and Order. The Original Call Off Contract and Order shall continue in full force and effect (subject to any agreed Change).

Any Change involving an increase or decrease in the charges and/or any dates specified for delivery of the Services or any part of them shall be deemed to have been made with effect from the date of the relevant acceptance by all parties as aforesaid.

The form attached as Appendix i is to be completed whenever there is a modification, addition or amendment of the Goods, Works and/or Services set out under the original Call Off Contract and Order.

19.3 OBJECTIONS TO A VARIATION

In the event that one or more written objections to a variation are received, the relevant party may:

- Withdraw the proposed variation;
- Or propose an amendment to the variation.

`9.4 VARIATIONS WHICH ARE NOT PERMITTED

In addition to these provisions, the Participating Authority may not propose any variation which:

- May prevent one the Retailer from performing its obligations under the Call-off Contract.
- Is in contravention of regulation 72 of the Public Contracts Regulations 2015.

To:	**Cabinet**
Date:	8 July 2026
Report of:	Director of Housing
Title of Report:	Procurement of a high-support service for accommodation for single homeless individuals

Summary and recommendations	
Decision being taken:	To approve the commencement of a procurement exercise for accommodation with high support in Oxford from 1st April 2027.
Key decision:	Yes Forward plan - May 2026 - August 2026<,. | Oxford City Council
Cabinet Member:	Cllr Mike Rowley, Cabinet Member for Regulation of the Private Rented Sector and Preventing Homelessness
Corporate Priority:	Good, affordable homes.
Policy Framework:	Housing, Homelessness & Rough Sleeping Strategy 2023-28

Recommendation(s): That Cabinet resolves to:

1. **Give** project approval for the commencement of a procurement of an accommodation support service for individuals with multiple and complex support needs who are experiencing homelessness;
2. **Delegate** to the Director of Housing (following conclusion of the procurement) in consultation with the Group Finance Director, Director of Law Strategy and Governance and the Cabinet Member for Regulation of the Private Rented Sector and Preventing Homelessness), the authority to award a contract within the relevant budget.

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Risk Register	No
Appendix 2	Equality Impact Assessment	No

Introduction and background

1. The current contract is provided from a 37-bed hostel located in Oxford with shared accommodation in small 'clusters', including bedrooms with ensuite showers and a shared kitchen, as well as a small number of self-contained units. The contract provides for support staff on-site 24 hours per day, 7 days a week (24/7).
2. The client group the support service works with are single adults who are, or are at risk of homelessness and rough sleeping, and who require a high level of support to meet their needs and to assist recovery from homelessness. Individuals using this service will often have multiple support needs which requires a multi-agency approach.
3. The current contract for provision of these support services expires 31st March 2027 and cannot be extended any further. The Council is now looking to start a procurement process for a high support accommodation support service for to ensure that such facilities and support continue to be delivered in the city.

Procurement of supported accommodation

4. There is a significant and sustained demand for supported accommodation services in Oxford. Existing services hold long waiting lists for assessment and have limited throughput due to the complexity of individuals' needs. The shortage is most acute within high support provision, where staff and support is available 24 hours per day. Continuing this type of provision is therefore critical to relieving system pressure, improving outcomes, and ensuring that individuals with the highest levels of need receive the right support at the right time.
5. The current service provision of 24 hour support located in accommodation with a 'cluster based' layout has worked well. This involves small groups of bedrooms arranged around shared kitchen and living spaces. This design is proven to be more effective than typical hostel accommodation, as it reduces issues such as noise and conflict between individuals while encouraging positive social interaction in a more manageable way. It also allows for a flexibility to create 'specialist clusters', such as female only. This model of support avoids the challenge associated with large tradition hostel setting by providing a more trauma informed environment that balances operational efficiency with dignity privacy and personalised support.
6. The intention for the procurement and new contract is to replicate the current arrangement and procure a high-support service for accommodation delivered from a single, well managed location to ensure individuals experiencing homelessness and who present with multiple and complex support needs can access timely, consistent support in a safe and stable environment.
7. The support services are to include support on site 24/7, and controlling access to the accommodation to enhance safety, enable continuous oversight, rapid response to incidents, and a consistent point of contact for service users.
8. Based on the current annual value of the current contract it is likely that a total contract value for a new contract including any proposed extension period, will exceed £750,000. As such, and in line with the Council's constitution, project approval is needed from Cabinet to start the procurement process for this service.
9. The intention is to contract for an initial period of 2 years (commencing on 1st April 2027), with an option for the Council to extend the contract for up to three further

periods of 12 months. The initial contract period will allow the much needed service to be in place through the period of reorganisation of local government in Oxfordshire, whilst the option to extend the contract, allows for any changes to need, demand, and available funding to be taken into account before committing for longer periods.

10. The funding for the proposed contract being procured, will be from the Homeless, Rough Sleeping and Domestic Abuse Grant (HRSDAG) from 1st April 2027 onwards.

11. The 2026/27 value for the current contract is at £319,823. A proportion of this cost, a total of £45,754, is met by District Councils in Oxfordshire. There is very limited provision of hostel or 24/7 staffed supported accommodation across the County, and to ensure that this important provision is available for individuals from across the County, Districts are contributing financially to the provision. The overall costs of the service to the City Council are therefore less than the full contract, releasing City funds to fund other homelessness services. The intention is for similar arrangements to be in place should this be needed and desired, for the service provision that is to be procured.

Procurement implications

12. Due to the estimated value of the contract any procurement is likely to be subject to the Procurement Act 2023, and as such needs sufficient time to complete a fully compliant procurement process.

Alternative Options Considered

13. Officers are requesting the approval from Cabinet to give project approval to commence a procurement for a high-support supported accommodation provision. Other options are as follows:

    a. Extension of the current contract to enable continuation of the current service. This is not an option as the current contract does not allow for further extensions;

    b. Discontinue the service when the current contract ends – this option is not advised for the following reasons:

        i. A total of 37 individuals are currently directly benefitting from the service. There would be a high risk of homelessness and possible rough sleeping if this provision was not in place. Residents would have to be assisted to move from the service, putting undue pressure on already stretched service and supply.

        ii. There is still high need for this type of provision, due to consistently long waiting lists for this kind of service.

Implications of Local Government Reorganisation

14. In line with guidance on financial decisions before local government reorganisation that has been produced by and is available at the time of writing this report, the Council is not in a position to defer the procurement of a new service provision, and in line with guidance does not have to do so as this decision is necessary to ensure service delivery continues. As described in ‘other options considered’ above, should

the procurement of this service not take place, this would cause a gap or cessation of a key service.

Other implications

15. The relevant implications, including those as a result of other options considered, the financial, legal and equalities, Local Government Reorganisation, and environmental, as well as risk are all included in the relevant sections of this report and in appendices of the report.

Financial implications

16. The Council needs to ensure sufficient funds are available for the initial 2 year contract period. Based on the current annual value of the current support service contract, it is estimated that a similar support service contract for the period 1st April 2027 to 31st March 2029, could be in the region of £800,000. The entire contract period, including three extension periods of 12 months each (with final end date 31st March 2031), could be in the region of £2,000,000, with an upper budget limit of £2,500,000.

17. The Council received the Homelessness, Rough Sleeping and Domestic Abuse Grant (HRSDAG) from the Ministry for Housing, Communities and Local Government, for a period of three years from 1st April 2026. The current government allocation of this funding ends 31st March 2029. It is intended that the Council use HRSDAG to fund the initial 2 years of a new contract – 1st April 2027 to 31st March 2029.

18. At the time the initial contract period ends, 31st March 2029, new local government structures will have been confirmed/in place following Local Government Reorganisation, and the decision whether or not to exercise the extension clauses to the contact, and agreeing a budget to fund such extension periods, will be done as part of the budget setting process for the new local government arrangements

19. HRSDAG is ring-fenced grant, intended for local authorities to deliver services based on local need, that prevent homelessness and reduce rough sleeping, as well as to increase the supply of good quality supported housing. The supported accommodation service that the Council intends to procure, falls within remit of the grant as it will provide supported accommodation for single adults who are, or are at risk of homelessness and rough sleeping, and who require a high level of support to meet their needs and to assist recovery from homelessness.

Legal issues

20. Under Parts 4.5 (10) 4.5 (11) 18.12 and 19 (17) of the Constitution Cabinet is responsible for the decisions set out in the recommendation. Under section 9E (3) (c) of the Local Government Act 2000 Cabinet is empowered to delegate its functions to officers.

21. Due to the estimated value of spend, including proposed extension periods, the procurement of the support service will need to be carried out in accordance with the Procurement Act 2023 and the Council's Constitution. The contract itself will be drafted to offer annual extension options but the decision to exercise them will be at the Council's sole discretion. If there is no funding following the initial contract period, the contract will naturally expire.

22. Any decision to award a contract of £750,000 or greater will be a Key Decision and will need to comply with the procedure for taking Key Decisions set out in the Council's Constitution.

Level of risk

23. The Risk Register is attached as Appendix 1.

Equalities impact

24. A detailed in the Equality Impacts Assessment attached as Appendix 2, there are limited impacts overall in relation to the procurement exercise in respect of this support service.

Carbon and Environmental Considerations

25. There are no environmental or carbon considerations arising directly from this report.

Why do an Equalities Impact Assessment (EqIA)?

1. Equalities Impact Assessment (EqIA) is part of Oxford City Council's **Public Sector Equality Duty (PSED) (Equality Act 2010).**

   The General PSED enables Oxford City Council to:

   a. **identify and remove discrimination,**

   b. **identify ways to advance equality of opportunity,**

   c. **foster good relations.**

2. An EqIA must be done before making any decision(s) that may have an impact on people and/or services that people use and depend on.

3715

An EqIA form is one of many tools that can simplify and structure your equalities assessment.

4. We are passionate about equalities, and we highly recommend that Corporate Management Team (CMT) reports and all projects must attach an EqIA.

A good EqIA has the following attributes:

1. **Comprehensively considers the 9 protected characteristics.**

1. **Age**	**6. Race & Ethnicity**
2. **Disability**	**7. Religion or Belief**
3. **Gender Reassignment**	**8. Sex**
4. **Marriage & Civil Partnership**	**9. Sexual Orientation**
5. **Pregnancy & Maternity**	**NEW- Socio-economic inequalities (voluntary adoption)**
	NEW- Sanctuary seeking status leading to intersecting inequalities (voluntary adoption)

2. It has **considered equality of treatment** towards service users, residents, employees, partners, council suppliers & contractors, and Council Members
3. Sufficiently considered **potential and real impact** of proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members.
4. **Systematically recorded and reported** any potential and real impact of your proposal or policy on service users, residents, employees, partners, council suppliers & contractors, and Council Members
5. **Collected, recorded, & reported sufficient information and data** on how your policy or proposal will have an impact.
6. Offers **mitigations or adjustments** if a PSED has been impacted.

3716

7. Provides clear **justifications** for your decisions.
8. It is written in **plain English** with simple short sentence structures.

Section 1: General overview of the activity under consideration

1.	**Name of activity being assessed.**	New contract and specification in place for a high support service for accommodation for single homeless individuals.	**2.**	**The implementation date of the activity under consideration:**	
3.	**Directorate/Department(s):**	People and Communities	**4.**	**Service Area(s):**	Housing Services
5.	**Who is (are) the assessment lead(s):** **Please provide:** -Name -Email address	Francesca Barr, fbarr@oxford.gov.uk	**6.**	**Contact details, in case there are queries:** **Please provide:** -Name -Email address	Francesca Barr, fbarr@oxford.gov.uk
7.	**Is this a new or ongoing EqIA?**	Previous EqIA completed in September 2024. ☐ ☐	**8.**	If this is an extension of a previous EqIA, please indicate where the previous EqIA is located and share the link to the said EqIA.	Equality Impact Assessment MH 2027 DRAFT.docx
9.	**Date this EqIA started:**	13.05.26			
10.	**Will this EqIA be attached to** Corporate Management Team (CMT) **reports/updates, which will be published online?**	No	**11.**	**Give a date (tentative or otherwise) when this assessment will be taken to the** CMT.

14.	**Which priority area(s) within Oxford City Council's Equality, Diversity & Inclusion Strategy (2022) does this activity fulfil?** Please check as needed.	☐ Responsive services and customer care.	☐ Diverse and engaged workforce.	☐ Leadership & organisational commitment.	☐ Understanding and working with our communities. x	
15.	**Outline the aims, objectives, & priorities of the activity being considered.**	Aims: Continue to deliver supported accommodation provision for single adult households who are homeless/rough sleeping or at risk of becoming homeless. Objectives:				

www.oxford.gov.uk
OXFORD CITY COUNCIL

		Work with incumbent support provider at current provision, legal and procurement teams to ensure a good service is in place. <u>Priorities:</u> Ensure that there is a good service in place that is delivered in line with the key priorities in Oxfordshire's Homelessness and Rough Sleeping Strategy and the City Council's Housing, Homelessness and Rough Sleeping Strategy.
16.	**Please outline the consequences of not implementing this activity.** **For example,** -Existing activity does not fulfill Corporate Objectives, -existing activity is discriminatory and not fulfilling Council's PSED, … to name a few.	If we did not continue to fund a 24/7 supported accommoation project like the current provision, it would mean that 37 bed spaces in supported accommodation would no longer be provided. There is established great need for this type of accommdodation provision, as the current provision is sees many referrals and has one of the longest waiting lists. If a service like this was not available, this would mean increased pressure on temporary accomodation and other supported accommodation, which may not be suitable to meet the needs of individuals. This EqIA is primarily being undertaken in relation to the launching of the re-procurement of the 24/7 supported accommodation service. Should there be significant changes to the service provision following the re-procurement process a comprehensive EqIA would be carried to assess the full impact of those changes and mitigations.

Section 3: Understanding service users, residents, staff and any other impacted parties.

17.	**Have you undertaken any consultations in the form of surveys, interviews, and/or focus groups?** **Please provide details—** -when, -how many, and -the approach taken.	-Regular monitoring of all services commissioned by the City Council and those commissioned in partnership through the Oxfordshire Homelessness Alliance takes place. -Monitoring data and information is provided by all services. These take place quarterly and provides commissioners with a good understanding of how services operate, if they meet the need, provide good and quality services. -Access panel data and waiting list- there is a high percentage of those waiting for accommodation that need 24/7 provision. A supported accommodation review which took place in September 2024 suggested a continuous need for higher supported accommodation settings as well as specialist accommodation provision.

18.	**List information and data used to understand who your residents or staff are and how they will be impacted.** **These could be-** -third-party research, -census data, -legislation, -articles, -reports, -briefs.	• Services monitoring information • Homeless Case Level Information Collection (HCLIC) • Ending Rough Sleeping Data Framework • Oxfordshire's Homelessness and Rough Sleeping Strategy 2021-26 • Annual rough sleeping numbers for city, including age, gender, • Oxford City Council's Housing, Homelessness and Rough Sleeping Strategy 2023-28 and accompanying homelessness review and evidence base Our evidence shows that there is great and in some instances unmet need for supported accommodation for persons who have high support needs, and those with multiple and complex needs, and therefore there is a need to prioritise the financial resources we have available to fund such accommodation provision. A large number of individuals experiencing rough sleeping in the city are long-term rough sleepers or those who have returned to rough sleeping, sometimes due to being evicted from the supported accommodation they were living in.
19.	**If you have not done any consultations or collected data & information, are you planning to do so in the future?** **Please list the details –** -when, -with whom, and -how long will you collect the relevant data.	Monitoring of services and all relevant data and trends takes place throughout the year in order to determine what kind of services are needed in Oxford. This information is used when we have to determine how funds available for services for single homeless persons and those experiencing rough sleeping will be used each financial year. Monitoring of services and collection of data will continue as is currently undertaken. We will work with services where possible and necessary to enhance and increase services users feedback. Data is collected throughout the year and will continue for the foreseeable future. We are also required to submit data to government of a monthly basis in relation to rough sleeping in the city. Monitoring of services will continue as long as services are commissioned. It is a requirement under the contracts/grant assistance agreements used that services provide monitoring on a quarterly basis, or more frequently if at the request of the commissioner. In addition, we continue to monitor the relevant actions in the strategy action plan that relates to single homelessness and rough sleeping in order to ensure that we and partners deliver and commission the support and services that are most needed in the city.

Section 4: Impact analysis.

Section 5: Conclusion(s) of your Full Impact Assessment

22.		**Conclusions.**						
	☐	Stop and reconsider the activity.	☐	Adjust activity before beginning the activity and continue to monitor.	**x** ☒	No major change(s) or adjustments and continue with activity but continue to monitor.	☐	No major change(s) or adjustments and continue with the activity. No need to monitor in the future.

23.	**Please explain how you have reached your conclusions above.**		**Benefits of Implementation**: As discussed above, there is great and in some instances unmet need for supported accommodation for persons who have high support needs, and those with multiple and complex need. A large number of individuals experiencing rough sleeping in the city are long-term rough sleepers or those who have returned to rough sleeping, sometimes due to being evicted from

[redacted]			the supported accommodation they were living in. With this in mind, the continutation of 24/7 supported accommodation provision is a vital as part of the overall provision the city council commissions to provide accommodation for, and meet the support needs of this cohort. **Promotes Equity**: Ensures everyone has equal opportunities. **Enhances Diversity/Improves Representation**: A range of people can become homeless, and people will have a range of characteristics, some will be protected. The provision of supported accommodation in the city and who can access the various kinds of suported accommodation we as a city council commission, depends on the support needs a person has and what kind of accommodation they need to live in. A person will work with support workers to ensure that they are assessed for and can access the appropriate accommodation. Where a person has particular support needs, support agencies will work together, both statutory and non-statutory to ensure that the person can access the appropriate support should they wish to do so.

34

Section 6: Monitoring and review plan.

The responsibility for maintaining a monitoring arrangement of the EqIA action plan lies with the service/team completing the EqIA.
These arrangements must be built into the performance management framework such as KPIs or Risk Registers.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	8 July 2025
Report of:	Director of Law, Governance and Strategy (Monitoring Officer)
Title of Report:	Appointments to Outside Bodies 2026/2027

Summary and recommendations	
Decision being taken:	To agree appointments to Outside Bodies for the 2026/2027 Council Year
Key decision:	No
Cabinet Member:	Councillor Susan Brown, Leader, and Cabinet Member for Partnership Working, Inclusive Economic Growth and Culture
Corporate Priority:	Support Thriving Communities.
Policy Framework:	Council Strategy 2025-2029.

Recommendation(s): That Cabinet resolves to:

1. **Approve** appointments to charities, trusts, community associations and other organisations as set out in Appendices 1A – 1D; and note the appointments to partnerships as detailed in Appendix 1E;
2. **Note** the guidance for appointees in Appendix 2; and
3. **Delegate authority** to the Director of Law, Governance and Strategy, in consultation with the Leader of the Council, and where appropriate with other group leaders, to make any changes to appointments to Outside Bodies as required during the council year 2026/2027**.**

Information Exempt From Publication	
N/A	N/A

Appendix No.	**Appendix Title**	**Exempt from Publication**
Appendix 1A	Community Associations 2026	No

Appendix 1B	Other Organisations 2026	No
Appendix 1C	Trusts 2026	No
Appendix 1D	Charities 2026	No
Appendix 1E	Strategic Partnership 2026	No
Appendix 2	Guidance for Members (Updated 2026)	No

Introduction and background

1. The Council currently has representatives on a total of 50 outside bodies (15 community associations, 17 other organisations, 8 trusts and 10 charities). These are detailed in Appendices 1A – 1D. Many Council representatives sit on the committee of the organisation to which they have been appointed, with many acting in a non-voting advisory role or simply being invited to attend meetings as an observer. Councillors who have been appointed to charities and trusts generally serve as Trustees on those bodies.
2. Guidance for Council representatives on these organisations is provided upon appointment, to ensure that all appointees understand their role and responsibilities in representing the Council on the organisation. A copy of the guidance is attached at Appendix 2.
3. The list of outside bodies and the appointment of representatives to those organisations is determined by the Leader of the Council, who seeks Cabinet agreement on the nominations; this is reviewed annually in March.
4. Proposed changes to individual nominations or to the list of outside bodies will be reported to the Cabinet as required during the year. Since 2017, the authority to approve any in year change to the representation on an individual organisation has been delegated to the Director of Law, Governance and Strategy in consultation with the Leader of the Council, and where appropriate with other group leaders. This delegation is restated annually to ensure good governance and clear decision making.
5. In 2019, the Cabinet endorsed the Leader's preferred approach, based on custom and practice, that nominations for Council representatives to outside bodies should be drawn from the cohort of serving councillors; and that existing representatives who were no longer serving councillors should be permitted to serve out their terms of office should they wish to do so.
6. The Council also has representatives on 16 strategic partnerships (see Appendix 1E). These appointments are either made by the individual partnership or determined by virtue of a councillor's position as a portfolio holder on the Council's Cabinet.

Categories for Appointments to Outside Bodies

7. The list of organisations to which the Council makes appointments has evolved over time. The justification for the inclusion of many of the organisations on the list is self-evident, but in some cases the reasons for the Council to continue to appoint to an organisation is less obvious.

8. To address this, the following categories are used to provide some rigour to the decision-making underpinning the Council appointments to outside bodies:

A.	Appointments to organisations that have a significant impact on the achievement of the Council's corporate policy objectives and service priorities and/or organisations which receive funding from the Council
B.	Appointments to organisations with established historical links to the local community, the city of Oxford or the Council on which representation is desirable and should be maintained as a matter of local goodwill and for as long as nominations are forthcoming from members
C.	Appointments which will allow the Council to influence policy at a national or regional level
D.	Appointments which are a statutory requirement and/or to a partnership

Proposed Appointments and Changes to Representation in 2026/2027

9. Appendices 1A – 1D set out the proposed nominations to charities, trusts, community associations and other organisations for 2026/2027.

10. The Leader of the Council has proposed the following specific changes to the list of organisations for 2026/2027:

Outside Body	Decision
Appendix 1D • City of Oxford Charity	Charity has advised that they wish to only have three Councillors appointed, one appointment will be made this year.
Appendix 1D • St Aldates Parochial Charity	Charity is currently undergoing a governance review and has requested no Councillors are added to the board during this review.

Implications of Local Government Reorganisation

11. There are no direct implications arising from this report relating to Local Government Reorganisation. Any future appointments will be a matter for decision of the new unitary authority.

Financial Implications

12. The appointments proposed in this report have no direct financial implications for the Council.

Legal Issues

13. Representation on outside organisations presents legal implications for the Council if the roles and responsibilities of those involved are not clearly defined. Council representatives are provided with detailed written guidance on their roles and responsibilities (Appendix 2).

Level of Risk

14. Representation on outside organisations should benefit both the Council and the organisation concerned. There is a risk that such benefit may be lost to either or both parties if representation is withdrawn or inadequately resourced or briefed.

Equalities Impact

15. An Equalities Impact Assessment is not required. The Council seeks to appoint nominees that represent as far as possible the diverse nature of the outside bodies and the communities that they serve.

OXFORD CITY COUNCIL

Guidance for Members who are appointed by the Council to serve on Outside Bodies

1. Introduction

1.1. This guidance is intended to help councillors understand their duties when appointed to outside bodies, and how to handle the conflicts of interest that can arise. The guidance relates only to nominations or appointments made of councillors by the Council to outside bodies or by the outside bodies themselves.

1.2. If a councillor is appointed to an external body in any other capacity, (i.e., not as a councillor) they do not owe the council any duties in relation to the way that they carry on their membership of the outside body. However, the councillor will need to record their role in the members' register of interests. The guidance does not attempt to provide a comprehensive guide. If you have any further queries, you can obtain advice from the Monitoring Officer. Councillors may be appointed to a wide range of outside bodies. Most appointments are made by the Cabinet.

1.3. The roles of Councillors on outside bodies will depend upon the legal nature of that organisation and the capacity in which they are appointed to act. Councillors must:

- act according to the framework set by the outside body
- take an informed role in the management of the outside body's affairs
- attend meetings on a regular basis
- carrying out their duties to the best of their abilities.

1.4. The fundamental principles of this guidance are as follows:

- Councillors will act according to the rules, constitutions and frameworks set by the relevant outside body and, where possible, with those of the Council
- Councillors will make independent and personal judgements based on their responsibilities to the outside body

1.5. The guidance addresses three specific circumstances which arise from time to time and as a result of which potential conflict can arise. These are:

- Where the Councillor is appointed Director of a Company
- Where the Councillor is appointed as a Trustee
- Where the Councillor is appointed to an Unincorporated Association

1.6. Councillors will report back on their involvement with the outside body – you will be asked to complete a feedback form each year about the organisation to which you are appointed for consideration by the Cabinet.

2. What might your appointment be?

2.1. If you are appointed by the Council to an Outside Body, this may be either:

- **as a member** e.g. of the management committee, board of directors, or committee of trustees of the outside body.

  If you serve in a decision-making capacity or have a position of general control or management on the outside body, whether company, trust or other association, you owe duties and responsibilities to that body which are separate and distinct from your duties owed to the council. It will be important for you to be clear what those duties are by referring to the constitution or relevant governing documents.

  On occasion, it is possible that duties owed to the outside body and to the council, will conflict e.g. if you are the treasurer of an outside body who has applied to the council for grant funding and the rest of this guidance gives more detail on this; or

- **as an 'observer'**, or an ordinary member, or undertaking a monitoring role, or facilitating exchanges of views or information as an extension of your council duties but taking no part in the outside body's management or governance, other than to attend and participate in meetings. Here, you will be mainly concerned with representing the council and will not have responsibilities for decision making or the governance of the body.

3. What sort of Roles does it apply to?

3.1. This guidance applies where you are a "member", which could be:

- a director of a company in which the Council has an interest; a member of another public body;
- a trustee of a charity;
- or a person appointed to the management board of an unincorporated body.

3.2. Your responsibilities will depend on the type of body you are appointed to. The main types are as follows (see further guidance later in this document):

- Companies
- Unincorporated Associations:
- Charities:
- Other statutory bodies:

4. The application of the council's Code of Conduct

4.1. These guidelines should be read in conjunction with the Members' Code of Conduct which has been adopted by Council. When Councillors are representing the Council on another body, they must follow the Code of Conduct unless it conflicts with a legal duty owed to the other body.

4.2. You should ensure that you enter any appointment to an Outside Body on to your Register of Interests (including those where you are appointed in a private capacity).

4.3. Where you are representing the Council on an Outside Body or where you are appointed to an outside body and a matter relating to that Outside Body is to be discussed at a meeting of the Council:

- If you have a Disclosable Pecuniary Interest (DPI) in a matter to be considered at the meeting you must declare as such, and you must leave the room during any discussion of, or vote on, any matter in which you have a DPI.
- if a matter arises at a meeting which directly relates to the financial interest or wellbeing of one of your Other Registerable Interests (ORI) you must disclose as such and you must leave the room during any discussion of, or vote on, any matter in which you have such an interest.

5. Bias and Predetermination

5.1. Even where your duties as a director, or trustee, or member of a management committee of an external body do not amount to a disclosable pecuniary interest, they may well be regarded, on an objective appraisal, as giving rise to a perception of bias, especially having regard to the desirability of maintaining public confidence.

5.2. Participation in the decision making at a Council meeting by a Councillor who is biased could potentially invalidate the decision of the Council where there is an issue of pre-determination and bias.

5.3. Examples may include where you have sat on an Outside Body and taken a decision to apply to the Council for funding. You should then not participate in the decision of the Council as to whether to award that funding or not.

5.4. Where the Council's wishes may conflict with the best interests of the outside body you must nevertheless, if taking decisions for that outside body, act in its best interests. If you consider that any such conflict prevents you from taking a decision for the outside body it is likely to be advisable not to participate in that decision.

5.5. Where membership of the outside body is on an advisory or consultative basis, bias will not be assumed from mere membership. However, once the outside body has a line which is being advocated by you, this could potentially be viewed as bias, and the Council's decision on the issue could be vulnerable to challenge if you participate in those circumstances. It will depend on the facts, and in such circumstances, advice should be sought from the monitoring officer

6. Insurance & Indemnities

6.1. Councillors who participate in external bodies may be indemnified in relation to liabilities they incur in that capacity, though this is subject to certain limitations.

6.2. Indemnity by the outside body:

a) <u>Directors:</u>

Directors cannot be indemnified by the company against liability for negligence, default, breach of duty and trust. Companies can however purchase insurance to protect directors against claims of negligence, default, breach of duty and trust. Those appointed as directors should ensure that appropriate insurance is in place. Companies can, if their Articles of Association allow, provide for directors to be indemnified for the costs of defending such a claim if they are granted relief by the court or acquitted.

b) Trustees:

Provided a charitable trustee act properly, and within his/her powers, indemnity can be given from the trust fund. Trustees can take out insurance to protect themselves from personal liabilities, but not for criminal acts such as fraud. If the premiums are to be paid out of the charitable funds, the consent of the Charity Commissioners will be needed.

c) Unincorporated Associations:

Members may be entitled to an indemnity if they act in accordance with the Constitution of the association and are not exceeding their powers. However, regard must be had to the terms of the constitution. The constitution will determine whether insurance can be paid for by the organisation.

d) Other statutory bodies:

Members may be entitled to an indemnity if they act in accordance with the terms of reference of the body and are not exceeding their powers. However, regard must be had to the terms of the constitution.

6.3. You should establish as soon as you are appointed what, if any, insurance is held by the Outside Body that covers you in your role including what insurance the organisation itself holds for other purposes, for example third party liability insurance and employers liability insurance (the second of which is a legal obligation for all organisations which employ staff)

6.4. The Council may provide an indemnity where Councillors are acting on an outside body at the request of the Council.

6.5. The indemnity the Council can provide is subject to limitations. In general terms, if a Councillor is acting properly, within their powers and in good faith, the power to indemnify will usually apply. However, the Council cannot, for example, provide an indemnity in relation to any action or failure by any Member which constitutes a criminal offence, or for any action or failure by any Member which is the result of fraud, or other deliberate wrongdoing or recklessness on the part of the Member.

6.6. When you are serving on an outside body, the Council's indemnity will only apply after any indemnity or insurance from the body itself. There are further limitations and it is advisable to be clear about the scope of the Council indemnity that may be available to you. You can seek further advice on any indemnity from the monitoring officer.

7. Appointment as a Director of a Company

7.1. Companies are separate legal entities. The company is distinct from its members, who may be either shareholders or guarantors. The Council itself may be a member of the company, either a shareholder or guarantor

7.2. If the body is a limited company, and you are asked to be involved, it is likely that you will be appointed as a company director. The duties of a company director are now set out in the Companies Act 2006.

7.3. The management of a company is usually the responsibility of the Board of Directors. Directors' powers are usually set out in the company's Articles of Association. Another important document is the Memorandum of Association, which sets out the Company's objectives and powers.

7.4. The duties of a company director are not the same as your responsibilities as a Councillor. Basically, when involved in company business, the company must come first. Directors must act in the interests of the company, and not in the interests of other parties, including shareholders. You cannot vote simply in accordance with the Council mandate, to do so would be a breach of duty as a Director.

7.5. A general duty of care and skill to the company is imposed, but a Director requires no greater skill than might reasonably be expected of someone of that individual's particular knowledge and experience. A Director is not deemed to be an expert, but is expected to use due diligence and to obtain expert advice if necessary

7.6. If a director fails to carry out his/her duties, action can be brought for breach of duty, either by the company itself, or by a liquidator if the company goes into liquidation, or with the consent of the court, by a shareholder. Such actions are unlikely where the company is properly controlled by the directors.

7.7. Some important considerations are:

- It is not always easy to reconcile the various factors which must be taken into account when reaching a major decision. The important thing as a director is to show that you are aware of and have taken account of the relevant factors, and have exercised due care and diligence in giving them all fair consideration.
- It may be difficult to be certain whether benefits may be regarded as giving rise to a conflict of interest. If you are unsure take advice from the company's advisers.
- Make sure you are aware of the company's constitution; its Memorandum and Articles of Association, so that you know what it can and cannot do. You must take this into account when making decisions, as well as any shareholder decisions that are relevant.
- Be diligent, and make sure you are well informed about the company's affairs. Make sure you are well briefed when taking up the role, and that you receive regular briefings throughout your term of office.
- Attend training and briefing sessions
- Ensure insurance is in place.
- Some Board decisions may be reviewed on a future occasion. Make sure detailed minutes show that all necessary factors have been considered

when major decisions are being taken. Obtain expert advice where necessary e.g. regarding impact of a decision on the environment.

- Take legal advice where there are doubts about a director's duty in relation to a particular matter

7.8. There may be actual or potential conflicts between the interests of the Council and the interests of the company. In such circumstances it would be inappropriate for the Councillor to take part in discussions upon such topics both as a Councillor and as a Director. You should decide in which role you are to act on the matter. If in doubt, Councillors should seek advice from the Monitoring Officer about any potential conflicts of interest

8. Where the Councillor is appointed as a Trustee of a Charity

8.1. Some companies and unincorporated associations are established for charitable purposes. Councillors should note that you can be both a Trustee and a Director, where the charity operates both models and you are appointed as such. Ensure you understand what role you are appointed to at the outset.

8.2. A charity is an organisation which:

- is established for charitable purposes only, and
- falls to be subject to the control of the High Court in the exercise of its jurisdiction with respect to charities.

8.3. Those who are responsible for the control and administration of a charity are referred to as trustees, even where the organisation is a company limited by guarantee where they are not strictly trustees.

8.4. Trustees of a charity retain personal liability and can only delegate to the extent that the constitution authorises them so to do. Generally, a trustee may incur personal liability if they:

- act outside the scope of the trust deed
- act in a way that falls below the required standard of care
- act otherwise than in the best interests of the charity, in a way which causes loss to the charity fund
- makes a personal profit from the trust assets

8.5. Trustees must take care to act in accordance with the Trust deed and to protect the charity's assets. They are also responsible for compliance with the Charities Acts and the Trustee Act 2000.

8.6. Trustees have a number of trustee duties which they must comply with.

8.7. If in doubt, always consult the Charity Commission. You may avoid personal liability for breach of trust if you act in accordance with their advice

9. Where the Councillor is appointed to an Unincorporated Association

9.1. Unincorporated associations are informal organisations / groups which are neither limited companies nor charitable trusts may be "unincorporated associations" which have no separate legal identity from their members.

9.2. The rules governing the members' duties and liabilities will (or should) be set out in the organisation's constitution, which is simply an agreement between members as to how the organisation will operate.

9.3. Usually the organisation's constitution will provide for a management committee to be responsible for the everyday running of the organisation. Management Committee members must act within the organisation's constitution and must take reasonable care when exercising their powers.

9.4. Because the association has no legal existence separate from its members, the liability of the members is not limited. Each member can incur personal responsibility for liabilities incurred on behalf of the association and relies on the membership agreement to be able to recover his/her costs from the other members. Councillors appointed to such bodies should familiarise themselves with the Constitution to understand the nature of their role, responsibilities and liabilities, and should assess the risk of personal liability, and the extent to which it has been covered by insurance.

10. Other Statutory Bodies

10.1. These are public bodies established by statutory provisions which will set out their functions, the parameters of their jurisdiction and the way in which they are governed.

10.2. This includes bodies such as the Police and Crime Commissioner Panel.

10.3. The details of representation of the council on such bodies may be set out in statute or regulations, or in terms of reference or constitutions established in accordance with the statutory provisions.

10.4. You should be clear about whether you are sitting on such bodies to make delegated decisions on behalf of the council, or purely as members of a board or committee of that body.

10.5. You will need to be clear about how decisions are made, any parameters relating to these, and how you declare your interests and how any potential conflicts are managed.

10.6. Much will depend upon whether the body is exercising its own statutory functions or whether you are exercising council functions whilst sitting on the body.
