2.5 The Council is required to keep a register of individuals and groups of individuals who are seeking to acquire serviced plots of land in their area to build homes for those individuals to occupy. The Act requires relevant authorities to "*keep a register of a) individuals, and b) associations of individuals, who are seeking to acquire services plots of land in the authority's area for their own self-build and custom housebuilding".* The requirements of the register are set out in the Self-build and Custom Housebuilding (Register) Regulations 2016. The Act also requires relevant authorities to publicise its register.

Elderly persons accommodation

2.6 *The Housing for Older and Disabled People PPG explains that* 'Offering older people a better choice of accommodation to suit their changing needs can help them live independently for longer, feel more connected to their communities and help reduce costs to the social care and health systems. Therefore, an understanding of how the ageing population affects housing needs is something to be considered from the early stages of plan-making through to decision-taking.' (Paragraph: 001 Reference ID: 63-001-20190626).

Gypsy, Traveller and Travelling Showpeople

2.7 The Planning Policy for Traveller Sites was last updated in December 2024. A key update was to the definition of "gypsies and travellers" clarifying that persons of nomadic habit of life, including those with a cultural tradition of nomadism or of living in a caravan are included within the definition. Paragraph 2 states that this document *"is a material consideration in planning decisions"*, whilst paragraph 3 specifies *"that, the Government's overarching aim is to ensure fair and equal treatment for travellers",* whilst also respecting the interests of the settled community. To help achieve this, the Government expects local planning authorities to make their own assessment of need and to plan for sites over a reasonable timescale.

Boat dwellers

2.8 The Housing and Planning Act 2016 (section 124) creates a duty under section 8 of the Housing Act 1985 to consider the needs of people residing in or resorting to a local authority area with respect to sites for caravans and the mooring of houseboats as part of the periodical review of housing needs. It deletes sections 225 and 226 of the Housing Act 2004.

Boarding School Accommodation

2.9 There are no national plans/policies or programmes relating to boarding school accommodation.

Houses in Multiple Occupation

2.10 HMO developments are governed under two different aspects- the Housing Act governs the licensing (and Oxford also has additional licensing) and planning legislation governs changes of use. For planning purposes, HMO are categorised differently under the Town and County Planning Use Class Order) to standard residential dwellings (C3), as either a small or large HMO. A large HMO is a dwellinghouse occupied by more than six non-related occupants sharing accommodation that is not separated into self-contained units, and where some domestic facilities (such as bathroom, kitchen or living space) are shared. Large HMO fall into the Sui Generis use-class and require planning permission. A 'small HMO' is the use of a dwelling house by no more than six unrelated occupants who share basic amenities (e.g. kitchen and bathroom). It falls under Use Class C4, and the legislation permits a change of use from a C3-dwellinghouse unless permitted development rights have been revoked. Oxford has an Article 4 Direction that removes these permitted development rights. As such, no change of use to either category of HMO is permitted within Oxford City Council boundaries without acquiring planning permission in advance.

2.11 HMO are also required to obtain a licence to operate. The licensing powers and standards are set out in the Housing Act 2004 and The Licensing and Management of Houses in Multiple Occupation and Other Houses (Miscellaneous Provisions) (England) Regulations 2006, and the licensing scheme is run by Oxford City Council. The Housing Act 2004 (and its resulting licensing scheme) is not a piece of planning legislation per se, and rather sits outside of the planning process as it operates.

Regional and Local Plans, Policies and Programmes

Student accommodation needs assessment

2.12 The Updated Specialist Housing Needs Assessment (2025, Iceni), is a technical report which draws together various bits of data, including the profile of students in the city and the existing student accommodation profile of the two universities, including their future expansion plans. It is the latest report of its kind, updating the Oxford Student Needs Assessment (2023, Iceni). The report considers the local context of Oxford where there is a significantly constrained land supply, with different forms of development competing against one another. It makes some recommendations as to how the relevant policies in the Oxford Local Plan 2036 should evolve. These currently set out where new student accommodation can be located and as well as how many full-time taught course students can live outside of non-university provided accommodation.

Gypsy and Traveller, Travelling Showperson and Boat Dweller Accommodation Assessment

2.13 The Gypsy and Traveller, Travelling Showperson and Boat Dweller Accommodation Assessment (2024, arc[4]) was undertaken on behalf of the city and all district authorities

within Oxfordshire. It sets out the need for these types of accommodation for each authority from 2023/24 until 2041/42 and establishes that Oxford City has a need of 0 for Gypsy and Traveller pitches and Travelling Showperson yards. However, the assessment does recommend that a criteria-based policy is included in any emerging plan for Oxford, as it provides a framework for assessing planning applications for these types of specialist housing. The assessment also clearly expresses that gypsies and travellers have different requirements from travelling showpeople and that this should be reflected in the criteria-based policy.

2.14 Paragraph 9.30 of the assessment notes that, *"the analysis of houseboat need would suggest there is additional need for residential moorings across waterways in Oxfordshire although there are complex dynamics relating to households living on waterways and accessibility to moorings. The principal location of residential moorings is in Oxford City."* Feedback from boat dwellers and stakeholders suggests that a range of 20-50 additional moorings should be made available, *"therefore, the current figure of 41 in the Oxford Local Plan 2036 as an expression of need remains appropriate."* (No specific needs for boat dwellers were identified in any of the district authorities.)

Specialist and Supported Housing Needs Assessment

2.15 Oxfordshire County Council has published a Specialist and Supported Housing Needs Assessment (2024, Housing LIN), which sets out the need for the various types of specialist and supported housing across Oxfordshire, broken down by district and over the next 10-20 years. This starts with background about the demographic profile and projections for each district. Oxford has a significantly younger age profile than the other districts, with significantly less growth of the elderly population expected. Nevertheless, there is still a need for additional accommodation over the plan period.

2.16 The Updated Specialist Housing Needs Assessment (2025, Iceni) involved working with Housing LIN to produce an assessment of need for sheltered/retirement and extra care units based on the capacity-led population projections as detailed in the report. It suggests a slightly higher level of need than indicated in the OCC report above. The assessment identifies a need in Oxford to 2045 of 1,029 additional sheltered/retirement housing (412 social/affordable rent, 102 shared ownership, 515 market). It identifies a need for 322 extra care units (152 social/affordable rent, 24 shared ownership, 152 market). Additionally, the report shows a need for 43 supported housing units for those with learning disabilities and autism; an estimated 121 supported housing units for those with mental health needs; and a short-term need for up to 10 supported housing units for care leavers and unaccompanied asylum seekers.

Oxford Local Plan 2036

Student Accommodation

2.17 The Oxford Local Plan 2036 (OLP2036), adopted in June 2020 is the current development plan for the city and sets out agreed planning policies for the city against which decisions are made. Policy H8 seeks to restrict the provision of new student accommodation to

specific locations – either on or adjacent to existing university campus sites; within the city centre or district centre or on a site allocated in the development plan to potentially accommodate student accommodation. This approach was intended to continue into the Local Plan 2040, albeit with some more flexibility, allowing new postgraduate accommodation to be built adjacent to existing postgraduate accommodation.

2.18 Policy H9 seeks to restrict the number of full-time taught course students that can live outside of non-university provided accommodation, with separate thresholds set for the University of Oxford and Oxford Brookes University. The intention of the policy is to ensure a balance is struck between providing accommodation for students, but also for all other types of housing needed within the city. The Local Plan 2040 intended to carry forward this policy but with updated thresholds based on the latest data which was included in the Oxford Student Needs Assessment (2023, Iceni).

Self-Build and Custom Housebuilding

2.19 Policy H7 in the OLP2036 seeks to help encourage sufficient self-build and custom housebuilding to come forward and to support community-led housing. The policy approach is to set a threshold for self-build plots on residential sites. The policy requires 5% of the site area on residential sites of 50 or more units to be made available as self-build plots. The policy also sets out expectations of what plots should have, including services, and access to the public highway. In addition, the policy requires the use of a legal agreement to ensure that self-build plots that have not sold after 12 months of marketing be built and bought forward in the normal way, in accordance with other policies regarding affordable housing and housing mix.

2.20 In July 2022, following public consultation and updated government guidance Oxford City Council adopted a Local Connection Test to the Self-build and Custom Housebuilding Register to help understand the local demand for this type of housing within the city. This connection test splits the Self-build and Custom Housebuilding Register into two parts to provide a differentiation between those people with a local connection to the city (Part A) and those without (Part B).

Elderly persons accommodation

2.21 The Oxford Local Plan 2036 Policy H11 is generally supportive of new elderly persons accommodation, and sets criteria to ensure it is appropriately located and provides a suitable living environment. The intention of the Local Plan 2040 was to continue this approach. This was supported by the County Council. It is recognised that, to be viable, specialist housing needs to be of a reasonably large size, so that there are enough rooms to accommodate the on-site staff and facilities. Because of the lack of large sites in Oxford, there are limited opportunities to allocate parts of sites specifically for this use.

Gypsy, Traveller and Travelling Showpeople

2.22 Policy H12 is a criteria-based policy which sets out all the requirements to be met for any new pitches for the travelling community, including for travelling showpeople. The 2024 assessment carried out by arc[4] confirmed that this approach could be continued into the new Plan but emphasised that the policy should reflect the differing requirements needed for gypsies and travellers, and travelling showpeople (the latter who need more space for equipment etc.)

Boat Dwellers

2.23 Policy H13 is a criteria-based policy which sets out all the requirements to be met for any new residential moorings or if appropriate, temporary visitor moorings. The 2024 assessment carried out by arc[4] confirmed that the findings of the previous Oxford Boat Dwellers Accommodation Needs Assessment (2018) used to inform this policy has not changed and that the demand/ need for 41 new residential moorings in Oxford remains relevant.

Boarding School Accommodation

2.24 The Local Plan 2036 didn't include any policies regarding boarding school accommodation.

3. Current Situation (supporting Task A2 and A3 of Sustainability Appraisal)

Student Accommodation

3.1 The latest Authority Monitoring Report (2024/25) indicates that both universities are currently operating within their respective thresholds for the number of students living outside of university-managed accommodation. The Iceni report (2025) does not find evidence to suggest that the current threshold of 6,000 across the two institutions should be changed currently. One application for new academic floorspace was approved during this period which was compliant with Policy H9.

Self-Build and Custom Housebuilding

3.2 Oxford City Council has had a Self-build and Custom Housebuilding Register in place since 1 April 2016. Inclusion on the Register does not confer any form of entitlement in terms of the provision of serviced plots. Rather, its purpose is to provide local planning authorities with demand data that they can use to understand and plan for the future need for this type of housing in their area. Authorities may, at their discretion, advise people on the Register of relevant proposals for development. Additionally, authorities are expected to meet the level of need indicated by the Register, by permitting an equal number of serviced plots within the following three years to the number of registrations that are made over the preceding three years. This is a rolling requirement, running from the end of October each year.

3.3 Since its introduction in 2016, there have been 141 registrations (140 individuals and 1 group) on the Self-build and Custom Housebuilding Register (compared to 136 as of October 2023). As of January 2026 there are 76 individuals that have provided evidence to demonstrate a local connection to the city and have subsequently been added to Part A of the register (compared to 73 as of October 2023). Analysis of the addresses of those on Part B of the register suggests that a further 6 individuals cite an address on their expression of interest that would suggest a local connection to the city. Whilst these individuals have not provided evidence to demonstrate this local connection it provides a proxy indication of potential demand. The very small increases in each part of the register since 2023 show there has been an apparent decline in interest in recent years compared to years prior to this where the growth in the register each year was significantly greater.

3.4 The constrained housing land supply in Oxford together with the limited availability of greenfield sites and the typical nature of residential development sites in Oxford, means that in many developments it is not feasible to accommodate self-build plots. For example, in high density flatted developments, in office to residential conversions, in student accommodation developments (also typically flatted), or in employer-linked developments. The types of sites which tend to be more suitable for self-build plots are the larger sub-urban and typically greenfield sites – of which there are few in Oxford. However, proposals for community led and self-build/custom housing are being supported on appropriate sites. Since the adoption of the current Local Plan (OLP2036) there has been one development proposal that includes the provision of self-build plots. This is St Frideswide Farm (21/01449/FUL), a development of 134 homes, 5 or which are self-build. This development commenced in 2023.

Elderly persons and other supported care

3.5 There have been no planning applications for these types of development recently. It is to be expected that these types of development will only come forward sporadically, when a suitable opportunity arises.

Gypsy, Traveller and Travelling Showpeople, and Boat Dwellers

3.6 There have been no planning applications for these types of development during the last few years. However, the criteria-based policies within the Oxford Local Plan 2036 ensures that a policy framework is present to ensure that these types of applications can be assessed should they be submitted in the future.

Boarding School Accommodation

3.7 There have been several planning applications for boarding school accommodation in recent years. An example includes St Edward's School Oakthorpe House (21/O2481/FUL), a development of 11 student rooms and a one-bed flat. This development commenced in 2022. Additionally, D'Overbroeck's School 472-474 Banbury

Road (22/O2661/FUL), a development of a 4-storey boarding house and 2 semi-detached dwellings. This development commenced in 2023.

Houses in Multiple Occupation

3.8 HMO provide a significant amount of accommodation in Oxford, forming an important and valuable contribution to the housing market. For many people, they offer the only available and affordable solution as renting individually or buying a property in Oxford is too expensive.

3.9 Oxford City Council maintains a record of licenced HMO in the city, and this provides an up-to-date view of the number of HMO properties registered. The Regulations only permit publication of licences that are in force and prohibit publication of licences pending or expired licences. As the data is real-time, the register can change on a daily basis. Licences are, however, not published until they are issued and are removed once expired. As of the end of October 2023 there were 2,964 active licences on the register.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

Student Accommodation

4.1 In the short term, very little would change without a new Local Plan. The latest Authority Monitoring Report (2024/25) indicates that both universities are still operating within their respective thresholds set out in Policy H9 which allows up to a certain number of full-time taught undergraduates to live outside of university managed accommodation. The Updated Specialist Housing Needs Assessment (2025, Iceni), suggests that the thresholds remain suitable as the Universities are tracking the low growth scenarios as set out in the original assessment, however Iceni also do not believe the thresholds should be reduced.

Self-Build and Custom Housebuilding

4.2 Without a new local plan, the *Self-build and Custom Housebuilding (Register) Regulations 2016* would still apply and there would be a requirement for the City Council to keep the Self-build and Custom Housebuilding Register. Whilst this would help gauge an idea of the level of demand for Self-build and Custom Housebuilding, without an up-to-date local plan there would be no policy framework and demand for this type of housing may not be met.

4.3 With the cost-of-living increases and ongoing affordability issues for housing in Oxford, the loss of a policy that is supportive of this type of housing could result in individuals and organisations seeking to build/ develop this type of housing outside of the city boundary. Therefore, the potential contribution to the overall housing provision that could come through this route would be constrained.

Elderly persons and other supported housing

4.4 In the case of other elderly persons accommodation, the current policy approach is to set criteria for where this is suitable and to ensure it is a good living environment. This policy adds clarity in terms of what is expected, smoothing the application process and ensuring high-quality applications. Without the policy approach, there would be less clarity for applicants and those making decisions on planning applications.

Gypsy, Traveller and Travelling Showpeople, and Boat Dwellers

4.5 The approach to these types of specialist accommodation in the Local Plan 2036 was to have criteria-based policies, which are aligned to the NPPF. Therefore, very little would change without a new Local Plan as the criteria-based policies for the travelling community and boat dwellers would still apply to any application submitted.

Boarding School Accommodation

4.6 The approach to this type of accommodation is to prevent the loss of dwellings, especially with the significant competition for land and sites in Oxford.

Houses in Multiple Occupation

4.7 Without a new local plan, the HMO licencing regimes would still apply to existing or new HMO, which would help to ensure the quality of accommodation for all those living in HMO in Oxford. However, the licencing does not control the location or distribution of new HMO. Without an up-to-date planning policy there would be no policy framework to guide necessary supporting infrastructure and amenity considerations such as appropriate parking, cycle parking and bin storage. Importantly, there would also be no mechanism to guide the location and distribution of HMO across the city. With the cost-of-living increases and ongoing affordability issues for housing Oxford, there may be even greater pressures for increased numbers of HMO. Unrestricted, this could put pressure on the supply of family-sized homes, potentially leading to their loss, and could also lead to clustering of HMO. If these are then housing predominantly one group of residents, i.e. young people or students, this can affect the mix and balance of the community, and in some cases lead to a perception of loss of community cohesion and neighbourhood character.

5. Key issues addressed through the Local Plan

Introduction

5.1 The analysis set out in the previous sections of this background paper indicates that the Local Plan 2045 will need to take account of varying needs and impacts of specialist accommodation that meets the needs of different groups. Housing is a social need, so it is important to try to provide the right types of housing for those who need it. Specialist housing is not however one size fits all and the accommodation needs of different groups will vary. The policies of the Local Plan can help address the varied needs for different specialist housing types.

5.2 The plan assess and responds to the need for specialist housing provision in a number of ways. The Options that were considered at Regulation 19 are shown in Appendix 1 (the policy numbering has changed slightly as two policies were combined, so each is one number lower in the draft submission version of the Plan). The policies presented in the Submission Draft Oxford Local Plan 2045 have not varied in any substantial way from these approaches.

Student Accommodation policy approach

5.3 Oxford is a world-renowned brand for educational excellence, principally because of the historic University of Oxford and also due to the highly respected Oxford Brookes University. It is as a result of this reputation that Oxford derives much of its high profile and prosperity.

5.4 This success also creates many pressures in the city. Oxford's reputation attracts tourists, language students, publishing businesses, spin-out university enterprises and medical research. The city also has students studying at other institutions, and a number of short-term students who visit the universities and language schools. It means there are significant numbers of students requiring accommodation.

5.5 In Oxford at the point of the 2011 Census, there were 29,924 full-time students aged 18 and over. This had increased by 10% in the 2021 Census to a total of 32,888 full-time students. This equates to around 20% of the City's population. In the 2024/25 academic year there were 26,595 students in total at the University of Oxford (compared to 24,510 in 2019 and 27,290 in 21/22) and 21,856 students in total at Oxford Brookes (compared to 16,673 in 2019 and 17,470 in 21/22).

5.6 Oxford has several language schools that attract students from all around the world. Courses at these institutions vary from part-time and full-time, from one-off courses to month-long courses and longer. The number of students at these institutions is therefore highly variable and particularly seasonable. The Oxford Student Needs Study (Iceni, 2023) estimated that, based on the 11 language schools assessed, during the peak week of enrolment there were 1,984 students studying languages in Oxford. There are also five

Further Education Colleges. These are institutions that offer any study after secondary education that is not part of higher education (i.e. that is, not taken as part of an undergraduate or graduate degree). Courses range from basic English and Maths to Higher National Diplomas.

5.7 Because the majority of language school courses are only a few weeks this means the accommodation need is for temporary accommodation rather than any kind of permanent accommodation. Most of this need is met and will continue to be met through homestays with families and in student accommodation not otherwise in use over the summer months. Many of the further education colleges in Oxford serve the existing residential population, so students more often than not live in existing residential households, either as part of a family unit or independently. Several of the institutions do already have accommodation for students who do have an accommodation need. The Oxford Student Needs Assessment (Iceni, 2025) therefore finds no significant need for additional student accommodation for students at institutions other than the universities over the plan period.

Overall approach to managing the impacts of student housing need

5.8 The approach of the Plan is to acknowledge, support and build on the important economic and educational role of the Universities and other educational institutions, whilst managing potential adverse impacts they may have, on established communities and on the housing market.

5.9 The demand for student accommodation places two main forms of pressure on the local housing stock:

- students accommodated directly in private rented housing; and
- from student accommodation being developed on sites that may equally be suitable for other types of housing.

5.10 These pressures on the local housing stock act to increase rents, worsening affordability, and also mean that sites that might otherwise deliver onsite affordable housing may come forward for student accommodation that does not deliver any onsite affordable housing. An additional consequence where there is a high proportion of students can be the perceived or actual harmful impacts on the host community or neighbourhood. A concentration of student halls can mean that they dominate an area, meaning a high proportion of transient occupants in an area, and an established community that becomes more fractured and less strong.

5.11 A policy approach is needed to manage the pressures of students in the best way, while recognising and responding to the forecast needs of educational institutions that have a housing need (predominantly the universities). There is a balance to be struck between encouraging students into halls because it frees up family housing, and limiting student halls because they take up new sites that could be used for new family housing. Hence, the Local Plan approach is to limit the over-concentration of HMOs, only allow student

accommodation in the most suitable locations and encourage universities to provide accommodation (in these locations) through the thresholds policy.

Linking new academic facilities with the adequate provision of student accommodation (Policy H9)

5.12 Policy H9 links new or redeveloped academic accommodation to the delivery of associated residential accommodation. The intention of the policy is to encourage educational institutions to ensure there is sufficient accommodation for their students, and therefore to limit the numbers of students living in general market housing in the city. In the case of the universities, this may be demonstrated if they have fewer than a set number of full-time taught degree students living outside of university provided accommodation (excluding students studying and working on placements such as teaching and nursing students and post-graduates on research-based courses. This longstanding policy approach is intended to attempt to manage and minimise the pressures of students on the housing market. In particular, the policy approach is deigned to balance the needs of the student population as well as local residents.

5.13 If the threshold for either university is breached, that university is prevented from gaining planning permission for new academic facilities that create additional capacity for students. There have been and will continue to be applications for facilities where the argument has been made and accepted that the development is unrelated to student numbers and so the thresholds are not relevant.

5.14 This policy has operated effectively since the introduction of the 1991-2001 Oxford Local Plan (adopted 1997). That plan recognised that students have particular housing needs and that the institutions have some responsibility for housing their students in purpose-built student accommodation. It recognised that purpose-built student accommodation can have the least impact on the availability of housing to long-term residents of the city. Policies HO26 and HO29 sought to restrict the numbers of students living outside of university accommodation to 4,000 at the University of Oxford and Oxford Brookes respectively. The 2001-2016 Local Plan found lower thresholds to be achievable and also introduced the link to academic accommodation. Policy ED.6 set a threshold for Oxford Brookes of 3,500 up to 2008 and 3,000 after that date. Policy ED.8 set the same threshold for the University of Oxford. The approach was continued in the Core Strategy Policy CS25, which set a threshold of 3,000 for each university, and continued in the Oxford Local Plan 2036, with current thresholds of 1,500 at the University of Oxford and 4,500 at Oxford Brookes (applied to a narrower range of students than previously, that excludes research-based students)

5.15 The PPG makes it clear that these caps or restrictions can be considered if other options won't support the needs of the student population and local residents and if there is understanding of the accommodation needs of universities and other higher education establishments (Paragraph: 004 Reference ID: 67-004-20190722). Care has been taken to understand the accommodation needs of the universities when setting the thresholds.

The Oxford Student Needs Assessment (2023, Iceni) and the Updated Specialist Housing Needs Evidence (2025, Iceni) used various sources of data to understand the current situation. To assess student accommodation needs over the plan period to 2045 they gathered information about what sites are in the pipeline and what the universities' growth plans are, as well as comparing this to historic growth patterns.

5.16 The accommodation needs of students vary greatly. Different types of institutions have different needs (as outlined in the background section, many language school students, for example, come for short stays and are often in homestays or student halls that are vacant during the summer). However, even amongst university students, there is a variation in the type of accommodation that is needed. Clearly student halls are not the answer for every student, and there will always be students living out. Some students may already live in or near the city at home, and they do not need accommodation. Some post-graduate students could be studying for many years whilst also working at the university and student halls are not the most suitable accommodation for them. Therefore, the policy focus is on students studying full-time on taught courses (so this excludes post-graduate research students and students on vocational or sandwich courses whilst they are working). Setting the thresholds 5.16 To set thresholds going forward, we need to predict how much student accommodation there will be and how many of the types of students with accommodation needs there will be over the relevant period. The profile of students and student numbers are always evolving. Iceni were commissioned to carry out the Student Needs Accommodation Assessment, Iceni, 2023 (and Updated Specialist Housing Needs Evidence, Iceni, 2025). This looked at the current profile of students and used information from the universities to forecast it going forward. Setting the threshold (and monitoring the policy) requires an understanding of the number of students requiring university accommodation (according to the definition in the policy, which is full-time, taught course students) against the number of students living in university-provided accommodation.

5.17 Both universities have predicted a growth in student numbers, which we need to respond to. It is difficult to be certain over the longer term in respect of the future recruitment of students. Factors that can influence this may be within the institutions' control (e.g. fees, facilities, courses offered, maintenance of academic reputation) but are as likely to be outside their influence (e.g. government policy, macro-economic situation). Both universities felt unable to accurately forecast over more than a short timeframe. Therefore, a threshold has only been included in draft Policy H9 to 2033.

Threshold calculation (Policy H9)

5.18 The Student Needs Assessment, using information from the University of Oxford, predicts 18,366 students will require accommodation (meet the criteria of the policy, i.e. full time, taught course students not already living in Oxford or with other exclusions set out in the Appendix of the Submission Draft Oxford Local Plan 2045) in 2033/34, using the low growth scenario. The accommodation assumption is that there will be an additional 809

rooms come forward in this time period, in addition to the 14,407 currently provided. This would leave a shortfall of 3,150 by 2033/4.

5.19 The Student Needs Assessment, using information from Oxford Brookes, predicts 10,670 students will require accommodation (meet the criteria of the policy, i.e. full time, taught course students not already living in Oxford or with other exclusions set out in the Appendix of the Submission Draft Oxford Local Plan 2045) in 2033/34, using the low growth scenario. The accommodation assumption is that there will be the same amount as the current situation. During this time period, some of Oxford Brookes's nomination rights on third-party purpose-built accommodation will expire. Oxford Brookes has said they may not renew these nomination rights. However, they also consider that they have enough information from students to know if they are living in this kind of purpose-built accommodation. There is therefore a slightly different wording for Oxford Brookes as compared to the University of Oxford (who have said they do not have this information) about the accommodation that can be considered to be meeting needs against the threshold, to enable this accommodation to be counted. The current amount of supply is 5,576 (including some accommodation with nomination rights that will expire). This would leave a shortfall of 5,576 in 2033/34.

5.20 The thresholds in Policy H9 are set at a level that allows for the anticipated growth in students anticipated above, alongside the understanding of supply and pipeline supply of student accommodation. This means that growth is not constrained, but also that care is taken to ensure no new negative impacts from development that enables increases in student numbers, with a need to retain existing accommodation, or fully replace it.

5.21 Purpose built student accommodation is not suitable in all locations. The intention of Policy H8 is to ensure student accommodation is prevented in locations which are not suitable or desirable for students to live. The most suitable locations are on existing university sites where there is no conflict with other housing types.

5.22 The locational restriction also recognises that it is important to locate student accommodation in a way that avoids unacceptable changes in character and great increases in activity along quieter residential streets. The proposed restriction means that student accommodation can be delivered only on or adjacent to existing campuses and within the city centre and district centres. These locations are particularly suited to absorbing student accommodation and the levels of activity associated with it. Campuses and sites adjacent to them are suitable because everything is on hand for students and they are not affecting an existing residential area. District centres and the city centres are suitable locations because student accommodation is suited to being on the upper floors, for example above retail and also because it means students will be located in accessible locations where public transport is available to key campus sites. Furthermore, the policy will prevent the domination of student accommodation in established residential areas and will help to maintain the quieter residential character and amenity of these streets and prevent complete domination by student accommodation.

Self-build and Custom housebuilding

5.23 To inform the OLP2045 policy, an exercise has been undertaken to establish whether there is an adequate supply of sites with potential to accommodate self-build housing. Table B of the Strategic Housing Land Availability Assessment (2026) sets out those sites which have met the SHLAA criteria and have development potential. Of those sites with development potential, the sites with capacity for at least 100 dwellings, that have not already been built out, or that do not yet have the benefit of a planning permission, have been reviewed for suitability for self-build. Sites that are expected to come forward as either flatted schemes, or as student accommodation or other communal accommodation types, or as employer-linked housing (for example the JR Hospital site) have been excluded as these would not be feasible for self-build plots to be incorporated into a scheme. For sites expected to come forward as mixed-use development, the proportion of the site expected to be developed for residential use has been estimated. The review of the SHLAA sites suggests that there are six sites in the city that could come forward where it would be feasible to include an element of self-build housing. These sites are as follows:

Helaa Ref	Site name	Total site size (hectares)	Proportion anticipated for residential (ha)	Total minimum no. Of dwellings estimated
018	Diamond Place	1.85	1.0 (mixed use and discounting likely student accommodation	135
0.28a	Kassam Stadium	6.52	3.4ha (Mixed use-discount likely car parking, replacement community facilities and commercial)	240
0.28b	Overflow Car Park at Kassam Stadium	2.29	2.29	100
113	Redbridge Paddock	3.64	3.64	200
289	Sandy Lane Recreation Ground	4.6	4.6 (assuming off-site reprovision of sports facilities)	250

590	Pear Tree Farm	2.03	2.03	111
TOTAL			**16.96**	

5.24 On the basis of the sites listed in the Table above, there is an anticipated 16.96ha for residential development where it could be feasible to incorporate self-build homes into the development. Policy H13 requires that 5% of the housing area of sites with potential for over 100 dwellings should be made available as self-build plots. The table above shows that 0.848ha would be available for self-build plots over the Plan period. Applying a 90 dwellings per hectare assumption, as the sites are predominantly gateway and district centre, would equate to around 77 self-build plots.

5.25 In terms of demand, there are 76 individuals on the Self-build and Custom Housebuilding Register that have demonstrated a local connection, so there is adequate supply identified in the table above to meet this demand and also additional potential demand as people are added to the register over the Plan period.

Elderly persons accommodation

5.26 Older people (including those who require retirement housing, housing with care and care homes) and people with disabilities as groups whose housing needs should be understood and attempted to be met. Nationally, the population is ageing, and whilst Oxford has a younger than average age profile of residents (12% aged 65+ compared to 19.8 in the South East, 2024, ONS), the population of those 65+ in Oxford is expected to grow by around 35.9%-38.7% by 2045 (representing 7,336-7,905 additional people in this age range).

5.27 Specialist housing for older people is provided in a range of formats and can include:
- Age-restricted general market housing, generally aimed at those over 55, potentially with some shared amenities but without on-site support or care services;
- Sheltered housing, typically purpose-built flats with some communal facilities, a warden and some support such as on-site assistance via alarm;
- Enhanced sheltered housing/assisted living, which will have additional services to enable people to retain independence such as some meals provided;
- Extra care housing, which has access to medium to high level of care with 24-hour access to support services and registered care staff and meals available; and
- Residential care/nursing homes, for those with a high level of dependency and which have rooms within a residential building and provide a high level of care for daily living.

5.28 The Oxfordshire County Council Specialist Housing Need Assessment 2024 and the Oxford Updated Specialist Housing Needs Evidence (Iceni, 2025) give a recent picture of the need for supported housing in Oxford. There is an anticipated net need for sheltered/retirement housing in Oxford to 2045 of 1,029 units, 515 of which are market and the rest affordable. For extra care housing, the net need to 2045 is 322, with 152 of

those market, and for care homes the need is 570. For market accommodation, it is expected that the market will respond by bringing forward specialist housing types, if there are available sites to bring forward.

5.29 Many sites are potentially suitable within the given criteria of Policy H12. Consideration was given to other approaches, such as requiring a certain proportion of sites to provide specialist accommodation, or requiring it as part of the affordable housing provision. However, this kind of accommodation can only feasibly be provided at scale. 135 units is considered roughly what is needed to make it feasible to run, because at that scale there are enough units to support the amount of specialist features, care facilities and servicing (such as cooking, cleaning and laundry) that are needed. This could not be provided as a small proportion of any site in Oxford and will only realistically come forward if a landowner is interested in using the site, or a fairly large portion of one of the larger sites, for this use.

5.30 The criteria set out in Policy are intended to ensure accommodation is well designed and located, so it is suitable for residents' needs and does not create traffic implications. It is important it is well designed, with good access to local facilities, and that it is well integrated into a mixed community.

5.31 Another aspect of Policy H12 is that existing specialist care accommodation should be protected unless it is to be replaced elsewhere or unless it can be shown that it is surplus to requirements. Given that there is additional need for this accommodation over the plan period, and limited sites where it can be delivered, this is important, and existing sites offer potential for intensification, which may also help to meet needs.

Gypsy, Traveller and Travelling Showpeople, and Boat Dwellers

5.32 To support the travelling community, the preferred approach for the Local Plan 2045 is to include a policy that sets out criteria against which to assess any sites that do come forward for gypsies and travellers and travelling showpeople, whilst acknowledging that their requirements differ. It is not proposed to allocate specific sites for this kind of housing type as the 2024 assessment does not identify current or forecast need for Gypsy and Traveller and Travelling Showpeople accommodation in Oxford within the plan period.

5.33 To support those people who wish to live on boats, the preferred approach for the Local Plan 2045 is to include a policy that sets out criteria against which to assess any sites that do come forward. It is not proposed to allocate specific sites for this kind of housing type as there is limited potential for additional sites in Oxford because of constraints such as the need to maintain safe navigation of the main river channels and avoiding conflict with the operational requirements of both the Canal and River Trust and Environment Agency.

Boarding School Accommodation

5.34 The preferred approach for the Local Plan 2045 is to have a local policy that limits the location where this type of accommodation would be permitted to existing campus sies or

adjacent to them. This approach limits the opportunities for boarding accommodation to compete with other housing types that meet housing needs. Because of the restriction to sites within or adjacent to existing school campuses, this limits the potential for impacts on amenity from school students needing to travel or being located in residential areas remote from the school. Other matters of student safety and facilities are guided by separate regulations, and so the policy does not provide criteria to determine applications against, only the locational restriction.

Houses in Multiple Occupation

5.35 In some areas of the city the concentration of HMO has resulted in changes to the character of the local area and has led to local parking problems and large numbers of transient households. This has been successfully managed by the threshold approach in the current and previous planning policy documents. There is therefore a clear case for continuing our existing threshold-based approach of development management for HMO of all sizes in Oxford. The policy approach therefore sets criteria to manage how and where new HMO are allowed and to restrict HMO numbers where there is already a high concentration of existing HMO.

5.36 The preferred approach for the Local Plan 2045 policy is to have a local policy that recognises the importance of HMO in Oxford and is supportive of them, yet sets criteria to manage them in a way that prevents and over-saturation or dominance of this type of housing within a street. This will help to ensure that there does not become a worsening overconcentration of HMO in certain streets/ part of the city which can result in changes to the character of the local area.

5.37 The Oxford Local Plan 2036 introduced a policy approach allowing new purpose-built HMO, when these had previously not been prevented. This was to acknowledge that HMO do have a role in ensuring a range of housing provision. However, the vast majority of new HMO are traditional conversions. Where purpose-built HMO have been proposed these have been very large, and are generally aimed at students. There is a high risk that this policy approach will be used to circumvent other housing policies, e.g relating to student accommodation location. Therefore, the Oxford Local Plan 2045 does not allow for new purpose-built HMO.

Appendix A: Options considered at Regulation 18

Policy options set 003a (draft policy H9): Houses of Multiple Occupation (HMO)

The NPPF sets out an expectation that within the overall aim of meeting an area's identified housing need, should also be the aim to provide an appropriate mix of housing types for the local community. For many, Houses in Multiple Occupation (HMO) offer the only available and affordable solution as renting individually or buying a property in Oxford is often too expensive. However high concentrations of HMO can result in changes to the character of the local area and it is therefore important that the supply of this type of home is monitored and controlled.

Table 1 - Policy options set 003a: Houses of Multiple Occupation (HMO)

1019

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Prevent a concentration of HMOs in any area by only allowing a certain percentage of HMOs within a frontage or radius (currently this is 20%).	This option would slow down the increase in the number of HMOs in specific areas where there are already significant numbers.	This restriction could lead to higher rents if it restricts the availability of private rented accommodation across the city.
Option b Allow new purpose-built HMOs in appropriate	Purpose-built HMOs could help to reduce some of the potential management issues or neighbourly tensions that can occur because issues such as car and bike parking	It is less likely that purpose-built HMOs could be converted to single dwelling houses in the same way as traditional HMOs. It is possible that large purpose-built HMOs will be put forward in locations not suitable for student accommodation, with the

locations, (potentially restricting the size of these in particular areas).	and bin storage can be integral to the scheme rather than retrofitting an existing building. This approach helps to address the unaffordability issues for people living and working across the city, offering another option to those who would struggle to access housing otherwise.	intention that they will house students and act like student accommodation.
Option c Concentrate HMOs in certain areas so there is no restriction in particular areas and a complete or near complete restriction in others.	This approach would acknowledge that the character of some areas is already influenced by the presence of HMOs.	It would be difficult to select an area for the concentration. It may lead to difficulties in building and maintaining a strong community, although HMOs do not always mean transient populations.
Option d Do not have any restriction on HMOs.	HMOs can be an important part of the housing market; meeting needs of those who can only afford to share but who wish to live in the city. In that sense it can help contribute to a balanced community.	HMOs can lead to pressures on services and streets for example with more bins and parking pressure. Homes do not always have sufficient amenity space for multiple households. HMOs are often a more short-term solution for people, so can create transient populations.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - various options/combinations (e.g. option a, b, c or d, or a+b, c+b, d+b) **High-level screening conclusion? -** the options should be subject to detailed appraisal. **Screened in for detailed appraisal? -** Yes

Rationale: In terms of options, there is no specific national requirement for a policy, though local context supports the inclusion of some sort of locally prescribed approach, the considerations then are how far such a policy goes in requirements and how these are geographically expressed. Options a and c represent alternative ways of addressing HMO proliferation, option a seeks to prevent a concentration anywhere above a threshold of 20% frontage, meanwhile option c instead defines geographically where HMOs would be accepted and where they would not. Option d is to not set any restrictions at all via the Local Plan. Option b could be carried forward on its own, instead relating to allowing new purpose-built HMOs but with restrictions on size, however it could also be combined with one of the other options.

The sustainability impacts arising from the various options all relate to similar SA criteria, particularly **criterion 4. Housing Need** in how they impact supply of new housing and deliver upon densification, as well as how they meet the particular needs of people on lower incomes. The options also impact on local amenity and street scene, as well as potentially the demand upon local services/facilities, which most closely matches **criterion 5. Inequalities**, **criterion 11. Urban design** and **criterion 6 Essential services**. Whilst options a, b and c are all likely to have positive impacts against housing need and inequalities as they serve to allow additional HMOs in varying ways to meet the needs of particular demographics, options b and c have the potential to have negative impacts against criterion 5, 6 and 11 where they could lead to additional harm to local amenity, character of the neighbourhood and additional demand on services locally (which option a seeks to avoid by ensuring the proportion of HMOs does not go above a certain threshold). Option c could lead to significant sustainability impacts particularly in relation to amenity and living environment in the areas that are designated as having no restriction, option d would further increase this impact by expanding the area of effect city-wide. Due to the varying level of sustainability impact arising across the potential options, it is considered justified to scope this option set in for detailed appraisal.

1021

The preferred approach for the Local Plan 2045 policy is to have a local policy that recognises the importance of HMO in Oxford and is supportive of them yet sets criteria to manage them in a way that prevents and over-saturation or dominance of this type of housing within a street. This will help to ensure that there does not become overconcentration of HMO in certain streets/ part of the city which can result in changes to the character of the local area.

The preferred option is **Option A** which will provides an opportunity for this type of housing to come forward to meet needs, in all parts of the city, but will avoid an over-saturation in any one length of street frontage, helping manage the potential impacts on amenity of this type of housing. Option B relates to purpose-built HMO and is not a preferred option as provision of this type of accommodation reduces potential for delivering housing that meets greater needs (such as social rented housing). There is also potential that under option B large purpose-built HMOs may be put forward with the intention of them housing students, in locations where purpose-built halls of residents would not be permitted. Option D does not set any restrictions at all via the Local Plan and

whilst the lack of any restriction may not make a difference in some areas of the city, there is potential for a significant amount of HMOs to come forward in other areas at the expense of meeting other housing needs. It is for this reason that option D is not a preferred option.

The options set was tested through the Sustainability Appraisal with Option A and C scoring more positive than Option D. Option D scored negatively against SA objective 4 whilst options A and C had some positive and some negative. Option D also scored negatively against SA objective 11, whilst Option A was neutral and Option C potentially could have negative impacts, depending on implementation. Option B, which is an additional element to the policy that could be combined with the others, rather than an alternative approach to them, might have additional positive sustainability impacts, for example for SA objective 5 if it was to be taken forward, however, Option B is not proposed as part of the preferred approach as discussed above.

Policy options set 003b (draft Policy H10): Location of new student accommodation

1022

It is important to acknowledge, support and build on the important economic and educational role of the Universities and other educational institutions, whilst managing potential adverse impacts that a large number of students resident in Oxford may have on established communities and on the availability of general market and affordable housing. The policy options below consider the different types of approaches to locating student accommodation and the potential consequences of each option.

Table 2 - Policy options set 003b: Location of new student accommodation

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Restrict the locations where new student accommodation would be allowed to: on or adjacent to existing or campus sites, existing student	This restricts student accommodation to the locations where it is most suitable both for the students and to avoid potential issues with unneighbourly behaviour. Student accommodation may be particularly suited to these locations, possibly more than	Limiting locations does mean institutions may be less able to meet their needs. Concentrating student accommodations in these areas may mean that district centres and the city centre could be dominated by these accommodation types.

accommodation sites, district centres and the city centre (or potentially only parts of these or some of these) and existing student accommodation.	general market housing, and it should help to achieve the high densities that these locations provide the opportunity for.	
Option b Restrict the locations where new student accommodation would be allowed to: existing campus sites, existing student accommodation sites, district centres, the city centre and on arterial roads.	This approach widens the suitable locations for student accommodation and opens more potential sites. However, it still means that students would not be accessing student halls along quieter residential streets.	The definition of arterial roads and when a development is 'on' them needs to be clear (i.e. how much of a setback is acceptable, what if the entrance is on a side road?). However, it may mean that arterial roads change in character and become dominated by student accommodation for long stretches. The character of many arterial roads currently is that of quiet residential streets and student accommodation can be reported as having a negative impact on neighbours in these areas.
Option c Have no locational restriction on student accommodation but a criteria-based policy.	This would maximise the opportunity to meet student accommodation needs.	This approach would not help to address the competition between student accommodation and other housing types, potentially creating an imbalance within communities and drawing student accommodation into unsuitable areas.
Option d Allow new student accommodation only on existing campus	This would significantly reduce competition between student accommodation and other housing types, maximising delivery of other housing types. It would limit	This approach would not allow us to meet the requirements of the NPPF because it would not provide for enough student accommodation to come forward to meet the needs. This would mean a greater number of students

1023

sites and on existing student accommodation sites.	feelings of disruption to communities of student accommodation that are sometimes reported.	in private rented accommodation, limiting its availability on the open market for others
Option e Restrict occupation of new student accommodation to full time students enrolled in courses of one academic year or more (with potential to allow other occupiers outside of term-time if a management plan is agreed).	Full time students who qualify for this accommodation will not be then renting houses in the general housing market thus releasing more of Oxford's housing stock for the nonstudent market. Policy flexibility for outside of term time maximise occupation of the developments.	Part-time students are also likely to have housing requirements and may struggle to find alternative suitable accommodation.
Option f Require a management regime to be agreed with the City Council to ensure the development complies with parking standards that allow only operational and disabled parking, with the developer providing a mechanism to prevent	This supports the policy approach to put downward pressure on parking in the city. The location of new student accommodation will be in sustainable locations with good accessibility to public transport, walking and cycling routes offering a realistic alternative to using a private car.	Will require appropriate monitoring and enforcement and if that is not in place could result in more cars in the city putting parking pressure on adjacent streets.

1024

residents from parking their cars anywhere on the site, (except for disabled residents).		
Option g Do not have any management restrictions on new student accommodation.	Would give opportunity to maximise occupancy if demand dropped from full time students enrolled on courses.	Without proper management of student accommodation all the benefits of providing it for full time students are lost and the universities will have little or no control of meeting their thresholds for student numbers living within their own accommodation.

1025

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Options a, b, c or d, in combination with Options e, e+f or g **High-level screening conclusion? -** Some of the options are similar to each other from a sustainability perspective. However, where there are differences, such as between Option a and Option d, there is the potential to have significant sustainability impacts, therefore the options should be subject to detailed appraisal. **Screened in for detailed appraisal? -** Yes, but only options A, B, C and D **Rationale:** Options a, b, c and d are all alternatives. Options a, b and d discuss restriction but to differing types of areas, whilst Option c has no geographic component and instead sets criteria. Option e could be taken on its own. It seeks to restrict occupation of new student accommodation to full time students enrolled in courses of at least one academic year or more. Option f could be taken in conjunction with Option e, as it requires a management regime to be agreed which ensures that the development complies with parking standards that only allow operational parking and not

residential parking. Option g is an alternative to Option e and Option e +f as it proposes not to have any management restrictions on new student accommodation.

The sustainability impacts arising from the various options all relate to similar SA criteria, particularly the impact of this particular type of accommodation on local amenity, which most closely matches **criterion 11. Urban design** (particularly in relation to street scene). The options also contribute to meeting the housing need of a particular community (students) so are relevant to **criterion 4. Local housing needs**. Option b is more negative for local amenity than options a or d because allowing student accommodation along arterial routes, has the potential to significantly change their character. Many of these routes are quieter residential streets which could then become dominated by student accommodation for long stretches, which could have a negative impact on the local community. Option b is slightly more positive for housing as it its less restrictive than options a and c, as it would allow more locations for student accommodation, albeit the positive is a minor one as it is only meeting the needs of one particular group. Option a would score lower than this due to geographical restrictions, these are less restrictive than Option d, which limits student accommodation to existing campus and student accommodation sites. This might result in this type of need not being fully met which would score a minor negative. Ultimately, due to the differences in the likely significant effects on restricting or not restricting the location of student accommodation, we have scoped this in for detailed SA appraisal to fully explore the potential impacts.

1026

Options e, f and g also strongly relate to **criterion 8. traffic and associated air pollution** because they are about managing impacts of students on car parking and the impacts of vehicles on general amenity, because of the increased numbers of residents typically in student accommodation. Options e and e+f would have a minor positive effect on criterion 8 as restricting parking to operational (and disabled) use would reduce the amount of traffic and associated air pollution in the area as students would be using other modes of transport or active travel. Option g would have either a neutral or minor negative impact, depending on implementation. However, Options E, F and G, are not considered necessary for testing through the detailed appraisal as they address options for management of student accommodation, rather than options for spatial approach, which is considered to be the area where there could be significant effects that need to be investigated further.

Location of New Student Accommodation – Draft Policy H10

The preferred approach is a combination of **options A, E and F**. Options A, B, C and D were tested through the SA in order to further explore their potential sustainability impacts. Options A and D scored fairly similarly in terms of impact, with slight nuances in the underlying impact against each SA objective, whilst options B and C had additional negative impacts. Option A is supportive of locating student accommodation in the most suitable places adjacent to existing institutions or student accommodation sites to avoid potential issues with unneighbourly behaviour, and in sustainable locations such as city and district centres. Student accommodation may be particularly suited to these locations, possibly more than general market housing, and it should help to achieve the high

densities that these locations provide the opportunity for, whilst ensuring that other sites that are most suitable for general market and affordable housing can be developed for those purposes. Options E and F ensure that full-time students who qualify for this accommodation will not be then renting houses in the general housing market thus releasing more of Oxford's housing stock for the nonstudent market. It also allows for policy flexibility for outside of term time to maximise occupation of the developments, whilst supporting the policy approach to put downward pressure on parking in the city.

Policy options set 003c (draft policy H11): Ensuring there is enough student accommodation to meet needs

The NPPF (paragraph 63) lists students as a group whose housing needs should be understood and attempted to be met. The PPG also notes that there is a need to plan for sufficient student accommodation and that there is an expectation that options which support both the needs of the student population as well as the local population should be considered. The policy options below detail the different types of approaches.

1027

Table 3 - Policy options set 003c: Ensuring there is enough student accommodation to meet needs

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Set thresholds for university students living outside of university provided accommodation and prevent expansion of academic facilities if the threshold is breached. The details of the threshold will include the level set (which would reflect what is achievable)	This is a long-standing approach which has been successful in ensuring the universities continue to strive to provide accommodation for most of their students and that this is considered in their wider development plans.	This policy approach has the potential to prevent the further development of important academic, research and administrative uses, which are important for economic growth and the health of the local and national economy. To be fair and reasonable, this must be related to the development and any related growth in students.

and the types of students it applies to (not all). The intention of the policy option is to see the student thresholds reducing in steps over the length of the local plan.		
Option b Only permit new academic facilities (of all types proposed by the universities or other institutions) that will facilitate growth in student numbers if it can be demonstrated how the students will be accommodated. Option (b) is linked to option (a).	This could also be applied to all academic developments that create a need for student accommodation, not just the universities. It ensures the institutions act responsibly by only undertaking developments that create new capacity for students if they show how they will be accommodated.	This may be difficult to enforce and monitor and will not necessarily be easy to make a judgement about whether a development will create increased demand for accommodation from students. A lot will depend on the submissions of the institutions, and it will be important the policy makes it clear the level of evidence expected.
Option c Have no policy linking new academic facilities to student accommodation.	This would mean new institutions could be established in Oxford.	This could undermine the long standing and successful policy which ensures the universities continue to provide accommodation for most of their own students.

1028

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Option a, a+b, or c

High-level screening conclusion? - The options are similar to each other from a sustainability perspective

Screened in for detailed appraisal? - No

Rationale:

Option a could be taken on its own - it seeks to set a threshold for (certain types of) university students living outside of university provided accommodation and prevent expansion of academic facilities should the threshold be breached. Option b expands on Option a by only permitting new academic facilities that will facilitate growth in student numbers if it can be demonstrated how the students will be accommodated. Option c is an alternative to option a and option a +b as it proposes not having a policy linking new academic facilities to student accommodation.

In relation to the sustainability impacts of the options, primarily they impact on **criterion 4. Local housing needs** in how the Local Plan meets needs for students, but also how we protect loss of other housing to students and achieve the required balance. Local amenity is also relevant, which most directly relates to **criterion 11. Urban design** and the approach to expanding academic facilities relates to criterion **12. Economic growth**.

Options a and a+b will have a similar impact on criterion 4 and criterion 12 as this policy approach has the potential to prevent the further development of important academic, research and administrative uses, which are important for economic growth and the health of the local and national economy. This could have a minor negative impact on both of these criteria, although it would also ensure that there is a policy framework in place to ensure that accommodation for other types of housing need is not all lost to student accommodation. Option c suggests not having a policy linking new academic facilities to student accommodation, which may result in new institutions being able to be established in Oxford and would score a minor positive for criterion 12. Equally, Option c would score a minor negative on criterion 11 as there is the potential for current market and affordable housing to be lost to student accommodation, reducing the supply of this much needed housing in Oxford which is already in short supply, and for quieter residential areas to be dominated by student accommodation, which could have a negative impact on the local community. Overall, it is not considered that there are significant sustainability impacts that would warrant detailed sustainability appraisal.

1029

Linking New Academic Facilities with the Adequate Provision of Student Accommodation – Draft Policy H11

The preferred approach for the Local Plan 2045 is to include a policy which sets thresholds for university students living outside of university provided accommodation and also prevents expansion of academic facilities if the threshold is breached. The thresholds needs to be set at a level which is realistic for each institution, whilst ensuring it is still effective in minimising the number of students who are reliant on living outside of university-provided accommodation so that this housing can be retained for market and and

affordable housing which is a priority for this Plan. Of the three options considered, **Options A and B** in combination is the preferred approach which reflects this balance that needs to be struck.

Policy options set 003d (draft policy H12): Homes for travelling communities

The December 2024 update to the Planning policy for traveller sites made clear that the Government's overarching aim is to ensure fair and equal treatment for travellers, whilst also respecting the interests of the settled community. The policy options below suggest different approaches to how this could be achieved.

Table 4 - Policy options set 003d: Homes for travelling communities

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Do not allocate sites but have a policy setting out criteria against which to assess any sites that do come forward.	This approach would be flexible to respond to needs that may arise during the plan period, even if none are currently identified.	It is important that criteria are aimed only at ensuring sites provide suitable living accommodation that does not conflict with other policies.
Option b Search for sites to allocate to meet an identified need.	This would ensure any identified needs were met within the city.	There is no justification to do this if no need within the city is identified. It might be that Oxford does not have any sites suitable for this use because of its compact urban character. Could unnecessarily preclude a site from other residential uses.
Option c Do not allocate sites or set out policy criteria – default to national policy	There may be no need to repeat national policy on this topic in the Local Plan. There would already be general policies of the plan that could be applied in these circumstances (for example on Green Belt).	In the event of a site coming forward there would not be any policy to help in the assessment of the impact, and there would be no guidance in the plan to suggest where that might go.

1030

(Planning Policy for traveller sites).		

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Options a, b and c are all alternative approaches to one another. **High-level screening conclusion? -** The options are similar to each other from a sustainability perspective **Screened in for detailed appraisal? -** No **Rationale:** The three options are alternatives to one another, but Option a and Option c are similar. The former sets out locally based criteria which might be more appropriate to Oxford's context should sites come forward, whilst the latter relies on the criteria set out in national policy. Neither of these options proposes to search for sites, unlike Option b, which would allocate sites to meet an identified need. Primarily relates to **criterion 4. Local housing needs** (meeting needs for a particular group), but also addresses **criterion 6. Services** (in that the options consider suitability of sites in terms of access to other services). Option c would have a neutral impact as national policy is relied upon. Option a could also have a neutral impact as it doesn't allocate sites to meet this type of need, but the criteria included in the policy should any sites come forward, are more relevant to the local context of Oxford. Option a would score a minor positive in respect of criterion 6, as ensuring accessibility to local services forms part of the criteria to be met. Option b is potentially a minor positive in helping to meet housing need (criterion 4) (should one be identified) and ensuring accessibility to local services is factored into where this accommodation comes forward (criterion 6). Overall, it is not considered that there are significant sustainability impacts that would warrant detailed sustainability appraisal.

1031

Homes for Travelling Communities – Draft Policy H12

To support the travelling community, the preferred approach for the Local Plan 2045 is to include a policy that sets out criteria against which to assess any sites that do come forward for gypsies and travellers and travelling showpeople, whilst acknowledging that their requirements differ. It is not proposed to allocate specific sites for this kind of housing type as the 2024 assessment does not identify current or forecast need for Gypsy and Traveller and Travelling Showpeople accommodation in Oxford within the plan period.

Of the three options that were considered to be taken forward, **Option A** is the preferred approach. This option provides a framework for applications for gypsy and traveller pitches and travelling showpeople yards to be assessed against should they come forward, where all criteria will need to be met, whilst not allocating sites.

Policy options set 003e (draft policy H13): Homes for boat dwellers

1032

Residential boats and their dwellers on both permanent and temporary visitor moorings contribute to the cultural and housing diversity of Oxford and provide a type of accommodation that can be more affordable. There are several policy options below which suggest how this type of housing could be approached.

Table 5 - Policy options set 003e: Homes for boat dwellers

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Do not allocate sites for new moorings but have a policy setting out criteria to assess any sites that do come forward.	Criteria can be developed to ensure that residential moorings have the facilities and services they need to make them safe and suitable homes and to direct them to the types of watercourses where they are suitable.	If proposals for residential moorings do not spontaneously come forward, then identified needs for moorings will not be met; this approach is not pro-active in trying to meet this need.
Option b	If a site could be found this site would help to ensure identified needs are met. Current site	This will not necessarily result in delivery of sites if there is no landowner interest. Searches for suitable

Search for a site to allocate for new moorings.	allocation planning policy in Local Plan 2036 SP29 includes a proposal for some new residential moorings.	sites show there are few potential sites in Oxford remaining. Some actions, such as converting visitor moorings to residential, can't be brought forward through the planning system.
Option c Do not allocate sites or set out policy criteria.	None identified	This would result in a lack of clarity and consistency of approach with no planning policy framework by which to assess planning applications.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Options a, b or c are all alternative approaches to each other. **High-level screening conclusion? -** The options are similar to each other from a sustainability perspective **Screened in for detailed appraisal? -** No **Rationale:** All the options are alternatives to each other. Option a proposes not to allocate sites but to have a criteria-based policy should applications come forward. Option b would allocate a site to meet identified need, whilst Option c would not allocate sites or set out policy criteria. Primarily relates to **criterion 4. Local Housing Need** (meeting needs for a particular group), but also addresses **criterion 6. Services** (in that the options consider suitability of sites in terms of access to other services). Option c would have a neutral impact although this may depend on implementation, especially should an application for residential mooring be submitted as there is little national policy guidance in respect of moorings, therefore no clarity on how these applications will be assessed could be given. Option a and b are potentially a minor positive in helping to meet housing need (criterion 4) and ensuring accessibility to local services is factored into where this accommodation comes forward (criterion 6) - either through the criteria as in option a or in the

1033

process for allocating the sites as in option b. Overall, it is not considered that there are significant sustainability impacts that would warrant detailed sustainability appraisal.

Homes for Boat Dwellers – Draft Policy H13

To support those people who wish to live on boats, the preferred approach for the Local Plan 2045 is to include a policy that sets out criteria against which to assess any sites that do come forward. It is not proposed to allocate specific sites for this kind of housing type as there is limited potential for additional sites in Oxford because of constraints such as the need to maintain safe navigation of the main river channels and avoiding conflict with the operational requirements of both the Canal and River Trust and Environment Agency.

Of the three options that were considered to be taken forward, **Option A** is the preferred approach. This option provides a framework for applications for residential moorings to be assessed against where all criteria will need to be met, whilst not setting out specifically where these moorings should be located.

1034

Policy options set 003f (draft policy H14): Elderly persons' accommodation and other specialist housing needs

The NPPF (paragraph 63) lists older people (including those who require retirement housing, housing with-care and care homes) and people with disabilities as groups whose housing needs should be understood and attempted to be met. There are a number of potential policy responses that could be considered. There are a wide variety of different housing types to support the elderly and those with additional needs. The need for these housing types is set out in Oxfordshire

Table 6 - Policy options set 003f: Elderly persons' accommodation and other specialist housing needs

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a policy that is supportive of elderly persons' accommodation of all	This approach ensures elderly persons' accommodation is in the right locations to provide the best quality of life for residents, making sure they have good local access to needed facilities	This approach will not necessarily lead to needs being met and may prevent some proposals coming forward.

types, but with criteria to be met that ensures it provides good quality living accommodation, is in accessible locations and is part of a mixed and balanced community.	and that they are not isolated and cut off from the wider community.	
Option b Include a general policy that is supportive of specialist needs accommodation of all types but does not provide additional criteria on quality.	This would maximise the potential for proposals for elderly persons accommodation to come forward.	This would not require elderly persons' accommodation, so wouldn't necessarily result in its delivery. It could result in accommodation coming forward in unsuitable locations where the residents become or feel isolated.
Option c Require a proportion of the affordable housing on large sites to be used to meet specialist housing needs.	There are a range of specialist housing needs in the city, which are expected to increase over time. It is not feasible to require a whole site to be used to meet these needs. This approach provides a potential means of delivering housing to meet these needs. This approach would help deliver mixed and balanced communities and meet the widest range of needs.	This approach would reduce the amount of regular affordable housing provided to meet the needs of those on the housing list, which is the greatest need in Oxford. The need may still be too great to meet without too much harm to other aims, and it will be difficult to set a justifiable threshold for sites if it is not set at a level to meet all needs. It is important it does not over-burden developers and prevent sites coming forward. Ultimately, in Oxford this policy is likely to be ineffective because there are simply not large enough sites available for this approach to be feasible. That is because there is a critical mass of units that are viable to manage. This need may be met on strategic sites just outside the city, or on sites where the developer makes a decision to bring

1035

		forward a scheme wholly of this type of accommodation.
Option d Include a policy that is restrictive of types of elderly persons' or supported accommodation, for example private market flats available to older people but with limited onsite support.	This could prevent an imbalance in the type of elderly persons' accommodation, for example a large amount of expensive private accommodation with minimal care on-site.	An attempt to restrict elderly persons' or supported accommodation of any type generally is unlikely to be justified or beneficial, as some needs will be met by all types of elderly persons' accommodation. This would also limit opportunities to downsize and free up larger homes to the market.
Option e Do not include a policy relating to elderly persons or other supported accommodation	This would allow the market to respond to need spontaneously and without restriction.	It could give rise to a 'land take' of speculative care homes instead of using land for other housing to better meet local needs, it could lead to no new accommodation of this type or it may lead to unsuitable accommodation in unsuitable locations that does not help to address needs.

1036

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - the options are standalone options, rather than ones that could be combined. **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** Only one of the options would actively require supported housing; the others are either supportive of it to a greater or lesser degree or would restrict particular types (in order to encourage others). Even the approach that actively requires supported housing could only apply to very few sites in Oxford, so would not have an impact significantly greater than the other options. PARA summarising the likely sustainability impacts (if any) in relation to the 12 SA criteria

Older Persons and Other Specialist Accommodation – Draft Policy H14

The preferred approach for the Local Plan 2045 is to have a local policy that sets criteria to guide where and how this type of accommodation comes forward. It is not proposed to set any kind of requirement for this housing type. That is because of the lack of opportunity to do so in the city, which lacks sites of a large enough capacity.

Whilst either of the four options, option A, B, C, D or E could be taken forward, the preferred approach is **Options A.** This option is supportive of elderly persons accommodation, but reflects both the fact that there is only a modest need in Oxford, compared to a significant need for other housing types, and that this housing type is likely to come forward in an unpredictable way, in response to a variety of factors that may influence the landowner, rather than being predictable enough to enable an allocation. It also reflects the fact there are no sites large enough for this to come forward as a requirement for part of a site over a certain size.

Policy options set 003g (draft policy H15): Self-build and custom house building options

1037

The NPPF lists people wishing to commission or build their own homes as groups whose housing needs should be understood and attempted to be met. It also states that local planning authorities should seek opportunities through policies and decisions, to support small sites to come forward for self build and custom housebuilding.

There are several policy responses that could be considered.

Table 7 - Policy options set 003g: Self-build and custom house building

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require a proportion of the overall number of units (or of the site area to be developed for residential use) to be made available as self-	Gives an opportunity for being able to build your own home in a very constrained city. We are required to show we are meeting the need for this housing type, and this option allows us to do that.	The size of site threshold and the proportion of the site would need to be matched to the housing trajectory to check enough plots would come forward through this approach to meet needs (as demonstrated by the self-build register). However, the rate of addition to the self-build register is likely to vary over time and the level of interest in plots is yet

build plots for large sites, for example all sites over 100 dwellings). Set threshold to meet identified need.		to really be tested so it could be that this does not meet needs or provides more plots than the level of interest and creates delays in delivery. Much residential development in the city involves flats to ensure efficient use of land, this type of development is much more complex to package up as self-build plots.
Option b Require a smaller proportion of the overall number of units (or of the site area to be developed for residential use) to be made available as self-build plots for a larger number of smaller sites, for example all sites over 10 dwellings	This approach could give more certainty that sufficient plots will come forward, because it does not depend on large sites being delivered, and large sites are more easily delayed and the delay of one site when the policy only applies to a few would have a greater impact. Therefore, this may give a greater opportunity for those on the self- build register to gain land to develop their own property.	The more land given to self-build housing would result in less housing being delivered of other types and tenures. Very complex to achieve on small sites and could risk the viability of developments. Marketing of singular self-build flats on multiple sites is likely to be very challenging and unlikely to be practical.
Option c Allow exceptions to the policy where this would not work well (e.g. only flats, student accommodation). Set thresholds to meet identified need.	Such a policy approach ensures that this type of housing is only made available on sites where it would work well.	Sites that would allow exemption would be developed with no self build opportunities.

1038

Option d Include a criteria-based policy which is positive towards but not requiring of self-build	Such a policy approach supports the delivery of other housing beyond self-build and custom build which is where there is the greatest need.	Without a specific policy there is potentially limited scope for people to find self-build plots, or custom housebuilding. This is not compliant with the Government's approach, which requires us to meet the need for self-build and custom housebuilding.
Option e Include in the policy that any self build plots that have been marketed but not sold over a specified time (e.g. 12 months) should be built and brought forward as dwellings in the usual way.	Such a policy approach gives an opportunity for those interested to gain land to develop their own property but acknowledges that if the plots have been marketed yet have not sold then they should be made available for the delivery of non self build housing as this is where there is greater need.	Demand for self build plots may vary over time and any new additions to the self build register would have reduced opportunities to develop their own properties as these plots would be lost.

1039

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? – various combinations (e.g. either a, b, c or a combination of a+b+d or a+d or b+d). **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** The self build register demonstrates that there is local demand to support the NPPF requirement for opportunities to be given for small sites for self build housing to come forward. The local context in Oxford leads to several potential options for how best to formulate a policy. Options a and b represent different levels of scope over which to apply a requirement (applying to either large sites only or sites over a smaller size threshold), whereas option c allows an exception to the prescriptive policy in

circumstances where the provision of self built plots could undermine the delivery of other types of housing. Option d represents a more influential as opposed to prescriptive approach. Option e represents an additional dimension that could be incorporated with both options a and b or alongside option a or b.

Considering sustainability impacts of the various options, they would generally all relate to the same SA criteria, **criterion 4. Local Housing Needs** because of how they help to meet needs of different groups in the community. The high land values in Oxford however mean that the provision of self build plots isn't really an affordable housing model/ affordable way to access housing.

Between the options, the level of sustainability impact is not considered to be significantly different. Homes would still be built and whilst focusing on larger sites (option a) concentrates delivery, focusing on smaller sites (option b) means that there is more dispersal geographically which could increase delivery times. Potentially option a could have a greater risk of homes not getting finished/ delivered as more smaller sites are likely to come forward than larger ones. Option c would likely have positive impacts. Option d of not having a prescriptive approach would likely be neutral impact. Option e could have either a neutral or more positive impact, more positive if the plots are built out for self build but neutral if they are built out as non-self build. Overall the differences between the likely impacts of the options are not considered to be significantly different, none of the options have major impacts on sustainability.

1040

Self-Build and Custom Housebuilding – Draft Policy H15

To support people wishing to build their own homes, the preferred approach for the Local Plan 2045 is to include a policy that requires self-build/ custom built plots to be made available.

Of the five options, either option or various combinations of these could be taken forward. The preferred approach is a combination of **Options A, C and E** which will provide an opportunity for this type of housing to come forward on sites that are suitable and where

it would work well, yet also ensures that any plots marketed for self build that have not sold after a certain period of time can be made available for other housing as this is where there is a greater need.

Policy options set 005h (draft policy H15): Community-led housing options

The NPPF indicates that local planning authorities should seek opportunities, through policies and decisions, to support small sites to come forward for community-led development for housing. There are several potential policy responses that could be considered.

Table 8 - Policy options set 003h: Community-led housing

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a policy that is generally supportive of community-led housing but does not have any requirements.	Gives an opportunity for being able to build your own home in a very constrained city, or develop community led housing schemes that could continue to provide more affordable accommodation in perpetuity. We are required to show we are meeting the need for this housing type, and this option allows us to do that.	This approach would actively ensure this housing type comes forward, so would not necessarily result in it being delivered.
Option b Require a proportion of the total site area to be available to groups wishing to develop community-led housing (for example of over 100 dwellings).	Gives a greater opportunity for community-led housing groups, to gain land to develop their own property.	More land given to community-led housing would result in less housing being delivered of other types and tenures. Very complex to achieve on small sites and could risk the viability of developments. Delivering this in combination with any requirement for self and custom housebuilding could lead to a significant decrease in the delivery of other housing types for which there is a greater need, including all tenures of affordable housing.

1041

Option C Do not have a policy that is supportive of community-led housing schemes.	Such a policy approach supports the delivery of other types of housing for which there is greater need.	Without a specific policy there is potentially limited scope for people to join community-led housing schemes.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a, or b, or c **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts. **Screened in for detailed appraisal? -** No **Rationale:** The local context in Oxford leads to several potential options for how best to formulate a policy. Option a shows general support but would contain no requirement for this housing type, which is probably appropriate given that whether it comes forward would be out of the control of developers. Option b would set a requirement for a certain amount of this housing type on large sites, although it would not be expected that there would be community housing groups necessarily ready to take up opportunities. Option c would have no policy support for this housing type. Considering sustainability impacts of the various options, they would generally all relate to the same SA criteria, **criterion 4. Local Housing Needs** because of how they help to meet needs of different groups in the community. The high land values in Oxford however mean that community housing isn't necessarily likely to be an affordable housing model/ affordable way to access housing.

1042

Between the options, the level of sustainability impact is not considered to be significantly different. Homes would still be built and opportunities could be taken to delivery this housing type by community housing groups if they are in a position to. The options would all be likely to have only a neutral effect on criterion 4.

Community led housing – Draft Policy H15

To support community-led housing schemes, the preferred approach for the Local Plan 2045 is to include a policy that supports this type of housing. Of the three options, either option could be taken forward. The preferred option is **Option A** which will provide an opportunity for this type of housing to come forward on sites that are suitable. Although acknowledged that community led housing will not necessarily meet the requirements for self-build or custom build housing, community-led housing has been incorporated within policy H15 rather than a standalone policy, with wording intended to show how it could meet the need for self-build or custom build housing.

1043

Policy options set 003i (draft policy H16): Boarding School Accommodation

There is no national policy or guidance regarding the development of boarding schools. However, the context of Oxford would encourage a policy as Oxford has a very large housing need with significant competition for land and sites. There are several policy options that can address the development of boarding schools.

Table 9 - Policy options set 003i: Boarding School Accommodation

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a policy that allows this accommodation type in most locations, with some criteria guiding how they come forward.	This still accommodates for expansion of boarding accommodation but sets out a clear criterion which will protect the loss of C3 dwellings.	This approach would likely do little to prevent the competition of this accommodation type with other housing types tha meet housing needs.
Option b Include a more restrictive policy that limits the locations where this type of	This restricts boarding school accommodation to the locations where it is most suitable for students and tries to	Boarding schools may find this approach too restrictive if they have significant growth plans.

accommodaion would be permitted, for example to allow it only on existing school sites.	avoid potential issues with surrounding neighbourhoods.	
Option c Do not include a policy relating to boarding school accommodation.	Boarding schools would have no restrictions on developing accommodation to meet their own needs.	This may cause the loss of C3 dwellings or compete with opportunities to delivery C3 dwellings, and may also cause harm to local neighbourhood and character of the area.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - **High-level screening conclusion? -** The options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** In terms of options, it would be appropriate to consider having a policy as there is no specific NPPF guidance. Local context supports the inclusion of some sort of policy, with potential options for how best to formulate a policy. The options that the Council have considered represent various approaches to setting policy. There have been several recent planning applications for boarding school accommodation, demonstrating local demand. This type of accommodation is not classed as residential and does not form part of Oxford's housing need. The inclusion of a policy would enable the monitoring of growth and ensure that boarding school accommodation is granted where appropriate and not competing for much needed residential dwellings and development. In terms of sustainability impacts, the different options all score against **criterion 4. local housing need** and the level of sustainability is unlikely to vary significantly between the options. Option a would have a neutral impact as this policy won't necessarily create or bring forward any new residential homes. Option b would have a neutral impact as it would be permitting limited development but still not bringing forward new residential development (although does the most to avoid competition with it). Option c could potentially have a minor negative impact as without a policy it could reduce sites available for residential development. Overall, the sustainability impacts are not considered significant for any of the criteria, regardless of the option.

1044

Boarding School Accommodation – Draft Policy H16

The preferred approach for the Local Plan 2045 is to have a local policy that limits the location where this type of accommodation would be permitted to existing campus sies or adjacent to them.

Whilst either of the three options, option A, B, or C could be taken forward, the preferred approach is **Options B.** This option limits the opportunities for boarding accommodation to compete with other housing types that meet housing needs. Because of the restriction to sites within or adjacent to existing school campuses, this limits the potential for impacts on amenity from school students needing to travel or being located in residential areas remote from the school. Other matters of student safety and facilities are guided by separate regulations, and so the policy does not provide criteria to determine applications against, only the locational restriction.

1045

Background paper 004

Title: Employment and Inclusive Economy

This paper addresses jobs (including knowledge-based jobs, jobs for unskilled residents, apprenticeships and jobs to support a diverse economy) and considers how best to use land to support and diversify the economy. **It addresses how the Local Plan can best use land to support and diversify the economy while fostering growth in key sectors including science and innovation.** **It considers how best to support local people and businesses access the training and opportunities they need to enable them to prosper.**
Relevant Local Plan 2045 Objective(s): • Maximise the benefits of the city's strengths in knowledge, healthcare and education while supporting economic growth in key sectors including science and innovation. • Recognise the valuable contribution that supporting a range of businesses (including SMEs) can make to innovation and economic diversity. Help to create the conditions in which all businesses can prosper. • Create opportunities for everyone in the city to access employment. Support local people giving them access to training, education and apprenticeships to make the most out of new job opportunities created in the city. • Help Oxford to continue in its role as a national and international destination and support the visitor economy by encouraging longer stays and higher spend in Oxford.
Relevant SA Objective(s): 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.
SEA theme(s): Population and material assets.

1. Introduction

1.1 This topic paper focuses on Oxford's economy, employment and the importance of research and development, education and skills. Oxford is recognised as a globally known brand. It has major assets which include two leading universities, and cutting-edge research in areas including bio-tech, data science, quantum technology and robotics. The city is home to diverse international enterprises including BMW Mini, Oxford University Press, Unipart, Centrica, Amey, Nielsen and TripAdvisor among numerous others. The city's economy plays a key role within both a wider regional and national context. Despite this, Oxford's level of unemployment is higher than the national average. Although it is a city renowned for education, disparities in education levels do exist and there are examples of areas where there is a deprivation of skills.

1.2 This topic paper provides a brief summary of the relevant national, sub-regional and local plans, policies and programmes that currently exist and are likely to influence change in the future. There is a section on Oxford's economy and its importance to the national economy, which includes some headlines that help to define the economy of the city, its job growth, key and potential emerging sectors. There is also a section on Oxford's existing education facilities. This includes some key indicators identifying the importance of these education facilities to both Oxford and Oxfordshire. As part of an assessment of the current situation some of the key challenges and future trends that impact the local economy are identified. The next section explores what would happen without a new plan and the potential issues that the city would face. The final section provides some conclusions and sets the key issues which the plan addresses, drawing conclusions from the evidence in relation to each of the policy approaches.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Industrial Strategy: Invest 2035

2.1 The publication of Invest 2035: the UK's modern industrial strategy, sets out this administration's "commitment to develop a modern, targeted industrial strategy, with the objective of long-term, inclusive, and resilient growth, by spurring investment into all parts of the UK".

2.2 The National Industrial Strategy focuses on "stimulating investment and activity in sectors with the highest growth potential". It identifies eight growth-driving sectors to be prioritised across services and manufacturing. These sectors are based on both existing and emerging strengths and are as follows:

- Advanced manufacturing
- Clean energy industries
- Creative industries
- Defence
- Digital and technologies
- Financial services
- Life sciences
- Professional and business services

2.3 Oxford and Oxfordshire are home to the majority of these identified growth-driving sectors. Driven by the existing presence of two successful universities, and their close ties to research and industry, there is significant potential for Oxford and Oxfordshire to further develop and deliver these nationally important growth-driving economic sectors.

Industrial Strategy Zones Action Plan (June 2025)

2.4 The Industrial Strategy Zones Action Plan sets out twenty-two locations across the UK which aims to create successful places that can deliver their full potential, supported by specific funding initiatives. The Government wants to ensure that these specific locations can seize opportunities and develop industries of the future. It is worth noting, all Industrial Strategy Zones are located outside Oxfordshire, however.

AI Growth Zones

2.5 The Government wants to accelerate efforts to build the necessary infrastructure needed to support AI growth. It sees AI Growth Zones as important as their creation will help to unlock investment in these areas by improving access to power and providing planning support. The Government has (to date) announced four AI Growth Zones, the first of which, at Culham in Oxfordshire was announced in April 2025.

National Planning Policy Framework (December 2024)

2.6 The NPPF gives a clear steer towards supporting economic growth through planning policies and it is clear significant weight should be placed on the need to support sustainable economic growth and productivity.

2.7 The NPPF sets out a requirement for a clear economic vision and strategy, which positively encourages sustainable economic growth having regard to the national industrial strategy and any relevant Local Industrial Strategies and local economic development and regeneration policies. It also sets out that Local Plans should develop policies that help to create the conditions in which businesses can invest, expand and adapt to meet anticipated needs over the Plan period.

2.8 The NPPF sets out a key economic objective which requires policies ‘to help build a strong, responsive and competitive economy’. This aims to ensure 'that sufficient land of the right

types is available in the right places and at the right time to support growth, innovation and improved productivity.' Planning policies are also required to 'create the conditions in which businesses can invest, expand and adapt' and to positively respond to the 'need to support economic growth and productivity'.

2.9 The NPPF highlights the importance of meeting the specific locational requirements of networks and clusters including the knowledge and data driven sectors, creative or high technology industries. National advice also requires a policy approach that 'should allow each area to build on its strengths, counter any weaknesses', and address 'the challenges of the future'. This is considered particularly important where 'Britain can be a global leader in driving innovation' and in 'areas of productivity' which should 'capitalise on their performance and potential.'

Draft NPPF Consultation (December 2025)

2.10 In December 2025, the Government announced a consultation on a revised NPPF. While not directly applicable to the Oxford Local Plan 2045, the consultation material highlights some revisions to current national policy, which indicate the likely direction of travel for future development plans.

2.11 In relation to the national economic policy position, some of the changes are largely editorial in nature. Notable changes include the introduction of national decision-making policies, and a new policy setting out the specific planning considerations for freight and logistics development, and associated infrastructure.

2.12 The consultation material highlights that elements of paragraphs 86 and 87 of the current NPPF are proposed to be redrafted, while notable changes include the expectation for plans to include explicit references to Industrial Strategy Zones, AI Growth Zones and Industrial Strategy itself. Additional text is also proposed to enable flexibility to respond to changing commercial property circumstances, which seek to ensure that site allocations for economic purposes are not overly prescriptive (unless there is a clear and justified rationale for doing so).

Planning Practice Guidance (PPG)

2.13 The PPG includes guidance about how local authorities should prepare and maintain an evidence base regarding the economic needs of their area. In working out the business needs for an area, consideration should be given to a range of factors including evidence of market demand; wider market signals relating to economic growth, diversification and innovation; the existing stock of land for employment uses and the recent pattern of employment land supply and losses. It also sets out a method for assessing economic land availability.

Oxford-Cambridge Growth Corridor

2.14 In January 2025, the Chancellor unveiled new plans to deliver the Oxford-Cambridge Growth Corridor that will boost the UK economy by up to £78 billion by 2035, catalysing the growth of UK science and technology. Sir Patrick Vallance has been appointed as the Oxford-Cambridge Growth Corridor Champion to provide senior leadership to ensure that the Government's ambitions are delivered. The Oxford-Cambridge Growth Corridor will provide a clear strategy for the entire region backed by funding for housing and infrastructure. A new growth commission for Oxford was also announced in January to review how nationally significant growth for the city and the surrounding area can be unlocked and accelerated.

Oxford Cambridge Pan-Regional Partnership

2.15 In January 2023, the previous Government confirmed support for the establishment of an Oxford to Cambridge Pan Regional Partnership following a proposal by leaders from local councils, local enterprise partnerships, the Arc Universities Group and the area's transport body – England's Economic Heartland. However, following an announcement in the Autumn Budget 2024, a decision was made by the new Government not to fund the Oxford to Cambridge Pan-Regional Partnership from 2025-26. The partnership was formally closed in May 2025, and some of its work and assets were transferred to the Cambridgeshire and Peterborough Combined Authority, and England's Economic Heartland (EEH), the geographical extent of which includes several counties including Oxfordshire.

PwC Good Growth Cities Index 2025

2.16 PricewaterhouseCoopers (PwC) produce an annual Good Growth for Cities Index. The most recent version of this Index, published in September 2025, which compares 50 UK cities using a number of different metrics. The 2025 edition saw ranked Oxford in nineteenth place, having previously been the top performing city from 2017-2023.

2.17 PWC's research indicates that the continuing shift in the public interest from the 2024 edition has resulted in financial priorities less dominant in favour tangible, local and essential concerns such as high streets and shops, skills, housing and transport. Below average comparative scores in the housing and transport indicators are therefore likely to explain Oxford's 2025 ranking. By comparison, Cambridge also had below average comparative scores in the housing and transport indicators, and overall was ranked a couple of places lower the Oxford.

2.18 The report showed that cities across the South-West region continued to perform well this year (Bristol Swindon, Exeter and Plymouth all ranked within the top ten). York topped the index in 2025. Scoring highly across high streets, skills and jobs – key indicators of prosperity that the public increasingly values.

Fast Growth Cities – 2021 and Beyond – Centre for Cities

2.19 The Fast Growth Cities Report 2021 provided an update to a report from 2016. The cities that make up the Fast Growth Cities group (comprises of Oxford, Cambridge, Milton Keynes, Norwich, Peterborough and Swindon) were considered as some of the most successful and innovative places in the UK. The Fast Growth Cities Report focused on six key areas:

- Labour markets, skills an education;
- Businesses and growth;
- High Streets and city centres;
- Housing and planning;
- Transport; and
- The economic impact of the pandemic.

2.20 The report recognises that the Fast Growth Cities group contains some of the UK's most successful cities, many of which (including Oxford) have a significant impact beyond their boundaries.

Oxford Growth Commission: Interim Report (December 2025)

2.21 Published in December 2025 by the Government on behalf the Oxford Growth Commission, this Interim Report sets out the views of the Chair (Neale Coleman – appointed in May 2025) on how best to unlock and accelerate growth in Oxford and the surrounding area. The Interim Report includes 47 recommendations for central and local partners with a focus on maximising the benefits of growth for the local area, and for the UK as a whole.

2.22 The final report, scheduled for Autumn 2026, will set out a series of recommendations to Ministers on priorities and actions to support growth in Oxford and Oxfordshire.

Enterprise Oxfordshire

2.23 Oxfordshire's wider economic vision and strategy are contained within several documents produced by the former Local Enterprise Partnership (LEP) for Oxfordshire. The county council (from April 2025), through Enterprise Oxfordshire, is now ultimately responsible for this work and acts as the sole shareholder for Enterprise Oxfordshire.

Prior to the creation of Enterprise Oxfordshire, the Oxfordshire LEP created a range of key economically focused documents including the Strategic Economic Plan (SEP), and its supporting Action Plan, the Local Industrial Strategy (LIS), and Local Investment Plan (LIP). The SEP was first produced in 2014 and was refreshed in 2016. More recently (December 2023) a refreshed SEP was published to help drive productivity, prosperity and wealth for all whilst accelerating Oxfordshire's transition to net-zero.

2.24 The SEP aims to champion good, sustainable growth that realises a shared ambition that by 2033, people and communities across Oxfordshire will be benefiting from new

opportunities which are created sustainably through local enterprise and innovation.

2.25 The LIS, published in July 2019, described Oxfordshire as a global centre of research and innovation, home to a number of world-leading science and technology companies located across business clusters and hubs, forming a hive of knowledge-intensive economic activity. It describes how cutting-edge products and services are solving challenges in healthcare, mobility, energy and communications, meaning Oxfordshire's success is critical to the UK.

2.26 The key sectors and technologies that Oxfordshire excel in have 'global reach', meaning we are a critical driver for UK economic growth. A primary aim of the strategy is to build a global innovation ecosystem in Oxfordshire by 2040. Existing and proposed developments in Oxford are central to this, including the West End.

Oxfordshire Leaders Joint Committee (OLJC)

2.27 The joint committee's purpose is to deliver the aims of the Oxfordshire Strategic Vision, adopted by all six councils. The Oxfordshire Strategic Vision aligns with the ambitions of the Strategic Economic Plan (2023) and sets out a set of guiding principles, a set of outcomes to be achieved by 2050, and a definition of "good growth". Taken together, these form an overarching approach to long-term sustainable development in Oxfordshire.

2.28 The OLJC consists of all six Oxfordshire authorities and makes several commitments, including to:

- Coordinate local efforts to manage economic, housing and infrastructure development in a way that is inclusive and maximises local social and environmental benefit.

Oxfordshire's Innovation Engine 2023 – Advanced Oxford

2.29 Oxfordshire's Innovation Engine 2023 reassesses the Oxfordshire's Science and technology ecosystem providing an update from the 2013 Innovation Engine Report – Realising the Growth Potential. The report looks forward, but also back over the past decade to see whether the growth potential has been achieved. The report recognises that despite the challenges associated with collecting reliable economic performance data that Oxfordshire appears to have a thriving and diverse innovation ecosystem. It sets out that while the region's knowledge economy has grown, high and medium-tech manufacturing has declined (although this may be more down to a more mature ecosystem).

2.30 There is a growing stock of innovation space with many new developments in the pipeline which will add much needed capacity into the system in the next five years. Housing and transport continue to be key challenges and need to be addressed. Other infrastructure needs investment too, particularly data connectivity and supply of power.

2.31 The report makes six recommendations if Oxford's innovation ecosystem is to continue to flourish, strengthen and play a pivotal role in making the UK a beacon for science, technology and innovation:

- Strengthen leadership across the region in relation to innovation;
- The City Council and County Council need to work together to develop a much- needed future-looking transport system which is Oxfordshire wide, not just focused on the city of Oxford;
- Grow and diversify the number of risk capital investors operating within the region;
- Develop a new, clear strategy, with collective buy-in, for inward investment into the region. Different players within the ecosystem need to work together to ensure that Oxfordshire is open, coherent and can respond to potential investors;
- Join up nodes of innovation across the region and help internal and external stakeholders to navigate the landscape through better defined pathways and connectors; and
- Develop a suite of communication tools and assets, tailored to the needs of different audiences, which can be used by all players, to tell Oxfordshire's innovation story.

Oxford City Council – Our Strategy 2024-28

2.32 The Council's corporate plan entitled, Our Strategy 2024-28 sets out five key priorities to support Oxford's ambition to continue to be a city that is a world-leading centre of research, innovation and science and a thriving place for independent businesses. One area of focus for the strategy is to support a strong fair economy under which the three priorities for the Council to deliver are as follows:

- Secure, fairly paid, local jobs for Oxford's residents and access to skills and reskilling training
- Using Oxford's unique strengths in a global economy to attract high quality investment
- Supporting development to boost economic activity and deliver benefits for all

Oxford City Council Economic Strategy 2022-32

2.33 Oxford's Economic Strategy seeks to establish a new standard for economic inclusion in the city, underpinned by the strength of an impactful global city, evolving in a way which recognises environmental limits and harnesses the opportunity of a zero-carbon economy. The Economic Strategy highlights Oxford's significant specialisms as:

- Health and Life Sciences; Technology and Digital; Creative Production; Green and Low Carbon; the Visitor Economy; and Social Enterprises and co-operative businesses

2.34 Oxford's Economic Strategy recognises that Oxford's economy has a positive global impact and as a hub of education and knowledge, it has a clear purpose to address many of societies' challenges through science and technology. Oxford City plays a key role developing research and incubating early-stage companies. It is one of Oxfordshire's most sustainable locations to locate employment, due to its critical mass, and connectivity to transport and research assets. It recognises Oxford's physical capacity constraints, and the need to deliver commercial floorspace in such a way that does not compromise wider placemaking, zero carbon and green and sustainability objectives.

2.35 The City's ambition is to ensure that the anticipated growth is of good quality, in the right location, supported by appropriate infrastructure and contributes to an inclusive economy.

Oxford City Centre Action Plan 2021-2030

2.36 The City Centre Action Plan (CCAP) sets out four workstreams, each intended to focus on a different thematic area of work. Each workstream is defined by a series of objectives, under which projects are identified. The four workstreams are:

- Connectivity and access:
    - To be delivered by limiting private vehicles, reducing conflict and congestion and creating spaces for buses, bikes and people;
- Public realm and animation:
    - To be delivered by improving the public realm and providing events and experiences to animate it and boost dwell times;
- Getting the mix right:
    - To be delivered by building on Oxford's world-class innovative and creative spirit, enhancing the city centre as a place to live, start and grow a business, visit, and play; and
- Get the basics right:
    - To be delivered by creating an inclusive, safe, and attractive city centre that mediates and promotes a diverse range of activities and uses.

2.37 The City Centre Action Plan also includes a series of objectives under each workstream. Not all of these can be directly influenced by the Local Plan 2040 as some need to be undertaken in partnership with colleagues, for instance, at the County Council.

Oxford Local Plan 2036 (Extant plan)

2.38 The policy approach for the city's economy seeks to build on Oxford's strengths and ensure the delivery of prosperity and opportunities for all. Oxford is home to many jobs with particular concentrations in the higher education, research and science sectors. The economic performance of the city is influenced by wider sub-regional and national plans. These include Oxfordshire's Strategic Economic Plan (refreshed in December 2023), the Local Industrial Strategy (2019) together with the Oxford Cambridge Pan Regional

Partnership (confirmed by Government in January 2023) and the Oxfordshire Housing and Growth Deal (2017).

2.39 Oxford's employment strategy in the Local Plan 2036 seeks to protect the city's existing network of well-performing employment sites, while supporting the release of poorly performing sites to other uses (including housing). Policy E1 categorises the city's network of employment sites according to their importance to the national and local economy. Category 1 employment sites are the city's most important employment sites supporting the national economy or are significant local employers or sectors. Category 2 employment sites provide local services and facilities, whilst Category 3 are generally smaller, less well-performing sites.

2.40 Policy E1 supports the modernisation and intensification of any category of employment site. The modernisation and intensification of any employment site will be supported in principle where it can be shown that the new development makes efficient use of land and does not result in adverse environmental issues. Generally, the approach taken is to resist the loss of employment floorspace at category 1 or 2 sites, but it in the case of poorly performing Category 3 sites, a criteria-based approach is taken which, if satisfied, may allow the release of some or all of the site to other uses such as housing.

2.41 The Local Plan 2036 also provides policy support for the sustainable growth of the city's two universities - Oxford Brookes University and The University of Oxford. This support allows these institutions to maximise the economic, social and cultural benefits they both bring to the city.

2.42 Oxford is also a major centre for teaching hospitals and home to a number of acute and specialist medical research organisations. These medical research organisations link closely with healthcare research undertaken at the two universities. Research and development and teaching uses associated with health and the hospitals is supported in principle given their role as one of Oxford's key sectors. Proposals for new educational, teaching and academic institutions need to show how they support the objectives and wider policies in the Plan.

Employment and Skills Plans:

2.43 The Oxford Local Plan 2036 encourages the use of Employment and Skills Plans or Community Employment Plans to help mitigate the impact of development and support an inclusive economy. Employment and Skills Plans seek opportunities including ensuring local people can access job opportunities arising from development at both the construction phase and once development is in operational use.

Development opportunities

2.44 There are limited remaining vacant plots at the Oxford Science Park and at ARC Oxford (formerly Oxford Business Park). Both these "Category 1" employment sites have seen

major development recently bringing forward a large amount of employment floorspace supporting Oxford's key strengths. A number of these recent development proposals are now under construction and due to be completed in the short-term. Some of the city's employment sites contain older buildings that are currently in employment uses. These sites cumulatively have significant redevelopment potential for modernisation and/or intensification within the plan period.

2.45 Development opportunities are also being realised at Oxford North with a sizeable amount of floorspace being built out under a series of reserved matters planning applications that support an outline granted in 2021. In Autum 2025, the recently completed Phase 1A was officially opened by Lord Hague of Richmond, Chancellor of the University of Oxford.

2.46 The Plan also recognises that significant scope for the redevelopment of brownfield sites exists in Oxford, particularly those in and around the wider West End of the city centre. Such sites include Oxpens, the 'Island Site', Oxford Station, longer-term opportunities at Osney Mead, and the more immediate opportunities involving the transformation of Botley Road Retail Park.

Oxford Employment Land Needs Assessment (2026)

2.47 Oxford City Council commissioned Rapleys to undertake an Employment Land Needs Assessment (ELNA) in early 2025. This report looks at the employment land need generated by Oxford city. The study assesses Oxford's economic need in quantitative and qualitative terms. It follows the three prescribed quantitative approaches set out in the PPG – a labour demand approach (drawing on an economic forecast), a labour supply approach (aligning the Standard Method (NPPF, December 2024) housing number with labour and jobs supply), and an assessment of a range of past trends in new floorspace completions and past jobs delivery. The consultants, in producing the ELNA also (as suggested in the PPG), engaged at length with the commercial property market, and this provides a qualitative view of the future needs assessment.

2.48 This final version of the ELNA Report builds on the Interim Report, which was published in June 2025 to support the Regulation 18 consultation. It provides relevant updates to the various sections of the Interim report, taking into account the change in base date of the plan period, and sets out conclusions and recommendations based on the findings.

Employment Land Supply

2.49 Oxford City Council monitoring data provides a useful context in relation to the changes to the city's economic landscape that have been taking place over the years preceding the start of the plan-period from 2025-2045.

2.50 This monitoring data was used to inform the city's Employment Land Needs Assessment (ELNA), which provides a comprehensive supply side assessment of employment land. Table 2.1 (below) provides a summary of Oxford's committed supply. A more detailed analysis is presented in the ELNA.

2.51 Table 2.1 shows total floorspace of committed supply based on the most up-to-date plan monitoring data (as at 31 March 2025), and also includes additional analysis of applications and planning permissions granted as at 17 October 2025).

2.52 The consultants' analysis recognises that while R&D/ lab space is the main form of employment space coming forward in the city, the floorspace under construction (approximately 165,000 sqm of R&D/ lab space) will increase the current office/R&D space available in Oxford by almost 50% (based on VOA (2023) data).

Table 2.1 - showing extant planning permissions involving employment-generating uses. All figures expressed as net increases in sqm (GIA)

Floorspace permitted (sqm GIA)	Office	R&D	Flexible B Class	Light Industrial Uses	General Industrial (B2)	Storage/ Distribution (B8)	Total
	1,877	352,180	2,940	57	-	123	357,177

(Source: Employment Land Needs Assessment, Rapleys, January 2026)

2.53 The ELNA also considered the development pipeline. This analysis included consideration of sites with known developer aspirations, the majority of which have submitted a planning application. The total known net additional floorspace (GIA) at the time the analysis was undertaken was 185.040sqm.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

Oxford's Economy

3.1 According to the Labour Market Profile for Oxford, the city was home to 4,915 businesses, collectively employing approximately 126,000 people in 2023. A high proportion of businesses in the city are micro or SMEs (small or medium sized enterprises). In fact, 96.2% of all businesses in Oxford are micro- (less than 9 employees) or small- (10 to 49 employees) businesses (UK Business Counts, 2025).

3.2 Oxford also has the highest employment rate in the county. The city's importance as an employment location is demonstrated by its job density ratio of 1.19 (2023), which is above the South-East (0.86) and Great Britain (0.86). According to the City Council's Economic Strategy, in 2019 it was estimated that Oxford contributed £6.8bn to the national economy annually.

3.3 The University of Oxford generates more spin-outs than any other university in the country. According to the Oxford University Innovation and University of Oxford Impact Report 2024 - Shaping the Future: Oxford's Innovation Impact, the University has been involved in the creation of more than 300 companies. Research and development, (R&D) is one of the

current growth sectors in Oxford linked directly to the Universities and hospitals. The Covid-19 Pandemic and the ground-breaking research on vaccines with the development of the Oxford AstraZeneca vaccine has helped to highlight Oxford's global importance and its contribution to both the national and local economy. The strong links between healthcare in practice and research are critical.

3.4 A Research Report published in 2021 by the Centre for Cities, entitled Fast Growth Cities – 2021 and beyond showed the importance of a section of fast-growing cities, such as Oxford, and the need to build on their respective strengths as a crucial means of achieving future growth. Innovation systems, such as those established within the city comprise business dynamics, skilled labour and innovative outputs such as patents which together provide the platform for delivering economic growth. The 2021 study confirmed that innovative places, such as Oxford, are likely to be the first places to benefit from the ongoing change in the economy, since they are directly involved in the development of solutions or have the right dynamics to adapt their business models.

3.5 Oxford is therefore well placed to help to drive forward national economic growth by supporting the nationally identified growth driving sectors through the ground-breaking research and development undertaken within the city, which benefits from its strong links between the University of Oxford and the hospitals together with key related commercial firms that are established in the city.

3.6 In 2023, the importance of "Innovation Hotspots" was highlighted by the Centre for Cities in a report entitled Innovation hotspots – clustering the new economy. Hotspot areas, such as Oxford, involve the clustering of businesses and cutting-edge industries. These areas have been more productive and have grown faster since the financial crisis than those areas that do not benefit from clustering.

3.7 The Labour Market profile for Oxford (produced by Nomis) indicates that the total number of jobs in the city peaked in 2018 at 144,000. Since then, the total number of jobs in Oxford had fallen each year to a low of 127,000 jobs in Oxford in 2021. The number of jobs fell most rapidly between 2019 and 2020, where the number of jobs in the city reduced by 9,000. The most recent figures report a total of 143,000 jobs in Oxford (2023).

Availability of broadband

3.8 Oxfordshire County Council's Digital Infrastructure Programme aims to improve digital infrastructure across the county and their work includes bespoke projects such delivering GigaHubs with Full Fibre broadband including at more remote locations including village halls, GP surgeries, schools and other public buildings. Other important work involves the delivery of gigabit-capable broadband to around 10,000 premises in Oxfordshire and driving to deliver 5G technology in Oxfordshire as part of a wider regional project across England's Economic Heartland.

3.9 Good broadband connections are essential for many highly skilled jobs. Oxford is well covered by superfast broadband connections (speeds of >24Mps).

Employment by type

3.10 Official census and labour market statistics from the Office for National Statistics are provided by Nomis. Nomis provides labour market profiles for local authority areas. Oxford City's labour market profile is available on the Nomis website. The statistics for "Employee jobs" shows a sectoral breakdown of employees in Oxford by Industry. At the time of writing the most recent data is for the year 2024.

3.11 This dataset shows a large number of people are employed both in "education" (39,000) and in the "human health and social work" sector (25,000) in Oxford. These two sectors make up 51.7% of all employee jobs in the city. By comparison, these two sectors represent 23.5% of all employee jobs across the South East and 22.8 of all employee jobs nationally. This is significantly more people than are employed in the next two largest sectors. Employee jobs in "wholesale and retail trade; repair of motor vehicles and motorcycles" (9,000) and "professional, scientific and technical activities" (11,000) together account for 16.2% of total employee jobs Oxford, while "information and communication" has dropped from 11,000 in 2023 to 7,000 in 2024.

Employment levels

3.12 The Nomis website provides statistics about both employment and unemployment levels within Oxford's labour market profile. At the time of writing the most up-to-date information presented on the Nomis website was for the time-period between July 2024-June 2025. This showed that Oxford's unemployment rate at 4.1% (this is model based due to a small sample size), was slightly higher than the national average of 4%.

3.13 The Nomis website also provides information on the number of Jobseekers' Allowance (JSA) claimants. This information is also found within the Oxford's labour market profile. It shows that as of November 2025 there were 3,085 people claiming Job Seeker's Allowance or Universal Credit (UC). This represents 2.6% of the working population. This shows a reduction since March 2021 when there were 5,040 claimants representing 4.3% of the working population (i.e., people aged between 16-64 years old).

Micro, Small and Medium Sized Enterprises (Micro SMEs)

3.14 Micro SMEs represent a significant proportion of the city's employment ecosystem. According to UK Business Count data for Oxford (2024), 96.2% of the city's businesses are micro- (employing up to 9 people – 83.9%) or small- (employing between 10-49 people – 12.3%) businesses.

3.15 Recent increased and sustained high-demand for state-of-the-art research and development (R&D) uses including high-value laboratory and office space, has meant that

certain Micro SMEs (including social enterprises, creative and co-operative businesses and local start-ups) have experienced increasing difficulties finding or affording suitable workspaces or premises in Oxford.

3.16 Where suitable premises for these types of Micro SMEs do exist, they are increasingly coming under pressure for redevelopment, and from rising commercial rents across the city. According to Advanced Oxford's Innovation Engine Update (2023), commercial rents have more than doubled since 2016 when prime office rents were £30/sqft (see Figure 4.1 below for more details). Commercial rent increases are currently being driven by very strong prime laboratory and office markets. According to Bidwells Oxford Office and Labs Databook (August 2025), prime city centre office rents were reported at £63/sqft in June 2025. While prime rents for larger fitted lab space remained constant at £78.50/sqft. Both prime office and laboratory rents are expected to continue to rise at steadily over the next five years.

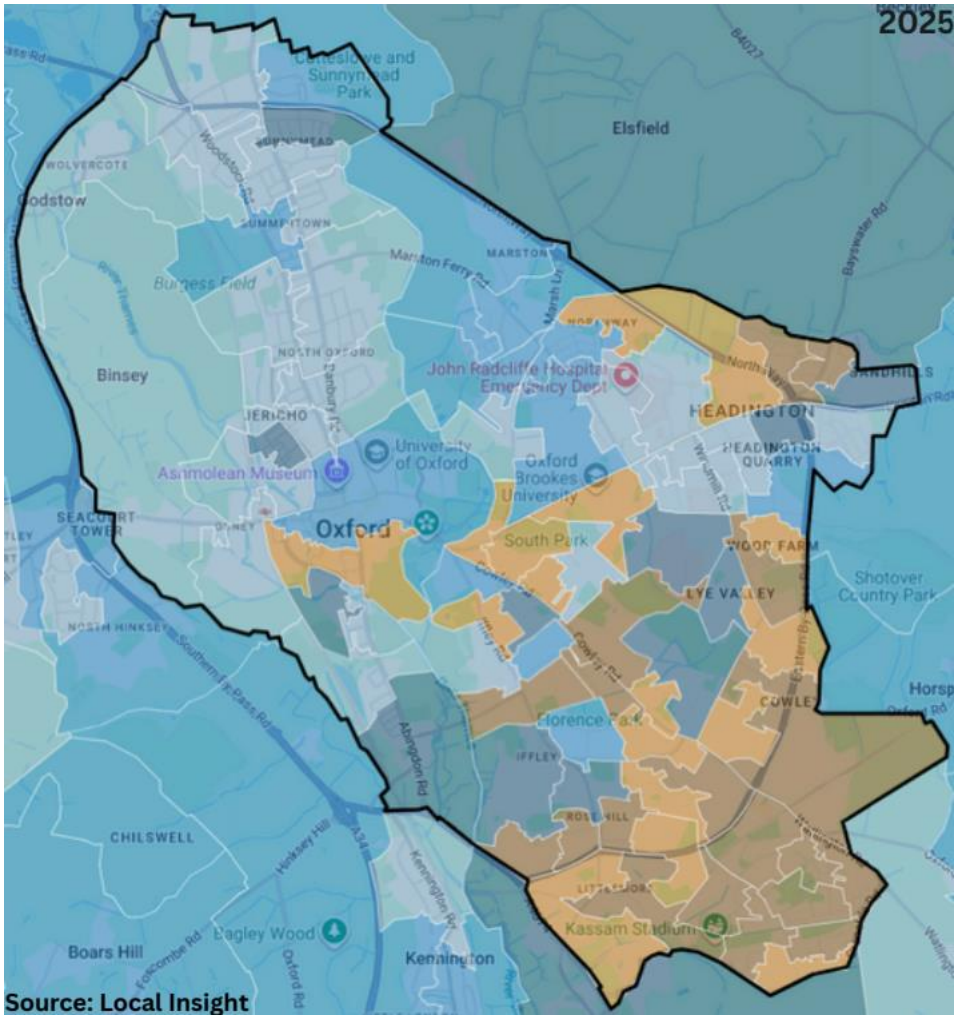
3.17 The dominant type of employment floorspace being proposed and delivered across the city frequently has a large floorplate, which in combination with the prime commercial rents that can command, excludes many business typologies from accessing it. Opportunities to create new premises to support the growth and development of Micro SMEs more generally in the city are restricted by overall land availability and from pressure to deliver other priority uses (e.g., housing) on any sites that do become available. This lack of suitable and affordable premises and workspaces in the city (both existing and proposed) means that many Micro SMEs are at risk of being priced out of the city.

3.18 This is likely to have a negative impact on innovation opportunities, productivity and the overall diversity of jobs in the city. The resulting loss of economic diversity neither benefits the end-users of the high-value, large floorplate uses that are currently dominating provision, nor local people, who many need to travel further (possibly outside of Oxford) to find suitable and affordable premises and workspace.

Education and skills

3.19 Oxford can be described as a well-educated city, with a high number of jobs in knowledge-intensive industries attracting workers with higher levels of qualifications. According to the Nomis website, data from the annual population survey (2024), is presented within Oxford's labour market profile. It shows the number of people aged between 16-64 with different levels of qualifications. The highest qualification level on the Nomis website is described as RQF level 4 and above. RQF level 4 is a higher education qualification and, according to the UCAS website, equivalent to the first year of an undergraduate degree, or a Higher National Certificate (HNC). While an RQF level 3 qualification represents A levels or equivalent. The Nomis data shows that 78,100 or 72.9% of Oxford's resident population aged 16-64 has been educated to RQF level 4 and above.

Figure 3.1 - Map showing levels of education and skills deprivation in Lower Super Output Areas of Oxford – (higher deprivation is marked by darker organge, lower deprivation in light blue)



(Source: https://www.oxford.gov.uk/downloads/file/3851/indices-of-deprivation-2025-oxford-report)

3.20 In 2025, the Government published the latest Indices of Multiple Deprivation. A detailed report, which discusses Oxford's rankings in the Indices of Multiple Deprivation is available on the City Council Website. This report sets out that since 2015 children and young people's attainment in Oxford has been improving, and Oxford has become relatively less deprived. The city is, however, the most deprived of the five Oxfordshire Districts and has one Lower Layer Super Output Area (LSOA) within the 10% most deprived areas nationally. There are 9 areas in total within the city that fall within the 20 per cent most deprived areas nationally. A further 9 areas within the city fall within the 20 per cent least deprived areas nationally. This inequality affects parts of the city more than others.

3.21 The Indices of Multiple Deprivation can be broken down into various categories. The report sets out regarding the Educational Skills and Training Deprivation category - which measures the lack of attainment and skills in the local population - the average score ranking for Oxford was 129 in 2025 compared to 206 in 2019 (the last time the Indices of Deprivation were prepared). This shows Oxford has become relatively more deprived in the Education domain, with 19 LSOA across the city within the 20% most deprived nationally. State

schools across Oxford, particularly in deprived areas, have under-performed compared to regional and national averages.

3.22 Further analysis of the Educational Skills and Training indictor (see Figure 3.1) shows it can be broken down into two sub-domains. These two sub-domains are designed to reflect the 'flow' and 'stock' of educational disadvantage within an area respectively. That is, the 'children and young people' sub-domain measures the attainment of qualifications and associated measures ('flow'), while the 'skills' sub-domain measures the lack of qualifications in the resident working-age adult population ('stock'). In 2019 there were 11 areas in the most deprived 10% nationally for Children and Young People educational attainment compared to only 4 for Adult Skills. Conversely, there were 36 areas that fell within the 10 per cent least deprived nationally for Adult Skills in Oxford compared to 16 for educational attainment for Children and Young People.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 In the absence of a new Local Plan, the importance of the role that Oxford plays to the national economy is likely to continue. This is due to the close ties between research and development (in particular, those associated with the University of Oxford and the Hospitals) and the spin-out companies that are generated because of this close relationship. These innovations through research and development are an essential part of Oxford's economy, both locally and nationally. While it is likely that Oxford's key employment sectors (i.e., education and health) would continue to be linked with innovative research and development, the comprehensive redevelopment and regeneration of certain key sites may prove more difficult.

4.2 The new Local Plan provides an opportunity to ensure that sites allocated for employment uses make the best use of land and contribute to wider plan objectives such as sustainable travel, zero-carbon and enabling the co-ordinated delivery of infrastructure to help mitigate the impact of development. However, without a new plan, there is less certainty that these objectives would be realised in a timely and co-ordinated manner. As such there is a risk that the growth of the city may be prevented or delayed from realising its full potential.

4.3 Given Oxford's global status and international recognition, the city would still be likely to continue to attract direct investment projects. However, external uncertainties created by world events such as the on-going war in Ukraine and the recent introduction of Tariffs by the US, and the impacts of Brexit would be likely to continue to have consequential adverse supply-chain impacts.

4.4 Without a new plan in place, it is likely, providing market conditions remain favourable, that demand for significant additional employment floorspace in the city would continue. This

floorspace has been coming forward at pace on numerous sites across the city. Indications are, that the market remains relatively strong, and that supply has not previously, and is not currently, keeping pace with that demand. This mismatch between supply and demand has led to higher rents across the city. With significant demand for floorspace, there is a risk that sites allocated for other uses (e.g., housing) may come under pressure to be developed for employment uses.

4.5 There is also a risk that the benefits of economic growth may not be felt by all. For instance, it is less likely that the development of Oxford's economy would be able to deliver benefits to all without policies in the new plan being in place. This is because there could be less opportunity for local people to improve their skills and training. It is also likely that there would be fewer prospects for SMEs and start-ups to find affordable workspace in the city.

Balancing economic uses, housing and supporting infrastructure

4.6 Ensuring economic growth is sustainable requires the delivery of sufficient new homes; the timely delivery of effective infrastructure; alongside the creation of new jobs. Striking a balance between delivering new homes and employment floorspace is a key strategic issue. Oxford is a small compact city. According to the City Council website, the Geography of Oxford statistics page sets out that Oxford has a total area of 46sq km (17.6sq miles). It is well-documented that there is a shortage of land for housing in the city as well strong demand and the associated impacts on affordability. As such, Oxford is one of the most unaffordable places to live in the country. This lack of suitable housing acts as a barrier to further economic growth.

4.7 The balance between the demand for housing and employment land has changed since the previous plan was being drafted. Since then, demand for certain types of employment uses have increased and current indications are that this is likely to continue. The current mismatch between employment land supply and demand is helping to maintain high prime rents for lab and office space both inside and outside the city centre.

4.8 Commercial rents are predicted to continue to rise, over the coming years. Advanced Oxford's Innovation Engine Report 2023 provided data from key local agents on how rent levels have increased in Oxford since 2016 to 2022 and then forecast future rent levels from 2023-2027. Figure 4.1 shows the change in rent levels (per sqft) comparing prime office rents with science parks and fitted laboratories.

4.9 Bidwells "Oxford Offices and Labs" Databook (August 2025) showed rent rises in the prime office market from the reported £61/sqft in December 2024 to £63/sqft in June 2025. Prime lab rents however, remained constant at £78.50/sqft, showing no change between December 2024 and June 2025.

Figure 4.1 - showing changes in rent levels (per sqft) comparing city centre office with science parks and fitted laboratories

Year	City Centre Office rents	Science Park rents	Fitted Labs rents
2016	£30.00	£27.00	–
2017	£30.00	£30.00	–
2018	£32.00	£32.00	–
2019	£37.50	£35.00	–
2020	£37.50	£35.00	£55.00
2021	£38.50	£45.00	£60.00
2022	£49.50	£55.00	£75.00
2023(f)	£60.00	£55.00	£76.50
2024(f)	£61.08	£55.99	£77.50
2025(f)	£62.48	£57.28	£78.50
2026(f)	£64.17	£58.82	£79.00
2027(f)	£65.97	£60.47	£79.50

Source: Advanced Oxford Innovation Report 2023

4.10 Oxford is currently in a somewhat unusual situation (outside of Central London), where the delivery of certain commercial floorspace typologies appears to be more profitable than other traditionally higher value uses, such as housing. As such maintaining a blanket protection of employment sites may not deliver the required outcome to boost the supply of housing over the course of the plan period. This is because the extant employment strategy (as set out above) seeks to protect the city's existing locally and nationally important employment sites for further employment uses, as it was written within the context that these sites were under threat from loss to other higher value uses. Considering the current future without the new plan, it is likely that employment sites would continue to receive protection. A new plan provides an opportunity to investigate the potential for new policy interventions that reflect the evolving economic context in which we find ourselves.

4.11 Employment growth should be appropriately located to take advantage of the city's strengths and help to provide a sustainable distribution of business premises and employment land, to help maintain a range of potential job opportunities throughout the city. Oxford's contribution to the national economy and importance to research and development, e.g., health, makes the city's economy particularly important to protect in these times of on-going uncertainty resulting from wider economic factors including Brexit, the longer-term impacts of Covid-19, and the war in Ukraine.

4.12 It may be necessary to safeguard and protect land to deliver sufficient school places; and to control where educational institutions build more student residences, which could result in the loss of land to other non-residential uses.

Affordable Workspaces

4.13 As set out above, Micro SMEs represent a significant proportion of the city's employment ecosystem. According to UK Business Count data for Oxford (2025), 96.2% of the city's businesses are micro- (employing up to 9 people – 83.9%) or small- (employing between 10-49 people – 12.3%) businesses.

4.14 Without the Local Plan 2045, any provision of suitable and affordable workspaces and premises for key Micro SME sectors would rely solely on voluntary provision by developers on a site-by-site basis. It is likely that this would result in a continuing erosion of opportunities for certain Micro SMEs to start-up and remain in the city. This could lead to an increase in the number of Micro SMEs at risk of being priced out of Oxford and the associated negative impacts on innovation opportunities, productivity and a reduction in the overall diversity of jobs in the city.

4.15 Recognising the valuable contribution that supporting a range of businesses (including SMEs) can make to innovation and economic diversity and helping to create the conditions in which all businesses can prosper is one of the objectives of the Local Plan 2045. This objective supports the council's ambition to enable a strong, fair economy – one of the priorities set out in Our Strategy 2024-28. Oxford's Economic Strategy 2032 recognises the importance of affordable workspaces in supporting creative activity, social enterprise, co-operative businesses and local start-ups. It sets out that the creation of affordable workspace in the city would enable a more diverse employment base and give opportunities for evolving sectors (including creative production, low-carbon, technology and digital) to develop and grow.

4.16 The production of the Local Plan 2045 offers the opportunity to consider how the introduction of a policy could support Micro SMEs by enabling the creation and delivery of suitable premises and workspace in the city. The Local Plan 2045 therefore can help to address a failing in the market to deliver suitable premises and/ or workspaces for a significant proportion of the Oxfords' business community.

Economic impacts of the Covid-19 pandemic

4.17 The Local Plan 2036 did not anticipate the Covid-19 pandemic. As such it did not contain any directly relevant policies. In the short-term the pandemic affected people's health, well-being and safety. National lockdowns resulted in the closure of schools and Universities and these closures impacted the quality of children and young people's learning experiences.

4.18 The longer-term economic outlook for Oxford remains positive with on-going investment in key sectors supporting life sciences and the knowledge economy at a variety of locations, such as Oxford North, the West End and Botley Road, and in the south of the city, including at The Oxford Science Park and ARC Oxford. Now looking to the future, Oxford appears set to continue to deliver on its key economic strengths and ambitions.

4.19 However, there are on-going social and economic costs of the pandemic which were presented in research undertaken at University College London (published in November 2024). This research presented the health implications of long-covid using a financial metric to understand the economic impacts and potential severity of the issue. The researchers calculated the economic burden of long-Covid, was primarily driven by productivity losses, which averaged £931 per patient over the six-month period. As the ONS recognised that around two million people in the UK have long-Covid the costs associated with days lost could potentially add up to £20billion a year.

Future role of the city centre, office space and home-based working

4.20 Oxford's city and district centres continue to play an important but evolving role in the city's economy. Encouraging people into the city's network of centres will help to preserve and enhance their vitality and viability. A mix of uses, alongside retail, including employment, community uses, residential and student accommodation is likely to help re-vitalise the city's centres and ensure that these areas are re-energised by activity.

4.21 Pressure on city's office stock remains driven by the accelerated growth in science and technology employment. This sector typically takes up more floor space than other sectors – but evidence suggests that the science sector can adapt to all property types. Existing industrial and retail units can be a more flexible and cost-effective solution for a low-cost fit-out. Recent redevelopments along the Botley Road are an example of this where some of the older retail units have been repurposed as flexible lab-enabled office space offering a flexible mix of office and R&D workspaces.

4.22 There is also potential for repurposing vacant spaces within the city and district centres. This brings social benefits in terms of increasing activity and footfall within the city and district centres as well as helping to drive innovation and economic growth. This approach may benefit vacant spaces in the city and district centres. In the city centre, regular surveys are undertaken of vacant units. The most recent survey data (2025) showed that out of 377 surveyed units 79 were vacant (20.95%). In 2024, out of 383 surveyed units, 75 were vacant (19.5%). In 2023, out of 383 surveyed units, 77 were vacant (20.1%). Redevelopment opportunities do account for some vacancies however the percentages broadly align with a national post-Covid picture that shows higher city centre vacancy rates than were experienced before the pandemic.

Retention and recruitment of staff

4.23 One of the biggest challenges Oxford faces arises from a mismatch between new homes and jobs. The city's growing economy and associated jobs growth in key sectors such as R&D and labs is resulting in an increased pressure on the availability of housing and services (and on Oxford's already constrained transport network). This homes/ jobs mismatch has also led to affordability and housing issues in the city. These issues represent

the concerns most consistently raised by Oxford's businesses in relation to staff retention and recruitment.

4.24 As Oxford is one of the most unaffordable cities in the UK, housing affordability issues also result in over-crowding issues and poor health outcomes. Opportunities to build sufficient new homes within Oxford itself to address this mismatch are limited by the city's size (Oxford is only 46sqm/ 17.6sq miles); its natural and heritage assets (including over 1,500 listed buildings); flood plain; and Green Belt (which covers more than a quarter of the city's total area).

4.25 The mismatch between homes and jobs has resulted in Oxford having the highest net inflow of commuting workers in the Oxfordshire region. The Office for National Statistics has produced an online visualisation tool for origin-destination data entitled Visualising People Flows available on the Office for National Statistics website. This shows that for the Census 2021, there were 28,342 workers recorded as commuting into Oxford out of a total of 92,047 workers aged 16 and over.

4.26 The Census 2021 figures reflect working from home patterns under restrictions imposed by the Covid pandemic. As such, the data does need to be treated with a degree of caution. However, a direct comparison with the Census 2011 data shows a reduction in in-commuting since 2011. The 2011 Census recorded 45,852 workers commuting into Oxford for work out of a total of 88,258 workers living and working in the city. Besides the obvious environmental pressures, commuting generates its own costs which can be significant particularly when they involve long journeys. These are often borne directly by the employee, particularly if they are on temporary or agency-based contracts.

4.27 Oxford City Council's website provides some additional transport statistics from the 2021 Census. This data shows that within Oxford, the most popular mode of transport was active travel (walk or cycle) with 38.8% of commuters choosing this method, while 38.2% of commuters arrived by car or van. This is significantly lower than the 2011 Census figure of 66.8%.

4.28 Finding a way to assist employers with recruitment and retention problems can support the Local Plan objectives in three ways: economically (helping productivity of employers and local investment); through housing (including by providing affordable housing); and sustainability (giving people the opportunity to live closer to place for work; through increased energy efficiency measures; and by through the associated reductions in emissions).

5. Key issues addressed through the Local Plan

Introduction

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to employment land as well as sustainable and inclusive economic growth objectives. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Meeting Employment Needs

5.3 The NPPF (December 2024), is clear (e.g., paras 20, 86) that local authorities should seek to meet the objectively assessed needs for their area by setting a clear economic vision and strategy, setting criteria and identifying strategic sites to meet anticipated needs over the plan period.

5.4 This section begins by reviewing evidence presented in the ELNA (in particular, in relation to employment need and supply). It then looks at the overall balance, drawing again, on the findings from the ELNA. Moving on to draw conclusions, based on the evidence, about in relation to the plan's employment strategy and how it will deliver the employment needs of the city over the plan-period.

Identified Floorspace Need

5.5 The Employment Land Needs Assessment (ELNA) identifies a total employment floorspace need of 412,460sqm for the plan period 2025-2045. In coming to this global floorspace total, the ELNA considered each of the following broad employment land uses:

- Office (Use Class E(g)i)
- Research & Development/ Laboratory Space (R&D) (Use Class E(g)ii)
- Industrial (Light and General) (Use Classes E(g)iii and B2)
- Warehousing (Use Class B8)

5.6 In coming to the conclusions for each of the four identified sectors, the ELNA considered a number of scenarios, in accordance with the PPG, which have been compared to determine which is the most appropriate for plan-making purposes both to support economic development in the city and to avoid constraining growth.

5.7 Table 5.1 sets out the floorspace identified in the preferred scenarios as set out in the ELNA. This table presents the findings in relation to each of the four land use categories (as described above).

Table 5.1 - Oxford's employment floorspace need 2025-2045

	Office (sqm)	R&D (sqm)	Industrial (sqm)	Warehousing (sqm)	TOTAL sqm
Identified need	21,370	345,004	0	46,086	412,460

Source: Oxford Employment Land Needs Assessment (January 2026)

Employment land supply (floorspace)

5.8 A summary of Oxford's known employment land supply position is included in this Background Paper at paragraphs 2.47-2.51 (above). It is also documented in more detail in the ELNA itself.

5.9 The employment land supply position (as documented in the ELNA), is based on known floorspace figures from extant commitments, submitted planning applications, and sites with known landowner/developer floorspace ambitions. Table 5.2 (below) sets out the known planning commitments (i.e., extant permissions). These have been separated into four main land use categories.

The ELNA has also considered the additional potential supply/ capacity for the city. This was based on an analysis of current major planning applications for employment land uses and known landowner/developer interest. This analysis uncovered circa 185,000sqm of additional employment floorspace.

Table 5.2 - Planning commitments 2025-2045

	Office (sqm)	R&D (sqm)	Industrial (sqm)	Warehousing (sqm)	TOTAL (sqm)
Extant permissions	1,877	352,180	2,997	123	357,177

Source: Employment Land Needs Assessment (January 2026)

5.10 The ELNA also recognises that there are other sites in Oxford with potential to deliver employment floorspace in the plan period. However, while an awareness of these sites is acknowledged, the ELNA sets out (as at October 2025), that relevant site owners/ developers were yet to quantify the scale of opportunity.

Oxford's Employment Floorspace Balance

5.11 The ELNA also looked at the balance of employment floorspace need and supply, providing observations about how the identified employment need (within the four land use categories), could be met within the plan-period.

5.12 Table 5.3 shows the employment floorspace balance for each of the four land uses categories.

Table 5.3 - Balance of employment floorspace need and supply

	Office (sqm)	R&D (sqm)	Industrial (sqm)	Ware-housing (sqm)	TOTAL (sqm)
Identified need	**21,370**	**345,004**	**0**	**46,086**	**412,460**
Planning commitments (supply)	1,877	352,180	2,997	123	35,177
Balance to find (rounded)	**19,000**	**-7,000**	**0**	**46,000**	**55,000**
Potential additional supply/ capacity*		185,000			
BALANCE		**192,000**			

Source: Employment Land Needs Assessment (January 2026)

5.13 The ELNA did not recommend there was a need to identify land for the modest office, industrial and warehousing needs that were identified through each of the preferred scenarios. This is because the ELNA considered that the growth identified within these employment land uses could all be absorbed within Oxford's existing employment portfolio.

5.14 In relation to the considerable identified need for R&D space, the ELNA notes that this can be met from within the committed and potential additional supply/ capacity that has already been promoted to the Council.

Employment land need vs Employment Floorspace need

5.15 Before going on to consider how the plan addresses employment needs, it is worth noting that the phrases "employment land need" and "employment floorspace need" are two different ways in which the objectively assessed needs for employment uses can be expressed. Employment land need expresses the employment floorspace need in terms of land ((i.e., hectares), rather than floorspace (i.e., square metres).

5.16 Expressing employment need in terms of floorspace is particularly useful in Oxford as the amount of land available for employment uses is not being increased. Instead, as will be shown below, the employment strategy proposes intensification (i.e., an increased density) of development across the employment site network with a specific focus towards the city's best performing (or "key") employment sites.

How the plan addresses employment land needs

5.17 At the Reg. 18 consultation stage, the preferred approach was selected because, while it sought to meet objectively assessed employment needs, it prioritised the delivery of much-needed housing (for which an unmet need has been identified). The evidence set out in paragraphs 5.5-5.15 (above) demonstrates that Oxford is capable of meeting all identified employment floorspace needs within the plan period. As such, the plan's employment strategy aligns with the overarching strategy (Policy S1) which seeks to prioritise housing.

Making the best use of employment sites

5.18 Historically, Oxford has needed to protect its employment sites to prevent their losses to other higher value uses (including housing), even resorting to the introduction of an Article 4 Direction in 2014 (now lapsed) to prevent their loss to housing (through permitted development).

5.19 However, as set out above, Oxford now appears to be in an unusual situation (outside of Central London). This is because, currently, delivering certain commercial floorspace typologies appears to be more profitable than other traditionally higher value land uses, including housing.

5.20 As set out above, Oxford is capable of meeting all identified employment floorspace needs within the plan period. In fact, additional analysis of the supply position has shown that 87.6% of total supply of employment generating uses as being put forward within the network of Local Plan 2045 Key Employment sites, or within the city and district centres.

5.21 Further analysis of planning commitments (only) shows the percentage of employment generating uses proposed at Key Employment sites or located within the city and district centres, rising to 97.9%.

Key Employment Sites

5.22 This analysis shows the importance of having a Key Employment Site network within the wider employment site ecosystem. Given its importance, the Key Employment Site network warrants protection to ensure that, should the economic circumstances change during the plan period, the city's most important employment sites are retained to provide support for Oxford's local economy as well as making a continued contribution to the regional and national economy. The Key Employment Site network was established using the methodology included in Background Paper 004a: Key Employment Site Methodology. This process established the designation of 34 Key Employment Sites across the city.

5.23 Policy E1: Employment Strategy therefore includes a presumption against the net loss of employment floorspace at Key Employment sites unless it can be fully justified by meeting set criteria that are designed to protect the wider employment use as well ensuring that the number of jobs in employment generating uses are retained.

Key Employment Sites in the city and district centres

5.24 Outside the city and district centres, all the qualifying Key Employment Sites warrant protection for the reasons outlined above.

5.25 However, within the city and district centres, the extant Oxford Local Plan 2036 offers protection for a range of employment sites. However, analysis of the city centre office

market undertaken as part the ELNA, highlights that some of the office stock is dated, is on small floorplates and is not considered suitable for modern occupier requirements. This alongside permitted development rights within Use Class E, and the need to maintain and encourage the vitality and vibrancy of centres all supports the use of a higher Key Employment Site threshold within the city and district centres.

5.26 It is worth noting that there have also been several recent examples where currently protected employment sites including larger sites (i.e., 0.25ha or more) located within the city and district centres have sought increased flexibility in relation to the planning use class of their future occupiers given the wide range of suitable uses (e.g., housing, student accommodation, retail and hotels) all of which are appropriate to the city and district centres. This reinforces the use of a higher protection threshold for Key Employment Sites located within the city and district centres.

5.27 Background Paper 004a: Key Employment Sites methodology describes the process by which the site size threshold for city and district centres, was reached.

Location of new employment uses

5.28 As set out above, a significant proportion of Oxford's future supply of employment floorspace is being put forward either within the city and district centres, or across the Local Plan 2045 network of Key Employment Sites. However, within the city there are a large number of employment sites (many of them smaller than 0.25ha), on which employment-generating uses already exist (or they are in lawful use for the proposed employment uses class). These sites form part of the wider employment ecosystem, and as such Policy E1 describes these sites as *Existing employment sites not designated as Key Employment Sites.*

5.29 These (generally smaller) employment sites often provide small scale local employment opportunities. As these are sites that are considered to be within a lawful use, Policy E1 introduces criteria to support their regeneration for employment generating uses, which include, making better and more intensive use of the site.

5.30 The Local Plan 2045 therefore seeks to support, the intensification of existing employment sites across the wider ecosystem, specifically focusing redevelopment opportunities towards the network of Key Employment Sites, and within the city and district centres.

5.31 As highlighted in the ELNA, Oxford's modest employment floorspace needs for Office, Industrial and Warehousing uses, can be met within the existing employment portfolio, while the considerable need identified for R&D uses can be met from within the committed and potential supply that has already been promoted to the Council. As such, the there is no need for the plan to identify additional land within the city for employment uses.

5.32 The employment strategy sits within the plan's overarching strategy, the focus of which is to deliver housing (for which there is an unmet need identified). The employment strategy therefore seeks to focus the location of new employment generating uses to the identified Key Employment Sites, the city and district centres, and existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class).

5.33 Ensuring that the city maximises housing delivery is therefore crucial (along with the provision of infrastructure) to helping address associated staff recruitment and retention issues highlighted in paragraphs 4.23-4.28 above, including affordability issues and commuting pressures.

5.34 The next section considers the additional measures the Local Plan 2045 has incorporated within the employment strategy to support housing delivery.

Housing on Employment Sites

5.35 In additional to the locational requirements for new employment generating uses set out in Policy E1, the plan's employment strategy also allows for the complete loss of *employment sites not designated as Key Employment sites*, while supporting their complete loss to housing. In fact, the plan, in recognition of the city's acute housing need, allows for an element of housing delivery across all employment sites in the city. The same objectives exist for all sites. On Key Employment Sites, where housing is proposed that involve a net loss of floorspace, those specific criteria should also be applied.

5.36 It is important that the delivery of housing is prioritised within the city boundaries to help to meet the acute shortage. Without the continued delivery of housing in the city, the key sectors of the economy will not be able to continue to contribute to the economy.

Warehousing, Storage and Distribution Uses

5.37 Given the limited available land in the city, it is important to make the best and most efficient use of that land. As set out above, the plan's employment strategy focuses new employment generating uses towards the existing employment site ecosystem, specifically the larger named Key Employment Sites.

5.38 Large scale warehousing, storage and distribution (B8) uses often have very specific operational requirements, often needing large areas of land in close proximity to key junctions on the strategic road network. It is precisely these operational requirements that dissuade large-scale B8 uses from locating within Oxford. However, small-scale B8 uses, which can be provide useful support for both local and key employers in the city.

5.39 As such, Policy E2 recognises the importance of allowing the city's larger Key Employment Sites to bring forward B8 uses, subject to certain criteria being met, which include residential amenity criteria.

5.40 Given the premium land values associated with the prime city centre office and R&D market, it is not expected that B8 uses would be sought in these locations. However, the potential for Key Employment Sites located within the city and district centres to bring forward an element of small-scale B8 uses was an important consideration in determining the site size threshold for Key Employment Sites located within the city and district centres. It was considered that sites above the threshold were generally large enough to accommodate an element supporting B8 uses.

5.41 This policy would also enable the city to meet its identified floorspace need for B8 uses.

Community Employment and Procurement Plans

5.42 As set out above, Oxford's 2025 Indices of Multiple Deprivation ranking for Education and Skills has fallen since 2019, indicating that the long-standing educational disparities across the city are still prevalent.

5.43 The introduction of a policy requirement for Community Employment and Procurement Plans for qualifying development proposals would solidify the extant approach, which encourages their submission alongside major planning applications.

5.44 This policy will help support a range of opportunities be delivered in the city, including helping to secure training, construction and operational jobs for local residents. This policy also aligns with the City Council's Economic Strategy 2023-32. It would also contribute to wider economic, social and community objectives, and support the city in delivering an 'inclusive economy'.

Affordable Workspaces

5.45 Underpinning the need for affordable workspaces in Oxford are a range of factors which together contribute to the need for intervention. The following factors have been identified through a range of different sources, including the Employment Land Needs Assessment (January 2026), and the Local Plan Viability Assessment (December 2025), the City Council Economic Strategy 2023-32 and the Reg. 18 Background Paper 004: Employment and Inclusive Economy (June 2025). These factors, as set out below, can be summarised as follows:

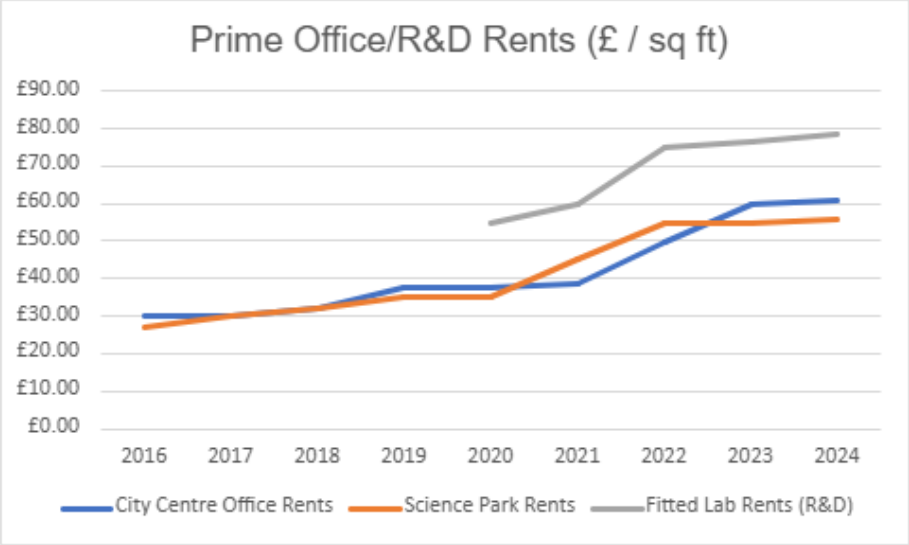
- Affordability
- High demand
- Constrained supply
- Regeneration pressure

Affordability

5.46 Prime office rents in Oxford have been steadily increasing from between £27-£30 per square foot (sqft) rising in line with predicted (2024) rents to, between £61 per sqft. Figure 5.1 (below) shows the changes to Oxford's Prime Office/ R&D rents between 2016-2024. This data is shown above in Figure 4.1, however, the rents for the forecast years 2023 and 2024 have been supplemented with actual reported rents from Bidwells Oxford Offices & Labs Databook (2024, 2025).

5.47 Figure 5.1 shows a step change in prime city centre and science park rents respectively from 2020 onwards. This shift seems to correlate with the introduction to the market, of fitted laboratory space/ R&D.

Figure 5.1 - Oxford Prime Office/ R&D Rent Changes 2016-2024

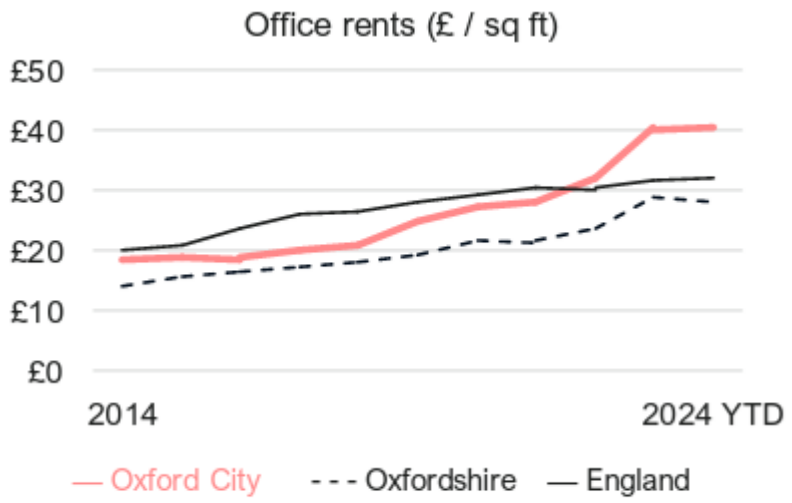


Source: Advanced Oxford (2023) and Bidwells Oxford Offices and Labs Databook (2024, 2025)

5.48 Data from CoStar database for the ten-year period between 2014-2024 (for the 'wider' office market) shows a similar picture post-2020. Average 'wider' office market rents in Oxford (CoStar does not distinguish between office, R&D/ laboratory spaces), seem to rise sharply around 2020. In fact, the data shows that average 'wider' office market rents in Oxford have almost doubled in the period between 2018-2024.

5.49 Figure 5.2 (below) shows the change in average office market rents between 2014-2024 comparing rents achieved in Oxford, with those achieved across the county, and nationally. Office rents in Oxford exceeded the national average in 2022, reaching an average of £40 per sqft in 2023.

Figure 5.2 - Oxford Average Office Market Rent Changes 2014-2024



Source: CoStar (2024)

5.50 The city's industrial/ warehousing market has, however remained static, with the ELNA reporting no new build development for around 25 years. As such, there is likely to be limited evidence of new build prime rents in this sector, which could result in a suppression of rents as they would most likely focus on the secondary market. However, as is set out in the ELNA, static growth in floorspace within these sectors has constrained its supply, which could counteract, to some extent, the impacts of rent suppression.

High demand

5.51 The ELNA notes that when considering the wider office market (i.e., office/ laboratory/ R&D) as a whole, the indications suggest an overall balanced market. However, the qualitative analysis (undertaken through consultation undertaken by the ELNA consultants with local property agents) has highlighted strong demand not only for R&D and lab space, but also for offices (as the market grows into AI).

5.52 The ELNA consultation uncovered that occupiers across the wider officer market (including funders) are looking for high quality space with high levels of sustainability. The demand for office space in the city is from a mix of professional services, servicing the local market, but also those servicing the lab and R&D market, e.g., specialist legal firms. Agents also report strong demand for offices in the city centre.

5.53 The ELNA reports very low vacancy rates within Oxford's industrial/warehousing market. Apart from Osney Mead, the main 'industrial' area is located in the south of the city and comprises of several smaller industrial estates, alongside MINI Plant Oxford and the Unipart site.

5.54 While the city's industrial/ warehouse market is small, there is demand for new units. The ELNA recognises that if new units were to be made available, they would likely to be occupied quickly due to the tight nature of the market. However, any new supply that does comes to the market is likely to be focused towards servicing the R&D market.

Constrained supply

5.55 While the analysis of the wider office market (as whole) suggests a generally balanced market, the supply-side analysis shows that Oxford's planning commitments are almost exclusively R&D-related. In fact, a large number of planning commitments involve the re-purposing or wholesale redevelopment of older secondary office accommodation to create modern flexible lab/R&D workspaces.

5.56 What the boost in supply of R&D masks, however, is a lack of delivery of smaller office spaces some of which are being lost as part of the redevelopment of secondary office space help meet the high demand for R&D in the city. While office space has been previously, and continues to be, lost due to office to residential conversions.

5.57 The lack of additional smaller office spaces, and the losses to other uses, means that the existing secondary stock has become more valuable even though most secondary stock (particularly in the city centre) lacks the quality to meet modern occupier requirements.

5.58 As set out above, the industrial/ warehouse market has seen very little new stock over the past 25 years. The current lack of planning commitments in the industrial/ warehousing market means that many units are fully let, with limited options for upsizing, this can result in occupiers remaining in premises which can lead to slower business growth.

5.59 However, any new future supply of floorspace within these sectors is likely to be high quality flexible space with high sustainability credentials (e.g., Nova, Cowley – a mid-tech building focussed towards servicing the R&D market by providing a flexible space suitable of catering for a range of uses including R&D but with a focus on high-tech, and manufacturing uses).

Regeneration Pressure

5.60 The biggest regeneration pressure facing the city's secondary office and industrial/ warehousing stock is through its loss to R&D and associated servicing sectors.

5.61 This could lead to further erosion of the city's smaller office stock (as well as through its loss through office to residential conversions). Without suitable replacement, the loss of existing smaller office space could increase the demand for, and value of, the secondary office market, even though much of it lacks quality (particularly in the city centre, where post-Covid, modern occupiers have been seeking smaller, high quality spaces with good sustainability credentials).

5.62 Similarly, the industrial/ warehousing market is under pressure, most notably at Osney Mead, for which there is an ambition to convert the industrial estate into an innovation district within the plan period.

5.63 Advice in the ELNA is that to mitigate displacement caused by rising rents and to support a balanced economy, the Council should progress its affordable workspace policy.

Benefits of Affordable Workspace

5.64 The provision of affordable workspace is important to ensure that individuals, organisations and businesses can access a range of employment spaces at affordable rates and on flexible terms for economic, social and cultural purposes.

5.65 Ensuring such spaces are available alongside more traditional employment space can help boost the city's economic strength and diversity. Affordable, accessible workspace provides opportunities to create places of innovation and enterprise that will support the evolution of Oxford's economy, including its social enterprises and priority sectors as they emerge and are identified. In addition to delivering community benefits, such spaces can be key to placemaking from early stages of mixed-use development.

Financial implications of delivering Affordable Workspaces

5.66 The Oxford Local Plan Viability Study (December 2025) provides an assessment of the financial implications of delivering affordable workspaces using a variety of employment typologies. This evidence tests two main approaches.

5.67 The first considers the viability implications of providing 10% of the floorspace at a variety of discounted rents. The second approach considers the implications of delivering 1,000sqm of floorspace (again, at a various rental discounts). According to the West London Alliance Affordable Workspace Study (June 2021) where (affordable) workspace is delivered that requires an operator to manage it, 1,000sqm is generally considered to be the minimum floorspace required to operate a sustainable business model.

5.68 Generally, the study showed that the larger typologies could support a degree of delivery of affordable workspaces. Sites located within the city centre being less impacted than those outside it. Overall, the viability study indicated that the larger typologies (i.e., those sized at 5,000sqm or more) were less impacted by the two main approaches.

5.69 As expected, as rent reductions increase, residual land values do fall, but depending on which typology applied to which approach, there are variations in the scale of impact on residential land values.

5.70 Overall, the viability testing supports the threshold within the policy and the policy requirement to produce an affordable workspace strategy. The sites listed within the policy

are all those capable of bringing forward larger developments (i.e., a net gain of 5,000sqm GIA or more floorspace) within the viable typologies for employment generating uses.

Delivering affordable workspaces through Policy E4

5.71 Policy E4 does not set an a floorspace requirement to be delivered as affordable workspace. Instead, it includes a requirement to produce an affordable workspace strategy and provides details of what to include within said strategy. The supporting text provides that affordable workspaces should be delivered on-site and this is supported by the viability testing.

Hotal and Short-stay accommodation

5.72 The Hotel and Short Stay Accommodation Study (2023), shows that Oxford has a good range of hotels and serviced accommodation within the city, noting that there has also been some growth in short-stay accommodation. The study also recognises that there is a need for further hotel accommodation within the plan period.

5.73 The study supports the spatial approach to the accommodation of future growth this sector, both in terms of new, and expanded short stay accommodation in Oxford. It clearly articulates support for the locational approach taken within the plan to direct new hotels towards the city and district centres, and the main arterial routes into and out from the city centre. It also sets out support for the approach to existing sites.

5.74 The study also highlights that, in some cases there may be some crossover, between the city and district centres/ arterial roads, and Key Employment Sites, such as in Headington and Cowley.

5.75 The study also acknowledges that there are likely to be some ‘business aspects of tourism’ resulting from the additional employment floorspace and emerging clusters that are identified in the ELNA. This will help to ensure that any overnight visitors to these businesses would not need to travel.

5.76 The study also recommends the use of policy thresholds and accompanying criteria (including viability) in order to protect larger properties. However, the study also reflects on how the sector can support housing delivery further, within the context of its locationally focused policy approach. As such the study recommends an approach whereby smaller premises (i.e., those below the threshold) should be allowed to change their use to residential without the need to undergo a viability assessment.

5.77 The study provides a detailed short-term assessment of likely need for future bedspaces and then assumes a longer-term average (post-2030). For the 2025-2045 plan-period this equates to just over 3,800 bedspaces in total (circa 190/year).

1082

Appendix A – Policy options and preferred approaches

Policy options set 004a-1:(draft Policy E1) Addressing employment land needs

1. The city's current employment strategy for meeting identified employment land needs (as set out in the Oxford Local Plan 2036) sought to protect the city's most important existing employment sites and supported the development of additional land for employment uses as part of a mixed-use strategic allocation at the city's northern gateway. Now known as Oxford North, this site is delivering 87,300sqm of commercial floorspace to support the knowledge economy, alongside residential development, at the northern edge of the city. Previous economic evidence showed that Oxford's continued policy of economic restraint was appropriate.

2. Post-pandemic, the city has seen increasing demand for high-value employment floorspace (such as R&D, lab-space and flexible lab-enabled office accommodation). Oxford's employment land supply is in a strong position with a significant amount of high-value, high-demand floorspace permitted in the last five years. The majority of this permitted floorspace is coming forward at pace and likely to be delivered in the early part of the plan period. This strong supply position aligns with the established and escalating demand for this type of floorspace. The employment strategy option set considers several approaches as to how Oxford could address its identified employment land needs for the plan period.

1083

Employment Strategy – Draft Policy E1

3. Draft Policy E1 combines the preferred approaches from four the following four options sets. Each options set considered a discrete element of the policy. The four options sets are as follows:
   - 004a-1: Addressing employment land needs (see table A1.1 conclusions)
   - 004a-2: Making the best use of employment sites (see table A1.2 conclusions)
   - 004a-3: Housing on Employment sites (see table A1.3 conclusions)
   - 004a-4: Location of New Employment Uses (see table A1.4 conclusions)

4. The preferred approach for each option set is set out below and includes a brief commentary about how that particular option was chosen.

Table A1.1 - Policy options set 004a-1: Employment Strategy – how the plan addresses employment land needs

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A Attempt to meet employment needs, but prioritise other uses, in particular housing, rather than employment, even if employment needs cannot be met in full within the city, recognising that existing sites in lawful commercial use cannot be changed from that use against the landowner's will, so intensification on those sites is appropriate.	It is not possible to truly 'balance' housing and jobs, because it is not realistic to assume the majority of people will live their lives confined by Oxford's boundaries, there are benefits to an overall approach focusing on allocating new sites for housing and focusing on an approach of intensification and modernisation at existing employment sites (as opposed to allocating new employment sites through the Local Plan) in the city at the current time. This would help reduce problems created by significant in-commuting. Also, employers have reported significant difficulties attracting and retaining staff because of a lack of housing and its expense. To help current employers maintain their success may require a focus on new site allocations for housing and potentially allowing elements of existing employment sites to be converted to housing.	This approach could mean that some employment needs might need to be met outside the city. If this was the case a strategy for meeting those needs across Oxfordshire would ideally need to be agreed through joint working. If that does not happen, there will not be a strategic approach to meeting those needs.
Option B Focus employment strategy on meeting all identified employment land needs within	Oxford's economy makes an important contribution locally, regionally and	This strategy could result in schemes for employment land being promoted across

1084

Oxford's boundary. Do not seek to prioritise other uses if employment need cannot be met. Actively investigate ways to meet employment land needs within the city through providing appropriately located employment land/ new sites (if required).	nationally, and this approach acknowledges that strength and focuses on it. Meeting our identified employment land needs within the city boundary would mean that there would be no cross-boundary issues for employment land. A wide range of jobs would be supported under this approach. This is because the Plan would actively seek to meet all employment land needs (not just focusing on Oxford's key strengths but This would allow a wide variety of entry points into the labour market, helping to overcome issues such as labour market exclusion, both actual and perceived.	the city. Such schemes could come forward at the expense of other priority uses (e.g., housing). A shortage of housing in the city, and its expense, has been previously reported by employers as one of the key reasons that they have for having difficulties attracting and retaining staff. Depending on the level of need identified, this approach could have adverse impacts on housing delivery, which may have cross-boundary implications requiring a strategy to be agreed through joint working. If that does not happen, there will not be a strategic approach to meeting those needs. There are also implications for transport and travel. This option could potentially result in increased in-commuting.
Option C Let the market decide the most appropriate employment land uses to deliver and actively support new locations for employment development if there is market demand for these spaces. Rely on the Framework (NPPF) and other policies in the plan to determine	Oxford's economy makes an important contribution locally, regionally and nationally, and this approach acknowledges these economic strengths and would focus on them by supporting key sectors (such as laboratories/ flexible lab-enabled office accommodation).	This approach could result in schemes for employment land being promoted across the city. There is a risk that schemes could come forward at the expense of other priority uses (e.g., housing). As such, this approach could have potential cross-boundary implications for housing.

1085

applications for employment land in the city.	The office/ lab market is generally considered to be strong and resilient in Oxford. Current market conditions support delivery across the city. A market-led approach would provide flexibility to changing market conditions which could respond quickly and enable other land uses to be delivered (e.g., housing) across the city if market conditions were to change.	It is likely that lower-value, lower density employment-generating land uses (e.g., industrial/ warehousing) would not be able to afford to be in Oxford. As such, these uses may not be brought forward within the city. It is likely that these uses would be delivered outside the city boundary, which may have cross-boundary implications requiring a strategy to be agreed through joint working. If that does not happen, there will not be a strategic approach to meeting those needs.

1086

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or c **High-level screening conclusion? -** Unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** These options have already been considered holistically as part of the wider growth strategy alternatives appraisal. While there are some minor negative effects likely on the SA objective for green spaces resulting from Option B, and potential uncertainties around whether homes or employment land would be delivered resulting from Option C, any likely effects are not considered significant.

Table 004a-1: Addressing employment land needs - conclusions

5. The preferred approach for the Local Plan 2045 policy is to take forward **option A**. This is because it was considered important to align the employment strategy with the plan's strategic focus to prioritise housing delivery (which supports the economy by helping to address long-standing barriers to economic growth relating to housing supply and associated affordability issues in

the city). This option would enable employment development to take place on existing sites which would help meet identified employment land need while also supporting the delivery of much needed housing.

Policy options set 004a-2 (draft Policy E1): Making the best use of employment sites

6. Traditionally, Oxford has protected its employment sites to prevent losses to higher value uses. In the past such uses have been residential in nature. More recently, higher value land uses in the city have been related to research and development and the importance of delivery of these uses has been prioritised nationally through incentives and linkages to increases in productivity. Oxford's economic strategy encourages the city to build on its key strengths in life sciences, research and development, while aiming to meet the city's overall employment needs in a way that enables a diverse economy.

7. Given the high demand for high value floorspace in the city, well-performing employment sites that support the city's local economy or provide important local services may come under pressure for redevelopment. Given the permissive changes outlined within Use Class E of the Use Classes order, there may be limited protection that can be afforded to these sites through the planning system. However, there is an opportunity to provide protection for locally important employment sites outside of Use Class E (i.e., those in Use Class B2).

1087

Table A1.2 - Policy options set 004a-2: Making the best use of employment sites

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A – existing OLP2036 approach Seek to meet employment land needs through appropriate modernisation and intensification of the city's employment site network. Protect the city's most important employment sites, which are named in the plan, from loss to other uses.	Continuing to provide protection for the city's most important employment sites is likely to continue to support a focus that aligns with Oxford's key strengths and support the local economy. Has the potential to support the delivery of sustainable transport solutions as intensification opportunities are at known locations.	The continuation of this policy approach could result in a lack of support for the some of the city's Category 3 employment sites. Although poorly performing in economic terms, some of these sites can provide a social value by adding economic variety, diversity and low-cost/ affordable workspaces which can benefit Oxford's economy.

Allow the loss of poorly performing sites to other priority uses e.g., housing).	This approach allows the loss of poorly performing employment sites to other uses (e.g., housing). Supporting housing delivery can help to reduce barriers to economic growth.	
Option B Seek to meet employment land needs through appropriate modernisation and intensification of the city's employment site network. Outside the city and district centres, protect a range of important employment sites that support the local and regional/ national economy. Include criteria-based approach to the loss of employment sites. Take a flexible approach to the continued use of existing employment sites in highly sustainable locations (i.e., city and district centres). Consider inclusion of criteria to support decision-making process.	Continuing to provide protection for the majority of the city's network of employment sites is likely to help to ensure a continued diverse network of employment sites remain in the city. This can help maintain a range of employment opportunities are available. Taking a flexible approach to the continued of employment sites in sustainable locations could enable the delivery of other appropriate uses (e.g., housing/ other town centre uses) in some of the city's most sustainable locations.	Not protecting employment sites inside the city and district centres would let the market decide on the most appropriate uses in these locations. This could potentially lead to uncertainty and potential difficulties in planning for and meeting employment land needs in these areas.
Option C Rely solely on national planning policy/ other policies in the plan	This option would provide flexibility for landowners/ developers to respond quickly to market conditions and is likely to support the continued growth of high-value, high-demand uses such as R&D.	Important sites that contribute to the city's economy could be lost as this approach would not actively protect employment sites. The market would ultimately decide on the most appropriate employment uses for the city.

1088

		This could result in more high-value, high-demand employment uses being delivered and would ultimately lead to uncertainty and increased difficulties in planning to meet the city's identified employment land needs.
Option D Protect all employment sites to support meeting identified employment land needs. Do not support the loss of employment uses on any existing employment site. Encourage intensification and modernisation of employment sites across the network.	Continuing to provide protection for the city's network of employment sites is likely to help to ensure a continued diverse network of employment sites remain in the city. This would help to deliver a broader selection of employment sectors than those associated and aligned with Oxford's key strengths.	As all employment sites would benefit from protection under this option, there would be no scope for their loss to other uses other than through permitted development. Including protection for all existing employment sites could result in employment opportunities coming forward on poorly performing or poorly located employment sites which could otherwise be redeveloped for other uses (e.g., housing)

1089

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Options a) - d) **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** No – all options align broadly with national policy. The effects of Option A on the SA Objectives are likely to be broadly neutral as this option takes forward the current Local Plan 2036 approach. Option B, while similar to option A could enable a wider range of uses, including priority uses such as residential development to come forward in sustainable locations such as the city and district centres. This could have minor positive impacts on certain SA objectives (e.g., housing), but would ultimately depend on the implementation of specific sites based on landowner interests. Option C could have minor positive or negative impacts on certain

objectives such as different aspects of economic growth and housing. This option would ultimately lead to the determination of development proposals being guided solely by national policy which may cause increased uncertainty in the decision-making process. Finally, Option D would broadly strengthen the protection of all employment sites across the city which could have minor negative impacts on housing delivery.

004a-2: Making the best use of employment sites – conclusions

8. The preferred approach for the Local Plan 2045 policy is to take forward **option B**. As set out above, the plan's strategic focus is to prioritise the delivery of housing as it helps to address barriers to economic growth. However, in a compact, constrained city, such as Oxford, with current strong demand for certain employment types, protecting the city's most socially and economically important or "key" employment sites for continued employment use and supporting their appropriate intensification and modernisation forms a key element of the preferred approach. In highly sustainable locations (i.e., the city and district centres), flexibility is important to ensure the on-going viability and vitality of the city's centres. This means that smaller sites in the city and district centres will not be protected for on-going employment uses.

1090

Policy options set 004a-3 (draft Policy E1) - Housing on Employment sites

9. Given Oxford's long-standing housing availability and affordability issues, which have often been cited by employers as key barriers to attracting and retaining staff, we are considering the introduction of a permissive approach to housing delivery across the city's employment site network. Delivering new homes in Oxford is an important aspect of addressing these known barriers to economic growth.

10. It is important to ensure that any approach that supports new homes on existing employment sites does not need lead to situation where it undermines the ability of sites to deliver employment floorspace required to meet the Oxford's identified employment land needs.

Table A1.3 - Policy options set 004-a3 - Housing on Employment sites

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach

Option A – existing OLP2036 approach Does not specifically allow an element of housing delivery on existing employment sites.	If Oxford was unable to meet its identified employment land needs in the city, it would be important to ensure that existing employment sites were not further diversified for other uses.	Not all landowners/ developers of employment sites would necessarily want to bring forward housing on their sites, however some large key institutions representing significant employers in the city (e.g., hospitals – 19.8% of the city's workforce was employed in the health sector in 2023 according to Nomis). This approach could undermine efforts to house hospital staff on their own sites, which enables the recruitment and retention of key workers, some of whom would otherwise struggle to live in the city.
Option B Allow an element of housing delivery on existing employment sites (if other policy requirements are met (e.g., around flood risk).	Locating housing and jobs in close proximity to one another can bring benefits for local services and facilities. It also has the potential to deliver more homes within Oxford city. This may help Oxford to meet its housing need and provides flexibility to respond to changing circumstances and values over time (even if owners/ developers are not interested in delivering housing to their sites at the present time). Certain sites, such as Old Road Campus (where important research linked to science and innovation takes place), and	It will be important to ensure that any housing that does come forward on the city's employment site network does not prejudice Oxford's ability to meet its identified employment land needs otherwise a strategy for meeting those needs across Oxfordshire would ideally need to be agreed through joint working. If that does not happen, there will not be a strategic approach to meeting those needs. It will be important to ensure that, if housing is allowed to be delivered (through a permissive approach) across the city's employment site network, that it is not to

1091

	the hospitals (which are important for health care treatment and research), need to be supported to both continue to contribute to the economy, and where appropriate, to investigate opportunities to house key workers who may otherwise struggle to remain in the city.	the detriment of the important contribution that Oxford's economy makes locally, regionally and nationally.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective. Unlikely to have significant effects **Screened in for detailed appraisal? -** No **Rationale**: These options have been assessed within the wider context of the growth strategy alternatives appraisal. They do not require further detailed appraisal as they are only likely to have minor positive or negative neutral or negligible effects. Option A is likely to have broadly neutral effects on all SA objectives as it would maintain the current Local Plan 2036 policy approach. Option B could have some minor positive effects on SA objectives such as housing and transport-related objectives as supporting additional homes in the city across all employment sites could help to address housing and commuting issues however the amount of new homes that could be delivered would likely depend on implementation as it would not be possible to mandate new homes without landowner agreement.

1092

Table 004a-3 Housing on Employment Sites - conclusions

11. The preferred approach for the Local Plan 2045 policy is to take forward **option B**. This option aligns with the plan's strategic focus to prioritise housing. The preferred approach recognises the importance of housing delivery but also the value that existing businesses and sites bring to the city. As such, housing proposed on the city's network of key employment sites must not undermine the continued operation or integrity of successful businesses and employment sites. The preferred approach includes wording to that effect.

1093

Policy options set 004a-4 (draft Policy E1): Location of New Employment Uses

12. Given Oxford's limited land availability and the importance of delivering other priority uses in the city (in particular, housing), it is important to ensure that new employment uses are supported in appropriate locations across the city.

13. There are a number of areas of the city where business and innovation sectors are clustered. These sites play an important role individually, and collectively they contribute to economic growth nationally, regionally and to the local economy. These include the Oxford Science Park; ARC Oxford (formerly Business Park); Old Road Campus; the Hospital sites; Oxford Science Area and Keble Road; the Radcliffe Observatory Quarter; Oxford North (which is now being built out); and the West End regeneration area.

Table A1.4 - Policy option set 004a-4: Location of New Employment Uses

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A Support new employment uses (through modernisation and intensification) at existing employment sites and sites specifically allocated for employment uses in the plan only. Do not allow any new employment-generating uses outside of these locations (i.e., do not allow the loss of existing housing sites to employment-generating outside the city and district centres). Allow new employment uses in the city and district centres (subject to their role and function).	This option would retain the geographic focus of locating new employment-generating uses in existing centres and specified employment locations. Continuing to focus new employment-generating uses in existing employment locations can bring connectivity and infrastructure benefits. Restricting new employment-generating uses to existing employment sites can support housing delivery in the city by limiting pressure to bring forward housing sites for high-value, high demand employment uses (e.g., R&D)	This approach would continue to support employment-generating uses within existing sites only. This could result in more development being pushed towards the southern edge of the city which includes the locally important Garsington Road cluster as well as key city employers such as the Science Park, ARC Business Park, Unipart site and Mini Plant Oxford. While significant strides have been made towards re-opening the Cowley Branch Line to passenger trains, this area is currently poorly served by public transport, and active travel routes. If by restricting the locations where new employment-generating uses are

1094

		acceptable in the city, this results in constraints to its future supply, this could increase the demand for high-value employment uses. This could result in pressure to redevelop lower-value employment sites to try and keep up with the demand for higher value uses.
Option B As Option A (above) but rather than restricting new employment-generating uses to existing sites, instead allow new employment uses, in a limited number of suitable specified locations (e.g., adjacent to exiting employment sites) Depending on the location, there may be merit in requiring certain sites to bring forward a mixed-use expansion including residential).	As above except this approach would enable key clusters to expand and continue to support Oxford in building on its economic strengths. If Oxford is unable to meet identified employment land needs in the city, this approach may provide a pragmatic way forward which could help support the delivery of additional housing and employment land.	Given Oxford's small size and limited opportunities for new development, actively supporting the creation of additional employment land in the city could negatively impact the delivery of other uses including housing and much-needed affordable housing.
Option C Rely solely on national policy and other policies in the plan (e.g. hierarchy of centres) to determine proposals for new employment floorspace in the city.	Recent changes to the NPPF strengthen support for economic growth and specifically mention laboratories as a key sector to stimulate the economy. This market-driven option is likely to support the delivery of high-value, high demand uses (e.g., R&D/ lab). This is an important sector, which would support national economic objectives.	Outside of the city and district centres, where Class E employment uses would be supported as "town centre uses", the plan would not provide any policy guidance on the location of new employment-generating uses. As a small, compact and constrained city, although Oxford is an inherently sustainable location for development and there could be increased pressure to deliver employment-generating uses in the city. However, this increased

1095

		pressure would be likely to be limited to unallocated sites that would need to comply with national policy. An absence of local policy in this instance could potentially increase uncertainty over where new employment uses could be delivered, if the strength of the commercial market was to soften in relation to the housing market over the plan period.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or c **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective. Unlikely to have significant effects. **Screened in for detailed appraisal? -** No **Rationale:** These options have been considered more widely within the context of the growth strategy alternatives appraisal. Detailed appraisal of these options is not required. Options A and B are similar. The effects of Option A are likely to be neutral against all SA objectives as this option would carry forward the current (LP2036) approach. Option B could have potential minor negative effects depending on the precise location of any expansion and factors such as the environmental quality of any land taken for development, but the precise nature of any effects undertaken at this stage would depend on implementation and would ultimately require more detailed site-specific assessment, which would be subject to a separate appraisal against the SA Framework. Option C would be likely to result in uncertainty in the decision-making process which could result in some minor negative effects on certain SA objectives (e.g., certain aspects of economic growth could be weakened but it is unlikely this objective would be significantly impacted upon by these locational uncertainties. It could ultimately involve more resources at the development management stage as each site would need to be assessed on a case-by-case basis to work out whether the location was suitable for employment uses.

1096

Table 004a-4: Location of New Employment Uses - conclusions

14. The preferred approach for the Local Plan 2045 policy is to take forward **option A**. Limiting the acceptable locations for new employment-generating uses in a constrained city such as Oxford broadly aligns with the plan's overall strategy to prioritise housing. Focusing new employment-generating uses towards existing areas of employment can help to overcome existing accessibility issues and bring connectivity to support existing employment clusters through the delivery of key infrastructure projects (e.g., re-opening of the Cowley Branch Line to passenger trains).

Policy options set 004b (draft Policy E2) Warehousing and Storage Uses

15. New large scale B8 uses are usually low-density and do not generally make an intensive land-use. As a small, compact and constrained city, there are numerous competing pressures for land in Oxford. This means that there is often a need to make the best, or most efficient use of any land that comes available. As such, new B8 uses are not always the most appropriate use for land within the city. Freight consolidation can support Oxford's transition to a zero-carbon future. One of the actions highlighted in the Zero Carbon Oxford Partnership roadmap and action plan was to pilot freight consolidation around the edge of Oxford. This is to help deliver a successful transition to Zero Carbon living. It is important that the Local Plan 2045 does not prevent this taking place.

1097

Table A1.5 - Policy options set 004b: Warehousing and Storage Uses

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A – Existing approach New B8 uses on sites not already lawful use are only allowed where the use is essential to the operation of a Cat 1 site Loss of B8 uses generally supported unless B8 use is essential for the ongoing support of a Cat 1 site.	This option would prioritise employment land in the city for more efficient and intensive land uses. By restricting B8 uses to support the operational requirements of the city's most important (Category 1) employment sites ensures that new B8 uses are delivered in way that supports and enables the continued or enhanced operation of employment sites with clear links to wider	Limiting B8 uses to Category 1 sites can preclude the legitimate expansion needs of suitably located local businesses that make a positive contribution to the economy by providing jobs to local people.

	economic aims as set out in national policy.	
Option B Where new B8 uses are allowed would be widened to enable support for the continued operation of locally recognised employment sites and those that support the national economy. Loss of B8 uses would generally be supported unless the B8 use is essential for the ongoing support of sites on which new B8 uses are allowed.	This option would support a wider range of employment sites to deliver B8 uses which could enable local businesses to expand and remain in Oxford, which can provide key services and support local jobs. This would align with national economic objectives relating to the continued growth of existing employment sites.	This approach would reduce the priority given to other uses that support the local, regional and national economy. It could bring B8, which often generates transport by HGV and LGV, into unsuitable areas. It allows this use which does not make best use of limited land.
Option C (in combination with option a) or b)) Introduce a specific exemption to enable the pilot of a suitably located freight consolidation centre	This option would enable LGV/ HGV freight to be moved to electric delivery vehicles, e-bikes and cargo-bikes at the edge of the city, rather than petrol and diesel LGVs and HGVs moving into residential areas and the city centre for deliveries. This would help to deliver City Council and partners' zero carbon partnership aims to decarbonise last mile deliveries in the city.	Any relaxation would need to be carefully managed to ensure it does not open up the potential for significant new storage facilities that do not make efficient use of land and that may not be well located in terms of the road network and avoiding congestion.
Option D Further restrict new B8 uses so they are generally not supported at all.	Further restriction of this inefficient land use could provide more land for priority uses.	Restricting B8 uses further in the city may result in potential difficulties for employment sites that rely on some B8 for their continued operation.

1098

Option E Rely solely on national policy and other policies in the plan to assess applications for B8 uses in the city.	Could see an increase of B8 uses on a range of sites in the city, providing services and jobs.	Would neither actively restrict nor promote B8 uses in the city and would allow market forces to dictate the demand for B8 uses. This approach could reduce the priority given to other uses that support the local, regional and national economy.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b (in combination with c) or d or e **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective. Unlikely to have significant effects. **Screened in for detailed appraisal? -** No **Rationale:** Two of the options (Option A and B) seek to restrict the location of new B8 uses to certain existing employment sites, while one option (Option D) does not seek to support new B8 uses at all in the city. Option D (further restriction) is likely to have a minor negative impact the SA objective for economic growth as not supporting new B8 uses at all in the city may result in difficulties for sites that rely on an element of B8 for their continued operation. While not having a policy could lead to uncertainties about future delivery of B8 uses on sites where they may be needed, this is unlikely to have a significant effect. Option C is a supplementary option and is considered in-combination with Options A and B. This option would be likely to deliver minor positive benefits which wider carbon reduction objectives. Option A would have a likely minor negative effect on economic growth as far as local supporting locally recognised employment sites, but this would be balanced out by a likely minor positive effect supporting nationally important sites and significant local employers. Option B (in combination with Option C) would be likely to have a minor positive effect on economic growth as it would support the widest selection of employment sites and could support existing businesses to expand, while remaining in Oxford. This can support local jobs and services.

1099

Warehousing and Storage Uses – Draft Policy E2

16. The preferred approach for the Local Plan 2045 policy was based on the options set out in the above option set only. The preferred approach was to take forward a combination of **options B and C**. New warehousing and storage (B8) uses often involve large-scale developments that do not make an intensive land-use. As they do not always make the best use of available land, they are not always the most appropriate use for land within the city. It is important to support appropriately located B8 uses where they support the ongoing needs of businesses in the city. Option B supports B8 uses at a slightly wider range of employment sites than is currently allowed through the extant Oxford Local Plan 2036. This means that local businesses who operate on important locally important employment sites will also be able to deliver small-scale B8 uses to support jobs and continued employment-related uses on identified sites. Option C helps support the Council's wider net zero ambitions to decarbonise 'last mile' deliveries in the city.

Policy options set 004c (draft Policy E3): Community Employment and Procurement Plans

1100

17. Community Employment and Procurement Plans (CEPPs) have an important role to play in securing opportunities that arise from new development. In the operational phase of development, agreements to secure a proportion of the longer-term workforce or supply chain locally or commitments to community education and outreach can ensure ongoing benefits. In the construction phase they can provide opportunities for local people to be employed in the building industry (e.g. through apprenticeships/ training/ making links to local schools and colleges) or secure commitment from the developer to procuring material and labour locally. Another option is to commit to paying employees the Oxford Living Wage and only using contractors who pay this higher level than the National Living Wage.

Table A1.6 - Policy options set 004c: Community Employment and Procurement Plans

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A Introduce a policy requiring applicants to submit a Community Employment and Procurement Plans alongside major development proposals, which also looks	Would introduce a partnership mechanism for securing community benefits from major development projects. Would help deliver the aims of the Economic Strategy and implement part of the linked Action Plan.	This could be seen as an unnecessary or onerous requirement of developers.

at the potential for engagement with training and education.		
Option B Encourage applicants to submit a Community Employment and Procurement Plans alongside all major development proposals but do not make this a policy requirement.	A voluntary approach would be flexible but applicants could still be encouraged to embark on CEPPs to provide opportunities for local people as they saw fit.	The voluntary approach is limited in scope and potential contribution that could be made. Measures set out in TAN are only presented as advice and guidance, no obligation to implement and no mechanism to monitor or enforce.
Option C Do not encourage or require applicants to submit a Community Employment and Procurement Plans.	Increased flexibility for applicants.	Removing encouragement from supporting text of plan may actively discourage applicants to submit Community Employment and Procurement Plans.

1101

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or c **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective. Unlikely to have significant effects. **Screened in for detailed appraisal? -** No **Rationale:** The options most directly influence criterion 12. Economic growth, by providing for greater amounts of employment opportunities within the city. They are possible impacts on other criteria in the SA framework indirectly where these have a relationship to economic growth (e.g., accessible services/facilities, inequalities). Option a would be likely to have a minor positive impact by providing access to education and employment opportunities to local people. Option b as a continuation of the status quo, is likely to have neutral impact, whereas option c would be a retrograde step as the plan would not actively encourage skills and training opportunities. Overall, this option set is unlikely to have significant effects and therefore can be screened out from further assessment.

Community Employment and Procurement Plans (CEPPs) - Draft Policy E3

18. The preferred approach for the Local Plan 2045 policy is to take forward **option A**. Community Employment and Procurement Plans (CEPPs) have an important role to play securing opportunities that arise from new development. CEPPs can help businesses by addressing skills shortages locally through supporting appropriate training, apprenticeships and providing other commitments local both at the construction and operational phases of development. The preferred approach is to include a policy requiring CEPPs to be submitted alongside applications for qualifying developments.

1102

Policy options set 004d (draft Policy E4) – Affordable workspaces

19. Oxford's economic successes have brought with them unforeseen challenges. Post-pandemic, the city has seen significant and increasing demand for high value employment land uses (such as R&D and flexible lab-enabled office development). This relatively new and high demand for these high-value land uses, coupled with a constrained land supply and a need to deliver other priority uses such as new homes in the city, has resulted in increased pressure to redevelop lower value premises across the city's employment site network.

20. A need for affordable workspaces to support certain identified sectors of Micro SMEs has been created by a combination of rising rents, high demand for larger-floorplate, high-value land uses, a lack of physical space in the city, and increasing land values have resulted in a failure in the market to provide suitable accommodation for a range of businesses and enterprises that can contribute to and support the economic diversity of an area. Oxford City Council's Economic Strategy highlights some of the key sectors that require these spaces. It also sets out the importance of providing affordable workspaces for the 'inclusive economy' i.e., to support creative activity, social enterprise, co-operative businesses and local start-ups in the city. The following options were considered.

1103

Table A1.7 - Policy options set 004d: Affordable workspaces

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A Introduce a policy requirement to deliver affordable workspaces on larger commercial development sites (in use Class E)	Likely to be the approach which would secure the most affordable workspace and help facilitate an inclusive and diverse economy.	Depending on the requirements of any future policy, this approach may be considered onerous. It will need to be backed up by appropriate viability evidence.
Option B Introduce text in the local plan encouraging employers to deliver affordable workspace in the city.	Allows the market flexibility to determine the type of employment space provided.	This could be a missed opportunity to address the issue of unaffordable workspaces in the city. Not providing support for affordable workspaces in the plan would not help to secure and deliver these types of spaces.

		As such the wider benefits from economic growth linked to Oxford's key sectors in science and innovation, would not be realised by all the city's residents.
Option C Do not incorporate the concept of affordable workspace in the Local Plan.	Leave the market to determine the type and amount of employment space to be provided across the city.	This could be a missed opportunity to address the issue of unaffordable workspaces in the city and therefore to help secure the benefits of a strong, fair and inclusive economy.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or c **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** While the policy may have economic and social value benefits, in land-use terms, development is happening anyway and is likely to be needed to support the delivery of affordable workspace on qualifying sites.

1104

Affordable workspaces – Draft Policy E4

21. The preferred approach for the Local Plan 2045 policy is to take forward **option A**. Including a policy requirement to deliver affordable workspaces helps key sectors (including those identified through the City Council's Economic Strategy), that make a vital contribution to the diversity of the economy. Suitable workspaces and premises to support the 'inclusive economy' can help foster creative activity, social enterprise, co-operative businesses and local start-ups in the city. Including a policy requirement to support the delivery of affordable workspaces in the Oxford and help facilitate an inclusive and diverse economy.

Policy options set 004e-1 (draft Policy E5): New Tourism and Short Stay Accommodation

22. Oxford's visitor economy makes an important contribution to jobs in the city. It is therefore important to support new and existing tourism and short stay accommodation in appropriate locations so that visitors to the city are encouraged to spend more time (overnight stays) and increase spend to support the local economy. Longer stays can reduce the numbers of "day-trippers" as high volumes of these types of visitors adversely impact traffic congestion and associated air quality issues.

23. This option sets look at locations for new tourism and short stay accommodation

Table A1.8 - Policy options set 004e-1: New Tourism and Short Stay Accommodation

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A Allow new sites for tourism and other short-stay accommodation in the city and district centres, on allocated sites and on Oxford's main arterial roads only.	Approach would continue to encourage new short-stay accommodation in sustainable and accessible locations. Likely to benefit Oxford's economy through supporting a higher percentage of Oxford's visitors to stay overnight. Potential to enhance the vibrancy of the city and district centres by allowing tourist accommodation to be located here.	Potential for increases in traffic along arterial roads and potential risk that this use could become dominant in locations supported by the policy.
Option B Allow new short stay accommodation in the city and district centres, and on allocated sites only.	Approach would continue to encourage new short-stay accommodation in sustainable and accessible locations and provide control over which sites outside of these areas were appropriate to deliver short-stay accommodation.	May increase pressure for town centre uses in city and district centres and reduce variety of uses in these locations. Would reduce the number of locations where tourist accommodation is deemed appropriate, and it may not be possible to meet needs.

1105

	Potential to enhance the vibrancy of the city and district centres by allowing tourist accommodation to be located here.	
Option C Support new short stay accommodation anywhere in Oxford.	Would increase potential locations where short stay accommodation is deemed appropriate. This is likely to encourage overnight stays in Oxford which is likely to have positive benefits for the city's visitor economy.	Allowing short-stay accommodation across Oxford could result in sites being developed that are poorly located in terms of potential traffic impacts or could have negative impacts on residential amenity, for example. Could result in more accommodation being provided where other priority uses (e.g., housing) would have been appropriate.
Option D Outside of the city and district centres, seek to resist new short-stay accommodation anywhere in the city.	May support the delivery of other priority uses (e.g., housing) in locations outside the city and district centres	May increase competition for land for tourism and short stay accommodation with other main town centre uses within the city and district centres. This could lead to a less diverse offer of tourism and short stay accommodation as higher land values in some centres would lead to the delivery of higher value accommodation (e.g., hotels) only.
Option E Do not include a policy on new short stay accommodation in the city. Instead rely on national policy to delivery new short stay accommodation in the city.	Hotels are included within the list of 'Main town centre uses' set out in Annex 2: Glossary (NPPF, December 2024). As such	Hotels are included within the list of 'Main town centre uses' set out in Annex 2: Glossary (NPPF, December 2024). As such

1106

	impacts of this option are essentially very similar to Option B (above).	impacts of this option are essentially very similar to Option B (above). Short-stay accommodation is not generally considered a suitable use outside of the city and district centres unless identified need shows otherwise. This approach may lead to uncertainty regarding where new accommodation would be supported and could lead to applications outside of sustainable accessible locations.

1107

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or d or e **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** Option A maintains the current locational approach supporting new tourism and short stay accommodation in a variety of accessible locations across the city. This would be likely to result in a neutral effect on all the Sustainability Objectives. Option B proposes a more limited selection of locations. By reducing the acceptable locations for new tourism and short stay accommodation it could have a minor negative effect on the visitor economy although the overall impact on the SA objective for economic development would be likely to remain positive. Option C would enable new tourism and short stay accommodation opportunities to be delivered across the city. This option could result in this type of accommodation being delivered in less accessible locations which could have minor negative impacts on local amenity and transport-related objectives. Option D is the most restrictive option and would only support new tourism and short stay accommodation in the city and district centres. This would be likely to have minor positive effects associated with housing outside of these locations, but it would increase competition within the city and district centres where land values may be higher, which may result in a focus on high-value accommodation. This may not achieve wider aims associated with the visitor economy of encouraging longer stays and increased spend in the city. Finally, not having a policy

could lead to uncertainty over locations where new tourism and visitor accommodation would be supported. This may result in competition with other priority uses.

Policy options set 004e-2 (draft Policy E5): Existing Tourism and Short Stay accommodation

24. Short stay accommodation helps meet the needs of tourists and other visitors, including business travellers and travelling researchers. Availability of sufficient short-stay accommodation may help to encourage tourists to stay for longer and help contribute to the success of businesses and the economy, but it also has impacts, including that it competes with other uses, and travel impacts. There may be reason to protect it, but where it is located is important in managing impacts and not all existing provision will be optimal. This final option set considers whether to include a policy supporting the expansion of existing short stay accommodation and protecting existing accommodation or not.

Table A1.9 - Policy options set 004e-2: Existing Tourism and Short Stay Accommodation

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A Do not include a policy protecting existing short-stay accommodation in the city and instead rely on other policies in the plan and national planning policies.	This option would mean that Oxford is reliant solely on market forces to protect its existing stock of short stay accommodation. Whilst providing flexibility for developers, it would not necessarily help the city to achieve its wider tourism aims and objectives.	Could provide uncertainty for existing short-stay accommodation owners and occupiers. May not effectively promote Oxford's visitor economy by encouraging more overnight visitation.
Option B Allow the expansion of existing short-stay accommodation providing certain criteria are met.	Likely to provide support for Oxford's visitor economy by protecting existing facilities and allowing their appropriate expansion.	Inclusion of criteria which must be met before a loss will be permitted (such as viability, marketing etc.) would ensure that existing sites that function poorly are not prevented from being redeveloped.

1108

Seek to protect existing accommodation and allow loss only if specified criteria are met (i.e., by providing viability evidence or if the location is not one where new short stay accommodation would be allowed).	It is important to seek to prevent the loss of existing visitor accommodation to other uses because tourism is an important contributor to the day and evening economy of the city.	

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** As these are existing sites, from a sustainability perspective whether to include policy guidance supporting appropriate small-scale redevelopment or changes or use, or not, is unlikely to result in significant effects on the any of the sustainability objectives.

1109

Tourism and Short Stay Accommodation – Draft Policy E5

25. Draft Policy E5 combines the preferred approaches from two options sets. Each options set considers a discrete element of the policy. The two options sets are as follows:
    - 004e-1: New Tourism and Short Stay Accommodation
    - 004e-2: Existing Tourism and Short Stay Accommodation

26. The preferred approach for each option set is set out below:

004e-1: New Tourism and Short Stay Accommodation

27. The preferred approach for the Local Plan 2045 policy is to take forward **option A**. This supports new tourism and short stay accommodation on allocated sites and at a variety of accessible locations across the city. It also helps deliver the city's wider visitor economy aims to encourage longer stays and increased spend in the city. The draft policy includes locational requirements that set out where new tourism and short stay accommodation in the city would be acceptable and supported through the planning process.

28. Focusing new tourism and short stay accommodation towards inherently sustainable highly accessible locations helps to reduce reliance on the private car and supports public transport and other non-car modes. It also aligns with the plan's overall strategy to prioritise housing as it reduces the pressure to locate new tourism and short stay accommodation on sites more suitable for housing.

004e-2: Existing Tourism and Short Stay Accommodation

29. The preferred approach for the Local Plan 2045 policy is to take forward **option B**. Supporting the appropriate expansion of existing tourism and short stay accommodation helps achieve the wider visitor economy aims and can also protect local amenity. The inclusion of criteria relating to the loss of tourism and short stay accommodation provides clarity about what is expected of applicants in a range of different circumstances.

1110

Background paper 004a

Title: Key Employment Sites Methodology

This paper sets out the approach and methodology that was undertaken in developing the city's Key Employment Sites.
Relevant Local Plan 2045 Objective(s): • Maximise the benefits of the city's strengths in knowledge, healthcare and education while supporting economic growth in key sectors including science and innovation. • Recognise the valuable contribution that supporting a range of businesses (including SMEs) can make to innovation and economic diversity. Help to create the conditions in which all businesses can prosper. • Create opportunities for everyone in the city to access employment. Support local people giving them access to training, education and apprenticeships to make the most out of new job opportunities created in the city. • Help Oxford to continue in its role as a national and international destination and support the visitor economy by encouraging longer stays and higher spend in Oxford.
Relevant SA Objective(s): 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.
SEA theme(s): Population and material assets.

Appendix 4 – Final scores for assessed sites..... 20

1. Introduction

1.1. This background paper focuses on providing an explanation of the approach and methodology undertaken in developing the policy for, and identifying, the city's Key Employment Sites.

1.2. It does not seek to simply repeat the content of sections of *Background Paper 004: Employment and Inclusive Economy*. Instead, it supplements existing information. As such, it does not follow the same structure.

1.3. The aim of this Background Paper is to provide the reader with a clear understanding of the process that was undertaken in the selection of Oxford's Key Employment Sites.

2. Methodology for Site Selection

Development of the Employment Site Assessment Pro-Forma

2.1. The first step in the process was the development of Site Assessment Pro-Forma. The Pro-Forma (re-produced at Appendix 1) was developed in consultation with the consultant team employed by the City Council to undertake the Employment Land Needs Assessment (ELNA) – drawing on their many years of experience in undertaking Employment Land and Economic Need Assessments for Local Authorities.

2.2. The Pro-Forma consists of two sections. The first part is a desktop assessment and the second, an on-site assessment. City Council officers undertook the individual site assessments, using the guidance notes as set out at Appendix 2.

2.3. However, before the site visits were carried out, a list of employment sites that required assessment was compiled. The employment site identification process is discussed in the next section.

Employment site identification process

2.4. A range of sources was used to compile the list of employment sites that were assessed using the Pro-Forma including:

- Category 1 and Category 2 Employment Sites (Local Plan 2036 Policy E1)
- Oxford Local Plan 2036 site allocations for employment uses
- "Key Protected Employment Sites" which were the subject of the historic Article 4 Direction (2014)
- Local Plan 2045 Strategic Housing Land Availability Assessment and its predecessor, the Housing and Economic Land Availability Assessment, which considered the suitability of sites for housing and economic uses.

2.5. This identification process uncovered 172 potential employment sites for further consideration.

Identified employment sites: initial site size filter

2.6. The first step in the assessment process was the application of an initial site size filter. The Planning Practice Guidance (PPG) Paragraph 009 Reference ID 3-009-20190722 suggests using a site area of 0.25ha (or 500 square metres of floorspace) when undertaking assessments of economic land.

2.7. City Council Officers discussed the use of a threshold with the appointed ELNA consultants. The consultants confirmed that the use of a site size threshold was consistent with other work they had undertaken and considered the 0.25ha threshold suitable for application in this instance.

2.8. As site size information was readily available in hectares (as opposed to floorspace) for the sites, the City Council concluded that use of a 0.25ha minimum site size threshold was appropriate.

2.9. The site size filter was then applied to the 172 potential sites. 113 sites were below the threshold, leaving 59 sites for further consideration.

Employment site assessments

2.10. Prior to undertaking the site assessments using the Pro-Forma, a sense check was undertaken by City Council officers. This sense-check resulted in the removal of duplicate entries, for instance, where several individual but adjacent employment sites were listed in addition to the collective larger employment area (i.e. making sure that component parts were not double counted as part of a larger area). In this case, the smaller duplicate entries were removed.

2.11. Sites were also removed from the assessment where there was no reasonable prospect of employment-related uses coming forward in the plan period (i.e., where sites had previously been redeveloped for housing).

2.12. This process left 50 sites which were then assessed using the Pro-Forma. Appendix 3 provides a list of the sites assessed.

2.13. City Council Officers undertook site visits during Spring 2025.

2.14. Each site was scored using the Pro-Forma (Appendix 1) using the Guidance Note (Appendix 2) to ensure a consistent approach. The scores therefore reflect a snapshot of each employment site at the time the site visit was undertaken.

2.15. Appendix 4 provides a summary of the scores attained for each site.

How the Key Employment Sites were identified

2.16. Having collated the results from the site assessments, the next step towards establishing the Key Employment Sites involved the comparison of all sites assessed. The top scoring sites were generally larger, well-established employment sites. For instance, the top three ranked sites, Oxford Science Park, ARC Oxford and the Churchill Hospital, all have a site area of more than 20ha.

2.17. By contrast the lowest ranked sites, which include the Former Blanchford's Building Supplies site in Headington, the Dairy Depot site on the Old Abingdon Road, and the Storage Yards located on Binsey Lane, were all generally smaller sites (1ha or under) with limited, or single current or previous occupiers.

2.18. A degree of professional judgement based on the collected data and qualitative considerations was used in identifying which sites were selected as Key Employment Sites. A range of factors were considered in coming to the decision. These factors included (but were not limited to):

- Local Plan 2036 Employment site category status
- Site size
- The redevelopment potential of sites within the plan-period
- The ability of sites to support a broad range of jobs
- Timing of the assessment
- The contribution made by sites to the local and/or national economy
- The ability of sites to contribute to the social value of an area
- The ability of sites to accommodate a range of occupiers

2.19. After careful consideration, on balance and in the light of the above factors, it was proposed that those sites which scored 36 points or more had a more positive alignment with the qualitative decision-making criteria.

2.20. A sense check to this approach was also undertaken, where it was observed that sites that did not qualify as Key Employment Sites were generally smaller employment sites with a single occupier or limited occupancy. It was also observed that majority of sites scoring 35 or less were those considered within the extant Local Plan 2036 policy framework, to be Category 3 employment sites (i.e., smaller, less-well located, etc.). It is worth noting at this stage, that the Pro-Forma was specifically designed to consider the site characteristics at the time it was assessed. This enables a degree of parity to be applied when comparing and ranking the site scores.

2.21. The sense check also involved consideration of the characteristics and circumstances which gave rise to the scores attained for certain individual sites. For instance, Oxford North and the Unipart site both scored 36 points in the assessment. As these sites are recognised as "Category 1" employment sites in the extant Local Plan 2036 policy framework (i.e.,

nationally or regionally important to the knowledge economy or represent significant employers or sectors within the city). As such, these two sites were considered further.

2.22. The score, particularly in the case of Oxford North, reflected the timing at which the assessment was undertaken (i.e., Spring 2025, while Phase 1A of the site was still under construction). As such, the assessment resulted in certain criteria scoring lower than if the site was operational. Given the strategic nature of Oxford North, its extant employment site status (Category 1), the ability of the site to deliver a broad range of jobs throughout the plan period (both construction and operational phase) and timing of the assessment (i.e., spring 2025, while the site was under construction), set it apart from those sites that scored 35 or below.

2.23. In the case of the Unipart site, the score also reflected the assessment as at Spring 2025. Like Oxford North, this site also has Category 1 employment site status under the extant Local Plan 2036 policy framework. While there is redevelopment potential at the site within the plan period, the scale of opportunity is yet to be quantified. Given the site's former Category 1 status, its size (circa 30ha) and the redevelopment potential of the site within the plan period, Officers considered these aspects set the site apart from the smaller sites scoring 35 or more.

2.24. As such, the city's Local Plan 2045 Key Employment Sites consisted of larger sites, all of which were able to support a broad range of jobs, or occupiers; which made a contribution to the national, or local economy; and/ or were sites that contributed to the social value of their local area. This process resulted in a list of 38 sites.

2.25. For completeness, this approach resulted in the removal of the following twelve sites which scored below the threshold adopted:

- 474 Cowley Road (Former Powell's Timber Yard)
- 79-83 Temple Road
- A.W. Clarke (Engineering) Ltd, Sandford Road
- Bossom's Boatyard, The Towing Path
- Cowley Marsh Depot, Marsh Road
- Dairy Depot, Old Abingdon Road
- Fire Station, Rewley Road
- Former Builder's Yard (Blanchford's Building Supplies)
- Harcourt House, Marston Road
- Salter Brothers Ltd, Meadow Lane
- Storage Yards Binsey Lane
- Units 1-4, 385 Cowley Road

Key Employment Sites: consideration of emerging Local Plan 2045 policy framework

2.26. The emerging Local Plan 2045 policy framework contains certain elements that apply to development proposals within the city and district centres, and others that apply specifically to Key Employment Sites.

2.27. This section provides the qualitative analysis, considering the of potential implications of the application of other policies in the emerging plan, that was undertaken in arriving an appropriate site size threshold for Key Employment Sites located within the city and district centres.

2.28. The following policies were considered as part of the analysis:

2.29. Policy S1: Spatial Strategy and Presumption in Favour of Sustainable Development establishes the over-arching spatial strategy for the city. The policy sets out a number of measures to help achieve the vision and objectives of the plan.

2.30. Bullet point b) is specifically relevant to the city and district centres. It allows flexibility of uses within these locations, so that the city and district centres can respond quickly to changing needs and economic circumstances and ensure a wide mix of uses, including housing, are encouraged.

2.31. Policy E1: Employment Strategy introduces a set of criteria, designed to protect Key Employment Sites by ensuring that, where a loss of floorspace is proposed, that the employment use can be maintained, and the number of jobs in employment generating uses is retained.

2.32. Policy E2: Warehousing, Storage and Distribution Uses (hereafter 'B8 uses') focuses new B8 uses at the city's network of Key Employment Sites only, introducing specific residential amenity criteria to ensure that any B8 are delivered in a way that does not result in an adverse impact on residential amenity.

2.33. The following six employment sites (located within the city and district centres) scored 36 points or more. Table 2.1 (below) sets out the specific sites, their relative size, and the overall score achieved. All sites were located in the city centre. This table shows that that two of sites are very large (i.e., over 5ha), while the remaining four sites are all smaller sites of less than a hectare (three of which being 0.3ha).

2.34. The Plan's overarching strategy allows flexibility of uses within the city and district centres. This is so that the city and district centres can respond quickly to changing needs and circumstances and ensure that a wide range of uses, including housing, are encouraged. However, Policy E1 is designed to protect the city's network of Key Employment Sites from loss to other uses, thus reducing flexibility of uses within the city and district centres.

Table 2.1 List of employment sites located in the city and district centres

Site Name/ Address	Site size (ha)	Total score
Beaver House/ Hythe Bridge St	0.3ha	39
County Hall/ New Rd	0.3ha	40
Island site/ Park End St Hythe Bridge St	0.7ha	36
Osney Mead	17.8ha	38
Oxford Town Hall/ St. Aldate's	0.3ha	39
Oxpens/ Oxpens Rd	6.3ha	37

2.35. As such, in order to allow the flexibility of uses within the city and district centres (as set out in Policy S1) a larger site size threshold for Key Employment Sites located in the city and district centres is considered appropriate. A first stage filter was then applied.

2.36. Consideration was given to the implications of setting this initial site size threshold filter at 0.5ha or 1ha, as in reality allowing flexibility on employment sites either 0.5ha or less or 1ha or less within the city and district centres, was considered to be something that most landowners or agents would generally welcome.

2.37. If the initial site size filter is set to 0.5ha, the three smallest sites (all circa. 0.3ha) are removed from further consideration. However, if the initial site size filter is set at 1ha, one additional site (0.8ha) is also removed.

2.38. The 2ha site size threshold, however, was considered more appropriate for city and district centres. This is because Policy E2: Warehousing Storage and Distribution Uses only supports B8 uses Key Employment Sites.

2.39. Unfortunately, there is a drafting error in the first sentence of Paragraph 5.40 of Background Paper 004: Employment and Inclusive Economy, which should read as follows:

> *Given the premium land values associated with the prime city centre office and R&D market, it is not expected that <u>many</u> B8 uses would be sought in these locations.*

2.40. The ability of Key Employment Sites within the city and district centres to be able to accommodate an element of small-scale B8 uses was an important consideration in coming to the site size threshold of 2ha. It was considered that, the larger sites had more potential to support an element of B8 uses than the smaller sites. Examples of B8 uses that might be considered within larger Key Employment Sites in city centre locations include sustainable last mile delivery solutions (e.g., cycle/e-bike couriers/ hubs and innovations supporting the circular economy (e.g., "reverse logistics" hubs).

2.41. The potential contribution of each site to the city's employment land supply was also a factor in determining the threshold. The ELNA recognises the contributions or each of the three largest city centre sites. The Oxpens site is likely to deliver a minimum of around 60,000sqm GIA and this is recorded within the planning commitments. While the scale of opportunity at Osney Mead was yet to be quantified, the site currently performs an important role as an Industrial Estate providing space for a variety of local businesses. At 17.8ha, it is important that the employment use of the site is maintained and that the number of jobs in employment-generating uses retained. This site clearly performs an important role in the city now and will continue to do so in the future.

2.42. The Nuffield Sites (which include the 0.7ha Island site) is a mixed-use allocation across three separate parcels, two of which are likely to be for employment generating uses. Although the ELNA suggests 28,500sqm across the sites (based on landowner consultation). Assuming that any employment floorspace was split evenly across the two parcels, this would deliver 14,250sqm at the Island site. This represents a relatively small proportion of the city's overall employment floorspace need.

2.43. As set out above, the 2ha Key Employment Site size threshold for the city and district centres was arrived at using professional judgement. It has taken into account range of qualitative factors, which stem from the importance of allow flexibility of uses in the city and district centres.

2.44. The 2ha site size threshold was therefore considered to adequately capture the larger Key Employment Sites while also enabling a degree of flexibility to enable their redevelopment for a forward a wide mix of uses, including housing, in the city's most sustainable locations.

2.45. This approach resulted in a list of 34 sites. For completeness, the application of a 2ha site size threshold within the city and district centres resulted in the removal of the following four sites:

- Beaver House, Hythe Bridge Street
- County Hall, New Road
- Oxford Town Hall, St. Aldate's
- Island site, Park End Street

3. Oxford's Key Employment Sites

3.1. The above process results in 34 employment sites being identified as Oxford's Key Employment Sites for the purposes of the policies in the Reg. 19 Plan. These sites are therefore listed in Appendix 3.1 of the Reg. 19 Plan, are shown on the Policies Map. They are listed below:

- 496 Cowley Road
- ARC Oxford
- Ashville Way Industrial Estate, Watlington Road
- Botley Road Retail Park
- Chiltern Business Centre, Garsington Road
- Churchill Hospital
- County Trading Estate, Watlington Road
- Eastpoint Business Park
- Fenchurch Court, Bobby Fryer Close
- Horspath Industrial Estate, Pony Road
- Huw Grays (formerly Buildbase), Watlington Road
- John Radcliffe Hospital
- Jordan Hill Business Park
- Light Industrial Units, Green Road
- MINI Plant Oxford
- New Barclay House, 234 Botley Road
- Newtec Place, Magdalen Road
- Nuffield Industrial Estate, Ledgers Close
- Nuffield Orthopaedic Hospital
- Old Road Campus
- Osney Mead
- Oxford Bus Company, Cowley House, Watlington Road
- Oxford North
- Oxford Science Park
- Oxford Trade Centre, Harrow Road
- Oxford University Press, Great Clarendon Street
- Oxpens
- Radcliffe Observatory Quarter (ROQ)
- The Gallery, 54 Marston Street
- Trade City Oxford and Network Oxford
- Unipart site
- University of Oxford Science Area and Keble Road Triangle
- Warneford Hospital

3.2. Wood Centre for Innovation

Appendix 1: Employment Site Assessment Pro-Forma

Employment Sites Assessment Pro-Forma – Desktop Assessment (Part 1)	
Site name	
Site address	
Site area (hectares)	
HELAA reference number	
Site allocation (OLP2036 site reference)	
Employment Site Category	
Policy considerations	
Physical/ environmental considerations	
Current use (including use class(es))	
Planning Status (i.e., live application, under construction, permission granted, complete etc.)	
Proportion of site undeveloped/ underdeveloped with potential for intensification	

Site location plan:

	Accessibility
Q1	**Access to the Strategic Road Network (qualitative assessment)**
	Brief description of route/ describe the path from site to SRN (e.g. does it go through LTN or residential neighbourhood or is it fairly clear vehicular route):

Q2	**Public transport (including rail) access**
1	**Poor:** remote site, poor infrequent public transport access
2	**Fair:** more than 800m from a railway station or a frequent service bus stop
3	**Good:** between 400-800m from a railway station or a frequent service bus stop (4 buses per hour)
4	**Very good**: good access to one or more frequent service bus stops (less than 400m) / within walking distance of a railway station (less than 400m)
	Notes:

	Site characteristics

Q3	Contamination (qualitative assessment)
	Brief description about any known contamination or potential issues:

	Market Conditions
Q4	**Market Perception (sites over 0.5ha)**
1	**Poor:** low demand, difficult to attract occupiers even with heavy marketing
2	**Fair:** requires strong marketing/incentives to attract new occupiers
3	**Good:** good demand, units don't remain unoccupied for long
4	**Very good:** viewed as attractive by agents/occupiers; strong demand; units rarely available/appears to be all full
	Notes:

Q5	Marketing evidence: what evidence is there that the site has been actively marketed? (Sites over 0.5ha only) (qualitative assessment)
	Notes:

	Ownership and potential for development
Q6	**Ownership factors (qualitative assessment)**
	Include any known information about ownership, e.g., site promoter, etc.):

Q7	Availability for development/ redevelopment/ intensification
1	**Poor:** constraints on development or owner aspirations for other uses, history of non-take-up, unlikely to be available for additional employment within 5 years or more
2	**Fair:** no active discussions but no specific constraints to development either.
3	**Good:** landowner actively pursuing / discussing future investment (e.g., consultation events; known intentions to develop in short-term – i.e., within five years)
4	**Very good:** land likely to be available for development/ occupation within immediate term (i.e., 1-2 years) (recent grant of planning permission/ current 'live' planning application)
	Notes:

Q8	What development would the landowner/developer consider/propose (housing, employment, other commercial, mixed use or unknown)? (qualitative assessment)
	Notes:
	Supports regional economic objectives (e.g., Oxford Cambridge Growth Corridor/ Enterprise Oxfordshire)
Q9	**Regional economic development opportunities**

1	**Poor: s**ite does not have ability to deliver any regional economic development objectives
2	**Fair:** site has limited ability to deliver regional economic development objectives
3	**Good:** site has good ability to deliver some regional economic development objectives
4	**Very good:** site has excellent ability to deliver several significant regional objectives
	Notes:

	Wider economic factors (Social Value)
Q10	**Deprivation and Regeneration Areas (assessed under 2019 IMD)**
1	**Poor:** site within the most affluent neighbourhoods (super output area is in top quartile of least deprived (0-25% least deprived)
2	**Fair:** site within a neighbourhood ranked as average to affluent (super output area is 25-50% least deprived)
3	**Good:** site within a neighbourhood ranked as average to deprived (super output is in the 25%-50% most deprived)
4	**Very good:** site is within a neighbourhood ranked as deprived (super output area is 0-25% most deprived) and within a City Council Regeneration Area
	Notes:

Q11	**Local factors**
1	**Poor: s**ite does not deliver any local development objectives
2	**Fair:** site delivers limited number of local development objectives
3	**Good:** site delivers some local development objectives
4	**Very good:** site delivers majority of local development objectives
	Notes:

Sub-total score of desktop assessment (Part 1):

Employment Sites Assessment Pro-Forma – On-site Assessment (Part 2)	
Site name	
Site address	

	Accessibility
Q12	**Local road access**
1	**Poor:** difficult/narrow road access, via residential roads, difficult site junction, congested roads or restricted heights/weights
2	**Fair:** some access issues as outlined above
3	**Good:** generally good access with few issues for HGVs and limited congestion
4	**Very good**: via free-moving good roads, avoiding residential areas and difficult junctions
	Notes:

Q13	**Walking and Cycling**
1	**Poor:** no existing footpaths or cycle paths to the site
2	**Fair:** some footpath or cycle paths although limited provision/not continuous
3	**Good:** reasonable paths available but some limitations such as poor-quality surface/lighting/crossings etc.
4	**Very good**: good and attractive footpath and cycle links from residential areas
	Notes:

	General location and neighbours
Q14	**General location; proximity to amenities and facilities (and labour)**
1	**Poor:** remote site, no amenities or facilities easily accessible
2	**Fair:** limited facilities available although access may be more difficult (1-1.5 Km)
3	**Good:** good access to some facilities (within 0.5 -1 Km)
4	**Very good**: easy access to a range of amenities and facilities (within 0.5 Km)
	Notes:

Q15	**Neighbouring uses (qualitative assessment)**
	Describe neighbouring uses and any sensitivities they may have in relation to the site itself:

	Site Characteristics
Q16	**Topography; size; profile**

1	**Poor:** sloping/uneven site; under 0.5 ha. size; irregular/narrow shape; difficult access point
2	**Fair:** some of the above issues
3	**Good:** some of the advantages below
4	**Very good:** generally level site; regular shape; over 2ha. in size; good access point
	Notes:

	Quality of local environment
Q17	**Age of existing premises (tick as appropriate)**
	Pre-1980
	1980-2010
	Post-2010
	Notes:

Q18	**Condition of existing premises**
1	**Poor:** buildings and external areas are of very poor quality and condition / very restricted circulation and servicing facilities
2	**Fair:** generally, buildings and external areas appear adequate, although some aspects may be poor
3	**Good:** generally, buildings and external areas are of good standard
4	**Very good:** buildings/ external areas are of a very good quality and condition providing a good range of building type, size and tenure / good circulation and servicing facilities
	Notes:

Q19	**General attractiveness of location**
1	**Poor:** surrounding environment is of poor quality; low profile/visibility; poor/run-down/unattractive appearance; attracts lower end users
2	**Fair:** some of the above aspects are more attractive
3	**Good:** most aspects are attractive though some users would likely look for a better standard
4	**Very good:** quality of surrounding environment will likely be a positive factor to attracting occupiers; high profile/visibility; high quality appearance, environment and quality of occupiers
	Notes:

Q20	**Environmental quality**
1	**Poor:** the site is substantially exposed to noise, dust and/or smell which significantly affects the quality of the immediate environment
2	**Fair:** the site is exposed to some noise, dust or smell which somewhat affects the quality of the environment at certain periods of day

3	**Good:** occasionally, the site is exposed to some noise, dust or smell which can affect the amenity of the immediate environment
4	**Very good:** the site does not appear to be exposed to unreasonable levels of noise, smell, dust or other amenity factors
	Notes:

Q21	**Green and blue infrastructure (GBI) features** – *this could include areas of green space, trees and shrubs, ponds, canals/rivers, green walls or roofs*.
1	**Poor** – little or no GBI features on the site. If located on site, relatively disparate and/or of low quality, the area is entirely or predominantly artificial in surface cover.
2	**Fair** – there are some areas of GBI features on the site, or features which seem of average quality.
3	**Good** – GBI covers a fairly large area of the site, or forms some good connections to neighbouring areas, or includes features which seem of a good quality.
4	**Very good**- GBI makes up extensive parts of the site, or forms strong connections to neighbouring areas, or includes features which seem of a very high/exceptional quality.
	Notes:

	Market conditions
Q22	**Vacancy levels**
1	**Poor:** over 25% site/premises vacant
2	**Fair:** 15-25% site/premises vacant
3	**Good:** 10-15% site/premises vacant
4	**Very good:** under 10% of site/premises vacant
	Notes:

Sub-total score of on-site assessment:

Total score: Desktop (part 1) and On-site (Part 2) assessment:
Notes:

Appendix 2: Guidance Notes for Pro-Forma

Employment Site Assessment Pro–Forma – Desktop Assessment (Part 1)	
Site name	
Site address	
Site area (hectares)	
HELAA reference number	
Site allocation (OLP2036)	
Category of employment site	
Policy considerations (only applies to non-SHLAA sites 0.25ha or more)	
Physical/ environmental considerations (only applies to non-SHLAA sites 0.25ha or more)	
Current use (including use class(es))	
Planning Status (e.g. under construction, has a permission in place, etc.)	
Proportion of site undeveloped/ underdeveloped with potential for intensification	

Site location plan:
[Insert Site Location Plan]

Section/ Question(s)	Instructions
Accessibility	
1. Access to Strategic Road network	1. Describe access from the site to the Strategic Road Network.
2. Public transport (including rail) access	2. A frequent service bus stop is one with four or more buses per hour.
Site Characteristics	
3. Contamination	3. Description of any known contamination issues.
Market Conditions	
4. Market Perception (site size 0.5ha or more)	4. Use evidence from web-searches, etc. to inform judgement about occupancy demand.
5. Marketing evidence (site size 0.5ha or more)	5. What evidence is there that the site has been actively marketed? Make a note of any commercial property lettings (e.g., from web-search) at the time of the assessment.
Ownership and potential for development	

6. Ownership factors (site size 0.5ha or more) 7. Availability for development 8. What development would the landowner/ developer consider/ propose?	6. What publicly available information exists about ownership? Is there a site promoter, etc? 7. Has there been a recent, or is there a current planning application at the site? 8. Check call-for-sites response forms, for example.
Supports regional economic objectives 9. Regional Economic Development Objectives	9. Regional economic objectives - Supports investment, growth and expansion of key sectors such as Science (STEM, Life Sciences etc.), and knowledge-based industries - Supports existing businesses to "scale-up" - Helps to attract new 'high growth' companies to Oxfordshire; - Supports investment in transport infrastructure to improve connectivity within Oxfordshire and with other major economic hubs (e.g., Cowley Branch Line, Oxford Railway Station improvements); Regional Economic Factors scoring: 1 – no objectives met 2 – 1 objective met 3 – 2-3 objectives met 4 – all objectives met
Wider Economic Factors 10. Deprivation and regeneration areas 11. Local factors	10. Use IMD database (2019) to work out deprivation scores. A "regeneration area" in this context, is an area which scores in the top 25% 'most-deprived' areas in the country. 11. Local Factors: - Site likely to support mainly local jobs - Site likely to support mainly micro (0-9) and/ or small business(es) - Site offers opportunities for training and skills - Provides a local/ community service (i.e., repairs, recycling, etc.) Local Factors scoring: 1 – no objectives met 2 – 1 objective met 3 – 2-3 objectives met 4 – 4 objectives met

Employment Sites Assessment Pro-Forma – On-site Assessment (Part 2)	
Accessibility	
12. Local Road Access	12. Assess site using specified criteria
13. Walking and Cycling	13. Assess site using specified criteria
General location and neighbours	
14. General location; proximity to amenities and facilities (and labour)	14. Assess site using specified criteria
15. Proximity to incompatible uses	15. Describe neighbouring uses and any sensitivities they may have in relation to the site.
Site characteristics	
16. Topography; size; profile	16. Consider site size, shape topography and site access.
Quality of local environment	
17. Age of existing premises	17. Estimate the age of the premises. (Supplement with further desktop work if required)
18. Condition of existing premises	18. Assess site using specified criteria
19. General attractiveness of location	19. Assess site using specified criteria
20. Environmental quality	20. Assess site using specified criteria
21. Green and blue infrastructure features	21. Assess site using specified criteria
Market conditions	
22. Vacancy levels	22. Use existing on-site information to inform judgement (e.g., site board/ letting signs). (Supplement with further desktop analysis as required.

Appendix 3 – List of sites assessed using the Pro-Forma

A3.1 The following sites underwent a full assessment using the Pro-Forma:

- 474 Cowley Road (Former Powell's Timber Yard)
- 496 Cowley Road
- 79-83 Temple Road
- ARC Oxford
- A.W. Clarke (Engineering) Ltd, Sandford Road
- Ashville Way Industrial Estate, Watlington Road
- Beaver House, Hythe Bridge Street
- Bossoms Boatyard
- Botley Road Retail Park
- Chiltern Business Centre, Garsington Road
- Churchill Hospital
- County Hall, New Road
- County Trading Estate, Watlington Road
- Cowley Marsh Depot
- Dairy Depot, Old Abingdon Road
- Eastpoint Business Park
- Fenchurch Court, Bobby Fryer Close
- Fire Station, Rewley Road
- Former Builder's Yard (Blanchford Building Supplies)
- Harcourt House, Marston Road
- Horspath Industrial Estate, Pony Road, Horspath
- Huw Grays (formerly Buildbase), Watlington Road
- Island Site, Park End Street
- John Radcliffe Hospital
- Jordan Hill Business Park
- Light Industrial Units, Green Road
- MINI Plant Oxford
- New Barclay House, 234 Botley Road
- Newtec Place, Magdalen Road
- Nuffield Industrial Estate, Ledgers Close
- Nuffield Orthopaedic Hospital
- Old Road Campus
- Osney Mead
- Oxford Bus Company, Cowley House, Watlington Road
- Oxford North
- Oxford Town Hall, St. Aldate's
- Oxford Trade Centre, Harrow Road
- Oxford University Press, Greal Clarendon Street
- Oxpens

- Radcliffe Observatory Quarter (ROQ)
- Salter Brothers Ltd, Meadow Lane
- Storage Yards, Binsey Lane
- The Gallery, 54 Marston Street
- Oxford Science Park
- Oxford Trade City and Network Oxford
- Unipart site
- University of Oxford Science Area and Keble Road Triangle
- Warneford Hospital
- Wood Centre for Innovation

Appendix 4 – Final scores for assessed sites

Name/ Address	Ward	Site Area (ha)	Final Score
474 Cowley Road (Former Powell's Timber Yard)	Donnington	0.3	34
496 Cowley Road	Donnington	0.3	36
79-83 Temple Road	Temple Cowley	0.5	32
AW Clarke (Engineering) Ltd, Sandford Road	Littlemore	0.3	32
ARC Oxford	Temple Cowley	35.4	47
Ashville Way Industrial Estate, Watlington Road	Blackbird Leys	1.3	40
Beaver House, 28-38 Hythe Bridge Street	Carfax & Jericho	0.30	39
Bossoms Boatyard, The Towing Path, OX2	Osney & St Thomas	0.3	34
Botley Road Retail Park, Botley Road	Osney & St Thomas	8.8	41
Chiltern Business Centre, Garsington Road	Blackbird Leys	0.6	37
Churchill Hospital, Old Road, Headington	Churchill	22.7	46
County Hall, New Road	Osney & St Thomas	0.3	40
County Trading Estate, Watlington Road	Blackbird Leys	9.7	42
Cowley Marsh Depot, Marsh Road	Temple Cowley	1.7	34
Dairy Depot, Old Abingdon Road	Hinksey Park	0.8	32
Eastpoint Business Park, Sandy Lane West	Littlemore	1.5	38

Name/ Address	Ward	Site Area (ha)	Final Score

Background paper 005a

Title: Green Infrastructure

This paper addresses the green infrastructure network, including the protection of green spaces and other features like trees, as well as the provision of new green infrastructure in development.
Relevant Local Plan Objective(s): • Secure strong, well-connected ecological networks and net gains in biodiversity. • Be resilient and adaptable to climate change and resistant to flood risk and its impacts on people and property. • Protect and enhance Oxford's green and blue network. • Provide opportunities for sport, food growing, recreation, relaxation and socialising on its open spaces.
SA Objective(s): 7. To provide adequate green infrastructure, leisure and recreation opportunities and make these readily accessible for all. 10. To conserve and enhance Oxford's biodiversity.
SEA theme(s): Landscape, human health, biodiversity, flora, fauna.

1. Introduction 2

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal) 4

Other relevant plans and programmes/strategies 5

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal) 6

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal) 10

5. Key Issues addressed through the Local Plan 2045 12

Introduction 12

Policy Approach to Green Infrastructure 12

Establishing the Green Infrastructure network hierarchy 13

Identifying spaces within the Core Network 14

Identifying additional supporting spaces in the GI network 16

Enhancing and providing new Green Infrastructure in Oxford 17
Urban Greening Factor for major development 18
Appendix A – Regulation 18 Policy options sets 22
Policy options set 005a (draft Policy G1): Protection of GI network and green features 22
Policy options set 005b (draft policy G2): Enhancement and provision of new GI features 27
Policy options set 005c (draft policy G3): Provision of new GI features – Urban Greening Factor 31

1. Introduction

1.1 The green infrastructure network is an important issue to be addressed in the new Local Plan. There are various definitions used for the term Green infrastructure (GI); however, the 2024 National Planning Practice Framework (NPPF) defines it as:

A network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity.

1.2 The Planning Practice Guidance sets out that green infrastructure includes both green and blue spaces and can include:

A range of spaces and assets that provide environmental and wider benefits. It can, for example, include parks, playing fields, other areas of open space, woodland, allotments, private gardens, sustainable drainage features, green roofs and walls, street trees and 'blue infrastructure' such as streams, ponds, canals and other water bodies.

1.3 Green infrastructure forms an essential part of the city's natural capital which is the various elements of the natural environment which provide us with valuable goods and services. An important feature of GI is its multi-functional nature, which means that it can perform a range of services from which people can benefit and which can contribute positively to achieving various policy objectives. Such services include, supporting physical and mental health and wellbeing; encouraging investment and regeneration; building resilience to climate change; providing space for nature and supporting biodiversity; reducing flood risk; and contributing to improved air quality (Table 1.1). The Council must balance competing development needs in the city whilst also ensuring that it plans in a positive way for the creation, protection, and enhancement of Oxford's green infrastructure so that these various benefits can be maximised for the city in the future.

Table 1.1 - The various benefits that green infrastructure can provide to an area (source: Oxford Green Infrastructure study 2022)

Environmental
• Supports and provides biodiversity (which underpins healthy and resilient ecosystems) and species movement/dispersal including through providing habitat, wildlife corridors and stepping-stones. • Provides climate change mitigation and adaptation, e.g., through providing flood and soil erosion protection, carbon sequestration and storage, urban cooling. • Improves air and water quality (pollution absorption and removal). • Enables food production and supports pollination. • Supports and creates attractive and sustainable places and landscapes i.e., quality placemaking
Social/Health and Wellbeing
• Provides opportunities for outdoor recreation, exercise, play and access to nature. • Provides attractive safe spaces for people to enjoy and improve social contacts – a key component of 'liveable' towns and cities where people want to live. • Supports the development of skills and capabilities. • Improves air and water, provides urban cooling and shade, reduces noise pollution. • Provides green active travel routes.
Economic
• Provides attractive places to live and work, attracting inward investment and tourism. • Increased land property values. • Supports sustainable homes and communities e.g., through providing local food, building materials, encouraging low carbon lifestyles e.g., through well-connected attractive travel walking and cycling routes. • Provides health and wellbeing benefits that result in avoided healthcare costs. • Provides local food, energy, and timber production. • Climate change mitigation and adaptation.

1.4 An important component of Oxford's Green Infrastructure network are the ecological spaces which support a variety of nationally and locally important species of flora and fauna. Some of these spaces are designated for their importance and protected by national legislation, some are protected through local policies where they are of county or city importance, meanwhile other informal spaces like gardens and wild areas within green spaces also play an important role but are not designated as such. The ecological network

is essential to supporting 'biodiversity' in the city, by which we mean the abundance of species such as plants and animals for which the city is home.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Planning Policy Framework

2.1 Highlights that planning for green infrastructure can help deliver a variety of planning policy objectives. Specifically, **para 20** states that green infrastructure is an element which local planning authorities should address in their strategic policies. **Para 164 and 199** highlight that green infrastructure should be considered as important mitigation measures for the impacts of climate change and poor air quality. Further references are made to green infrastructure elsewhere in the document:

- **Para 35**: plans should set out the development contributions expected in association to green infrastructure and set out the levels and types required.
- **Para. 96**: Provision of safe and accessible green infrastructure is one example of a way that local authorities can enable and support healthy lifestyles.
- **Para. 135**: developments should optimise the potential of the site to accommodate and sustain an appropriate amount/mix of development including green and public space.

2.2 With regard to open space, **para 103** of the NPPF sets out that access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities, and can deliver wider benefits for nature and climate change, and that local plan should assess what open space is needed and make provision to accommodate this. **Para 104** sets out strict conditions for when loss of open space, sports land/buildings and pitches can be lost.

Planning Practice Guidance and National Design Guide/Model Design Code

2.3 The online Planning Practice Guidance has a dedicated page for the natural environment including green infrastructure and biodiversity considerations. Paragraphs 4 to 8 include guidance on why green infrastructure is important and how local plans should take a strategic approach to addressing it including use of strategic policies to identify the location of existing and proposed green infrastructure networks and set out appropriate policies for their protection and enhancement. Open space is addressed in separate guidance and sets out how this should be taken into consideration in Local Plans to support health and wellbeing.

2.4 In relation to biodiversity (covered in paras 9 to 35), the PPG includes various pieces of guidance including on responsibilities regarding protected and priority species and

habitats; ‘proportionate’ information and assessment required on biodiversity impacts at all stages of development; local ecological networks and nature recovery networks; application of mitigation hierarchy, biodiversity net gain, and promotion of woodlands.

2.5 The National Design Guide is a material consideration and forms part of national planning guidance. The guide sets out ten characteristics of good design, of which designing to incorporate nature is one. It highlights the value that natural spaces can bring to people and encourages networks of green and blue infrastructure within the design of spaces as well as making space for biodiversity.

National Parks and Access to the Countryside Act 1949

2.6 Section 21 of this Act enables local authorities to designate Local Nature Reserves where they are of high natural interest in the local context.

Small Holdings and Allotments Act 1908

2.7 This places a duty on local authorities to provide allotment gardens where demand for them exists. Requests for allotments submitted by at least six local people must be taken into account when considering whether demand exists. Allotment provision is also subject to other legislation arrangements less related to the planning process, including the Allotments Acts of 1922, 1925 and 1950.

Oxford Local Plan 2036

2.8 The topic of green and blue infrastructure in the city is addressed in detail in chapter 5 of the adopted Local Plan, ‘Protecting and enhancing Oxford’s green and blue infrastructure network’, through policies G1 to G8. As well as overarching policies for protection of the GI network (policy G1) and providing new green features (policy G8), there are a number of individual policies for different aspects of the GI network.

Other relevant plans and programmes/strategies

Natural England Green Infrastructure Framework (2023)

2.9 The Green Infrastructure Framework was launched by Natural England in 2023. It is a collection of policy tools and documents whose purpose is to assist local planning authorities and developers meet requirements in the National Planning Policy Framework to consider GI in local plans and in new development. The framework is structured around a number of key components that include a set of national standards on quantity/quality of GI; mapping; planning and design guidance. Whilst the Green Infrastructure Standards have no statutory power, they are intended to support better planning for good quality GI and help to target the creation or improvement of GI, particularly where existing provision is poorest. When supplemented with local knowledge

and evidence, Natural England advise that they can be used to help set local targets for provision.

Oxford City Council Green Spaces Strategy 2013-2027

2.10 The strategy focuses on green space that is freely available to the public for informal recreation, allotments and play irrespective of who the land is owned by.

Oxford City Council Playing Pitch Strategy 2022-2036 (and emerging update)

2.11 This strategy is a needs and evidence-based document that is aligned with the adopted Local Plan, and it seeks to ensure that the city has a good supply of well-managed, well-maintained and efficient playing pitches and other outdoor sports facilities that would help to encourage residents to maintain healthy and active lifestyles. Whilst there was no legal requirement for a Playing Pitch Strategy, the Council had opted to develop one as one of the ways to promote healthier living and reduce inequality. The Strategy is intended to be reviewed every year and refreshed on a five yearly basis.

2.12 An update to the Council's Playing Pitch Strategy is currently in progress, which will cover the city to 2045. An interim update note to inform the new Local Plan, which brings together emerging analysis and findings from Strategy's development with an early picture of existing and future demand for pitches, has been published alongside the Regulation 19 consultation. The full strategy is expected to be completed later in 2026.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

3.1 The Green Infrastructure study (2022) identified that Oxford's green spaces are providing a variety of roles that support health and wellbeing of residents and ecosystems. With regard to publicly accessible green spaces, the analysis highlighted that whilst there is a fairly even distribution of green spaces across the city in general meaning that accessibility for residents to walk or cycle to green spaces was good, however, there are inequalities in distribution of certain types of green spaces resulting in gaps in accessibility for specific types of green space. Whilst it is very challenging to establish significant new green space to counter these gaps, additional loss of open space in certain areas could exacerbate these accessibility problems or establish access deficits for other types of green space like parks or outdoor sports. In summary, the report found that:

- Allotments: Gap in access in the eastern part of the city centre (low deprivation) (however much of this area is university land), and smaller gaps in the north (low deprivation) and west (pocket of high deprivation) of the study area.
- Amenity green space: large gaps in access in the north and east of the city (low levels of deprivation, and small gaps in the south in Littlemore and Temple

Cowley (high levels of deprivation). However, the good access to parks and recreation grounds across the city mitigates this.

- Parks and recreation grounds: Good access across the city. Small gap in the north in Wolvercote (low levels of deprivation) but there is access to amenity green space and accessible natural green space in this area, which helps to mitigate this gap in access (although it is acknowledged that these types of spaces do not typically offer the same level of facilities that a park might).
- Accessible Natural Green Space (15-minute walk time buffer): large gaps access in Cowley/Temple Cowley in the south and in the North (around Sunnymead), both in areas with relatively high levels of deprivation.
- Play space: for children's play spaces, gaps in access in the city centre (although much of this area is university land) and North Oxford (low levels of deprivation). There is also a gap in the south in Iffley (IMD decile of 6). For youth play spaces, small gaps in access in the centre and north of the city centre (in areas of low deprivation).

3.2 Informed by more than 200 site visits, the report also looked at quality and multi-functionality of the open spaces (helping to assess wider benefits they play to the local areas). It found that:

- The majority of public open spaces in the city (84%) were currently of good or excellent quality, however there are opportunities to improve quality on some spaces, with 16% assessed as fair or poor quality.
- Generally, the highest quality sites fall within areas of lower levels of deprivation, however there are exceptions to this. The wards with generally higher numbers of poorer scoring sites are Marston, Headington Hill and Northway, Quarry and Risinghurst, Barton and Sand Hills, Churchill and Lye Valley.
- Larger/destination parks within the city are high quality sites providing multiple functions and are important sites for tourism and built/natural heritage.
- Sites delivering very low numbers of functions tend to be private spaces and amenity green spaces. Smaller sites, including other typologies, typically delivered fewer functions (though not in all instances) and there are areas with lower levels of multifunctionality in the south and east of the city (which generally corresponds with areas of high deprivation).
- For lower scoring sites, common issues appeared to be low biodiversity value, poor access (e.g. path quality and overgrown vegetation), management of soft landscaping, dog fouling, litter and lack of signage.

3.3 A particular type of open space that provides an important role for health and wellbeing is that of playing pitches. The Council's existing strategy identified the importance of protecting pitches and indicated that any losses need to be sufficiently mitigated through sufficient reprovision as there is not generally considered to be a surplus in the city. A

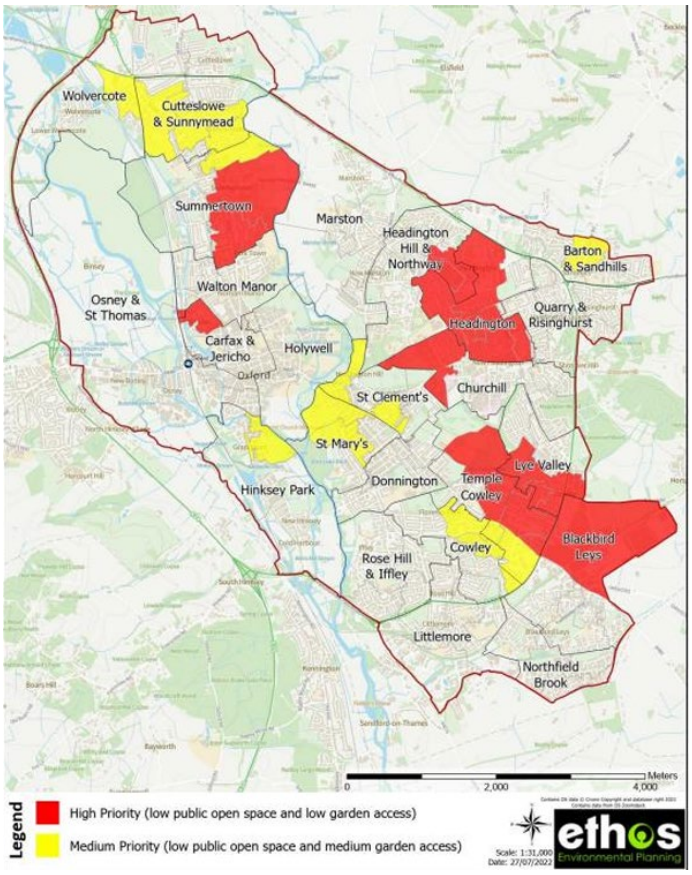
similar picture is emerging from the ongoing update to the Council's Playing pitches strategy when existing provision is considered against current population demands and future demands. Other mechanisms could also play a role in improving access such as enhancing existing pitches and associated facilities, as well as community use agreements.

3.4 Beyond public open spaces, there are a variety of greenspaces in the city which are not freely accessible to public, yet still make an important contribution to the overall green infrastructure network. For example, many of the schools and colleges in the city have their own playing fields and outdoor spaces which play an important role in the health and wellbeing of the young people and children in attendance and add to the sense of place locally (sometimes playing an important role in heritage setting particularly around the colleges).

3.5 According to land use data (2018), around 19.9% of Oxford's land use is classified as residential gardens. There is diversity in the amounts of green infrastructure that is present across Oxford gardens and policy has little control over how they are managed but many of these spaces nevertheless are an important location for green assets like trees in the city. Whilst only being accessible to individuals within the home, private gardens offer an important outdoor space for socialising and being active. Of course, there is not an equal distribution of this type of space across the community, and many individuals, particularly those living in flatted developments or house shares, may not have any privately accessible green space at all.

3.6 The GI study found that some of areas of the city with the lowest amounts of private garden are located in areas with lowest access to public open space. In these locations (highlighted in red and yellow in Figure 3.1), there is potential for existing open space to be under greater pressure from local residents. Notably, some of these locations are also areas of higher deprivation which could exacerbate existing health inequalities where residents are not able to benefit from sufficient outdoor space.

Figure 3.1 - Bivariate map showing areas of the city with lowest public open space in combination with lowest garden access (red are lowest)



3.7 Beyond green spaces, the city hosts a range of other important green infrastructure features such as trees. Trees are present in our greenspaces but also help to break up the urban fabric of roads and streets throughout the city. Many of these trees have been protected for their high amenity value through Tree Preservation Orders (TPOs) however there are a greater proportion that have not (and TPO designation is not the only determiner of high-quality trees). Oxford is also home to several areas of ancient woodland, including Brasenose Wood and at Shotover Country Park. The Oxford Urban Forest Strategy estimates that the urban forest in Oxford contains approximately 248,000 trees which equates to a total canopy cover of 22.3%; meanwhile separate analysis that used a slightly different methodology conducted for the GI study concluded with a similar figure of 21.02%. This is above the 20% minimum recommended by Forest Research for urban areas which is a positive, however, as Table 3.1 shows, canopy cover does vary across the city with some of our more deprived wards featuring some of the lowest amounts of coverage (e.g. Blackbird Leys).

Table 3.1 - Canopy cover % and Indices of Multiple Deprivation score per ward as shown in the Oxford Green Infrastructure Study (2022)

Ward	Canopy Cover (%) – Ethos analysis 2m+	Highest level of deprivation in ward (1 is most deprived)
Barton & Sandhills	21.82	2
Blackbird Leys	9.69	2
Carfax & Jericho	15.9	1
Churchill	28.1	3
Cowley	19.71	4
Cutteslowe & Sunnymead	31.02	4
Donnington	22.28	2
Headington	28.33	9
Headington Hill & Northway	32.54	5
Hinksey Park	24.07	4
Holywell	22.42	2
Littlemore	22.54	4
Lye Valley	22.74	5
Marston	22.59	3
Northfield Brook	19.62	1
Osney & St Thomas	11.64	7
Quarry & Risinghurst	29.45	4
Rose Hill & Iffley	30.26	2
St Clement's	27.64	3
St Mary's	33.27	2
Summertown	26.26	6
Temple Cowley	21.69	6
Walton Manor	26.74	9
Wolvercote	21.75	6

3.7 The GI network also includes a range of blue spaces including the two rivers (Cherwell and Thames), a number of streams and smaller water courses, as well as the canal and other waterbodies like ponds and lakes. These features act as important corridors through the city and in between green spaces, providing habitat for wildlife and connectivity for people. The Water Cycle Scoping Study will discuss the current environmental conditions of the main water courses, which continue to be challenged by a range of pollutants such as from agriculture, urban runoff and sewer discharges.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 The currently adopted Local Plan 2036 will maintain protection of the network of green infrastructure across the city, alongside national policy (which affords its own strict protections for open space). Other legislation outside of planning that protects certain green spaces like allotments, as highlighted in section 2, will also continue to apply.

4.2 Nevertheless, a growing population means that there is likely to be increasing demand for outdoor sports provision and public open spaces in the long term. Ongoing development pressure as the city grows means that these spaces will continue to need to be protected and access enhanced wherever possible. Where additional recreational pressure is not mitigated through new or improved facilities, this can lead to a deterioration of these spaces. The quality of existing spaces already varies across the city, without additional investment, facilities associated with some green spaces may deteriorate further, exacerbating this uneven distribution in quality.

4.3 Different types of green spaces could face different challenges. In areas of the city where access to private gardens is reduced, there is likely to be particular demand on public spaces like parks and smaller amenity green areas for people to socialise and undertake physical activity, as well as allotments (many of which already have waiting lists).

4.4 Some types of GI will continue to be protected from inappropriate development through other mechanisms outside of the Local Plan, for example some trees benefit from Tree Preservation Orders (TPOs) and conservation area protection. Formal allotments benefit from protection that can only be removed via application to the secretary of state. Some of our parks and gardens benefit from heritage protection as Registered Parks and Gardens.

4.5 Blue spaces like the rivers and streams are already facing pressures from pollution as well as historic development of their banks. It is likely water quality issues relating to sewage pollution will continue without additional investment from Thames Water into the Wastewater Treatment Works, although with sufficient upgrades as are proposed, these issues could then improve. Other sources of pollution that are not within the control of the Local Plan are likely to continue without separate actions in the relevant areas such as changes to agricultural practices. Without a new Local Plan there could be additional pressure for developing on open spaces along embankments, particularly beyond 2036, which could have impacts on the water courses and exacerbate the challenges they face.

4.6 Climate change is also likely to put pressure on many green spaces, particularly ecological sites (discussed further below). Increases in summer temperatures, milder winters, changes in rainfall distribution and seasonality, and more extremes of weather are anticipated long term impacts of climate change. The effects of these changes are uncertain and may occur as sudden and unexpected step changes. Potentially they could result in the need for additional management measures (e.g. to address risk from wildfires during drought seasons), or make spaces unusable due to additional flooding throughout the year. Indirectly, adaptation actions by other sectors that are key to land and water management may force changes in how certain spaces are utilised (e.g. to secure additional land for flood relief).

5. Key Issues addressed through the Local Plan 2045

Introduction

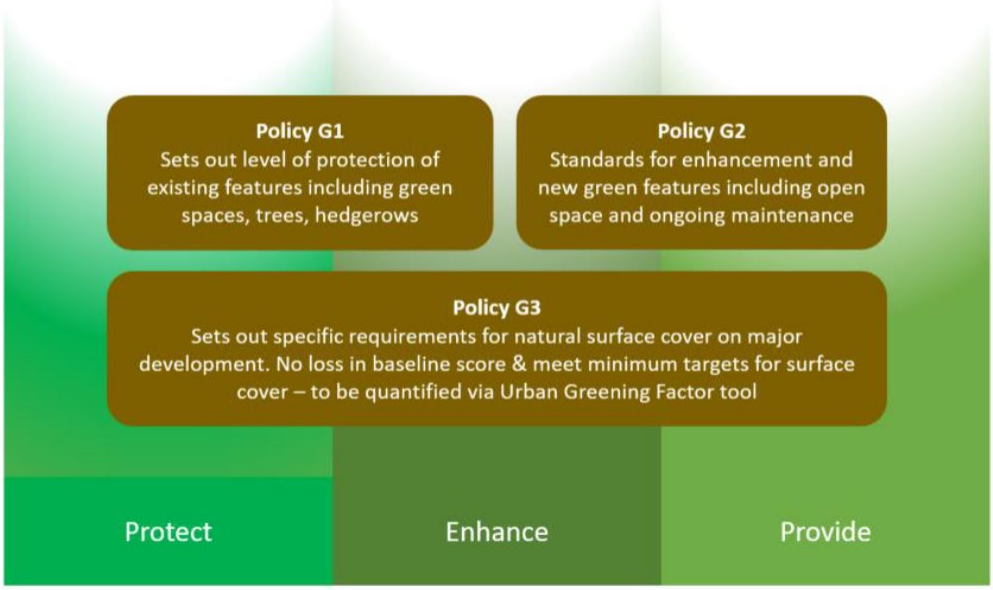
5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to green infrastructure. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Policy Approach to Green Infrastructure

5.3 The policy approach to Green infrastructure (GI) is guided by recognising and protecting a network of green features across the city and in order to harness the ability of GI to provide multi-functional benefits to the city's inhabitants and the wider environment. The intention is to ensure that new development preserves our highest quality GI and avoids unnecessary harm to it, whilst also ensuring that new GI is an integral component of the design of development. Three interrelated policies drive this approach as is shown in Figure 5.1.

Figure 5.1: The approach to green infrastructure in the new Local Plan



Establishing the Green Infrastructure network hierarchy

5.4 Oxford's Green Infrastructure (GI) network is made up of a variety of green and blue spaces across the city which provide multiple benefits to the wider natural environment and the health and wellbeing of the people of Oxford. Whilst national policy already includes protections for open space through the NPPF, which is expanded upon in the associated guidance, the Local Plan policy G1 includes additional protections and helps define the network.

5.5 Whilst the approach to all of the green spaces of the network is one of resistance to their loss or harm in line with national policy, the Local Plan assigns the spaces of the network to different levels of protection with the hierarchy set out in policy G1. The hierarchy is as follows:

- **Core**: Spaces within the highest level of the hierarchy benefit from the strongest level of protection meaning loss would not be deemed acceptable in any circumstance because their location is fundamental to the benefit they provide and to supporting the functioning of the wider network and addressing wider sustainability issues.
- **Supporting**: Spaces within the second level of the hierarchy which also play an important role in supporting the network and addressing sustainability issues; however, specific location is not as fundamental and loss could be acceptable where this is reprovided elsewhere in the network.
- **All other spaces**: Not identified through policy G1 and do not have additional

protections applied on them via the Local Plan. Applications would defer to the protections which already exist through national policy – e.g. meeting the tests for loss of open space as set out in the NPPF.

5.6 This approach is considered to be a reasonable and pragmatic way of responding to the constrained nature of the city and recognising the varying clusters of functions different spaces provide to supporting the city-wide network. It takes a strong line on protection of many spaces across the city, affording higher levels of protection to those areas whose value derives significantly from their current geographic location in order to perform these functions – value which could not be easily replicated elsewhere were they to be lost.

5.7 Equally, it acknowledges the demands on space that the city is constantly subject to and it recognises that to meet the wider vision for the city in 2045 and meeting the other Local Plan objectives, sometimes other types of uses may be necessary. Whilst the protection of the supporting tier also exceeds national policy, it recognises that these spaces can provide more limited value to the overall network where they currently preside and that these could potentially be reprovided in another part of the network without irreparably reducing quality of GI in the city where a more fitting use can be demonstrated for the site.

Identifying spaces within the Core Network

5.8 Several typologies of green spaces which were automatically assigned to the core network because these typologies provided a clear role or unique set of functions/benefits that other typologies could not and in a location that would be challenging to reprovide in the short term as part of the development process. These typologies included:

- allotments for their role in food growing and social interaction, particularly for those without private gardens (also protected through additional national legislation),
- churchyards/cemeteries because of their important setting for heritage assets and burial spaces.
- ecological sites protected under a local or national designation due to their specific ecological value for the habitats in these areas to supporting biodiversity.

5.9 Access to a park that can provide multiple types of facilities and functions to meet recreational needs was also considered to be an important component to the GI network, particularly in supporting the needs of residents with limited private open space but also more generally for meeting a range of health needs. The GI study identified a number of ‘destination’ parks which are of a significant size (varying from 7ha to 122ha), which formed the basis of a list of sites to be included in the core network. Council officers subsequently reviewed and added to this list to ensure some additional parks were protected across the city including where they were part of a limited offer of alternative green spaces in areas of significant deprivation.

5.10 Other typologies of open space with a more heterogenous character required a more nuanced approach, particularly where they were more variable in the types of functions they provide. Unlike spaces with a more singular or primary function such as an allotment, or cemetery, other spaces such as the remaining parks as well as areas of natural green space can vary more greatly in character and the role they play in the network sometimes. There are a range of parks and gardens in the city for example and some have an important heritage status being designated as Registered Parks and Gardens; whilst some are particularly large and serve a wide area of the community; others are much smaller with limited features and potentially congregated in areas with an abundance of other types of green space. This variation necessitated further analysis to designate certain spaces into core and others into supporting.

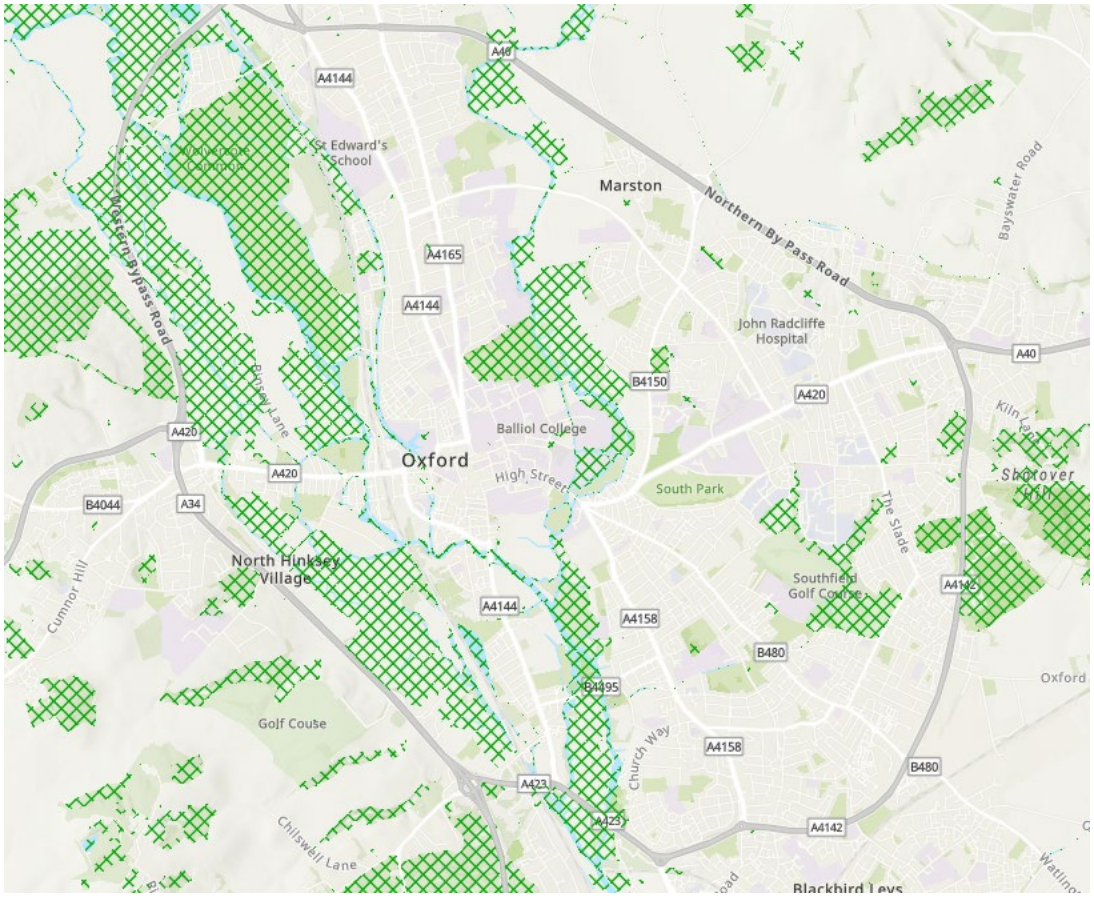
5.11 A key driver in identifying and protecting a network of core spaces across the city was the understanding that many of their benefits need to be retained in situ and are very challenging to relocate. In this context, officers have considered a number of specific factors relating to key multi-functional benefits that arise from the situation of certain spaces and broadly fall under three topics: heritage, biodiversity and climate change. The remaining spaces not already within core network were assessed in terms of their contribution to these benefits and allocated to core where they met the following criteria:

- Biodiversity – has the space been identified as containing a significant amount of core habitat (more than 50% of the site) within the Oxfordshire Nature Recovery Network and is it also connected to other spaces and clearly forming part of a wider wildlife corridor through the city?
- Heritage – is it a Registered Park and Garden or has the space been identified on the Oxford Heritage Asset Register as a local green feature of significance?
- Climate change – has the space been identified as containing a significant amount of land within flood zone 3b (more than 50% of the site) and therefore acting as important source of flood storage?

5.12 Appendix B of this background paper (contained in a separate document) details all sites added into the core network and the rationale for why they have been assigned to this level of the network.

5.13 For reference, the Oxfordshire Nature Recovery Network (Figure 5.2) was identified in advance of work on the Local Nature Recovery Strategy and the Council has utilised it in informing core designation in the GI network because it takes into account a wider variety of biodiversity considerations than the LNRS, including areas of ecological interest such as Sites of Special Scientific Interest, Local and National Nature Reserves, Wildlife Sites (Local, District, and City), as well as various reserves, woodlands, TVERC's priority habitat mapping and other protected sites. The Council has cross-referenced with the Oxfordshire County Council LNRS mapping to ensure any identified existing sites of particular importance for biodiversity are also incorporated.

Figure 5.2: TVERC Nature Recovery Network (NRN) core zones – which contribute to designation of some 'core' spaces (where they also clearly form part of a wider ecological corridor), where the core zone exceeds 50% of the site Council (© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.).



Identifying additional supporting spaces in the GI network

5.14 There were a number of other types of green space which did not meet the standards for core protection set out in the preceding paragraphs but were still deemed important enough to be classified as supporting spaces to the network. Typically, these were spaces which could feasibly be reprovided to another part of network if necessary and were typically of a more limited wider benefit to the area in terms of functionality or public access but still played some function that supports the wider area and that would need to be replaced.

5.15 Sports pitches, for example, are an important asset to supporting health and wellbeing through providing formal spaces for recreation. Whilst reprovision of any losses will often be an important consideration (which the supporting tier of the network would require),

these spaces typically offer fewer wider benefits to warrant core protection (unless they met one of the additional considerations in para 5.11).

5.16 A number of spaces with no fixed role, including amenity spaces and private outdoor spaces, were also added to the supporting tier where they were of a significant enough size. As was found in the 2022 GI study, typically larger areas of green space are able to perform a wider variety of positive functions for the city than smaller ones, though there may be exceptions. These spaces can make a valuable contribution to greening the urban realm in general and can have potential for enhancement in future.

5.17 Amenity green space (areas of informal grass with limited features) were included within the supporting tier where they exceeded a size threshold of 0.15ha, which was deemed significant enough to be of benefit to the local environment. Private green spaces were included within the supporting tier based upon a size threshold, however, due to their restricted public access benefit this was only where they exceeded a size threshold of 0.3ha.

Enhancing and providing new Green Infrastructure in Oxford

5.18 A key driver behind the policies of the new Local Plan is encouraging green and blue infrastructure to be considered with equal importance and value to more traditional grey infrastructure provision. Whilst policy G1's hierarchy of protection seeks to ensure that we retain our highest quality GI in the city and supports the objective of retaining opportunities to enhance what we have, policies G2 and G3 then set out the framework for how we expect to see enhancement and new provision take place.

5.19 Principally, policy G2 requires applicants to consider not just the provision of features on the site but also how they connect in with features around the site to deliver greater interconnectedness with the wider GI network. This is important for building resilience into the GI network, reducing fragmented landscapes and supporting movement of people and wildlife across the city. Equally, policy G2 sets out the importance of a design rationale which looks for ways to secure multi-functionality. It sets out various functions that are considered important such as supporting biodiversity, building climate resilience and providing spaces for people, which should guide design beyond purely aesthetic concerns. To be most effective at fulfilling multi-functional roles, these have to be taken into account in informing the design of green spaces/features from the beginning, rather than as an afterthought. Where reprovision is required to accord with loss of protected space under policy G1 – the requirements of G2 guide how we expect the reprovided GI to be delivered.

5.20 There are some other elements to the policy that address more specific situations. For example, recognising that our blue spaces are an integral component to the city's landscape and that in places the connection with our watercourses has been degraded over time which can lead to negative impacts for the water environment, Policy G2 also

sets out specific expectations in relation to development that occurs adjacent to watercourses. It sets out that new development adjacent to these spaces incorporates a sufficient buffer to mitigate negative impacts on them and also help to enhance the environment in these areas. Where the land alongside our watercourses has already become urbanised the policy requires that buffers ideally be reinstated.

5.21 The policy also sets out requirements for new open space on larger developments. Whilst our analysis of the city through the GI study 2022 and of the existing development sites over the Local Plan period suggest that opportunities for the creation of large-scale new open space is limited by various constraints, open space is an important component of healthy, well designed development and where possible this needs to be incorporated within the site layout of larger schemes. The new Local Plan therefore retains the existing requirement for 10% open space to be delivered on larger developments of 1.5ha and above.

5.22 Where green features are included in a development, it is important to recognise that these are live components of a design which are subject to varying levels of ongoing care and maintenance. A successful development is one that considers these longer-term needs and plans accordingly for them as part of the design process. Certain features like trees have a crucial establishment window which requires more intensive care and attention in terms of watering to ensure the longevity of these features going forward. Meanwhile, other features like green walls and roofs require more regular watering and maintenance throughout their lifetime to avoid failure due to their more exposed and unnatural planting location. With climate change and longer hot/dry conditions in future these demands are likely to increase. The policy therefore sets out specific requirements for ongoing maintenance/management arrangements which need to be included as part of the applications, along with conditions that will be set for replacement of failed specimens during the establishment period post- construction.

Urban Greening Factor for major development

5.23 As has already been identified, Oxford's constrained nature makes the delivery of new green spaces of notable size within the city boundary challenging to achieve. There are also parts of the city that are more densely developed and deficient in green spaces in terms of their size, accessibility and quality. It is therefore crucial that in areas where new development comes forward, all opportunities are taken to maximise the amount of greening within the site. This also supports other objectives such as making space for nature and building resilience to climate change (through reducing surface water flood risk and risk of overheating in summer). Whilst the scope of policy G2 sets out principles and requirements in this regard that apply to all scales of development, policy G3 introduces additional requirements of major development in the city in the form of the Urban Greening Factor (UGF) assessment.

5.24 The UGF assessment process produces a score for the proportion of urban greening in comparison to the total area of a given development site. The calculation focuses on the types of surface cover used within the landscape of the site and is measured for the existing situation and post development conditions following building and landscape proposals. Each surface cover type is assigned a weighting factor (between 0.0 to 1.0) that reflects its environmental and social value in urban greening; its functionality in providing ecosystem services, including improving permeability; and its benefit in supporting biodiversity and habitat creation.

5.25 The benefit of the UGF process is that it provides a simple means of quantifying the changes in amount and type of green surface cover delivered through a development in a transparent way. Whilst certain types of more natural surface cover are incentivised through the UGF, applicants have flexibility in how they meet the policy requirements for post- development score and can freely pick the proportions of different surface cover types to best fit their site's constraints. This is particularly important in addressing the constrained nature of many sites in the city, balancing out the space demands of various policy requirements in the Local Plan, and viability challenges of delivering development.

5.26 Whilst the UGF process involves the use of an area-based metric which has similarities to the Statutory Biodiversity Net Gain metric that applicants will be required to complete as part of Biodiversity Net Gain (BNG), the two tools have different roles in meeting the Local Plan's objectives. The BNG metric works as an uplift in score for a site (a 10% improvement on current score) and is focused primarily on habitat creation for biodiversity. Meanwhile, the UGF sets out a minimum target and is focused on delivering multi-functional green features which could provide for biodiversity but also many other benefits. On particularly urbanised sites lacking in existing habitat, a 10% uplift in a low score as required by BNG may have relatively limited effect, whilst the UGF instead requires sites to meet a minimum score based upon the combination of surface covers as a proportion of overall site area. Meeting the UGF requirements can of course support biodiversity objectives of the Statutory BNG Metric (and vice versa).

5.27 In formulating the specific requirements of policy G3 the Council has adopted the list of surface cover types and individual scores recommended through Natural England's guidance, which applicants will be required to utilise in their assessments (Table 5). Natural England devised these different weightings in order to maximise multi-functionality of green infrastructure in urban areas and benchmarked them against their Environmental Benefits from Nature tool which assigns values to different habitats based on the ecosystem services they provide. As the intention is to provide a consistent approach across England and in discussion with Natural England, the Council deemed that it was unnecessary to amend the weightings further.

No.	Surface Cover Type	Facto
1	Semi-natural vegetation and wetlands retained on site (including existing / mature trees)	1.0
2	Semi-natural vegetation established on site	1.0
3	Standard / semi-mature trees (planted in connected tree pits)	0.9
4	Native hedgerow planting (using mixed native species)	0.8
5	Standard / semi-mature trees (planted in individual tree pits)	0.7
6	Food growing, orchards and allotments	0.7
7	Flower rich perennial and herbaceous planting	0.7
8	Single Species or mixed hedge planting (including linear planting of mature shrubs)	0.6

Table 5: A selection of the surface covers and their weightings from the Natural England UGF tool – the full list is included in the Appendix of the Local Plan – any updates will be published in the Green Infrastructure and Biodiversity TAN in future.

5.28 In relation to the specific targets new development will need to meet in Oxford, whilst Natural England also set out recommendations in this regard (e.g. 0.4 for residential and 0.3 for non-residential), an additional assessment of the local context and other aspirations in the Local Plan have helped informed the targets for policy G3. Sites in Oxford are particularly constrained by a variety of pressures whilst the Local Plan also includes a variety of policies which will put additional demands on the layout of development sites. As such, high level testing of the UGF assessment was carried out on proposed allocated sites in the Local Plan to understand how these sites currently score and what could practically be achieved. This testing process has led to slightly reduced targets for major development (0.3 for residential sites and 0.2 for non-residential), except for wholly greenfield sites. The policy also includes requires that proposals should not result in a reduction in the baseline score, meaning sites that already exceed these targets (e.g. greenfield), will need to maintain these scores as a minimum (no net loss).

5.29 On wholly greenfield sites, the policy does acknowledge that no reduction in baseline score may not always be feasible, particularly where there are limited opportunities to enhance parts of the site further to mitigate losses elsewhere on the site. Applicants will need to justify where this is technically not feasible, such as by setting out how they have tested different layouts of the site. These sites have a higher minimum target that must be met, however, in recognition of the higher level of greening they are starting from. Other policies, such as Policy G1 will also remain relevant, meaning higher quality elements on the site, such as

mature trees should be retained regardless (subject to the requirements of that policy).

5.30 The testing process on allocated sites enabled officers to identify existing natural features on site, particularly those that are of sufficient quality to contribute to the UGF score and compatible with the design-led approach to writing the allocations policies. Whilst the overarching targets of policy G3 apply to all sites, where applicable, such features have been highlighted in the allocation policy as part of the overall guidance on natural features and placemaking. They are written in such a way as to not be unduly prescriptive, which should give allowance for applicants to explore appropriate design solutions and engage with council officers.

5.31 The overall approach is considered to be most pragmatic for the local circumstances of the Oxford, given that it is a new policy addition which is based on relatively new UGF standards from Natural England. It will ensure that green infrastructure provision is appropriately considered in all major development (with encouragement for its application on other types of development), that provision is quantified helping to understand net change and achieves a realistic minimum baseline, whilst also leaving flexibility for applicants to tailor their approach to the particular circumstances of their sites. The approach can be tailored in future iterations of the Local Plan based upon how the new approach performs.

Appendix A – Regulation 18 Policy options sets

Policy options set 005a (draft Policy G1): Protection of GI network and green features

- The proposed options set out to protect a network of different open spaces. The options consider the protection of the open space network in a couple of ways, either assigning similar protection to all sites, or identifying a hierarchy of sites with different levels of protection. The options seek to protect the network through one policy, rather than having bespoke policies for each type of space in the network, but there is an option which considers whether additional policies could be applied to different types of spaces. There is also an option for protecting trees, hedgerows and woodland.

Table 1 - Policy options set 005a: Protection of GI network and green features

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Identify a network of green and blue infrastructure for protection, informed by the green infrastructure study. Incorporate multi-functional green spaces of varying sizes, with clear criteria for inclusion in the network. All spaces in the network would be treated with equal protection, based on presumption against any net loss (because being a part of	Ensuring that we are protecting a network of spaces and features at various scales will help to ensure that the needs of local residents and the environment are met at various levels. Ensuring spaces are connected, and protected from further fragmentation, can help support quality of these areas and wider nature recovery.	The green infrastructure study has identified that some green spaces and features are of a higher quality than others – performing a more important role in supporting the city than others. Considering the high demands for space in the city in order to meet other objectives, such as providing affordable, quality housing for residents, it may be preferable to protect only the higher quality, strategic spaces, or those with practical opportunities to enhance. This would allow us to release poorer quality spaces for other needs, rather than treat all spaces with the same degree of importance. Careful wording will be needed to ensure this approach clearly fits in with the NPPF wording that protects all

1156

a network means that it would be challenging for them to be replaced elsewhere).	The city is limited in its green infrastructure, particularly open space. Once open space is lost, it can be very difficult to reprovide. Beginning from a standpoint that all spaces are valuable and should be protected in themselves helps to recognise this challenge. Protecting open space regardless of quality recognises that every space has the potential to make an important contribution to health and wellbeing as well as wider sustainability, particularly to the local area.	green spaces unless they are shown to be surplus or can be re provided.
Option b Set out a hierarchy of protection that will be accorded to spaces comprising the identified GI network. Hierarchy will focus on protection from loss to development and will rank from protection from all development other than in	Gives further clarity than option a, and provides opportunity to identify higher quality, strategic and multifunctional sites and prioritise these for protection over sites that have less adverse impact if lost to development.	Categorising sites may be subjective exercise and run risk of depriotising spaces that may still bring about benefits.

1157

exceptional circumstances, to permitting development with reprovision of spaces to a similar standard, to protection of spaces to the minimum standard as set by national policy.		
Option c In addition to the network, have a series of separate policy protections based on different types of greenspaces (e.g. outdoor sports, designated ecologcial sites, allotments and greenbelt) and address each specifically. Note that none of these designated sites are considered surplus.	This option could allow bespoke policy approaches to specific types of green space and any unique needs/concerns.	This approach may add a level of confusion where there are protections of a particular category both within and outside of the network (for example some outdoor sports pitches may be a multifunctional part of the network and others may have protection only as outdoor sports).
Option d Only allow the loss of trees, hedgerows and woodland where it is clearly justified (level of justification to be considered against quality of tree) and any loss mitigated. Require developers to demonstrate how the	Trees perform several important functions such as helping to improve air quality, supporting biodiversity and contributing to the character of an area. It is important that, where possible, developments are designed to enable the retention of	Where high quality trees are already protected by Tree Preservation Orders, additional tree protections could be considered too onerous in the development of particularly constrained sites.

1158

retention of existing trees/hedgerows and the planting of new trees/hedgerows has been considered (applying BS.5837:2012 Guidance or future equivalent) in the design and layout of new development and outside space. This should include protection and/ or enhancement of tree canopy cover. Planning permission will not be granted for development resulting in the loss or deterioration of ancient woodland or ancient or veteran trees except in wholly exceptional circumstances.	established trees and to incorporate the planting of new trees. Tree canopy cover often has the biggest impact on setting and as such that correlates to the benefits that trees can bring. Some high-quality trees are protected by Tree Preservation Orders (TPOs), but this relies on the City Council having been made aware of them and designating in this way. It is unlikely that all high-quality trees in the city are protected in this way however, thus many will not benefit from TPO protection.	
Option e Do not define a network of green spaces but assign individual protection to larger strategic sites including public parks, biodiversity sites, allotments, cemeteries and	This option recognises that there are key areas of open space with value to supporting health and wellbeing in the city. These larger spaces are likely to have more capacity	Green infrastructure works best when thought of as an interconnected network, which this approach would ignore. Smaller spaces and linear features contribute to and enhance larger spaces, as well having an equally important role in supporting day-to-day wellbeing – breaking up urban environment, supporting climate resilience, creating wildlife corridors and encouraging active travel.

1159

outdoor sports, with sets of criteria relevant to each. Include the wording from the NPPF that sets out protection for all green spaces unless they are surplus or can be reprovided.	for enhancement than smaller ones too. It would ensure that key areas are identified and protected across the city whilst diverting development pressure away to poorer quality areas or areas that provide less benefit overall.	
Option f Do not include a policy protecting green and blue infrastructure and defer to national policy/standards.	National guidance on GI standards is developing, including the full launch of the Natural England GI Framework later in 2022.	Relying on national standards for green infrastructure provision could risk ignoring local contextual issue and priorities which a local policy can help to address.

1160

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various options or combinations e.g. option A or B, A+C, B+C, A+B+C, A+B+C+D, A+D, B+D, E, F) **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** In terms of sustainability criteria that are relevant to the options, these are most directly relevant to criterion **2. Resilience to climate change**, **7. Green Infrastructure,** and to **10. Biodiversity**. There is also some relevance to criterion **3. Efficient use of land,** as the use of designations and protections that restrict development on greenfield land. All options are going to score positives for criteria 2, 3, 7 and 10, apart from option g (no policy – defer to national policy/standards) which would score neutral. All other options seek to put in place some form of baseline level of protection on all green spaces, creating designations dependent on the function or type of green space, and restrictions. The differences between

the policies are of degree and extent. The extent of the positive impact of these options will depend largely on the implementation. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Protection of Green Infrastructure network and features – Policy G1

The preferred approach for the Local Plan 2045 draft policy is to take forward a combination of aspects from options **A, B, C** and **D.** This combination of options establishes the principle of a city-wide connected green infrastructure network made up of spaces and features of different scales and type, that will be subject to varying levels of protection. This approach is considered the most effective way of protecting all public and private green infrastructure in the city from inappropriate development and mitigating the impact on green spaces of development in general. Policy can establish a hierarchy of protection for all green spaces in the city, which can identify spaces that are particularly important to the city in terms of their function, historical significance or local amenity and where needed can ensure levels of protection that go beyond what is stated in national policy. This approach would allow us to set out the specific conditions under which certain types of green space may be lost to development, and measures to mitigate the impact of such losses including reprovision. The approach would also recognise importance of trees and set out expectations for developments that might impact them.

1161

Policy options set 005b (draft policy G2): Enhancement and provision of new GI features

- Green features on sites can be designed in ways that allow them to perform multiple benefits for the local area, e.g. making space for biodiversity, recreation, climate resilience. The policy options in this set consider how opportunities can be maximised for delivering new and improved green infrastructure and securing the various benefits associated with it, whilst cumulatively bringing about a greener and healthier city. They also consider options for securing new open space, though opportunities for this will likely be limited to larger sites.

Table 2 - Policy options set 005b: Provision of new GI features

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require green and blue infrastructure features on all new development – guide expectations through tailored requirements in different areas of city or on different scales of site including: i. Compliance with Urban Greening Factor to demonstrate net gain ii. % new open space on larger sites iii. Bespoke guidance on greening within allocations policies.	More bespoke tools would align with the wider spatial approach to the Local Plan and such tools/approaches could be tailored to meet specific needs/challenges in different areas of the city (e.g. areas of deficit, deprivation, with poor air quality, highly urbanised sites). National policy encourages use of such tools as a standard. Such tools can allow for better analysis and more effective design of green infrastructure, assist in practical delivery and better quantification of benefits. With better quantification of green infrastructure, comes the potential for better	Quantifying green infrastructure provision and its benefits can be a subjective process which is not an exact science. There is the potential for any provision of green infrastructure by applicants to be tailored to meet only the bare minimum as required by any such policy (e.g. the minimum acceptable to meet policy), rather than striving to maximise provision or be more innovative. Potential for more complicated/onerous development management process which would need to be addressed with quality guidance.

1162

	monitoring of what is being delivered in a design proposal.	
Option b Require open space as percentage of site area on larger sites and all other new development to include green and blue infrastructure features. Set out principles for what should be included. Leave requirements flexible, to respond to the site's specifics.	Larger developments potentially offer the biggest opportunities for achieving new, worthwhile open space in the city – ensuring these are captured with a requirement for a specific level of open space helps to contribute to new open space provision. Smaller sites in the city are typically more limited in what green infrastructure features they can provide, as such, requiring new provision to be factored into their design, but leaving flexibility in how this achieved, would allow for different proposals to respond in the best way possible for the site. Requiring open space provision on smaller sites could lead to small, unusable	Many developments in the city have historically been on smaller sites and not of the scale large enough to meet the need for open space provision on larger sites. Asking for green infrastructure, without specifying more exact/quantifiable targets risks under provision and proposals not maximising the potential for green infrastructure on a site. In relation to smaller sites and requiring green infrastructure without setting more exact targets, historically, it has been difficult to monitor and therefore assess the performance of similar policies.

1163

	spaces that are costly to manage and maintain and offer little value to residents, as has historically been experienced in the city.	
Option c Set out a specific quantity standard of the number of hectares per 1,000 population for green space provision on all new developments in city	This would provide a simple target to monitor and report on.	Such a target would not necessarily be meaningful as greenspace may not be evenly distributed, located close to centres of population, accessible, or of quality. It is more meaningful to measure and provide greenspaces on a more localised basis. Work on the Local Plan 2036 identified the challenge that it is increasingly difficult to manage the provision of open space at a fixed ratio to population in Oxford as most developments are on small sites.
Option d Do not include a policy for providing new green infrastructure, defer to national policy/standards.	This would allow for greatest flexibility for applicants to work within the constraints of their site.	This option would be limited in influencing the amounts of greening undertaken on a site and would not set any minimum expectations on proposals. It could result in opportunities to maximise green infrastructure being missed and is likely to have less of a positive influence on the design of natural elements of designs.

1164

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various options (A, B, A+B, C, D) **High-level screening conclusion?** the options are similar to each other from a sustainability perspective. **Screened in for detailed appraisal?** No **Rationale:**

In terms of sustainability criteria that are relevant to the options, these are most directly relevant to criterion **2. Resilience to climate change**, and **7. Green Infrastructure**. There is also some relevance to criterion **10. Biodiversity.**

All options are going to score positives for criteria 2, 7 and 10. because they seek to bring in additional greening as part of new development, apart from option g (no policy – defer to national policy/standards) which would score neutral. The differences between the policies relate to how the additional greening is delivered and how the amount is determined. The extent of the positive impact of these options will be dependent on the implementation. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Enhancement and provision of new Green Infrastructure Features – Policy G2

The preferred approach for the Local Plan 2045 draft policy is to take forward a combination of options **A** and **B**. Policy would set out requirements for green and blue infrastructure features to be associated with new development schemes, and where there are existing GI features for these to be enhanced. The approach will allow for specific requirements for new or enhanced features as applicable to the parameters of the site and its context. Specific amounts of open space provision will only be required for large sites. The combined approach will allow for some degree of flexibility with respect to requirements depending on the parameters of the site, while ensuring that GI forms a fundamental element of development schemes coming forward.

1165

Policy options set 005c (draft policy G3): Provision of new GI features – Urban Greening Factor

- At its most basic, the Urban Greening Factor (UGF) is a policy tool that provides a way of simply quantifying green surface cover on a given development site via a metric system. UGF schemes have been applied in several cities through planning policy including the London Plan and the Southampton Local Plan. The methodology is also one of the Headline Standards that form the basis of the Natural England Green Infrastructure Framework.
- The UGF can be used to quantify in simple terms the amount of green infrastructure being proposed as part of a development scheme. Policies that incorporate the UGF can require proposals to secure a certain target, or to simply demonstrate a betterment in score compared with the existing site. The use of the UGF is intended to achieve separate objectives to biodiversity net gain, though it will be mutually supportive. Instead, the key intent of the UGF is to help address a variety of

wider place-making and environmental issues, for example, making spaces that are more pleasant for people, as well as delivering resilience/adaptation to climate change (more green infrastructure can improve flood resilience and reduce urban heat).

- Requiring applicants to use an UGF could be a useful way of improving the way that green infrastructure provision on sites is quantified. The policy options below set out possible approaches for applying the tool in the Oxford context and have been developed with consideration of the strengths and weaknesses of the methodology.

Table 3 - Policy options set 005c: Provision of new GI features – Urban Greening Factor

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Incorporate the use of an Urban Greening Factor (UGF) into policy, requiring proposals to demonstrate a betterment in score (above a minimum) as part of the design of the development	Would allow for greening on sites to be quantified and seeking a betterment should help to green the city over time. UGF tools are quick and simple to use and to be understood by a range of users, they can assist in discussing and visualising levels of greening on a site. Could be well suited to more constrained sites due to promoting use of often wasted spaces such as walls and rooftops.	The simplicity of UGF tools means they are fairly limited at distinguishing quality/condition of greening measures. Where designs incorporate more complex features, their suitability will still need relevant expert assessment for quality/management etc. as with any other application. They are not a replacement for ecological analysis and associated metrics such as DEFRA Biodiversity metric. The tool would be an additional metric to be completed by applicants alongside the DEFRA Biodiversity metric. The two tools have differing but complementary aims, but it would be an additional ask of applicants.

1166

Option b The scale of application of the UGF tool could be across select sites/ areas of the city, whilst its use is encouraged but not mandatory elsewhere. Potential areas of application could be: • Major applications • Specific site allocations which are not already sufficiently green. • Retail/district centres • Areas of deficit of green surface cover and/or heightened climate risk.	This avoids unnecessary work by avoiding areas that are already particularly green. It is sensible to target the approach to areas in the city where the use of the tool and securing betterment would be required.	Could be missing out on opportunities to promote greening elsewhere in the city – encouraging the tool's use may not be strong enough to get applicants to use it elsewhere.
Option c Incorporate the use of an Urban Greening Factor (UGF) into policy with bespoke higher scoring for areas of the city identified as a priority greening area - determined by the level of deficit of green surface cover and/or heightened climate risk.	This can secure targeted betterment in areas where there is a clear deficit of green space and potentially reducing the greening requirement on developers for schemes in areas that are already particular green.	Oxford is highly constrained and has a high level of density in some areas. Desktop assessment already indicates what is likely to be an achievable threshold of UGF score, which is lower than the NE baseline. Development sites tend to be fairly small and compact particularly in dense areas where there is deficiency in green space. Achieving higher bespoke scores in areas where there is already deficiency will be difficult and potentially unviable – testing

L1967

Option d The scale of application of the UGF tool could be mandatory across all developments in the city.	The ease of use of the tool and the non-prescriptive requirement of simply achieving betterment (leaving a site greener than it started) could be quite easily applied to many areas.	Some sites in the city are already quite green and achieving betterment could be difficult to achieve/of little value. The tool is better suited to harder, grey areas with little greening at present. The tool does not distinguish between quality/condition in detail, therefore, there is a risk that on particular green sites, the policy requirement could promote replacement of existing established/quality features for other poorer quality features.
Option e Do not incorporate an UGF into policy	The tool would be an additional metric to be completed by applicants alongside the DEFRA Biodiversity metric. The two tools have differing but complementary aims, however, it is an additional ask of applicants.	The tool is a simple and practical way of quantifying and better negotiating net gains in greening on sites which has a range of benefits including climate adaptation, mental and physical health and wellbeing and biodiversity.

1168

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? various options (A, A+B, A+C, A+D, E) **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** The options relate to whether or not to include policy requirement for undertaking an urban greening factor assessment (option a) or not (option e), as well as various options for the scale of application to which such a requirement would be applied (options b, c and d).

In terms of sustainability criteria that are relevant to the options, these are most directly relevant to criterion **7. Green Infrastructure,** and to **criteria 5. Inequalities** (some of the options address greening in areas that are below average for green infrastructure currently). All options are going to score a minor positive for criteria 7. because they seek to bring in additional greening as part of new development, apart from option e (no policy) which would score neutral. Option b and c seek to prioritise greening in areas which are lacking, (the difference is just which areas) so would also score a minor positive for inequalities. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Provision of new Green and Blue Infrastructure: Urban Greening Factor –Policy G3

The preferred approach for the Local Plan 2045 draft policy is to take forward **option B**. This option will incorporate the use of UGF into policy and the use of the tool will be encouraged for all developments, however its mandatory use will only be required for a selected category of development. This approach will enable targeting application of the methodology to where the most benefits may be accrued, for example development types that present opportunities to secure significant betterment in green surface cover or areas of the city where there is a deficit in green infrastructure. A targeted approach is also less likely to be onerous to implement for developers or impact on the viability of schemes.

1169

Appendix B List of Core Spaces

Policy G1 Site ID	Policy G1 Site reference	Typology	Contains (partial or whole) Registered Park and Garden? Designated OHAR?	Contains (partial or whole) Designated ecological site?	50% or more of site contains TVERC NRN status - Core	50% or more of site contains Flood zone 3b?	Additional comments relating to rationale for core designation
1	St. Clements Church	Churchyards and Cemeteries					As a churchyard/cemetery this space provides a specific combination of functions, particularly supporting the city's wider heritage, which are considered important to protect in situ.
4	Memorial Garden	Amenity Green Space	RPG				
5	Oatlands Recreation Ground	Parks and Recreation Grounds				Yes	
6	Oatlands Play Space	Play Space (Child)				Yes	Supporting features accommodated within boundary of park and contributing to its wider wellbeing function.
7	Botley Park	Parks and Recreation Grounds		OCWS		Yes	

8	Botley Road MUGA	Play Space (Youth)				Yes	Supporting features accommodated within boundary of park and contributing to its wider wellbeing function.
9	Botley Road Tennis	Outdoor Sport (Fixed)				Yes	Supporting features accommodated within boundary of park and contributing to its wider wellbeing function.
10	Botley Road Bowls	Outdoor Sport (Fixed)				Yes	Supporting features accommodated within boundary of park and contributing to its wider wellbeing function.
11	Botley Road Play Space	Play Space (Child)				Yes	Supporting features accommodated within boundary of park and contributing to its wider wellbeing function.
12	Osney Cemetery	Churchyards and Cemeteries					As a churchyard/cemetery this space provides a specific combination of functions, particularly supporting the city's wider heritage, which are considered important to protect in situ.
14	Spragglesea Mead and Dean's Ham Allotments	Allotments/other food growing				Yes	As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
16	Hinksey Park	Parks and Recreation Grounds - Destination Park				Yes	Identified destination park playing a particularly important role as a major park providing wellbeing benefits to a large proportion of the wider area.

17	Hinksey Park Play Area	Play Space (Child)				Yes	Supporting features accommodated within boundary of park and contributing to its wider wellbeing function.
18	Hinksey Park Tennis Courts	Outdoor Sport (Fixed)				Yes	Supporting features accommodated within boundary of park and contributing to its wider wellbeing function.
19	The Links Barracks Lane Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
20	Bartlemas Close (Links) Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
21	East Ward Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
22	Sorrel Road Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.

1172

23	Mill Lane Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
24	Eden Drive Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
25	Elder Stubbs Gardens	Allotments/other food growing	OHAR				As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
26	Fairview Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
27	Pullens Lane Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
28	Barton Fields Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions

1173

							that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
29	Town Furze Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
30	Court Place Farm Allotments +	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
31	Cripley Meadow Allotments	Allotments/other food growing				Yes	As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
32	Upper Wolvercote Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
33	Cutteslowe Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access

							to private gardens, which are considered important to protect in situ.
34	John Garne Way Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
35	Ramsay Road Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
36	Osney St Thomas	Allotments/other food growing				Yes	As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
37	Bullstake Close Allotments	Allotments/other food growing				Yes	As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
38	New Hinksey Allotments	Allotments/other food growing				Yes	As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.

1175

39	Fairacres Road Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
40	Bartholomew Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.
41	Richards Way Allotments	Allotments/other food growing					As a communal space for food growing, site provides a specific combination of functions that support wellbeing of the local community, particularly those without access to private gardens, which are considered important to protect in situ.

Background paper 005b

Title: Biodiversity

This paper addresses the protection of biodiversity, including designated sites, as well as enhancing biodiversity.
Relevant Local Plan Objective(s): • Secure strong, well-connected ecological networks and net gains in biodiversity. • Be resilient and adaptable to climate change and resistant to flood risk and its impacts on people and property. • Protect and enhance Oxford's green and blue network.
SA Objective(s): 10. To conserve and enhance Oxford's biodiversity.
SEA theme(s): Landscape, biodiversity, flora, fauna.

1. Introduction 1

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal) 1

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal) 3

Protecting Oxford's ecological network – draft Policy G6 31

1. Introduction

1.1 An important component of Oxford's Green Infrastructure network are the ecological spaces which support a variety of nationally and locally important species of flora and fauna. Some of these spaces are designated for their importance and protected by national legislation, some are protected through local policies where they are of county or city importance, meanwhile other informal spaces like gardens and wild areas within green spaces also play an important role but are not designated as such. The ecological network is essential to supporting 'biodiversity' in the city, by which we mean the abundance of species such as plants and animals for which the city is home.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Planning Policy Framework (Dec 2024)

2.1 In relation to Biodiversity, the NPPF sets out:

- **Para 187:** that plans should: recognise the wider benefits from natural capital and ecosystem services such as trees and woodland, and minimise impacts on and provide net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures.
- **Para 188:** that Local Plans should distinguish a hierarchy of designated sites and take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure.
- **Para 192:** that local plans should identify, safeguard components of wildlife-rich habitats and wider ecological networks; promote the conservation/restoration/enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify/pursue opportunities for securing measurable net gains for biodiversity.

Planning Practice Guidance and National Design Guide/Model Design Code

2.2 The online Planning Practice Guidance has a dedicated page for the natural environment including green infrastructure and biodiversity considerations. In relation to biodiversity (covered in paras 9 to 35), the PPG includes various pieces of guidance including on responsibilities regarding protected and priority species and habitats; 'proportionate' information and assessment required on biodiversity impacts at all stages of development; local ecological networks and nature recovery networks; application of mitigation hierarchy, biodiversity net gain, and promotion of woodlands.

2.3 The National Design Guide is a material consideration and forms part of national planning guidance. The guide sets out ten characteristics of good design, of which designing to incorporate nature is one. It highlights the value that natural spaces can bring to people and encourages networks of green and blue infrastructure within the design of spaces as well as making space for biodiversity.

The Environment Act

2.4 This legislation received Royal Assent on 9th November 2021 and includes provisions to strengthen and improve the duty on public bodies to conserve and enhance biodiversity. In particular, it introduces a mandatory requirement for net gains in biodiversity of 10% from most forms of new development approved through the planning system, this must be calculated using the DEFRA Biodiversity Metric and informed by a biodiversity gain plan which details the strategy for how biodiversity net gain will be delivered. The Act also requires the preparation and publication of Local Nature Recovery Strategies to support Nature Recovery Networks by setting out priorities for nature recovery and proposing actions in the locations where it would make a particular contribution to achieving those priorities. These Recovery Strategies are to be prepared by 'Responsible Authorities' as appointed by the Secretary of State, Oxford falls into the strategy that will cover the Oxfordshire County area.

Natural Environment and Rural Communities Act 2006

2.5 Section 40 of this Act places a duty on all public authorities in England and Wales to have regard, in the exercise of their functions, to the purpose of conserving biodiversity.

Conservation of Habitats and Species Regulations 2017 (as amended)

2.6 Legislation that previously transposed the European Habitats Directive (European Commission 92/43/EEC) into English law was amended upon exit from the EU in order to transfer functions from the European Commission to the appropriate authorities in England and Wales but otherwise functions broadly the same. The Regulations designate Special Areas of Conservation (SAC) and Special Protection Areas as priority locations for biodiversity conservation. In Oxford, this is the Oxford Meadows SAC, and near Oxford are the Cothill Fen SAC and Little Wittenham SAC. The effects of any plan or programme on these designated areas must be assessed via a Habitats Regulations Assessment (HRA).

National Parks and Access to the Countryside Act 1949

2.7 Section 21 of this Act enables local authorities to designate Local Nature Reserves where they are of high natural interest in the local context.

Oxford Local Plan 2036

2.8 As well as overarching policies for protection of the GI network (policy G1) and providing new green features (policy G8), there are a number of individual policies for different aspects of the GI network including policy G2 which addresses biodiversity and the

ecological network specifically, including protections for national and locally designated sites.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

3.1 It has long been noted that the biodiversity around the country is under intense pressure and has been in prolonged decline. This biodiversity loss is particularly pronounced in cities and urban areas such as Oxford as wildlife is forced out of natural habitats due to development pressure, recreational disturbance, pollution from various sources, as well as climate change. A particular issue in the city relates to the ecological conditions in Oxford's rivers and streams as water quality is being put under pressure from various sources including sewage discharges, invasive species and pollutants arising from agricultural practices upstream. This issue is explored in greater detail in the separate Natural Resources Background paper and more fully in the Water Cycle Scoping Study.

3.2 Nevertheless, Oxford benefits from a concentration of rare and valuable habitats that are important refuges for a variety of flora and fauna, including lowland hay meadows, calcareous grassland, alkaline spring fen (among other types of wetland) as well as pockets of woodland. A number of sites have been designated as being of particular importance to ecology including:

The Oxford Meadows Special Area of Conservation (SAC)

3.3 An internationally important site of nature conservation importance. The SAC is situated on the broad floodplain of the River Thames to the west and north-west of Oxford. The site is made up of an extensive complex of meadows and pastures which support species-rich grassland vegetation which would once have been widespread on floodplains in lowland England, but which is now very rare. The qualifying features for which the area was designated as a SAC are the presence of Lowland Hay Meadows habitat and the species *Apium repens* (creeping marshwort), which is a very rare plant of seasonally-flooded habitats. The Port Meadow population of this plant remains the largest and most consistently recorded in the UK.

3.4 Natural England's assessments indicate that the colony of *Apium repens* is under pressure from hydrological changes in the areas, possibly due to deeper, more prolonged and frequent flood episodes. There is also concern about invasive species moving into the habitat from other parts of the meadow and outcompeting the plant. Additionally, previous liaison with Natural England relating to Habitat Regulations Assessments work undertaken by the Council for the SAC have identified potential vulnerabilities arising from the impacts of air pollution (from traffic on the nearby roads), recreational disturbance due to increased visitors to the area (particularly those with dogs), as well as impacts from changes to hydrology and water quality as noted above.

3.5 There are also two other SACs within 10km of Oxford, these are:

- **Cothill Fen SAC** is a 43ha site located just over 5km from the city boundary. It is designated for its lowland valley mire, which contains one of the largest surviving examples of alkaline fen vegetation in central England. In 2015, the last year of analysis of Cothill Fen, the alkaline fens were of good overall ('global') value, and the alluvial forests were of significant overall ('global') value. It is highly threatened by pollution to groundwater and human-induced change in hydraulic conditions.
- **Little Wittenham SAC** is a 69ha site located around 8.5km from the city boundary. It is designated because it contains one of the best-studied great crested newt sites in the UK. In 2015, the last year of analysis of Little Wittenham, it was of good overall ('global') value, but it is highly threatened by non-native invasive species.

Sites of Special Scientific Interest (SSSIs)

3.6 These nationally important designated sites include four geological SSSIs and eight ecological SSSIs that are wholly or partly within the city, as well as others nearby. Four of these SSSIs comprise the Oxford Meadows SAC: Cassington Meadows SSSI; Pixey and Yarnton Meads SSSI; Port Meadow with Wolvercote Common and Green SSSI; and Wolvercote Meadows SSSI.

3.7 Natural England intermittently publishes condition assessments for the units comprising the SSSIs, which is available on the Designated Sites View website. These assessments are usually 5-10 years old, as such the condition may have changed in the intervening years since the last assessment was completed. As can be seen in Figure 3.2 and Table 3.2, the SSSIs are in varying condition, and of the twelve within or partially within the city, two SSSIs are in unfavourable condition and three are partly in unfavourable condition, whilst the others are in a favourable condition.

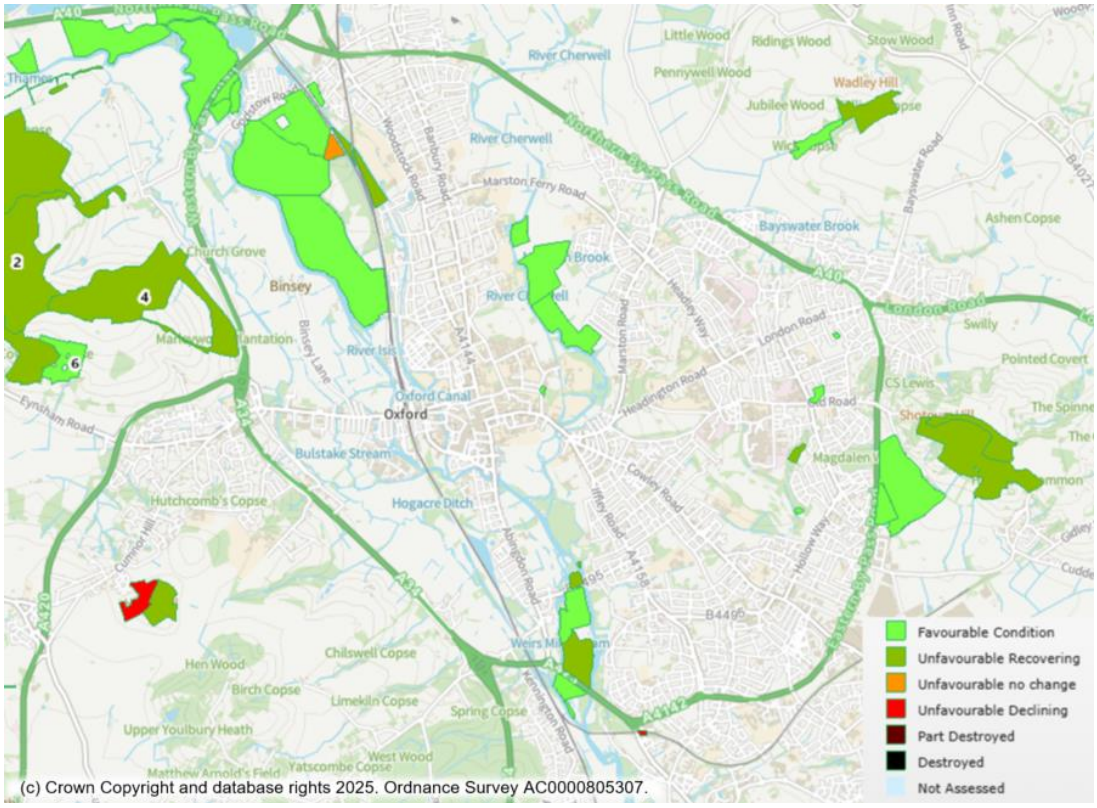

Figure 3.2 - Locations of Special Scientific Interest (SSSIs) within and around Oxford and their condition, source: DEFRA MAGIC website accessed 13.01.25)

Table 3.2 - Condition assessment for the Sites of Special Scientific Interest (SSSIs) within Oxford or nearby (Natural England)

Site of Special Scientific Interest (SSSI)	Size in hectares	Within city?	Unit(s) condition
Brasenose Wood and Shotover Hill	109.24ha	Partially	42.67% Favourable; 57.33% Unfavourable - recovering
Cassington Meadows	6.89ha	Nearby/outside city *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Hook Meadow and the Trap Grounds	11.85ha	Yes	67.56% Unfavourable - recovering; 32.44% Unfavourable – no change
Iffley Meadows	36.14ha	Partially	53.80% Favourable; 46.20% Unfavourable - recovering
Littlemore Railway Cutting	0.50ha	Yes	100.00% Unfavourable declining
Lye Valley	2.34ha	Yes	22.96% Favourable; 77.04% Unfavourable - recovering
Magdalen Grove	0.43ha	Yes	100.00% Favourable
Magdalen Quarry	0.34ha	Yes	100.00% Favourable
New Marston Meadows	44.70ha	Yes	100.00% Favourable

Pixey and Yarnton Meads	86.38ha	Partially *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Port Meadow with Wolvercote Common and Green	167.15ha	Yes *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Rock Edge	1.72ha	Yes	100.00% Favourable
Sidling's Copse and College Pond	21.71ha	Nearby/outside city	33.19% Favourable; 66.81% Unfavourable - recovering
Wolvercote Meadows	7.06ha	Yes *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Wytham Ditches and Flushes	2.74ha	Nearby/outside city	100.00% Unfavourable - recovering
Wytham Woods	423.83ha	Nearby/outside city	3.50% Favourable; 96.50% Unfavourable - recovering

Local ecological designated sites

3.8 The city includes a number of locally important sites made up of Local Wildlife Sites, Oxford City Wildlife Sites and Local Nature Reserves. These are non-statutory sites of local importance for nature conservation, recognised for having high conservation value, containing rare species or habitats whose protection is bestowed upon them via the policies of the Local Plan rather than national legislation. This means that our policies will be particularly important for these local features which do not reach of the benchmark of higher protections and yet can still be valuable refuges of priority habitats and for local species.

3.9 Local Wildlife Sites are designated through criteria that is shared across the county, meanwhile Oxford City Wildlife Sites are sites of importance to the city which were established as part of work on the Local Plan 2036 (replacing what were previously known as Sits of Local Importance to Nature Conservation or 'SLINCS'). Whilst the overall interest of OCWSs has not been considered sufficient to be of county level importance in the same way LWSs are, with appropriate management, many do however have the potential to become LWSs in the future. The Thames Valley Environmental Records Centre (TVERC), undertake yearly reviews of sites across the county and assign LWS status on new sites where these are deemed to meet specific criteria.

3.10 As part of its work on the Local Plan 2040, the Council undertook a high-level review of its existing OCWSs to consider whether it was still appropriate to protect them and whether there were additional sites that might meet the criteria of local designation as either an OCWS (or LWS). This review was supported by a limited number of new surveys undertaken throughout 2023. As set out in Table 3.3, the work resulted in four previously proposed OCWSs being formalised (although in practice, these were already treated as full OCWS sites because of their proposed status at the time), as well as the addition of three new OCWSs. In addition, two sites were taken forward as LWSs via the county-wide selection process.

Table 3.3 - Recent updates to ecological network of local sites in city

Site name	Result of review process
Mileway Gardens	Previously proposed OCWS – Designation confirmed
Churchill Hospital Field	Previously proposed OCWS – Designation confirmed
University Parks	Previously proposed OCWS – Designation confirmed
Stansfeld Study Centre	Previously proposed OCWS – Designation confirmed
Burgess Field	New OCWS designation confirmed
Dunstan Park	New OCWS designation confirmed
CS Lewis Reserve	New OCWS designation confirmed
Showman's Field	New LWS designation confirmed
Marston Brook Meadow	New LWS designation confirmed

Other important areas of habitat

3.11 Beyond these formally designated sites within the city, there are also many of types of habitats which have been formally identified as being of importance in other ways. This includes Priority Habitats under Section 41 of the Natural Environment and Rural Communities Act 2006, many of which are included within Conservation Target Areas that were identified as part of work on Oxfordshire's Biodiversity Action Plan (BAP) for being the most important areas for wildlife conservation in Oxfordshire and where targeted conservation action will have the greatest benefit. It should be noted that the expectation is that the mapping of the Local Nature Recovery Strategy will subsume and replace the previous Conservation Target Areas.

3.12 There are also areas of irreplaceable habitat in the city, which are afforded significant protection through national planning policy. These types of habitat include several areas of ancient woodland, including at Brasenose Wood and at Shotover Country Park which straddles the boundary of the city to the east, as well as areas of lowland fen habitat such as can be found in the Lye Valley SSSI.

Protected species

3.13 The various types of habitat discussed above are important for supporting a range of wildlife species, many of which are under direct threat from pressures like habitat loss, climate change and pollution. The city has records of a variety of notable species, again as identified under Section 41 of the Natural Environment and Rural Communities Act 2006 referenced above. Species that are present in Oxford and that are protected under the Act include, but are not limited to: Hedgehogs, Water voles, Dormice, Swifts and Slow worms.

3.14 It is not only the natural environment which supports some of these different types of wildlife either. There are certain species present in the city which have come to rely upon elements of the built environment to support their life cycle. For example, urban birds like

swifts which return to the UK every spring to breed and raise young and that have experienced significant declines. Swifts have come to rely on buildings for nesting and will often return to the same nest site each year so the re-development and demolition of buildings, and loss of old nest sites can have further negative impacts. The development process can support the species through careful design and inclusion of artificial roosting features.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 The currently adopted Local Plan 2036 will maintain protection of ecological sites within the city (via LP2036 policy G2) alongside protection of the network of green infrastructure across the city. The Local Plan 2036 sets out that development that results in a net loss of sites and species of ecological value will not be permitted and includes specific details of protection/mitigation required for the SAC, SSSIs and Local sites. Alongside this, protection exists within national policy, such as affording protection to nationally designated sites as well as protections more generally to open space.

4.2 The requirement of 5% net gain in biodiversity in Local Plan 2036 policy G2 for all major developments proposed on greenfield sites or brownfield sites that have become vegetated has already been superseded by the 10% requirement of the Environment Act. With the mandatory 10% biodiversity net gain being set as a condition unrelated to the Local Plan and with the expectation being that the associated habitat is secured for at least 30 years, there is potential that biodiversity could receive increasing support going forwards without a new Local Plan, however, opportunities for this net gain to be delivered within the city are likely to be limited. The county's Local Nature Recovery Strategy (LNRS) will identify opportunity areas for enhancement actions to improve biodiversity in due course, however, the LNRS cannot force enhancements nor assign additional protection, thus these opportunities will rely on willing landowners and sufficient sources of funding, thus their benefit for biodiversity is not certain.

4.3 The GI study 2022 noted the unequal distribution of certain types of green space and this is likely to remain the case in the absence of the new Local Plan – and this would include more nature rich spaces. The constrained nature of the city means that opportunities for creation of significant new green spaces within the denser urban areas will remain limited and smaller-scale enhancement are likely to be more forthcoming where resource and changes to management practices are forthcoming. A growing population as the city grows means that green spaces including those for nature will continue to need to be protected and access enhanced wherever possible. Where additional recreational pressure is not mitigated through new or improved facilities, this could lead to a deterioration of these spaces.

4.4 Climate change is also likely to put pressure on many green spaces, particularly ecological sites (discussed further below). Increases in summer temperatures, milder winters, changes in rainfall distribution and seasonality, and more extremes of weather are anticipated long term impacts of climate change. The effects of these changes are uncertain and may occur as sudden and unexpected step changes. Potentially they could result in the need for additional management measures (e.g. to address risk from wildfires during drought seasons), or make spaces unusable due to additional flooding throughout the year. Indirectly, adaptation actions by other sectors that are key to land and water management may force changes in how certain spaces are utilised (e.g. to secure additional land for flood relief).

4.5 Climate change could influence biodiversity in various ways such as by making ecological sites less suitable for the species that rely on them or driving changes in species distribution as they move to better suited climates. It could also lead to influxes of invasive species that are better suited to the new climate. Generally, it has been suggested that in the longer term, there is a significant risk of direct impacts on priority habitats. Equally, pressures on watercourses impacting ecological conditions will likely continue without various interventions such as upgrades to key wastewater infrastructure as are noted in the green infrastructure section.

5. Key issues addressed through the Local Plan

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to biodiversity and nature conservation. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Implementing Biodiversity Net Gain in Oxford

5.3 Policy G4 sets a requirement of 10% net gain consistent with the target required through the Environment Act. This target should be considered as a minimum, however, and the policy encourages delivery which exceeds this wherever possible. There were responses to the Regulation 18 consultation that expressed a desire for the Council to go with a higher target, and officers are aware of other authorities pushing for higher levels.

5.4 It is important to recognise that the 10% net gain requirements of the Environment Act are very specific in how they can be delivered. The requirement is essentially focused on habitat creation (as a proxy for biodiversity) which must be to a certain quantity and quality that conforms with the Statutory Biodiversity Net Gain metric, which is the calculation tool applicants are expected to use to assess and demonstrate how they have met the target. A higher requirement would mean higher amounts of habitat creation but potentially still missing out on delivering enhancement for the full range of species that need to be supported in the city. It could also limit delivery of other important types of green features that have other benefits, such as for people (recreation, food growing). Additionally, for many sites in the city, a higher than 10% target is also likely to result in additional proportions of offsetting payments being secured for delivery in other locations, rather than extra habitat creation on sites themselves.

5.5 For the above reasons, the Local Plan seeks to maintain the requirement at 10% but to reinforce this requirement through other policy requirements that seek to support biodiversity in other ways (as discussed further below), as well as deliver broader greening on development sites (e.g. policy G3).

Further supporting onsite biodiversity including priority species

5.6 Whilst biodiversity net gain is one mechanism for delivering new habitat for biodiversity, it is important that the Local Plan utilises other mechanisms to deliver for nature. This is also important because, as discussed earlier, the DEFRA metric primarily focuses on habitat as a way to support species, whereas there are other important features that support wildlife which are not recognised/incentivised by it. For example, species-based features like bird and bat boxes are not included within the metric but can be just as valuable to more urban wildlife.

5.7 Oxford hosts a range of important species and these have varying environmental needs in terms of space, shelter, and feeding. Our urban context and the development processes that happen throughout the city can negatively impact these species in different ways, like fragmenting landscapes, introducing pollution, removing food sources and spaces to rest. In some cases though, development can positively support these species too, particularly for the wildlife that have come to rely on areas of the urban environment to flourish, e.g. buildings for roosting.

5.8 The planning process is an important mechanism for mitigating negative impacts on existing species where they could arise but also for supporting developers to maximise on opportunities to positively support species in other ways. Whilst policy G6 includes requirements for ensuring that important species on a site are properly identified and

impacts on them mitigated in accordance with the mitigation hierarchy, policy G5 sets out the additional enhancement actions the Council expects to see to support onsite biodiversity regardless of whether 10% habitat net gain has been provided onsite or not.

5.9 The onsite ecological enhancements list has been devised to offer applicants as much flexibility as possible to respond to the specifics of their site. The list includes a number of potential enhancement features which have been chosen for their suitability in supporting known species in Oxford and that are generally not covered by the considerations of the Statutory BNGy metric. Applicants are required to select from a certain number of features depending on the scale of the development from three different 'pots'. Some features (those in first pot) are mandatory and form a minimum provision, whilst the other two pots address needs for shelter/movement and for other supporting landscape features. The intention is for this list to be kept live and added to in the future, so whilst the initial list is included in the appendix to the Local Plan, future versions will be published via the Technical Advice Note along with additional guidance on how they should be implemented in a scheme.

5.10 Alongside the minimum standards for green surface cover on a site as set out in policy G3 (and discussed in the green infrastructure background paper), policy G5 is intended to ensure that overall new development will bring forward a variety of additional spaces for nature. The combination of these policies is considered to be a more bespoke but pragmatic approach response to the constraints of many sites in Oxford that is in keeping with the spirit of going beyond the minimum 10% biodiversity net gain. It also means that, even if the Environment Act's 10% net gain cannot be delivered onsite, the Local Plan can help ensure direct onsite delivery of features to support nature throughout the city.

Oxfordshire's Local Nature Recovery Strategy

5.11 Oxfordshire County Council published the Oxfordshire Local Nature Recovery Strategy (LNRS), which includes the Oxford area, in November 2025. The LNRS is made up of a number of documents, including a Local Habitat Map, Statement of Biodiversity Priorities, Species Priorities List, and a Description of the Strategy Area.

5.12 Of particular spatial relevance to the city as covered by the Local Plan is the Local Habitat Map, which is intended to help a range of stakeholders, including landowners, conservation groups, and local communities to target their efforts where they'll have the most impact, creating a stronger, more connected natural landscape across Oxfordshire. The Habitat Map identifies both:

- existing areas of particular importance to biodiversity – which, in the city, are primarily limited to national and locally designated ecological sites; and
- areas that could become particularly important to biodiversity – which can also be known as 'recovery' areas,

5.13 In complying with their duties under Section 40 of the Natural Environment and Rural Communities Act (as amended by the Environment Act 2021), local authorities need to "have regard" to the relevant Local Nature Recovery Strategy. The Council has engaged in the development of the LNRS and sought to ensure that the various priorities and opportunities identified in it are reflected where possible in the Local Plan, whilst balancing the range of broader sustainability objectives need to be planned for within a highly constrained city.

5.14 In particular:

- any site allocation in Chapter 8 of the plan which includes opportunity areas identified in the LNRS, flags this as part of the policy. The policy identifies that the site includes areas identified in the LNRS and that the LNRS sets out particular measures which would be particularly beneficial for biodiversity. In this way, applicants are encouraged to refer to the LNRS and incorporate BNG which aligns with the strategy.
- for applications coming forward elsewhere in the city, the overarching policy G4 applies and specifically sets out that *opportunities to deliver measures which align with those identified in the LNRS as part of any net gain provision should be prioritised, particularly where a proposal is located in an area identified in the LNRS, unless site constraints would make this unfeasible*.

5.15 It should also be noted that many areas of the LNRS are protected from development through the Local Plan's protection for the green infrastructure network, as set out in Policy G1.

5.16 As the county's website notes, *the main purpose of the LNRS map is to show which locations hold the greatest potential to benefit nature and the wider environment if habitats were created or enhanced in those places. However, this does not mean that landowners and managers would be required to implement any of these meas*ures. The mapping identifies a range of potential measures that could be targeted to different locations based on a range of the best and latest data available including soil data, but these locations and identified measures would need to be sense-checked in-person, to ensure the right habitat is created in the right place. As such, the Local Plan seeks to ensure applicants and decision makers take account of the LNRS whilst also acknowledging that particular site

context may or may not allow the specific actions within the LNRS to be implemented in practice.

Protecting designated sites and other areas of habitat

5.17 The earlier section 3 detailed the extensive network of designated ecological sites in the city which have either international, national or local importance for biodiversity. Policy G6 sets out how the Local Plan will protect the hierarchy of ecological sites for the future of the city. Because the various sites have been designated for a range of qualities, they are susceptible to different sorts of impacts from new development and so the policy acts as an overarching protection from adverse impacts and requires appropriate mitigation which will need to be informed by relevant data sources such as Natural England's SSSI Impact Risk Zones mapping.

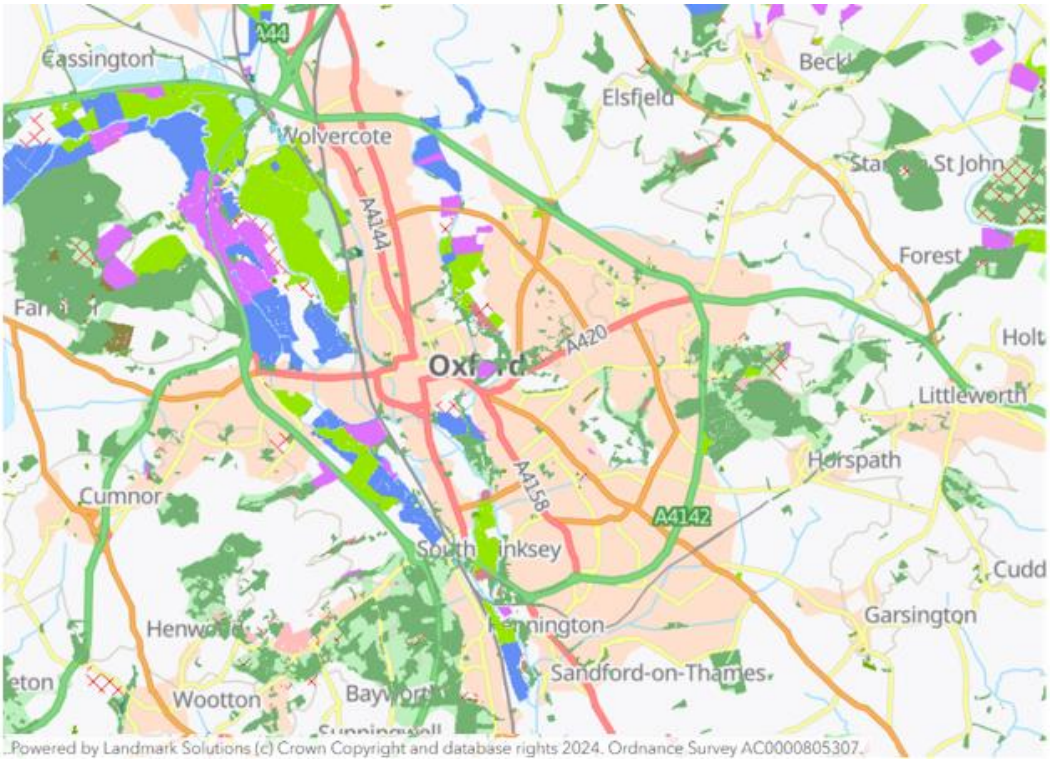
5.18 The considerations for potential adverse effects will differ depending on the site and its particular sensitivities. A number of the sites in the city are particularly susceptible to impacts on hydrological processes including those associated with surface water and groundwater, this includes the Oxford Meadows SAC, as well as some SSSIs including Lye Valley, New Marston Meadows and Iffley Meadows. Policy G6's supporting text therefore explicitly highlights these risks in its supporting text, and the policy itself lists a wider range of potential impacts that could have adverse effects.

5.19 Informed by separate workstreams such as the Habitats Regulations Assessment (HRA), for the Oxford Meadows SAC, and the Source Pathway Receptor Analysis (SPRA), for the SSSIs, relevant allocated sites that have been identified as having the potential to impact upon protected sites also include explicit requirements for mitigation of impacts to ensure these risks are addressed by applicants (with cross reference to policy G6).

5.20 Of course, there is also valuable habitat that exists beyond the boundaries of designated sites. Irreplacable habitat, is highly protected through national policy, and whilst this does not need to be repeated in the Local Plan, Policy G6 also makes clear that the Council will apply the strict tests in the NPPF to applications that could impact this habitat.

5.21 Additionally, there is a significant amount of priority habitat in the city as is highlighted in Figure 5.1. The most significant locations of this habitat are protected through the GI network's policy G1.

Figure 5.1 Mapping of various priority habitats in the city according to DEFRA Magic mapping (accessed January 2026).



5.22 More generally, Policy G6 sets out that proposals with a reasonable likelihood of adversely impacting natural and/or semi-natural habitats, or protected species, on or immediately adjacent to the site, will only be permitted where they have been informed by targeted ecological surveys and impacts addressed in line with the mitigation hierarchy. This would apply wherever a development is located.

Appendix A – Regulation 18 Policy options sets

Policy options set 005d (draft policy G4): Delivering mandatory net gains in biodiversity

There is a national mandatory requirement for providing 10% Biodiversity Net Gain (BNG) as part of planning applications (subject to some exceptions in the legislation). Applicants are incentivised through the DEFRA biodiversity metric (used to calculate net gain) to provide this onsite or in areas identified within an appropriate strategy, but are able to find other offsite options where necessary.

The constrained nature of many sites in the city means that BNG may need to be provided offsite in many instances even if kept to the national minimum target, going higher than this may have impacts in terms of what other features can be provided onsite, or result in more BNG having to go offsite. Where offsite delivery is necessary, the Local Plan can play an important role in steering where this should go. The Local Nature Recovery Strategy identifies opportunity areas where enhancements for biodiversity could be particularly valuable. At the time of writing the options, the LNRS was still emerging, thus options also referenced Conservation Target Areas and previous Nature Recovery Network mapping as a way to help steer net gain to suitable areas. The options considered relate particularly to how offsite delivery should be guided, but also whether higher BNG targets should be incorporated.

1227

Table 1 - Policy options set 005d: Delivering mandatory net gains in biodiversity

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Set out a hierarchy for how 10% net gain as required through Environment Act should be delivered, particularly where on-site net gain is not possible.	The approach is in line with national expectations for net gain in biodiversity and would allow more flexibility to secure other types of benefits for sites too e.g. other types of onsite features not addressed by the BNG metric (as is the topic of option set G5).	There is an element of repetition of the national BNG legislation here which may not be necessary. The city has limited capacity for taking on additional biodiversity enhancement to the scale and specific standards required through the Environment Act/DEFRA metric. As such, whilst a policy could try to focus any off-site delivery in the local area, geographical constraints may limit its

Guidance would seek to secure off-site delivery in the local neighbourhood in first instance, then within city boundary, then county. Off-site delivery at each of these scales would be guided to the opportunity areas of the forthcoming Local Nature Recovery Strategy in the first instance, (or the Oxfordshire Nature Recovery Network and/or Conservation Target Areas) in advance of the LNRS publication). Payment into the national statutory BNG credit scheme as last resort only.	The national guidance, and the BNG metric, are not as prescriptive about where off-site gains should be delivered, so this approach would provide some local steer about the Council's priorities. This policy would help to ensure that any off-site delivery of net gain would be to the benefit of the local area in first instance before options further afield are considered.	effectiveness and options further afield, even beyond the boundary, may be necessary regardless. Off-site delivery may actualy deliver better outcomes for biodiversity if geared towards landscape-scale nature conservation. From a net gain perspective, it may be less effective forcing constricting delivery to local areas first (particularly onsite).
Option b Require higher than 10% net gain, in excess of the minimum requirements of the Environment Act (but subject to same exemptions as apply to national 10% requirement). Set out hierarchy for where this should be delivered if on-site not possible.	Recognises the importance of supporting biodiversity and acting on biodiversity decline nationally by setting a standard higher than the nationally imposed minimum.	10% net gain on sites as required by Environment Act is likely to be challenging enough in many areas of city. A higher target is not considered realistic/deliverable particularly on many smaller, constrained sites and could result in more off-site mitigation, as opposed to on-site measures. This off-site mitigation is unlikely to all be within the city, but instead via contributions to schemes across the wider county. There are other measures that can support biodiversity which are not recognised by the DEFRA metric and that would not

1228

Guidance would seek to secure off-site delivery in the local neighbourhood in first instance, then within city boundary, then county. Off-site delivery at each of these scales would be guided to the opportunity areas of the forthcoming Local Nature Recovery Strategy in the first instance, (or the Oxfordshire Nature Recovery Network and/or Conservation Target Areas in advance of the LNRS publication). Payment into the national statutory BNG credit scheme as last resort only.		be boosted under this option. Eng. wildlife friendly features like bird boxes, insect hotels, hedgehog highways etc. Additional demands in terms of net gain could impact ability/viability to provide for other needs. The additional cost of this will affect the affordability and therefore selection of other policy approaches that are equally important.
Option c Do not include a policy addressing biodiversity net gain requirements as set out in Environment Act, defer to national guidance/policy.	Environment Act is a landmark piece of legislation which will already result in an increased focus on delivering for biodiversity on all new developments. It may be that this is brought into the NPPF at a national policy level instead.	The national requirements in the Environment Act are not informed by local context. Many sites in the city are constrained in nature without the space to provide for new habitat on site, thus having to rely on off-site delivery elsewhere in city (and, as last resort, beyond city). Could result in limited benefit to local area.

Initial sustainability appraisal screening of options sets

1229

Is there only one option or are there various options we could take? Either option a, b or c (they are alteratives to each other).
High-level screening conclusion? the options are similar to each other from a sustainability perspective
Screened in for detailed appraisal? No

Rationale: The options relate to whether the Local Plan should include policy guidance setting out the Council's preference for how offsite biodiversity net gain should be provided, guiding this to the local area and the opportunities identified in the LNRS, before looking more widely (option a and b) or not to set any local guidance. Option b also weighs up an approach of requiring more than 10% biodiversity net gain.

In terms of sustainability impacts, the options most directly relate to **criterion 10. Biodiversity.** Options a and b are likely to have minor positive impacts for the criteria, though in practice they do not exceed national standards particularly and are principally focussed on articulating how the Council would wish to see BNG implemented in the city. Option a and b would both seek to try to ensure that even if biodiversity net gain cannot be delivered onsite, it would be guided to local areas in the city (particularly those that are also identified as opportunities in the LNRS), potentially reducing the risks that this would otherwise be provided much further afield and to mimimal benefit to local biodiversity. Option b might result in more positive impacts because it would seek to secure higher proportions of BNG than the national 10% target, however, larger targets are less likely to be able to be accommodated on many of Oxford's constrained sites and would also likely reduce the pool of local offsite opportunities that could accommodate this where it is not able to be met onsite (meaning it may go further afield) - thus the benefit is likely to depend on implementation. Option c would still likely result in minor positive impacts, because of the national target of 10% BNG which would still apply to all applicable planning permissions, which is likley to result in positive improvements over time even without the benefit of local policy specifying the Council's preferences for how BNG should be implemented. Overall, the sustainability impacts are unlikely to vary significantly between the options and it is not considered necessary to scope these in for further detailed appraisal.

1230

Delivering mandatory net gains in biodiversity – draft Policy G4

The preferred approach is to take forward **option A.** This approach would maintain BNG requirements in line with national requirements, recognising that onsite delivery is already challenging on many constrained sites, but also that there are various other onsite

enhancements that the Council is seeking to drive forward to improve the environment and provide for biodiversity alongside the 10% habitat net gain as recognised by the DEFRA metric (e.g. draft policy on urban greening G3, draft policy G5 onsite ecological enhancements). This approach would also ensure that where onsite provision cannot be achieved, offsite provision is guided towards areas that most benefit the city and wider county, particularly focusing on the Local Nature Recovery Strategy areas once adopted.

Policy options set 005e (draft policy G5): Protecting and enhancing onsite biodiversity

Whilst the national mandatory Biodiversity Net Gain (BNG) targets for planning applications promote habitat creation to support biodiversity, there are other needs for supporting species that are not recognised as part of the Environment Act's net gain requirements but that can still be highly beneficial. For example, the ways we design the urban environment can either support or hinder movement of species between habitats, meanwhile, certain species such as swifts and bats have adapted to rely on elements of the built environment for shelter where these spaces are designed in the right way. Habitat creation to satisfy BNG may also not always be able to be delivered onsite and so it is important to seek to secure other types of enhancements to support biodiversity too.

The options considered in the below table address the ways that the Local Plan can support biodiversity in other ways beyond BNG. They range from more prescriptive requirements that still retain some flexibility to meet needs of particular sites, to less prescriptive requirements or having no policy at all.

1231

Table 2 - Policy options set 005e: Protecting and enhancing onsite biodiversity

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Policy with prescriptive requirements to secure biodiversity features on site. • Could require a specific number of enhancements on each site selecting from a pre-defined 'biodiversity points list'	Highlights on-site biodiversity measures as a priority for the Local Plan/Oxford City Council. Policy could be tailored to challenges of delivering biodiversity net gain in a constrained city like Oxford. Would primarily seek to secure some sort of onsite improvement and support/fill	Every site is likely to be different, risk that a prescriptive list/point system could be too blunt a tool, limiting any benefits. On more constrained sites, the scope for biodiversity enhancements will still be challenging.

(e.g. bat box, bird box, wildflowers). • Points could be broken down into several pots/categories. • Potentially different points targets for householder, minors and majors applications. Could potentially be supported by updated Technical Advice Note (TAN).	in gaps left by Environment Act which may result in off-site compensation for on-site impacts. More specific targets (e.g. through point system) would be more practical to monitor and implement. A pre-defined list would provide guidance to applicants about what is most suitable for their site/location.	
Option b Policy that requires biodiversity features/ecological measures but is not prescriptive about what measures are incorporated/or how much/or the standard of those measures. Could potentially be supported by updated TAN.	Highlights on site biodiversity measures as a priority for the Local Plan/Oxford City Council. Allows more flexibility than Option b for developers to work within the constraints of a site.	Less prescriptive policy and lack of quantifiable targets for what measures are expected could result in less effective policy and less influence on what comes forward. Without a minimum target, proposals may be more likely to fail at maximising opportunities on a site.
Option c No bespoke policy on supporting biodiversity on	Constrained city means achievable measures could have limited effect anyway,	The Environment Act requirements likely to have issues with achieving onsite net gain in many parts of city, resulting in off-site contributions, exemptions also, meaning net gain in real

1232

site, instead, via complimentary policies (e.g. sustainable design and construction), include requirements to incorporate general ecological enhancements.	protection of established ecological sites nearby may be more effective overall.	terms could be limited. A specific policy would highlight this as a priority for the City Council, not including one could weaken this position. General encouragement of ecological enhancements means effectiveness of policy is harder to quantify and monitor.
Option d Do not include a policy for protecting and enhancing on site biodiversity, defer to national policy/standards.	Environment Act is a landmark piece of legislation which will already result in an increased focus on delivering for biodiversity on all new developments.	Environment Act 10% net gain is focused primarily on habitat creation which equates to habitat units and will have limited benefits for addressing wider needs of many species present in Oxford. Many sites in the city are constrained in nature without the space to provide for new habitat on site, thus having to rely on offsite delivery elsewhere in city (and, as last resort, beyond the city). Could result in limited benefit to local area and lead to ecological impoverishment.

1233

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Either option a, b, c or d **High-level screening conclusion?** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** The options presented set out alternative approaches for the Local Plan to address provision for onsite biodiversity beyond what is expected as part of the Environment Act 10% net gain requirements and could be treated as standalone alternatives to each other. Options a, b and c set out different ways that additional biodiversity enhancements could be secured through policy. Option d would mean no local policy requirements. In terms of sustainability impacts, the options all most directly address SA **criterion 10. Biodiversity**, whilst some of the enhancements that might be secured under the options could support **criterion 7. green infrastructure**, this would depend

on implementation (some biodiversity enhancements could instead take the form of other features like bird boxes, swift bricks, etc), so it is difficult to assess impacts. For criterion 10. Options a, b and c are all expected to have some varying level of minor positive impact, with more prescriptive requirements of options a and b likely to have a slightly more positive impact than option c, which has the potential to be a less effective approach. Option d is likely to have a neutral or minor negative impact for criterion 10. Whilst the net gain requirements of the Environment Act are likely to ensure key habitat features are identified on a site and a net gain of 10% biodiversity secured, this does not have to be onsite and could be provided for off-site and potentially outside of the city. Equally, the BNG process is focussed on habitat and may not fully address impacts on particular species onsite or in the surrounding area, meaning there is potential for new development to have harmful impacts if these are not mitigated through other mechanisms. Under criterion 7. Whilst this is dependent on implementation, options a, b and c could result in minor positive impacts where enhancements are in the form of greening and habitat creation measures, meanwhile option d would likely be neutral. Other than option d, the options for this policy are about securing additional benefit for biodiversity from development, and the impacts for sustainability are similar and not considered significant enough, regardless of option, to warrant detailed appraisal.

1234

Protecting and enhancing onsite biodiversity – draft Policy G5

The preferred option for the draft policy is **option A** which would set prescriptive requirements for types of onsite ecological enhancements that are expected of development. This approach will help to provide clarity for applicants as to expectations and allow the Council to set out a list of features that would be most appropriate to the city's context and the needs of particular local species. Flexibility can be introduced to accommodate varying context of development sites by allowing applicants to pick a number of features from this list. The policy will complement the 10% BNG requirements and help to ensure that even where BNG cannot be delivered onsite, some provision for biodiversity is incorporated. There may be opportunities to tailor the list of features so that they complement the types of enhancements that the Local Nature Recovery Strategy identifies as opportunities within the city.

Policy options set 005f (draft policy G6): Protecting Oxford's ecological network

There is a range of sensitive species and habitats across the city which need to be considered in the development process. Onsite, there may be features already present that need to be investigated and appropriately addressed through the design process in order to mitigate impacts. Additionally, there are a range of designated sites across the city of varying national/local significance, and whilst the nationally

important sites benefit from high levels of protection through national policy, the locally valuable sites rely on Local Plan policies for their protection. The sites have varying characteristics and can be sensitive to different types of impacts from developments which applicants would need to consider.

The options set below includes options for addressing onsite biodiversity through the development process, as well as options for how to protect the wider ecological network across the city. These national and local designated sites would also be identified within the green infrastructure network (the subject of draft policy G1), and as such these options would set out additional considerations for development that could impact these particular sites in relation to their special biodiversity functions.

Table 3 - Policy options set 005f: Protecting Oxford's ecological network

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include policy requirements that seek to ensure applicants identify/assess/protect any existing habitat of value on a site.	There are often habitat/features/species that exist outside of designated sites in the city which are valuable and need to be protected where possible. Ensures developers assess potential impacts on legally protected species.	This would involve additional checks and assessment for applicants before commencing work.
Option b Include a policy which protects the city's network of national and local designated sites from development. Define hierarchy within the network, with level of protection based upon importance/value of	Ensures that the city's most important areas of habitat and species are protected from the direct and indirect impacts of inappropriate development in future. Also ensures that the level of protection is proportionate to the level of ecological interest.	Protecting designated habitats is important for supporting biodiversity in the city, however, there are likely to be other smaller/undesignated habitats which provide an important supporting/connecting role which will need to be safeguarded where possible also. Space in the city is under demand to deliver upon a variety of objectives, including providing for affordable/quality housing and jobs – these needs must be balanced with the need for

1235

species/habitat they have been designated for such as: • International designations (SAC) • National designations (SSSIs) • Local sites like Local Wildlife Sites and Oxford City Wildlife sites. • Priority habitat. Reiterate national guidance for how to deal with irreplaceable habitats.	Protection of SACs, SSSIs and irreplaceable habitats set out in legislation/NPPF. No specific protection for locally designated sites, although the NPPF requires local plans to identify, map and safeguard such sites. Also acknowledges that there is differentiation in local designations where Oxford has multiple tiers of locally designated sites; notably, more stringent criteria area applied in designating local wildlife sites (LWS) versus Oxford City Wildlife Sites (OCWS). Also ensures protection of sites/habitats that are of notable ecological value but not previously identified through selection of designated sites.	protecting biodiversity, but will necessarily be limited as space is secured for other purposes like this.
Option c Set out that proposals will need to consider a range of	Recognises that there are different characteristics/qualities for	Whilst the approach would flag the range of considerations that applicants may need to consider and address in an application, the level of information needed to assess and

1236

potential impacts depending on the context of application and proximity to any protected site(s), particularly, but not limited to: • Loss of protected land • Recreational impacts • Changes to the hydrological regime (groundwater, primarily), • Impacts on water quality • Impacts from air pollution.	which sites are designated and these are at risk from different impact mechanisms arising from development. For example, some sites in the city, such as the SAC and Lye Valley SSSI are particularly at risk from changes to hydrological regime (e.g. changes to groundwater flows and pollution impacting water quality). Others are at risk from other pressures. Provides a hook in policy from which to develop additional helpful guidance, potentially tailored to particular locations or types of sites (e.g. Technical Advice Notes) that can provide further detail for area specific requirements/considerations -- e.g. where applications impact a particular designated site.	justify no impact will vary depending on the level of protection on a site and type of application (e.g. likely a higher burden of information needed where proposal impacts a site protected through national legislation). Would be challenging to provide detailed steer on this at Local Plan policy level, and the level of assessment would need to be determined by the applicant through reference to the appropriate information.
Option d Include separate policies focussed on specific sensitive areas in the city, e.g. in	Particular considerations tailored to the specific risks to these areas could be set out	There is a network of ecological sites in the city and varying levels of national/local significance and

1237

proximity to the Lye Valley, or the SAC, with bespoke requirements focussed on particular risks (e.g. changes to groundwater flows).	clearly for development coming forward nearby.	Focussing policy on particular risks to the areas might reduce the ability to look at wider impacts from development as a whole. There may be other adverse effects that particular developments may need to consider. There are other ways to provide more specific guidance on particular locations, e.g. Technical Advice Notes, which can be kept updated more regularly throughout the Local Plan's lifetime.
Option e Do not include a policy protecting biodiversity including ecological sites. Instead, defer to national policy/standards.	There is already legislation and national policy governing the upper levels of the hierarchy so may not be necessary to repeat that locally.	Particularly for local sites of ecological importance, the Local Plan is the key means through which these designations are protected from inappropriate development.

1238

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various combinations e.g. option a, a+b, a+b+c, a+c, d **High-level screening conclusion?** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** If not taking forward option e (no local policy), it is likely a combination of options that include option a would be taken forward. Option a sets out requirements for identifying what is already on a site and responding accordingly. The additional options presented are either to include a policy protecting a hierarchy of ecological sites, including those of national/internation importance and those of local importance (option b), or to have more specific policies focused on particular areas (option d). Option c isn't an alternative, but rather an additional element that could be incorporated into option

b which would set out additional guidance/expectations for proposals to consider a range of impacts that could cause harm to these sites.

In sustainability impacts arising from the options, these would most directly relate to SA **criterion 10. Biodiversity.** Whilst option a is likely to have a neutral impact, as it is about identifying the biodiversity features present on a site and mitigating any impacts from development, Options b and c would have minor positives for this criterion by helping to ensure that existing biodiversity onsite is identified/protected and that the most valuable sites in the city for ecology would be protected from harmful development, particularly the locally important sites that do not benefit from the same levels of protection in national legislation as the SAC and SSSIs (option c would just provide further detail about implementation in relation to dealing with adverse impacts). Option d would be similar, but more focussed to particular locations and would thus depend on implementation (which locations). Option e is likely to have neutral impacts in relation to the national sites (because they are already strongly protected at national level), however, there would potentially be minor negative impacts in relation to the local sites not protected in the same way through national policy.

Overall, the sustainability impacts of the options are principally focussed on mitigating impacts from development and protecting what is already there, so they are unlikely to differ significantly enough from each other to warrant detailed sustainability appraisal.

1239

Protecting Oxford's ecological network – draft Policy G6

The preferred approach for the Local Plan 2045 draft policy is to take forward a combination of **options A, B** and **C**. Option **A** will help to ensure that development appropriately investigates and addresses any existing biodiversity on site in accordance with the mitigation hierarchy (e.g. seeking to avoid impacts before thinking about mitigating). Meanwhile options **B** and **C** mean that the Local Plan can identify and protect a the network of designated sites in the city, including locally important sites and set out the various considerations that applicants may need to take into account in order to avoid adverse effects. This should mean that applicants fully consider all the relevant information and potential impacts from their development, taking into account the varying characteristics of different sites around the city. The expectation would be that, where appropriate, additional guidance would be provided through technical advice notes which expand on the policy and help applicants to interpret its requirements, e.g. setting out how the Council expects them to avoid adverse effects in relation to particularly sensitive sites.

Background paper 006

Title: Green Belt

This paper addresses the protection of Oxford's Green Belt.
Relevant Local Plan Objective(s): • Maximise capacity for delivering homes across the city and set a housing requirement that seeks to meet the needs of different groups as far as possible. • Be resilient and adaptable to climate change and resistant to flood risk and its impacts on people and property. • Protect and enhance Oxford's green and blue network. • Provide opportunities for sport, food growing, recreation, relaxation and socialising on its open spaces.

5) Exceptional circumstances 7

Appendix 1 – Green Belt parcels showing results of filtering process (i.e. which were filtered through to the Green Belt assessment) 9

Appendix 2 – Results of Green Belt assessment and further consideration of development potential 38

1) Introduction

1.1 The Green Belt is an important strategic planning policy tool implemented to protect the rural surroundings of conurbations and prevent unmanaged 'urban sprawl'. Within a localised context, the Oxford Green Belt offers protection to the historic setting of Oxford and to areas surrounding the city.

1.2 Green Belt should remain protected, with sites only released from this designated area after a thorough consideration of all other options. Areas in the Green Belt are protected in line with the National Planning Policy Framework (NPPF), last updated in December 2024.

1.3 Although the Government still attaches great importance to Green Belts and meaningful protections against development within it remain, significant changes were made in respect to Green Belt policy in the 2024 update to the NPPF. This included the introduction of 'grey belt' and how this should be identified. A second key change is set out in paragraph 146 of the NPPF which states that Green Belt boundaries should be reviewed by authorities who *"cannot meet their identified need for homes, commercial or other development through other means."* Further detail about how authorities should be undertaking reviews and identifying grey belt have been provided in an update to the Planning Practice Guidance (PPG), published in February 2025. These issues will be discussed further below, including how Oxford City Council has interpretated these changes and what the next steps will be.

2) National Planning Policy Framework (December 2024) and Planning Practice Guidance (updated February 2025)

2.1 The five purposes which Green Belt serves are unchanged in the latest National Planning Policy framework (NPPF) and are as follows:

a) to check the unrestricted sprawl of large built-up areas;
b) to prevent neighbouring towns merging into one another;
c) to assist in safeguarding the countryside from encroachment;
d) to preserve the setting and special character of historic towns; and
e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

2.2 Paragraphs 144 and 145 of the NPPF express that the boundaries of established Green Belts across the country should only be altered where exceptional circumstances are fully evidenced and justified through the preparation or updating of plans. Strategic policies should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period. When a Council is considering making changes to Green Belt boundaries, they must consider all other reasonable options for meeting its development needs, including:

a) making as much use as possible of suitable brownfield sites and underutilised land;
b) optimising densities, including whether policies promote a significant uplift in minimum density standards in city and town centres, as well as other locations well served by public transport; and

c) liaising with neighbouring authorities about whether they could accommodate some of the identified development needs.

2.3 As previously referred to in paragraph 1.3 of this background paper, paragraph 146 of the NPPF states that in this context, one of those exceptional circumstances includes not being able to meet the identified need for homes. The Government's Standard Method has been used to calculate the housing need for Oxford. This is currently 1,087 per annum, equating to a housing need for the 20-year plan period 2025-2045 of 21,740 homes. It is highly unlikely that the capacity of the city will be sufficient to meet this housing need, even when maximising brownfield land and underutilised land, optimising densities of sites and liaising with our neighbouring authorities as referred to in the previous paragraph. It should be noted that the unmet housing need arising from the current Oxford Local Plan 2036 was largely met through all neighbouring authorities allocating sites in their respective most recently adopted local plans, with some authorities releasing land in the Green Belt to accommodate this. At the same time, Oxford City also released Green Belt land through its Plan where it was identified to have the least harm, in order to ensure it was maximising its capacity. However, whilst this dealt with unmet need arising from the Oxford Local Plan 2036, the City Council is now undertaking a new Local Plan 2045, which is also highly likely to generate unmet housing need. As a consequence, Oxford City Council has commissioned Land Use Consultants (LUC) to undertake a review of the Green Belt in Oxford.

2.4 Paragraph 001 (Reference ID: 64-001-20250225) of the National Planning Practice Guidance (PPG) related to Green Belt makes clear that there is an expectation for authorities to identify grey belt land in their review and where necessary, identify where land is grey belt for the purpose of determining planning applications. The PPG details that this should be done in accordance with paragraph 147 of the NPPF which is referred to in the previous paragraph in respect of maximising brownfield sites, optimising development density and liaising with neighbouring authorities, but also with paragraph 148. Paragraph 148 identifies that where release of Green Belt land is necessary, priority should be given to previously developed land, then to grey belt which is not previously developed and then other Green Belt locations. However, Paragraph 001 (of the PPG) also states that, *"where grey belt is identified, it does not automatically follow that it should be allocated for development, released from the Green Belt or for development proposals to be approved in all circumstances."* Assessing the contribution that Green Belt land makes to Green Belt purposes is one consideration in making decisions about Green Belt land. The application of the relevant NPPF policies should also inform any decision.

Grey belt

2.5 The glossary of the NPPF notes that not all the five purposes of the Green Belt should be used to identify grey belt. The three purposes below are identified as relevant to its identification:

a) to check the unrestricted sprawl of large built-up areas;

b) to prevent neighbouring towns merging into one another;

d) to preserve the setting and special character of historic towns

2.6 Whilst the comprehensive details of how grey belt should be identified were not provided in the NPPF, the glossary did note that 'grey belt' is defined as land in the Green Belt comprising previously developed land and/or any other land that, in either case, does not strongly contribute to any of three purposes (a, b or d) listed above. The glossary also noted that *"grey belt excludes land where the application of the policies relating to the areas or assets of particular importance in footnote 7 (other than Green Belt) would potentially provide a strong reason for refusing or restricting development"* of the assessment area. Assets in footnote 7 refer to designations such as Sites of Specific Scientific Interest (SSSI), Local Green Spaces, designated heritage assets and areas at risk of flooding.

2.7 Paragraph 003 (Reference ID: 64-003-20250225) of the PPG notes that after grey belt land has been identified, local authorities need to identify if the release or development of the assessment areas would fundamentally undermine the five Green Belt purposes (taken together) of the remaining Green Belt when considered across the area of the plan.

2.8 After discussions with Land Use Consultants (LUC), it was determined that the Green Belt assessment would be split into two parts. The first of these would focus on identifying grey belt land within Oxford and the second part would identify if release or development of an assessment area would fundamentally undermine the five Green Belt purposes (taken together) of the remaining Green Belt.

3) Methodology and summary of findings

3.1 The methodology undertaken reflects the latest changes to the NPPF and PPG which have been discussed in the previous chapter and builds upon previous Green Belt assessments undertaken by LUC in Oxford in both 2017 and 2023. These assessments were based on the older methodology which focused on the level of harm (or otherwise) to the Green Belt that may result from their potential release for development, whereas the latest methodology is based on assessing the strength of the contribution that each parcel makes to each of the purposes of the Green Belt.

3.2 The first stage of the most recent assessment required Oxford City Council to determine the location, scale and most appropriate parcel size as set out in the Paragraph 003 (Reference ID: 64-003-20250225) of the PPG. All green sites including those in the Green Belt are already in the Council's Strategic Housing Land Availability Assessment (SHLAA), therefore it was considered that any SHLAA site which contained any Green Belt would be looked at in the first instance. This resulted in an initial 121 parcels of or including Green Belt (one was subsequently split into two for allocation purposes), which can be found in Appendix 1 of this background paper.

3.3 A filter was then applied to exclude those sites that were either entirely or nearly all within greenfield Flood Zone 3b, or where the pattern of Flood Zone 3b would otherwise preclude development, a Site of Special Scientific Interest (SSSI) or a Special Area of Conservation (SAC). These are constraints that are considered to be included under footnote 7 of the NPPF and insurmountable to overcome, and therefore there is no development potential on these sites, because of these intrinsic constraints. The assessment of their performance against Green Belt purposes would therefore be entirely academic and not required. Other constraints such as Registered Parks and Gardens, Flood Zones 2 and 3a and brownfield 3b, Local Wildlife Sites or anything else that could not definitely be assumed to be included under Footnote 7 of the NPPF were NOT used to exclude areas from the Green Belt assessment.

3.4 This exercise resulted in 25 new parcels to be further reviewed by LUC, with 18 from the previous assessments undertaken in 2017 and 2023 to be reviewed using the new methodology that assesses the strength of the contribution to each of the five purposes of the Green Belt, rather than assessing the level of harm of releasing the parcel from the Green Belt.

Identification of grey belt

3.5 The first part of the assessment undertaken by LUC was to identify if any of the assessment parcels could be identified as grey belt. As referred to in paragraph 2.5 of this background paper, only the strength of contribution to three of the five purposes (a, b and d) can be considered when identifying grey belt. LUC have made clear in their assessment that none of the assessed parcels were identified as making any contribution to purpose B (prevent merging of towns), therefore only the strength of contribution to purposes A (check unrestricted sprawl) and D (preserve the setting and special character of historic towns) have been further analysed.

3.6 Further detail of how strength of contribution has been assessed can be found in chapter 3 of the Oxford Local Plan Green Belt Assessment of Additional Sites (LUC, June 2025). Using that methodology, **12 of the 25 new parcels, and part of one other** (split into two for assessment purposes) have been identified as grey belt. After reviewing the 18 previously assessed parcels, **3** were identified as grey belt. The sites that have been identified can be found in Tables 4.1 and 4.2 of the 2025 Oxford Local Plan Green Belt Assessment referred to above.

3.7 Paragraph 001 (Reference ID: 64-001-20250225) of the PPG supports the position that grey belt parcels are not all developable. As the Oxford Local Plan 2045 has developed, they have been considered alongside other parts of the Green Belt, which are not grey belt, to see if any of them warrant further consideration.

Assessing fundamental impact

3.8 The second part of the assessment LUC undertook was to address paragraph 146 of the NPPF and to ascertain whether any alterations to Green Belt boundaries would *"fundamentally undermine the purposes (taken together) of the remaining Green Belt, when considered across the area of the plan".* Paragraph 008 (Reference ID: 64-008-20250225) of the PPG states that this judgement should focus on evaluating the effect of release or development on *"the ability of all the remaining Green Belt across the area of the plan from serving all five of the Green Belt purposes in a meaningful way"*. LUC acknowledge that this can be most clearly judged at a later stage in the planning process, when there is a detailed set of development options, and the cumulative impact of their release can be considered. Nevertheless, any *potential* for development in a particular location to 'fundamentally undermine the purposes' can be assessed at this earlier stage of the process.

3.9 More detail on the interpretation of what is a fundamental and meaningful impact on each of the five purposes is discussed in paragraphs 3.82-3.87 of the Green Belt Assessment of Additional Sites (LUC, December 2025). In the absence of specific proposals, LUC has highlighted the areas where Green Belt contribution is at its greatest. These areas of highest contribution have been reviewed in the round to judge where there is *potential* for development (this would be dependent on the exact nature of development which is unknown) to fundamentally and meaningfully undermine the purposes. This has been undertaken for each of the 25 new parcels and for those 18 previously reviewed.

3.10 Using that methodology, 21 of the 25 new parcels have been identified as not having the *potential* to fundamentally undermine the purposes (taken together) of the remaining Green Belt, when considered across the area of the plan. Of the previously reviewed sites, 13 of the 18 parcels, and part of two others (split into smaller parcels for assessment purposes) have also been assessed as **not** having the *potential* to fundamentally undermine the five purposes of the remaining Green Belt within the plan area. The sites that have been identified can be found in Tables 4.1 and 4.2 of the Oxford Local Plan Green Belt Assessment of Additional Sites (LUC, 2025).

4) Consideration of Green Belt parcels against the strategy of the OLP2045

4.1 Not all parcels which do not fundamentally undermine the five Green Belt purposes (taken together) of the remaining Green Belt when considered across the area of the plan are developable, just as not all grey belt is developable. These parcels, and those which were assessed as having potentially fundamental impacts on the Green Belt purposes, have all been considered alongside the identified grey belt parcels, to see if any of them warrant further consideration and to assess against other aspects of the spatial strategy.

4.2 Many parcels have strong reasons for protection, such as Registered Parks and Gardens, and the Core Green Infrastructure (GI) network, which includes important parks such as Cutteslowe and Sunnymead. Development on these areas would undermine the spatial strategy of the plan, so these are not taken forward for further consideration. Other sites, both grey belt and Green Belt, do merit further investigation for development potential.

4.3 Further investigation has included checking issues such as potential access and traffic impacts, biodiversity issues and landowner interest. Appendix 2 sets out which parcels were assessed as grey belt and the parcels where development may have a fundamental impact on the Green Belt purposes. It then sets out whether development on the site would be otherwise contrary to the strategy of the plan, or not feasible, in which case it was not considered further.

4.4 Appendix 2 shows that many of the Green Belt sites assessed are Core Green Infrastructure, so to allocate them for development would be contrary to the Plan's strategy. Some sites have a green infrastructure function (playing pitches/sport) but are not designated Core Green Infrastructure. These were explored further; however, nearly all were found to be in use and all with no landowner or leaseholder intention to develop, or in a few cases are not practically developable because of their cut-off locations and surrounded by watercourses. One except is part of site 298, Hertford College Sports Ground. On this site, the landowner is interested in bringing the site forward for an alternative use, but the landowner does not have a current strategy for bringing the site forward for an alternative use and re-providing the sports pitches. The exception is site 114e, which was assessed as part of a larger parcel, mainly in the ownership of the Oxford Preservation Trust (OPT). This site is a farmhouse and its curtilage, including garden and hard standing as well as trees and grass. The landowner has put forward the site for housing development. The site is allocated as SPE9, with a minimum housing capacity of 20 units. The site is considered to be grey belt, because it meets the definition of previously developed land. However, in order to be allocated for housing in the Local Plan 2045, the Green Belt boundary must be amended and this site removed from the Green Belt. Therefore, an exceptional circumstances case must be made

5) Exceptional circumstances

5.1 The NPPF sets out that strategic plan making authorities should have examined all other reasonable options for meeting its identified development needs before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries. The criteria to be considered are whether the Plan's strategy makes as much use as possible of suitable brownfield sites and underutilised land, including by optimizing the density of development, and whether the strategy has been informed by discussions with neighbouring authorities about whether they could accommodate some of the need identified for development.

5.2 The plan's strategy has been to consider every potential site for development, fully utilizing all potential opportunities on brownfield land. Background Paper 015 - Developing Local

Plan 2045 Site Allocations sets out how sites have all been considered, and the SHLAA 2026 sets out the process in more detail. The capacity assessments are based on an assumption of high but appropriate densities, as set out in Background Paper 016: Efficient Use of Land. All opportunities to focus development on brownfield sites and maximise their capacity have been taken. In addition to this, discussions have continued with neighbouring districts about production of the Plan. Extant plans in neighbouring districts include releases of Green Belt, with exceptional circumstances that justified their release being the need to accommodate Oxford's unmet need. Therefore, to not look at Green Belt whilst asking for unmet housing need to be accommodated in neighbouring districts, which may then require Green Belt release, is not a good foundation for unmet need discussion. Looking to Green Belt for housing development potential is a justified approach.

5.3 In order to establish the need for any changes or alterations to Green Belt boundaries, a set of exceptional circumstances needs to first be demonstrated. Demonstrating exceptional circumstances requires the presentation of a set of factors that come together to override the normal presumption that Green Belt boundaries should endure. There is no formal definition or standard set of assessment criteria for assessing 'exceptional circumstances'. Rather, it is for the local planning authority to determine whether exceptional circumstances exist to justify removing land from the Green Belt.

5.4 Although national planning policy does not explicitly define the phrase "exceptional circumstances", there is a considerable amount of case law on its meaning in the context of reviewing Green Belt boundaries through the Local Plan process. Once a Green Belt has been established and approved, it requires more than general planning concepts to justify an alteration. Oxford City Council considers that the following make up the set of factors that come together to override the normal presumption that Green Belt boundaries should endure (exceptional circumstances).

5.5 Oxford's historic housing need is well-documented and Oxford has been unable to meet its housing need for decades. The housing need in Oxford calculated using the Government's Standard Method is 21,740 dwellings over the Plan period. The Capacity of the city is calculated in the SHLAA 2026 as 9,267 dwellings over the Plan period. That means that, over the Plan period, there is an unmet housing need of 12,478 generated from Oxford. As Oxford's housing need is already being accommodated through the Local Plans of neighbouring authorities, Oxford must demonstrate that it is doing all that it can to locate as much of its own housing need as can be sustainably accommodated within the city, without resulting in detrimental impacts to the special character and historic setting, which give Oxford some of its unique qualities – qualities important to maintain in order that Oxford remains an attractive place to both live and work.

5.6 Oxford's potential for growth has been well-documented and addressing the barriers to this growth is imperative for the national, sub-regional and local economy. Oxford is an

international city, it is successful, vibrant and a national economic asset. It is the focus of a world-class knowledge economy with one of the most important concentrations of high-value businesses in Europe. It is a global brand, known all over the world for its academic excellence and historic significance. Oxford's historic undersupply of housing has resulted in a housing shortage. This housing shortage is widely recognised as one of the key barriers to economic growth facing not only the city, but also the sub-region and more widely the UK.

5.7 All options to accommodate need outside of the Green Belt have been fully explored, but a high need for housing remains. This high need for housing has detrimental impacts for people and also for the economy. Exceptional circumstances exist for amending the Green Belt boundary to allow for housing development. The proposed amendment to the Green Belt would have very limited impact, as the site is previously developed land and therefore grey belt. The landownership extends beyond the site allocation area into greenfield which means there are opportunities for the required enhancements to open space required alongside Green Belt release.

Appendix 1 – Green Belt parcels showing results of filtering process (i.e. which were filtered through to the Green Belt assessment)

Key

Not taken forward for Green Belt assessment due to intrinsic constraints	Previously been assessed	Put forward for Green Belt assessment	Not put forward for Green Belt assessment for specific reasons as outlined

1249

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
25	Oxford Sports Park	15.9	Sports facilities. Most of site within Green Belt	GI supporting network	n/a	n/a		Put forward to be assessed in 2025
62	Univ of Oxford Science Area & Keble Road Triangle	12.43	A very tiny proportion of site is within Green Belt (already built on)	Approx 270m from New Marston SSSI Adjacent to Oxford City Wildlife Site (OCWS) University Parks Adjacent to Local Wildlife Site (University Parks)	n/a	Adjacent to and part within Central (University & City) CA Within High Buildings Area Contains Listed Buildings Adjacent to Grade II listed Registered Park and Garden (University Parks)		Parcel is not included in LUC assessment as only a very tiny part is within Green Belt, and that part is already developed.

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
67	**Wolvercote Paper Mill**	**Site 4.94 but GB area only 5% of site (0.27ha)**	**Green Belt is only a small part of the site, most of which has been developed recently. The Green Belt part is greenfield.**	**Supporting GI**	**FZ3b (Green Belt part)**	**southern 'finger' of Green Belt in Wolvercote CA**	**n/a**	Parcel not included in LUC assessment. The wider site has already been developed and the Green Belt part of the parcel is very small .
112a1	**Hill View Farm**	**4.25 (formerly 3.52)**	**Part of site within Green Belt**		**n/a**	**n/a**		Adopted site allocation, and site under construction (2025). Site expected to be developed within the Local Plan time period- only small part not removed from Green Belt, which did not need further assessment.
112a2	**Green Belt Land at Cherwell Valley/Old Marston, (southern part of previous site 112).**	**12.8**	**greenfield- agricultural land**	**GI supporting network**	**Flood Zone 3a (5%)** **Flood Zone 3b (4%) (greenfield)**	**n/a**	**2017 assessment- high impact**	Reviewed in the 2023 GB assessment, as part of the site assessed in 2017 has since been allocated in the 2036 LP (SP25 and SP26). However, the latest review concluded that this would not alter the change to the 2017 assessment findings of this part of the site.

Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
114c	Marston Saints Sports Ground	0.98	greenfield- pitches drawn on.	GI supporting network.	n/a	n/a	No review as sports pitches.	Put forward to be assessed in 2025
114e	Marston Paddock Extension	0.51	Part of site within Green Belt	Part of site within Green Belt Site in Old Marston CA GI Network (Supporting)	n/a	n/a		Site was assessed as part of parcel site 114a. This part put forward by landowner and a separate site has been created and is proposed for allocation for housing
117	Land surrounding St Clement's Church	2.31	A very tiny proportion of site is within Green Belt	A very tiny proportion of site is within Green Belt GI network (Supporting) but adjacent to GI Network (Core) (St Clement's Church & Magdalen College Fellows Garden)	N/A	Entire site within St Clement's and Iffley Rd CA and adjacent to Central Area (University & City) CA and Headington Hill CA The site is close to two view cones and the high buildings area and adjacent to a listed building (St Clement's Church)		Site not included in GB assessment as only a negligable part is Green Belt.
118	Land rear of Meadow Court Flats (formerly Land to rear of Wolvercote Social Club)	0.52 (GB only tiny part- 0.07ha)	Greenfield- full tree cover.	GI supporting network.	N/A	n/a	2023 assessment - low impact	Included in the LUC 2023 assessment

1253

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
126	Wildlife Corridor at River Cherwell 8	5.29 (GB same)	Greenfield - tree/hedge lined around perimeter and centrally, in a vertical direction	Core GI network	Nearly all FZ3b	n/a	n/a	Functional floodplain
127	Wildlife Corridor North of South Hinksey	2.51 (GB same)	Greenfield - tree covered at southern end, maintained grass at northern end. Most of the site appears to be unmowed grassland with a few trees dotted within the site and along parts of the perimeter.	Core GI network	Whole site lies within FZ3b	n/a	n/a	Functional floodplain
129	Wildlife Corridor at River Cherwell 9	3.93 (GB same)	Greenfield - pastoral and tree/hedge lined around perimeter	Core GI network	Nearly all FZ3b	n/a	n/a	Functional floodplain
131	Wildlife Corridor at River Cherwell 4	0.67	Greenfield - meadow and parkland, heavily treed along perimeter	Core GI network	Nearly all FZ3b	Site within Grade I listed Magdalen College Registered Park and Garden	n/a	Functional floodplain
133	Wildlife Corridor Adjacent North Hinksey Village	23.48	Greenfield.	GI Core Network. contains LWS	Nearly all FZ3b.	Very small part of site within Osney CA	n/a	Functional floodplain

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
134	Wildlife Corridor at Christ Church Meadow	23.2 (GB same)	Greenfield - meadow and park with trees dotted around perimeter	Core GI network	Nearly all FZ3b.	Within Grade I Christ Church Registered Park and Garden and majority withing Central CA	n/a	Functional floodplain
135	Wildlife Corridor at River Cherwell 1	3.95 (GB same)	Greenfield - school playing field with some pitches marked on	Core GI network	Nearly all FZ3b	Within Central CA	n/a	Functional floodplain
136	Wildlife Corridor at River Cherwell 2	0.44 (GB same)	Greenfield - amenity open space/ sports pitches to the east and a play area within scattered mature trees to the west	n/a	Nearly 12% within FZ3b - forms a 'v' shape along the western and south eastern boundaries.	Within Central CA	2023 assessment - high impact	Included in LUC 2023 asssessment
137	Wildlife Corridor at Seacourt	2.53 (GB area is 2.51)	Greenfield - heavily covered in trees except south eastern corner which appears to be maintained grass.	Core GI network	Nearly all FZ3b.	n/a	n/a	Functional floodplain
139	Wildlife Corridor at River Cherwell 3 (Angel and Greyhound Meadow #161)	5.28 (GB same)	Greenfield - meadows with a heavily treed perimeter and a row of trees separating the two meadows	Core GI network	Nearly all FZ3b	Within Central CA	n/a	Functional floodplain
142	Wildlife Corridor at River Cherwell 5	2.53	Wildlife corridor on banks of watercourse and including watercourse.	Adjacent to New Marston Meadows SSSI.	Small part FZ3b but including most the land	Within Central CA	n/a	Parcel is mainly river and the small part that is land is mainly FZ3b.

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
144a	Wildlife Corridor at Marston Brook (northern part)	1.39	Greenfield, meadow adjacent to watercourse with perimeter made up of mature trees; accessible green space	Local Wildlife Site (Marston Brook Meadow), Core GI network	More than half FZ3b	n/a	2023 assessment - moderate-high impact	Included in 2023 assessment
144b	Wildlife Corridor at Marston Brook (southern part)	0.84	Greenfield, dense mature tree cover all over site, appears to be accessible to public	Adjacent to LWS, part of supporting GI network	N/A	n/a	2023 assessment - high impact	Included in 2023 assessment
145	Wildlife Corridor at River Cherwell 6	3.22	Greenfield, bordered by mature trees and hedgerows, private open space	Core GI Network. Adjacent to New Marston Meadows SSSI	Almost entire site (95%) in FZ3b	n/a	n/a	Functional floodplain
147	Wildlife Corridor North of Binsey	11.77	Greenfield, meadow adjacent to watercourse with perimeter made up of hedgerows, accessible green space	Core GI Network. Adjacent to watercourse, in proximity to Port Meadow SAC and Wolvercote SSSI	Two-thirds of site in FZ3b.	Small part within Binsey CA	n/a	This site, although nearly 12ha in size is awkwardly shaped and is fairly narrow in parts, following the shape of the adjacent watercourse. The patches of the site which lie outside FZ3 are surrounded by FZ3, and are therefore not suitable for development. Not to be included in review.

1256

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
148	Wildlife Corridor at River Cherwell 7	8.34	Greenfield, meadow (pasture?) adjacent to watercourse with perimeter made up of hedgerows, accessible green space	Core GI Network. Adjacent to watercourse, in proximity of New Marston Meadows SSSI	Almost all FZ3b	n/a	n/a	Functional floodplain
149	Wildlife Corridor at Godstow Holt	2.53	Greenfield, adjacent to watercourse and bordered by a number of designated sites; perimeter made up of hedgerows and mature trees	Core GI Network. Adjacent to watercourse, in proximity of New Marston Meadows SSSI, part of Core GI network	Around a third of the site in FZ3b	n/a	n/a	FZ3b (and FZ3a) lie within the eastern part of the site, with a significant part of the western side not within a flood zone. However, access is poor and most of the area surrounding the site lies within FZ3b apart from the northern perimeter, although this largely lies within FZ2. Not to be included in review.
150	Wildlife Corridor at West Godstow Road	0.42 (GB same)	Greenfield - unmaintained grassland with trees and shrubs along the perimeter	Core GI network	largely FZ3b.	n/a	n/a	Functional floodplain
151	Wildlife Corridor at St Edward's Boat Yard	0.76 (GB same)	Greenfield - dense mature tree cover across the entire site	Supporting GI network.	A quarter of the site lies within FZ3b.	n/a	2023 assessment - high impact	Included in 2023 assessment
152	Wildlife Corridor at Lower Wolvercote South of Godstow Road	2.57	Greenfield, meadow or pasture with paddock; adjacent to watercourse	Core GI network	Most of site in FZ3b	n/a	n/a	Functional floodplain

1257

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
153	Wildlife Corridor at River Cherwell 10	1.96	Woodland and pasture adjacent to watercourse	Supporting GI network In proximity of SSSI	Nearly half FZ3b	n/a	2023 assessment - where pasture and woodland parcels of site were considered separately (using refs 153a, 153b respectively). Moderate high impact.	Included in 2023 assessment
154	Wildlife Corridor at River Cherwell 11	6.8	Greenfield, comprises 2 parcels of meadow land that adjoin a watercourse. Perimeter is made of hedgerows and trees. A hedgerow also runs through the site separating the 2 parcels.	Directly adjoins watercourse, Core GI network	Nearly all FZ3b	n/a	n/a	Functional floodplain
155	Wildlife Corridor at Lower Wolvercote North of Godstow Road	3.66	Greenfield, comprises of a number of parcels (pasture, and a small area of woodland)	Core GI network, adjacent to allotments, Wolvercote Meadows SSSI, Oxford Meadows SAC and in proximity to other designated sites	Three quarters FZ3b	Within Wolvercote with Godstow CA	n/a	Much of the site is within FZ3b. The patches that don't lie within FZ3 are spread across the site and are largely immediately surrounded by FZ3b, making access unsuitable for any potential development. Not to be included in review.

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
156	Wildlife Corridor at River Cherwell 12	1.22	Greenfield, local public park - Sunnymead Meadow, adjacent to watercourse and LWS	Core GI network	Nearly all FZ3b	n/a	n/a	Functional floodplain
157	Wildlife Corridor at Hill Farm (site boundary updated)	2.78	Greenfield, pasture bordered on NE by A40 and with hedgerows on remaining perimeter	Supporting GI network	Very small part FZ3	n/a	2023 assessment - high impact	Included in 2023 assessment
158	Wildlife Corridor South of Pixey Mead	0.93 (GB same)	Greenfield - entire site is covered in trees	Core GI network Immediately adjacent to two SSSI	Over half FZ3b	Within Wolvercote with Godstow CA	n/a	Pattern of FZ3b precludes development.
159	Wildlife Corridor Adjacent to Duke's Meadow	0.85	Greenfield, scrub and woodland - adjoining railway line and canal	Directly adjoins Duke's Meadow OCWS	N/A	n/a	2023 assessment - moderate impact	Included in 2023 assessment

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
163	Astons Eyot (#163a) and The Kidneys (#163b)	17.52	Green field, public park and nature reserve with diverse ecology including woodland, scrubland and meadows. Adjacent to watercourse	Designated wildlife site (OCWS), high level of biodiversity part of Core GI network	Some areas within FZ3, mainly confined to banks along the watercourse	Designated heritage asset	n/a	Put forward to be assessed in 2025
166	Banbury Road North Sports Club	3.48 (2.22 ha in GB - car park not included)	MUGA with pitches for football, hocky, tennis	Supporting GI network	n/a	n/a	n/a	Put forward to be assessed in 2025
178	Boults Lane Recreation Ground	1.8	Greenfield, comprises of football pitches (senior and junior)	Supporting GI network	n/a	Within Old Marston CA, Elsfield VC	n/a	Put forward to be assessed in 2025
179	Brasenose College and Queens College Sports Ground	9.13	Greenfield, comprises of playing pitches - including formal and informal spaces	Most of site in Core GI network, although Queens College SG (33% of site) is designated as Supporting GI network	about 80% FZ3b	n/a	n/a	Pattern of FZ3b precludes development.
180	Brasenose Farm Allotments	1.91	Mainly greenfield- allotments in active use, some historic barns in corner converted to kitchen architect business.	GI Core Network (except barns). Adjacent to Brasenose Wood and Shotover Hill SSSI	n/a	n/a	n/a	Put forward to be assessed in 2025

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
182	Bullstake Close Allotments	1.61	Greenfield, allotments in active use	GI Core Network, allotments	98% FZ3b	n/a	n/a	Functional floodplain
183	Burgess Field (edge of Port Meadow)	35.52	Greenfield- scrub, grass, paths	GI Core Network, OCWS	1% FZ3b	n/a	n/a	Put forward to be assessed in 2025
186	Christ Church Meadow – South	0.87	Greenfield- treed riverside adjacent to meadow	GI Core network.	Nearly all FZ3b	Within Central CA	n/a	Functional floodplain
188	Court Place Farm – East	1.52	Greenfield- nature park	GI supporting network	N/A	n/a	n/a	Put forward to be assessed in 2025
189	Court Place Farm – West	9.98	Mix of brownfield and greenfield of the OXRAS integrated sport and leisure facility.	GI supporting network (outside of buildings)	Tiny part FZ3b	n/a	n/a	Put forward to be assessed in 2025
190	Court Place Farm Allotments	5.91	Greenfield- large allotments site, around half the site in active use.	GI Core Network	n/a	Within Old Marston CA	2017 Assessment divided into parcels 190-1 and 190-2 and both assessed to have a moderate-high impact	Reviewed in the 2023 GB assessment which notes that there are no GB allocations or other notable changes in the vicinity of the site that would affect the 2017 assessment findings.
192	Cowmead Allotments	3.49	Greenfield- allotments in active use.	GI Core Network, allotments	Nearly all FZ3b	n/a	n/a	Functional floodplain
193	Cripley Meadow Allotments	6.02	Greenfield- allotments	GI Core Network	about 70% FZ3b	n/a	n/a	The patches of site not within FZ3 are scattered across the site and therefore not appropriate to consider for development as flood risk across the site is high.

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
194	Cutteslowe Park 1	2.79	Greenfield- cricket field	GI Core Network	n/a	n/a	n/a	Put forward to be assessed in 2025
195	Cutteslowe Park 2	13.51	Greenfield and brownfield. Traditional large park with formal planting, duck pond, play areas, aviary, miniature railway, community centre and collection of buildings including nursery greenhouses, depots and a cabin used as an office.	GI Core network.	n/a	n/a	n/a	Put forward to be assessed in 2025
196	Cutteslowe Park 3	11.5	Greenfield- grass playing pitches within Cutteslowe Park	GI Core Network, playing pitches	N/A	n/a	n/a	Put forward to be assessed in 2025
197	Cutteslowe Park 4	7.95	Greenfield- grassland area of large Cutteslowe Park	GI Core Network	Part FZ3b	n/a	n/a	Put forward to be assessed in 2025
198	Cutteslowe Park Allotments	2.38	Greenfield- western half allotments, eastern half woodland.	GI Core Network, half allotments	n/a	n/a	n/a	Put forward to be assessed in 2025
209	Fairacres Road Allotments	0.79	Greenfield- allotments	GI Core Network	Less than 1% FZ3b	n/a	n/a	Put forward to be assessed in 2025
215	Former Abingdon Road Allotments	0.86	Greenfield- former allotments completely overgrown with thick scrub and trees	GI Core Network	Nearly 80% FZ3b	n/a	n/a	Pattern of FZ3b precludes development.

1262

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
217	Former Binsey Lane Allotments	3.78	greenfield- grassed-over former allotments	GI Core Network	Nearly all FZ3b	n/a	n/a	Functional floodplain
223	Goose Green (South-West of Goose Green Close)	1.95	greenfield- grass and tree common land	GI Supporting Network, designated Common Land,	part FZ3b (west and north edges)	Within Wolvercote with Godstow CA	n/a	Designated Common Land
225	Grandpont Sports Ground	4.27	Greenfield (Hogacre Common Eco Park)	GI Core Network,	Nearly all FZ3b	n/a	n/a	Functional floodplain
251	Merton College Sports Ground	5.29	Greenfield- mown college sports/recreation ground with cricket and football pitches and tennis courts	GI Supporting Network	very small amount of FZ3b	Within Central CA	n/a	Put forward to be assessed in 2025
252	Merton Field	3.5	Greenfield- grass university playing fields- cricket pitches	GI Core network	n/a	Within Central CA	n/a	Put forward to be assessed in 2025
267	Oxford Golf Centre	3.15	Entire site within Green Belt	Entire site within Green Belt GI Network (Core)	Nearly all FZ3b	Adjacent to Adopted OHAR		Functional floodplain

1263

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
274	Park Adjacent Rowing Clubs	1.21	Greenfield- heavily treed area	GI Supporting Network	Part within FZ3b	n/a	n/a	The site was not taken forward for assessment by LUC because it was nearly fully in FZ3b. The change to the flood mapping in the SFRA L1 shows only part of the site in FZ3b. It is still a greenfield site in FZ3b, but for the purposes of this assessment it would have been assessed for Green Belt function.
275	Part Trinity and Magdalen Sports Grounds – North	7.76	Greenfield- grass college playing fields including cricket pitches and tennis courts	GI Supporting Network	N/A	Small part within St Clement's and Iffley Road CA, contains listed building	n/a	Put forward to be assessed in 2025
278	Pembroke College Sports Ground	3.43	Greenfield- tree-lined grass college playing fields withing green floodplain corridor.	GI Core network	100% FZ3b	n/a	n/a	Functional floodplain
279	Port Meadow	165.93	Greenfield- ancient meadow floodplain with cattle grazing.	GI Core Network, SAC/SSSI	86% FZ3b	Two Scheduled Monuments located within site	n/a	SAC/SSSI
290	Shotover Country Park	8.01	Greenfield- well-established woodland and grass- country park	GI Core Network, SSSI	n/a	n/a	n/a	SSSI

1264

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
298	St Catherine's, Exeter, and Hertford Colleges Sports Grounds	10.86	Greenfield- grass college playing fields (including two cricket pitches)	GI Supporting Network	A third FZ3b	n/a	n/a	Put forward to be assessed in 2025
311	Sunnymead Park	7.87	Heavily treed park with mown grass areas and paths.	GI Core Network.	8% FZ3b	n/a	n/a	Put forward to be assessed in 2025
315	The Harlow Centre Playing Fields	5.96	Site includes most of the Swan School and Swan School playing fields.	Playing fields are GI Supporting Network	n/a	n/a	n/a	Not to be included in review - new secondary school and associated playing fields
323	Trap Grounds Allotments	3.71	Greenfield- allotments	GI Core Network. Allotments	84% FZ3b	n/a	n/a	Pattern of flood risk precludes development.
325	University College Sports Ground	4.26	Greenfield- mown, tree-lined pitch	GI Core Network	Nearly all FZ3b	n/a	n/a	Functional flood plain
326	University Parks	33.02	Greenfield well-used open space with areas of pitches, mature trees, areas of semi-natural grassland and riverside vegetation.	GI Core Network, LWS/OCWS	Small part FZ3b	Within Central CA	n/a	Put forward for assessment in 2025

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
347	Iffley Meadow	7.15	Greenfield- meadow	GI Supporting Network	Small part FZ3b	n/a	n/a	The site was not taken forward for assessment by LUC because it was nearly fully in FZ3b. The change to the flood mapping in the SFRA L1 shows only part of the site in FZ3b. It is still a greenfield site in FZ3b, but for the purposes of this assessment it would have been assessed for Green Belt function.
364	Donnington Bridge Road Riversports Centre and City of Oxford Rowing Club	3.221	Site is split into two parcels; to the north and south of Donnington Bridge Road. Both are predominantly brownfield containing various buildings related to more than one rowing club as well as the Sea Cadets and Sea Scout Group.	n/a	Over 1/4 FZ3b.	n/a	n/a	Southern parcel is mainly within FZ3. The southern half of the northern parcel lies outside of FZ3, but is mainly within FZ2 and is currently in active use by the Falcon Rowing and Canoeing Club.
380	Iffley Road Sports Centre (west)	1.984	Northern part of site is not Green Belt and has sports buildings. Southern part in GB is artificial pitch.	GI Supporting Network	Most of Green Belt part of site FZ3b	n/a	n/a	Green Belt FZ3b
390	Land at Wolvercote Viaduct (west of canal)	0.487	Greenfield grass floodplain	GI Core Network	Mainly FZ3b	n/a	n/a	Functional floodplain
391	Land at Wolvercote Viaduct	1.887	Greenfield- marsh habitat	GI Core Network, LWS (Oxford Canal Marsh)	Mainly FZ3b	n/a	n/a	Functional floodplain

1266

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
	(east of canal)							
393	Land east of Abingdon Road (south)	0.923	Greenfield- mown college sports/recreation ground	GI Core network	Part FZ3b	n/a	n/a	The site was not taken forward for assessment by LUC because it was nearly fully in FZ3b. The change to the flood mapping in the SFRA L1 shows only part of the site in FZ3b. It is still a greenfield site in FZ3b, but for the purposes of this assessment it would have been assessed for Green Belt function. However, there is no landowner interest and it is a sports ground.
403	Manor Farm, Binsey	1.496	Greenfield, farm buildings and treed area, listed building within site.	n/a	Part FZ3b	Listed building within site. Within Binsey CA.	n/a	Site all at flood risk, though little FZ3b, but site surrounded by a large area of FZ3b with no potential for access except through this area of high flood risk.
431	Walton Well Road Car Park	0.318	Parking area surrounded by trees and drainage ditches	n/a	Part FZ3b (southern and eastern edges)	n/a		Put forward for assessment in 2025

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
464	Land adjacent Seacourt P&R	37.2	Greenfield- agricultural	GI Core Network, Scheduled Monument northern part of site.	82% FZ3b	Scheduled Monument in northern part of the site.	2017 Assessment- high impact	Reviewed in the 2023 GB assessment which notes that there are no GB allocations or other notable changes in the vicinity of the site that would affect the 2017 assessment findings, which concluded that its development would result in high harm to GB purposes. The 2023 assessment also concluded that there are no allocations in the Vale of White Horse DC Local Plan 2031 which would affect the 2017 assessment and that much of this area to the west of the A34 remains designated as SSSI and Ancient Woodland.
468a1	Sunnymead	4.19	greenfield- grass floodplain	GI Core Network	About 85% FZ3b	n/a	n/a	Pattern of flood risk precludes development.
468a2	Land South of A40, Old Marston	11.38	Greenfield- grass floodplain	GI Core Network	About 85%FZ3b	n/a	n/a	Pattern of flood risk precludes development.
469	North of Botley Road/ around Binsey/ Cripley Meadow	212	greenfield- meadows	GI Core Network, small part OCWS, small part LWS.	About 85%FZ3b	n/a	n/a	Pattern of flood risk precludes development.
470	North of Godstow Bridge	2.18	Greenfield, tree-lined hay meadow (West Cowleys Meadow).	GI Core Network, LWS.	Just under half FZ3b (southern portion of site)	n/a	n/a	Given location of flood risk and proximity of SSSI and SAC, do not include in review.

1268

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
471	North of Marston Ferry	3.84 (GB same)	Greenfield - pastoral and tree/hedge lined around perimeter	Core GI network	Nearly all FZ3b	n/a	n/a	Functional floodplain
473	SLINC west of Willow walk & site to east –an extension of Bulstake stream SLINC site.	17.56	Greenfield- meadows	GI Core Network, mainly LWS, remaining part OCWS	Nearly all FZ3b	n/a	n/a	Functional floodplain
474	Extension to site #127	6.62	Greenfield, heavily treed, watercourses, alongside railway.	GI Core Network.	Over half FZ3b (present throughout site but predominantly in the central region)	n/a	n/a	The lower area of flood risk is spread in patches across the site and most of the site is immediately surrounded by FZ3b, therefore do not include in review.
476	Land between HWRS and Kennington Road	2.76	greenfield, significant tree cover, large pylons.	Supporting GI network.	About 1/4 FZ3b (largely towards the north western and north eastern perimeter)	n/a	n/a	Given location of flood risk and only possible access road located in area of higher flood risk, do not include in review.
477	Principal Oxford Spires Hotel (formerly Four Pillars) including surrounding land (former #477a & #477b).	18.2	mainly greenfield with a hotel- trees, horse-grazed and grass pitches	Core GI network (except hotel). University pitch.	Nearly all FZ3b	n/a	n/a	Functional floodplain

1269

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
478	OCWS to North of Weirs Lane (Long Bridge Nature Park)	2.53	greenfield- heavily treed area between watercourses	GI Core Network, half LWS, other half OCWS	Over 60% FZ3b	n/a	n/a	Pattern of flood risk precludes development.
479	Isis Farmhouse Pub and surrounding OCWS area	1.75	Isis farmhouse pub complex (very limited parking/hardstanding) and greenfield	middle of site is LWS, all Core GI network	100% FZ3b	n/a	n/a	Functional floodplain
480	Meadow Lane / opposite Isis boat house	1.84	Greenfield, footpath crosses site.	GI Core Network on northern half of site.	Nearly all FZ3b	n/a	n/a	Functional floodplain
489	Marston – gap between SSSI	5.13	Greenfield.	GI Supporting Network	Over 1/4 FZ3b	n/a	n/a	Put forward for assessment in 2025
490	Park Farm and adjoining OCWS	9.13	Brook runs through the site (Greenfield).	OCWS (Park Farm Meadows). Adjacent to SSSI.	About 85% FZ3b	n/a	2017 assessment - Moderate	GIven location and level of flood risk, do not include in review.
491	East of Wolvercote Paper Mill site (Nixey's Field)	3.43	Greenfield	GI Core Network	N/A	n/a	n/a	Put forward for assessment in 2025

1270

HELAA ref number	Site Name	Total site area (ha) and GB area if different	Site description	GI constraints (biodiversity, network, pitches, allotments	Flood risk- contains FZ3b?	Statutory Heritage Designation	Green Belt review done? Which yr and outcome?	Summary- whether parcel is filtered in or out of further Green belt assessment.
524	**Wolvercote Green**	**2.14**	**Entire site within Green Belt**	**GI Network (Core)** **Part designated Common Land** **Oxford City Wildlife Site (OCWS) adjacent to site (Oxford Canal)** **This site is located within the Port Meadow with Wolvercote Common and Green SSSI**	**Around 85% in Flood Zone 3b (greenfield)**	**The entire site is located within the Wolvercote with Godstow CA** **Listed bridge/building adjacent to site**		Pattern of flood risk precludes development.
534	**Land north and west of Hogacre Common Eco Park.**	**19.5**	**Greenfield grass and trees (informal) publicly accessible natural green space.**	**GI Core Network**	**Nearly all FZ3b**	**n/a**	**n/a**	Functional floodplain
536	**Island Site North of Weirs Lane**	**0.82**	**Entire site within Green Belt**	**Part GI Network (Core)**	**N/A**	**A very small element of the site is located in a View Cone**		Site is not suitable or available for development as it is a wooded site with a watercourse on both sides and no potential suitable access.
546	**Sidling Island**	**0.31**	**Greenfield, wooded**	**Supporting GI network**	**100% FZ3a**	**n/a**	**n/a**	Since sites were put forward to LUC for assessment, updates to the flood risk mapping have changed this site from 100% FZ3b to 100%FZ3a. Therefore, this site has not been assessed for its Green Belt purposes. However, the site is not a developable site, being a narrow site stranded between the river and the railway, as well as being a greenfield site at high risk of flooding.

1271

Background paper 007

Title: Flood risk, SuDS and drainage

This paper addresses flood risk and new development including SuDS and drainage
Relevant Local Plan Objective(s): • Be resilient and adaptable to climate change and resistant to flood risk and its impacts on people and property. • The city's water resources are utilised efficiently with consideration for the future, whilst water quality is protected and enhanced for the benefit of the wider environment
SA Objective(s): 2. To build resilience to climate change including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.
SEA theme(s): Water, climatic factors, human health

Sustainable Drainage Systems (SuDs) - Policy G8 25

1. Introduction

1.1 Oxford is located at the confluence of two rivers, the Thames and the Cherwell, as well as numerous watercourses. The risk from river flooding is one source of flooding that has the potential to impact development in Oxford, with other sources including groundwater, surface water and sewer flooding. The ongoing impact of climate change, including projected wetter winters and increased incidences of intense rainfall events, is likely to exacerbate these risks in the future, with a variety of negative consequences for property, economy and ecosystems as well as human health.

1.2 Oxford has a history of flood events with several occurring during 2024, where a number of flood warnings were issued, temporary defences deployed, several roads closed and footpaths along the city's waterways completely obscured. Other recent flood events were at the start of 2021, with more historic flooding events occurring in January 2014, November 2012 and July 2007, each of which resulted in significant disruption to the city. This series of flood events resulted in a programme of short-, medium- and long-term measures including the development of the Oxford Flood Alleviation Scheme (OFAS) - the primary purpose of which is to reduce the risk of flooding for properties and infrastructure.

1.3 This background paper provides a brief overview of some of the flooding issues in the city, including SuDS and drainage. It begins by taking a look at flooding from a policy perspective, reviewing relevant policies, plans and programmes at the national, regional and local level. It then goes on to set out the current situation for flooding in Oxford, looking at each source of flooding in turn and how they present a different set of issues. Then the paper moves on to look at what would happen if we didn't produce a plan before setting out what potential

topics could be included in the new plan. Finally, it draws out some of the key issues relating to flooding.

2. Policy Framework/ Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

The Flood and Water Management Act, 2010

2.1 This piece of legislation requires better management of flood risk, creates safeguards against rises in surface water drainage discharges and protects water supplies for consumers. It gave a new responsibility to the Environment Agency for developing a National Flood and Coastal Risk Management Strategy, and established upper tier local authorities (in our case Oxfordshire County Council) as Lead Local Flood Authorities and provided them with a range of duties.

National Planning Policy Framework (NPPF)

2.2 Paragraphs 170-182 of the NPPF set out the policy for planning for development in flood risk areas. It requires a sequential approach to development: sites should not be allocated, or permitted, if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. It also requires an exception test for proposed development in areas of flood risk: this requires proposed development to show that it will provide wider sustainability benefits to the community that outweigh flood risk, and that it will be safe for its lifetime, without increasing flood risk elsewhere and where possible reduce flood risk overall. Paragraphs 180-181 focus primarily on planning applications and paragraph 182 states that applications which could affect drainage on or around the site should incorporate sustainable drainage systems to control flow rates and reduce volumes of runoff, and which are proportionate to the nature and scale of the proposal. It is expected that these sustainable drainage systems will provide multifunctional benefits wherever possible, through facilitating improvements in water quality and biodiversity, as well as benefits for amenity. Local Planning Authorities need to have appropriate policies in place on sustainable drainage systems.

2.3 Paragraph 125 (b) of the NPPF recognises that some undeveloped land can perform many functions, including flood risk mitigation. The NPPF also requires that Local Plans should be supported by a Strategic Flood Risk Assessment (SFRA) and develop policies to manage flood risk from all sources, taking account of advice from the Environment Agency and other relevant flood risk management bodies. The NPPF states that the SFRA will be the basis for determining the sequential approach to development. This is important as applicants need not apply the sequential test again on sites allocated in the development plan through the sequential test.

2.4 The NPPF was recently updated and published in December 2024, however there were not any significant amendments to the flooding policy. A few minor amendments were made to

the September 2023 version of the Framework, which included specifically referencing that improvements to green infrastructure and other forms of infrastructure can provide opportunities to reduce the causes and impacts of flooding as well as explicitly stating that as well as development being resistant and resilient to flooding, in the event of a flood, buildings should be able to be quickly brought back into use without significant refurbishment. Additionally, a separate Annex 3 was provided which classifies flood risk vulnerability.

National Planning Practice Guidance (PPG)

2.5 The Flood risk and coastal change section of the PPG was last updated in September 2025. Significant amendments were made in 2022 to bring the guidance up to date and in line with the latest policy position on flood risk introduced in the updates to the NPPF in 2018 and 2021. Paragraph 078 refers to a table which sets out the definition of the different flood zones:

- Flood Zone 1 has the **lowest** probability of flooding
- Flood Zone 2 has a **medium** probability of flooding
- Flood Zone 3 has a **high** probability of flooding
- Flood Zone 3b is the **functional flood plain** and this zone comprises land where water has to flow or be stored in times of flood.

2.6 The key difference made in 2022, is that the definition of the functional flood plain (Flood Zone 3b) changed from an annual probability of 1 in 20 (5%) or greater in any year to 1 in 30 (3.3%) or greater in any year.

2.7 The PPG on Flood Risk and Coastal Change provides more detailed guidance as to the application of the sequential and exception tests in the context of plan-making and planning applications. It also provides additional information on the "sequential approach to the location of the development" and provides some over-arching guidance relating to "taking flood risk into account in preparing plans".

New national flood and coastal erosion risk information

2.8 In December 2024, the Environment Agency published a new report summarising the changes to the National assessment of flood and coastal erosion risk in England in 2024. In March 2025, new national flood risk assessment (NaFRA) was also made available. Its intention is to provides a single picture of current and future flood risk from rivers and the sea, and from surface water, using both the existing detailed local information and improved national data. This includes future scenarios accounting for climate change. This new flood zone data is expected to inform any new flood risk assessments, including those undertaken at a strategic level.

Flood and Coastal Erosion Risk Management Strategy Roadmap to 2026

2.9 The Flood and Coastal Erosion Risk Management (FCERM) Strategy for England was published in 2020, with an initial 1-year action plan showing the actions needed, published

in May 2021. The Environment Agency has recognised that a longer-term view is now needed to implement the strategy and to address this, they have worked with partners to develop a roadmap. The roadmap contains practical actions out to 2026, which once completed will help to implement the strategy's 2100 vision. These include actions such as taking forward projects and programmes that will pioneer innovative ways of boosting flood and coastal resilience and make a difference to their local communities, as well as identifying practical ways in which flood and coastal investments can contribute to wider priorities, including local nature recovery, carbon reductions and more integrated water solutions that help with both flood and drought resilience.

Catchment Strategic Plan, Part of our Drainage and Wastewater Management Plan (DWMP) for Oxfordshire, Swindon, Wiltshire, Gloucestershire and Warwickshire, Thames Water, 2023

2.10 Thames Water produced a strategic plan which develops a strategy for the next 25 years to meet future challenges such as climate change and population growth which could impact the sewerage and drainage systems in the region. The document also illustrates the range of investment that is required for each of the catchments across the region (including Oxford) and identifies sewage treatment works that will need to be upgraded within the next 25 years to ensure treatment capacity keeps pace with growth.

Our Catchment Plan, Thames Water, 2018

2.11 Thames Water produced a plan which includes an analysis of the causes of sewer flooding and pollution in the Oxford catchment. These include heavier and more intense rainfall events happening more often; deterioration within the sewerage network and blockages caused by fat, oil and grease deposits, resulting in flooding and operational issues; loss of local river flood plains; and increasing river flooding. The report notes that the foul sewers were not designed to cope with surface water. For example, in the Grandpont area, the deterioration of some of the sewers within their network has allowed groundwater into the foul sewers. At Abingdon Road, flooding from surface water sewers has also occurred as a result of high river levels and / or restriction of the outfalls due to vegetation growth.

2.12 The Our Oxford catchment plan is currently at the Options Appraisal stage. Thames Water are recommending an intervention comprising short-, medium- and long-term measures. Short-term activities will include their ongoing work to improve the operation of their network and their response to problems as they occur. Medium term activities will include the refurbishment of their local sewerage network to reduce pollution and foul sewer flooding. Long term activities include the review and refinement of their catchment approach based on the experience gained, and outcomes achieved from the short- and medium-term interventions.

Oxford City Council "Our Strategy" 2024-28

2.13 The City Council's "Our Strategy" document sets out the importance of working with partners to deliver improved flood defences and managing the increased risks of flooding in order to help the city become more resilient to climate change.

Oxford Local Plan 2036 Policies on Flood Risk

2.14 The Oxford Local Plan 2036 is the current development plan for the city and it contains a number of policies that relate to flood risk. In particular, Policies RE3 and RE4 set out the City Council's approach to flood risk, sustainable drainage, and also provide the policy approach in relation to water management at some of Oxford's important nature conservation sites. Policy RE3 includes strict provisions as to what development will be granted planning permission in Flood Zone 3b. Any proposal must meet all of the criteria in this policy and must be for water-compatible uses or essential infrastructure; or, where it is on previously developed land, it must represent an improvement of the existing situation in terms of flood risk.

2.15 Policy RE3 was informed by the Flood Risk and Sequential Test of Sites Background Paper. In line with the associated guidance in the PPG, when developing site allocation policies, the sequential test was applied if any of the potential sites were outside of Flood Zone 1. Before allocating sites in higher risk flood zones, it was demonstrated that there were no reasonable alternative sites available in areas with a lower probability of flooding that would have been appropriate to the type of development or land use proposed. Any proposals for the development of sites in Flood Zone 3a that incorporated 'more vulnerable' uses such as housing also required the exception test. In the case of Oxford, where previously developed sites in Flood Zone 3b were proposed, an exception test was also required. Paragraphs 1.21 to 1.59 of our Statement of Common Ground with the Environment Agency provide more detail as to how the sequential and exception tests are applied in Oxford.

2.16 The Flood Risk and Sequential Test of Sites Background Paper set out the individual capacities of sites within each Flood Zone and demonstrated that Oxford had insufficient capacity to accommodate its housing need within lower risk flood zones. Consequently, development sites were allocated within higher risk flood zones applying the sequential test. These sites must be accompanied by a site-specific flood risk assessment when planning permission is sought.

Oxford City Sustainable Drainage Design and Evaluation Guide

2.17 In 2010 the Flood and Water Management Act proposed that sustainable drainage systems (SuDS) should be used on most development and this was confirmed in a ministerial statement in 2015 introducing the 'non statutory technical standards' for SuDS. The evaluation guide to sustainable drainage was published in 2018 and provides a link between the design of SuDS with the evaluation requirements. The design and evaluation guide promotes the idea of integrating SuDS into the fabric of development using the available landscape spaces as well as the construction profile of buildings. This approach provides

more interesting surroundings, cost benefits, and simplified future maintenance. This guide provides a background context for SuDS designs, taking into account the landscape character and local geology and provides advice on what type of SuDS is most suitable in Lye Valley; a Site of Special Scientific Interest (SSSI) with a unique nature, where special consideration to the type of SuDS must be given.

3. Current Situation (supporting Task A2 and A3 of Sustainability Appraisal)

3.1 In Oxford there are major technical obstacles which mean any solutions to flooding will be expensive, provide different levels of protection and not benefit everyone in the affected communities. Proposals can be brought forward that will reduce the risk to many people, but major flood defences are not a realistic option in the foreseeable future. The most sustainable way of managing flood risk in Oxford will be through a Flood Risk Management Strategy. As set out in the introduction, flooding occurs from a number of sources including groundwater, surface water, river, and sewage flooding. Each will be looked at in turn to present a current picture of what is happening in the city.

Fluvial Flooding

3.2 Fluvial (or river) flooding occurs when a river bursts its banks and water spills out onto the surrounding land. This type of flooding is caused by heavy rain. Fluvial flooding is the primary source of flood risk in Oxford in terms of flooding extent, the number of properties at risk and historical flood damages. Oxford is located at the confluence of the River Thames and River Cherwell, and is at risk from both watercourses independently, as well as concurrently in large flood events. As can be seen from Figure 3.1 below, large parts of Oxford are at risk from this type of flooding. Some areas of flood risk in Oxford allow the river to naturally burst its banks onto river floodplain, however other areas have properties in them.

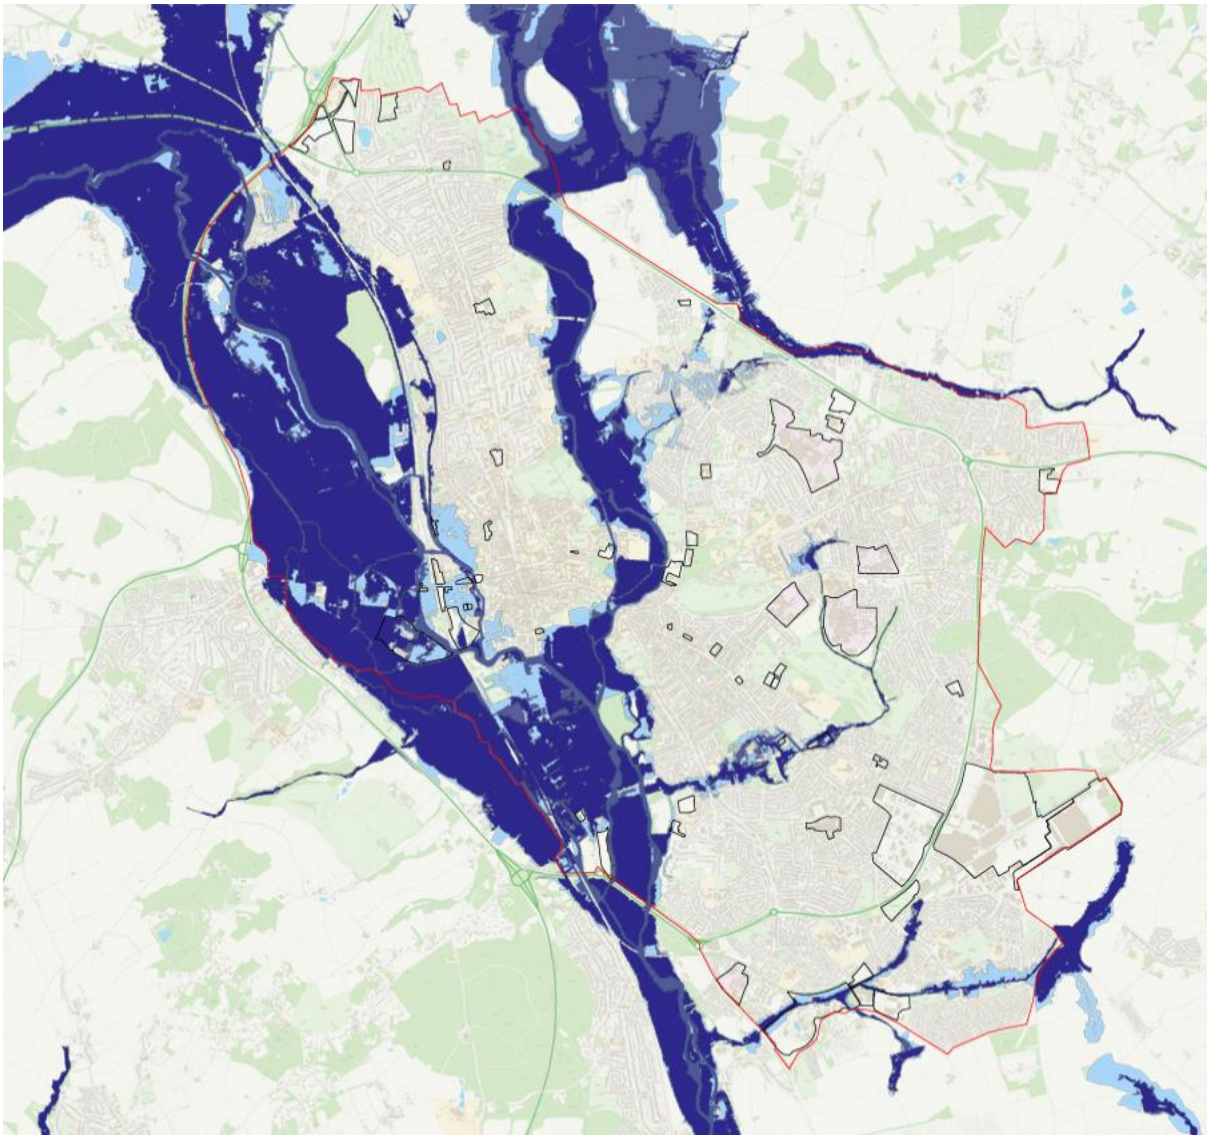

Figure 3.1 - Flood map showing risk of river flooding in Oxford (WHS, 2025)

Groundwater Flooding

3.3 According to the Environment Agency, groundwater flooding:

> *"can happen when the level of water within rock or soil underground – known as the water table – rises. When the water table rises and reaches ground level, water*

starts to seep through the surface and flooding can happen. This means that water may rise up through floors or underground rooms such as cellars or basements."

3.4 The Environment Agency and British Geological Survey have investigated the nature and mechanisms behind groundwater flooding in Oxford. In the majority of cases, it has been found that local ground water is linked to river flows and has an independent response to rainfall. There is a lack of reliable data however, therefore a system of water level measurement points for future monitoring purposes has been established.

3.5 The Environment Agency holds and updates a groundwater flooding register identifying the locations and nature of specific groundwater flooding events. For Oxford, the groundwater register has identified 21 records of suspected ground water flooding. These occurred between 2000 and 2003 and 2007 and 2009. 15 of the incidents occurred within the city, whereas 6 were located just outside the city's boundary. Groundwater flooding tends to occur in low lying areas, with clusters of incidents in New Hinksey, Grandpont and New Botley. These three areas all lie within Flood Zone 3, so the groundwater incidents are likely to be associated with fluvial flooding.

3.6 Four of the incidents reported immediately to the west of the Cherwell-Thames confluence are within Flood Zone 1. The sites are located on gravels like those within the floodplain. Although the incidents took place within Flood Zone 1, the proximity of the Rivers Cherwell and Thames means that groundwater emergence is likely, especially during periods of high-water level in the two rivers.

Surface Water Flooding

3.7 Surface water (or pluvial) flooding happens when heavy rainfall overwhelms local drainage capacity. It is a significant risk affecting 3.2 million properties in England. Surface water flooding is **more** difficult to forecast than flooding from rivers as it is often caused by periods of intense rainfall. This is because "current meteorological methods are not able to pinpoint where or when potential intense rain will arrive, nor can they know or predict the capacity of local systems to manage the level of rainfall." There are several high-risk areas near the city centre where surface water pools, including large parts of St Aldates and Speedwell Street to the south of the city, and George Street to the west. The Oxford City Level 1 Strategic Flood Risk Assessment (WHS, 2023) indicated that ground levels to the west and south of the city are lower than those in the city centre, which may explain why water is shown to pool in these locations. The greatest risk of surface water flooding is around certain roads pertaining to the areas of Jericho, Headington, Summertown, Woodstock Road and the city centre. Recent surface water flood incidents have been reported at the following locations:

Table 3.1 - Recently recorded surface water flood incidents

Area	Road	Year
Headington	Old Road	2020

Summertown	Summerhill Road	2020
Summertown	Water Eaton Road	2023
Woodstock Road	Blandon Close	2020

3.8 Most of the areas identified above tend to be located outside of the floodplains of the River Thames and River Cherwell, meaning that the main source of flooding shown in these areas is likely to originate from surface water flooding rather than from fluvial flooding.

Sewer Flooding

3.9 Sewer flooding is when sewage or foul water leaks from the sewerage system (through pipes, drains or manholes) or floods up through toilets, sinks or showers inside a building. The responsible authority for sewer flooding across in Oxford is Thames Water, the sewerage undertaker, who have confirmed that a total of 155 historic records of sewer flooding have been recorded within the Oxford City administrative area since records began. The most incidents have occurred in the built-up areas of New Hinksey, Grandpont, Botley, Osney and Marston.

Strategic Flood Risk Assessment (SFRA)

3.10 The NPPF requires local plans to be supported by an SFRA and develop policies to manage flood risk from all sources, taking account of advice from the Environment Agency and other relevant flood risk management bodies, such as Lead Local Flood Authorities (in this case, Oxfordshire County Council). The EA provides guidance on how to undertake an SFRA. The most recent SFRA was undertaken in 2023 to support the emerging Oxford Local Plan 2040 (now withdrawn). A Level 1 SFRA was initially undertaken which identified all flood risk areas, based on all sources of flooding and taking account of the latest climate change allowances. A Level 2 SFRA was then carried out as it was determined that the City Council could not allocate all land for development outside flood risk areas. The Level 2 SFRA gives more detail on the nature of the flood risks identified and where the sequential and exception tests will need to be applied. Although the Oxford Local Plan 2040 has now been withdrawn, the 2023 SFRA is based on the most up-to-date modelling available at the time, including running the associated central, higher central and upper end climate change allowances, which provided a comprehensive update to the flooding mapping for the city. The Level 1 assessment in particular therefore provides a very useful baseline (regardless of which site allocations are taken forward in the Oxford Local Plan 2045). However, any future SFRA will need to use the new flood zone data that was published by the Environment Agency in March 2025.

Taking account of Climate Change impacts when looking at Flood Risk

3.11 The paragraphs below summarise the approach that was taken in respect of taking account of the climate change allowances in the Local Plan 2040. The new Local Plan will have to determine if this approach is still the preferred one.

3.12 An important part of predicting the likely impact of flooding in the future is looking at the likely impacts of climate change. In flood risk terms, climate change is likely to bring increased wetter weather and more incidences of various types of flooding. The headline findings from the current UK Climate Projections released in 2018 (known as UKCP18) highlighted that in the most recent decade (2009-2018), the UK climate has been on average 1% wetter than 1981- 2010, and 5% wetter than 1961-1990. Looking into the future, UKCP18 reported that rainfall patterns across the UK will vary, but that by 2070, under a scenario of high greenhouse gas emissions, winters will on average grow increasingly wetter and summers drier. However, despite overall summer drying trends in the future, there are likely to be future increases in the intensity of heavy summer rainfall events, particularly for urban areas in the UK, which will have an impact on the frequency and severity of surface water flooding.

3.13 To take climate change into account in planning for flood risk, the 2023 SFRA has been informed by the latest guidance released by the Environment Agency on how local planning authorities, developers and their agents should use climate change allowances. There are allowances for different climate scenarios over different epochs, or periods of time, over the coming century.

3.14 For Oxford City, the peak river flow and peak rainfall intensity allowances are relevant and have been used in any relevant modelling updates. For peak river flow, Oxford falls within two management catchment areas: Gloucestershire and the Vale Management Catchment and Cherwell and Ray Management Catchment. The climate change allowances for the Cherwell and Ray are significantly lower than those for the Gloucestershire and the Vale. The majority of the Oxford administrative area lies within the Gloucestershire and Vale Management Catchment, therefore this in combination with the more precautionary climate change allowances, is why this management catchment has been deemed to be the most appropriate one to use for Oxford. More detail on how the climate change allowances have been applied to the updated hydraulic modelling can be found in the Level 1 SFRA (2023). In the emerging Oxford Local Plan 2040 (now withdrawn), we also looked at the implications of climate change on a site-specific basis as part of gaining a clear understanding about whether development proposed in higher-risk flood zones would be safe, as well as meeting the other tests set out in national policy. Climate change allowances were applied to all site allocations assessed as part of the Level 2 SFRA.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 Flood risk from a range of sources will be an ongoing challenge in the city. Climate change is projected to bring about wetter winters and more incidences of high intensity rainfall events, which is likely to increase the risks of flooding, particularly in highly urbanised parts of the city and within the flood risk zones.

4.2 In the absence of a new local plan, local flooding policy would still be in place until 2036, as long as the plan remained "up-to-date". In the absence of an up-to-date local plan, development management decisions would need to be made against the national framework. As the NPPF presently contains a strong policy framework at the national level for flooding, it is unlikely that new or existing development would be adversely impacted by this change.

4.3 More locally, the Environment Agency is working in partnership on a major new scheme to reduce flood risk in Oxford. The Oxford Flood Alleviation Scheme (OFAS) will cost around £176 million and is one of the biggest flood schemes in the country, with the aim of reducing flood risk to homes, businesses, services and major transport routes into the city. The OFAS will create a new stream with wetland wildlife corridor to the west of Oxford. The intention of the scheme is to reduce flood risk to all properties in Oxford currently at risk of flooding from the River Thames, as well as to the railway, Botley and Abingdon Roads, other local roads, utilities and services such as broadband. The scheme will also bring additional environmental improvements to the area, including creating new wetland which will link up existing wildlife sites. The proposed scheme is approximately 5 km long, starting just north of Botley Road and passing under the A423 Kennington Railway Bridge (Southern by-pass) to the south before re-joining the River Thames.

4.4 In spring 2022, the Environment Agency submitted a new planning application for the scheme to Oxfordshire County Council, who in summer 2024, resolved to grant planning permission for the OFAS. Approval is subject to the application first being referred to the Secretary of State for the Ministry of Housing, Communities and Local Government, due to the scheme's location in the Green Belt. The Secretary of State will decide if they wish to make a determination. The Environment Agency also made a new compulsory purchase order (CPO) for the scheme. There was a public inquiry into the CPO, led by an independent inspector, which ran from 14 November 2023 to 26 January 2024. In May 2025, the Secretary of State confirmed the CPO which means the Environment Agency can progress with purchasing the land and securing the access needed to build the scheme.

4.5 Although a scheme like the scale of OFAS has the potential to significantly reduce flood risk to all properties in Oxford currently at risk of flooding from the River Thames, even with flood defences in place, an element of residual risk will remain in areas that are prone to flooding. Residual risk can arise from the failure of flood management infrastructure such as a breach of a raised flood defence or blockage of a surface water conveyance system.

4.6 In respect of sustainable drainage systems (SuDS), the absence of a local plan would not be so impactful. National policy now requires SuDS on not just major developments (over 10 dwellings), but for minor developments (fewer than 10 dwellings) within an area liable to flood from surface water or groundwater, or that are likely to increase flood risk locally, as well as for developments that need sustainable drainage solutions to be provided. The relevant policy in the current Oxford Local Plan 2036 (Policy RE4) contains a hierarchy of

SuDS approaches to apply and refers applicants to the guidance provided by either the City Council (minor development) or County Council (major development).

5. Key issues addressed through the Local Plan 2045

Introduction

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to climate change, resources and flood risk objectives. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Impacts of Climate Change on Flood Risk

5.3 Addressing current and future flood risk remains a key priority for the new Local Plan. The ongoing impact of climate change includes projected wetter winters and increased incidences of intense rainfall events and this is likely to exacerbate risk of flooding in the future, with a variety of negative consequences for property, economy and ecosystems as well as human health. Although there is a need to strike a balance to ensure that other objectives such as the correct amount of housing, infrastructure etc. are also achieved, it is imperative that any new development is directed to areas with the lowest risk of flooding first, and that flood risks are well managed in new development so as to not increase flood risk elsewhere and to ensure the safety of occupants.

5.4 Our existing policy is performing fairly well according to feedback from specialists and the EA. Our approach to flooding also benefits from national policy providing a strong framework for addressing flooding, much of which can be applied directly to Oxford. There are however some areas where relying on national policy alone is not appropriate, as it does not take account of the local circumstances of Oxford's flood risk context, particularly in relation to extensions and also brownfield land at high risk of flooding. As the Local Plan 2036 policy has been put into use, some weaknesses and lack of clarity in how to apply the policy have also surfaced, which the Local Plan 2045 could address.

Strategic Flood Risk Assessment

5.5 Our current Strategic Flood Risk Assessment (SFRA) was published in 2017. In order to ensure that the SFRA is still relevant to best practice and the latest available knowledge, there is a need to undertake a new assessment to ensure that it takes account of the latest climate change predictions and modelling published at the time of the study. Climate change predictions are constantly being updated and refined and new predictions can have a notable effect on the picture of risk which we have considered as we have refined our policies (particularly our site allocations).

5.6 To support the Oxford Local Plan 2045 we commissioned an SFRA in order to understand the impacts of the latest modelling, including climate change predictions. The SFRA uses the EA's latest available modelling data, but also considers the detailed and area-specific 2018 model alongside this to maximise the accuracy of defining Flood Zone 3b. The SFRA assesses the risk from all sources of flooding as well as cumulative impact that development or changing land use would have on flooding. It also identifies opportunities to reduce the causes and impacts of flooding and identifies any land likely to be needed for flood risk management features and structures. The SFRA provides an evidence base to allow us to carry out a sequential test for site allocations to locate these in the lowest areas of flood risk wherever possible. It is also necessary for informing a more detailed assessment (SFRA level 2) of any allocations that need to be located in areas of higher flood risk to ensure development can happen in a safe way, historically this has been necessary in the city due to the lack of available sites that can meet our housing needs within areas of lowest flood risk.

Approach to flood zone 3b (functional flood plain)

5.7 The city is highly constrained by areas of flood risk, with a significant area comprising flood zone 3 – this is the area at highest risk of flooding. Flood zone 3 includes an area that is functional flood plain, referred to as flood zone 3b. National guidance is that we should not usually accept development within this area due to the high risk of flooding along with the loss of flood storage that this would incur, and our proposed approach is to continue to follow national policy and set out that development of greenfield sites within 3b would not be permitted. However, historic development has happened within the flood plain and has led to a number of areas of brownfield land existing within 3b.

5.8 Current policy in the Local Plan 2036 was formulated recognising that these brownfield sites can provide more sustainable locations for development than greenfield sites and that refusing further development could allow these areas to deteriorate whilst ignoring the opportunities for thoughtful redevelopment that can actually reduce flood risk in future. Many developments in these flood zones in the past have not compensated for lost flood storage or ensured suitable drainage systems, whereas new development on these same sites can make sure this does happen. The Policy in the Local Plan 2036 takes a pragmatic approach that recognises that Oxford already has significant development in areas at high risk of flooding, but that preventing redevelopment of these sites would also be preventing

opportunities to be taken for improvements to the flood risk situation, as well as sterilising sites in highly accessible locations.

5.9 Policy G7 in the Local Plan 2045 would broadly continue the approach of the existing plan, but would also deliver a clearer and more comprehensive approach to a range of development types including explicit reference to minor and householder development, and basement development. The policy allows some limited development within Flood Zone 3b, for water-compatible uses or essential infrastructure, as allowed for in national policy, but also on previously developed land in circumstances where the flood risk is demonstrably decreased through careful design and where all of the set of six criteria can be met, which are designed to ensure safety and improvements to flood risk management. These criteria include that the built footprint of the site is not increased and that the development does not result in an increase in flood risk vulnerability classification (so for example and office in flood zone 3b could not change to residential).

5.10 The approach for greenfield sites in Flood Zone 3b follows national policy, setting out that new development would not be permitted there except for water compatible uses and essential infrastructure. It is not seeking to be any more restrictive that this.

Sustainable Drainage Systems (SuDS)

5.11 National Policy includes some references to SuDS; however, we feel that more detail can be added in the new Local Plan, especially in regard to the design of SuDS which are specific to Oxford and have developed Policy G8 to capture this. In Oxford, a significant amount of development comes from minor planning applications, and we recognise that there is an opportunity to further help mitigate for flood risk by requiring SuDS on all new developments, including minor schemes. This would have a significant positive impact, especially considering the potential cumulative effect that numerous small developments could have on increasing overall flood risk in Oxford.

5.12 In addition to having SuDS on all new developments, Policy G8 is also explicit about encouraging green SuDS, that incorporate natural features, rather than grey (e.g. tanks underground). SuDS that incorporate natural green features have the benefit of bringing a wider range of additional benefits to place-making, such as making spaces for biodiversity and making spaces that are more pleasant for people. The policy therefore includes a hierarchical style approach to SuDS design, prioritising green SuDS and maximising multi-functionality. More details on this can be found in the background paper for Green Infrastructure which illustrates the benefits of multi-functionality, which although a priority, are far wider than just reducing flood risk.

6. Appendix A - Policy options and preferred approaches

The analysis set out in the previous sections of this background paper indicates that flood risk is a key issue that new development will need to consider and respond to depending on where it comes forward in the city. The process by which drainage is managed on sites is also a related consideration.

The Local Plan 2042 therefore includes proposed policies in response to the following topics:

- Addressing flood risk and requirements for flood risk assessments
- Sustainable Drainage Systems (SuDs)

For each topic, options for the approach that could be taken for the Local Plan 2042 policy have been considered, and these 'options sets' are set out in tables on the following pages. The tables identify potential positives of the approach, as well as the potential negative or neutral impacts that could arise depending on the approach taken and that have helped inform the preferred position set out for the Regulation 18 consultation.

Additionally, the options sets have been considered in light of their specific sustainability impacts through a high-level screening against the 12 sustainability criteria forming the assessment process for the separate Local Plan Sustainability Appraisal (explained in greater detail in the main Sustainability Appraisal report). Where there is potential for a significant sustainability impact to arise from an option, or where there are significant differences in impacts between potential options, the Council has screened the options set in for a detailed appraisal in the main Sustainability Appraisal report. A summary of this screening process is included at the end of each options set table.

Policy options set 007a (draft policy G7): Flood Risk and Flood Risk Assessments

Table 1 - Policy options set 007a: Flood Risk and Flood Risk Assessments

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Reiterate national policy and set out requirements for when an FRA will be required, particularly where there is less certainty within national policy (e.g. extensions). Include expectations for how flood risk ought to be assessed, avoided, managed and mitigated. This will include where flood risk could be impacted off-site.	Applications for extensions are a regular occurrence across the city, including within Flood Zone 3b. Owing to the constraints within the city we are seeking to allow some householder extensions if it can be demonstrated that it will not result in a significant increase in flood risk. This option would set out greater certainty as to what is expected.	Whilst the Local Plan can set out some basic principles that should be applicable to most situations, there is likely to always be an element of site-specific context which will need to be considered and may require deviation from these principles. With more extensions permitted within Flood Zone 3b, there is a risk of cumulative impacts from increased developed footprint over time.
Option b For extensions proposed within Flood Zone 3b – set out some key principles/ requirements that will need to be met to address flood risk before these will be permitted.	This option would make explicit the City Council's expectations for when FRAs are to be submitted, and how flood risk is to be addressed in Oxford. It would ensure that where flood risk is present on a site, this is effectively assessed and then addressed in the most appropriate way through the design of the development. Despite strength of national policy regarding flood risk, it does have some weaknesses/ ambivalence towards certain	National policy is generally strong regarding when FRAs are to be expected and how they ought to be completed. Policy is also strong regarding how flood risk ought to be addressed by new development. This could result in some repetition.

1301

	situations, for example how FRA is to be applied to extensions, and local policy can provide greater certainty regarding our expectations.	
Option c Prevent self-contained basement flats in areas at risk from fluvial flooding.	There is a higher level of risk to life in self-contained basement flats than in basement accommodation more widely when in areas of flood risk. This policy approach would make self-contained basement flats unacceptable in such an area.	Could reduce opportunities for development of sites which are otherwise in accordance with national policy and where risks could be largely addressed through specific mitigation measures. Such development is already prevented by national guidance in Flood Zone 3 and subject to an exemption test in Flood Zone 2, so a specific option would not be considered necessary.
Option d Prevent culverting of open watercourses.	Culverting of open watercourses can introduce additional flood risk in the local area due to potentially throttling water flows during heavy rainfall events as well as risks of blockages during storm events that can exacerbate flooding. It can also have detrimental effects for the quality of the watercourse, removing habitat and harming local species.	Could reduce opportunities for development of sites if the open watercourse cannot be incorporated into the scheme.
Option e Allow only water compatible uses and essential infrastructure in undeveloped Flood Zone 3b. However, allow limited development (e.g. redevelopment of existing structures) on brownfield within Flood Zone 3b, with high standard of	Allowing only water-compatible and essential infrastructure in undeveloped flood zone should not increase flood risk elsewhere or result in unnecessary net loss of functional floodplain.	Where development is proposed on brownfield sites in Flood Zone 3b, it will be essential for proposals to have appropriately assessed risks and be able to demonstrate that new development would not: reduce the water storage capacity of the floodplain; impede flows of

1302

mitigation, where built footprint of a site is not increased and where risk is demonstrably decreased. Apply sequential test for development in other flood zones in accordance with national policy. In any circumstance where proposals would conflict with safe access and egress requirements, they would be refused.	In Oxford there is much existing (and historic) development in areas of flood risk; it is important that those existing properties can be improved/ reused/ redeveloped to make efficient use of land. This approach would provide for careful regeneration of existing development sites but limiting further changes in built footprint should help to ensure no increase in flood risk elsewhere (with potential for improvement). Also, encourages use of brownfield land over developing on greenfield sites and can allow development close to where people already live.	water; create or increase any risks for occupants, or of flooding elsewhere. The policy would need to provide clarity on what constitutes the built footprint of a site and what conditions are acceptable under the policy – e.g. if the footprint remains the same, is it acceptable to be relocated within a site?
Option f Allow only water compatible uses and essential infrastructure in undeveloped Flood Zone 3b. However, allow limited development (e.g. redevelopment of existing structures) on brownfield within Flood Zone 3b, no restriction on built footprint change if risk is demonstrably decreased. Apply sequential test for development in other flood zones in accordance with national policy. In any circumstance where proposals would conflict with safe access and egress requirements, they would be refused.	Greenfield sites are likely to have a role as flood storage, and this option would preserve this function and help to ensure no increased flood risk elsewhere. Exemptions could be possible for specific allocated sites where the required evidence has been gathered at the Local Plan stage to support this.	This policy could restrict opportunities for utilising land for other uses, e.g. to meet the city's housing need, which could come forward designed in a way that is safe from flooding, does not shift flood risk elsewhere, and is in accordance with the NPPF.

1303

Option g Prevent development of greenfield sites within Flood Zone 3a, but with specific exemptions (e.g. for allocated sites).	Same positives as above for option b, except this option allows for a greater use (e.g. densification) of site compared with option a - as long as design of development ensures flood risk is ultimately reduced compared to pre-development.	Where development is proposed on brownfield sites in Flood Zone 3b, it will be essential for proposals to have appropriately assessed risks and be able to demonstrate that new development would not: reduce the water storage capacity of the floodplain; impede flows of water; create or increase any risks for occupants, or of flooding elsewhere. A demonstrable reduction in flood risk alongside an increase in built footprint could be very difficult to achieve in practice.
Option h Do not include a policy about flood risk but rely on national policy instead.	Simply relying on national policy could be easier for developers to understand and work with. National policy on flood risk is fairly developed and well tested and may ultimately be transferred into National DM policies.	Oxford has a unique flooding environment and particular constraints on development in the city. There is a risk that a more generalised approach misses opportunities to address this.

1304

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Option a, or Option a+ combination of all or some of Option b, Option c and Option d, with either Option e or Option f or Option g. Option h is an alternative option to Option a.

High-level screening conclusion? The options are similar to each other from a sustainability perspective. National policy already provides a strong framework for managing flood risk, however the additional options proposed on top of national policy are seen as necessary due to local context.

Screened in for detailed appraisal? No

Rationale:
Options a and h are alternative options. Option a reiterates national policy and provides more detail where there is less certainty within national policy such as for extensions, whereas Option h does not have a policy and just defaults to national policy. Options b, c and d are all additional options which seek to set out key principles to consider for extensions in Flood Zone 3b; to prevent self-contained basement flats in areas at risk from fluvial flooding; and to prevent culverting of open watercourses respectively. Option e would allow limited development on brownfield land within Flood Zone 3b, where the built footprint of the site is not increased and where flood risk is demonstrably decreased and where safe access and egress requirements are mandatory. Option f is similar to Option e, except it would not restrict the size of the built footprint of the development. Option g goes further than either Options e or f as it prevents development of greenfield sites in Flood Zone 3a, but with specific exemptions (e.g. for allocated sites).

1305

In terms of sustainability impacts, **criterion 2. Climate resilience** is the most relevant. Most of the options would score positively against this criterion as they seek to manage flood risk, albeit in different ways, for example, whether it's addressing extensions in Flood Zone 3b (Option b) or preventing culverting of watercourses (Option d), or providing more detail than what is contained in national policy (Option a). The extent of the positive impact of these options will be dependent on the implementation. The only option that would score neutral is Option h as it would proposes no policy and defers to national policy. Some of the policy options would impact **Criterion 3. Efficient use of land**. Options e or f would have a minor positive impact as they both seek to allow limited development on brownfield land within Flood Zone 3b, which minimises the use of greenfield land. Depending on implementation, Option g would score neutral against this criterion, as although it wouldn't allow development on greenfield Flood Zone 3a, this more restrictive option might limit sites that could be allocated for development, where land is already constrained. Option d might even score positively against **Criterion 10. Biodiversity** as not allowing watercourses to be culverted, not only reduces flood risk (water storage) but keeps the water naturalised, potentially allowing preferable conditions for biodiversity to flourish. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Flood Risk and Flood Risk Assessments - Policy G7

For the Local Plan 2045, the preferred approach is a combination of **Options A, B, C, D and E.** This will allow for a targeted policy that responds to various considerations and potential risks arising from the local context of flood risk in the city.

Option A helps to ensure national flood risk requirements are met but also provides more certainty around expectations for FRAs where national guidance is less clear, or where there are particular local issues that applicants need to consider. **Option B** would help to ensure that extensions in particular flood risk zones are informed by FRAs that meet particular requirements. **Option C** would prevent self-contained basement accommodation in areas of flood risk because of the particular vulnerabilities associated with this type of development and the risks for occupants. Meanwhile, **Option D** would prevent culverting which can incur additional flood risk due to constraining water flows during heavy rainfall events, but also have negative impacts for ecology and wildlife that rely on the watercourses.

Option E is considered to be an important response to Oxford's particular circumstances in relation to pre-existing development in flood risk areas. The option allows only water-compatible and essential infrastructure in the undeveloped flood zone, which should mean flood risk is not increased elsewhere or that loss of functional floodplain does not occur unnecessarily. However, the option also recognises that there is sometimes historic development located in areas of flood risk that could benefit from sensitive redevelopment in order to secure more sustainable futures for these sites, whilst also taking opportunities to address existing flood risk there. However, it will be important to ensure that strict requirements are set out in the policy for when this may be acceptable.

1306

Policy options set 007b (draft policy G8): Sustainable Drainage Systems (SuDs)

Table 2 - Policy options set 007b: Sustainable Drainage Systems (SuDs)

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require SuDS on all new developments (including minors), unless this is shown not to be feasible, and include guidance on how they should be implemented.	Greener solutions have multiple benefits – so these can be maximised where green SUDs are prioritised for in the first instance.	Some sites may not be able to accommodate green solutions. Whilst well-designed SuDS can deliver multiple benefits, this should not come at

Incorporate hierarchy style approach to SuDS design, prioritising green SuDS and maximising multi- functionality.	Same benefits as Option b but with more detailed specifications on the type of SuDS to be implemented, with a priority given to green, natural features. Green, multi-functional SuDS can contribute to wider placemaking and have a variety of benefits that extend beyond water management, including improving water quality, reducing urban heat, promoting biodiversity and better placemaking.	the cost of their role as flood risk mitigation where this is required – potentially this could be complicated by seeking to deliver wider multi-functionality particularly where inappropriately designed. Additional management/ maintenance requirements for green SuDS would need to be factored into design and cost of schemes.
Option b Require SuDS on all new developments (including minor household applications), unless this is shown not to be feasible, and include guidance on how they should be implemented.	Some sites might only be able to accommodate limited 'grey' drainage measures (e.g. tanks). This approach would ensure that new development include SuDS wherever possible and set out guidance for how this ought to be designed. SuDS can help to reduce risks of flooding, particularly during times of intense, heavy rainfall by capturing surface water run-off and reducing pressures on sewers. Sets out that SuDS would be required on minor schemes also (which are not addressed in national policy).	Could lead to proliferation of 'grey' SUDs and miss out on benefits that greener solutions for SuDS design – e.g. making use of green infrastructure – can provide. SuDS may be more challenging to deliver on smaller sites where space is limited. Would need to ensure that proposals are accompanied by appropriate infiltration studies.

1307

Option c Do not include a policy about SuDS but rely on national policy instead.	There is a variety of industry guidance about good design for SuDS which could be utilised by developers. Equally the City Council could set out its expectations in the form of supporting guidance/ technical advice note.	Guidance in national policy about SuDS is limited in terms of 'good design' and regarding wider objectives (e.g. water quality), it also only addresses SuDS on major schemes. A local policy could be more explicit in terms of what is expected/ suitable for Oxford, including on minor applications. This option would arguably not address the local context of flood risk in the city and the need for all new development to address it.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Option a, b or c are alternative to each other **High-level screening conclusion?** The options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** Options a, b and c are all alternatives. Option a requires SuDS on all new developments (including minors), prioritising green SuDS and maximising multifunctionality. Option b is similar to Option a except it doesn't prioritise green SuDS or multifunctionality, whilst Option c is not to have a policy and rely on national policy/ guidance instead. In terms of SA impacts the options are most directly relevant to **criterion 2. Climate resilience** and both Options a and b would be a positive impact. Option a will also have minor positive impacts for **criterion 7. Green Infrastructure.** Potentially option b might also positively impact criterion 7 as well but it depends upon implementation, otherwise it would be neutral. Option c is expected to be neutral in impact for these criteria, as there is strengthened national policy guidance however this is lacking the detail that would help to steer the design of these measures to take account of local context. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

1308

Sustainable Drainage Systems (SuDs) - Policy G8

For the Local Plan 2045, the preferred approach is **Option A**, which would mean requiring SuDS on new development and also incorporating a hierarchy style SuDS policy that steers applicants towards prioritising green SuDS measures first, before other 'grey' solutions are selected. This approach would help to ensure that surface drainage is managed appropriately, reducing strain on sewer systems and helping to build in flood resilience into sites.

This approach would also help to ensure multi-functional benefits can be derived from SuDS design by seeking to maximise green infrastructure features that can manage drainage whilst also providing other benefits for people and the environment. It would also complement the greening aspirations of other elements of the Local Plan. An approach of having no local policy, or not prioritising green features could risk missing opportunities for multi-functional features and applicants selecting less optimal drainage solutions for their sites.

1309

Background paper 008

Carbon reduction and climate resilient design

This paper addresses carbon reduction in new development and how the Local Plan will support the city's transition to net zero carbon. The paper also addresses climate resilient design and adapting the built environment to the changing climate of the future.
Relevant Local Plan Objective(s): • Ensure Oxford is ready for a net zero carbon future. • Be resilient and adaptable to climate change and resistant to flood risk and its impacts on people and property.
Relevant SA Objective(s): 1. To achieve the city's ambition to reach net zero carbon emissions by 2040. 2. To build resilience to climate change, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.
SEA theme(s): Climatic Factors, Air

1. Introduction

1.1 The Council has a legal duty, as set out in Section 19(1A) of the Planning and Compulsory Purchase Act 2004, to ensure that the new Local Plan includes policies that, taken as a whole, have been designed to secure action on climate change. This is reflected in national policy, which sets out that the planning system should help to: 'shape places in ways that contribute to radical reductions in greenhouse gas emissions', and that Local Plans should take a proactive approach to mitigating climate change. In recognition of the need to take action on climate change, the Council declared a climate emergency in 2019 and has committed to achieving net zero carbon emissions as a city by 2040.

1.2 Alongside the transport network, the built environment is a primary contributor to Oxford's carbon dioxide emissions, a potent greenhouse gas which is causing global climate change. The power used to heat and operate buildings, as well as the resources used within the construction process, all have a role in these emissions. In order to meet national and local commitments on mitigating climate change, it is essential that new development being built in the city is designed for a net zero carbon future, and that existing development is retrofitted to reduce its carbon footprint. It is also important that new development is designed to be resilient to the impacts of the changing climate – e.g. flood risk and overheating – which could be more common in future.

1.3 This background paper firstly sets out key context in the form of existing policy analysis, current situation in the city and the likely situation without a new Local Plan. It then goes on to discuss the key topics and options for policies that will need to be considered in the preparation of the Local Plan 2042.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National and international context

Climate Change Act 2008

2.1 This legislation sets statutory targets for reducing national carbon dioxide emissions below 1990 levels at intervals up to 2050. The targets set out in the Act have been amended since to reflect updated goals for climate mitigation, such as in response to the Paris Agreement, most recently setting out a target of net zero emissions by the year 2050 (100% reduction in emissions over 1990 levels).

2.2 Under the Act, the government is required to set five-year caps on emissions (known as carbon budgets) twelve years in advance and publish its proposals and policies for meeting these budgets. Most recently, the sixth carbon budget enshrined a target of 78% reduction in carbon emissions for the period from 2033 to 2037, whilst the seventh carbon budget is expected to be set in 2025.

Planning and Compulsory Purchase Act 2004

2.3 Sets out the current structure for the English Local Planning framework and includes, within section 19 (as amended by the Planning Act 2008), the legal duty to ensure that, taken as a whole, planning policies contribute to climate change mitigation and adaptation.

Planning and Energy Act 2008

2.4 The Planning and Energy Act (2008) makes provision within Section 1 for a local planning authority to include policies within its development plan that require development in their area to comply with energy efficiency standards that exceed the energy requirements of building regulations, provided these policies are reasonable, not inconsistent with national policies, and compliant with usual provisions around plan making as set out in section 19 of the Planning and Compulsory Purchase Act 2004.

National Planning Policy Framework (NPPF)

2.5 Chapter 14 of the NPPF sets out the government's requirements for how the planning system should address the challenge of climate change, particularly paragraphs 161 to 169. For the first time, the updated wording in para 161 that opens the chapter now explicitly references the transition to net zero by 2050, stating that: The planning system should support the transition to net zero by 2050 and take full account of all climate impacts including overheating, water scarcity, storm and flood risks and coastal change. It goes on to flag the need for shaping places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, and conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure.

2.6 Para 162 sets out that plans should take a proactive approach to mitigating and adapting to climate change, footnote 53 clarifies that this should be in line with the objectives and provisions of the Climate Change Act 2008, which legislates for net zero carbon emissions by 2050. Para 164 (b) discusses the need for planning development in ways that help reduce greenhouse gas emissions, such as through its location, orientation and design.

2.7 Paras 165 flags the importance of securing energy from renewable sources and the role of plans in helping to enable this. In particular, it sets out the need for providing a positive strategy for energy from these sources; considering identifying suitable areas for renewable and low carbon energy and supporting infrastructure; and identifying opportunities for development to draw energy from such sources. Para 167 also highlights that significant weight should be given to the need to support energy efficiency and low carbon heating improvements to existing buildings.

National Planning Practice Guidance (PPG) including National Design Guide/Model Design Code

2.8 National guidance supporting planning policy is set out on the Planning Practice Guidance climate change webpage, although much of this now dates back to 2019 or earlier (with some sections dating to 2015). Whilst some of the guidance, including key legislation planners should take into account and general advice on climate change mitigation measures that could be applied through planning process are still of relevance, other sections appear to have been overtaken by recent policy developments (such as guidance around the 2015 Ministerial Statement as discussed below).

2.9 The National Design Guide (2019) which now forms part of the PPG includes guidance on what government considers to be 'good design' and breaks design down into 10 key topics. There is a section on "Resources" which sets out that "well-designed places and buildings follow the energy hierarchy" as well as containing some other general design guidance which can help local authorities with preparing more locally specific design guidelines.

Written Ministerial Statements on Plan Making (2015 and 2023)

2.10 There are two WMSs that have been published since the above legislation which have some relevance to the topic of energy and carbon, but also serve to confuse policy and local authorities' powers.

- The first, published in 2015, set out the expectation that local authorities should not set energy efficiency standards with requirements above the equivalent to level 4 within the withdrawn Code for Sustainable Homes. It should be noted that an update to Building Regulations during that same year meant that they had already superseded the old Code for Sustainable Homes standard.
- The more recent WMS, published in December 2023, indicates that Local Authorities cannot set their own targets based on actual energy use in buildings and dissuades them from going beyond national standards. It sets out that "*Any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned building regulations should be rejected at examination if they do not have a well-reasoned and robustly costed rational...*" Where policies are proposed that do go beyond national standards, the WMS sets out that these should be supported by viability evidence that shows development would remain viable, with a focus on housing affordability and supply. It also states that such policies should be expressed as a percentage uplift of a dwelling's Target Emission Rate (TER) calculated using the Standard Assessment Procedure (SAP) of Building Regulations.

Regional and local context

Oxford's climate emergency declaration and the Zero Carbon Oxfordshire Partnership (ZCOP)

2.11 In January 2019, Oxford City Council members unanimously declared a climate emergency and agreed to create a citizens assembly in Oxford to help consider new carbon targets and additional measures to reduce emissions. This was followed in February 2021, by signing the Zero Carbon Oxford Charter, and the creation of a new Zero Carbon Oxford Partnership (ZCOP) for the city along with the setting of a local target of achieving net zero carbon emissions as a city by 2040 (ten years ahead of the UK net zero carbon target). The partnership is currently in the process of expanding to incorporate the rest of the county and will be known as the Zero Carbon Oxfordshire Partnership.

2.12 The ZCOP has previously developed a Roadmap and Action Plan (published 2021) for the city which identifies the primary sources of carbon emissions in city at present and the key milestones that are needed in relation to decarbonising different aspects of life in Oxford in order to meet the net zero target of 2040. The roadmap highlights the large-scale changes and the challenging nature of the transition to full decarbonisation which is needed across various sectors, such as expansive retro-fit of existing buildings to decarbonise heating and increase fabric efficiencies, large amount of micro-renewable installation on rooftops to increase clean energy generation as well as ongoing increases in EV charging infrastructure to support decarbonisation of transport.

Oxford Local Plan 2036

2.13 Policy RE1: Sustainable design and construction sets out the Council's expectations regarding carbon emissions in new development. The policy requires new development to achieve reductions in carbon emitted beyond those set out in national Building Regulations. The targets are increased at intervals throughout the plan period, beginning at 40% reduction, before moving to 50% by 31 March 2026, and then zero carbon after 2030 (for residential development).

2.14 Other policies in the adopted Local Plan that have a role in contributing to reductions in carbon emissions in the city, include:

- Policies that encourage and enable sustainable/active travel and the transition to electric vehicles (policies M1 to M5),
- Policies relating to protecting and enhancing Oxford's green and blue infrastructure network (policies G1 to G8).

Other relevant plans/programmes/strategies

Future Homes/Buildings Standard – Building Regulations reforms

2.15 Outside of the planning system, a review of national Building Regulations has also been ongoing with staged plans to implement the Future Homes Standard (dealing with residential development) and Future Buildings Standards (non-residential development). These reforms to the technical requirements within Building Regulations are intended to deliver higher standards of energy efficiency and carbon reduction across all new buildings through Building Control process. The first stage of these reforms came into

effect in 2022 and was presented as an interim uplift to Building Regulations that would result in homes producing 31% less CO2 emissions compared to current standards. It also included updates to other technical standards such as on ventilation, the performance gap, overheating and EV charging.

2.16 Further changes, expected in 2025, will result in new homes producing at least 75% lower CO2 emissions than those built to previous Building Regulations standards, as well as being 'zero carbon ready'. This means that, even if the new buildings are still emitting some emissions, these should reduce to zero over time (e.g. with the continued decarbonising of the energy supply sourced from the national grid as fossil fuels are phased out of the system). The reforms only affect the performance standards of buildings that are addressed by Building Control (e.g. regulated energy systems), meaning the current proposals would not deliver full net zero development, nor address embodied carbon/energy.

Oxfordshire Climate Vulnerability Assessment (2024)

2.17 The County Council have produced a climate risk vulnerability assessment for the county which identifies how climate change could impact various sectors within Oxfordshire. The assessment identifies the city as being an area with increased climate risk to hazards such as overheating and flooding, both now and in the future.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

Primary sources of greenhouse gas emissions in the city

3.1 Analysis of the greenhouse gas emissions that are generated across the city is challenging with varying estimates depending upon the methodology and data sources used. The Department for Energy Security and Net Zero (formerly BEIS) publish statistics on per capita emissions yearly and these show an overall trend of reducing per capita emissions for Oxford since 2005, as can be seen in Figure 3.1.

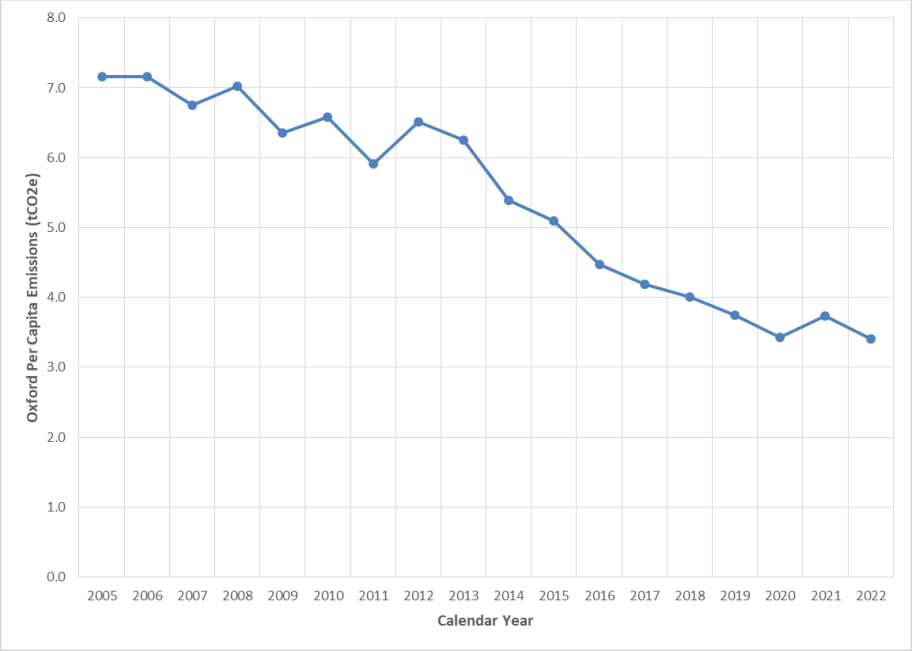

Figure 3.1 - Per capita emissions of carbon dioxide (tCO2 equivalent) for Oxford according to Local Authority Greenhouse Gas Emissions statistics (2005-2022) Sourced from the Department for Energy Security and Net Zero statistical release (June, 2024)

3.2 The underlying summary accompanying the statistics above highlights that the national pattern in declining emissions, which the city's own performance tracks with, has largely been due to reductions in emissions from power stations and industrial combustion. The reduction from power stations is driven by change in the fuel mix used for electricity generation with a large reduction in the amount of coal, which is a carbon intensive fuel, and increasing use of renewables. A small increase in emissions was noted in 2021 for the majority of Local Authorities, including Oxford, due to COVID-19 restrictions easing and colder temperatures in that year increasing the use of heating in buildings. For the most recent statistical release (2022), per capita emissions for the city had decreased in line with much of the rest of the country. The national decrease in emissions associated with 2022 was attributed largely to milder weather reducing heating demands and potentially the impact of higher energy prices.

3.3 The Zero Carbon Oxford Partnership's Roadmap and Action Plan (2021) identified the key sources of emissions in Oxford as part of its work in defining a roadmap to net zero by 2040. This was an assessment of all greenhouse gas emissions across the city (not just carbon, as is highlighted in the government data above) and drew upon data from both BEIS and from the SCATTER cities tool as well as local sources, to produce a sector-by-sector breakdown of emissions in the city. Whilst the baseline data informing the analysis is now a few years old (2018 was the baseline year), the sector-by-sector profile as shown in Figure 3.2 clearly highlights the major impact of the built environment on emissions, with buildings being the primary source of emissions resulting from the city, and this is not

considered likely to have changed in the intervening period. Transport was the second largest contributor though this is a much smaller proportion of emissions as a whole.

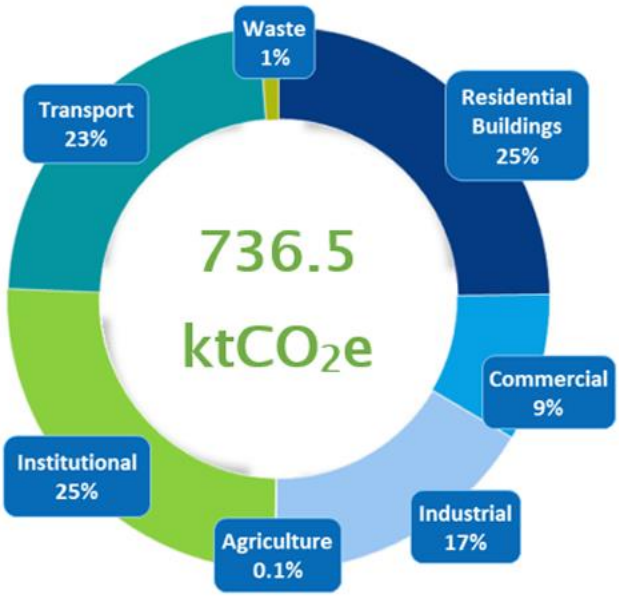

Figure 3.2 - Sector-by-sector greenhouse gas emissions in Oxford (2018 baseline year as used in the Zero Carbon Oxford Partnership Action Plan)

Carbon emissions associated with buildings in operation

3.4 As the ZCOP work notes, the primary reason for the major contribution buildings are making to Oxford's carbon footprint is the use of fossil fuels for heating. However, other sources within buildings include gas used for cooking, as well as emissions associated with electricity use (where this is not sourced from renewables). The majority of the emissions associated with buildings are from buildings that are already in existence. This flags a significant need for retro-fitting to happen alongside ensuring that new development does not exacerbate the problem.

3.5 The Building Regulations reforms embodied through the Future Homes and Future Buildings Standards (as discussed in section 2) should help to ensure new buildings make a much smaller contribution to this existing carbon footprint. Until grid energy is decarbonised, however, where these buildings rely on power from the national grid for their operation then there will still be some associated emissions from them without applying further standards via local policy.

Embodied carbon emissions during construction

3.6 The carbon associated with buildings in operation is not the only source of emissions that need to be addressed as the city moves towards net zero carbon by 2040. There is an embodied carbon cost of the materials used in the built environment in the construction,

maintenance, redevelopment and demolition processes. Carbon dioxide can be emitted in various ways as part of the processes but equally, carbon can be sequestered through careful design choices (e.g. use of natural materials like wood). As operational energy becomes zero carbon, the embodied carbon cost of new development will become the primary source of emissions that needs to be addressed and this will be a growing area of focus in future years.

3.7 Addressing the issue of embodied carbon is closely tied with the concept of a circular economy (Figure 3.3). The Low Energy Transformation Initiative (LETI), in its Embodied Carbon Primer, define the circular economy as a system that is 'restorative or regenerative by intention and design'. In this regard, products, buildings and systems are designed in a way that considers not only how these can be repaired and reused easily, but also how the energy and materials used to construct them can be remanufactured and recycled at the end of their life. This approach enables reductions in the raw materials we extract from the environment over time, our energy demands and the impacts we have upon the wider environment, and by extension, carbon emissions associated with the construction process.

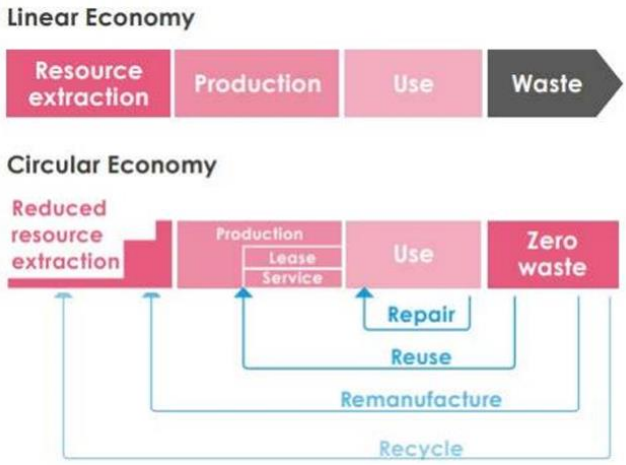

Figure 3.3 - The stages of a linear economy versus a circular economy (source: LETI Embodied Carbon Primer)

3.8 But embodied carbon is an even more challenging and complex aspect of net zero carbon design to address than operational carbon. There is much ongoing research and emerging guidance with varying levels of understanding at present in relation to the different stages of a building's life cycle. As UKGBC note, most of these embodied emissions occur early during the construction stage and this is typically the focus at present. Perhaps reflecting the emerging nature of this topic, it is not currently addressed through a consistent set of national standards, though this is something that has been repeatedly called for through an amendment to Building Regulations as highlighted in this recent House of Commons Committee report.

3.9 The emerging nature of our understanding of the topic and how to effectively address it makes formulating policy challenging, particularly because there are many difficult

questions that the development management process must grapple with when considering embodied carbon and how it is balanced with other place-making objectives, and there are not always definitive answers. For example:

- Is it more sustainable to retain an energy inefficient building or demolish to provide a highly energy efficient replacement?
- How should we balance out the benefits of long-life materials that may have a high carbon cost to produce, as opposed to shorter lived materials which will need replacement more quickly but have a low carbon cost to produce?
- How do we balance out issues of carbon reduction alongside other important choices in delivering high-quality design that contributes to making the places we wish to see in Oxford?

Energy supply and grid capacity

3.10 Across the UK, there are national trends in new sustainable technologies which are of increasing popularity and that also form important context to the new Local Plan policies. The uptake in electric vehicles has been growing, leading to increased demand for EV charging infrastructure. Equally, we are seeing increasing uptake in electric solutions for heating our properties instead of fossil fuel burning boilers, such as Air Source Heat Pumps. The uptake in these technologies is likely to continue and most likely speed up and will result in increasing demands for electricity and increased pressure on the national and local energy grid infrastructure.

3.11 The Oxfordshire Energy Strategy (2018) and associated delivery plan (2019), supported by the Stage 1 work of the Oxfordshire Infrastructure Strategy (OXIS) commissioned by the Oxfordshire local authorities, previously identified that the electricity grid across the county is already constrained. The OXIS work concluded that annual electricity consumption across the county to 2040 is expected to increase due to three reasons: continued increase in the number of domestic and non-domestic buildings; the transition to electric vehicles; and the decarbonisation of heat. These factors will not only increase annual consumption but will also increase peak demand and will necessitate ongoing work by the Distribution Network Operators to meet future demands through upgrades and reinforcing of the grid so that constraints can be reduced and additional generation capacity (e.g. solar PV) incorporated. Whilst this work is some years old now, the high-level messages about future needs are unlikely to have changed, though there is emerging work such as Local Area Energy Planning across the County and an updated OXIS emerging which may update this picture in due course.

3.12 Looking beyond Oxford, the current Government has recently published an action plan for meeting a target of securing a clean power grid by 2030 (in advance of the previous 2035 commitment) as it seeks to ensure that the majority of the country's energy demand is generated by clean, renewable sources, backed up with gas only during generation shortfalls. National decarbonisation actions to date have already supported reducing per capita emissions in the city, which is likely to continue, however, it seems reasonable to hold a 2030 or 2035 net zero target with some caution. Recent assessments have

highlighted that the pace and lack of investment to date has put targets for decarbonisation of grid in doubt, for example, the Climate Change Committee flagged multiple uncertainties based on lack of strategy and direction for rollout of renewable energy generation. In their most recent 2024 report to parliament, they continue to note that pace of delivery in rollout of renewable energy capacity needs to increase radically if net zero targets are to be achieved. A new 2030 clean power target suggests this required increase in pace is even more pressing.

Fuel poverty

3.13 The Oxfordshire Joint Strategic Needs Assessment (JSNA) defines a household as being in fuel poverty if:

- they have a fuel poverty energy efficiency rating (FPEER) of band D or below; and
- if they are to spend their modelled energy costs, they would be left with a residual income below the official poverty line.

3.14 Three factors therefore affect fuel poverty: household income, fuel prices and household energy consumption. Buildings that demand a lot of energy to heat and run, combined with high energy prices (e.g. as has been seen subsequent to global instability in face of crisis like war in Ukraine and covid recovery), and pressures on household incomes can serve individually and cumulatively to exacerbate fuel poverty.

3.15 The Oxfordshire JSNA identifies that Oxford City is significantly worse than the Oxfordshire or regional averages on fuel poverty, whilst the other Oxfordshire districts are each significantly better than average (Figure 4). The 2024 update, which reports on 2021 and 2022, indicates that fuel poverty worsened across the county including in Oxford with its score increasing from 10% to 11.2% (+1.2%). The picture of fuel poverty within the city is unequal; there are twelve areas in the city with more than 10% of their households in fuel poverty, with the highest proportion (East Central Oxford) and lowest in (North Central Oxford) (Figure 3.4).

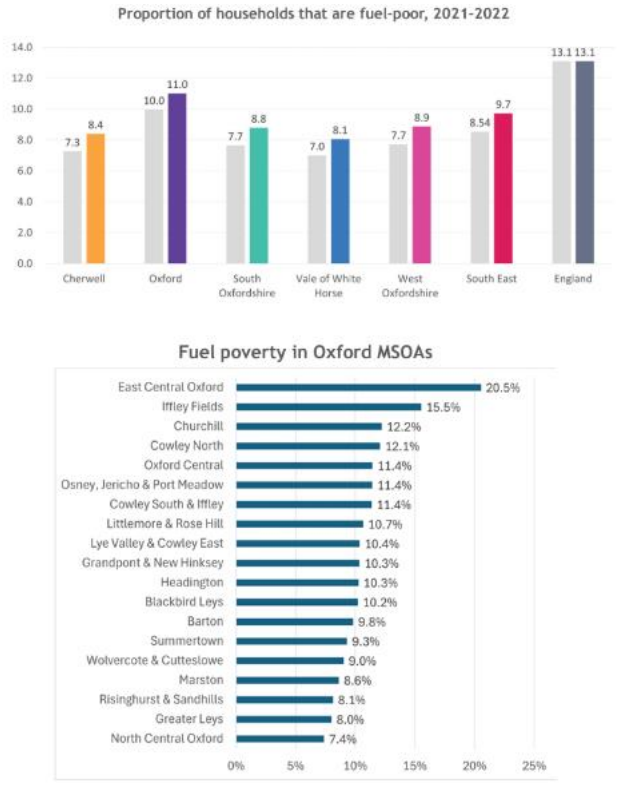

Figure 3.4 - Percentage of households in fuel poverty across Oxfordshire in 2021 and 2022 (top) alongside a breakdown of fuel poverty across different parts of Oxford in 2022 (bottom) (source: Joint Strategic Needs Assessment 2024)

Climate change risk and the need for adaptation

3.16 The impacts of greenhouse gas emissions such as carbon dioxide are in exacerbating the global problem of climate change, however, even if emissions were to be cut to zero today, the climate would continue to change because emissions in the atmosphere will persist for some time. The risks from climate change such as milder, wetter winters; coupled with increasing periods of intense and prolonged rainfall; as well as hotter, drier summers, will impact everyone in Oxford, but could be especially pronounced for more deprived communities and those living in poor health (as is discussed further in the health and wellbeing background paper).

3.17 Oxford has various characteristics that lead to climate change risks. A significant amount of land is exposed to flood risk from the two rivers, and other water courses running through the city. Despite areas of abundant green space, other areas are intensely urbanised and lacking in any green features, reflecting the constrained nature of parts of the city which brings additional challenges. For example, water runs off these artificial surfaces easier and there is less storage available in the form of green features and soils which can exacerbate flood risk (e.g. surface water flooding or overwhelming drainage systems). Also, the lack of green features exposes the city to additional overheating risk and the urban heat island effect as artificial surfaces absorb and reradiate heat, shading is reduced and the natural cooling effects of vegetation are reduced.

3.18 Recent research by the Oxfordshire County Council as part of their County-wide Climate Vulnerability Assessment 2024 identifies Oxford as having some of the most at risk areas in the county for future climate change in respect of flooding and heat waves. The assessment highlights that confirmed that current heat wave risk is concentrated in the most urban parts of the county and is only exacerbated in future according to different projections for 2050. Eight of the ten wards in Oxfordshire with the highest current heatwave risk are located in the Oxford City (Barton and Sandhills, Blackbird Leys, Cutteslowe and Sunnymeade, Carfax and Jericho, Holywell, Littlemore, Northfield Brook and Walton Manor), including some in higher deprivation areas.

3.19 The picture is similar for flooding, with the county work identifying a number of wards in the city as being in the top ten with highest flooding risk at present (Blackbird Leys, Holywell, Hinksey Park, Littlemore, Marston and Northfield Brook). The subject of current and future flood risk is explored further in the Flood risk background paper and will be an important factor in the updated Strategic Flood Risk Assessment.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 In the absence of a new local plan, the existing Oxford Local Plan 2036 policies would continue to apply. Policy RE1: Sustainable design and construction, sets out the carbon reduction requirements that proposals for new-build residential developments and new-build non-residential developments of 1000m2 or more need to demonstrate through submission of an energy statement. At time of writing, this requirement is a 40% reduction over the current Building Regulations baseline.

4.2 However, Policy RE1's requirements are not fixed over time, instead, they step up and require an increase in carbon reductions against the current Building Regulations baseline in 2026 and 2030 for residential developments, and 2026 for non-residential developments. The policy ultimately requires Zero Carbon homes from 2030, although this requirement does not apply to new build non-residential developments and as such the requirement for those types of development the expectation would remain at a 50% reduction from 2026 onwards.

4.3 Policy RE1 applies only to regulated carbon emissions, excluding those unregulated emissions from any policy requirements. Meanwhile, the policy is also very limited in setting requirements in relation to actions that can reduce embodied carbon emissions within the construction process. Additionally, the Local Plan has minimal control over existing buildings and cannot force through owners to undertake retro-fit works, which will leave the existing retro-fit challenge to be addressed in other ways.

4.4 Beyond the plan period (past 2036), in the absence of a new local plan, the policies for planning in national planning policy as set out in the NPPF would take on increasing prominence. Whilst recent updates to the NPPF highlight the role of planning in supporting transition to net zero carbon, there is no specific requirement for net zero carbon development despite the national legislated target of being a net zero carbon country by 2050.

4.5 Of course, if the proposals are progressed as previously consulted on, then national standards set through Buildings Regulations are expected to become tighter in future with the introduction of the full Future Homes and Future Buildings Standards. This will support further reductions in some emissions associated with new development. As touched upon earlier in this paper, these proposed updates however do not currently address the full operational energy demands of buildings, ignoring unregulated energy loads not controlled through Building Regulations and associated with up to 50% of energy demand in a new building. They also do not address embodied carbon/energy. As these elements are also not touched by Local Plan 2036, the emissions associated with them would remain unaddressed without a new Local Plan.

4.6 Nationally, we are likely to see continued drop in emissions related to grid electricity used in development in line with the government's clean power target of 2030, which is ahead of previous 2035 net zero grid commitments. However, the national scale rollout of renewable energy generating technology needed to support a net zero grid has, to date, suffered from lack of strategy and investment at the required pace to achieve such targets.

4.7 In the short term at least, without additional mitigation measures in place to address emissions from new development via a new Local Plan, then any additional growth can be expected to result in an increase in emissions.

4.8 In relation to climate change risk. The impacts of climate change are likely to continue to be felt, even with radical reductions in greenhouse gas emissions, but could become more severe if trends in emissions do not reduce. The Oxfordshire Climate Vulnerability Assessment 2024 indicates that six of the city's wards which were discussed in the last section remain in the top ten at risk from overheating for 2050 projections (Littlemore and Walton Manor are replaced by other wards in the county) and five remain in the top ten for flooding (Holywell and Hinksey Park are replaced by other wards in the county).

5. Key issues addressed through the Local Plan

Introduction

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to carbon reduction and achieving net zero carbon objectives. Under each of these topics, there were various options for policy

approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Ensuring new development is net zero carbon in operation

5.3 The Local Plan's influence over carbon reduction is primarily about making sure new development does not add to the challenge of decarbonisation in the city, either by emitting additional emissions or by introducing costly retrofitting burdens for future occupiers. In the absence of net zero carbon standards in national policy, including current or future Building Regulations, this means that the new Local Plan needs to ensure that new development is net zero carbon.

5.4 At its simplest, net zero carbon design essentially means ensuring that new buildings do not contribute net additional emissions into the atmosphere whilst in use. Most directly, emissions from buildings comes from the burning of fossil fuels for heating (e.g. within boilers), as well as for cooking. Indirectly, emissions are also associated with fossil fuels used to power the energy grid. A growing consensus has developed around several metrics which relate to energy use in net zero carbon buildings in operation which have guided the formulation of policy R1:

- **A maximum energy allowance for total Energy Use Intensity (EUI)** – Encouraging energy efficient design by limiting the overall annual energy use needed to operate the building. Also important for addressing challenge of rising energy costs and fuel poverty by reducing energy costs for occupants. Targets for total EUI vary depending on type of development.
- **A maximum energy allowance for space heating** – having a specific limit on energy used for heating - driving a focus on thermal efficiency (in line with a fabric first approach). Choice of heating technology will influence overall energy demands (some systems are more efficient than others) - and can also address cooling needs.
- **Requiring enough on-site energy generating capacity to match total EUI** – to be net zero carbon in operation energy demands need to be met renewably and ideally through on-site energy generation which matches the development's total EUI. Encouraging greater decentralised energy production through more onsite renewables (especially if coupled with energy storage) also reduces strain on the wider energy grid and increases energy security.

5.5 Additionally, whilst recent (and further planned) tightening of Building Regulations will make direct burning of fossil fuels for energy in new buildings more challenging in future, Policy R1 specifically sets out that these systems will not be permitted. This will have benefits not only for avoiding direct carbon dioxide emissions, but also avoiding costly future retrofits for occupants, as well as for local air quality.

Addressing energy efficiency and setting energy use targets

5.6 With direct fossil fuel burning omitted from new buildings, the focus of design then needs to be on energy efficiency. Policy R1 requires that design of development is led by the principles of the energy hierarchy which helps to ensure buildings are as efficient as possible. These principles can be applied to various scales of development, from a simple extension up to a multi-building development and seek to guide energy efficient design through several different levels of action, which the National Design Guide summarises in the following way:

1. Reduce energy need (be lean) – through passive design measures
2. Be efficient in energy use (be clean) – use energy efficient systems such as heat networks for lighting, heating/cooling, operation etc.
3. Source energy from renewables (be green) – source remaining energy needs from renewable technologies, including decentralised sources.

5.7 The policy sets targets for total operational energy used in the building via an Energy Use Intensity (EUI) target, which is the total energy used by the development in a year as measured at the meter divided by the gross internal area (m2). The use of EUI as the key performance metric accommodates for both regulated and unregulated energy sources to that comprise all operational energy uses in the building. The EUI calculation also allows for easier verification of real world performance of the building as built and can better represent how the building will perform in terms of energy use.

5.8 Additionally, alongside the total energy use/EUI target, the policy also sets a target for the energy associated with space heating. This is because the primary source of energy use in our buildings is the energy used for heating (and cooling) and it is important to ensure that the overall energy balance of the building is not overly dedicated to space heating alone. A space heating target helps to promote a 'fabric-first' approach to design and encourage more efficiently designed buildings that take less energy to heat (and cool).

5.9 These targets help to reinforce the first couple of steps in the energy hierarchy by promoting reductions in energy use through careful design choices. Additionally, the requirements will have other important benefits. For example, buildings with an inefficient layout or poor fabric efficiency, take more energy to keep comfortably warm (or cool), which is a particular issue when coupled with high energy prices which can increase risk of fuel poverty.

5.10 When coupled with other design features, they can also help to reduce the risks of overheating by maintaining a comfortable temperature indoors all year round (reducing heat infiltration during summer). Equally, in the context of the known constraints on existing electricity infrastructure, more efficient design helps to reduce additional energy demand being imposed by new development and the carbon emissions associated with grid electricity whilst power plants still rely on some level of fossil fuels.

5.11 The policy includes specific energy targets for EUI and space heating. In setting the specific targets for the total energy demand/EUI and space heating requirements, the Council has considered a range of sources. This includes recommendations from national industry best

practice such as produced for the UK Net Zero Carbon Standard, the Low Energy Transformation Initiative (LETI), the Committee on Climate Change, and others. It also includes a review of technical feasibility studies produced to inform similar adopted or emerging Local Plan from other local authorities (as summarised in the separate Net Zero Carbon Technical Feasibility literature review), as well as previous engagement responses on the development of the Local Plan (and the withdrawn Local Plan 2040).

5.12 In particular, the various sources above identify that whilst residential developments tend to be more standardised in energy performance, non-residential development typically have more variety and generally higher energy demands which can only be reduced so far. There are also particular challenges for high energy demand uses, such as those associated with some types of healthcare, as well as research (e.g. labs). This has led to Policy R1 including varying EUI targets for residential and non-residential uses, as well as an additional allowance for high energy demand uses to justify exceeding targets where necessary through their application (having made every effort to ensure other elements of the policy are met).

Requirements for renewable energy generation on new development

5.13 The other factor intrinsic to net zero carbon design is ensuring that the energy needs which cannot be designed out through efficient design are being met through clean, renewable sources wherever possible (step 3 in the energy hierarchy). Policy R1 therefore sets out that the overall EUI figure for the development needs to be met with sufficient renewable energy generation which should ideally be installed onsite. Keeping operational energy demands as lean as possible by meeting the minimum targets referenced earlier helps to reduce the amount of onsite renewables needed.

5.14 It is acknowledged that some types of development will struggle to match total energy demand through installation of sufficient onsite renewables. This is particularly the case for high energy demand uses, as well as constrained sites with limited roof space (e.g. for rooftop solar PV). The policy allows for different ways to overcome this challenge, including installing renewables offsite on land elsewhere that is within control of the applicant. Equally, there is an allowance for making a contribution into the Council's energy offsetting fund (discussed further below), which would utilise financial contributions from the applicant to pay for installation of an appropriate amount of renewables, or potentially other energy saving retrofit measures, elsewhere in the city.

Additional considerations which have informed the approach to net zero carbon

5.15 Whilst policy R1 has a number of prescriptive targets which relate to the performance of the building as outlined above, it is also important to highlight that the approach continues the existing LP2036 one of being technology agnostic. In practice, this means that flexibility is retained for applicants to justify the most appropriate technologies for their site in order to attain the targets and the policy is future-proofed where new technologies arise in future.

5.16 In relation to heating/cooling, often air source heat pumps are likely to be most effective, particularly as these systems are much more efficient than other systems like direct electric heating. However, the policy also encourages applicants to consider connection into heat

networks where this could offer a more sustainable option. The policy also supports the development of new energy centres and heat networks in recognition of the role these can play in supporting decarbonising of the city's energy systems.

5.17 The policy includes minimum energy performance targets which should be feasible for most development and that are comparable to best practice for net zero carbon development today. However, the Council acknowledges that there are likely to be challenges for some types of development, and where difficulties arise, the policy seeks to set out a clear and consistent approach to how these challenges should be dealt with through the planning process. In summary, this includes:

1. An allowance for non-residential uses with exceptionally high energy demands to align with a higher Energy Use Intensity target where it can be robustly justified, including the measures taken to limit this.
2. An allowance for offsetting as a last resort where the particular challenge of providing enough onsite renewables to meet total EUI cannot be fully met.
3. Where any other individual performance target cannot be met due to specific constraints of an application, the policy requires the proposal to demonstrate net zero carbon overall (in no circumstances will direct fossil fuel burning be a permitted solution to meeting needs). It also sets out a clear set of steps that an applicant should follow to meet the overall spirit of the policy.

Energy offsetting mechanism

5.18 Whilst the full process for the energy offsetting mechanism, including full offsetting costs, will be outlined in the Energy and Carbon Technical Advice Note, an indicative process and approach to pricing offset contributions is outlined below:

1. Applicants work through the policy criteria and clearly set out in their Energy and Carbon Statement how they have met this criteria.
2. Where any criteria cannot be met, applicants should set out robust justification for why the proposal is unable to meet the requirements. Justification should only relate to technical feasibility (e.g. site/design constraints).
3. The Energy and Carbon Statement should set out the total energy demand that needs to be offset because it is unable to be met through onsite renewable energy generating installations provided by the applicant. This would be devised by working out the total operational energy demand of the development per year, compared with the average annual renewable energy generation that can be achieved through installed renewables. The deficit in demand that cannot be met by renewables will be what is to be met through offsetting.
4. An S106/developer contribution will be agreed with the applicant as part of the planning application. The cost will cover the provision of an equivalent amount of renewable energy generation (or energy saving) elsewhere to match deficit onsite.

5.19 Policy R1 is focused on ensuring energy efficient development, meaning buildings designed to specified total energy use and space heating targets, as well as ensuring that all

energy needs are then met through sufficient renewable energy generation. Offsetting is only to be relied upon where a development is unable to meet its full energy needs through onsite generation, as such, the offsetting funds are envisaged to be utilised to support alternative energy generation schemes (or potentially to reduce energy demands in existing buildings) elsewhere in the city. The most practical way of delivering the offsetting requirement is likely to be the installation of rooftop solar elsewhere in the city, as such it is envisaged that the standard offset pricing is linked to the cost of providing comparable solar pv.

5.20 The energy offset fee is envisaged to be based upon the average cost for installing equivalent solar pv (per kwh) according to the regularly published national costs figures from the government. This would provide for a standard and transparent costing, which could be kept updated as the average cost changes over the lifetime of the plan. Administrative costs (e.g. 10% the offsetting fee) would be incorporated on top of the average solar pv installation cost as part of the overall offsetting payment. This would account for the Council's time and resource in establishing the offset fund as well as identifying, developing and managing appropriate offset projects.

5.21 It is envisaged that the pricing of these contributions would be published clearly on the Council website as part of the TAN, or separately, and updated regularly in line with the changing national cost of installing comparable renewables.

Addressing embodied carbon in the construction process

5.22 Despite the challenges identified earlier in this paper with addressing embodied carbon in the construction process, the Local Plan's Policy R2 is aimed at reducing embodied carbon through careful design choices. The policy sets out that all new development should demonstrate how the design process has considered embodied carbon emitted during the construction stage via their Energy and Carbon statement and includes a set of principles which are intended to be used as a framework guiding applicants in how to do this. The principles have been formulated to tackle the key drivers of carbon emissions (mainly at the construction phase) though not all will be relevant for every application and will depend on the context of the site and the type of proposal.

5.23 On larger scale development, the policy also requires completion and submission of Whole Life Cycle Carbon Assessment (WLCCA) demonstrating how embodied carbon has been quantified and reduced through the design process. Whole life/lifecycle carbon assessment is a process which details the predicted carbon emissions associated with each stage of a building's lifecycle, although the policy is focussed on upfront emissions related to construction specifically as these are most within the control of the applicant and design process.

5.24 Whilst the requirement for WLCCA is focussed on the largest developments, as these are likely to have the most significant carbon impacts, smaller scale development may still find WLCCA to be a useful way of evidencing how they have followed the other elements of the policy – but it is not a requirement.

5.25 Unlike Policy R1, Policy R2 does not set specific targets for reduction in emissions. The framing of the individual requirements set out above are, however, considered to be a pragmatic

step forward driving development in Oxford to start seriously thinking about issues of embodied carbon alongside designing to net zero carbon in operation from adoption of the Local Plan. In this way, the policy is intended as a stepping stone which lays a foundation for more rigorous requirements in future iterations of the Local Plan that can be further developed as industry knowledge on the subject and best practice matures (and if national policy continues to fail to take action). The approach also allows for a degree of flexibility on an application-by application basis where the balance between embodied carbon savings and other important placemaking issues which could ultimately result in a more sustainable development cannot be resolved easily.

5.26 The intention is to expand on the guidance for addressing principles as part of a supporting Technical Advice Note to accompany the policy, this will also allow the Council to signpost various independent guidance and best practice and keep this list updated as new references become available.

Supporting the retrofit of existing buildings

5.27 Beyond new development, there is a significant need for retrofitting existing buildings to meet net zero carbon goals, as well as to deliver climate adaptation. Many retrofitting measures, including installation of renewable energy generation technologies like solar panels, are classed as permitted development under the General Permitted Development Order (GDPO). This means that planning permission would not usually be required for such works – unless the buildings are listed or within a conservation area or if the works are more extensive than what is covered by the GPDO.

5.28 As these buildings have already gone through the planning process, the Local Plan has limited influence over them, except for where they come forward for planning permission associated with redevelopment in future. The Local Plan seeks to set out a clear signpost of support through Policy R3 for applications which involve retrofitting that would require permission.

5.29 Oxford has a high preponderance of older and historic buildings and many of these buildings will also require retrofitting in future, however, their particular qualities require additional consideration which policy R3 also makes clear. For example:

- Some types of retrofit that would be commonplace for most buildings, such as fabric efficiencies and improved air tightness, can be inappropriate for older buildings which rely on passive ventilation to control issues like moisture build up. Applying such measures to historic buildings can lead to problems of damp build up that can impact health of occupants and the building.
- Additionally, the Council also has a statutory duty towards protecting the historic environment which the Local Plan must also balance. In the case of designated assets, some solutions may not always be suitable, or will need to be carefully designed, especially where they might cause conflict or cause harm to the special features for which a building is protected.

5.30 The difficulty is that every historic building is different, and solutions that may be acceptable in some cases will be much more harmful in others. This variation in harm occurs even at the building scale, with certain facades being more sensitive than others. Policy R3 reinforces the position that the Council will recognise the public benefit of retrofit measures, however, in every case this will need to be balanced out against potential for harm. This is an important caveat which reflects our responsibility towards preserving Oxford's unique heritage and ensuring change is managed in the right way for these features. To aid applicants, the policy includes some general principles which proposals should demonstrate have been addressed in the design rationale for any intervention to aid in securing the most successful application.

5.31 A key aspect of the policy is the explicit reference to the need for taking a **Whole Building Approach** to retrofitting traditional buildings (including designated buildings). This is a way of ensuring that alterations to buildings are informed by a careful and methodical understanding of the context of the asset, its surroundings, and how it performs so that the correct interventions are selected for the sustainability of the structure and the health of occupants. This is particularly important for avoiding harm to valuable heritage features, but also for ensuring that improper retrofit measures that might cause harm to the functioning of the building and/or occupants' health are avoided. By showing that a proposal has been informed in this way, the applicant will be better positioned for a successful application.

5.32 The Local Plan policy is but one tool to help encourage retrofit of existing buildings. An update to the Council's existing Technical Advice Note on retrofitting historic buildings, available on the website here, will also help elaborate on the policy requirements with additional guidance and useful resources.

Ensuring new development is resilient to climate change

5.33 The Local Plan includes a range of policies which seek to drive more climate resilient design in new development. Most directly, policy G9, seeks to ensure applicants consider current and future climate projections and use this to inform their design. It also sets out a range of resilience measures that should be included where applicable, including measures to address overheating, water use, flooding.

5.34 Naturally, policy G9 crosses over with various other policies, particularly in chapter 4, including requirements for greening (which can bring multiple adaptation benefits in terms of managing water run off, flood risk and cooling); as well as for dealing with flood risk. Equally, there is some overlap with requirements for Health Impact Assessment, which would increasingly need to consider health risks posed by climate change.

5.35 More broadly, the Local Plan's policy G1 seeks to protect a network of green space in the city, and climate resilience was one consideration in defining the GI network, with spaces providing for significant amounts of flood storage (areas with more than 50% flood zone 3b) being assigned to the core GI network. Protecting open spaces will not only help

to ensure resilience against climate change in terms of people's health, but also help wildlife to adapt to climate change by being able to move through the city as easily as possible.

Appendix A – Policy options and preferred approaches

Policy options set 008a (draft policy R1): Net zero carbon buildings in operation

It is clear that the built environment contributes overwhelmingly to Oxford's existing carbon footprint as existing buildings contribute to emissions arising from the energy used to heat and power them. New buildings coming forward in the city will only add to these emissions unless they are designed to operate as net zero carbon buildings (which do not emit net additional carbon dioxide emissions in order to function).

Whilst the current Local Plan already requires improvements in carbon dioxide emissions over national building regulations standards, the current requirements do not ask for net zero carbon design. National buildings regulations are expected to be updated in future, and require net zero carbon ready development, but these will not deliver true net zero carbon buildings in operation (because Building Regulations does not address all energy sources in a building – only 'regulated' energy sources).

The options for policy that have been considered for the Local Plan therefore relate to how much further local standards should go beyond what is asked for in national building regulations now or in future. They also include whether or not to allow for offsetting on trickier sites.

1333

Table 1 - Policy options set 008a Net zero carbon buildings in operation

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Specify design in accordance with energy hierarchy principles (including fabric-first) for all new development **and** permit no fossil fuel use in new buildings.	Designing in accordance with the energy hierarchy will help to ensure buildings are as efficient as possible from the ground up. Energy use is the primary source of carbon emissions from buildings in operation, tackling this will support carbon reduction but also potentially help address issues of fuel poverty and reduce demand on the wider energy grid.	Different types of application will have varying opportunity to apply the energy hierarchy – for example, it may be easier to take a fabric first across a new self-contained dwelling, compared with an extension to an existing dwelling. This could add complexity or confusion in the design process. There may be circumstances where there is a need for relying on fossil fuel systems – potentially where grid

	Preventing any additional fossil fuel combustion heating systems will help to reduce the need for retrofit later. This could also ensure that new development does not contribute further to air pollution, including NO2 levels, but also Particulate matter levels (PM) in the city. Direction of travel, including previous updates to Building Regs already (and will further) disincentivizes fossil fuel systems like gas boilers. Policy would lock in local commitment and ensure all new development accords with it from adoption of the plan.	constraints are unable to support fully electric systems for example. Equally, there may be opportunities for future technology advances to enable the transition of fossil fuel systems to cleaner sources (e.g. infrastructure and gas boilers being upgraded to function using hydrogen), although this is highly uncertain.
Option b **Mandate net zero carbon in operation (applying to <u>regulated</u> energy only)** from adoption of the Plan. Measure performance using Energy Use Intensity (EUI) as the primary calculation. Set targets for: • regulated energy use in the building, and • energy use associated with space heating, and • this energy use to be met through equal amount of new renewable energy generation (ideally onsite). Encourage net zero unregulated energy to be addressed as part of overall	Regulated energy use is a well understood area of operational energy consumption and there is good understanding about how to decarbonise it. It is currently addressed as part of Local Plan 2036 so would keep in line with current practices. Assessing net zero carbon performance using an Energy Use Intensity (EUI) calculation would measure energy use as recorded at the meter and is more reflective of performance. Measuring via EUI instead of traditional carbon % reduction targets allows for better comparisons of performance between buildings also.	The option is not in line with the government's current policy guidance for Local Authorities. A more prescriptive policy, with specific targets could limit innovation and become outdated more quickly, whilst also making for an overly technical policy. It may be difficult to set targets that are realistic for the range of building types that could come forward under non-residential development (e.g. schools, offices, warehouses etc). Encouraging net zero unregulated energy through the policy would not be as strong

1334

approach where possible (e.g. seek opportunities to reduce, and to meet through additional renewable generation capacity).	Policy would still encourage developers to address unregulated energy where possible, which may secure some additional benefit for energy use/emissions associated with thus type of energy use, but would not make it compulsory.	of a requirement as requiring it.This could have implications for power grid capacity considering expected increasing demands on electricity nationally with the shift to net zero. Ultimately, this option could risk the city not meeting its targets in addressing climate change, or achieving local (2040) or national (2050) net zero goals, particularly where national grid takes longer to decarbonise.
Option c **Mandate net zero carbon in operation (applying to <u>regulated and unregulated</u> energy)** from adoption of the Plan. Measure performance using Energy Use Intensity (EUI) as primary calculation. Set targets for • total energy use (regulated and unregulated) in the building, and • energy use associated with space heating, and • this energy use to be met through equal amount of new renewable energy generation (ideally onsite).	Similar positives to option b, however, option c would resemble a more reaching policy encapsulating decarbonising of unregulated energy sources also. Unregulated energy can be a significant component of the total operational energy use of a building and it will need to be decarbonised in the same way as regulated energy in order to meet future net zero targets. This option would seek to ensure unregulated energy needs are met through sufficient on-site generation wherever possible, potentially reducing demands for power from the main power grid. This policy option is considered to be the most well-aligned with the measures	Similar negatives to option b, however, option c is likely to be much more challenging. Again, the option is not in line with the government's current policy guidance for Local Authorities and strays further in scope (than option a). Unregulated energy use is predominantly determined by occupant behaviour within the building once in operation, something that planning policy and the design/ construction process has limited influence on. There could be particular challenges for high energy demand, non-residential uses, such as healthcare and research (such as labs) with bespoke equipment needs central to their operation. Some flexibility may need to be built into targets used in such a policy.

1335

	needed to accord with the city's 2040 Net Zero Carbon target (and roadmap/action plan) as well as the national net zero 2050 target. It should help boost micro-generation of renewable energy across the city and mitigate need for future retro-fitting. It also accords with the majority of industry guidance for designing to net zero carbon in operation e.g. (LETI, BRE GROUP etc).	More constrained sites and/or certain buildings (e.g. with limited roof space) may struggle to meet unregulated energy demands through on site renewables and may be pushed towards other forms of offsetting.
Option d **Mandate 'net zero ready' buildings, in line with the principles in the proposed Future Homes/Buildings Standard (which apply to regulated energy only)**. Measure compliance via national Building Regs calculations (e.g. SAP/ SBEM) demonstrating carbon reduction over notional building. Encourage net zero unregulated energy to be addressed as part of overall approach where possible. (e.g. seek opportunities to reduce, and to meet through additional renewable generation capacity)	This approach represents a less advanced one to options b and c but would be closer to the direction of travel outlined by central government in its consultations on the Future Homes/Buildings Standard. It would mandate the requirement for net zero ready homes from the Local Plan's adoption, even if the national standards are delayed or watered down and would seek to ensure that no further retrofit is needed to new developments in the future to bring them to net zero as the national grid decarbonises. Recognising that the proposals set out in FH/BS do not currently address unregulated emissions, this policy would still encourage developers to address unregulated energy through ensuring sufficient on-site renewable energy	Net zero ready development as currently set out in the Future Homes/Buildings Standard does not address total operational energy of buildings and would omit emissions associated with unregulated energy. Development built to this standard would not be net zero in terms of regulated energy until the national grid has fully decarbonised either, thus would be responsible for continued emissions. Encouraging net zero unregulated energy through the policy would not be as strong of a requirement as requiring it.This could have implications for power grid capacity considering expected increasing demands on electricity nationally with the shift to net zero. Ultimately, this option could risk the city not meeting its targets in addressing

1336

	generation and to demonstrate this via submission of EUI calculations.	climate change, or achieving local (2040) or national (2050) net zero goals, particularly where national grid takes longer to decarbonise.
Option e For challenging typologies of development that have exhausted all onsite options to meet operational energy demand in line with other policy requirements, accept offsetting as a way to mitigate impacts through paying to provide offsite retrofitting to existing buildings elsewhere. Set out strict principles for how/when this would be accepted including that this option is **a last resort**. This would be framed as 'energy offsetting' (rather than carbon offsetting) and tied to the energy calculations of demand versus generation for the development.	Due to the constrained nature of many sites in the city, it may be difficult to incorporate technologies such as renewables onsite (or find spaces offsite) to balance out energy use, thus offsetting may be necessary. It could be an option where all other approaches are exhausted. Collection of an offset fund could potentially create a pot of money which could be utilised to deliver carbon reduction measures elsewhere in the city (e.g. existing buildings in need of retrofit).	There is the risk, as evidenced elsewhere with similar schemes, that offsetting could be more attractive than delivering onsite measures leading to poorer performing buildings. Offsetting shifts the problem of carbon emissions elsewhere and does not address the real need to deliver truly net zero buildings from the beginning. Offsetting projects would need to be identified, resources would need to be found to monitor their delivery, manage the fund, and ultimately ensure a 1-to-1 offset in carbon emissions between the project and the contributing development.
Option f Set no local standards on net zero carbon design of new buildings. Conform with the approach advocated by the Written Ministerial Statement 2023 and rely on national standards set out in Building Regulations, including the upcoming uplifts associated with Future Homes/Building Standard which is envisaged to deliver 'net zero ready' development from 2025 onwards.	Similar to option d but not setting any expectation/local direction on net zero carbon design standards. This option would mean greater consistency for developers building in Oxford compared to elsewhere and less complexity in the planning application process. At the design stage, regulated emissions are the primary area that can be influenced thus Building Regs process could achieve this.	This approach ignores the local context of Oxford, such as its 2040 local net zero carbon target. Previous updates to Building Regs have been slow historically, and Future Homes/Buildings Standard is not yet guaranteed (at time of writing the results of the last consultation on the options it proposed have not even been released).

		Even when in place, the updated building regs will not deliver net zero carbon until the grid is decarbonised, it will also not address unregulated/embodied carbon (in its current proposed form). Ultimately, this option would be even more likely (than other options) to risk the city not meeting its targets in addressing climate change or achieving local (2040) or national (2050) net zero goals, particularly where national grid takes longer to decarbonise.

1338

Initial sustainability appraisal screening of options sets

Is there only one option or are there various options we could take? - various options/combinations e.g. A+B, A+C, A+D, E, F
High-level screening conclusion? - the options are similar to each other from a sustainability perspective
Screened in for detailed appraisal? - No

Rationale: In terms of options, it would be appropriate to consider having a policy or not as there is no specific NPPF demand either way, though local context supports the inclusion of some sort of policy, the considerations then are how far such a policy goes in requirements. The options that the Council has considered represent various approaches to setting policy for new development to deliver upon net zero carbon in operation through use of various combinations of requirements relating to: types of energy addressed (e.g. regulated or unregulated); use of specific targets for energy use (space heating and total); requirements for renewable energy generation; as well as the methodologies for calculating performance (e.g. SAP or EUI). Whilst options b, c, d and f, represent four alternative approaches, some of the options (options a and e) are not strictly alternatives, but rather additional options for a policy to cover and, whilst option a could stand alone, it could also be incorporated alongside one of the other options, as with option e (offsetting) which is less likely to stand alone.

In terms of sustainability impacts, the different options all relate primarily to levels of mitigation that the Local Plan could ask for in relation to new developments' energy use and carbon emissions and would be assessed against similar criteria within the SA assessment framework – particularly criteria **1. Carbon emissions**, **2. Resilience to climate change**, but also potentially **5.**

Inequalities (because of potential influence on fuel poverty) and **11. Urban design** (because higher standards may push towards more standardised design styles/shapes in buildings and limit design innovation). As the differences between the options are essentially in how they propose to technically implement net zero carbon design, as well as in how far they push in terms of standards applicants must meet, there would be some variety in the extent of any impact each option would incur against the SA criteria – particularly the extent of positive impact under criteria 1. 2. and 5. and variation between neutral or minor negative impact under criteria 11. (because as standards get stronger and potentially limit design). Option f would mean no local policy requirements, however, this is likely to still be accompanied by some positive impact for criteria 1. 2. and 5. because of the expected tightening of national building regs to move new development towards being net zero ready, although the positive impact is going to be reduced and would take longer to begin to take effect (it is likely to be negative/neutral in the immediate term). Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Net Zero Carbon buildings in operation – Policy R1

1339

The preferred approach is to take forward a combination of **options A, C and E**. Whilst the approach would risk not aligning with central government expectations (because it sets energy standards for development that exceed national standards), this approach is considered necessary to ensure new development does not compromise the city's ability to meet net zero carbon targets in future.

The combination of **options A and C** will help reduce need to retro-fit buildings in future and also help to address risks of fuel poverty for occupants of new buildings by reducing energy demands to operate buildings and drive renewable energy onsite, which can help with bills. Equally, driving more energy efficient buildings are important for reducing burdens on the wider energy grid.

The addition of **option E**, which makes an allowance for offsetting is considered to be a necessary and pragmatic approach, recognising that delivering net zero buildings in operation will be challenging for some typologies. It should only be allowed for as a last resort, once all onsite options for meeting the rest of the policy have been explored. Where utilised, the offsetting mechanism could help to deliver retro-fitting of existing buildings, which is also a potential positive (though the preference is for the mechanism to be used sparingly, if at all).

Policy options set 008b (draft policy R2): Embodied Carbon

In addition to the carbon dioxide emissions related to a building whilst it is in operation, there is also an upfront embodied carbon cost associated with constructing them as was touched upon earlier. Embodied carbon in construction can be influenced by a wide range

of factors, from the types of materials used in construction, to where these are sourced from and how they are processed, making this topic a highly complex one, subject to various considerations. As set out in Section 3 of this paper, the balance between addressing embodied carbon and achieving other place-making concerns in the planning process is not always clear either.

The stronger and more explicit a policy is, the more challenging it could be to implement, particularly as national guidance and industry understanding is still emerging. Nevertheless, whilst the current Local Plan is not explicit in requirements to reduce embodied carbon, it is important that development at least begins to consider and take action to address this topic in order to mitigate impacts on the wider environment and climate change. The options for policy relate to how far the Local Plan should go in requiring applicants to address embodied carbon.

Table 2 - Policy options set 008b: Embodied Carbon

Option for policy approach	**Potential positive consequences of the approach**	**Potential negative/neutral consequences of the approach**
Option a Include high level principles for limiting embodied carbon, including the importance of retaining existing buildings where possible. Guidance would be expanded upon in accompanying technical advice note (TAN).	A strong set of principles for addressing embodied carbon (an area where industry guidance/learning is more limited at present) would ensure the issue is not ignored, whilst leaving flexibility for applicants to respond in the most suitable way per application. Providing more detailed guidance in an accompanying TAN would allow for expectations to be expanded upon and guidance to be regularly updated considering evolving knowledge/guidance which is less developed than for addressing operational energy.	This is an area of evolving guidance and understanding and broad principles could be difficult to formalise in policy. Equally, principles need to retain a level of flexibility to enable innovation and adaptation to specific context of individual sites and schemes.
Option b *Unless superseded by future updates to Building Regulations (or other national policy).*	Requiring larger development to measure embodied carbon at the construction stage will allow for improved understanding of the embodied carbon	Assessment methods for measuring embodied carbon in construction can be resource intensive and could be challenging for some smaller scale major

1340

Set more specific requirements for major development requiring a measurement of embodied carbon during construction through a recognised methodology and require applicants to demonstrate specific actions taken to reduce this as much as possible. Applicants would complete and submit a Whole Life Cycle Carbon Assessment demonstrating how embodied carbon has been quantified and reduced.	problem. It will enable a more informed approach to addressing the issue and requiring applicants to demonstrate how they have taken action to reduce it will be an important step forward in delivering net zero construction. This could be expanded upon in future iterations of the local plan as national guidance and understanding on this issue grows.	development – setting an alternative/appropriate threshold for where these would be required may require further consideration. Demonstrating actions to reduce embodied carbon in major schemes is less prescriptive than setting a fixed maximum target for embodied carbon. It also risks a lack of clarity for applicants about how far the Council expects them to go in justifying their approach in an application and in the level of detail they will be asked to provide.
Option c *Unless superseded by future updates to Building Regulations (or other national policy).* Set more specific requirements for major development requiring a measurement of embodied carbon during construction through a recognised methodology. Require applicants to demonstrate that they have kept embodied carbon levels to within a specific maximum target for embodied carbon on new developments. Applicants would complete and submit a Whole Life Cycle Carbon Assessment demonstrating how embodied carbon has been quantified and how they have aligned with policy target.	Same benefits as option C but going further requiring that embodied carbon levels are kept to within a certain limit. This is likely to have more effect at reducing overall embodied carbon footprint of new development. Clear targets could also provide greater clarity to applicants about the level of action the Council expects them to take/demonstrate in order to address embodied carbon in the design process.	Setting specific targets to comply with will reduce the level of flexibility for applicants to respond to various drivers influencing design of proposals on particular sites. Rigid targets may not be achievable on some sites in the city and this more prescriptive approach to policy would make their redevelopment more challenging. Setting specific targets could be challenging at policy level considering the complexities of accounting for it in construction processes and the evolving nature of guidance/industry knowledge on this issue. Equally, it may be challenging for applicants to deliver upon

		or satisfactorily respond to in a planning application. Alongside net zero carbon in operation, targets for embodied carbon are likely to have additional viability impacts.
Option d Do not include any policy requirement setting principles or targets/requirements for measuring embodied carbon.	There is potential for future updates to national policy/ Building Regs that would address embodied carbon, which may render reference in the plan unnecessary.	Previous updates to Building Regs have been slow historically, and Future Homes/Buildings Standard is not yet guaranteed. Even when in place, the updated building regs will not deliver net zero carbon until the grid is decarbonised, it will also not address unregulated/ embodied carbon.

1342

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Yes, various options (e.g. options A alone, A+B, A+C, D) **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal? -** No **Rationale:** Option a proposes setting general principles for applicants to follow in order to take action on reducing embodied carbon, whilst options b and c represent alternative ways of setting further standards for larger scale developments. Both options b and c require these types of applications to submit evidence showing they've quantified their embodied carbon and quantifying how much they have reduced this, however, option c goes further and sets a specific target that should not be exceeded. Option d is to set no local policy requirements for addressing embodied carbon. In terms of sustainability impacts, the impacts arising from the options most directly relate to SA **criterion 1. Carbon Emissions.** For this criterion, option a is likely to have a slight positive impact, though will depend upon implementation, and may not result in any significant reductions in embodied carbon emissions. Option b and c have increasingly positive impacts as they begin to set

standards for quantifying the emissions and actual reductions secured, so are likely to have more meaningful impact, though they will not negate all emissions so the positive impact would be minor overall. Option C is

Embodied carbon in the construction process – Policy R2

The preferred approach for this topic is a policy that comprises of **options A and B.** The policy approach would essentially act as a stepping stone, introducing requirements for the city where very little currently exist, but also recognising that embodied carbon is an area of complex topic and one where understanding is still emerging.

Option A would apply to all proposals, but the principles it would propose will vary in relevance depending on each specific site context and type of development proposed. The principles would act as important considerations to guide applicants when designing their proposals, whilst remaining flexible enough to respond to the varying context that each application for development is brought forward in. **Option B** would seek to push larger developments towards taking more explicit action in addressing this topic. Whilst the option does not impose specific targets to limit embodied carbon to, which some may feel limits the effectiveness of the policy, it would help to ensure the largest schemes with the most significant potential impacts are transparently calculating embodied carbon and specifically demonstrating the types of measures they propose to reduce this and by how much.

1343

The options together will help to improve awareness and understanding around this topic which will be of increasing pertinence in future. They will form an important step forwards towards potentially more stringent requirements in future, either locally or nationally.

Policy options set 008c (draft policy R3): Retrofitting existing buildings including heritage assets

The Local Plan will have limited influence over existing buildings that have already gone through the planning process, yet the earlier analysis in this background paper highlights that these buildings collectively form a significant source of carbon emissions which will need to be retro-fitted to help achieve local and national net zero targets. Many retro-fitting measures, such as fabric efficiency and installation of renewables, can be undertaken without planning permission, but where permission is required the Local Plan can help applicants to approach these projects in the right way.

This is particularly important for traditional buildings and heritage assets which can have special qualities which need to be conserved (particularly where these benefit from national designation). It will also help avoid problems of maladaptation which could lead to negative impacts for occupants' health (e.g. impairing passive ventilation processes many of these buildings rely on and that

is essential for avoiding damp build up). The options set out for this topic therefore mostly focus on how the Local Plan policy should treat applications impacting traditional and historic buildings.

Table 3 - Policy options set 008c: Retrofitting existing buildings including heritage assets

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a presumption in favour of retrofit measures for all existing buildings that are not heritage assets or in the setting of, subject to certain conditions, where these measures secure demonstrable carbon reduction/energy efficiency/climate adaptation.	This policy recognises the high priority afforded to the retrofit need in the city and seeks to ensure that retrofit measures that require planning permission will be supported wherever possible – particularly where demonstrable benefits for climate (mitigation or adaptation) can be evidenced. It highlights that as a starting point, such measures are presumed to be acceptable on planning grounds. This additional certainty is intended to support and encourage more occupants to pursue retrofit projects.	The local plan has limited direct influence on retrofitting of existing properties unless they need planning permission (many small-scale improvements are considered permitted development and would not). Any such policy can only be supportive, as and when such measures do require planning permission. Whilst this policy would highlight the importance which we assign to supporting retrofitting measures in existing buildings, there will be other material considerations which have to be weighed up against this policy and could still ultimately be determined to outweigh this presumption in favour.
Option b In relation to designated heritage assets and historic buildings, or proposals within conservation areas, set out that carbon reduction/ energy efficiency/climate adaptation measures will be considered as public benefits that may outweigh harm.	This option addresses the retrofit need in the context of historic buildings and heritage assets and responds to the particular challenges present in the need to balance heritage considerations. It guides applicants to follow Whole Building Approach in order to ensure retro-fit maximises opportunities for	Same negatives as for option a as well as the following: Listed buildings and other heritage assets are afforded statutory protection which is over and above that given through planning controls. Great weight is given to preserving or not harming the

1344

Be explicit in setting out some key principles to follow, including the need for taking a Whole Building Approach to retro-fit. Expand on guidance through a Technical Advice Note (updated from the current version of TAN 15 supporting Local Plan 2036). This additional supporting guidance could expand on this complex topic such as by flagging measures that would be more or less likely to cause harm (e.g. permanent versus temporary), and how levels of harm would be assessed against public benefit.	carbon reduction/climate adaptation and minimises potential for harm to the asset or its occupants (e.g. through maladaption). Same benefits as option a, however, this option would seek to provide further certainty for how retrofit of heritage assets will be considered through the planning application process. It would provide clarity on how to approach design of retrofit projects for these assets, setting out the key issues the Council would want to see addressed in an application for it to be succesful. Yet this option would also benefit from leaving flexibility for approaching each project in a way that is tailored to the specific context of the site and the particular features for which it is protected. Would also help to address the complexity in navigating how harm to heritage assets needs to be balanced with benefits of retrofit (e.g. carbon reduction/climate adaptation) in the decision-making process.	significance of these heritage assets, and this must be borne in mind when considering measures of change to buildings or retrofitting measures to combat or mitigate the impacts of climate change. In supporting retrofitting of older buildings, a policy will have to take account of the protection afforded to heritage assets and the need to preserve their values. Setting out principles that applicants would be expected to follow, as opposed to specific measures that would be acceptable or not, would still leave a fair amount of site-specific analysis for occupants to undertake. They would still need to set out project-specific justification for why a particular design (and set of retro-fit measures) has been selected. There is a risk that this quite complex topic of retro-fitting heritage assets remains a challenging one to navigate for applicants.
Option c In relation to designated heritage assets and historic buildings, or proposals within conservation areas, set out that carbon reduction/ energy efficiency/climate	Similar benefits as options above but without the additional flexibility for approaching site specific considerations relevant to retro-fit of heritage assets as is offered in option b.	Same negatives as above aside from the point about flexibility as is offered in option b which seeks only to set out key principles to follow.

1345

adaptation measures will be considered as public benefits that may outweigh harm. Be explicit in setting out some key principles to follow, including the need for taking a Whole Building Approach to retro-fit. Additionally, set out in the policy the retro-fit measures that would be more or less likely to cause harm (e.g. permanent versus temporary), and how levels of harm would be assessed against public benefit. Expand on this through guidance in an updated version of Technical Advice Note 15.	Listing specific retrofit measures that would be more or less suitable in a policy potentially provides greater certainty to applicants as to which measures would be more appropriate versus those that would be viewed as more harmful in a heritage context. It might reduce some of the uncertainty around what would be acceptable for such applications.	In addition, option c's approach of setting out specific measures in the policy that may cause more or less harm would have its own potential negatives. This is because it is likely that identifying a strict list of measures that cause less harm in a policy will be challenging when the character and value of heritage assets and their setting varies so much across the city. Such a policy is likely to be highly complex to present in the Local Plan and subject to many caveats because it is unable to grapple with the level of detail needed to be truly helpful to applicants (and likely better suited to an optional Technical Advice Note instead). Ultimately, decisions will still have to be made on a case-by-case basis, thus the benefits of this approach may be undermined.
Option d Do not include policy addressing retrofitting of existing buildings and/or heritage assets.	The local plan has limited direct influence on retrofitting of existing properties unless they need planning permission (many small-scale improvements are considered permitted development and would not). Any such policy can only be supportive, as and when such measures do require planning permission. It would also be limited by the need for balancing other	This would ignore the significant need for pursuing retrofit projects on existing buildings in the city to reduce our carbon footprint. Any policy in the plan is likely to have limited effect in directly driving retrofit measures, however, by highlighting that such measures would be supported and providing clarity on what is most appropriate where, this could help to

1346

	relevant planning issues in the decision-making process (such as any potential harm to protected heritage features).	avoid the planning system being seen as a barrier to uptake where such measures are planned and require planning permission.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Yes (e.g. options A, A+B, A+C, D) **High-level screening conclusion? -** the options should be screened in for detailed appraisal **Screened in for detailed appraisal? -** Yes **Rationale:** Option a sets out a presumption in favour of retro-fitting for non-heritage buildings, meanwhile, options b and c are alternative approaches for how local policy could support retro-fit on heritage assets and represent alternative approaches which could be combined with option a. Option d would mean no local policy requirements in relation to retro-fitting. Options a, b and c would all likely have some positive impact for **SA criterion 1. Carbon Emissions** and **SA criterion 2. Resilience to Climate Change** through establishing a local policy environment that is as supportive and enabling of retro-fit of existing buildings in order to achieve carbon reductions/energy efficiency or climate adaptation. Option b and c would have slightly more positive impact as they would also relate to the city's various historic buildings. Local Plan policy cannot enforce retro-fit of existing buildings and, in relation to historic assets, there are also other competing considerations that may limit the positive impact, meaning the options are likely to result in minor positives at best. Whilst Options b and c might increase the scope for positive impact against criteria 1. and 2., because these options would explicitly support sensitive retro-fit on heritage assets, they do also introduce the potential for harm to the special characteristics for which many are designated – thus resulting in a potential negative impact against **SA criterion 11 Urban Design and Historic Environment,** though the extent of this impact would depend upon implementation and types of assets that are retro-fitted, but should be reduced through following the key principles such a policy would set out. Option D would result in neutral impacts against the criterion because it would neither cause additional harm (indeed emissions are likely to continue to reduce in some respects e.g. as national grid decarbonises), nor will it result in specific positive impacts (there is no national requirement to undertake retro-fitting). The balance between competing priorities of reaching net zero through retro-fit and also continuing to preserve and enhance the historic environment which is intrinsic to Oxford is a complex one. Whilst the potential sustainability impacts arising from the

1347

options are not expected to be significant, the extent of negative impacts under options b and c could vary. Based on this initial screening, it is suggested that the option set should be scoped in for further detailed appraisal.

Retro-fitting existing buildings including heritage assets – Policy R3

The preferred approach for policy addressing retro-fitting in the new Local Plan is a combination of **options A and B.** This would make it clear that the Council supports retro-fitting existing buildings, but that for traditional buildings and heritage assets this support is contingent on applicants demonstrating they have approached the design of retro-fit projects in the right way.

Option B includes that the policy would set out the need for taking a Whole Building Approach to retro-fitting traditional buildings and heritage assets along with some other key principles to follow. It would then refer applicants to a more detailed Technical Advice Note, which can be kept updated as regularly as needed, to provide additional guidance. This would ensure that the key considerations that an applicant needs to address as part of their application are set out in the policy. However, it would allow flexibility to take into consideration varying contextual factors that might need to guide design on a case-by-case basis, as there is unlikely to be a one-size-fits-all solution that will work for every building and site in the city.

1348

The option set was scoped in for testing through the Sustainability Appraisal (SA) to better understand the effects of each option and any potential for significant effects. The SA testing indicates that this preferred approach would have the most sustainability benefits according to the SA testing, although potential for negative impacts in terms of the historic environment would need to be mitigated through careful wording of the policy in terms of guidance for applications impacting traditional buildings/heritage assets.

Policy options set 008d (draft policy G9): Resilient design and construction

Oxford is at risk from climate change, particularly in relation to increased flood risk, water stress, overheating and more intense weather events generally. Climate resilience will be supported by various policy areas in the Local Plan, and various climate adaptations such as greening can have multiple benefits not just for making places that are healthier and more comfortable for people. A specific policy could be beneficial in ensuring that the key issues of relevance are flagged to applicants and in guiding them towards considering future climate as part of their design process. The options presented below relate to what this policy approach could look like.

Table 4 - Policy options set 008d: Resilient design and construction

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Set out a discrete adaptation/ resilience policy, whilst continuing to address risks in other policies where relevant. Ask applicants to demonstrate how they have designed in accordance with policy via the design checklist or a separate checklist. Cross referencing to other relevant policy requirements (e.g. flooding) as well as incorporating other specific requirements such as: • Need for climate resilience impact assessment; • Details of a cooling strategy (for the building and surrounding spaces in large schemes, addressing alignment and shading) intrinsic to the design (not having implications for carbon use), including measures for addressing overheating risk for lifetime of development; • Measures to conserve/recycle water; • Flood resistance/resilience measures; • Supporting infrastructure such as electricity supply and broadband	Would set out a strong position/stance on the issue of climate adaptation and building resilience to climate impacts which could negatively impact on health and wellbeing. Bringing the range of policy areas into one checklist, ensuring applicants are looking at them through the lens of climate resilience, could be helpful. Would specifically pick up on issue of overheating, a key risk in the city moving into the future, and require applicants to detail what measures they have included in design/construction to address this and maintain thermal comfort for occupants during hot summer periods. Likely to go further than what is asked for in Building Regs alone.	Many aspects of climate adaptation will be dealt with through other policies, there is a danger of repetition e.g. with health, flood risk, design, and GI. Will need to find a consistent and concise way for applicants to demonstrate they have met these policy requirements without forcing them to repeat work in multiple places in their application. The design checklist would be one means of doing this. Could allow for cross-referencing to evidence prepared to meet other policy requirements where relevant.

1349

designed to function in extreme weather conditions (such as prolonged periods of very high temperatures or heavy rainfall).		
Option b Require major development to achieve certification against a recognised sustainability assessment e.g. BREEAM/HQM.	There are several sustainability certification schemes in existence which are well recognised by industry such as BREEAM. These schemes often take a holistic view of design and ensure that considerations like climate change are weighed up alongside other design measures. Certification would ensure a high standard of sustainable design in major developments and help to ensure consistency across for applicants.	Schemes such as BREEAM are not specifically focused on climate resilience/adaptation alone, it is usually one element that is assessed amongst a range of sustainability considerations. Points that underpin certification can usually be scored across a variety of categories – though we could require points in certain places as we do at present with requiring 4 points under the water topic of BREEAM under RE1. This option would force applicants to pursue independent certification with a particular provider, though we could specify that any equivalent is acceptable to provide more flexibility. Relying on this kind of certification alone may not fully maximise climate resilience objectives. Likely to incur additional costs and resource demands for applicants.
Option c Address climate risks as theme purely through other policies e.g. design flood	Ensures resilience/adaptation is central to thinking across local plan policy framework.	Climate resilience aspects can be lost amongst other objectives when they are not given sufficient consideration.

1350

risk, green infrastructure. No requirement for specific policy addressing issue.	Avoids repetition of requirements/considerations set out in other complementary policy areas (e.g. flooding and green infrastructure).	There are some specific adaptive measures, and wider sustainable construction issues which may not easily fit into other policy areas without making them overly long/ unwieldy.
Option d No policy on climate adaptation/resilience – rely on national guidance.	Some elements of building resilience to climate change will necessarily be covered elsewhere e.g. flood risk requirements are strong in NPPF, overheating within building regs.	Ignores local context – e.g. heritage, dense urban environment, as well as identified climate risks facing the city in future. National policy hasn't traditionally been particularly strong on adaptation. Could miss opportunities to tie together benefits for many complementing agendas – e.g. health, air quality.

1351

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Either option A, B, A+B, C, C+B, or D **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal? -** No **Rationale:** The options represent different approaches to incorporating requirements for applicants to deliver climate resilient design into local policy or not. Option a would be to have a bespoke policy with a checklist of requirements for them to address where relevant and option c would instead scatter these requirements across other policies. Option B would instead require applicants to achieve certification against an independent sustainability certification scheme, which could be standalone or in combination with option A or C. Option D would be to have no local policy requirements about climate resilient design. Most directly these policy options relate to **criterion 2. Resilience to climate change**, although the wide-ranging nature of climate resilient design means that these policy options can indirectly impact a variety of other criteria such as **criterion 7. Green Infrastructure** (where resilience measures include greening), **criterion 5 inequalities** (where resilient design reduces health risks

from climate change), though this is more dependent upon implementation and challenging to appraise. In relation to criterion 2, however, the options are all likely to represent minor positive impacts, other than option d, with the differences between them being more about how a local policy approach is implemented through the local plan. Option D is assumed to be neutral (because national policy has enough requirements to at least ensure some level of risk mitigation such as through national guidance on addressing flooding and Building Regs addressing overheating to some degree). Overall, the differences between the options are not significant enough in sustainability terms to warrant being scoped in for a detailed appraisal.

Resilient design and construction – Policy G9

The preferred approach is **Option A.** This acknowledges climate risk as a key issue for health and wellbeing of people and the sustainability of the wider city and will allow the Local Plan to guide applications in considering future climate change as part of the design process. The key issues of concern relevant to Oxford and its particular climate change risks can be set out in the policy and applicants can be encouraged to incorporate resilience measures to address them through the design process.

There is likely to be overlap with other policy areas, e.g. requirements for addressing flood risk, or providing green infrastructure, and information provided to meet other policy requirements can be used to support meeting this policy's requirements. The policy will help to ensure that these aspects of design are approached through the lens of adapting to climate change in particular, which may not always be the focus, and will help reduce the chances of opportunities for resilience building being missed.

1352

Background paper 009

Title: Natural Resources including air, water, soil quality

This paper addresses the protection of Oxford's natural resources including the quality of air, water and land/soil.
Relevant Local Plan Objective(s): • Our resources, including land, soil, and raw materials, will be protected and used prudently, with consideration for replenishment and renewal. • Contribute towards continued improvement in the city's air quality and its further limit impacts upon public health. • The city's water resources are utilised efficiently with consideration for the future, whilst water quality is protected and enhanced for the benefit of the wider environment.
Relevant SA Objective(s): 8. To reduce traffic and associated air pollution by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. 9. To achieve water quality targets and manage water resources.
SEA theme(s): Water, air, climatic factors, soil, material assets, landscape

1. Introduction 1

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal) 2

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal) 8

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal) 14

5. Key issues addressed through the Local Plan 16

Appendix A – Regulation 18 Policy options sets 18

Policy options set 009a (draft policy R4): Air quality assessments and standards 19

Policy options set 009b (draft policy R5): Water quality and resources 22

Policy options set 009c (draft policy R6): Soil quality 25

Policy options set 009d (draft policy R7): Contaminated land 28

Policy options set 009e (draft policy R8): Amenity and environmental health impacts of development 29

1. Introduction

1.1 This background paper addresses the topic of environmental quality and natural resources in the city. In particular, it focuses on three aspects of Oxford's environment: the quality of air, land (including soils), and water and the issues that relate to these different aspects of the environment.

1.2 Oxford is a small city with a tightly drawn administrative boundary and contains a number of physical and policy constraints which means that land must be used prudently. Where land is available, it needs to be used in the most efficient way possible while ensuring that there is no harm to the city's natural environment, human health and well-being.

1.3 The issue of poor air quality is multi-faceted and has various causes which are discussed in greater detail later. It is an important topic for the Local Plan to address because air pollution has a direct link with health and well-being and has been evidenced to cause and exacerbate health problems. Poor air quality also has negative impacts for the wider natural environment, especially our most sensitive ecological habitats.

1.4 Oxford has a long history of settlement with different parts of the city having been used for a variety of types of development in the past, some of which can leave behind a legacy of contaminated materials and other pollution which is another issue the planning process needs to address. The development process can play an important role in helping to identify historic contamination and contributing to its remediation to make it safe for future generations, however, where this is not carried out appropriately, people can be brought into contact with harmful pollutants that can damage health. Equally, it is important to ensure that the quality of our soils is protected as these act as important natural capital which supports the environment in a number of ways, from mitigating flood risk and supporting healthy habitats, to acting as important sinks of carbon which could otherwise be released into the atmosphere exacerbating our impacts on climate change.

1.5 Water quality issues have been brought to the forefront of planning since the introduction of the Water Environment Regulations, which seek to ensure that the biological and chemical quality of watercourses in England and Wales reach a "good standard". Key concerns for the Local Plan to address include whether the availability of sufficient water resources for the existing and future population of Oxford. Also, that the quality of the water environment is preserved from further harm arising from new development, particularly because certain nature sites rely on certain amounts and quality of water to maintain the particular habitats and species for which they are protected.

1.6 The paper also considers wider issues of pollution such as impacts of noise and light which are also important for new development to address where necessary.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

2.1 There are a range of national and local plans, policies and strategies which form important context for the policies of the new Local Plan. Those of most relevance to the natural resources policies are summarised below.

National Planning Policy Framework (NPPF)

2.2 The NPPF addresses topics of natural resources and environmental quality in several sections. In particular, paragraph 187 of the NPPF states that policies should contribute to and enhance the natural and local environment in a number of ways including:

- Protecting and enhancing soils (in a manner commensurate with statutory status or identified quality in the development plan)
- Preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution or land instability. Development should, wherever possible, help to improve local environmental conditions such as air and water quality, taking into account relevant information such as river basin management plans; and
- Remediating and mitigating despoiled, degraded, derelict, contaminated and unstable land, where appropriate.

2.3 Paragraphs 196 to 201 of the NPPF set out various requirements relating to ground conditions and pollution including:

- Ensuring that sites are suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination.
- Ensuring that new development is appropriate for its location taking into account the likely effects (including cumulative effects) of pollution on health, living conditions and the natural environment
- Policies and decisions should sustain and contribute towards compliance with relevant limit values or national objectives for pollutants, (including presence of Air Quality Management Areas and Clean Air Zones). Identify opportunities to

improve air quality or mitigate impacts such as through traffic and travel management, and green infrastructure.

2.4 Paragraph 124 of the NPPF sets out principles for effective use of land and strongly emphasises making as much use as possible of previously developed or "brownfield" land (paragraph 125(c) unless it would conflict with other policies in the NPPF. Paragraph 125 also sets out that plans should recognise that some undeveloped land can perform many functions, such as for wildlife, recreation, flood risk mitigation, cooling/shading, carbon storage or food production. It also sets out that plans should give substantial weight to the value of using suitable brownfield land within settlements for homes and other identified needs, and support appropriate opportunities to remediate despoiled, degraded, derelict, contaminated or unstable land.

2.5 Water supply and wastewater treatment is briefly referenced in the NPPF, including that strategic policies should set out a strategy for and make provision for infrastructure to address this (paragraph 20(b)). Also, take a proactive approach to mitigating and adapting to climate change, taking into account the long-term implications of water supply (paragraph 162).

National Planning Practice Guidance, including National Design Guide

2.6 The Planning Practice Guidance (PPG) provides additional support for interpreting the policies of the NPPF related to these topics, for example:

- Air quality guidance, covering topics such as: the air quality considerations planning and local plans address; information sources available to assess air quality; detail required within air quality assessments; and how can air quality impacts be mitigated.
- Water supply, wastewater and water quality guidance, which sets out how this should be addressed within planning processes as well as where information can be obtained with respect to the water environment.
- The natural environment provides guidance on issues such as agricultural land quality, soil protection and brownfield land of environmental value.
- Land quality, is in several places including in guidance about contaminated land and land stability, about how the planning processes should interpret and address these issues as well as potential mitigation measures.
- The National Design Guide sets out ten components of what the government considers to be good design. One of these components is the efficient use of resources including issues of prudent use of resources and factoring risks of pollution into the design process.

The Environment Act 2021

2.7 The Environment Act 2021 does not revoke or replace the Environment Act 1995, but it does make amendments to strengthen and enforce adoption of the environmental provisions. The Act includes requirements for the Secretary of State for DEFRA, to set long-term legally binding targets on air quality, biodiversity, water, resource efficiency and waste reduction within the UK. Part 5 of the Act also aims to tackling discharge of sewage and places several duties on water companies regarding monitoring of water quality near storm overflows and sewage disposal works to secure a reduction in the adverse impacts of discharges from storm overflows.

Air Quality: other specific context

Air Quality Standards Regulations 2010 (as amended) and Air Quality Strategy

2.8 The European Directive 2008/50/EC was transposed to UK law through the UK Air Quality Standards Regulations 2010. This legislation sets legally binding limits for concentrations in outdoor air of air pollutants that impact public health such as particulate matter (PM10 and PM2.5) and nitrogen dioxide (NO2). Key limits are:

- the annual mean standard for NO2, which is 40 µg/m3 for humans and 30 µg/m3 for vegetation.
- Targets for fine particulate matter (PM2.5) set through the Environmental Targets (Fine Particulate Matter) (England) Regulations 2023, which require a maximum annual mean concentration target of 10µg/m3 to be achieved by 2040 (the AMCT), and a population exposure reduction target of 35% compared to 2018 to be achieved by 2040 (the PERT). Defra is developing guidance on how to consider PM2.5 targets in planning decisions.

2.9 The UK Air Quality Strategy sets out the UK government's plans for dealing with all sources of air pollution. The Environment Act 1995 Part IV of the Environment Act 1995 requires the Secretary of State to publish a national Air Quality Strategy and established the system of local air quality management. The Act also requires local authorities to regularly monitor air pollution in their areas against national targets and to take action where it is found that these targets are unlikely to be met. If areas are found to be in exceedance of the legal limit values and improvements are necessary, those areas need to be designated Air Quality Management Areas, and an Action Plan need to be developed and put in place by the local authority which set up the actions that are going to be put in place to address air quality.

Oxford City Air Quality Action Plan 2021-2025

2.10 Oxford City Council is committing to becoming the first UK Local Authority to set a local annual mean NO2 target in a citywide AQAP. The Oxford Air Quality Action Plan 2021-2025 sets an ambitious target of meeting a local annual mean (Nitrogen Dioxide) NO2 target of 30µg/m3 by 2025. The overall objective of this AQAP for the whole of the Oxford City area is to achieve a local annual mean NO2 target of 30 µg/m3 by 2025 "30 by 25".

2.11 The Plan sets out 30 actions and measures that will be delivered by Oxford City Council and partners, via four priority areas of intervention:

a) Developing partnerships and public education;
b) Support for the uptake of Low and Zero emission vehicles;
c) Reducing emissions from domestic heating, industry and services;
d) Reduce the need to travel, explore opportunities for modal shift and increase the uptake of sustainable transport.

2.12 Progress against the targets is reported annually in the Air Quality Annual Status Report, the most recent was published in June 2024.

2.13 The Council has produced a 2025 source apportionment study, which has updated the known picture of the contribution of various sectors (e.g. transport, domestic, industry, etc) to the levels of the multiple air pollutants in the city. This work will then inform a new Air Quality Action Plan in 2026, following the public consultation which took place at the end of 2025.

Land Quality: other specific context

Oxfordshire County Council Minerals and Waste Plan

2.14 Oxfordshire County Council has an adopted Minerals and Waste Core Strategy which sets out the over-arching county policy for minerals and waste in Oxfordshire to 2031.

Land Quality Strategy for Oxford (2020)

2.15 This City Council strategy seeks to ensure that Oxford's residents and the natural environment are not exposed to unacceptable risks from land contamination and to improve our environment for a sustainable future. The strategy seeks to achieve this through working with developers, landowners and other key stakeholders to manage risks from land contamination effectively and efficiently. The first objective of the strategy is "To deal with contamination through development control and building control wherever

possible". In order to achieve this, the strategy sets out that it seeks to "ensure that land contamination is taken into account when developing planning policy documents".

Water Quality: other specific context

The Water Environment (Water Framework Directive) (England and Wales) Regulations 2017

2.16 These regulations aim to improve and integrate the way water bodies are managed in England and Wales. They require England and Wales to reach good chemical and ecological status in inland and coastal waters by 2027.

Thames River Basin District Management Plan, Environment Agency 2022

2.17 River Basin Management Plans provide a framework for the protection and enhancement of water environments at a river basin scale, as part of implementing the Water Framework Directive.

2.18 The Thames River Basin District Management Plan (updated 2022) covers a wide area including Oxford, and it identifies a number of significant water management issues impacting upon the river basin as a whole, (though not necessarily reflective of Oxford specifically) including issues relating to physical modifications to water bodies; pollution from waste water; pollution from towns, cities and transport; changes to the natural flow and level of water; negative effects of invasive non-native species; and pollution from rural areas.

Thames Water's Water Resources Management Plan 2024

2.19 Thames Water recently published its updated Water Resources Management Plan (WRMP) which sets out how the company will provide a secure and sustainable supply of water to their customers, whilst protecting the environment, over the next 75 years. WRMPs are important strategic plans that set out the preferred programme for managing water resources in the Thames Water supply area. The plan sets out forecasts of supply and demand, including the expected shortfalls in the future due to pressures such as climate change and population growth. It also sets out a programme of planned interventions to ensure that water resources within the Thames Water area are appropriately managed, including demand reduction measures like addressing leaks, and larger more strategic measures including water transfers and a new reservoir in the Abingdon area.

Thames Water's Drainage and Wastewater Management Plan

2.20 Thames Water's Drainage and Wastewater Management Plan (DWMP) addresses future pressures on our wastewater service and sets out their approach and the investment needed to deliver a sustainable service that manages wastewater for the area and protects the environment. The DWMP covers a 25 year period and was published in May 2023.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

Air quality

3.1 The City Council declared an Air Quality Management Area (AQMA) for Nitrogen Dioxide (NO2) in central Oxford in 2003, which was expanded in 2005. Despite good progress being made as part of the responses enacted to address these designations, significant breaches of the national objectives for NO2 still existed and additional hotspots were identified. Following further detailed assessments of air quality, a city-wide AQMA was declared in September 2010. In 2021 the Council published its Air Quality Action Plan (AQAP) prepared to address poor air quality in the city covers the period from 2021-2025 and includes an ambitious headline target to "achieve a local mean NO2 target of 30µg/m3 by 2025".

3.2 Air pollution can have a variety of causes including tail pipe emissions from transport, the wearing of tyre and brake pads, as well as emissions from heating sources within buildings (e.g. gas boilers). The pollutants are comprised of various substances including nitrogen dioxide, ozone, and particulate matter (small particles of solids like soot and dust). The latest Air Quality Annual Status Report (published June 2025 and reporting on 2024 observations) indicates that the transport sector continues to be the largest contributor (44%) to total emissions of Nitrogen Oxides (NO + NO_2) in the city, followed by combustion from industry and services (30%), domestic combustion (26%), and others: waste, agriculture, solvents, nature (<1%).

3.3 The Council's annual air quality status report (published June 2025 and reporting on 2024 observations) indicates the following in terms of current situation:

- Air pollution levels have significantly improved in the city of Oxford over the last few years since the launch of the Air Quality Action Plan (AQAP) 2021-2025. Nitrogen Dioxide (NO_2) is the pollutant of greatest concern in Oxford, it is

emitted from high-temperature combustion processes and is generally concentrated around busy roads due to its short lifetime. Across the city, it is estimated to have decreased on average by 10% in 2024 compared to 2023. Despite this, there are still air quality challenges to address.

- Only one of the 118 sites that the city monitors for NO_2 levels were in breach of the UK's legal annual mean limit value for this pollutant: Headington Hill (TF19), though this is not an area of primary concern (i.e. where members of the public are likely to be regularly present for a period of time).
- Only four of the 118 sites were in breach of Oxford's local annual mean target for NO_2 (30 µg/m3) – this target is the city's local commitment laid out in the city's AQAP, and which is expected to be achieved across the city by 2025. Those locations are St Clements (DT55), Headington Hill (TF19), and Oxford's ring road (TF31 and TF36).
- The reduction in NO_2 levels are likely linked with reductions in transport levels in the city seen recently, which are also expected to have been influenced by the closure of the Botley Road in April 2023 for improvements to the railway station, as well as the influence of the Zero Emission Zone Annual mean for particulate matter (PM2.5 and PM10) levels is measured in fewer locations than NO_2 (at AURN St Ebbes, representing urban background and Oxford High Street, representing roadside). For PM2.5, annual mean levels recorded at the city's two monitoring locations were of 6 and 7 µg/m3 respectively. These are below the current UK legal annual mean limit of this pollutant (10 µg/m3) but slightly above the WHO recommended annual mean (5 µg/m3). Annual mean PM10 levels were recorded as 9 and 13 µg/m3 respectively and have seen reductions of 0% and 7% at the city's monitoring sites compared with the levels measured at these sites in 2023. Values are well within compliance with the UK's annual mean limit value of 40 µg/m3, and just below the 15 µg/m3 guideline value recommended by WHO for this pollutant.
- Ozone is measured at one site in Oxford and levels exceeded the legal air quality objectives for this pollutant 114 times, during a total of 15 days in 2024, compared with 113 times over a total of 15 days during 2023. Therefore, AURN St. Ebbes has not met the AQ objectives for this pollutant in 2024. These breaches were likely caused by periods of warmer weather, linked with south-eastern winds coming from Europe, which brought pollutants that contributed to ozone formation.
- The report also details various positive steps that have happened over the last year with regard to addressing transport emissions. For example, the County

secured £3.6 million funding from the Department of Transport to triple its public EV chargers; the City and County held Air Quality Action Plan workshops; and the City and Canal & River Trust launched 'eco-moorings' for the first time along the Aristotle Canal for charging e-boats.

3.4 Long-term exposure to air pollution has been linked to chronic conditions such as cardiovascular and respiratory diseases as well as lung cancer, leading to reduced life expectancy. Short-term increases in levels of air pollution are associated with a range of health impacts, including lung function, exacerbation of asthma, increases in respiratory and cardiovascular hospital admissions and mortality. It can be particularly detrimental for society's most vulnerable individuals including the children, the elderly, and those with long-term health conditions. Air quality was legally recognised as a contributing factor in the death of an individual in the UK for the first time in 2020. The issues of poor air quality affect everyone, but there are often inequalities in exposure towards those living in more deprived communities for reasons such as: living in poorer quality buildings; reduced access to open space and green infrastructure; proximity to busier main roads where pollution is worst.

3.5 Poor air quality can also have negative impacts on sensitive habitats, particularly near to sources of emissions like roads with deposits of substances like nitrogen altering the suitability of the environment for certain species and changing the makeup of the ecosystem over time. Previous iterations of Habitats Regulations Assessment (HRA) have flagged that air quality impacts are a particular sensitivity that risks the habitats and species of the Oxford Meadows Special Areas of Conservation (SAC). The HRA which has been published alongside the Regulation 19 Local Plan should be referred to for additional detail.

Land quality/soils

3.6 Oxford contains several wedges of agricultural land. The best and most versatile agricultural land (Grades 1, 2, and 3a) is considered to be a national resource and should not be lost. Most of the agricultural land in Oxford is not of this quality, however, there are some parcels of Grade 2 agricultural land north of Binsey and in the Cherwell Valley.

3.7 Oxford has seen significant industrial change to the present day in fact Oxford's industrial history has resulted in a substantial amount of land affected by contamination. Almost all of the former major industrial sites have now been remediated and redeveloped, such as Lucy's in Jericho and the former car factory site in Cowley. However, there remain a number of smaller sites that have the potential to be affected by contamination.

3.8 In 1989, Oxford City Council commissioned a review of former landfill sites in the city. It was a comprehensive review that allowed the city council to manage the risks associated with those sites. A review of council-owned allotment sites was also carried out in the 1990s following some concerns about the quality of the land for growing produce. Since then, some council-owned land, such as former depots, has been redeveloped for housing and the necessary site investigations and remediation has been secured through the planning process.

3.9 Oxford City Council maintains a public Contaminated Land Register in accordance with the relevant legislation. There are currently no entries on the Contaminated Land Register. It is worth noting that the register does not include the details of sites that have been remediated through the planning process. There is the possibility that contaminated sites which have not been identified remain and thus could be added to the register in the future.

3.10 Oxford also has a number of peat-rich soil deposits which are located in several locations across the city. Peat rich soils are particularly valuable natural features which not only act as important storage for carbon (carbon sinks) but are also important for managing/storing water and also for retaining archaeological deposits. Historic British Geological Survey/Natural England mapping has these identified at Dunstan Park, around the Churchill Hospital and Lye Valley, as well as along Littlemore Brook in the south of the city. Engagement with Natural England officers previously suggests that this mapping was only approximate and that a future project is likely to result in refinements to this mapping (discussed further in Section 5). Indeed, the Council is aware of the potential for deposits more widely in the city despite historic development having likely removed much of what was once present.

Water resources/water quality

3.11 The Council has produced a separate Water Cycle Scoping Study which should be referred to for a detailed assessment of water conditions in the city. This follows best practice for preparing such studies as set out by the Environment Agency. The following is a summary of the situation in relation to water resources (supply and quality).

3.12 In terms of water supply, the city remains in an area of serious water stress as identified by the EA and this is the basis for the more stringent water use limits imposed by Building Regs which the Local Plan 2036 requires of new development. Thames Water are responsible for water supply for the city and their Water Resources Management Plan (see earlier in this background paper) notes several key challenges facing the management of the water supply for the region in the future: a growing population, climate change and the

need to protect the environment. By 2050, without taking action, the plan projects a water supply shortfall for the region of 1060 million litres per day, which increases to 1100 million litres per day by 2075. In order to tackle the shortfall, the plan proposes a variety of measures including leakage reduction, smart meter installation, free water efficiency measures and advice for customers, as well as new water supply schemes.

3.13 Water quality issues are ongoing in the city, with the majority of watercourses either classified as moderate or poor in ecological status for a variety of reasons. Oxford is located within the Thames River Basin District which is covered by the Thames River Basin Management Plan (TRBMP) which was last updated by the Environment Agency in 2022. As part of this update, revised condition assessments are available showing the variety of reasons for the condition of water quality in waterbodies, in particular:

- Agricultural practices (poor nutrient management)
- Sewage discharge
- Invasive species
- Urbanisation
- Global pollutants (uPBTs) - causing all waterbodies across country to currently be classed as fail for chemical status

3.14 Some of these stressors are not within the Local Plan's influence, for example, pollution arising from agricultural practices within the catchment, as well as the influx of invasive species into watercourse or the chemical contamination arising from global pollutants. Others are more within the influence of planning policies that guide the quality of new development, for example the treatment of urban run-off arising from urbanisation, as well as the pressures on wastewater infrastructure leading to sewage discharges (though this is partial in relation to new development, as there is already a significant proportion of existing development that new planning policies are not able to influence).

3.15 There are known capacity concerns in relation to wastewater infrastructure in the city and upgrades are required to the Wastewater Treatment works which services the city to address current capacity problems and future needs. On 20 March 2025, following a rigorous process to find a solution to the existing concerns, an announcement was made that the EA, Thames Water and Oxford City Council agreed a scheme to provide the capacity needed at the Oxford Sewage Treatment Works, this will help provide the confidence and certainty that water quality will be protected and communities in the area will have the water services they need, allowing projected growth to come forward. Separately, Thames Water's Drainage and Wastewater Management Plan (covering the period 2025 to 2050), proposes various measures to address targets for addressing known issues with the wastewater and drainage systems across their region which will include

Oxford. The Council has been engaging with representatives of Thames Water and the EA during preparation of the Local Plan 2040 and continues to do so on throughout the preparation of the new Local Plan 2045.

3.16 Groundwater is another important element of the city's water environment and the Environment Agency includes various pieces of guidance in relation to its protection. The quality of groundwater and the way it flows below the ground can be particularly important for maintaining the healthy functioning of various sensitive ecological sites around the city, including the Oxford Meadows SAC and SSSIs such as the Lye Valley. New development coming forward in particular areas needs to ensure that risks of introducing pollutants into groundwater are mitigated sufficiently but also that subterranean development, such as introduction of basements, does not interrupt water flows.

3.17 Climate change is likely to put additional pressures on the water environment in future. Drier, warmer summers could put pressure on water supply and the quality of waterbodies in the city, as well as impacting the more sensitive habitats that rely on a certain hydrological profile to support species that exist there. Equally, more intense rainfall events could put additional pressures on wastewater systems and result in additional releases of pollutants into waterbodies without appropriate mitigation measures in place.

Other impacts on the environment

3.18 The development process can have other impacts on the environment and people's health unless sufficient mitigations are put in place. In denser urban areas, sources of different types of amenity impact and pollution can be more common and their impacts increased. For example,

- Impacts of noise pollution arising from construction processes as well as when a development is in operation and from other sources such as traffic can have a variety of health impacts such as sleep disturbance, impairing concentration and causing stress in people whilst also disturbing wildlife.
- Impacts of dust released arising from during construction processes like demolition and processing materials can exacerbate air pollution
- Impacts from odour, including where development arises in proximity to particular odour sources such as sewage treatment works or industrial uses.
- Excessive artificial lighting can impair natural functions of wildlife such as birds and insects.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 The policies of the adopted Local Plan 2036 would continue to apply. There would also be national policy which affords various protections and requirements for addressing issues of pollution/contamination of air, land and water. This would be supported by the range of other associated environmental legislation, including what was touched upon in the policy context section.

4.2 Whilst air pollution arises from various sources, it is predominantly transport-related emissions (particularly fossil fuel burning engines) which is responsible for the bulk of pollutants in Oxford. The Local Plan has limited influence on transport emissions as the Council is not the highways authority. However, there are a number of schemes proposed for Oxford through the Local Transport and Connectivity Plan (LTCP) and the Central Oxfordshire Travel Plan (COTP) which, in combination, should improve air quality by reducing emissions associated with transport. These include: traffic filters, low traffic neighbourhoods (LTNs), and the zero-emission zone (ZEZ). These are likely to bring benefits even without a new local plan as they are being driven via different work-programmes and funding. The Transport background paper 012 explains these programmes in more detail.

4.3 Nationally, transport-related emissions are expected to continue to reduce as transport shifts towards electric vehicles with the phasing out of new petrol/diesel engines (previously this was delayed to 2035, although the current government have pledged to bring this date forward to 2030). Indeed, Oxford is already shifting public transport to electric modes, with the recent delivery of 159 electric buses which will help to shift 69% of the total bus mileage operating in the city to electric. There are likely to remain air quality impacts from brakes/tyres, however, small improvements could also occur in this regard as technologies improve.

4.4 Government proposals to phase out gas boilers in domestic heating, alongside tighter Building Regulations and general improvements in the efficiency of these systems, are also likely to bring improvements in relation to domestic sources of air pollutants in the absence of a new Local Plan, at least for new buildings. The effect of these improvements in reducing the sources of emissions from existing buildings will likely take more time as the retro-fitting of existing stock is a significant challenge. These issues are explored more in the Background paper 008 Carbon Reduction and Climate Resilient Design.

4.5 In terms of efficient use of land, development pressures will continue in the city regardless of a new Local Plan, with high demand for land for housing and commercial

uses in particular; pressure for higher density development; and a continued reliance on previously developed land (which also now has greater emphasis in the 2024 NPPF updates). The absence of an up-to-date Local Plan could potentially increase the pressure for development on greenfield sites within the city boundary, including open spaces which could be used for agricultural land. This could have subsequent implications for degrading soils if unmitigated, including areas of more carbon-rich peat reserves which have not already been lost, as well as the potential to have an adverse impact on the amenity of residents and visitors to the city. With use of previously-developed land, there is also likely to be a continued need to address issues of contaminated land including appropriate remediation where necessary to ensure that people do not come into contact with harmful pollutants.

4.6 In terms of water resources, Oxford is already in an area of water stress, and climate change may exacerbate this. Increased development and associated population growth will also put more pressure on water resources without appropriate mitigations. Thames Water has various plans in place to address water supply and wastewater treatment which will likely have benefits for Oxford. To be most effective, these will also need to be combined with appropriate water efficiency measures in homes and businesses, which a new Local Plan could help to implement for new developments only (not for retrofitting) as is the case with the extant Local Plan 2036. A new Local Plan would also provide infrastructure providers like Thames Water with the best certainty over the location, scale, and type of future development expected to come forward in the city allowing them to better plan for future needs.

4.7 In relation to water quality, Local Plans have varying levels of influence over the different factors negatively impacting the quality of the water environment in the city. Without a new Local Plan, problems associated with urbanisation and sewage discharge could be exacerbated as the current Local Plan policies grow out of date, meanwhile impacts of pollution relating to agriculture, or invasive species in the environment are likely to persist without other types of interventions outside of planning. There are various infrastructure upgrades and improvements that will need to be carried out by Thames Water in order to address existing capacity concerns and meet demands for the future, which will support improvements to the water environment by addressing problems of sewage discharges. Again, having an up-to-date Local Plan can help ensure that there is a clear picture of how future development will come forward in order to help inform those upgrades. Whilst the current Local Plan sets policies that help to mitigate water quality impacts from new development (e.g. SUDs policies), a new Local Plan will help to ensure the right policies are in place up to 2045 in order to mitigate impacts of future growth and complement the upgrades to infrastructure that also need to be put in place.

5. Key issues addressed through the Local Plan

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to impacts on natural resources. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

5.3 The new Local Plan continues the approach of the Local Plan 2036 in addressing different elements of natural resources and environmental quality across a number of policies. Overarching across all the topics discussed in this paper is policy R8 Amenity and Environmental Health impacts of development which covers a wide range of issues that can arise during the construction and operational phases of development. The policy sets out various impacts a development may need to mitigate including various types of pollution such as noise and vibration, light, as well as impacts of odour. This is supported by requirements for construction management plans as set out in policy C6. The Local Plan then also includes several bespoke policies which address particular issues that need more nuanced responses.

Air

5.4 Policy R4 sets out requirements in relation to air quality including requirements for Air Quality Assessments on major developments as well as general requirements with regard to designing to mitigate impacts of poor air quality, particularly on sensitive receptors. Air quality limits of new development are expected to fall in line with the local target for Nitrogen Dioxide (NO2) as set within the Council's Air Quality Action Plan, this is intended to ensure that the standards of development are aligned with the wider strategy for addressing poor air quality in the city. With the shift towards electric vehicles and electric forms of heating in buildings (as opposed to burning fossil fuels), it is expected that accordance with this target should become increasingly manageable over time.

5.5 Additional policy requirements set out elsewhere in the Local Plan, including those related to net zero carbon buildings (Policy R1) which restrict burning of fossil fuels in new development, as well as policies promoting walking/cycling/wheeling in Chapter 7 will also support air quality.

Water

5.6 The Local Plan 2045 includes a new water focussed policy—Policy R5—which addresses both the use of water (water resources) and protection of the water environment in the city (water quality). This is an important policy which responds to various pressures on water in and around the city and requires applicable proposals to submit a water awareness statement as part of their application setting out how the policy's requirements have been met.

5.7 The policy sets requirements that seek to promote prudent use of water including the tighter water use restriction of Building Regulations, as well as more general water saving/efficiency measures. This is important for seeking to mitigate impacts on water resources, which we know from the Council's Water Cycle Study are under pressure now and increasingly so in future due to factors like increased demand from population growth and hotter, drier summers due to climate change.

5.8 Additionally, the policy seeks to protect the water environment from the impacts of new development, seeking to ensure that proposals demonstrate that development will not have an adverse impact on the quality of controlled water bodies and groundwater. The policy works in tandem with a range of policy requirements across the Local Plan, such as:

- Policy G2 encouraging buffers along watercourses which seek to protect and enhance these areas where development happens adjacent to them.
- Policy G6 setting out the protection and mitigations required where development could potentially have an impact on ecological sites including those that are particularly sensitive to impacts on water quality (and/or flows of surface/groundwater and groundwater recharge.
- Policy G8 setting out requirements for multi-functional green Sustainable Drainage Systems (SuDS) which are important for helping to filter contaminants of surface water run off.

Land and soils

5.9 There are two policies in chapter 5 which deal with land and soils, policies R6 and R7. Policy R7 addresses the potential for presence of land contamination. This policy is largely unchanged from the currently adopted policy within the Local Plan 2036, with minor revisions including reference to sustainable remediation practices. It seeks to ensure applications are accompanied by appropriate investigation of land contamination where it could be present and that remediation efforts are put in place where necessary to ensure it is made safe.

5.10 Another new policy for the Local Plan, first proposed as part of the withdrawn Local Plan 2040, is Policy R6 which addresses soils and peat reserves. The purpose of these requirements are to help mitigate impacts on soils, which are a resource which takes a very long time to replenish, but one that can be impacted in various ways through development (e.g. compaction from heavy equipment during construction, sealing off by overuse of artificial surfaces etc). General requirements are included which encourage more sustainable use of soils, and whilst these will be more relevant on greenfield sites, it is important that they are considered in any development which affects soil where this could be a risk as these are important resources.

5.11 Additionally, the policy also includes requirements for preserving remaining peat reserves in the city, of which there are several recorded reserves in Oxford. Previous engagement with Natural England on mapping of peat across the UK has identified that existing mapping can be patchy and subject to some uncertainty. Indeed, the new national peat map published by Natural England in 2025 does not appear to currently identify any of the previously recorded deposits in the city on Natural England's old mapping or that appear on British Geological Survey records, although the guidance associated with this new mapping indicates it is subject to some uncertainties based on how deposits have been modelled. As such, the historic mapping has been utilised as the basis of the policies map layer as the Council is fairly confidend that this acts as a good indicator for significant existing deposits in the city based on existing knowledge of ground conditions in the city.

5.12 To accommodate for uncertainties in existing mapping, the policy also includes a requirement for investigations within 200m of the previously recorded reserves identified on the policies map if proposing development on undeveloped land. This requirement is considered to be a pragmatic solution so that the development process is informed by a sound understanding of below ground conditions in areas with a higher likelihood of deposits being found. It will also help to ensure that the Council is provided with sufficient information to make a determination about impact of proposals on other peat deposits in the city when applications come forward.

Appendix A – Regulation 18 Policy options sets

Policy options set 009a (draft policy R4): Air quality assessments and standards

Whilst air quality is improving in the city, it is important that new development is designed with appropriate consideration for existing pollutant exposure in area, potential impacts on users of the development (including sensitive users), and also the potential for the new development to exacerbate existing issues. Whilst the key pollutant of concern in the city to date has been Nitrogen Dioxide, there are a range of other pollutants which have impacts on people's health that need to be considered, including particulate matter. These various pollutants can have a range of sources including transport, boilers, manufacturing and construction processes. The city's Air Quality Action Plan (currently being updated), includes local targets for air quality that are more stringent than national targets and it is important that new development is aligned with this.

The policy options set out include requirements for undertaking air quality assessments and demonstrating that proposals have considered the range of pollutant sources during operation but also construction and that any significant impacts on air quality are mitigated. There is also an option for requiring new development to align with the city's locally set air quality targets as outlined in the latest Air Quality Action Plan. There is also an alternative option of having no locally set policy on air quality.

Table 1: Policy options set 009a: Air quality assessments and standards

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require Air Quality Assessments (AQAs) for all major developments, and any other development considered to have a potentially significant impact on air quality. The AQA must consider all the different sources of air pollution during operational and construction phases (including but not	Improving local air quality, mitigating the impact of development on air quality and reducing exposure to poor air quality across Oxford is key to safeguarding public health and the environment. The whole of the city was declared an AQMA in September 2010. A policy in the Oxford Local Plan can influence and seek improvements in air quality at both a local and strategic level. For example, the	Additional assessment/modelling requirements for applicants which adds to the information they would need to submit with a planning application.

limited to: transport, heating, dust generated from construction activities, etc). Any resultant significant impacts on air quality inside an AQMA must be mitigated.	encouragement of active travel options reduces dependence upon use of private cars, the majority of which are currently non-electric vehicles (EVs). The Air Quality Action Plan (AQAP) has been produced as part of the City Council's statutory duties and it outlines actions to be taken to improve air quality in Oxford 2021-2025. Key objective is to bring NO2 emissions into legal compliance as soon as possible and to go beyond legal compliance.	
Option b Require all new major developments within the city's AQMA to comply with the locally-set, more stringent, air quality standard for Nitrogen Dioxide (NO2) set out in the city's latest air quality action plan (AQAP) (currently a target of 30µg/m3) as well as compliance with current national air quality objectives (unless superseded by local standards).	This target would set an ambitious standard for accepted Nitrogen Dioxide emissions from all new development in recognition of the rigorous target the City Council has set locally within its Air Quality Action Plan (AQAP). The standard would potentially become more challenging if the AQAP is updated with tighter standards in future. The target is currently 10ug/m3 lower than the UK's current annual mean limit value for this pollutant.	A more stringent target will set a higher standard for new development in the city which could be considered more onerous for applicants. This is an additional standard to the requirements that developments currently follow in the current local plan.
Option c Do not include a policy about air quality assessments but rely on other regulatory regimes.	None identified	This option is not considered to be reasonable due to the poor air quality across the city, and the whole city already covered by an AQMA. Relying upon national legislation ignores the Oxford context and the city's ambition to go beyond national targets.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or a+b, or c **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective

Screened in for detailed appraisal? No

Rationale: These options are about whether to set local policies about air quality (options a and b) or to rely on national policy and regulatory regimes (option c). The whole of Oxford is covered by an Air Quality Management Area (AQMA) so air quality is a sustainability issue of particular relevance to Oxford. Historically there have additionally been air quality 'hotspot' areas identified, where pollutant levels were of even greater concern than the rest of the city, although in recent years the levels at the majority of these hotspots have now reduced significantly as a result of various measures to improve air quality (as set out in the Oxford Air Quality Action Plan), such that they no longer warrant bespoke policy measures for those areas. The AQAP sets more stringent targets for air quality than national targets, and as the monitoring in the AQAP report sets out, those more ambitious targets are being met in recent years, so it would a reasonable approach for LP2042 to continue to set ambitious targets to tackle the issue of air quality.

In terms of sustainability impacts, options a and b could potentially help to meet **criterion 8 reduce traffic and associated air pollution**, because although the options aren't about traffic, they encourage consideration of air pollution and as emissions from transport are one of the biggest contributors in Oxford then any AQA would need to consider the operational impacts which would include transport (as well as other sources of air pollutants). This is partly however subject to implementation. Option b is likely to have the greatest positive impact because that sets stringent targets whereas option a only requires consideration of air quality but does not set targets. Option c would be neutral because it does not go beyond the national policy baseline and sets no targets, however emissions from transport are likely to continue to reduce under this scenario as the national transition away from fossil fuel transport and heating sources continues. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

1373

Air quality assessments and standards – Draft policy R4

The preferred approach for the Local Plan policy is to have a local policy that addresses air quality so as to ensure that impacts on health, particularly for the most sensitive groups, are fully considered and that progress on improving the city's air quality continues. This recognises that this issue is an important one locally, as well as a particular objective to be addressed by the new Local Plan, and responds to the ongoing AQMA designation which covers the entire city.

This means a combination of **options A and B**, with option A helping to ensure that new development fully considers the issues of relevance in relation to existing air quality issues in the area, but also how a proposal could be impacted by this or could impact upon it via submission of an Air Quality Assessment. Option B will also help to ensure that new development is designed in a way that is aligned with the city's local objectives for addressing air quality, including aligning with the local air

quality targets which are tighter than national targets in relation to Nitrogen Dioxide (for which past exceedances are the reason for which the city's AQMA designation is in place).

Policy options set 009b (draft policy R5): Water quality and resources

The city is subject to various issues impacting the water environment. Oxford is in an area of water stress and this stress is likely to increase due to climate change, meaning that it is imperative that new development uses water prudently and minimises waste. Equally, watercourses around the city are subject to pollution from various sources which impact on their ecological status, some of which is associated with the development process (e.g. urbanisation increasing pollutant run off; pressures on wastewater systems leading to sewage discharges). Whilst the Local Plan cannot fully protect or mitigate all of the ongoing challenges facing the water environment (which is subject to actions carried out by stakeholders across the wider catchment), it can help to ensure that the impacts from new development are fully considered and appropriately mitigated.

Various design choices can help to address pressures on the water environment, from the way services and water fittings are implemented within buildings, to the way that green infrastructure and sustainable drainage systems are incorporated in areas around buildings. As such, one option would be to ensure that considerations affecting water are spread throughout relevant policies of the Local Plan to ensure a wholistic approach to assessing new development. Alternatively, because issues impacting the water environment are so pronounced, and subject to increasing concern, it may be more appropriate to include a bespoke policy addressing these requirements, though there may be some repetition/crossover with other policy areas. The options also include requirements for separating foul and surface water in when designing drainage for new sites, to reduce pressure on the sewage system.

Table 2: Policy options set 009b: Water quality and resources

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a bespoke policy on water resources and water quality. This would include various requirements such as	Ensures that water quality is addressed separately in any development. Having a bespoke policy is a clearer way of presenting the various requirements for water use and water quality for applicants and also decision	This could result in unnecessary repetition in the Local Plan and additional information being prepared for a proposal that would have already been undertaken as part of the SuDs design, and would have already been considered in assessing any potential impacts of the proposal on water quality.

requiring measures to limit water use and conserve water, including meeting the tighter Building Regs water use limits. Also, measures to mitigate impacts on water quality, such as use of Sustainable Drainage Systems (SuDs).	makers, and transparently demonstrating compliance with Water Framework Directive requirements.	
Option b Do not have a bespoke policy but instead incorporate water resources/ quality considerations into other policies about managing the impacts of development.	This approach ensures that water quality is addressed through approaches such as: ensuring water use is limited to certain standards in new development through resilient design and construction; the use of SUDs in development; and the provision of evidence in any planning application submitted which demonstrates that there would not be a negative impact on water quality.	Previous feedback on the Local Plan 2040 from the Environment Agency flagged concerns about this approach including that there was potential for it to result in elements of water quality being overlooked. It is also potentially a more complicated way of presenting the policy position rather than having a bespoke policy.
Option c Expect that foul water is separated from surface water drainage on development sites. Require a Foul and Surface Water Drainage Strategy for all new build residential development and non-residential development above a certain threshold.	Would ensure that appropriate consideration is given to foul water drainage and how this is handled on site regarding sewer system. Would ensure that design of foul water drainage is appropriately informed by strategy on larger developments.	Additional requirements placed upon developers in order to achieve planning permission.

1375

Option d Do not include any policy direction about water quality but rely on other regulatory regimes and national policy.	The NPPF includes high level guidance about water quality and drainage (paragraph 182).	Would not address Environment Agency concerns raised at LP2040.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Option a or b or d (they are alternatives) or combination with option c **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal? -** No **Rationale:** These options are about whether to set local policy requirements about water quality (options a or b) or to rely on national policy and regulatory regimes (option d). Option c would require additional information to be submitted in relation to foul and surface water drainage which is important for reducing impacts on sewer network. Options a, b and c would score positively for **criterion 9 water quality targets**, but option a would set out the requirements in a single policy whereas in option b the issue of water quality would be woven into other relevant policies through the plan (the requirements themselves are not expected to differ, the choice is principally in how they are presented). Option d will be neutral in some respects because there are regulatory regimes that should prevent deterioration of water quality in various ways, alongside Thames Water's own responsibilities for addressing this challenge, however, there could potentially be some negative impacts where national standards are not considered enough, particularly in light of known challenges with water quality in the city and this makes this option unlikely to be reasonable to take forward. Overall, it is considered that the sustainability impacts from the options do not differ significantly enough to warrant them being scoped in for further detailed appraisal.

1376

Water quality and resources – Draft policy R5

6.7 Again, the preferred approach for the Local Plan policy is to have a local policy that addresses the issues of water resources and water quality. Whilst the local plan will not be able to fully address the various stressors on the water environment which arise from various sources such as climate change, pollution from land use management like some agricultural practices, as well as the actions of stakeholders beyond the city, it can still help to ensure the impacts from new

development are appropriately considered and mitigated. Previous feedback on the Local Plan 2040, which proposed addressing water issues across various policies instead of one policy, suggested that stakeholders such as the Environment Agency wanted to see a bespoke policy which would provide more clarity and better signpost this as a key issue facing the city.

6.8 As such, the preferred approach is a combination of **Options A and C. Option A** will mean setting out a policy with various requirements for how development should address conserving water, including that they follow the optional tighter standard for water use limits, as well as incorporating other water saving measures. It also means including requirements for how water quality should be preserved, which would have overlap with other policies in the plan such as use of sustainable drainage measures. The preferred approach would also include **option C** which is to ask applicants to ensure foul water is separated from surface water in drainage systems, which can help reduce the strain on wastewater systems, and, on larger developments, go further and ensure their application is supported by a foul and surface water drainage strategy which can fully set out how these issues have been considered.

1377

Policy options set 009c (draft policy R6): Soil quality

Earlier sections of the background paper identify that construction practices and inappropriate design of new development can have harmful impacts for soils, of which Oxford has varying quality. Soils are important for providing a range of benefits, from supporting green infrastructure and habitats, to flood storage and locking up carbon. In particular, Oxford has several areas of particularly valuable peat deposits, which are especially important carbon sinks as well as sources of archaeological deposits. Whilst existing mapping identifies several recorded deposits, there is potential for additional areas of deposits in undeveloped land nearby which have not been officially recorded.

The options set includes an option for setting out requirements to ensure new development considers its impact on soils, regardless of their quality, and seeks to adapt design and construction practices to help ensure sustainable management of soils and mitigate harmful impacts. In addition, there is an option for having additional requirements in relation to protecting peat reserves because of their particular range of benefits they provide, which would focus on the known peat deposits, but could also incorporate requirements for investigating and addressing potential undiscovered deposits nearby.

Table 3: Policy options set 009c: Soil quality

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Set out requirements/principles for conserving and enhancing soils.	Construction practices, including use of heavy machinery, below ground construction and reworking of soil layers can have detrimental impacts on long-term health of soils. Incorporating standards within policy to guide design and construction would help to ensure the least impactful practices are followed wherever possible to avoid and mitigate impacts. Preserving soil health could help to secure multiple benefits in the long term, including for biodiversity, flood risk (improved flood storage) and climate change (healthier soils can better lock up carbon).	Different sites and types of proposed development will result in a variety of considerations and different solutions that will be needed. Unlikely to be a one-size-fits-all solution that a policy could guide applicants towards. Asking applicants to tailor construction processes to avoiding impacting soil quality e.g. through avoiding loss, erosion, compacting soils with heavy machinery is likely to impose additional challenges for design and construction and potentially incur additional cost and resource.
Option b Set out additional standards for the protection of peat reserves including no loss/dewatering of these reserves.	This approach would help to ensure that some of the most valuable types of substrate, not only for locking up carbon, but also archaeological remains, are preserved where they still remain. This is particularly important as peat deposits take a significant period of time to develop. The most pragmatic approach would be to focus this policy requirement on the known areas of recorded peat deposits in the city according to public mapping from Natural England with a precautionary buffer area, whilst treating the surrounding areas with an element of caution, focusing requirements for additional investigation only to proposals on undeveloped sites in the vicinity.	Known, publicly accessible mapping of peat reserves that applicants could rely upon is potentially patchy. Whilst it seems most appropriate to focus requirements for additional investigation to areas within or around recorded deposits, the approach could potentially miss out on unknown deposits located more widely across the city. Requirements for additional investigations within the buffer zones to known reserves will incur additional cost and resource from applicants, though this could be reduced by focusing on undeveloped land where potential for underlying peat is potentially higher.
Option c	None identified	National policy is fairly limited in guidance for conserving soils and peat so a lack of local policy may

1378

No additional policy for addressing soil quality or protection of peat.		lead to further deterioration and loss of peat (which is effectively irreplaceable).

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - either option A, B, A+B, or C **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** The options represent varying levels of protection that local plan policy could provide for soils, with option a setting out general requirement and guidance, and option b setting out additional protections for peat reserves (which could theoretically be standalone or in combination with option a). Option c would mean setting no local policy. The sustainability impacts relate most directly to **SA criterion 3. Efficient Use of Land** with option a and b representing minor significant impacts for protecting soils. Admittedly, the additional protections for peat could have negative impacts for the same criterion at the site scale in a select number of locations in the city where development capacities of sites in proximity to peat reserves could be limited by their additional protection (although these circumstances are expected to be quite limited). Option b would also represent an additional indirect positive impact for **criterion 1. Carbon Emissions** because it would help to ensure that the most carbon-rich reserves recorded in the city (peat reserves are typically significant carbon sinks) would be protected from further loss arising from the development process – although these resources are not factored into the city's specific net zero target roadmap. Option c is likely to be a minor negative impact for criterion 3. in relation to soil quality because there is little specific guidance in national policy alone that development would need to follow, thus without local guidance development has a far greater likelihood of coming forward in ways that degrade soils. The same is likely true for criterion 1. although the impact of option c may be closer to neutral in this regard as peat reserves in the city do tend to occur near to waterbodies or within areas of green space that mean they may benefit from additional protections that could mitigate some of the harm, although these are not specific to conserving below ground deposits like peat. Overall, the sustainability impacts are unlikely to be significant or to differ much between the options and screening in for detailed appraisal is not considered necessary.

1379

Soil quality – Draft policy R6

6.11 To ensure impacts on soils are fully considered and opportunities for sustainable soil measures incorporated, the preferred approach is to follow **Option A and B** and include a local policy on soil quality. **Option A** will allow the Council to set

out various principles which applicants will need to follow, depending on the context of the site. This should help to ensure that future development mitigates impacts on soils as much as possible and ensure the issue of soil quality has greater prominence than in the current Local Plan.

6.12 In addition, **Option B** would help to respond to concerns flagged about the Local Plan needing to protect remaining peat reserves in the city as part of the previous Local Plan 2040 preparation and would recognise the particularly important role these deposits serve as carbon sinks and sources of archaeology which will be hard to replace if lost. It is acknowledged that mapping of peat reserves in the city is subject to some uncertainty, however, the focus on the recorded reserves according to publically accessible Natural England mapping would be bolstered by a buffer zone that seeks to ensure proposals nearby sufficiently investigate potential for peat on their sites and respond accordingly.

Policy options set 009d (draft policy R7): Contaminated land

Many of Oxfords past major industrial sites have been subject to remediation to address potential land contamination in the past, however, there is potential for additional contamination on smaller sites across the city due to Oxford's long history of settlement. Whilst national policy already sets various requirements for developers to address contamination, there is the option to set out specific local policy expectations for ensuring that potential contamination investigated and appropriately mitigated, with the alternative option being not to include a local policy at all.

Table 4: Policy options set 009d: Contaminated land

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a policy that requires the submission of details of investigations of any site suspected to be contaminated and details of remedial measures which must then be carried out.	This would be a continuation of the existing policy (currently set out in policy RE9). This approach ensures that there will be no threat to the health of future users or occupiers and no adverse environmental impacts.	Additional assessment/modelling requirements for applicants which adds to the information they would need to submit with a planning application.

1380

Option b Do not include a policy about land quality but rely on national planning policy and other regulatory regimes.	NPPF includes general policies about ground conditions and pollution and remediation.	This option is not considered to be optimal as the relatively large proportion of brownfield sites in Oxford means that there are more sites with potentially contaminated land than in other areas.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - either option a or b (they are alternatives) **High-level screening conclusion? -** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** The options presented are either to have a local policy that requires applicants to demonstrate they have sufficiently investigated potential for land contamination where relevant (and carried out sufficient remediation) or not to have a local policy. In terms of sustainability impacts, the options relate most directly to SA **criterion 3. efficient use of land** and would also indirectly impact upon **5. Inequalities** (in relation to impacts on health). Option a would likely have a minor positive impact for criterion 3. in that it would allow for the efficient reuse of brownfield land through ensuring the previous contamination is investigated and remediated, ensuring this land can be brought back into use. It would have neutral or slight positive impacts for criterion 5. in that it would help ensure any harm to future occupiers' health is avoided, though the sites may not have been suitable for redevelopment at all without appropriate action to address any existing contamination too. Option B is likely to have a neutral impact across the criteria, as there is at least national policy guidance about addressing contamination, as well as other environmental quality legislation. The options are not considered to have significant sustainability impacts to warrant further detailed sustainability appraisal.

1381

Contaminated land – Draft policy R7

6.14 Whilst national policy is already fairly strong on requirements for considering contaminated land, the preferred approach is to follow **Option A** and set out a local policy for addressing contaminated land. This would allow the Local Plan to clearly set out the specific local context of contamination in Oxford and provide applicants with a steer on the Council's expectations for how potentially contaminated sites are investigated and remediated.

Policy options set 009e (draft policy R8): Amenity and environmental health impacts of development

The constrained nature of the city means that development is often coming forward in close proximity to existing uses with various amenity implications where design has not considered this existing context. New development can have various impacts either as part of the construction process, or once in operation, particularly in relation to noise, dust and vibration, but also in other respects, such as glare, emission of pollutants and other forms of nuisance. These impacts can affect not only people but also the wider environment. Equally, the operation of existing uses nearby can impact upon users of a new development if a proposal is brought forward without due consideration. These existing uses may mean appropriate mitigation needs to be incorporated as part of the new development to ensure a reasonable and healthy environment for new occupants.

Some of these considerations, particularly those arising from the construction process and transport movements, will be factored into the production of construction management plans which would be required elsewhere in the Local Plan (discussed more in background paper 012/ draft policy C6). However, an option has also been considered for a broader amenity policy that could address these issues as a whole, alongside an option not to include a local policy.

1382

Table 5: Policy options set 009e: Amenity and environmental health impacts of development

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require that new proposals do not result in unacceptable impacts on amenity as a result of noise, nuisance from light, dust, fumes etc. Continue to require that impacts of developments must be mitigated to ensure that the amenity of communities, occupiers	This approach ensures that any potential threat to the residents, future occupants and existing communities from the development are assessed and mitigated appropriately. This is not a prescriptive policy but one that ensures that the impacts of development are comprehensively considered and mitigated where applicable. This option should provide greater protection to the health and wellbeing of the population.	Additional assessment/modelling requirements for applicants which adds to the information they would need to submit with a planning application.

and residents are protected.		
Option b Do not include a policy but rely on national planning policy and other regulatory regimes.	Relying on regulatory regime would be familiar to developers and not unreasonable burden.	Regulatory regimes may provide the minimum standards of protection, however, having a local policy helps to ensure the impacts of development are properly considered and assessed in the local context of Oxford.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - either option a or b (they are alternatives) **High-level screening conclusion? -** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** One option is to include local policy that sets standards for protecting amenity and environmental health from the impacts of new development, and the other is to not include a local policy. The nature of this policy option set is that it is likely to impact upon a range of SA criteria such as **8. traffic and associated air pollution, 9. Water Quality, and 5. Inequalities** (the health element of this), due to the broad range of considerations it addresses. However, as it is focussed on ensuring mitigation to avoid negative impacts from new development this is likely to result in neutral impacts overall for these criteria. Option b would potentially therefore result in minor negatives for the same criteria, where development could come forward and cause amenity/environmental health consequences, however, this impact is mitigated by the presence of various other types of environmental health legislation and national requirements that could reduce these negatives, although it is less likely these would align with local objectives. Overall, the sustainability impacts of the options are not significant or different enough from each other to warrant further detailed appraisal.

1383

Amenity and environmental health impacts of development – Draft policy R8

6.17 Again, the preferred approach for the Local Plan is following **Option A** to include a local policy on amenity and environmental health impacts of development. This recognises that the nature of the many constrained sites in the city means

that applicants need to consider a variety of impacts from their development on the surrounding area and vice versa and allows the Council to set out the key issues it wants to see applicants address.

6.18 The local policy can help ensure issues like noise, dust and vibration are considered as well as other impacts, to ensure that amenity for occupiers and neighbours as well as impacts on wider environment are sufficiently mitigated, although not all issues will be relevant to all applications. There is likely to be some crossover with other policies, such as the requirements for Construction Management Plans, however this policy would address broader issues like the impacts arising from the development once in operation too (not just the construction stages). Without a local policy, some of these considerations risk being missed, or not being sufficiently addressed upon submission of an application, potentially delaying the decision process.

1384

Background paper 010

Title: Health and Wellbeing

This paper addresses: Regeneration, geographical spread of new development, accessibility of areas of deprivation, availability of green space in areas of deprivation and availability of essential services/facilities in areas of deprivation.
Relevant Local Plan Objectives: • Provide access to affordable, high-quality and suitable accommodation for all. • Curate a built environment that supports and enables people to be physically and mentally healthy.
SA Objective(s): 5. To reduce poverty, social exclusion, and health **inequalities**.
SEA theme(s): Human health, population, material assets.

1. Introduction

1.1 The causes of poor health and wellbeing do not arise by chance and cannot be explained by genetics alone. It is now recognised that the built environment can have a significant impact on health and health inequality. The way that areas are designed and constructed can have a tangible impact on many of the wider determinants on health and wellbeing, such as peoples' activities, communities, economies and lifestyles.

1.2 Furthermore, health is not consistent across the population and stark inequalities often exist across population groups, even over small areas. Health and wellbeing are strongly correlated with levels of socio-economic deprivation, for example, with those living in the most deprived areas typically facing worse health inequalities compared to those living in less deprived areas.

1.3 As such, there are many indicators of health and wellbeing which can be influenced by planning. This paper highlights a range of physical and mental wellbeing indicators, which together begin to build a general overview of the health of Oxford's population.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Planning Policy Framework (Dec 2024)

2.1 The **National Planning Policy Framework (NPPF)** updated in December 2024 is explicit in its support for healthy place shaping. It states in paragraph 96 that:

Planning policies and decisions should aim to achieve healthy, inclusive and safe places which:

a) promote social interaction, including opportunities for meetings between people who might not otherwise come into contact with each other – for example through mixed-use developments, strong neighbourhood centres, street layouts that allow for easy pedestrian and cycle connections within and between neighbourhoods, and active street frontages;
b) are safe and accessible, so that crime and disorder, and the fear of crime, do not undermine the quality of life or community cohesion – for example through the use of well-designed, clear and legible pedestrian and cycle routes, and high quality public space, which encourage the active and continual use of public areas; and
c) *enable and support healthy lifestyles, especially where this would address identified local health and well-being needs – for example through the provision of safe and accessible green infrastructure, sports facilities, local shops, access to healthier food, allotments and layouts that encourage walking and cycling.*

2.2 The NPPF further seeks to promote healthy lifestyles and wellbeing with requirements that have implications for placemaking, including restrictions on the location of hot food takeaways (paragraph 97), positive planning for the provision of shared spaces and community facilities, avoiding the unnecessary loss of such facilities, and ensuring an integrated approach to considering the location of housing, economic uses and community facilities (paragraph 98).

2.3 **Planning Practice Guidance (PPG)** sets out that plan-making bodies will need to discuss emerging strategies early with bodies such as NHS England and local clinical commissioning groups, while maintaining an awareness of the potential impacts of development on health infrastructure.

National guidance documents

2.4 NHS England Long Term Plan (Jan 2019) aims to ensure that the nation's future health is given high regard when planning and designing places. "*Wider action on prevention will help people stay healthy and also moderate demand on the NHS. Action by the NHS is a complement to – not a substitute for – the important role of individuals, communities, government, and businesses in shaping the health of the nation*". Lessons have already been learned from healthy new town demonstrator sites around the UK and principles for

healthy place making have been incorporated into the NHS 'Putting Health into Place' guidance.

The Marmot Report and 2020 update

2.5 The Marmot report of 2010 "Fair Society, Healthy Lives" stated that there must be prioritisation of policies that both reduce health inequalities and mitigate climate change by improving active travel, the availability of good quality open and free spaces, the food environment in local areas and energy efficiency of housing across the social gradient. It also suggested that planning, transport, housing, environmental and health systems should be fully integrated to address the social determinants of health in each locality.

2.6 Ten years on from that review, an update published in 2020 by the Institute of Health Equity, highlighted various negative observations on health equity across England, including a stalling in improvements to life expectancy, an increasing health gap between the wealthiest and poorest parts of the country, and that people are spending more of their lives in poor health. It highlighted that the original recommendations made in 2010 are still relevant, and increasingly so, in many cases.

Marmot Places

2.7 The Institute has promoted the concept of 'Marmot Places', which are areas where local authorities and policy makers recognise that health inequalities are largely shaped by the social determinants of health and pursue policies and interventions that aim to improve health equity. Such interventions are based on the 8 Marmot Principles, and there is a commitment by such places to improve health equity over the short, medium and long term by:

1. Developing and delivering approaches, interventions and policies to improve health equity.
2. Strengthening their health equity systems.
3. Involving communities in the identification of the drivers of poor health and in the design and implementation of actions to reduce them.
4. Broadening advocacy on health equity and engaging with other Marmot Places to share knowledge, roll out best practice alongside partners in local regions and nationally.

Regional supporting strategies

2.8 The **Oxfordshire Joint Health and Wellbeing Strategy (2024-2030)** sets out how the NHS, Local Government and Healthwatch will work together as the Oxfordshire Health and Wellbeing Board, to improve health and wellbeing in Oxfordshire. The vision of this strategy is:

"To work together in supporting and maintaining excellent health and well-being for all the residents of Oxfordshire"

2.9 To achieve this vision, the Health and Wellbeing Board propose to focus on:

- *Agreeing a coordinated approach to prevention and healthy place-shaping.*
- *Improving the resident's journey through the health and social care system (as set out in the Care Quality Commission action plan).*
- *Agreeing an approach to working with the public so as to re-shape and transform services locality by locality.*
- *Agreeing plans to tackle critical workforce shortages.*

2.10 Cutting across all of these priorities is a commitment to shift the focus to the prevention of ill health, reducing the need for treatment and care whilst also tackling health inequalities.

2.11 **Oxfordshire Local Industrial Strategy (July 2019):** Oxfordshire's LIS Vision Statement aims to position Oxfordshire as one of the top three global innovation ecosystems by 2040, building on the region's world leading science and technology clusters to be a pioneer for the UK in emerging transformative technologies and sectors. The LIS recognises the importance of planning for the health and well-being of communities and integrating the concept of healthy place shaping in developing communities. It also recognises the importance of 'inclusive growth' to ensure that the benefits of economic growth are felt by those in more deprived communities, thereby addressing the problem of income inequality that is a key cause of health inequalities.

Local Transport Connectivity Plan 2022-2050 (LTCP5)

2.12 The LTCP5 was published in July 2022 and follows on from the previous **Local Transport Plan 2015-2031 (LTP4).** The vision is of a net zero travel system for the county that protects the environment and makes for a better quality of life for communities that live there. The objectives of the strategies are to reduce the need to travel, reducing reliance on individual private car use and promoting alternative modes such as walking, cycling and public or shared transport as natural first choices.

2.13 There is a greater emphasis on promoting a 'decarbonised' transport network, air quality and productivity on a sustainable basis, which includes highlighting role of digital infrastructure in enhancing connectivity and reducing the need to travel.

2.14 There are direct implications on public health and wellbeing, and the policies specifically focus on healthy place-shaping. The creation of liveable neighbourhoods, that are made up of communities where social connections are easy and local amenities and services are readily accessible, and where active travel (walking, cycling) is a viable option and car journeys are minimized. There is a greater ready availability of public or shared transport, and an environment that incentivizes active travel. The promotion of a net zero or 'decarbonised' transport network can also have impacts in terms of air quality.

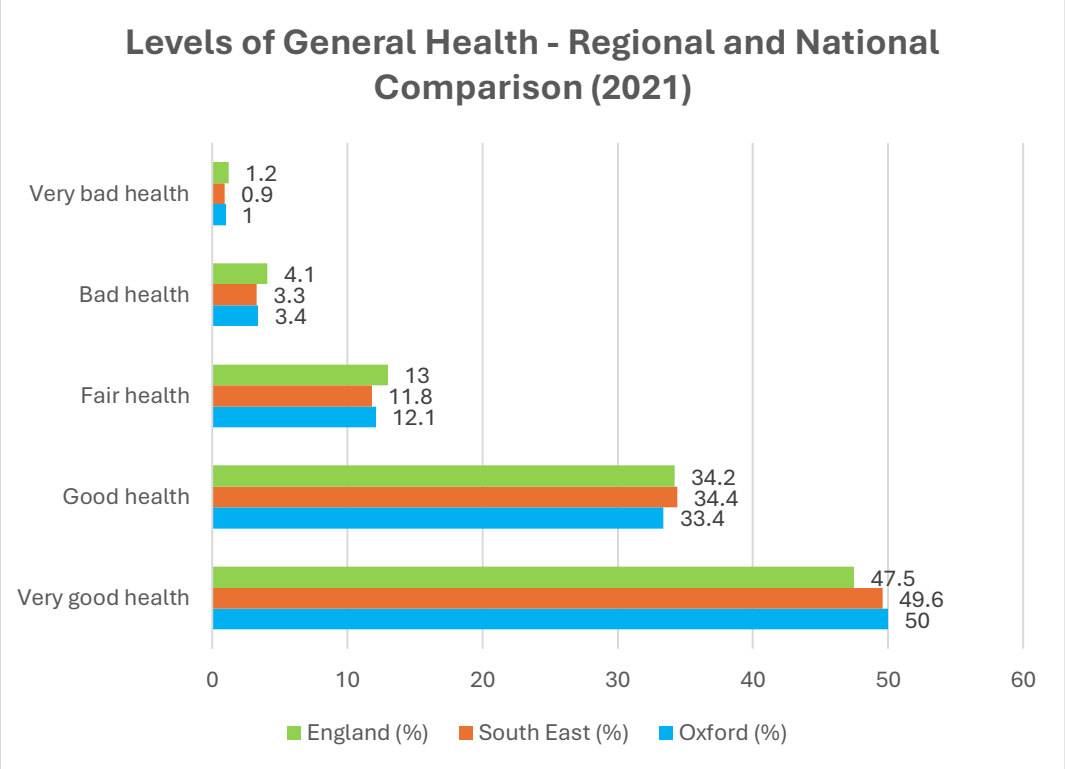
2.15 **The Joint Strategic Needs Assessment Annual Summary Report 2023:** The Joint Strategic Needs Assessment (JSNA) monitors trends in the health and wellbeing of Oxfordshire's population and assesses changing patterns of need and demand for services across the county. Much of the data set out in this paper is taken from this report.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

Levels of General health

3.1 In 2021, 50% of Oxford residents described their health as “very good”, increasing from 48.3% in 2011. Those describing their health as “good” fell from 33.8% to 33.4%. the proportion of Oxford residents describing their health as “very bad” was 1.0% (similar to 2011), while those describing their health as “bad fell from 3.9% to 3.4%.

3.2 Figure 3.1 shows a higher percentage of people in Oxfordshire report good or very good health than in the South East or in England. Oxford has a higher level of people reporting good or very good health than the national and regional average, but at a lower level than the last reporting in 2021. Compared across the county, Oxford has a lower level than West and South Oxfordshire districts.



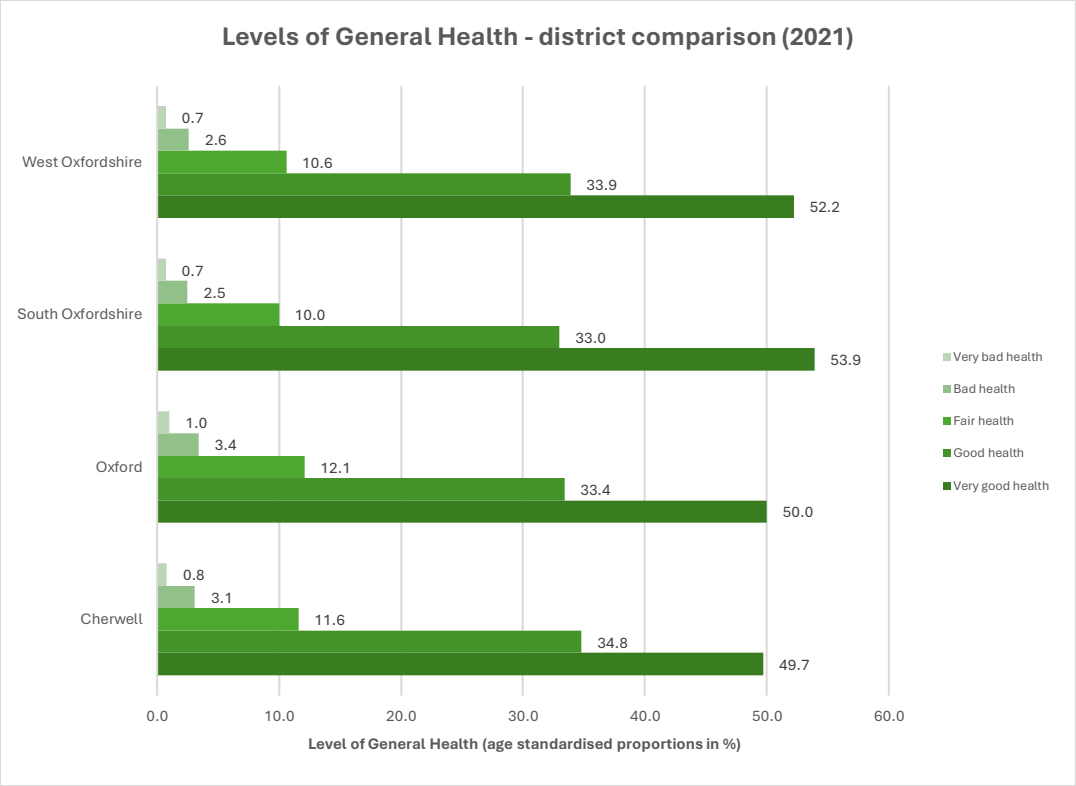


Figure 3.1 - Level of reported health – regional, national, and district comparison (Census 2021)

3.3 Figure 3.2 shows a range of health indicators and how Oxford compared to the benchmark of South East England and England. For several indicators, Oxford performs better than the benchmark, for example for life expectancy at birth (female), percentage of physically active adults, and Year 6: prevalence of obesity (including severe obesity).

Indicator	Period	Oxford			Oxon	England	England		England	
		Recent Trend	Count	Value	Value	Value	Worst		Range	Best
Life expectancy and causes of death										
Life expectancy at birth (Male, 3 year range)	2021 - 23	–	-	80.4	81.3	79.1	73.1			83.4
Life expectancy at birth (Male, 1 year range)	2023	–	-	80.6	81.6	79.3	73.4			83.2
Life expectancy at birth (Female, 3 year range)	2021 - 23	–	-	83.9	84.9	83.1	78.9			86.5
Life expectancy at birth (Female, 1 year range)	2023	–	-	83.4	84.5	83.2	78.2			86.8
Under 75 mortality rate from all causes New data	2024	→	322	312.3	250.8	329.4	563.5			191.9
Under 75 mortality rate from cardiovascular disease	2024	→	67	68.4	51.4	74.3	138.9			33.8
Under 75 mortality rate from cancer	2024	→	111	108.0	102.1	117.9	169.0			74.6
Suicide rate	2022 - 24	–	38	9.4	9.4	10.9	20.6			4.6
Injuries and ill health										
Killed and seriously injured casualties on England's roads	2024	–	-	-	67.0*	89.8*	-		*Insufficient number of values for a spine chart*	-
Emergency Hospital Admissions for Intentional Self-Harm	2023/24	↓	210	100.6	97.3	117.0	342.5			36.1
Hip fractures in people aged 65 and over	2023/24	→	120	560	519	547	849			120
Percentage of cancers diagnosed at stages 1 and 2	2022	→	245	59.3%	60.2%	56.8%	48.0%			66.8%
Estimated diabetes diagnosis rate	2018	–	-	66.8%	67.2%	78.0%	54.3%			98.7%
Estimated dementia diagnosis rate (aged 65 and older) > 66.7% (significantly) similar to 66.7% < 66.7% (significantly)	2025	→	1,152	64.7	63.0*	65.6	45.3			94.2
Behavioural risk factors										
Admission episodes for alcohol-specific conditions (under 18 years)	2021/22 - 23/24	–	15	17.3	18.3	22.6	75.2			3.8
Admission episodes for alcohol-related conditions (Narrow)	2023/24	→	574	445	414	504	890			240
Smoking Prevalence in adults (aged 18 and over) - current smokers (APS) New data	2024	–	-	9.9%	7.5%	10.4%	20.8%			2.4%
Percentage of physically active adults	2023/24	–	-	73.4%	73.9%	67.4%	48.9%			81.1%
Overweight (including obesity) prevalence in adults, (using adjusted self-reported height and weight) (18+ yrs)	2023/24	–	-	49.6%	58.6%	64.5%	77.2%			42.6%
Child health										
Under 18s conception rate	2022	→	17	6.0*	9.2	13.9	34.4			4.2
Smoking status at time of delivery	2024/25	→	59	5.5%*	5.5%*	6.1%	13.2%			2.2%
Infant mortality rate	2022 - 24	–	16	3.7*	2.4	4.2	8.7			1.2
Year 6 prevalence of obesity (including severe obesity) (10-11 yrs)	2024/25	–	250	19.0%	17.8%	22.2%	30.7%			9.7%
Deprivation score (IMD 2019)	2019	–	-	16.7	11.7	21.7	45.0			5.5
Inequalities										
Smoking prevalence in adults in routine and manual occupations (aged 18 to 64) - current smokers (APS) New data	2023	–	-	*	15.3%	19.5%	54.8%			2.4%

Figure 3.2 Health indicators, Oxford compared to benchmark of Oxfordshire and England (Department of Health and Social Care, 2023)

Active Travel

3.4 The latest Sport England data (November 2023-24) shows that the South East of England Region had a lower proportion of adults (33%) participating in active travel (at least twice in the last 28 days) compared to Oxford City (56%)

3.5 There has been a rise in active travel in all districts since November 2020-21. However, active travel remains lower than before the coronavirus pandemic which may be due to changes in active travel because of home working.

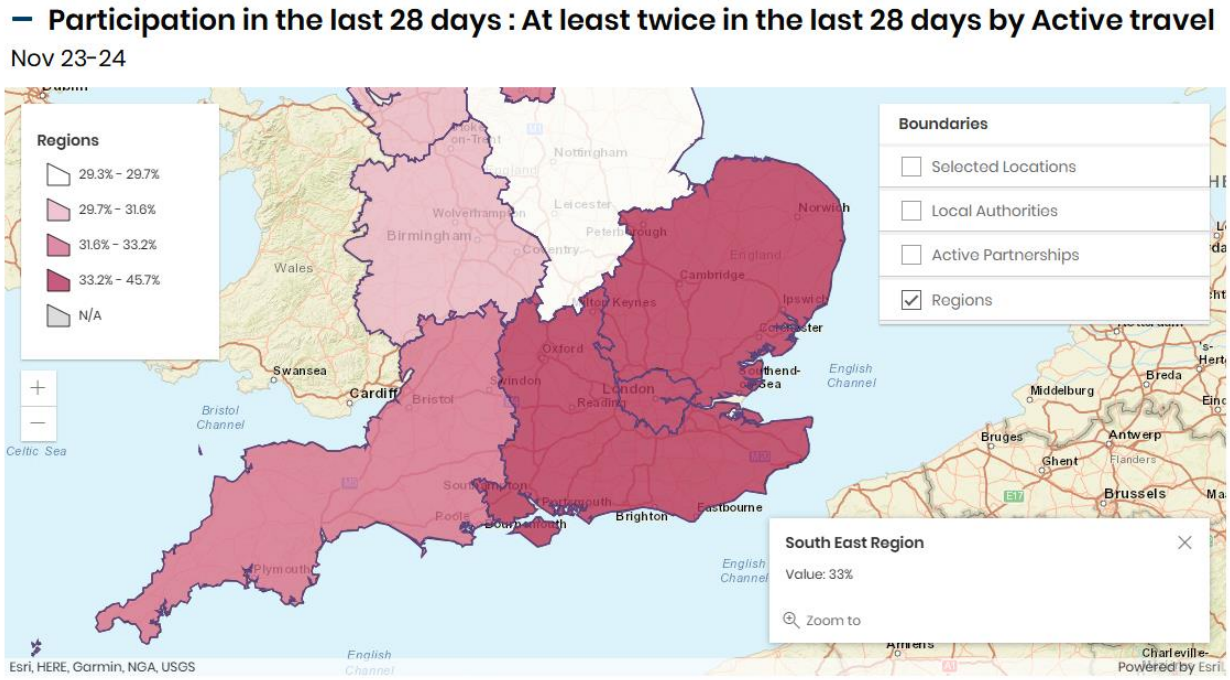

Figure 3.3 Regional participation in active travel (Sport England, 2026)

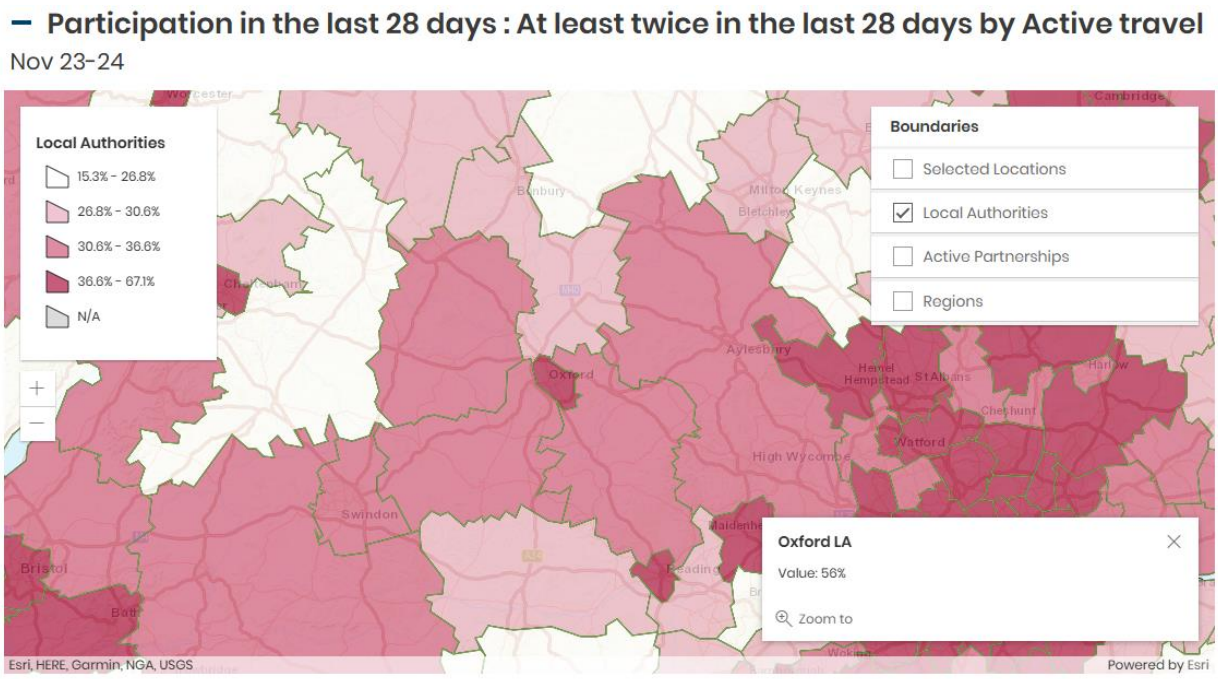

Figure 3.4 Oxford participation in active travel (Sport England, 2026)

Isolation and loneliness

3.6 Various national and international research studies have linked social isolation and loneliness with adverse health outcomes, including higher mortality rates. Social engagement has also been found to be a driver of quality of life. The coronavirus pandemic has had a notable impact on the way people live their lives and as such, reported levels of loneliness in Great Britain have increased since spring 2020.

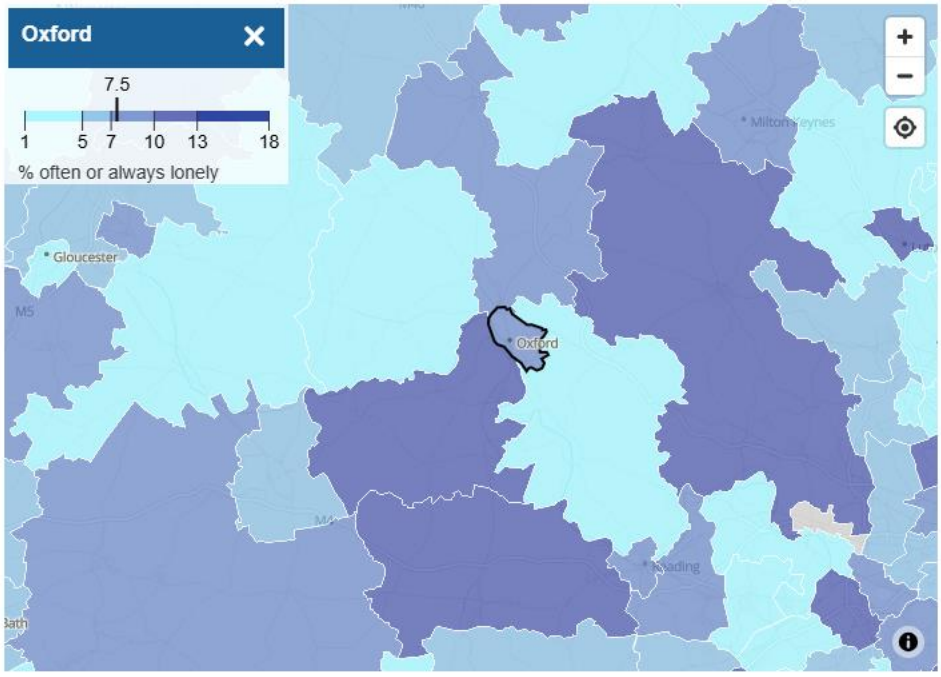

Figure 3.5 Loneliness rates by local authority (Office for National Statistics, 2021)

Air Quality

3.7 In September 2010 Oxford City Council made an Air Quality Management Order declaring the whole of the city as an AQMA, to include the 7 localised hotspots where pollution levels of nitrogen dioxide have exceeded national objectives. It is one of 13 designated Air Quality Management Areas in Oxfordshire, where air quality objectives are not being met. The latest (2020) modelled air pollution data from DEFRA indicate that sites with the highest readings for Nitrogen Dioxide (NO2) in Cherwell, Oxford and West Oxfordshire have each seen a slight increase since 2020.

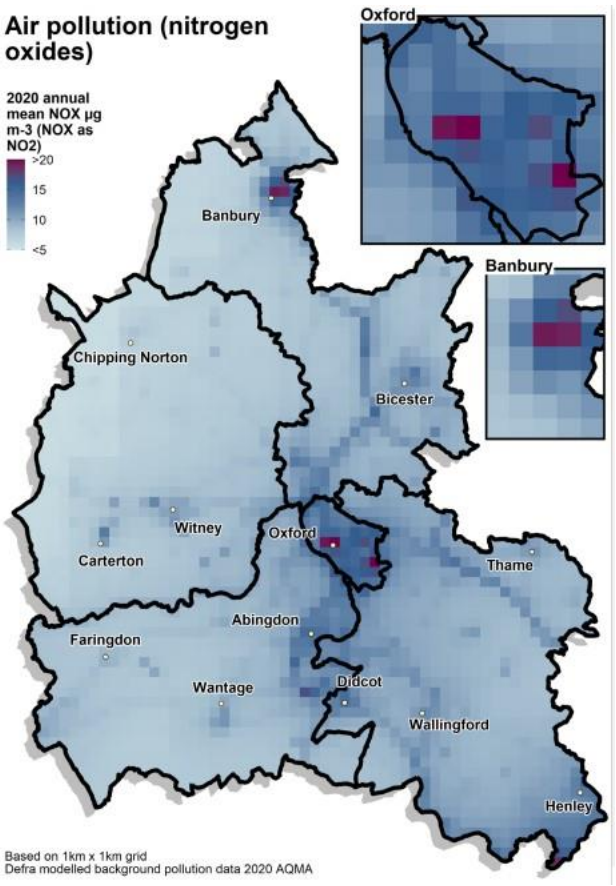

Figure 3.6 - Air pollution in Oxfordshire (Source: Defra modelled background pollution data via Oxfordshire JSNA 2023)

Inequality and health outcomes

3.8 Despite the relative levels of economic prosperity in Oxford, there are still great inequalities within the city. This is reflected in health outcomes and life expectancy. At ward level it can be observed that the life expectancy tends to negatively correlate with the level of deprivation.

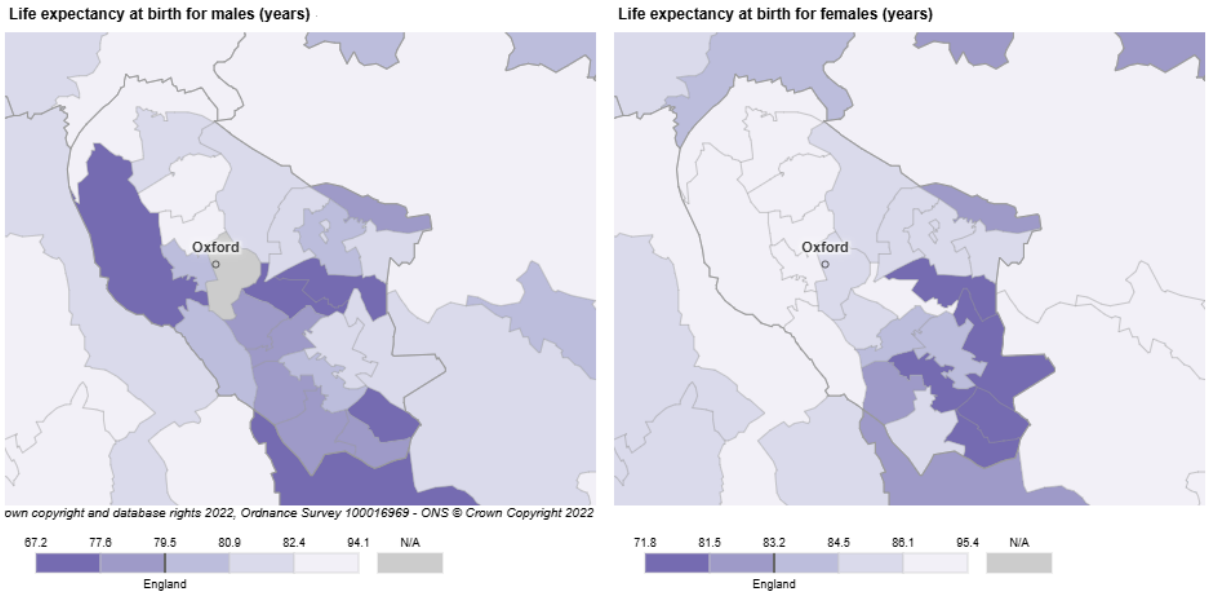

Figure 3.7 - Comparative life expectancy across Oxford wards: Office of Health Improvement and Disparities analysis (accessed 6 January 2025)

Table 3.1 - Life expectancy compared across wards in Oxford. Source: Office of Health Improvement and Disparities analysis (accessed 6 January 2025)

Ward	Life expectancy at birth for males	Life expectancy at birth for females
Barton & Sandhills	79.4	81.8
Blackbird Leys	74	80.9
Carfax & Jericho	80.6	90.8
Churchill	76.7	81.1
Cowley	80.2	79.5
Cutteslowe & Sunnymead	81.6	88.5

Summertown	87	87.1
Temple Cowley	82	83.5
Walton Manor	85.4	89.1
Wolvercote	83.3	90.9

Health Deprivation

3.9 The Health domain of the Index of Multiple Deprivation is the official measure of relative deprivation in England. Within Oxford, there is wide variation in the level of health deprivation, as shown in Figure 3.8. Areas of the city with high levels of health deprivation include Blackbird Leys. The majority of least health deprived areas, as shown by Figure 3.8 are located within the north of the city.

3.10 In 2025, only 1 of Oxford's Lower Super Output Areas (LSOAs) fell into the 20 per cent most deprived, compared with 2015, where 12 of Oxford's LSOAs fell within the 20 per cent and 2 LSOAs in the 10 per cent most deprived nationally.

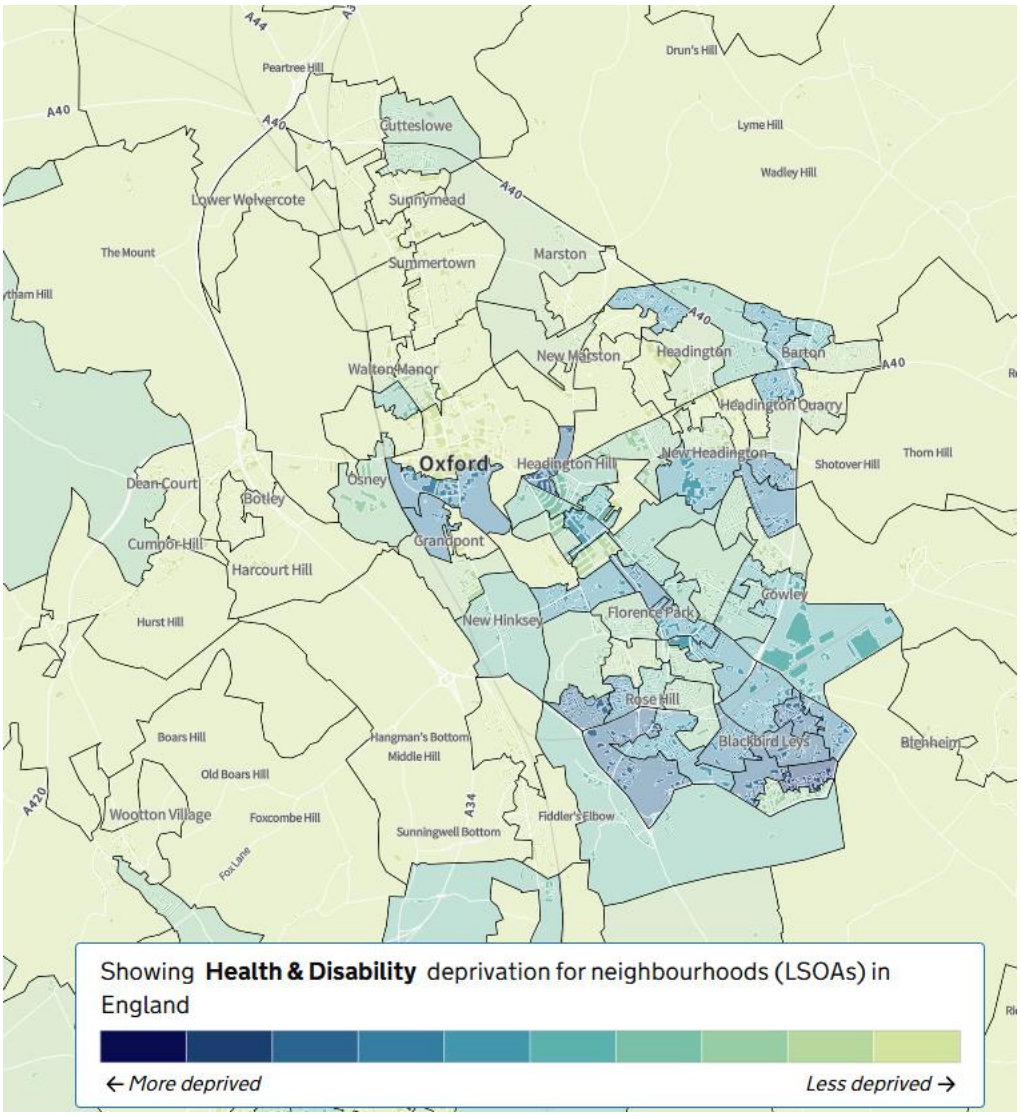

Figure 3.8 - Health deprivation and disability in Oxford (English indices of deprivation 2025))

Employment Deprivation

3.11 Being in employment has been linked to improved health and particularly mental health. Figure 3.9 shows the proportion of the working-age population involuntarily excluded from the labour market. This includes people who would like to work but are unable to do so due to unemployment, sickness or disability, or caring responsibilities. There are no areas in Oxford within the 10% most deprived areas in England for this indicator, but a number of areas, predominantly in the south of the city, fall within the 20% most deprived areas in England for employment deprivation.

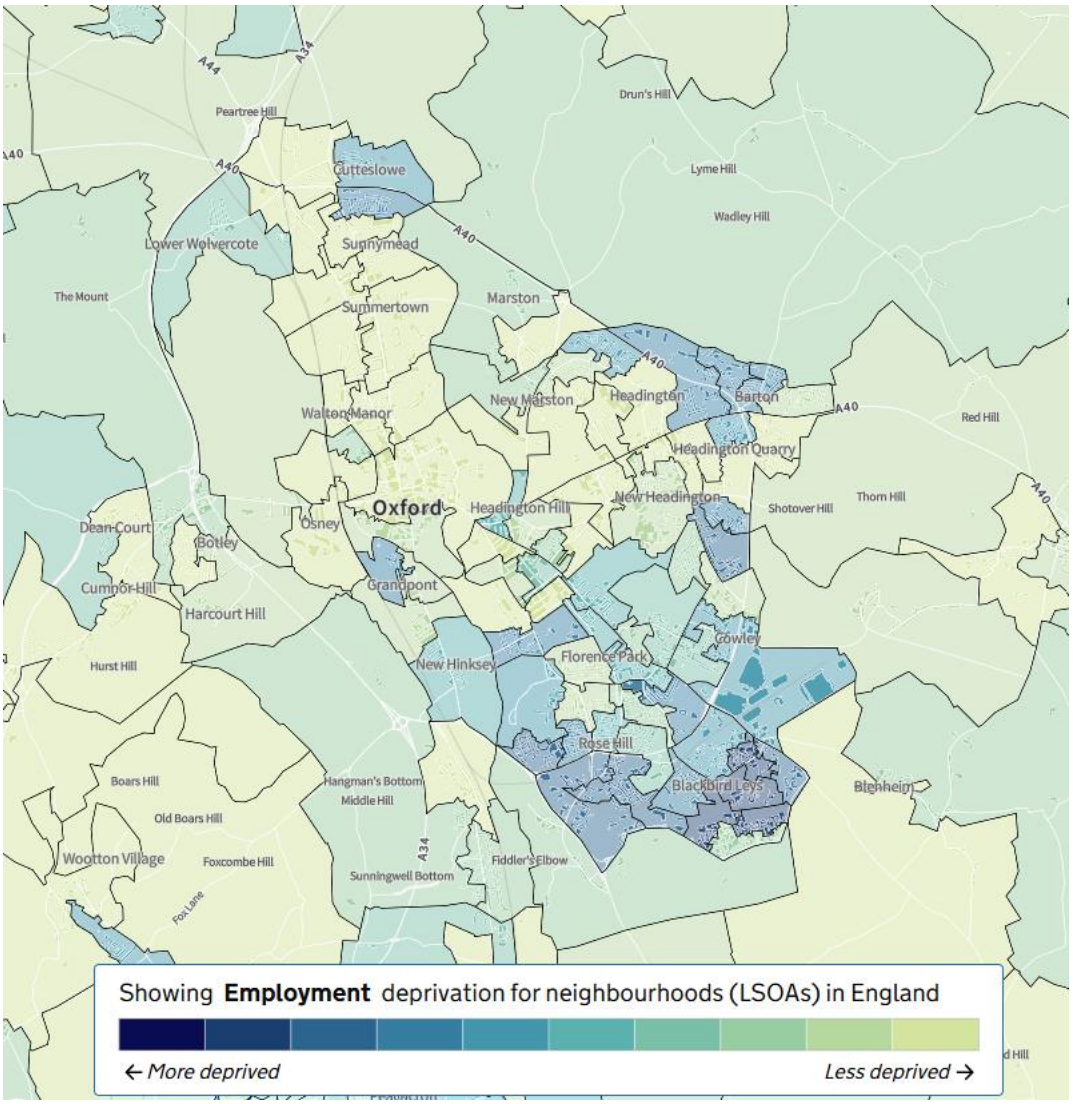

Figure 3.9 - Employment deprivation in Oxford (Oxfordshire County Council 2019)

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

What trends do data show?

4.1 For Oxford as a whole the trends indicate an overall improvement in overall measures of good health, which is likely to be the result of improvements to services and treatments, specific interventions and an increase in awareness and education of lifestyle factors in particular. This is positive when taking into consideration the broader national picture of health and wellbeing in England, which highlights various negative observations of health equity across England, including a stalling in improvements to life expectancy, an increasing health gap between the wealthiest and poorest parts of the country, and that people are spending more of their lives in poor health.

4.2 The data does show, however, that there are several areas where Oxford performs below the local or national average, where more focus is needed to secure similar improvements. It also demonstrates that there are significant health inequalities within the city, typically linked with levels of socio-economic deprivation, which need to be a priority for future health interventions and strategies.

Health and wellbeing in the context of the climate emergency

4.3 The risks from climate change, such as milder, wetter winters and hotter, drier summers, will impact everyone in Oxford, but for those living in poor health, the risks are exacerbated. Indeed, regardless of our achievements in relation to climate mitigation (cutting carbon emissions), climate is expected to change in the future due to historic greenhouse gas emissions that have already 'baked in' changes in the climate system.

4.4 The impacts of hotter summers and prolonged heat wave events for example have been shown to be particularly threatening for those with pre-existing health conditions such as heart and lung disease, as well as the young and the elderly. The ongoing stress that is caused by flooding events, and just the threat of flooding, can be taxing on residents' mental health and this is likely to be a particular issue for those already in poor mental health.

4.5 Climate-related risks are further compounded by the particular challenges faced by those living in high socio-economic deprivation. As was evidenced earlier in the paper, those living in more deprived areas in the city are more likely to be living with worse health and wellbeing thus potentially being at higher risk from stresses related to climate change. Furthermore, those living in areas of deprivation may have fewer resources (financial and material) to adapt to changing climate, for example finding it harder to afford cooling measures to cope with high heat in the summer, or to pay for insurance that can cover damages during a flood event. There is also the issue that some may be living in poorer quality accommodation, which is ill-equipped to function in future climate.

4.6 Recent research by the Oxfordshire County Council as part of their County-wide Climate Vulnerability Assessment 2024 confirmed that current heat wave risk is concentrated in the most urban parts of the county and is only exacerbated in future according to different projections for 2050. Eight of the ten wards in Oxfordshire with the highest current heatwave risk are located in the Oxford City (Barton and Sandhills, Blackbird Leys, Cutteslowe and Sunnymeade, Carfax and Jericho, Holywell, Littlemore, Northfield Brook and Walton Manor), including some in higher deprivation areas. Six of these wards remain in the top ten for 2050 projections (Littlemore and Walton Manor are replaced by other wards in the county).

Considerations for the new Local Plan

4.7 Good health includes physical, social and mental wellbeing going beyond simply the absence of illness and care of persons who have become ill. The Local Plan has a role to

play in considering all of the aspects that impact on an individual's health and to help influence positive health and wellbeing outcomes across all parts of the city.

4.8 Indeed, health and wellbeing is a wide-ranging topic that will be influenced by many, if not all, of the policies within the Local Plan. The emerging Local Plan aims to integrate health and wellbeing considerations in a variety of areas, including:

4.9 **High quality housing –** The type of housing someone lives in can negatively impact on their health and wellbeing in a number of ways if it has not been appropriately designed. Poorly designed housing that provides inadequate levels of daylight or ventilation; overcrowding; injuries in the home; or inadequate heating or cooling of the building can all have direct and indirect impacts on physical and mental health. This is an issue that has become more prevalent throughout the Covid-19 pandemic, which saw the population forced to spend greater amounts of time at home in general, as well as for work and exercise. However, housing standards and quality are largely governed by the Government's nationally set building standards and cannot be influenced by local planning policies.

4.10 **Transport and accessibility** – Improving access and movement around the city is important for an individual's health and wellbeing for several reasons. Improving the connections between places can help people to integrate with their communities and reduce the chances of social isolation. Availability, quality and choice of modes of transport are also important not only for facilitating travel to employment, healthcare and social facilities, but also for ensuring people can utilise active travel methods such as walking and cycling, over the car. Transport emissions can also cause adverse health impacts on human health: the local plan can play a role in reducing these and the effect they have on people.

4.11 **Social infrastructure -** Provision of social infrastructure is vital for vibrant neighbourhoods, and this can include uses such as schools; health centres; local food shops; public buildings, local workplaces and open spaces. Neighbourhoods which enable residents to have good access to goods and services and which provides opportunities for social interaction such as in parks can improve social interaction and promote a feeling of community.

4.12 **Natural environment** – The quality of the environment and in particular, access to green space can have a positive impact on health and wellbeing, through increased physical activity and mental health benefits stemming from taking a break from heavily urbanised environments. Healthy environments can also provide opportunities for local food growing which can help promote healthy diets and active lifestyles. Poor air quality can be one aspect of an unhealthy environment and is an important issue in Oxford with impacts on a range of health problems including asthma and cardiovascular diseases.

4.13 **Climate resilience** – Much of what is being built today will be around for the next 50-100 years and thus will need to be able to function and respond to the projected changes in climate that Oxford will face in the future. Development that is able to keep residents cool during warm summer weather will be essential in order to reduce risks from heat stress,

whilst flood resistance (keeping water out) and resilience (allowing quick clean up and drying out) measures will help to reduce danger to life and the ongoing stresses that flooding can cultivate. This issue will be particularly important for the most vulnerable communities in the city.

4.14 **Health inequalities** - Whilst working to ensure that negative impacts on health and wellbeing are avoided and positive impacts maximised for everyone, it will also be important for the new Local Plan to work towards reducing the health inequalities that exist in the city. This could take the form of targeted interventions in particular areas in need, as well as ensuring that the issues of health inequality are considered throughout the planning process.

4.15 **Health Impact Assessment** - The current Local Plan requirement for HIAs on new development is likely to remain an important approach to ensuring that developers consider issues of health and wellbeing throughout the development process. Furthermore, to ensure that health and wellbeing considerations have been embedded sufficiently through the Local Plan, the Council's intention is that the development of its constituent policies should be informed by a high level Health Impact Assessment (HIA). There is no single, nationally applied standard for how local plan HIAs ought to be conducted, though there is a range of guidance and examples of best practice that the Council can draw upon. Work being undertaken at the county level will also help guide the approach, and it will also be important to engage with colleagues in Public Health on this process throughout.

5. Key Issues addressed through the Local Plan

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to health and wellbeing objectives. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan. It is important to note that some policy reference numbers have been updated as a result of amendments made post the Regulation 18 consultation.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Health Impact Assessments

5.3 As was set out earlier in the paper, there are clearly health and wellbeing challenges affecting the communities within Oxford. Inappropriate or poorly designed development has the potential to exacerbate some of these issues if these are not sufficiently incorporated into the design process. For this reason, the Local Plan 2045 continues with a requirement of major

development needing to undertake a Health Impact Assessment (now: Policy HD7) as with the previous Local Plan.

5.4 The purpose of Health Impact Assessment (HIA) as part of the planning application process is to ensure that the design of new development is tailored to the particular local health context of the area where it is proposed. Producing an HIA should be far more than just a tick box exercise; the process seeks to ensure that the impacts of new development do not further exacerbate negative health trends, whilst also helping to identify and take up opportunities to ameliorate these conditions and secure positive impacts that support wellbeing. The policy sets out the high level requirements that applicants are expected to follow, including undertaking analysis of the local context and presenting appropriate data on these conditions and then using this to demonstrate how they have addressed the design of their development informed by this understanding. Where impacts are identified, these need to be appropriately addressed (and mitigated where necessary) and details of any monitoring required to ensure mitigations are successful should also be provided.

5.5 Whilst the policy sets out the high-level requirements that the Council will look for to ensure that a proposal has demonstrated that health impacts have been appropriately addressed as part of the design process, there are a number of different methodologies available for how Health Impact Assessments can be specifically undertaken in practice. The policy is supported by an Appendix which sets out more specifics as to the kind of format that the HIA should follow and refers applicants to the toolkit that has been specifically developed by Oxfordshire County Council and that was approved for use by all six Oxfordshire Local Authorities by the Future Oxfordshire Partnership (formerly known as the Oxfordshire Growth Board) on 26 January 2021. The toolkit includes briefing notes as well as a checklist that will help applicants to focus their analysis on the key issues of relevance. A Technical Advice Note (TAN) also contains information to support the preparation of HIAs.

5.6 Ultimately, ensuring that new development undertakes HIA will help to support higher quality design in the city. The policy is designed to be flexible enough to allow applicants to tailor the level of information they provide as part of the HIA to be proportionate to the scale of the development, whilst also ensuring that the key elements are addressed (such as being informed by relevant contextual data). In this way, HIAs provided should include enough information to allow the Council to make an informed judgement as to any potential negative or positive impacts for health and wellbeing in the city, without being overly burdensome to applicants.

Privacy, Daylight and Sunlight

5.7 Ensuring all homes are built with adequate privacy, daylight and sunlight (both internal and external) helps to ensure the wellbeing of residents. It is also important to consider the impacts on neighbouring residential properties to ensure they do not lose their sense of privacy. This is particularly important in the context of Oxford, where high density development is expected in some areas of the city to make efficient use of land.

5.8 The policy approach will ensure that new development provides adequate daylight and privacy and will not reduce privacy and daylight in existing development to an unacceptable level.

Internal Space Standards for Residential Buildings

5.9 It is important to ensure that new homes are of an adequate size and layout to provide high quality, functional homes that meet the needs of a wide range of people and take into account how those needs might change over time. This should apply to development at all scales, from large strategic sites to infill development, which represents an important contribution to meeting Oxford's housing need.

5.10 The pressure to deliver more homes leads to increased pressure to deliver smaller homes. This could result in housing that is unacceptable in terms of internal space because it doesn't offer occupiers appropriate living standards or meet the national aim that everyone should have access to a decent home. The pressure to make efficient use of land, and the fact that dense development is to be required, makes it particularly necessary to ensure that the internal living environment of new homes is adequate.

5.11 The policy has been carefully informed by a consideration the local need for space standards and the viability impact of taking such an approach and the approach is to adopt the optional nationally described standards. In addition, minimum bedroom sizes for HMO are governed by the Licensing of Houses in Multiple Occupation (Mandatory Conditions of Licences) (England) Regulations 2018.

5.12 The policy will ensure that new developments are designed and built to provide adequate space for occupants. It will be important to ensure that designs maximise the useable space within housing, through functional layout, and provide scope to adapt and modify housing to meet future requirements. The demand for housing in Oxford means that a small proportion of larger and family homes will be provided in the form of flats or apartments; ensuring adequate space and quality environments will play a crucial role in changing the perception of apartments and their suitability as family homes.

Outdoor Amenity Space

5.13 The adequate provision of outdoor amenity space is a key factor in supporting the physical and mental health and wellbeing of residents. It provides a space to dry clothes, grow plants and vegetables, and can provides shade and limit urban heat-island effects. In addition, if the space is designed with permeable surfaces it can contribute towards flood risk management.

5.14 Where high density development and subdivision of properties are expected and where many sites are infill development, high standards for the delivery of good quality outdoor amenity space becomes increasingly important to ensure the health and wellbeing of residents.

5.15 New homes should provide some open space that allows the occupants to enjoy fresh air and light in privacy. The policy will ensure that appropriately sized balconies/private terraces and private/ shared garden space is provided for residents.

5.16 The policy approach will ensure that both public and private amenity and garden spaces are well designed and ensure that it is clear how these spaces are used without the need for extensive signage, avoiding narrow pathways to link spaces, optimising sunlight, and ensuring principles of good landscape design are incorporated.

Accessible and Adaptable Homes

5.17 Housing provision across the city should meet the needs of everyone and new homes need to be accessible to all, including those with disabilities. As such, it is important to consider the demands and requirements people will have from their homes and how this may change over time. Homes need to be built with the flexibility to be adapted to the changing needs of residents. Adaptability is important to respond to changes to the size and compositions of households, and an ageing population.

5.18 Providing opportunities for residents to maintain their independence is important and can help to alleviate pressure on health and social care if older people can remain in their homes adapted for their needs. In addition, housing needs to be adapted to support those with chronic health conditions and specialist housing needs. Ensuring we build homes that can be adapted to meet people's longer-term needs is an important part of good design.

5.19 The policy approach is to provide enhanced accessibility or adaptability through Requirement M4(2) Accessible and adaptable dwellings and/or M4(3) Wheelchair user dwellings in 'Approved Document M: access to and use of buildings. To ensure provision of housing to meet the range of needs that will exist in Oxford and because of the advantages of dwellings that can adapt to changing needs, requirements for accessible and adaptable dwellings are set out in the policy.

5.20 Oxford has a markedly young population compared to neighbouring districts and the UK, mainly because of the substantial number of students. The trend of Oxford having a younger population than average is set to continue; however, people are living longer and there will be an increase in the number of older people resident in the city. As it is likely that Oxford will have a greater proportion of older residents making up its population, there will be changing housing requirements over the Plan period. The Census 2021 showed 5.3% of the population of Oxford are 75 or over. This is lower than the national average, but that represents a section of the population more likely to need adaptable homes in order to remain living in them for longer. The Census 2021 shows that 29% of households in Oxford have one or more people with a disability. Some of those households will need specialist adaptations to their homes, so providing housing that is adaptable will play an important role in ensuring that these people have an adequate choice of homes available to them. The Government has found that 34% of disabled people have had to make adaptations to their homes UK Disability Survey

research report, June 2021 - GOV.UK. Therefore, at least 10% of homes should be adaptable, but given the increasingly aging population and the proportion that are already over 75, the policy requires that 15% of market homes meet Category 2 Standards of Part M of the Building Regulations.

5.21 Some typologies of development will not be suitable for providing homes that meet M4 requirements because these require level access to the front door and so must have lifts. As well as installation costs they have ongoing maintenance costs (which are likely to affect residents' ground rents). This will affect viability and will not be feasible unless a certain number of units are served by one lift shaft. This will be less likely on lower blocks of flats. There may be other options, such as provision of one and two bed units in terraced houses instead of flats, maisonettes with accessible homes below and so on. But these options will often not be feasible, in which case the policy allows schemes with fewer or no dwellings that meet Part M of the Building Regulations.

Appendix A - Policy options and preferred approaches

Policy options set 010a (Draft Policy HD10): Health Impact Assessments

The process of undertaking Health Impact Assessment (HIA) ensures that development promotes and contributes to a healthy living environment, by requiring that local context and particular issues are assessed and then addressed through the design process. The benefit of HIA is greatest when it is conducted at the earliest opportunity to inform the design process. The current local plan requires the undertaking of HIA for major development and the options below set out alternative approaches with respect to continued HIA requirements.

Table 7.1 - Policy options set 010a: Health Impact Assessments

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require an HIA for all developments over a certain size- for example for major developments (as currently). This requirement could be integrated with others such as demonstrating resilient design and construction.	A checklist based template is straightforward and would keep the process fairly streamlined. The intention of this approach is that healthy design is considered from the outset and therefore factored in.	This may be seen as an extra administrative burden on developers, and on those assessing applications.
Option b Include a requirement for HIAs, not just based on a size threshold but other factors such as socioeconomic, health or environmental factors that could trigger the need for a more extensive HIA. Wider categories for	More development is subject to an HIA, which ensures issues are properly considered and addressed at an early stage of the development.	There is limited evidence that expanding the range of development will bring additional benefits. This may create an onerous process where the drawbacks outweigh any benefits.

1408

development that will be subject to an HIA.		
Option c No specific policy requirement, rely on NPPF.	Less burden on developer who will cover off the points in an HIA as part of application process.	Not having a policy makes it harder to have a consistent metric to assess schemes.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? A, b or c (they are all alternatives). **High-level screening conclusion?** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** The options most directly influence **criterion 5. Inequalities** but depending on the implementation of the options, they are likely to impact other criteria in the SA framework indirectly where these have a relationship to healthy design (e.g. greening, accessible services/facilities, resilience to climate change etc). Option a and b are likely to have a minor positive impact on inequalites (and option b is likely to be a slightly more positive impact because it incorporates a greater area of the city/more development). Option c is likely to be a minor negative, as whilst there is some discussion over what health and wellbeing considerations should factor into planning proposals, there are not explicit requirements, so there is much more potential for development to come forward in unhealthy way. Overall, the likely sustainability impacts between the options are not significant and not complex enough to warrant a detailed appraisal.

1409

Health Impact Assessments – Policy HD10

The preferred approach is to take forward **option A**. This option is a continuation of the approach followed by the currently adopted 2036 Local Plan, whereby it is a policy requirement for applicants for qualifying development schemes (currently major development) to submit an HIA. This approach is considered to be the most appropriate for assessing schemes that are the most likely to have an impact on the health and wellbeing of the contexts in which they are set in.

Policy Options Set 010b (Draft Policy HD11: Privacy, Daylight and Sunlight)

There are many factors in the built environment that can affect our health and wellbeing, but it is particularly important to ensure that the places where we spend so much of our daily lives, such as our homes and workplaces, enable us to be healthy and happy. The recent Covid pandemic, with the need for social distancing and the shift to home working for some people, has highlighted the importance of having a healthy home setting for us all, and of particular importance to this internal environment is having ample daylight and privacy.

Table 7.2 - Policy options set 010b: Privacy, Daylight and Sunlight

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Extend the policy to also include expectations for daylight, privacy and sunlight for new non-residential buildings (types to be specified but likely to include offices and similar workspaces, potentially healthcare facilities but may exclude manufacturing and warehouses, retail units), to ensure good working conditions and to ensure consideration of impacts on neighbouring buildings. This will also need to be	These requirements for non-residential buildings may prevent buildings with a large mass, which would have the benefit of more appealing design. It is also likely to reduce energy use due to minimising the need for electric lighting (and potentially also improving natural ventilation). The working environment would also be healthy. Helps meet BRE sunlight/daylight guidance.	This may be restrictive to certain building needs or may affect viability due to reducing the potential for subdivision of a building, or for large machinery. Its application is unlikely to be possible universally so the policy must specify when it applies and when it does not.

1410

considered alongside shading and overheating impacts.		
Option b Include a policy with requirements to ensure adequate daylight, privacy and sunlight to new residential developments.	This would ensure new development provides adequate daylight and privacy and does not reduce privacy and daylight in existing development to an unacceptable level.	This may be too restrictive for certain buildings and/or may impact upon viability due to reducing the potential for subdivision. This needs to be considered alongside considerations of sustainable design and construction, such as avoiding overheating.
Option c Do not include a policy on privacy, daylight or sunlight for any type of development.	This would provide more flexibility for design to reflect the location and other factors.	This could result in poor quality design in new development that does not have sufficient daylight or privacy for its occupants and could reduce daylight or privacy to neighbouring development to an unacceptable level.

1411

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various options (A+B, C) **High-level screening conclusion?** The options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** The most relevant criterion that may be applicable to these options is **criterion 5. Inequalities,** as their implementation may have an impact on the quality of living spaces, which can often serve as an indicator of levels of poverty and social exclusion. Option a and b are likely to have a minor positive impact on inequalities (and option b is likely to be a slightly more positive impact because it incorporates a greater area of the city/more development). Option c is likely to be a minor negative, as it may result in a greater potential for poor quality development – building regulations include standards for window sizes/orientation, daylighting design and good practice for daylight levels, however they do not explicitly state minimum requirements for daylight/sunlight or privacy.

Overall, the likely sustainability impacts between the options are not significant and not complex enough to warrant a detailed appraisal.

Privacy, Daylight and Sunlight – Policy HD11

The preferred approach is to take forward a combination of **options A and B**. This approach will ensure that policy requirements include minimum standards that can be expected for the amenity of occupiers of development (with respect to privacy, access to daylight and sunlight), in terms that can be measured and monitored, and it also allows policy to specify the types of development for which these standards will apply – including the option of having requirements that apply to non-residential development. This will broadly follow the policy approach as followed by the currently adopted 2036 plan.

Policy options set 010c (Draft Policy HD12:) Internal Space Standards for Residential Buildings

1412

New homes, whether they are infill plots or on larger sites, need to be of an adequate size and layout to provide high quality functional homes that meet the needs of a wide range of people. The pressure to build more homes can lead to the building of smaller homes if standards aren't set, which could result in housing being built that does not provide future occupants with appropriate living standards.

Table 7.3 - Policy options set 010c: Internal Space Standards for Residential Buildings

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Apply Nationally Described Space Standards. In flatted schemes, require communal areas to be designed to enable neighbours to meet and interact, for example some fixed seating, wider	Following the Nationally Described Space Standards should ensure that developments maximise the useable space within housing through functional layout and provide scope to modify	Oxford is highly constrained spatially and by adopting these standards it could result in reducing the number of houses being delivered. It may become unnecessary to have this policy if the intended national development management policies cover this (which should not be repeated or contradicted in local plans).

areas of corridor or lobby space.	layouts for future needs. Design of developments can be important in helping people avoid social isolation and loneliness. In flats, communal areas that allow neighbours to interact is likely to facilitate successful inter-generational living. Including these standards is important in Oxford because development pressure is so great and heights are constrained, so without requirements housing could be inadequately small.	
Option b Do not include a policy on internal space standards (if the national standards are not adopted locally then they do not apply).	Does not restrict homes being delivered where space is so limited. If space requirements are written into national policy this will become the preferred option as having a local policy will be unnecessary.	Having no space standards for self-contained dwellings could result in the delivery of housing that is of poor quality with an unacceptable amount of internal space for its occupants.
Option c Include a policy but do not follow the Nationally Described Space Standards.	Provides more flexibility for the delivery of new homes which is so urgent in Oxford.	Government policy is very clear that either the nationally described standards are followed or there is no requirement included in plans, so it is very unlikely that this approach could be justified.

Initial sustainability appraisal screening of options sets

Is there only one option or are there various options we could take? Yes
High-level screening conclusion? The options are similar to each other from a sustainability perspective
Screened in for detailed appraisal? No

Rationale:
The most relevant criterion that may be applicable to these options is **criterion 5. Inequalities,** as their implementation may have an impact on the quality of living spaces, which can often serve as an indicator of levels of poverty and social exclusion. Option c is unlikely to be justified, as it will contradict current national policy and if implemented will most likely encourage the development of schemes with poor quality of space for occupants. Overall, the likely sustainability impacts are not expected to be significant and not complex enough to warrant a detailed appraisal.

1414

Internal Space Standards for Residential Buildings – Policy HD12

The preferred approach is to take forward is **option A.** Government policy does not allow much flexibility for authorities to set bespoke standards, and as such the approaches available to plans are for national space standards to be followed, or no standards to be specified. A key objective for the plan is that housing tenures and types are of the highest quality possible and most conducive to promoting the health and wellbeing of occupants. To secure these objectives in a way that is suited for monitoring and enforcement, following the nationally described space standards which have universal familiarity and application.

Policy Options Set 010d (draft Policy HD13): Outdoor Amenity Space

The adequate provision of outdoor amenity space is important as it supports the physical and mental health and wellbeing of residents. Well-designed outdoor amenity spaces enhance the immediate and surrounding areas and provide much needed open spaces for residents, particularly those who do not have access to their own private garden.

1415

Table 7.4 - Policy options set 010d: Outdoor Amenity Space

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include an outdoor amenity space requirement for all residential units, with size standards. This could allow flexibility between communal and private space and balconies would be included to ensure flats are deliverable. Include a requirement for outdoor areas	This would ensure that outdoor amenity space provided as part of new development would be well designed and provides more certainty about the level of provision. Requiring space for meetings and interactions may help to reduce loneliness and social isolation.	This could be too prescriptive, and the amount required may not be deliverable or viable. There is no requirement currently for communal outdoor amenity space for flats- it may be hard to know how to set this in a way that can be justified.

where neighbours can meet or interact.		
Option b Include a policy that sets out broad principles required for amenity space for housing but no size requirement.	This approach would be less prescriptive but encourage good design by setting out broad principles.	Potential for poor design and quality and not a large enough quantity of outdoor amenity space to serve needs.
Option c Set a requirement for outdoor amenity space for larger non-residential developments.	This approach ensures biggest non – residential schemes have well designed outdoor amenity for users of the development and, if well landscaped, this enhances the attractiveness of the design and potential for benefits of green spaces such as biodiversity and enhancing wellbeing.	Private amenity space at workplaces should not be needed if there is adequate public open space in an area and in living places. This would not represent the most efficient use of land. Management plans would be needed to ensure it does not become neglected.

1416

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various (A, B, A+C, B+C) **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** The most relevant criterion that may be applicable to these options is **criterion 5. Inequalities,** as their implementation may have an impact on the quality of living spaces, which can often serve as an indicator of levels of poverty and social exclusion**.** Depending on the implementation of the options, they are likely to impact other criteria in the SA framework indirectly where these have a relationship to healthy design (e.g. greening, accessible services/facilities, resilience to climate change etc). **Criterion 3. efficient use of land**, may be relevant as there may be implications for design of buildings and site layout. Overall, the likely sustainability impacts are not expected to be significant and not complex enough to warrant a detailed appraisal.

Outdoor Amenity Space – Policy HD13

The preferred approach is to take forward is **option A.** A key objective for the plan is that housing tenures and types are of the highest quality possible and most conducive to promoting the health and wellbeing of occupants. To secure these objectives in a way that is suited for monitoring and enforcement, following the nationally described space standards which have universal familiarity and application.

Policy Options Set 010e (Draft Policy HD14): Accessible and Adaptable Homes

1417

Housing provision across the city needs to ensure that it meets the needs of everyone whatever age and stage of life. Homes need to be built with the flexibility to be adapted to the changing needs of residents. These changes include adaptations in the size and compositions of households, helping successful intergenerational living, with adult children and older parents moving back into the family home and an ageing population. Providing opportunities for residents to maintain their independence is very important and can help to alleviate pressure on health and social care if older people can remain in their homes adapted for their needs.

Table 7.5 - Policy options set 010e: Accessible and Adaptable Homes

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Seek to ensure that a % of affordable homes and market homes (dependent on needs, viability and practicality but currently 100% affordable and 15% market) are constructed	This approach future proofs the housing stock.	The standards can be too onerous and impact upon site viability.

to accessible and adaptable homes standards set out in Part M4(2) and M4(3) of the Building Regulations. For M4(3) for Social Rent these should be able to be adapted to the needs of the household who will be occupying them, ahead of their occupation.		
Option b Introduce specific exceptions to the requirement for accessible and adaptable homes for practical reasons, for example provision of lifts is disproportionately expensive for flats of less than three or four storeys or for a small number of flats (fewer than 10) sharing one lift core, so upper floors would not need to conform.	Rather than lowering the percentage generally to ensure accessible/adaptable homes are achievable in all situations, this allows a generally high percentage, whilst avoiding situations where there are practical reasons that limit the amount of accessible and adaptable homes that can be provided.	This may encourage low-rise flats, or one bed houses, to circumvent the policy, which may often not be the most efficient use of land or the most suitable design for the area.
Option c No specific policy, rely on NPPF requirements or National Design Guide as template.	Rely on the NPPF to deliver the policy framework for delivering accessible and adaptable homes.	This could result in homes being built that are not sufficiently adaptable to the changing requirement of residents which is not an effective approach to meeting residents both current and future needs. Retrofitting houses to meet needs in the future is more costly and an inefficient use of resources.

Initial sustainability appraisal screening of options sets

Is there only one option or are there various options we could take? Various options (A, B, A+B, C)
High-level screening conclusion? the options are similar to each other from a sustainability perspective
Screened in for detailed appraisal? No

Rationale:
The options most directly influence **criterion 5. Inequalities** but depending on the implementation of the options, they are likely to impact other criteria in the SA framework indirectly where these have a relationship to healthy design (e.g. accessible services/facilities). Option a and b are likely to have a minor positive impact on inequalities as there is an explicitly requirement for development to integrate accessibility and adaptability in their designs. Option c is likely to be neutral, as compulsory national policy requirements are likely to apply in most circumstances - particularly building regulations. Overall, the likely sustainability impacts between the options are not significant and not complex enough to warrant a detailed appraisal.

1419

1420

Accessible and Adaptable Homes – Policy HD14

The preferred approach is to take forward is a combination of **options A and B.** This approach would ensure that a sufficient amount new additions to the city's housing stock is future proofed in line with the projected demographic trends for the aged population and the current needs of residents with mobility issues. Option B in particular will allow the policy to be sufficiently flexible for situations where accessible/adaptable homes are difficult to achieve for practical reasons while ensuring a sufficient amount is still delivered.

Background paper 011

Title: Urban Design, Placemaking, Heritage and Archaeology

This paper addresses: Principles of high-quality design, the historic environment of Oxford including designated heritage assets.
Relevant Local Plan Objectives: • Permit well-designed buildings and public spaces that feel safe, that are sustainable, and that are attractive to be in and travel to. • Protect and enhance our valued and important heritage.
SA Objective(s): 11. To promote good urban design through the protection and enhancement of the historic environment and heritage assets while respecting local character and context and promoting innovation.
SEA theme(s): Cultural heritage, landscape.

Bin and Bicycle Stores and External Servicing Features – draft policy HD15 33

1. Introduction

1.1 The importance of high quality design in creating places where people feel safe and rooted and want to be is well recognised. Good design can create or enhance unique character, but is also about functionality, helping to make a place that is attractive for walking and cycling, that feels safer from crime and vehicle traffic and can help stimulate social interaction. Good design means resources are used more efficiently and maintenance costs are reduced. Good design is also linked to health and wellbeing, making space for nature, as well as building resilience to climate change.

1.2 Understanding of existing character, whether that is from natural or built features, is the starting point of creating good design. Strongly linked to that is identifying and understanding heritage assets. Heritage assets are strongly protected in national policy. In recent years there has been a subtle change in national policies that require the significance of heritage assets to be weighed up against the potential benefits of new development. There is also an increased understanding of the wide range of things that contribute to the importance of heritage assets, which includes the significance placed on them by local people.

1.3 The Council has a duty to protect and enhance historic environment through the Local Plan, this is important for delivering sustainable future for city. The historic environment is important for supporting wellbeing and economic growth too, particularly in Oxford, where it acts as a significant draw for tourists globally every year and helps to contribute to the special character of the city. Protections for the historic environment are not about ensuring no development happens to them full stop, instead the focus is on managing change so it happens in right way so we preserve historic environment for benefit of future generations.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

The National Planning Policy Framework (NPPF) 2024 and Planning Practice Guidance (PPG)

2.1 The NPPF (2024) places significant weight on good design as a means of bring about sustainable development, creating “better places”, and bringing about development that is suitable and appropriate for the communities where it takes place. Paragraph 135 sets out how planning policy and decisions should ensure that development:

a) *will function well and add to the overall quality of the area, not just for the short term but over the lifetime of the development;*
b) *are visually attractive as a result of good architecture, layout and appropriate and*

effective landscaping;

c) *are sympathetic to local character and history, including the surrounding built environment and landscape setting, while not preventing or discouraging appropriate innovation or change (such as increased densities);*
d) *establish or maintain a strong sense of place, using the arrangement of streets, spaces, building types and materials to create attractive, welcoming and distinctive places to live, work and visit;*
e) *optimise the potential of the site to accommodate and sustain an appropriate amount and mix of development (including green and other public space) and support local facilities and transport networks; and*
f) *create places that are safe, inclusive and accessible and which promote health and well-being, with a high standard of amenity for existing and future users; and where crime and disorder, and the fear of crime, do not undermine the quality of life or community cohesion and resilience.*

2.2 There is the expectation that design policies are developed alongside local communities in order to reflect the aspirations and defining characteristics of the local area (paragraph 132). The NPPF further requires that the greatest possible amount of clarity on what is expected with respect to design outcomes and requirements is facilitated as early as possible in the development process (para 126). It promotes the use of tools such as design guides and codes within instruments like local plans and supplementary planning documents to create a framework setting design standards and requirements, with the level of detail or prescription tailored to the specific setting.

2.3 Continued engagement during the development of emerging individual schemes is also encouraged, with the onus placed on local authorities and to some extent applicants/developers to ensure early local involvement in the evolution of schemes (paragraph 132). Local authorities are expected to be proactive in using methods such as design reviews, workshops and assessment frameworks such as Building for a Healthy Life to ensure design quality (paragraph 138).

2.4 Paragraphs 202 to 221 of the NPPF contain policies specific to the historic built environment and heritage assets. The objective of the policies is to maintain and manage change to heritage assets in a way that sustains and, where appropriate, enhances its significance.

2.5 Heritage significance is the value of a heritage asset to this and future generations because of its heritage interest, which may be archaeological, architectural, artistic or historic. This significance may derive not only from its physical presence, but also from its setting.

2.6 'Great weight' is to be given to conservation and clear and convincing justification is required for all grades of harm, including through change to the setting, Justification must be on the grounds of public benefits that outweigh that harm (paragraphs 208 and

209). Public benefits will most likely be the fulfilment of one or more of the objectives of sustainable development as set out in the NPPF, provided the benefits will endure for the wider community and not just for private individuals or corporations. In order to make a sound decision, a planning authority needs to understand from the applicant the significance of any heritage asset affected (paragraph 211). This may require some investigative work, but the information to be supplied with the application should be proportionate to the asset's importance and the potential impact.

National Design Guide

2.7 The National Design Guide (updated January 2021) is a material consideration and forms part of national planning guidance setting out the characteristics of well-designed places and demonstrating what the government considers good design to mean in practice. The guide outlines and illustrates ten characteristics of good design falling under the topics of Climate, Character and Community. The characteristics range from context, identity and built form, through to nature, public space, movement, and the uses on the site including homes and buildings, the resources used to construct them and their life span. Each is discussed in detail in the guide but are illustrated in the circular diagram in Figure 2.1.

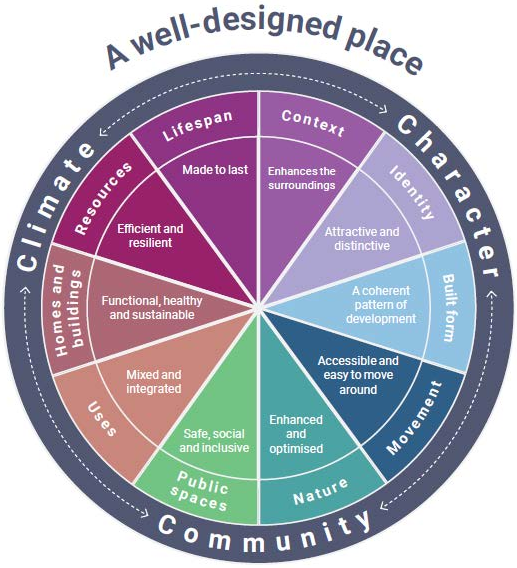

Figure 2.1 - Ten characteristics of good design (DCLG National Design Guide 2021

Listed Building Act

2.8 The Planning (Listed Buildings and Conservation Areas) Act 1990 provided listed buildings and conservation areas with additional protections relating to the granting of planning permission. It created special controls for the demolition, alteration or extension of buildings, objects or structures of potential architectural or historic interest.

Oxford Local Plan 2036

2.9 Existing policies from the Oxford Local Plan 2036 are working to protect the historic environment in Oxford. The design and conservation policies can be found in Chapter 6 'Enhancing Oxford's heritage and creating high quality new development'. The plan promotes high quality design and placemaking through Policy DH1:

Policy DH1: High quality design and placemaking
Planning permission will only be granted for development of high quality design that creates or enhances local distinctiveness.
All developments other than changes of use without external alterations and householder applications will be expected to be supported by a constraints and opportunities plan and supporting text and/or visuals to explain their design rationale in a design statement proportionate to the proposal (which could be part of a Design and Access Statement or a Planning Statement), which should cover the relevant checklist points set out in Appendix 6.1.
Planning permission will only be granted where proposals are designed to meet the key design objectives and principles for delivering high quality development as set out in Appendix 6.1.

2.10 In order to protect Oxford's unique historic environment described above, further policies in Chapter 6 include:

- Policy DH2: Views and building heights
- Policy DH3: Designated heritage assets
- Policy DH4: Archaeological remains
- Policy DH5: Local Heritage Assets
- Policy DH6: Shopfronts and signage
- Policy DH7: External servicing features and stores

Other relevant plans/programmes/strategies

Conservation Area Appraisals

2.11 Appraisals have been written for a number of our conservation areas, some of which are currently being updated. These documents detail the locations and characteristics which contribute to each area's architectural or historic importance, as well as opportunities for enhancement. They are available to view on the conservation webpages under conservation areas.

Assessment of the Oxford View Cones (Oxford City Council)

2.12 View cones are drawn as triangles from important viewing points to encompass the width of the area containing buildings that constitute Oxford's historic skyline. A View Cones Assessment has been prepared to examine the significance of views, identifying their special qualities. The View Cones Assessment sets out a methodology for heritage

assessment of the Oxford views and applies this to each of the view cones. It describes and analyses the important features of the view cones. The study enables a greater understanding of the significance of all parts of the view cones, i.e. not just the skyline. It is designed to aid understanding of the impact of proposals on views.

2.13 The 10 identified view cones do not represent an exhaustive list of viewing points that provide an important view of Oxford's skyline. There may be glimpses of the famous skyline in other locations, and tall buildings in particular that are proposed outside of the view cones might still have an impact on the historic skyline.

High Buildings Study (LDA, 2018)

2.14 The High Buildings Study is in two parts-the Evidence Base Report and the Technical Advice Note. The Evidence Base Report (EBR) summarises the current 'baseline' of Oxford and has utilised mapping and 3D city wide modelling. The 'baseline' analysis looks at townscape character areas, how the city is structured such as through identifying the location of the city centre, district centres, and the main transport routes, as well as the current nature of building heights across the city. The EBR looks at the geographical distribution of heritage assets within the city and the ways in which setting contributes to the heritage significance of these assets and their potential to be affected by high buildings. The EBR also considered where future growth in the city is planned or may be anticipated. The EBR concludes by identifying 'Areas of Greater Potential' for high buildings. These are areas that are relatively unconstrained by heritage considerations and also represent opportunities for high buildings such as at district centres and transport nodes. The Technical Advice Note (TAN) is a guidance document that supports policy within the Local Plan 2036 and aims to shape the growth of Oxford positively.

Cowley Branchline Densification Study (LDA, 2025)

2.15 The intention of this study is to give guidance to guide the opportunities for growth and regeneration within this Area of Focus. This includes opportunities that may arise from the planned investment in the Cowley Branch Line and associated walking, cycling and public transport connection to the stations from existing and future residential and commercial neighbourhoods. The study aims to guide development so that it extends the compact and mixed-use development of Oxford's core and district hubs to within the area of change, limiting sprawl and inefficient use of land, and maximising connectivity and availability of facilities and services.

A Character Assessment of Oxford in its Landscape Setting (LUC, 2002) and update Addendum Report (LUC, 2022)

2.16 The report was commissioned in recognition of the importance of the city's landscape and townscape and the changes it faces. The assessment looks at the component parts of the city, including its villages and neighbourhoods, and their individual characteristics

which make up the city as a whole. It considers the historic, cultural and architectural associations, open places, wildlife and natural habitats and perceptual characteristics that combine to create Oxford's sense of place. The study helps in understanding which open spaces in the city are important in landscape terms, which areas of the city are sensitive to change and merit protection and opportunities for enhancement.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

Context of the city

3.1 Key to Oxford's character is the fact that it is located in a floodplain overlooked by surrounding ridges, which create a backdrop to the 'dreaming spires'. These ridges provide an important backdrop to Oxford's cityscape. Oxford's setting is defined by agricultural vales to the north and south, wooded hills to the east and the west and river valleys extending through the urban core of the city. The river corridors running either side of Oxford's historic core are also an essential part of its special character and landscape setting.

3.2 Oxford's character is also defined by its unique built environment. The iconic skyline and architecture produced by the limestone colleges and towering spires create a world famous urban environment. As set out in the Oxford Local Plan 2036: *"It is important that design choices about building heights are informed by an understanding of the site context and the impacts on the significance of the setting of Oxford's historic skyline, including views in to it, and views within it and out of it. Taller buildings will be possible in many locations, but they must be designed to ensure they contribute to the existing character, and do not detract from the amenity of their surroundings."*

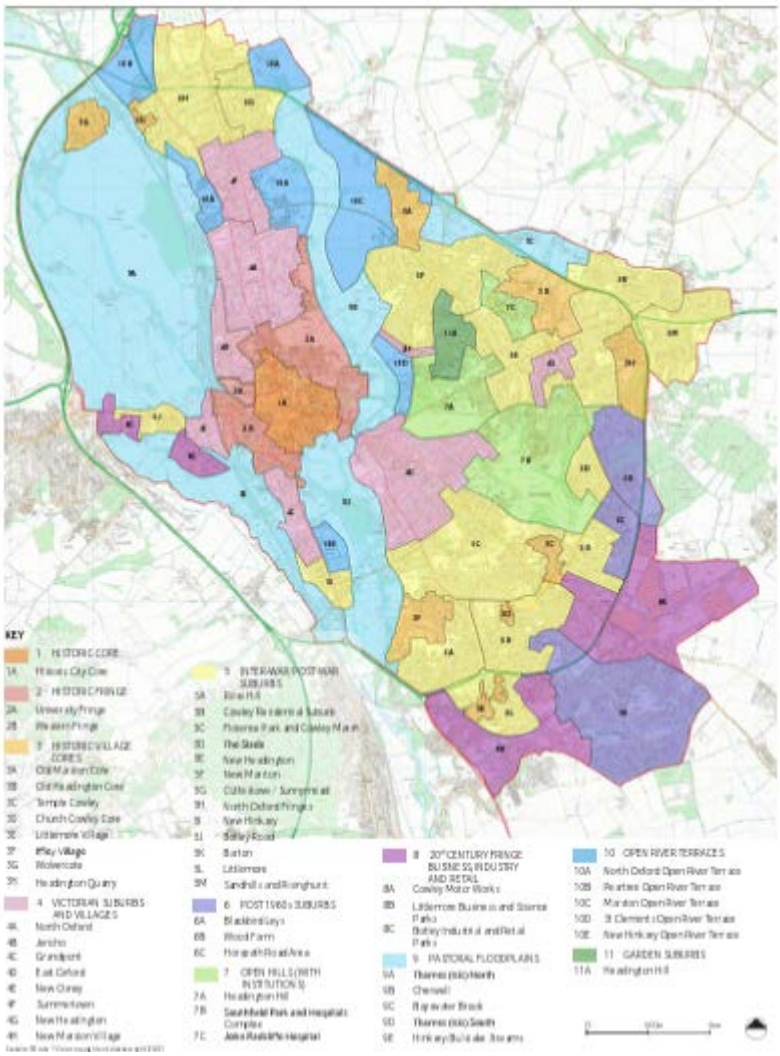

Figure 3.1 - Landscape character areas of Oxford as identified in the Character Assessment of Oxford in its landscape setting and updated using research for the Heritage Assets Register Project

Historical context and heritage assets in the city

3.3 Oxford contains buildings spanning every major period of British architectural history from the 11th century onwards Oxford's extensive history of settlement and cultural significance has contributed to a wide array of statutory designations across the city which are of national importance for ongoing protection for the benefit of future generations. The city hosts around 1,500 listed buildings, with the proportion of grade I and II* as a total of all listed buildings being more than twice the national average. Statutory listing protects both the inside and outside of a building, as well as fixtures and fittings (like windows, doors or staircases) and subsidiary buildings that form the 'curtilage' of the building. Alterations can only be made to a listed building if the Local Planning Authority (LPA) grants Listed Building Consent for any changes that might affect the special architectural or historic interest of the building.

3.4 There are 18 Conservation Areas designated across the city at present3. Conservation area designation is afforded to areas to identify that they have special architectural or historic interest that makes them worth protecting and improving. They include a diverse range of qualities from the compact college environment found in the city centre, the open green space found in the Headington Hill Conservation Area, to the vast meadows in Wolvercote and Godstow. Architectural styles and landscape qualities are diverse, but they all have the common element of containing features that contribute to our historic past. Oxford's Conservation Areas are as follows:

- Bartlemas
- Beauchamp Lane
- Binsey
- Central (University and City)
- Headington Hill
- Headington Quarry
- Iffley
- Jericho
- Littlemore
- North Oxford Victorian Suburb
- Old Headington
- Old Marston
- Osney Town
- Oxford Stadium, Sandy Lane
- St Clement's and Iffley Road
- Temple Cowley
- Walton Manor
- Wolvercote with Godstow

3.5 In addition to Listed Buildings and Conservation Areas, there are other important national heritage designations in the city including 10 scheduled monuments and 15 Historic Parks and Gardens which form an important component of the wider green infrastructure network.

3.6 Aside from national designations summarised above, there are a number of locally designated assets which have been identified on the Oxford Heritage Asset Register. This is a register of buildings, structures, features or places that make a special contribution to the character of Oxford and its neighbourhoods through their locally significant historic, architectural, archaeological or artistic interest. Locally listing does not establish the same level of protection as national listing in of itself.

3.7 Beyond these formally registered local assets, the city then also hosts a large number of traditional buildings (e.g. those built prior to modern methods of construction that arose in the 20th century) which also contribute to the wider character of Oxford. These other

buildings may still benefit from special qualities or features that are characteristic of older construction/architectural styles which warrant protection where possible, and may also require more careful approaches to redevelopment that reflect the unique ways these buildings function (e.g. passive ventilation) compared with modern buildings built today.

3.8 Three of Oxford's heritage assets are currently on Historic England's Heritage at Risk Register, which identifies sites most at risk as a result of neglect, decay or inappropriate development. These are the Church of St Thomas the Martyr, St Thomas Street (condition poor, priority category D - slow decay; no solution agreed), Minchery Farmhouse (condition poor from slow decay, no solution, priority C), and Church of The Holy Family, Blackbird Leys (condition very bad, priority A - Immediate risk of further rapid deterioration or loss of fabric; no solution agreed).

3.9 The features below ground also make an important contribution to Oxford's rich heritage and the city has a rich archaeological abundance comprised of features that were deposited at various points in the past from prehistoric times to the modern day. The unique archaeological heritage of the city encompasses a wide variety of asset types. Notable assets include prehistoric domestic, ritual and funerary sites located across north Oxford and the remains of an important Roman pottery manufacturing industry to the south and east of city. The town is also distinctive for its middle-late Saxon urban remains, its emergence as a major cloth trading town in the Norman period and for the numerous assets associated with Oxford's development as an international centre for academic study including the remains of multiple religious institutions, academic halls and endowed colleges. Other assets of particular note include the town defences, the distinctive remains associated with the medieval Jewish Community and the Royalist Civil War defences.

Encouraging high-quality urban design

3.10 Oxford continues to develop exciting new buildings at the forefront of modern architectural design. 4 of the 13 2021 RIBA south award winners were new buildings in Oxford, 6 of 13 in 2022, 3 of 11 in 2023, 2 of 6 in 2024 and 2 of 6 in 2025. Many of these award winners are within the historic core of Oxford and respond sensitively to that context, whilst successfully achieving modern and functional design that meets its brief.

3.11 Oxford City Council have been running the Oxford Design Review Panel (ODRP) for over 10 years. It is run in house by the Urban Design team with a highly experienced panel of 40 members. Design Review is an independent and impartial evaluation process conducted by a panel of built environment experts and was set up to ensure that there is a consistently high standard of design for significant built environment projects. It aims to embed best practice in urban design into the planning process. The panel promotes high quality design to help create better buildings, streets and public spaces in the city and all major development proposals are encouraged to engage with ODRP before a planning application is submitted.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 There is an on-going development pressure on historic assets and this is likely to remain the same over the coming years. However, a strong suite of historic environment policies remains in place within the Oxford Local Plan 2016-2036. There are areas where fairly significant amounts of development area expected, and these have 'Area of Change' policies within the Oxford Local Plan 2036, intended to help manage change within these areas.

4.2 The factors that enable the development of successful new buildings that are modern yet integrated are varied, and many will remain. The existing Local Plan policies such as DH1 ensure the design of proposals responds to its context from the start of the process and that sufficient information is submitted to allow a thorough understanding of the design implications. After 2036, Policy DH1 will no longer be a current policy and the NPPF will be the framework under which planning applications are determined. Although the proposed changes to the NPPF appear to reflect a move towards greater emphasis on 'beautiful' design, this would still lack the detail and specificity which is reflected in local level policies, particularly in a city like Oxford.

4.3 In addition to well-designed buildings, it is attention to walkability, landscaping, layout and availability of services that are vital to a positive experience of a place, wellbeing and health. The Oxford Local Plan 2036 identified areas of change. Without a new plan these areas of change may not provide guidance for the right areas.

4.4 Local level policies are able to focus on a level of detail which applies to the specific setting of the local area, for example Policy DH2 of the Oxford Local Plan 2036: Views and building heights, relates specifically to Oxford's view cones and it iconic skyline. In the absence of this local specificity in planning policies, there would be greater risk that the level of detail which the city needs in order to protect Oxford's uniqueness would be lost.

4.5 One of the legacies of the COVID-19 pandemic and the response to it has been a change in the way that people use the public realm, arguably engendering a greater appreciation of what is, and is not, on one's doorstep. There are clear links between urban design and health and wellbeing, and it is more important than ever that places are designed with an awareness of the impacts on these. In times of social distancing, design can also help reduce perceptions of risk. Designs that allow for safe social interactions and that help to instill a sense of community are very important. This means places designed to give space for people to interact safely and to feel comfortable in, with access to nature and opportunities for outdoor recreation and with an emphasis on designing spaces for people, not cars.

4.6 The risks from climate change, such as milder, wetter winters and hotter, drier summers, will impact everyone in Oxford. Design should respond to the challenges of climate change. Buildings will need to help adaptation to climate change, for example by being well insulated and naturally ventilated to deal with potentially hot summers, reducing the risks and damages of flooding events, ensuring biodiversity is maintained, ensuring there are green spaces to absorb rainwater and reduce flood risk, and to provide natural shade in the summer.

4.7 In terms of our contribution to climate change, the running of buildings is responsible for 81% of carbon emissions of Oxford, 29% of the total being from the running of residential dwellings[2]. In Oxford there is a careful balance that needs to be struck between preserving heritage value and retro-fitting buildings to reduce their carbon contributions. However, we take as a starting point that historic buildings are inherently sustainable. The inherent embodied energy (i.e. the energy expended and encapsulated within the fabric of a building in its construction) of historic buildings means that their retention and care is consistent with modern concepts of sustainability and with the ambitions of reducing carbon emissions. The 'whole building approach' seeks to save energy, sustain heritage significance, and maintain a healthy indoor environment through understanding the building in its context.

5. Key Issues addressed through the Local Plan 2045

Introduction

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to green infrastructure. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan. In some cases the review of the options has resulted in changes to the names or references of the policy taken forward to the 2045 plan. The running order of the policies in the plan may also have been amended from the Regulation 18 stage.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Overall approach to different types of historic assets

5.3 At Regulation 18 stage, the preferred option was for the plan to include a suite of policies separately addressing each type of designated heritage asset were proposed in order that the nuances of the local context relevant to each can be more clearly conveyed.

Following the consultation, it was noted that while the historic environment of Oxford is of particular national significance and uniqueness, the proposed policies directly reflect national policy approaches with no deviation of note. Although not having policy could not be justified because of the unique environment, it was considered that that the best approach for the Plan would be to have a consolidated policy that addresses all relevant types of heritage asset within the city – to avoid unnecessary repetition and facilitate conciseness. Nuances and specifics on the local context can be captured in the policy supporting text or within site allocation policies as required.

5.4 There are a number of locally significant heritage assets which the Local Plan also sets out protections for through policy HD4. These non-designated heritage assets may or may not be identified in the Oxford Heritage Asset Register but still have a local relevance that, whilst not being of merit for national-level designation, is still important for supporting the wider character of the city. The policy protection afforded to these assets is not as strong as national designated assets but sets out requirements for mitigating impacts and avoiding their loss in line with the level of significance that they are deemed to warrant.

5.5 There is a significant archaeological presence across the city as was flagged earlier in the paper, and where possible it is important that this is preserved from loss through inappropriate development. At times, information is limited to there being knowledge of potential for archaeology only, thus the policy seeks to ensure that where necessary applicants undertake the appropriate investigation to identify any potentially valuable finds and undertake suitable mitigation to prevent their loss. In particular, the policy flags the City Centre Archaeological area as an area with known high concentrations of archaeology.

Promoting the principles of good design

5.6 National guidance on good design is clear that heritage considerations are an important contextual factor which should inform good design, and as such the Council is keen to ensure that these are factored into the design process for development in Oxford. The Local Plan includes an overarching design policy (policy HD1) which sets out principles of good design for Oxford including requiring applicants to utilise the design guidance held within the appendix to ensure a comprehensive approach to design of new development. This design guidance includes a checklist to prompt applicants to take appropriately address the relevant design considerations within the design rationales for their schemes.

5.7 The emphasis of the assessment will be on a design process that is clearly explained and justified, and a demonstration that the proposed development is one that works well for its intended uses and is responsive to the immediate and wider context.

Appendix A – Regulation 18 Policy options sets

- A number of potential topics for policies derive from the analysis set out in the previous sections. These will be important for delivering upon the various Local Plan 2045 objectives that seek to ensure that development at all scales in the city is of the highest design quality, and that Oxford's visual character and street scene, and its unique skyline and views in and out of the city are preserved and enhanced.

- The Local Plan 2045 therefore includes proposed policies to address aspects both protection and enhancement of different elements of the historic environment as well as a number of policy areas seeking to guide applicants towards high-quality design.

- For each potential policy, options for the specific approach that could be taken for the Local Plan 2045 have been considered, and these 'options sets' are set out in tables on the following pages. The tables identify potential positives of the approach, as well as the potential negative or neutral impacts that could arise depending on the approach taken and that have helped inform the preferred position set out for the Regulation 18 consultation.

- Additionally, the options sets have been considered in light of their specific sustainability impacts through a high-level screening against the 12 sustainability criteria forming the assessment process for the separate Local Plan Sustainability Appraisal (explained in greater detail in the main Sustainability Appraisal report). A summary of this screening process is included at the end of each options set table.

Policy options set 011a (draft policies HD1, HD2, HD3, HD4): Designated Heritage Assets

- A cornerstone of good design is about ensuring proposals are informed by an understanding of existing context and designed to respond to this positively. In Oxford, a key part of this context is defined by the presence of heritage assets, and many of these have been designated for their national and local importance. There are a variety of designated assets in the city, from conservation areas and historic parks/gardens, to listed buildings and scheduled monuments, and their protection is not only about the features of the assets themselves, but often also about their wider setting.

Table A.1 - Policy options set 011a: Designated Heritage Assets

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a set of policies relating to designated assets that reflects the NPPF (including Conservation Areas, Listed Buildings, Registered Parks and Gardens, and Scheduled Monuments), that set out how impacts on designated heritage assets will be assessed, when mitigation is required, and how harm should be balanced against benefits, including Oxford-specific detail in relation to what harm and benefits may be for different types of assets in Oxford/in different parts of Oxford.	This could set out Oxford-specific considerations, giving local detail to the direction of the NPPF and helping to ensure local context is considered in proposals and decision making. It gives more clarity for applicants.	A list of potential harms and benefits in Oxford could never be definitive and will not precisely fit all situations. It is important it does not take over from case-by-case consideration based on specifics of the case.
Option b Include a policy or set of policies for designated heritage assets (e.g. listed buildings, conservation areas) that reflects the NPPF but does not include	Ensures that new development schemes are built to the highest standard of design to maintain and enhance Oxford's reputation as a world class city. Specific aspects of design addressed using checklist.	Policy wording covers a lot so is long and can be unwieldy to read through and understand. This approach relies on overarching principles that may not address specific design issues. The policy would not have to include all

Oxford-specific detail in relation to harm and benefits.		designated assets, for example there is not scope for a policy that does much more than repeat national guidance in relation to scheduled monuments and important parks and gardens. Generally, this approach of largely repeating national guidance is unnecessary.
Option c No specific policy, rely on NPPF requirements or National Design Guide as template.	NPPF has specific direction on delivering well-designed places, which it is not necessary to repeat.	It might be difficult to ensure proposals reflect Oxford context,risk of non – compliance with NPPF by not having more specific policies.

Initial sustainability appraisal of options sets
Is there only one option or are there various options we could take? A or b or c **High-level screening conclusion?** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** These options are about protecting designated heritage assets, to ensure that the significance of valued and important heritage is conserved and that understanding of the value and importance is enhanced. Options a and b prioritise the protection of Oxford's designated heritage assets, ensuring the assessment, prevention or where necessary mitigation of harm. Option c would provide no local steer on the protection of designated heritage assets, but rely on national policy and guidance. The options would all score positively against criteria **11. Good urban design and the historic environment** by seeking to protect and conserve existing heritage assets that contribute to the wider environment of the city. Additionally, the options would also require new design to mitigate against any potential harm, and respond to local context. Option c would have a more neutral impact as it would rely on national policy. There is no direct national policy,

but it does promote good design. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Designated Heritage Assets – draft policy HD1, HD2, HD3, HD4

- The preferred approach for the Local Plan 2045 policy is to have a local policy that elaborates on the NPPF, following the same approach, but applying that to specific heritage types, and also adding additional guidance in the policy where relevant and Oxford specific information in the supporting text. Given the significance of heritage in Oxford, it is important that the local plan contains a suite of heritage policies to enable application of the NPPF approach in Oxford, with a detailed expectation of requirements.

- As such the preferred option is option A. A suite of draft policies in proposed, that explain how the NPPF approach should be applied to different types of designated heritage asset, and which includes more detail than the NPPF and will enable the supporting text to include Oxford-specific information. This will help ensure Oxford's designated heritage assets are understood and responded to appropriately in the planning process.

Policy options set 011b (draft policy HD5): Non-Designated Heritage Assets

- There are several historic buildings and other assets which do not meet the requirements for protection of a national designation, but which are of importance to the city for their locally significant heritage values. Oxford City Council maintains a list of local heritage assets known as the Oxford Heritage Asset register (OHAr). The OHAr provides the opportunity to identify those elements of Oxford's historic environment particularly valued by local communities. Locally important heritage assets can be added to the list when they are identified, if they meet the criteria. The current policy ensures that heritage assets of local importance will be a material consideration when determining planning applications. Buildings and structures on OHAr are not given any statutory protection from demolition.

Table A.2 - Policy options set 011b: Non-Designated Heritage Assets

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach

Option a Include a policy that requires development to consider heritage assets of local importance. The policy would also set out criteria for assessing whether an asset has locally important heritage interest, and how to identify non-designated heritage assets.	This is very helpful in adding clarity and highlighting the importance of local assets and ensuring something of their significance is reflected in new proposals.	There is a risk the list could be seen as definitive, and it is then considered that anything not on the list has no heritage value.
Option b No specific policy, rely on NPPF requirements or National Design Guide as template.	NPPF has specific direction on local heritage assets, so it is not necessary to repeat it and that would aid conciseness of the Plan.	It might be difficult to ensure proposals reflect Oxford context, or to argue that something is a heritage asset if it is not clear that they are considered important in Oxford and what the criteria for defining them is.

1441

Initial sustainability appraisal of options sets
Is there only one option or are there various options we could take? A or B **High-level screening conclusion?** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** These options are about how to protect local heritage assets in a manner appropriate to their significance. Option a would add clarity and highlight the importance and significance of such assets within a local context, whereas option b would rely solely on national policy and guidance. Option a would score positively against criteria **11. Good urban design and the historic environment** by seeking to protect and conserve existing heritage assets that contribute to the wider environment of the city. Additionally, the option would also require new design to mitigate against any potential harm, and respond to local context. Option b would have a more neutral impact as it would rely on national policy. There is no direct national policy, but it does promote good

design. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Non-designated Heritage Assets – draft policy HD5

- The preferred approach for the Local Plan 2045 policy is to have a local policy that elaborates on the NPPF approach to non-designated heritage assets. The policy approach needs to align with the NPPF, but by including a policy there is the opportunity to reference the Oxford Heritage Asset Register and also to reiterate how non-designated heritage assets may be identified.

- As such the preferred option is option A. A draft policy is proposed that sets out how non-designated heritage assets will be considered, which is accordance with the NPPF. In addition it sets out routes by which a non-designated heritage asset may be identified.

Policy options set 011c (draft policy HD6): Archaeology

- Just as with its built environment, Oxford has a rich archaeological heritage that has been progressively built up from prehistoric times to the modern day. This archaeology has the potential to aid understanding of our heritage. New development presents opportunities to unearth and discover new archaeological remains which need to be fully realised, equally, it has the potential to harm or destroy these assets where their presence is not appropriately investigated, and impacts are not carefully mitigated.

- The policy options are intended to address the presence of archaeology, our preferred approach is to continue to define the City Centre Archaeological Area and require a holistic management plan for the colleges which are areas of known archaeological significance whilst also flagging those important features could be found elsewhere in the city. Where features could be present, we would require appropriate assessments and information gathering that can define character, significance and extent of any deposits so that these are not missed or lost. We would also positively support proposals which are designed to enhance or to better reveal the significance of the asset.

Table A.3 - Policy options set 011c: Archaeology

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Continue to define the City Centre Archaeological Area. For all sites where archaeological deposits or features are suspected, require the incorporation of sufficient information to define the character, significance and extent of such deposits including a heritage assessment and full archaeological desk-based assessment if the initial assessment suggests this is relevant.	There are known to be archaeological deposits of significance across the whole city centre area, so defining this area to flag this up front and ensure assessments are carried out from the start of the process would help to bring certainty. This sets out from the start exactly what is expected which aids certainty for developers.	By defining an area there is a danger that areas outside of this will not be considered from the outset for their potential archaeological importance. To mitigate this a policy would also need to ensure it was made clear that there is potential for archaeological deposits across the city. This adds length and detail to the policy.
Option b Require a holistic management plan for key historic college owned and occupied sites in the City Centre Archaeological Area when development is proposed. These should take a holistic view of the whole college site and should consider features that should guide the location of new development within the site, including best location for basements in terms of impacts on archaeology (and cumulative impacts).	Colleges sites are almost certain to have archaeologic interest, as well as being long-term owners with extended interest in their significant sites, which they are custodians of. Where developing in an area with such significant archaeology it is important that development is considered holistically and located in the best way within a site.	This does require up front work from the colleges.
Option c Where proposed development would impact on archaeological or	This follows the NPPF approach so adds clarity that this would be expected. If the other parts of the	This adds length and detail to the policy which may not be necessary as

paleoenvironmental features and deposits, it will only be supported where the harm to such deposits and features can be eliminated or where, by agreement, mitigated to an appropriate level, conserving the remains and the significance of the archaeological or paleoenvironmental asset better revealed and understanding of that significance enhanced (by agreed measures).	NPPF approach are to be in a policy tailored to Oxford then it would be confusing not to include this also.	it is at least partly covered in the NPPF.
Option d Map more areas as archaeological areas where it is known there are likely to be deposits/not allocate sites where archaeological deposits or features are expected to be present and require heritage assessments with potential desk-based assessments if needed.	There are other known areas of deposits, although none to the extent of the city centre. We could define these on the policies map to help flag the high likelihood of deposits in these areas, which would ensure they weren't overlooked and would add certainty for developers from the start of the process.	This risks suggesting that areas that aren't mapped are unlikely to have deposits. It might be safest to rely on initial investigations for individual sites as they come forward, which can be done in advance for allocated sites.
Option e Do not include a policy about archaeology but rely on national policy instead.	This avoids any repetition with national policy and keeps the plan focused on things that are not already covered in national policy.	Given the importance of the heritage of Oxford and its rich archaeological record it should be highlighted in the local plan. Having no specific policy would miss the opportunity to highlight this importance from the start or to tailor the policy approach to Oxford.

Initial sustainability appraisal of options sets
Is there only one option or are there various options we could take? A, b, c, d, or e, or a combination of a, b, and c **High-level screening conclusion?** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** These options are about protecting archaeological and paleoenvironmental assets, to ensure that the significance of valued and important heritage is conserved and that understanding of the value and importance is enhanced. Options a and c would have a positive impact, options b and d do not directly apply restrictions and therefore are more likely to be neutral on their own. Option e does not provide local context, but relies solely on national policy and guidance. The options would all score positively against criteria **11. Good urban design and the historic environment** by seeking to protect and conserve existing heritage assets that contribute to the wider environment of the city. Additionally, the options would also require new design to mitigate against any potential harm, and respond to local context. Option e would have a more neutral impact as it would rely on national policy. There is no direct national policy, but it does promote good design. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Archaeology – draft policy HD6

- The preferred approach for the Local Plan 2045is to have a local policy that defines the city centre archaeological area and that also provides guidance for when archaeological deposits are impacted. The city centre area has such a wealth of deposits, that it is almost a certainty that development will impact on them. Therefore, it is worth being upfront and setting out the starting point that deposits are likely to be found. The sets out a clear expectation that there is efficient use of land in all schemes. The policy sets out criteria to be considered in determining a site's capacity, following the same approach, but applying that to specific heritage types, and also adding additional guidance in the policy where relevant and Oxford specific information in the supporting text. Given the significance of heritage in Oxford, it is important that the local plan contains a suite of heritage policies to enable application of the NPPF approach in Oxford, with a detailed expectation of requirements.

- As such the preferred option is option A combined with Option C.

Policy options set 011d (draft policy HD7): Principles of high-quality design of buildings

- High quality design needs to show a good response to its surroundings as well as considering how buildings and spaces interact and function. From the materials selected to build a structure, to the provision of green open space, layout of pedestrian routes and provision of shops/amenities, design of places needs to take account of and balance many considerations in order to be successful.

Table A.4 - Policy options set 011d: Principles of high-quality design of buildings

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a policy that requires high quality design and include a checklist to set out key principles of what this means in detail (including principles for materials, layout, potentially secure by design, etc.), requiring that the Design and Access statement or other submission alongside the planning application covers the relevant aspects of good design. Exempt householder applications and changes of use without external alteration from needing to include answers to the relevant checklist questions in their submission.	Would help ensure that new development schemes are built to the highest standard of design to maintain and enhance Oxford's reputation as a world class city. Specific aspects of design addressed using checklist. Sets standards for high quality design for relevant schemes, reflects importance placed on creating distinct places in planning framework.	Types of development that checklist may apply to are limited e.g. householders and change of use not covered. Householder applications should still aspire to high design quality. Checklist can be generic, with overarching principles that may not address design quality issues affecting specific development types e.g. residential dwellings, hotels etc. The alternative is to expand the scope of checklists including becoming more prescriptive. Assessment of schemes may rely on some level of subjective judgement which might be point of contention with applicants and lead to drawn out negotiation and argument. May be onerous to apply and may require extensive officer time.

Option b Include householder applications and/or changes of use applications in the requirement to follow the checklist.	Even if there are no significant external changes of use, they may have an impact on the character of an area. Householder extensions also have an impact. Smaller applications are not necessarily simple and the cumulative impact of poor-quality design and a low expectation for householder applications can have a significant impact on the overall quality, character and particularly appearance of a place.	The impacts on design can be assessed without a checklist for these smaller applications. Many of the urban design principles will not be applicable to these or householder extensions. This approach could be quite onerous without necessarily adding significant value.
Option c include a generic design policy but be less specific e.g. have requirements for good quality design but do not rely on a checklist.	Potentially more flexibility for developers to bring forward compliant schemes and more quickly. Easy to compare requirements to NPPF and other authority baselines.	It might be difficult to ensure proposals reflect Oxford context.
Option d No specific policy, rely on NPPF requirements or National Design Guide as template.	NPPF update has more specific direction on delivering high quality design.	It might be difficult to ensure proposals reflect Oxford context, risk of non-compliance with NPPF by not having more specific policies.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Option a, b, c, or d **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No

1447

Rationale: Options a, b, and c are all alternatives and generally cover how far a policy goes with setting design guidance/requirements (e.g. detailed checklist or more simple). Option C would be considered as an addition to either option a or b and would expand the types of applications it applies to.

In terms of sustainability impacts... Most directly the options would impact **criterion 11. Urban Design**, but depending on the implementation of the options, they are likely to impact other criteria in the SA framework also (e.g. sustainable construction, greening, health and wellbeing etc). Option d and E are likely to have a neutral impact, but options A and B are likely to have a more positive impact because they are more prescriptive and specific about what would be considered good design in the city, potentially, option A might achieve a significant positive for this reason. Overall, the sustainability impacts between the options are similar to each other from a sustainability perspective, it is not considered necessary to scope in for detailed appraisal.

Principles of high-quality design of buildings – draft policy HD7

- The preferred approach for the Local Plan 2045 is to have a local policy that requires high quality design and that links to a checklist that sets out what needs to be considered in order to demonstrate high quality design. This policy approach is not prescriptive, but does ensure a thorough consideration is given to all aspects of high quality design.

- As such the preferred option is Option A. Option B is very similar, but would also require use of the checklist for householder and change of use (with no external alterations). This is not justified, because the approach would not be proportionate to the scale of those developments. Option C or D would not provide sufficient design guidance.

Policy options set 011f (draft policy HD9): Views and Building Heights

- Oxford has an iconic skyline, which includes the ‘dreaming spires’, as well as several special views into the historic core which are detailed in the Oxford View Cones assessment. These features mean that the city is particularly sensitive to the impacts of taller buildings, and care needs to be taken over the design and placement of such development where it is proposed so that taller buildings do not negatively impact on views of the iconic skyline.

Table A.5 - Policy options set 011f: Views and Building Heights

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Continue to define the area within a 1,200 metre radius of Carfax tower as the Historic Core Area. This area contains all the buildings that comprise the historic skyline, so new developments that exceed 18.2m in height will intrude into the skyline. Require that any buildings above this height are limited and bulk, only thin, delicate and of the highest design quality, demonstrated by stringent appraisals to inform and explain design choices.	This option gives a nuanced approach to assessing heights, which aims to avoid harmful uniform heights but also ensure positive impacts. It does not prevent unwanted intrusion into the skyline because there is a rigorous process to prevent it, but it also still allows fantastic additions to the skyline.	Uniform heights can still occur. An element of judgement is introduced without a set height limit (even though a rigorous policy and process should prevent harm).
Option b Continue to refer to the High Buildings Technical Advice Note (TAN) (or an updated version) as the key evidence base for deciding appropriate heights, designing higher buildings and appraising applications.	The High Buildings TAN contains useful guidance specific to Oxford that helps positively shape design choices in relation to building heights. The guidance is already in place and has been used successfully to inform many applications and decisions.	The guidance can't itself prevent designs that are harmful to character and not justified and this would need to be in conjunction with other policy requirements. It will be necessary to make it clear that local townscape considerations still apply too.
Option c Continue to define view cones, which are the areas within a view from historic viewing places from where the 'dreaming spires' can be most clearly seen. Include a policy that requires	This approach has been successful over a long period of time. Although views of the spires may have altered over time because of growth of vegetation, there are not buildings in the view cones that prevent the viewing, enjoyment and understanding	The approach is limited to views from defined viewing points.

design within the view cones to avoid harming the views of the spires.	of the spires. These are long established as the key viewing points, and the protection, especially in combination with policies relating to the central area, has conserved the important views over time.	
Option d Include an absolute height limit in the city centre that does not interfere with the spires.	This would protect the views of the historic spires as they are.	An absolute height limit can be set lower than it potentially needs to be in order to make sure everywhere is low enough not to interfere with the dreaming spires. Any innovation or change is stifled. This approach can lead to uniform heights, leaving unwanted horizontal line that harms the foreground of views and the setting of historic assets and prevent the spires and towers to be properly discerned, detracting from their significance.

1450

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various combinations of options e.g. option a, a+b, a+b+c, b+c+d **High-level screening conclusion?** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** Of the options – option a does potentially allow higher buildings, meanwhile option d is a hard restriction in heights in the city centre. Option B is about making reference to the high buildings TAN to guide design considerations and option C is about incorporating view cones into a policy and including particular considerations in relation to applications within these zones.

In terms of sustainability impacts – key criteria these options are relating to is criterion 11. Urban Design/Historic Environment. All the options would likely have a positive impact for this criterion (at least in terms of supporting the historic environment). The options also potentially have an impact on criterion 12. Economic Growth, because option a is not a hard restriction, it is likely to have a neutral impact on economic growth. Option D is likley to be a negative impact. Option C potentially also has a minor negative impact for criterion 3. Efficient use of land – limiting heights potentially limits development options/density?

Overall, there are unlikely to be significant sustainability impacts from the options that would warrant testing through a detailed Sustainability Appraisal.

View Cones and High Buildings - draft policy HD9

- The preferred approach for the Local Plan 2045 policy is to have a local policy that sets guidance for what a high building is and sets criteria for guiding appropriate height and analysing impacts. The preferred approach is also to define an area within 1,200m radius of Carfax tower as needing very strong justification for any building over a set height. The preferred approach is also to continue to define view context. Taken together, these elements of the draft policy ensure that the important skyline is protected, but do also allow flexibility for well-designed schemes of height, with supporting guidance showing how to determine appropriate heights in different parts of the city.

- As such, the preferred option is a combination of a, b and c. An absolute height limit is not considered appropriate as it does not offer flexibility and could have other significant negative impacts, such as uniform height being introduced.

Policy options set 011g (draft policy HD15): Bin and Bicycle Stores and External Servicing Features

- It is important to ensure that new development is designed with appropriate consideration for bin and bicycle storage and also external servicing features. The Local Plan 2045 seeks to increase the uptake of cycling further to help Oxford achieve its ambitions of improving air quality, reducing congestion and encouraging healthy lifestyles. The Local Plan also seeks to ensure that bins and external servicing features are considered at the initial stages of the design process so they can be designed in

at an early stage rather than being considered as an afterthought which can result in negative impacts on the appearance and amenity of an area. The policies in Chapter 6 of the Local Plan include guidance on bin, bicycle storage and external servicing features whilst the policies in Chapter 7 include bicycle parking design standards.

- The policy options set out below include requirements for the design of these areas. There is also an alternative option of having no locally set policy on bin and bicycle storage and external servicing features.

Table A.6 - Policy options set 011g: Bin and Bicycle Stores and External Servicing Features

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Requires that bin and bicycle stores and external servicing features should be considered from the start of the design process and set criteria to ensure they meet practical needs but do not detract from the overall design, that external servicing features are integrated into the design or positioned to minimise their impact and that high quality materials are used. Include compulsory requirements, setting out binding design codes depending on location, building type etc, and requiring fire-safe spaces with adequate electric supply for charging.	Applying a discrete policy ensures considered design of these areas and not just as an afterthought; it helps alignment with other objectives of plan e.g. encouraging active, sustainable travel; effective waste management etc. This can bring in a far greater level of clarity in terms of design requirements, ensuring high design quality, public amenity etc. There is less chance for this area to be overlooked or for poorer quality to be introduced by stealth or negotiation. There are many consistent key principles that can be written into policy, to raise the awareness of the need for good design of these areas from the outset, and to be consistent with increasing e-bike ownership, etc.	Adding further burden to developers in bringing forward schemes; may be too onerous to apply or enforce.
Option b		

No specific policy, rely on NPPF.	NPPF update has specific direction on delivering high quality design.	It may be difficult to ensure proposals reflect Oxford context; difficult to ensure consistent standards and design quality if proposals are always assessed on case-by-case basis; difficult to require a minimum level of servicing without policy.

Initial sustainability appraisal of options sets
Is there only one option or are there various options we could take? - Option a or Option b **High-level screening conclusion? -** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** Option a or Option b are alternatives to each other and represent the choice between having a specific local policy or not. In terms of sustainability impacts, the two options relate to **criterion 11. Good urban design, criterion 8. to reduce traffic and associated air pollution and criterion 1. car emissions.** Option a would have a minor positive impact for all criteria above. It would help with urban design, potentially reducing the risk of bin storage being unsightly and could help encourage the use of active travel modes. Option b would have a minor negative impact as whilst there is national policy on delivering high quality design, this is not specific to the Oxford context and could result in poor quality design of either bin storage and/or cycle storage areas. Poorly designed cycle storage could deter the use of bicycle which could exacerbate congestion or air quality issues if people chose to travel by car instead. Overall, the difference between the sustainability impacts of the different options are unlikely to be significant so it is not considered to warrant a detailed appraisal.

Bin and Bicycle Stores and External Servicing Features – draft policy HD15

- The preferred approach for the Local Plan 2045 policy is to have a local policy that requires bin and bicycle stores and external servicing features to be considered at the outset of the design process. This will help to ensure a higher quality design. It would also help to meet other Local Plan 2045 objectives including encouraging active travel and effective waste management.

- As such the preferred option is option A. The draft policy includes a set of criteria that should be considered. Option B is to not have a bespoke policy but to rely on the NPPF. This may result in inconsistent standards of bin and bicycle storage provision, which may have negative implications including on the urban realm.

Background paper 012

Transport

This paper addresses: Oxford's circumstances around Transport and Movement
Relevant Local Plan Objective(s): • Create opportunities for supporting the transition to more sustainable/active forms of transport, including by reducing the need to travel, supporting good bicycle parking facilities and avoiding on and off-street car parking where possible across the city. • Contribute towards continued improvement in the city's air quality and its further limit impacts upon public health.
Relevant SA Objective(s): 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040 8. To reduce **traffic and associated air pollution** by improving travel choice, encouraging active travel, shortening journeys, and reducing the need to travel by car/lorry.

1. Introduction

1.1 This paper focuses on Oxford's transport system. It provides a context for considering this subject by providing a brief summary of the relevant national and local plans, policies and

programmes that currently exist and will influence change in the future. There is a section on the current situation which includes some key information about existing and emerging strategies. As part of an assessment of the current situation some of the key challenges and future trends that are likely to impact on the transport system are identified. The next section explores what would happen without a new Local Plan and the potential difficulties that the city would face in terms of transport and connectivity. Finally, it discusses what the emerging Local Plan 2045 could do to meet the objectives of both existing and emerging policies and strategies.

2. Policy Framework/ Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

Plans Policies and Programmes

National Planning Policy Framework (NPPF)

2.1 The NPPF (December 2024) indicates (paragraph 109) that transport issues should be considered from the earliest stages of plan-making. This should involve identifying and pursuing opportunities to promote walking, cycling and public transport use. It states (paragraph 111) *"Planning policies should: [...] b) be prepared with the active involvement of local highways authorities, other transport infrastructure providers and operators and neighbouring councils […] d) provide for attractive and well-designed walking and cycling networks with supporting facilities such as secure cycle parking (drawing on Local Cycling and Walking Infrastructure Plans)."* In terms of parking, the framework specifies (paragraph 112-113) that policies should take into account the availability and opportunities for public transport.

Regional Policy and Strategy

2.2 England's Economic Heartland (EEH), the subnational transport body stretching from Swindon in the west to Cambridge in the east published its Transport Strategy: Connecting People, Transforming Journeys in February 2021. Although a non-statutory document, this strategy sets out a policy framework designed to deliver the EEH's ambition to support sustainable growth and improve quality of life and well-being through a world-class, decarbonised transport system which harnesses the region's global expertise in technology and innovation to unlock new opportunities for residents and businesses, in a way that benefits the UK as a whole. Informed by a programme of technical work, taken forward in collaboration with partners within the Heartland and Government, the strategy is guided by four key principles:

- Achieving net zero carbon emissions from transport no later than 2050, with an ambition to reach this by 2040;
- Improving quality of life and wellbeing through a safe and inclusive transport system accessible to all which emphasises sustainable and active travel;
- Supporting the regional economy by connecting people and businesses to markets and opportunities; and

- Ensuring the Heartland works for the UK by enabling the efficient movement of people and goods through the region and to/from international gateways, in a way which lessens its environmental impact.

2.3 There are various relevant strategies listed below:

- The EEH have produced multiple connectivity studies (see here: https://englandseconomicheartland.com/publications-and-papers/publications) for areas in Oxfordshire which helps to identify opportunities for partnership working and develop the case for regional funding and further scheme development.
- Transport mode-based evidence studies and strategies have also now been produced. These include:
    - The Active Travel Strategy (Part 1 (March 2022) and Part 2 (July 2023)) which identifies cross boundary opportunities to improve active travel;
    - The Regional Bus Strategy (July 2022) which identifies opportunities to improve cross boundary bus movements;
    - The Mobility Hubs Business Case Guidance (March 2023) which provides practical guidance and advice in developing business cases and undertaking appraisal for mobility hub proposals;
    - The Improving the North Cotswold Line strategic narrative (January 2025) and The case for reinstating Oxford-Swindon-Bath-Bristol rail services (January 2025) which both aim to improve services along their corridors, Hereford, Worcester and Oxford and Oxford-Swindon-Bath-Bristol respectively.

Local Transport and Connectivity Plan (LTCP)

2.4 The LTCP, adopted in July 2022 and updated in November 2024 is the statutory Local Transport Plan required under the Transport Act 2000. It sets out Oxfordshire County Council's (as Local Highways Authority) strategy for both digital infrastructure and transport to 2050. It outlines a clear vision to deliver a net-zero Oxfordshire transport and travel system that enables the county to thrive while protecting the environment and making Oxfordshire a better place to live for all residents.

2.5 The headline targets in the LTCP include:

By 2030:

- Replace or remove 1 out of every 4 current car trips in Oxfordshire;
- Reduce car vehicle miles driven in Oxfordshire by 10%;
- Increase the number of cycle trips in Oxfordshire from 600,000 to 1 million cycle trips per week; and
- Reduce road fatalities or serious injuries by 50%.

By 2040:

- Deliver a net-zero transport network; and
- Replace or remove an additional 1 out of 3 car trips in Oxfordshire

By 2050:

- Have zero, or as close as possible, road fatalities or serious injuries; and
- Deliver a transport network that contributes to a climate positive future

2.6 These are to be achieved by reducing the need to travel, discouraging individual private vehicle journeys and making walking, cycling, public and shared transport the natural first choice. The LTCP vision and policies will be used to influence and inform how we manage transport and the types of schemes implemented. The latest LTCP monitoring report covering 2023-2024 was published in November 2024.

2.7 The LTCP is supported by a number of strategies and plans which are relevant to Oxford. These include the Active Travel Strategy (July 2022) which focuses on active travel modes; the Mobility Hub Strategy (July 2023) which focuses on transport interchanges across the county to improve the way we travel and to better integrate different transport modes; the Freight and logistics strategy (July 2022) which addresses some of the challenges with the movement of goods in Oxfordshire; the Innovation Framework, (October 2021) which sets out guidance as to how to consider innovation within planning and development; the Digital Infrastructure Strategy (updated summer 2022) which sets out how to continue to improve both fixed and mobile digital connectivity in collaboration with partners, suppliers, and central government, the Central Oxfordshire Travel Plan (COTP) (August 2023) which sets out the transport plan for the central Oxfordshire area from 2023 to 2050, with a focus over the period to 2032 and the OxRAIL 2040: Plan for Rail (November 2025) which aims to deliver on high-level policies on rail and public transport described in the LTCP.

Central Oxfordshire Travel Plan (COTP)

2.8 The COTP covers the urban area of Oxford, the immediate movement and connectivity corridors to and from the city, as well as the main villages that lie on these corridors (Kidlington, Eynsham, Botley, Cumnor, Kennington and Wheatley). The COTP sets out 23 actions to achieve the plan outcomes and support the achievement of the LTCP targets. For Oxford these include the following:

- an expanded zero emission zone (ZEZ) - an expansion of the pilot ZEZ launched in February 2022;
- strategic traffic filters - intended to reduce traffic levels in Oxford by managing the use of certain roads in the city by private cars; and
- a workplace parking levy - an annual charge to businesses with 11 or more staff parking spaces within the Oxford ring road. The funds raised from a WPL would be set aside to improve transport in and around the city.
- Improving priority and safety of sustainable modes through implementation of the Oxford Local Cycling and Walking Infrastructure Plan (LCWIP) (March 2020) and the Oxfordshire Strategic Active Travel Network (SATN) sets out priority infrastructure measures fundamental to achieving a step change in cycling and walking in Oxford in terms of infrastructure. This includes low traffic neighbourhoods (LTNs), and the introduction of active travel routes (Quickways,

Quietways and Connector Routes). Whilst there are no specific targets for improving overall walking levels, the LCWIP supports measures to provide appropriate infrastructure for those with mobility issues, children and older people.

- The introduction of a Central Oxfordshire Movement and Place Framework (COMPF). A joint County-City project which aims to raise the quality of public realm, support a shift to active travel and public transport, improve access to green and blue spaces and make the most of development and regeneration.

Oxfordshire Housing and Growth Deal

2.9 The Oxfordshire Leaders Joint Committee (formerly the Future Oxfordshire Partnership) secured £215 million of Government investment for new homes and infrastructure across Oxfordshire in 2017, of which £60m is for affordable housing and £150m is for infrastructure improvements. Within Oxford City, funding from the Housing and Growth Deal is being used alongside match funding and other developer funding to fund technical work for infrastructure improvements that include a number of measures set out in the COTP, as well as complementary development work to support the reopening of the Cowley Branch Line; a new pedestrian and cycle bridge between Oxpens and Osney Mead and the Environment Agency's planned Oxford Flood Alleviation Scheme (OFAS).

Department for Transport's Local Growth Fund and Homes England's Housing Infrastructure Fund (HIF)

2.10 Oxfordshire County Council has secured funding from the above for improvements between Eynsham and Oxford. The A40 improvement programme which will improve the commutes of current and future residents as well as visitors to Oxford, includes a new bus lane between Eynsham and Oxford and upgraded walking and cycling facilities along the route.

Bus Service Improvement Plan (BSIP)

2.11 In March 2021 the Department for Transport published a new long-term national strategy for buses in England titled Bus Back Better. This asks local authorities and bus operators to work in partnership to develop ambitious plans to deliver better bus service in their area. Oxfordshire's Bus Service Improvement Plan was adopted in October 2021. It is reviewed annually with the latest update in June 2024. The Oxfordshire BSIP delivery plan 2025-26 which includes improvements in the Oxford City area was approved in March 2025.

2.12 In March 2022, Oxfordshire County Council was awarded funding from the government's Zero Emission Bus Regional Areas (ZEBRA) scheme. With additional funding from the council and bus companies Stagecoach and the Go Ahead Group, the ZEBRA scheme will deliver 159 electric buses and supporting charging infrastructure to Oxfordshire. Electric buses are now operational on many routes covering Oxford, helping to improve air quality within the city, reduce CO2 emissions and make bus travel a more attractive option.

Oxfordshire Rail Corridor Study

2.13 The Oxfordshire Rail Corridor Study (ORCS) (June 2021) was jointly funded by the Department for Transport, Future Oxfordshire Partnership (now named the Oxfordshire Leaders Joint Committee) and other partners. It focuses on the movement of people and goods across the rail network in Oxfordshire, with particular emphasis on how rail can support growth and development across the County and the wider region and inform strategic decisions. The study identifies several strategic capacity requirements on the rail network as well as a need for better connectivity between key rail hubs within the county. For Oxford City, the introduction of East-West rail services from Milton Keynes/ Bletchley to Oxford require improvements to the capacity and upgrades at Oxford Rail Station which are being undertaken. Further service enhancements are also identified to enable new passenger services via the Cowley Branch Line to London with two new stations on the Branch Line. The study also identified a need for increases in freight path availability particularly between Didcot and Oxford, including 4- tracking of the rail line between Oxford Station and Radley.

Oxfordshire Connect

2.14 Oxfordshire Connect is a programme to upgrade Oxford Station and includes expanding the railway infrastructure and improving the local road network. The works include the replacement of the Botley Road bridge to enable upgrades to Oxford station, the wider railways and road, cycle and pedestrian routes as well as signalling and track upgrades. The outcomes the programme will bring include:

- A bigger, better station for everyone;
- More services with East West Rail;
- Additional rail capacity for the future; and
- An improved and safer road layout.

Electric Vehicle (EV) Charging Strategy

2.15 The Oxfordshire Electric Vehicle Infrastructure Strategy (OEVIS), adopted by Oxfordshire County Council in March 2021 sets out policies and plans to support the transition to zero emission road transport. This will help Oxfordshire to achieve net zero carbon, reduce air pollution, and deliver key transport initiatives such as the Oxford Zero Emission Zone (see above). The strategy is among the first of its kind in the UK and has been a collaborative piece of work between the County and five district councils of Oxfordshire.

2.16 Of the 17 OEVIS policies, those of most relevance to policy makers are Policy EVI 7 and Policy EVI 8:

Policy EVI 7: The Councils will seek to include statements & policies supportive of EV charging infrastructure and, where appropriate, references to the Oxfordshire Electric Vehicle Infrastructure Strategy in their planning standards and guidance;

Policy EVI 8: The Councils will benchmark nationally, and between themselves, each seeking to set minimum standards for the quantity of EV charging to be provided in developments in their planning requirements.

2.17 Oxford City has adopted its own Electric Vehicle Infrastructure Strategy (July 2022) and has installed a number of EV charge points across the city as part of the 'Go Ultra Low Oxford' project.

Transport/ Traffic Modelling

2.18 The transport/ traffic model used to inform the Oxford Local Plan 2045 is the County Council's Oxfordshire Strategic Model (OSM). Background Paper 012a provides a discussion of how that model has been used to inform plan-making in the city.

Oxford Local Plan 2036

2.19 The Oxford Local Plan 2036 is the current adopted Local Plan. The plan aims to reduce carbon emissions, encourage the use of sustainable transport modes and make the best use of land. Section 7 contains strong policies to help realise this strategy:

- Policy M1 seeks to promote sustainable transport choices by prioritising walking, cycling and public transport.
- Policy M2 seeks the submission of Transport Assessments/Statements and Travel Plans from development proposals that will have significant transport implications, with the intention of reducing car travel and encouraging the use of sustainable transport.
- Policy M3 requires new residential development to be car free in Controlled Parking Zones and no increases in parking provision and ideally a reduction, in all other areas. For non-residential developments the policy aspirations are to keep parking levels to an operational minimum, with a shift towards more sustainable travel modes. A low standard for car parking provision means that a greater proportion of scarce land can be used for providing homes and avoids issues of parking creating poor urban design. Reduced car parking, and therefore car ownership and car trips, is likely to reduce air pollution and noise levels. Fewer cars using the roads improves the attraction of walking, cycling, and spending time in the public realm.
- Policy M4 seeks the provision of electric charging points in new developments.
- Policy M5 addresses cycle parking provision.

Corporate Plan

2.20 Oxford City's Council's Strategy 2024-28 was approved by the Council's Cabinet in July 2024. Its five priority areas of focus are:

- Good, affordable homes;
- Strong, fair economy;
- Thriving communities;
- Zero Carbon Oxford; and
- Well-run Council.

2.21 The strategy identifies that achieving a Zero Carbon Oxford will require a citywide effort, involving local and national government, businesses, institutions and citizens. To help achieve a Zero Carbon Oxford, priorities for the City Council include:

- Decarbonising homes and other buildings and securing the additional funding required to meet the target of becoming a zero carbon council by 2030 and a net zero city by 2040;
- Maintain and improve parks, green spaces, biodiversity and access to nature; and
- Develop low carbon infrastructure and support households, businesses and institutions to save energy and cut emissions.

2.22 Commitments to achieve these priorities include:

- Ensuring all homes and other buildings are built to high standards with good energy efficiency;
- Maintain and improve biodiversity in our green spaces and access to nature in the city; ensure building projects support biodiversity by providing land for OX Place and other developers to use for Biodiversity Net Gain locally when exceptional circumstances mean it cannot be delivered on the building site itself; and
- Working with partners to deliver a Local Area Energy Plan for Oxford to support decarbonisation and infrastructure development.

2.23 To help enable a strong fair economy, the City Council commits to maximising the local benefit from investment in a new station for Oxford, and continuing to work for the Cowley Branch line extension (which received £120m of government funding in October 2025).

2.24 The strategy is designed to be used as a framework to guide thinking and decision-making and resource allocation. It is underpinned by the Medium-Term Financial Strategy 2026-27 to 2028-29 that sets out the financial priorities and commitments over the next three years. To support the delivery of the strategy, the Council will produce an annual Business Plan that will set specific priorities for the year ahead and report on progress against agreed key performance indicators (see the Annual Business Plan 2025 to 2026). In turn the Business Plan will be complemented by Oxford City Council's annual Budget that will allocate resources against the priorities set.

Oxford Climate Emergency

2.25 In January 2019, Oxford declared a climate emergency and in autumn 2019 was the first city to hold a Citizen's Assembly on Climate Change. Since 2019 work has continued to tackle the climate emergency and Zero Carbon Oxford is the goal for Oxford to achieve net zero carbon emissions across the city as a whole by the year 2040, 10 years ahead of the legal deadline set by Government.

2.26 In February 2021, the Zero Carbon Oxford Partnership was created, comprising a group of leaders from Oxford's main institutions and employers, including the universities, hospitals, businesses and other organisations. The Zero Carbon Oxford roadmap and Action Plan

was published in July 2021 outlining how the 2040 target can be achieved. Zero Carbon Oxford projects include Energy Superhub Oxford, Europe's most powerful electric vehicle charging hub; Oxford Zero Emission Zone (see above), introduced by Oxfordshire County Council and Oxford City Council to improve air quality, cut carbon emissions, and move towards zero emission travel in the city; and Go Ultra Low Oxford which provides electric car charging solutions for Oxford residents who do not have a driveway.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

3.1 Oxford is a city recognised for its high levels of walking and cycling however, the LCWIP identifies that cycling conditions, provision and routes are often very poor. The cycling section of the Active Travel Strategy and the Oxford LCWIP sets targets to increase both commuter cycling and all cycling trips in Oxford by 50% by 2031.

3.2 Figure 3.1 shows the number of cycle trips per week in Oxford City between 2016 and 2023. This data is calculated using Sport England's Active Lives Survey. The data shows that the number of cycling trips per week in Oxford fell from 2019 to 2021, which is most likely because of the Covid 19 pandemic. Since 2021 the number of trips has increased but have not returned to those recorded pre pandemic. Notably, the surveys were conducted during different months in each year which does have an impact upon cycling take up.

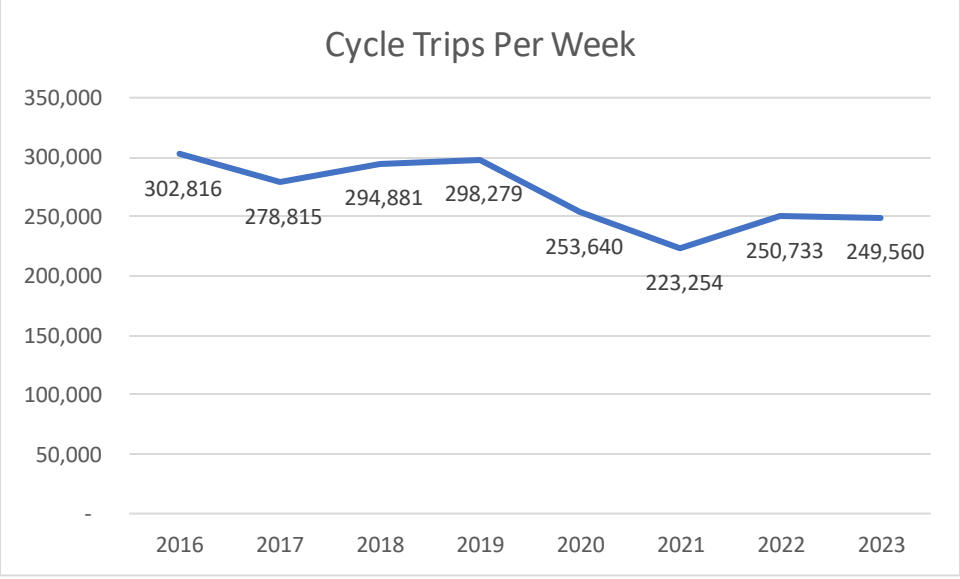

Figure 3.1 - Total number of cycle trips per week 2016 – 2023

3.3 Figure 3.2 shows the number of walking trips per week in Oxford City between 2016 and 2023. This data is calculated using Sport England's Active Lives Survey. The data shows that the number of walking trips per week has fluctuated over the years, with the lowest

number of trips occurring during 2017. More recent data shows that the number of trips has been increasing since 2021 and now exceeds the previous recorded high in 2018.

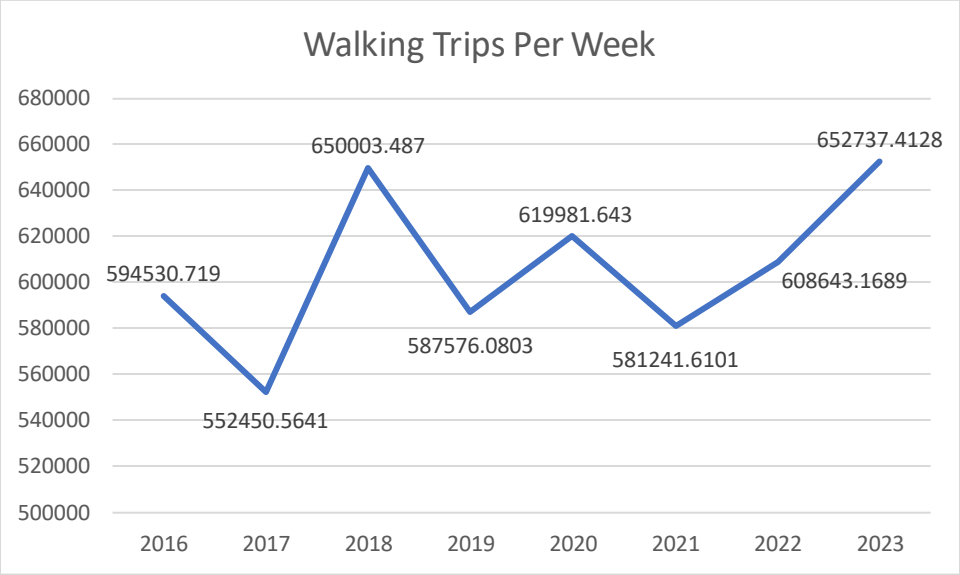

Figure 3.2 - Total number of walking trips per week 2016 – 2023

3.4 In terms of commuter travel, Figure 3.3 shows a comparison of the transport mode share of Oxford with the rest of Oxfordshire and nationally. This comparison uses data from the 2021 census which was undertaken during the COVID-19 pandemic. Census Day was in March 2021 during the national lockdown and although the census addressed questions related to Travel to Work, it did not collect any workplace address information for those working at home, including those following government guidance to do so. Furthermore there were large numbers of people still being supported by government furlough schemes and it is not clear whether the Office of National Statistics (ONS) guidance issued in relation to this question was followed; some people may have provided travel information for the last time they worked, or they may have answered with their behaviours on Census Day.

3.5 Notwithstanding the above, the data which includes a 'working from home' category (that accounts for residents who live in Oxford and work remotely (i.e. do not commute)) shows that when compared to the rest of the Oxfordshire and nationally, Oxford has a much higher share of people commuting to work on foot and by bicycle or bus. Consequently, the percentage of people travelling to work by train, or by car or van is much lower than national averages.

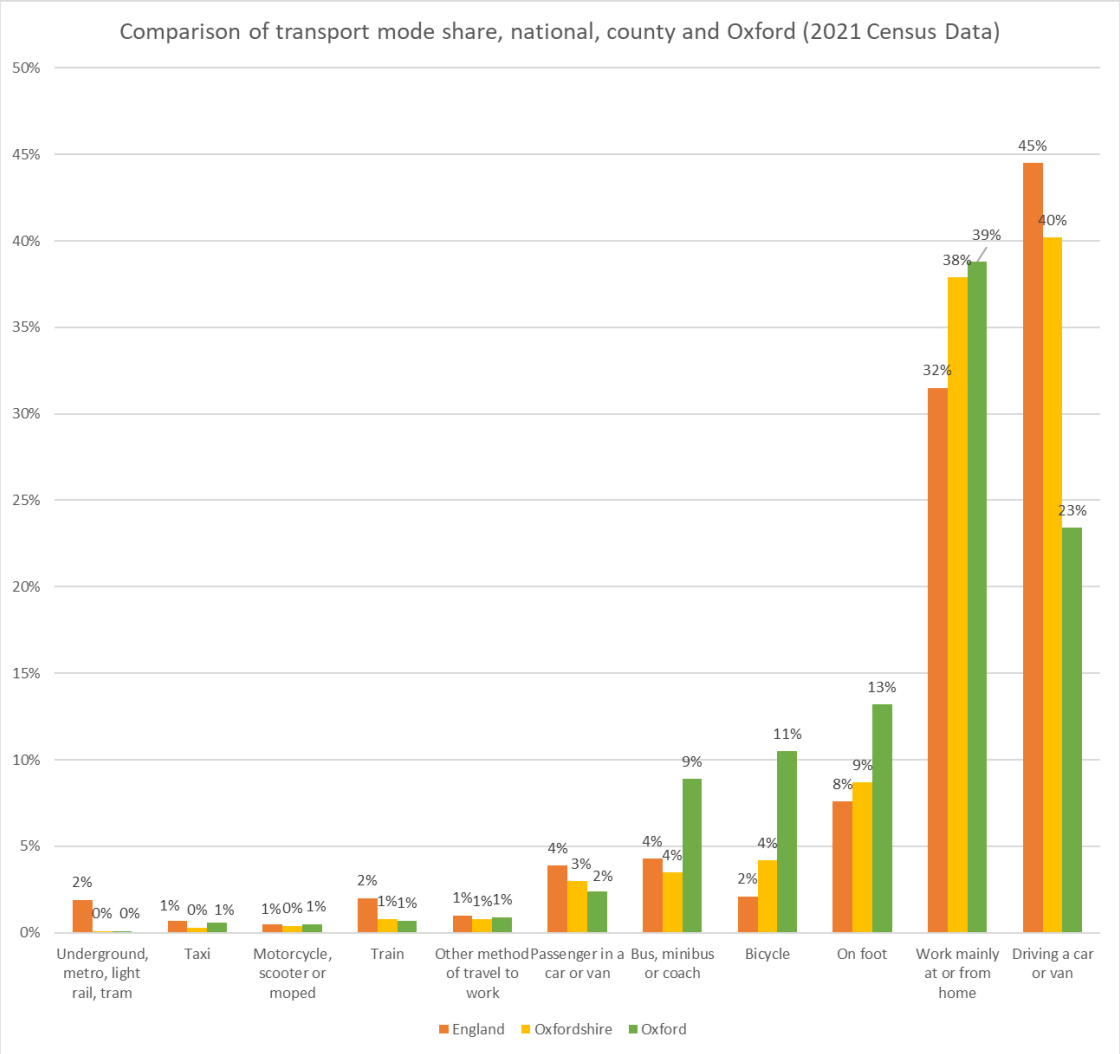

Figure 3.3 - Transport mode share for Oxford, Oxfordshire and England (2021 Census)

3.6 Whilst it is not possible to analyse origin destination by mode of transport from the 2021 census dataset, it is possible to review the journey origin data for commuters to Oxford. At the time of the 2021 census, a total of 92,047 people worked in Oxford, including 34,732 who worked from home or had no fixed place of work, and 28,973 who travelled within the area. Excluding those 'working from home' and those 'who lived within the Oxford boundary', the largest movement into Oxford was from the Vale of White Horse, followed by Cherwell and South Oxfordshire as shown in Figure 3.4 below.

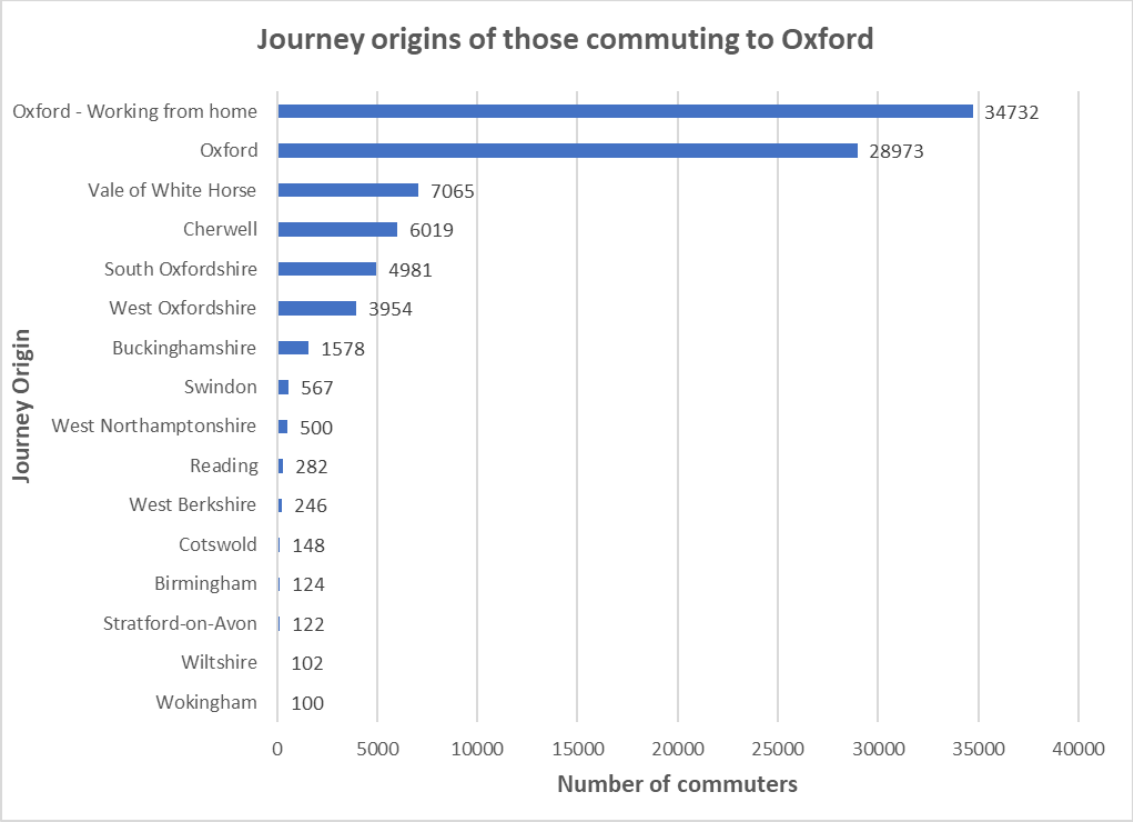

Figure 3.4 - Journey origin data for commuters to Oxford.

3.7 Within Oxford itself, it is possible to review the origin and destination of working people within specific wards of the city by using the Origin-Destination Explorer and then using the Census 2021 Maps to identify Middle Super Output Areas (MSOAs). Table 3.1 below identifies origin and destination data for wards in the east of the city that are either near or contain areas of employment (e.g. the Science Park, ARC Oxford (former Oxford Business Park), BMW, and the Headington hospitals). The data set for Oxford (all wards) has also been included as a reference point.

Area (MSOA)	Lived here	Worked here	Lived and worked here	Travelled to another area to work	Travelled from another area to work	Go (out) to work to:	Come to work from:
Oxford	***73,324***	***92,047***	***63,705***	***9,619***	***28,342***	***Vale of White Horse (2,292), South Oxfordshire (1,702), and Cherwell (1,638)***	***Vale of White Horse (7,065), Cherwell (6,019), and South Oxfordshire (4,981)***
Littlemore & Rose Hill	5,500	5,293	2,484	3,016	2,809	Oxford Central (418), Lye Valley and Cowley East (403), Headington (374)	Greater Leys (160), Blackbird Leys (157), Cowley South and Iffley (151)
Blackbird Leys	3,116	2,240	1,062	2,054	1,178	Lye Valley and Cowley Easy (386), Headington (261), and Oxford Central (257)	Greater Leys (123), Littlemore and Rose Hill (106), and Lye Valley and Cowley East (79)
Greater Leys	3,332	1,479	1,098	2,234	381	Lye Valley and Cowley East (348), Headington (284), and Oxford Central (253).	Blackbird Leys (64), Littlemore and Rose Hill (42), Cowley South and Iffley (26)
Cowley North	4,076	2,862	1,938	2,138	924	Oxford Central (452), Headington (316), and Lye Valley and Cowley East (223)	Cowley South and Iffley (66), Littlemore and Rose Hill (57), Lye Valley and Cowley East (49)

Cowley South and Iffley	5,482	4,478	2,611	2,871	1,867	Oxford Central (549), Lye Valley and Cowley East (429), Headington (335)	Littlemore and Rose Hill (205), Greater Leys (121), and Blackbird Leys (118)
Lye Valley and Cowley East	4,064	8,713	1,916	2,148	6,797	Headington (533), Oxford Central (316), and Churchill (203)	Cowley South and Iffley (429), Littlemore and Rose Hill (403), and Blackbird Leys (386)
Headington	5,166	16,693	3,402	1,764	13,291	Oxford Central (345), Churchill (273), East Central Oxford (78)	Barton (821), Churchill (723), and Risinghurst and Sandhills (693).

Table 3.1 - Origin Destination Data for city wards

3.8 Table 3.1 shows that the largest movement of people out of Littlemore and Rose Hill, Cowley North and Cowley South, Iffley and Headington was to Oxford Central. The largest movement of people out of Blackbird Leys and Greater Leys was to Lye Valley and Cowley East, and the largest movement of people out of Lye Valley and Cowley East was to Headington.

3.9 The strategic road network around Oxford is primarily served by the A34, A40, A420, and the ring road. Within Oxford, key arterial routes accommodate large amounts of vehicular traffic; sharing these with strategic bus routes that connect Oxfordshire's principal towns and settlements (such as Abingdon, Banbury, Bicester, Didcot, Kidlington, Thame, Wantage, and Witney) as shown in Figure 3.5. Banbury, Bicester, and Didcot, as well as a number of smaller villages are also connected to Oxford via the railway network. Together, the bus and railway network provide opportunities for commuter traffic from neighbouring authorities to access the city by sustainable modes. National Cycle Routes 5 and 57 also provide access to the National Cycle Network, with connections to Bicester, Didcot, Kidlington and Thame; as well as several smaller villages on these routes.

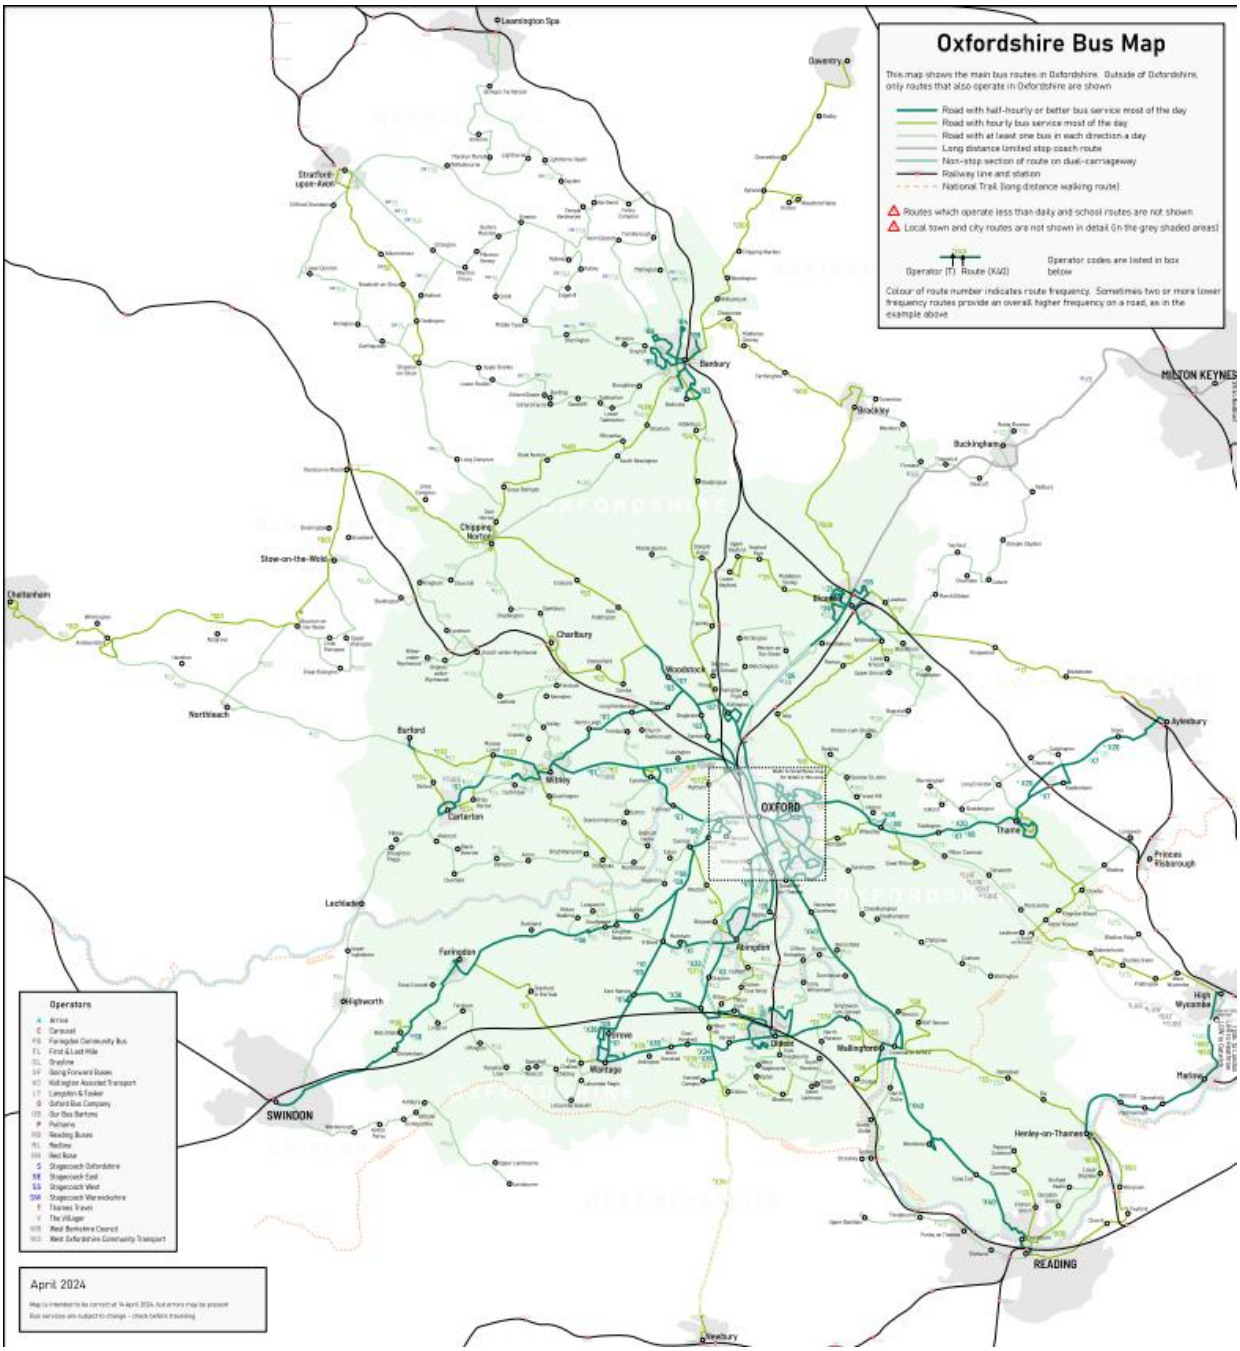

Figure 3.5 - Oxfordshire Bus Map (reproduced here with permission of Oxfordshire County Council)

3.10 Despite having very good bus services and higher levels of cycling and public transport use than many comparable cities in the country, congestion on Oxford's main roads is endemic. The entire city of Oxford has been a designated Air Quality Management Area (AQMA) for NO_2 since 2010 and whilst air pollution levels have significantly improved in the city over the last few years, Oxford City Council is aware that there's still more to be done. The latest Air Quality Annual Status Report (published June 2025 and reporting on 2024 observations) indicates that the transport sector continues to be the largest contributor (44%) to total emissions of Nitrogen Oxides (NO + NO_2) in the city, followed by combustion from industry

and services (30%), domestic combustion (26%), and others: waste, agriculture, solvents, nature (<1%). The Natural Resources background paper (BGP.9) provides more information on air quality in the city and the strategies that are in place to improve it.

Motor Vehicle Parking

3.11 In a compact city like Oxford where there are many competing demands on space, it is important to consider whether using large areas of land for parking of vehicles is appropriate. Vehicle parking is usually an inefficient use of land. However, there will be those who need to drive or who drive to access certain areas at certain times and for particular types of trips. The needs of people to access services and potential impacts on local centres if there is not enough parking must be balanced against the negative effects of car traffic generation.

Public Car Parking in City and District Centres

3.12 With regards to public parking provision, the current Local Plan's strategy is that in the city centre, levels of public parking will be maintained at approximately the same levels, with a discouragement of arrivals during network peaks. Meanwhile, within district centres it is to maintain roughly current levels of public parking.

Residential Parking

3.13 The current Oxford Local Plan 2036 permits only low levels of residential parking for new residential developments. The majority of the city has an excellent existing level of public transport provision, as well as good connectivity by walking and cycling, therefore, in certain circumstances, Policy M3 of the Local Plan requires residential developments to be "car free"; that is they will have no general parking spaces provided for residents. Policy M3 allows for some parking however, for example for disabled and visitors, ensuring there are not negative consequences for accessibility for the elderly, disabled and vulnerable groups.

Controlled Parking Zones (CPZ)

3.14 Large parts of the city are already covered by a CPZ (an area where parking is only permitted in designated parking bays, and the rest of the kerbside space is restricted by yellow lines) as shown on the map in Figure 3.6 below. Where CPZs have been implemented they have been extremely successful in removing commuter parking. Further expansion of CPZs is currently being rolled out by Oxfordshire County Council, and Oxford City Council supports these measures and efforts to ensure that increases in residential population and/or in visitors do not bring about increases in the number of vehicles parked in an area. In CPZs, new developments with little private parking are less likely to have a negative impact on surrounding areas, as parking cannot be displaced to the street. Over time it is likely that most streets in the city will be covered by parking restrictions.

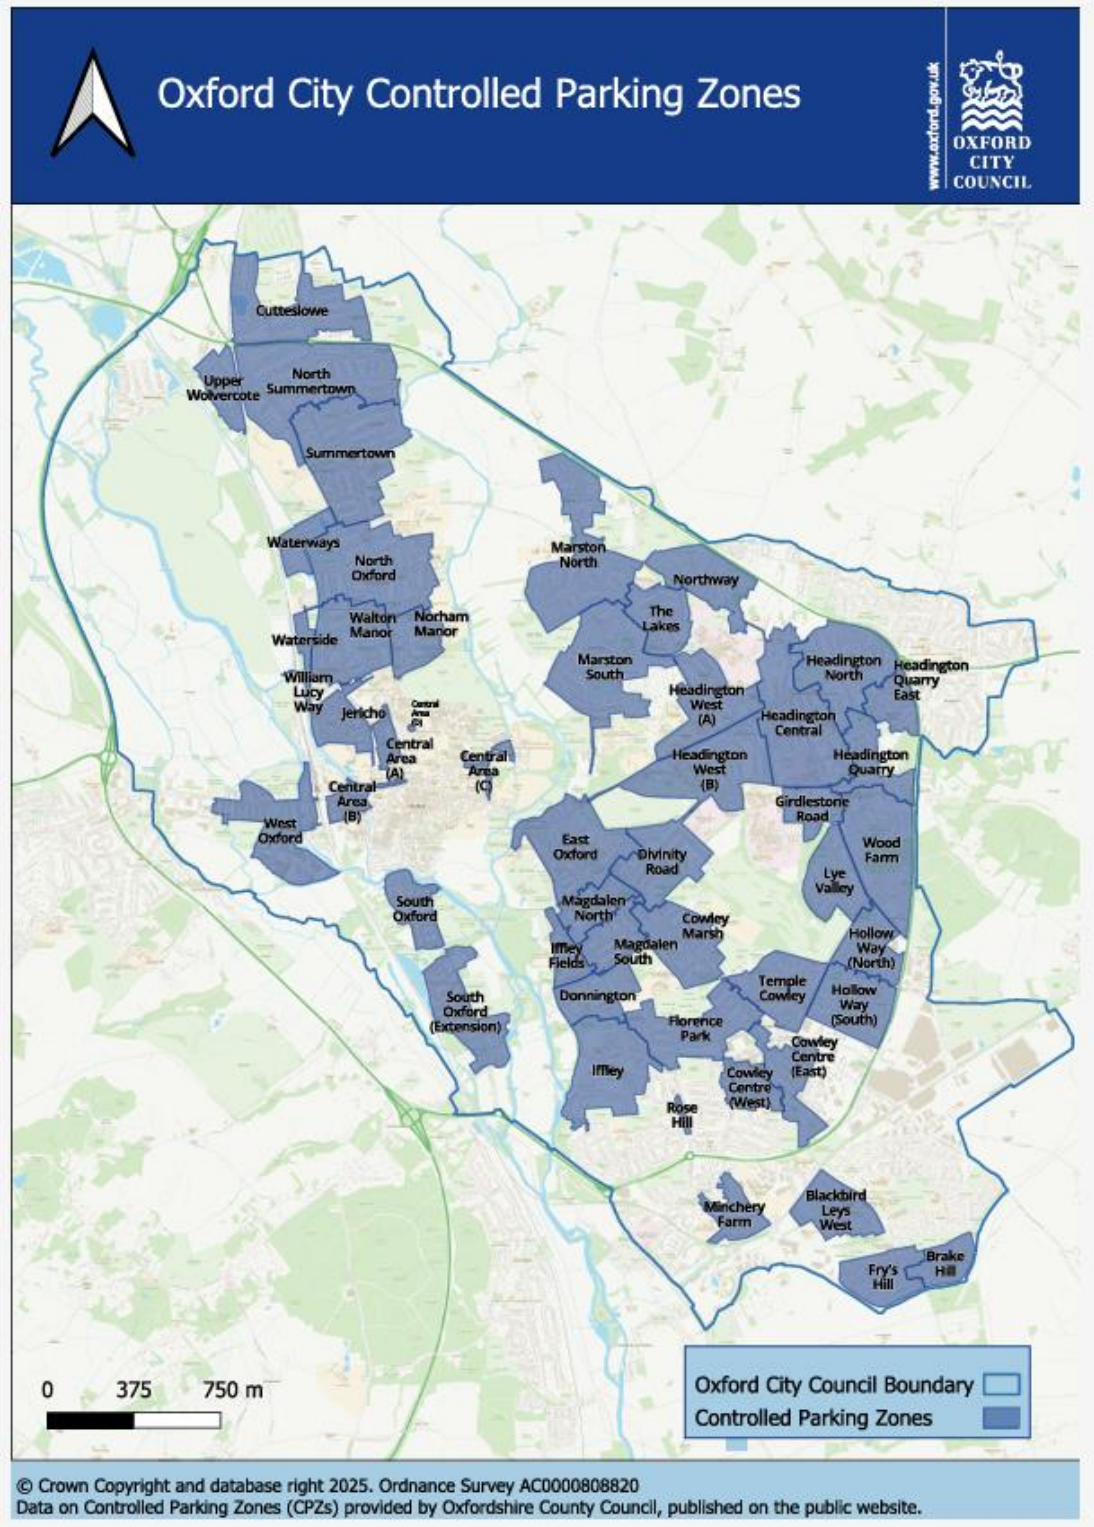

Figure 3.6 Controlled parking zones in Oxford (November 2024 Oxfordshire County Council)

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 Without a new Local Plan, the policies within the current Local Plan 2036 would remain in place until 2036 or until they become otherwise out of date. At this point the National Planning Policy Framework would take over as a default. These policies should help deliver increased use of sustainable modes of transport within Oxford. The residential car parking policies should help reduce car ownership on new build developments. Other policies seek to safeguard land for the reopening of the Cowley Branch Line for passenger services and support the redevelopment of Oxford Rail Station.

4.2 With the population and job growth envisaged for Oxfordshire, a continuation of existing levels of car use would threaten to over-burden the transport network. Both Oxfordshire County Council and Oxford City Council are preparing detailed measures for implementing the Central Oxfordshire Travel Plan. This will include traffic filters, the introduction of a workplace parking levy, and an extended zero emission zone in the city centre.

4.3 Without a new Local Plan, these measures will still come forward, but the existing policies will remain as drafted when the plan was adopted in 2020 and in time, will become out of date whereas the evidence base and influencing strategies as described above, will have continued to develop and evolve, and the urgency with which we need to address the climate emergency will also have increased. A new Local Plan provides the opportunity for the existing policies to evolve and be further developed to ensure that the issues affecting Oxford are addressed.

5. Key issues addressed through the Local Plan

Introduction

5.1 The analysis set out in the previous sections of this background paper indicate that the Local Plan 2045 will need to take account of existing and emerging transport strategies for Oxford including those that the County Council as LHA are leading on. These strategies will help shape policies that encourage travel by sustainable modes, such as walking, wheeling, cycling, and public transport, helping to continue to address the transport sector's contribution to climate change in Oxford.

5.2 The Regulation 18 consultation identified a number of transport and movement topics that could be addressed through implementation of a policy. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The tables identified potential positives of the approach, as well as the potential negative or neutral impacts that could arise depending on the approach taken and helped inform the preferred position set out for consultation.

5.3 Additionally, the options sets were considered in light of their specific sustainability impacts through a high-level screening against the 12 sustainability criteria forming the assessment process for the separate Local Plan Sustainability Appraisal (explained in greater detail in the main Sustainability Appraisal report). Where there is potential for a significant sustainability impact to arise from an option, or where there are significant differences in impacts between potential options, the Council has screened the options set in for a detailed appraisal in the main Sustainability Appraisal report. A summary of this screening process is included at the end of each options set table.

5.4 The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period. The tables are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan 2045.

5.5 This section will now discuss the key issues that are being addressed through the Local Plan 2045 in response to the topics and how the policies respond to them. The proposed policies are as follows:

- Transport Assessments/Statements, Travel Plans and Service and Delivery Plans,
- Cycle Parking and Powered Two Wheeler Parking,
- Motor Vehicle Parking Design Standards, and
- Electric Vehicle Charging

Transport Assessments/Statements, Travel Plans and Service and Delivery Plans

5.6 The Plan sets out the requirements relating to the submission of Transport Assessments/ Statements, Travel Plans, Delivery and Service Management Plans and Construction Management Plans in support of development proposals. This has been included to ensure that major new development proposals seek to optimise active travel and public transport opportunities and aim to limit the increase in car journeys which would contribute to air pollution and congestion.

5.7 The requirements for Transport Assessments/ Statements are set out in Policy C6 and Appendix 7.2. Travel Plan requirements are set out in Policy C6 and Appendix 7.3. The requirements for Delivery and Service Management Plans and Construction Management Plans are set out in Policy C6.

Cycle and Powered Two Wheelers Parking

5.8 The Plan seeks to ensure that adequate parking provision is made for these modes of transport in new developments. The parking design standards for cycle and powered two wheelers is set out in Policy C7 and Appendix 7.4. The standards largely align with Oxfordshire County Council's Parking Standards for New Developments, with

some elements tailored to the local context. Following feedback from the Regulation 18 consultation the title of the policy has been amended from 'Bicycle' to 'Cycle' as this is considered a more inclusive term. The direct reference to 'Motorcycle' within the policy title has also been removed as was not considered necessary as 'Powered Two Wheeler' includes motorcycles.

Motor Vehicle Parking Design Standards

5.9 The Plan seeks to reduce opportunities for parking in different types of development across the city. The parking standards for residential and non residential developments are set out in Policy C8 and Appendix 7.6. The standards align with Oxfordshire County Council's Parking Standards for New Developments.

Electric Vehicle Charging

5.10 Infrastructure for the charging of electric vehicles is addressed by Part S of the Building Regulations. To ensure that chargers are well located and designed for ease of use, the requirements for electric vehicle charging for both residential and non residential developments are included in Policy C8 which includes reference to the Oxfordshire County Council Street Design Guide to ensure suitable provision for off-plot parking.

Appendix A – Policy options and preferred approaches

Policy options set 012a (draft Policy C6): Transport Assessments/ Statements, Travel Plans and Service and Delivery Plans

Key tools to appraise and determine the transport impacts of a development proposal are Transport Assessments (TA)/Statements (TS), Travel Plans (TPs), Construction Management Plans (CMPs) and Service and Delivery Plans (SDPs). TA/Ss are a comprehensive and systematic approaches to ensure that the transport impacts of the development are properly considered and where appropriate include measures to help mitigate development impact. TPs are a package of measures tailored to suit the needs of an individual site and focus on reducing dependence on the private car. CMPs set out measures to minimise and mitigate the impacts of construction traffic and SDPs set out measures that will be introduced to minimise impacts of servicing and delivery traffic and are required to be submitted for development proposals that will affect the city centre or district centres and also for sites in close proximity to residential areas.

The options for the policy that have been considered for the LP2045 relate to the extent of requirements for submission of TAs/TSs, TPs, Construction Management Plans and SDPs in support of development proposals.

1476

Table 1 - Policy options set 012a: Transport Assessments/ Statements, Travel Plans and Service and Delivery Plans

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require transport assessments/ statements and travel plans to review transport impacts and show transport measures proposed to mitigate them, for all development that is likely to have significant transport implications.	This approach will encourage measures that reduce the need to travel and manage congestion. In addition, more sustainable modes of travel are promoted as part of these assessments. Transport Assessments/Statements should include, for example, targets associated with the proportion of journeys made to and from the development site by travel modes more	These requirements could be seen as an extra burden on developers and those assessing applications. Travel Plans, to be effective, need monitoring, managing and where necessary enforcing. If the proposal is for employment activities, employers need to ensure that employees abide by the Travel Plan with appropriate sanctions for non-compliance.

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
	sustainable than the private car, and measures such as bus passes.	
Option b Require transport assessments/statements to also include construction management plans and service and delivery plans, where relevant.	Including construction management plans and service and delivery plans as part of the assessment process will also help to mitigate the impacts of construction, freight and service vehicles by requiring consideration of measures to minimise any issues that may arise, such as managing delivery times or construction materials. This is particularly important in busy and confined areas such as the city centre and for sites near residential areas.	These requirements could be seen as an extra burden on developers and those assessing applications.
Option c Do not include a policy requiring transport assessments/statements, travel plans, construction management plans or service and delivery plans.	Not requiring these reduces the burden on developers and assessors.	The assessment and mitigation of transport impacts of development schemes are crucial to their success or failure. Requiring an assessment as part of a planning application is the only way to secure the required information on which to make a sound planning decision. Without a requirement to assess and manage traffic impacts there may be an increase in congestion and a lack of encouragement and provision for active travel.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Option a, Option a & b or Option c **High-level screening conclusion? -** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** Option a could either be stand alone or incorporated alongside option b. Option b is not strictly an alternative, but rather an additional option that could be added to a policy. Option c is the alternative. In terms of sustainability impacts, the different options all relate to **criterion 8. to reduce traffic and associated air pollution and criterion 6. to provide accessible essential services and facilities** and the level of sustainability impact is unlikely to vary significantly between option a and b. Both option a and option b would have a minor positive impact for access. Option a and b would have a minor positive impact for air quality; however, option b would potentially have a slightly more positive impact as it would also require consideration of construction traffic management and service and delivery plans which could result in further traffic reduction and associated air pollution (dust and fumes from equipment). Option c would have a minor negative impact as there is no direct national policy, and without any requirements in place it could exacerbate current congestion and air quality issues. Overall, the difference between the sustainability impacts of the different options are unlikely to be significant so it is not considered to warrant a detailed appraisal.

1478

Transport Assessments, Travel Plans and Service and Delivery Plans – Policy C6:

For the Local Plan 2045, the preferred approach is to take forward a combination of **Options A and B**. Together these options will help to encourage measures that reduce the need to travel, manage congestion and consider from the outset how more sustainable modes of travel can be promoted. The requirement for Construction Management Plans and Service and Delivery Plans will also help mitigate the impacts of the development.

Policy options set 012b (draft Policy C7): Bicycle Parking Design Standards

If travel by sustainable modes of transport such as bicycle is, to be encouraged, it is important to ensure that there is secure bicycle parking in residential and employment developments. The options for the policy relate to how far the Local Plan 2045 should go in relation to levels of parking required for bicycles.

Table 2 - Policy options set 012b: Bicycle Parking Design Standards

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require high levels of secure bicycle parking either indoors or external for residential and non-residential schemes to achieve best design outcomes.	The provision of a high level of well-designed cycle parking will help to encourage cycling across the city which brings positive benefits such as improved air quality, reduced congestion, enhanced public realm and healthy lifestyles. This could increase the number of people cycling to work, to the shops, for health appointments, to school etc. as they will be confident that their bike will be parked in a safe secure way which would reduce the risk of theft or vandalism. This is particularly important with the rise in e-bikes. Also well designed bike parking can enhance the public realm.	Providing well designed secure cycle facilities could add to build costs and take up space within the development which could be used to enhance the design in other ways and may result in the loss of public amenity areas.
Option b Set more specific requirements for the type of bicycle parking for residential developments and workplaces to make sure e-bikes, trailers, tricycles etc. can be accommodated. Require higher levels of well-designed and secure bicycle parking and ensure that showers and lockers are provided to support staff.	More specialist types of bikes are increasingly common providing the option of cycling to a wider range of people. They also have more complex storage and charging requirements which won't necessary be met if the requirement for them is not set out clearly. Although showers are currently required for offices over 500m2 and most other non-residential uses over 2500m2	This adds an extra requirement for space and potentially cost, which may compete with other requirements.

1479

	this approach encourages more provision for cyclists.	
Option c Lower the residential and non-residential bicycle parking standards from existing levels.	There is no loss of amenity space or indoor living space. This approach would help to reduce build costs for the scheme.	If insufficient or poorlydesigned bicycle parking is provided in new development, it is likely that bicycles will be parked informally in inappropriate areas causing clutter and obstruction. It provides no encouragement for future residents to consider cycling and embracing a more active and healthier lifestyle – lower levels of cycle parking may make it more difficult for people to store bikes and as such bike ownership could drop as travelling by bike is not practical without secure storage. There are already concerns across the city about bicycle parking stress and concerns about security particularly from those with more expensive bikes which are more at risk from being stolen. If Oxford is to become a cycling city reducing the levels of parking provision would be a disincentive to people who might be considering how to travel around the city other than by private car.
Option d No local policy standards	Not requiring these reduces the burden on developers.	Bicycles may be parked in inappropriate areas, potentially reducing the space available for parking motor vehicles and/or causing an obstruction.

1480

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Option a, Option b, Option c or Option d **High-level screening conclusion? -** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** All options are standalone and represent various levels of cycle parking that the local plan could ask for. In terms of sustainability impacts, the different options all relate to **criterion 8. to reduce traffic and associated air pollution** (supporting active travel options) **criterion 1. carbon emissions** and **criterion 11. good urban design** (assuming that high quality urban design would include supporting active travel). Option a and option b would both have a minor positive impact for all the criteria however option b's prescriptive approach will depend on site context and could be harder to achieve on smaller sites, and easier to achieve on bigger sites thus whether it has slightly more or slightly less positive effect than option a will depend on implementation. Option c would have a neutral impact, it has the potential to provide some cycle space but what is provided could be unusable as for example it could be of poor quality. Option d is likely to have a minor negative impact against all three criteria, as whilst there is potential for a developer to still provide cycle parking provision this could be as an afterthought and may be of poor quality or poorly located so that it is unattractive. Under option d it is assumed that occupiers would be pushed to other less sustainable forms of transport e.g car. Overall, the difference between the sustainability impacts of the different options are unlikely to be significant so it is not considered to warrant a detailed appraisal.

1481

Policy options set 012c (draft Policy C7): Motorcycle and Powered Two Wheelers Parking Design Standards

Parking provision for motor cycle and powered two wheelers is also important and should be considered at the design stage to ensure the most efficient use of land and encourage the use of this mode of transport. The options for the policy relate to how far the Local Plan 2045 should go in relation to levels of parking for these vehicles.

Table 3 - Policy options set 012c: Motorcycle and Powered Two Wheelers Parking Design Standards

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a	The provision of a high level of well-designed parking would	Providing well designed secure facilities could add to build costs and take up

Require high levels of secure motorcycle and powered two-wheeler parking for residential and non-residential schemes to achieve best design outcomes.	reduce the risk of theft or vandalism. Also well designed parking can enhance the public realm.	space within the development which could be used to enhance the design in other ways and may result in the loss of public amenity areas.
Option b Set more specific requirements for the type of parking for residential developments and workplaces and ensure that showers and lockers are provided to support staff who use these modes of travel.	Although showers are currently required for offices over 500m2 and most other non-residential uses over 2500m2 this approach encourages more provision for those who use motorcycles and powered two wheelers.	This adds an extra requirement for space and potentially cost, which may compete with other requirements.
Option c Lower the residential and non-residential motorcycle and powered two-wheeler parking standards from existing levels.	There is no loss of amenity space. This approach would help to reduce build costs for the scheme.	If insufficient or poorlydesigned parking is provided in new development it is likely that motorcycles and powered two wheelers will be parked informally in inappropriate areas causing clutter and obstruction.
Option d Do not set any parking standards for motorcycles and powered two wheelers.	Not requiring these reduces the burden on developers.	Motorcycles and powered two wheelers may be parked in inappropriate areas potentially reducing the space available for parking motor vehicles and/or causing an obstruction.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Option a, Option b, Option c or Option d **High-level screening conclusion? -** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No

1482

Rationale: All options are standalone and represent various levels of parking for motorcycles and powered two wheelers that the local plan could ask for.

In terms of sustainability impacts, the different options all relate to **criterion 8. to reduce traffic and associated air pollution** (reducing reliance on the private car) **criterion 1. carbon emissions** and **criterion 11. good urban design** (assuming that high quality urban design would include supporting travel). Option a and option b would both have a minor positive impact for all the criteria however option b's prescriptive approach will depend on site context and could be harder to achieve on smaller sites, and easier to achieve on bigger sites thus whether it has slightly more or slightly less positive effect than option a will depend on implementation. Option c would have a neutral impact, it has the potential to provide some parking provision but what is provided could be unusable as for example it could be of poor quality. Option d is likely to have a minor negative impact against all three criteria, as whilst there is potential for a developer to still provide parking for motorcycles and powered two wheelers this could be as an afterthought and may be of poor quality or poorly located so that it is unattractive. Under option d it is assumed that occupiers would be pushed to other forms of transport e.g. car. Overall, the difference between the sustainability impacts of the different options are unlikely to be significant so it is not considered to warrant a detailed appraisal.

1483

Cycle and Powered Two Wheelers Parking Design Standards – Policy C7

For the purposes of the Local Plan 2045 it was considered that merging the requirements of both Cycle and Powered Two Wheeler Parking into the same policy would be the best way forward. The preferred approach for Cycle parking is a combination of **Option A and Option B** which together are considered to bring positive benefits such as improved air quality, reduced congestion, enhanced public realm and healthier lifestyles. The preferred approach for powered two wheeler parking is **Option A** which is considered to bring positive benefits as the provision of well designed and dedicated parking areas reduces the risk of theft or vandalism and can also provide enhanced public realm for example by reducing opportunity for inappropriate parking of these types of vehicles.

Policy options set 012d (draft Policy C8): Motor Vehicle Parking Design Standards

Setting the right level of parking for motor vehicles can positively influence design outcomes, ensure the most efficient use of land and encourage residents to consider alternative options to using a private car. If standards are too low, a potential unintended effect is that parking is displaced to surrounding streets that do not have any parking restrictions. Although Controlled Parking Zones (CPZs) can prevent this from happening there are still parts of the city that are not included within a CPZ or where parking restrictions are not in

place 24 hours a day, 7 days a week. Whilst the LP2045 will have limited influence over the implementation of new or review of existing CPZs within the city, where planning permission is required, the levels of parking for motor vehicles can be considered.

The options set out below therefore focus on how parking levels could be considered in applications for both residential and non residential developments. For residential developments, low car would mean no car parking spaces allocated to a particular housing unit, instead, only a number of shared spaces and spaces for blue badge holders, service and delivery vehicles, including for working drivers. For non-residential developments, low car would mean either a reduction in existing car parking spaces where there is good accessibility for the area or provision of a number of shared spaces and spaces for blue badge holders, service and delivery vehicles. Parking standards assumes the Council would apply County standards. This means that for residential, there will be more parking provision per household (e.g. one space per dwelling). For non-residential development, the standards seek car free development or operational use only with supporting evidence, which means applicants are able to justify higher levels of provision according to their site's needs which can result in significantly more provision.

Table 4 - Policy options set 012d: Motor Vehicle Parking Design Standards

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Seek low car residential development across the city, subject to criteria to ensure accessibility to public transport and local shops. Consideration will be given in the policy to setting a threshold for the numbers of pooled cars/ car club spaces because larger sites have more scope for successful carpooling and more space for essential vehicles.	A lower level of parking provision across the city means that less land is being used for parking cars, also the reduction of car ownership and car trips in the city can help reduce congestion and air and noise pollution. Fewer car movements could encourage people to walk and cycle as they may feel safer, and parents may feel more confident allowing their children to cycle or walk if there is less traffic on the roads.	Although sites are low car it could result in parking being displaced to other streets which are not restricted. In some parts of the city outside of the centres there are insufficient realistic alternative transport options other than using the car. Some occupations require employees to have a vehicle or take a vehicle home – many such jobs are low paid (e.g. mobile carers; maintenance trades; mini-cab drivers; etc.). Many households also work outside of the city; away from the

1484

1092

	Supports the use of car clubs across the city. Supports the most efficient use of land, opportunity to create well designed external spaces. Low car developments can give proper and adequate consideration as to where the parking would be located to ensure good design is delivered.	city or district centres; have children to take to school on the way to work; or work outside of the usual operating hours for bus services. Households that include persons in these occupations risk being excluded from housing that might best meet their needs, if low car schemes become predominant in new housing developments. Having low car parking provision for larger family dwellings for sale may impact on the viability of schemes, and the ability to deliver affordable housing.
Option b Adopt parking standards for residential developments	Ensures that the design of car parking is properly considered and encourages private car ownership. Levels of car parking provision would be consistent with other developments throughout the City.	More land would be used for parking and there would be more cars in the city adding to congestion, air and noise pollution.
Option c Seek low car non-residential development across the city. This could vary by accessibility of the area of the city and/or existing parking levels.	A lower level of parking provision across the city means that less land is being used for parking cars, also the reduction of car trips in the city can help reduce congestion and air and noise pollution. Fewer car movements could encourage people to walk and cycle as they may feel safer.	More land would be used for parking and there would be more cars in the city adding to congestion, air and noise pollution. The inadequate provision of parking at a site could lead to displaced parking on nearby streets creating parking stress elsewhere if there is no CPZ in operation.

	Supports the most efficient use of land, opportunity to create well designed external spaces. Low car developments can give proper and adequate consideration as to where the parking would be located to ensure good design is delivered.	
Option d Adopt parking standards for non-residential developments.	Ensures that the design of car parking is properly considered Levels of car parking provision would be consistent with other developments throughout the City.	More land would be used for parking and there would be more cars in the city adding to congestion, air and noise pollution.

1486

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Option a + c, Option a + d, Option b + c, Option b + d **High-level screening conclusion? - the options are likely to have significant sustainability impacts** **Screened in for detailed appraisal? - Yes** **Rationale:** The options represent various levels of motor vehicle parking that the local plan could ask for. Assuming that options b and d are allowing a greater level of parking on sites than low car as in options a and c. In terms of sustainability impacts, the different options all relate to **criterion 8. to reduce traffic and associated air pollution** (reducing reliance on the private car) **criterion 1. carbon emissions** and **criterion 11. good urban design** (assuming that high quality urban design would include supporting travel). Whilst all options allow for parking, options a and c could be neutral to positive as this would likely drive reductions in the amount of parking across residential and non-residential sites. Options b and d would potentially be neutral to negative in terms of impact against the same criteria, this would depend upon implementation e.g.

being more neutral where a site already has car parking and the standards would not allow for increases, but negative where provision is currently below the standard and there would be scope to increase levels of car parking.

In addition, option b may also have an indirect positive impact on **criterion 4 Local housing needs,** improving viability of new residential development because increased car parking can be provided. Option c, may have indirect impacts on **criterion 12 economic growth**, depending upon implementation, potentially having a neutral impact in terms of viability on new non-residential development where there is existing parking provision, or a more negative impact where there is no existing provision and they are unable to provide as much car parking which could impact viability.

Overall, there are varying sustainability impacts across the criteria depending on whether low car options are selected or not. As there is uncertainty about the impacts and whether they will be significant or not, the options should be screened in for further detailed appraisal.

14487

Motor Vehicle Parking Design Standards – Policy C8

For the Local Plan 2045, the preferred approach is to have a policy that is supportive of parking design standards.

The preferred option is a combination of **Options A and B and Option C** as they push for lower levels of parking provision in areas of the city that are suitable e.g. where they are accessible to public transport but accept that some parking will be needed in parts of the city and for people that rely on a vehicle e.g. for employment or those with a disability.

The options set was tested through the Sustainability Appraisal with the options having varying impacts. Seeking low car where possible will help to maximise positive sustainability impacts but it is acknowledged that there could be some negative sustainability impact where higher levels of car parking come forward.

Policy options set 012e (draft Policy C9): Electric Vehicle Charging

The increase in ownership and use of electric vehicles has placed greater demand for charging infrastructure in both residential and commercial developments as well as in public spaces such as public car parks, leisure centres and shopping centres. The current

local plan does not include a policy to address Electric Vehicle Charging and although the delivery of infrastructure for charging vehicles is now covered by Building Regulations the options considered for LP2045 relate to how much further local design standards could go beyond what is being asked for in national building regulations.

Table 5 - Policy options set 012e: Electric Vehicle Charging

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Seek the provision of electric vehicle charging infrastructure on all new residential developments with a dedicated parking space and on all non-residential development providing additional car parking bays. Where there is no dedicated parking space and on street parking is proposed, appropriate infrastructure should be incorporated to enable the charging of electric vehicles on the street. All blue badge and car club parking bays must be electrified.	The NPPF indicates that when setting parking standards, policies should take into account an adequate provision of spaces for charging plug-in and other ultra-low emission vehicles. The provision of electric vehicle charging infrastructure for residential and non-residential developments supports the NPPF. It may also increase the market value of homes and non-residential developments. Demand on the electricity grid can be assessed at the time of application.	The requirement for the provision of EV infrastructure could lead to additional costs being incurred by developers for example there may not be adequate grid capacity
Option b Specify design standards for EVs being installed – e.g. in relation to impact on streetscape, safety etc.	This could help to ensure that a particular local context is considered (e.g. minimising harm to heritage assets or cluttering the street).	Design standards could change quite rapidly as technology develops. It might be challenging to be too specific at the Local Plan level (e.g. site context could differ a lot across the city). It might be better to direct applicants to other guidance/TANs.

1488

1096

Option c Do not seek any electric vehicle charging infrastructure on new residential developments or on non-residential developments and do not set any local design standards.	Associated costs of providing this infrastructure are not incurred by landowners/ developers.	Residents of new developments or employees at workplaces who have electric vehicles would not have access to charging infrastructure at their own property

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - Option a, Option a + b, or Option c **High-level screening conclusion? -** the options are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** Option a is about requiring new EV charging points, Option b is about adding design considerations to the policy, and option c is an alternative to option a (or a+b) and essentially leaving standards to national regs. In terms of sustainability impacts, the options relate to **criterion 8. Traffic and Air Pollution**, as well as **criterion 11 Urban design** (reducing harm to the amenity and local context from new EV equipment) and **1. Carbon emissions** (supporting occupiers to adopt lower carbon transport options). Options a and b both have minor positive impacts for criteria 8 and criteria 1 because they can support occupiers to choose low carbon transport options. Option a potentially has a minor negative impact on criterion 11, particularly where new EV equipment clutters up streetscape or causes harm to nearby heritage assets due to poor quality design. Option b would have a neutral impact for criterion 11 because it helps to ensure the harm to urban realm and heritage is mitigated. Option c would have a neutral impact for criteria 8 and 1, because Buildings Regs will require charging infrastructure to support EVs for most new development, however it would again potentially have a minor negative impact for criterion 11, for the same reasons as discussed under option a above. In conclusion, the sustainability impacts arising from the different options would be minor, and are not considered to warrant a detailed appraisal.

1489

Electric Vehicle (EV) Parking – Policy C8

For the purposes of the Local Plan 2045 and following feedback received at Regulation 18 it was considered that merging the EV parking requirements with the Motor Vehicle Parking Design Standards would be the best way forward. The preferred approach is a

combination of **Option A and Option B**. Whilst recognised that EV infrastructure is part of Building Legislation, the NPPF makes it clear that if setting parking standards, policies should take into account the provision of spaces for charging plug-in and other ultra low emission vehicles. Option A seeks the provision of EV infrastructure on all residential developments and on non-residential developments that would provide additional parking spaces. It also includes the provision of EV parking for blue badge and car club parking bays. Option B goes further by including reference to design standards that could help to ensure that EV infrastructure does not cause harm to a particular local context, for example in Conservation Areas.

1490

Background paper 012a

Transport: Traffic and Air Quality Modelling

This paper addresses: Transport Modelling
Relevant Local Plan Objective(s): • Create opportunities for supporting the transition to more sustainable/active forms of transport, including by reducing the need to travel, supporting good bicycle parking facilities and avoiding on and off-street car parking where possible across the city. • Contribute towards continued improvement in the city's air quality and its further limit impacts upon public health.
Relevant SA Objective(s): 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040 8. To reduce **traffic and associated air pollution** by improving travel choice, encouraging active travel, shortening journeys, and reducing the need to travel by car/lorry.

4. What this means for Oxford's Local Plan 2045 6

1. Introduction

1.1 This topic paper supplements Transport Background Paper (012). This paper begins by providing a short contextual summary of Oxford's traffic issues. It then goes on to discuss the traffic modelling undertaken (using the County Council's Oxfordshire Strategic Model)

in relation to the strategic and local road networks. It also highlights, in the case of the Strategic Road Network, discussions with relevant key stakeholders. It sets out how the use of traffic modelling has informed the development of the Oxford Local Plan 2045. Finally, it considers the implications of transport modelling that has been undertaken, on Oxford's Local Plan 2045, drawing some conclusions based on the findings.

Context

1.2 As a medieval city, Oxford's often narrow streets are unsuited to motorised vehicles – particularly to high levels of motorised vehicle use. In fact, peak period traffic congestion has been a persistent problem. Within the city centre for instance, a clear conflict exists between cars, buses and delivery vehicles, all of which compete for the limited available space with pedestrians and cyclists. The city's tightly drawn administrative boundary means that access to the Strategic Road Network (SRN) is limited to several junctions on the A34. More details can be found in Background Paper 012: Transport.

Traffic Modelling

1.3 The City Council has undertaken bespoke traffic modelling to look specifically at the impacts of planned growth contained within the Oxford Local Plan 2045, on the Strategic Road Network (SRN). This was carried out using the County Council's Oxfordshire Strategic Model (OSM). The OSM model outputs are expressed in terms of the change in Annual Average Daily Traffic (AADT) flows. This means they can be used to assess the impacts of planned growth in Oxford on the section of the SRN closest to Oxford – i.e. the A34. It is important to note that they are also very helpful in informing the air quality assessment as required by the Habitat Regulations Assessment (HRA).

1.4 In order to assess the impact of the Local Plan on the Local Road Network, the City Council has benefited from access to the local network modelling carried out by the County Council: Oxford Trail Traffic Filters Transport and Traffic Forecasting Report (October 2022). This modelling carried out to assess a proposed demand management intervention (see Background Paper 012: Transport for more details) takes account of assumed future growth across the five Districts of the County. For Oxford this modelling uses the levels of growth proposed in the Local Plan 2036, this included higher land use assumptions than are being proposed through the Oxford Local Plan 2045 (see section 4 below).

2. Strategic Road Network

Modelling outputs

2.1 Significance thresholds are used to determine when changes in traffic volume - often from new development - require further assessment. The "significance" thresholds for both transport assessment work and air quality work are 1,000 AADT or more for cars/ LGVs (Light Goods Vehicles) and 200 AADT or more for HDVs.

2.2 Table 2.1 below shows the predicted change in Annual Average Daily Traffic (AADT) flows on the A34 resulting from the growth proposed in the Oxford Local Plan 2045. These outputs show that the two-way change for cars/ LGVs, on the A34 (northbound and southbound) is 274 AADT, while the change in Heavy Duty Vehicles (HDVs) is –49 AADT.

2.3 The AADT changes identified in Table 2.1 are therefore below their respective "significance" thresholds, both for air quality assessment work and for transport assessment work. This means that as the modelled outputs are below each of their respective thresholds, the impacts are not likely to be significant. In this instance, the change in AADT is used as a proxy for changes to the critical load or level of certain pollutants (e.g., Nitrous Oxides – NOx).

2.4 An advice note, published by Natural England entitled 'Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitat Regulations' sets out that widely acknowledged Environmental Benchmarks for imperceptible impacts are set at 1% of the critical load or level, which is considered to be roughly equivalent to the thresholds for changes in traffic flow, as set out in the Design Manual for Roads and Bridges.

Table 2.1 Change in AADT on the A34 resulting from the Oxford Local Plan 2045

	AADT (DS-DM) Cars/ LGVs	AADT (DS-DM) HDVs
A34 (northbound)	-48	-7
A34 (southbound)	+322	-42
Total (Two-way change)	**+274**	**-49**

Source: Oxford City Reg. 19 Habitat Regulations Assessment

Discussions with key stakeholders: National Highways

2.5 Following representations made by National Highways at Regulation 18 stage of the Local Plan (a summary of which is contained in the Oxford Local Plan Regulation 18 Stage Consultation Report), City Council Officers met with colleagues from National Highways on 15 October 2025 to discuss the key issues raised.

2.6 At the meeting, officers explained that the neither the total (two-way) change, nor the individual (northbound or southbound) carriageway changes in AADT, exceeded the significance thresholds set out above (i.e., 1000AADT or more change for cars/ LGVs; or 200 or more change for HDVs). At the meeting, both parties agreed that all of the issues raised as part of the National Highways response to the Regulation 18 consultation had been satisfactorily resolved. Following the meeting, the City Council Officers provided colleagues from National Highways with a short note of the meeting which set out the key issues that were discussed, a short, written response those issues, and a note of the outcomes of the meeting.

2.7 On 4 November 2025, National Highways confirmed that they were happy with the note, which confirmed that all the issues raised within National Highways' response to the Oxford Local Plan Regulation 18 consultation had been satisfactorily resolved. One final point to note is that, at the meeting, both parties recognised the value of producing a Statement of Common Ground as a way of formally documenting the agreed position of each organisation going forward. The intention is to agree a Statement of Common Ground between National Highways and Oxford City Council on the Oxford Local Plan 2045 to accompany submission.

Discussions with key stakeholders: Natural England

2.8 Following the Regulation 18 consultation, the City Council received a response from Natural England. City Council Officers have met with Natural England on a number of occasions. A detailed account of the correspondence with Natural England is set out in the Regulation 19 version of the Habitat Regulations Assessment.

3. Local Road Network

Modelling Outputs

3.1 The recent traffic modelling undertaken by Oxfordshire County Council (for the traffic filters project) has shown that, without intervention (i.e inclusive of predicted growth, but without the traffic filters project), there would be a negligible overall change to the current situation. Table 2.2 (below) includes data from the Oxford Trial Traffic Filters Transport and Traffic Forecasting Report (October 2022). It shows the predicted change in demand for car use both within, and to/ from the city between 2018 (the model base year) and 2024 (the assumed start year for the scheme (but without its implementation)).

Table 2.2 Sectorised demand for car use (12-hour period, 2018 BY vs 2024 DM)

Mode/ Sector	2018 BY	2024 DM	Change	% Change
Car (person trips)				
Within city	130,675	123,307	-7,368	-6%
To/ from city	159,323	164,909	5,586	4%
Combined	**289,988**	**287,785**	**-2,213**	**-1%**

(Source: Oxfordshire County Council, Oxford Trial Traffic Filters Report (October 2022)

3.2 Additional spatial analysis undertaken within the report showed the main changes in the city were the result of re-routing due to the six East Oxford Low Traffic Neighbourhood Schemes. The report noted that elsewhere in the city, there was generally no change in traffic flows, or in some cases, small increases and recognised that maintaining the existing situation would not address the existing challenges faced by the city.

Demand Management Measures

3.3 The County Councils "Core" Transport Schemes are a suite of transport demand management measures. These measures are needed because, on much of the city's road

network, the amount of traffic has resulted in significant congestion, and associated problems relating to air quality, public transport service reliability and cycle and pedestrian safety issues. On-going traffic congestion issues also impact the ability of the County Council to achieve the vision, aims objectives and headline targets set out in the Local Transport and Connectivity Plan, which include to:

- Reduce 1 in 4 car trips by 2030
- Deliver a net-zero transport network by 2040 and
- Have zero, or as close as possible, road fatalities or life-changing injuries by 2050

3.4 Given Oxford's medieval origins, there is insufficient physical space to overcome the city's long-standing traffic and congestions problems through engineering efforts (e.g., through increasing road capacity or the introduction of basic bus priority measures. The implementation of the comprehensive suite of transport demand management measures (included within County Council's "Core" transport schemes) has been shown to reduce demand for private car use in the city. The Core transport schemes include:

- Traffic Filters
- Low Traffic Neighbourhoods
- Workplace Parking Levy
- Zero Emission Zone

3.5 The Oxford Trial Traffic Filters Report (October 2022) considered the change in overall demand for a variety of different sectors. Table 2.3 (below) shows the predicted change in demand for car trips within and to/ from the city. It shows the changes in demand both with (2024 DM) and without (2024 DM) scheme implementation for the assumed scheme start year (2024).

Table 2.3 Sectorised demand for car use (12-hour period, 2024 DM vs 2024 DS)

Mode/ Sector	2024 DM	2024 DS	Change	% Change
Car (person trips)				
Within city	123,307	98,541	-24,766	-20%
To/ from city	164,909	162,973	-1,936	-1%
Combined	**287,785**	**261,514**	**-26,271**	**-9%**

(Source: Oxfordshire County Council, Oxford Trial Traffic Filters Report (October 2022)

3.6 The report shows that implementation of the traffic filters would reduce car person trips within the city by 20%. The spatial analysis accompanying the data shows that as a result of the route restrictions, car journeys through the city would be discouraged. This would result in a clear reduction of traffic volumes in the city centre, and on the majority of main 'arterial' routes into and out from the city centre, (e.g., Abingdon Road, London Road, Cowley Road). The report also showed reductions in traffic volumes at the Eastern Arc.

3.7 The reduction in some car person trips (particularly those to the city centre) would mean that some drivers would change their behaviour and travel by alternative modes (i.e., bus, rail, Park and Ride, walk or cycle). However, the report did note that there may be some

increases of traffic of the ring road, as drivers chose to divert their route away from the restricted roads. In this context, it is important to note that the Traffic Filters modelling impacts were factored into the assessment of the growth proposed in the Oxford Local Plan 2045 on the Strategic Road Network, discussed above.

4. What this means for Oxford's Local Plan 2045

4.1 Oxford is in a somewhat unique position in identifying site allocations, they tend to be located in with existing access to (or at least close proximity to) the current road network, thus not requiring critical site-specific infrastructure interventions to be delivered. The site allocations proposed within the Local Plan 2045 are generally of a non-strategic nature, i.e., no sites are allocated for more than 500 homes, and no 'new' land is proposed for employment uses. In addition, many of the plan's site allocations were previously allocated within adopted development plans.

4.2 The County Council's comprehensive suite of demand management measures, mean that even with the inclusion of the predicted level of growth, the modelled outputs have demonstrated sizeable reductions in car trips associated with the city's resident population.

4.3 The Oxfordshire Strategic Model (OSM) (which was used to undertake the traffic and transport modelling and analysis that underpins the County's assessment of the traffic filters) contains within it, regularly updated housing and jobs figures for Oxford city. At the time the traffic filters transport and traffic modelling report was produced (i.e., October 2022), the OSM contained the housing and jobs numbers (or 'land use assumptions') that were used to inform the adopted Local Plan 2036.

4.4 The traffic modelling undertaken to inform the Local Plan 2036 included higher land use assumptions than are being proposed through the Oxford Local Plan 2045. As such, the County Council's assessment of traffic filters included assumptions that 11,724 homes would be delivered in the plan period, and 944,939sqm of commercial floorspace. The Local Plan 2045 however has a lower housing requirement (9,267 homes) and less commercial floorspace (circa 550,000sqm) than was assessed in the County Council's traffic and transport modelling that was undertaken to support the traffic filters. Therefore, even with the later end date and accounting for previous delivery, the transport model factors in the assumed growth level to 2045.

4.5 As such, given that the traffic and transport modelling undertaken that underpins the suite of demand management measures being implemented by the County Council already includes, embedded with the modelled scenarios, more homes and jobs than are proposed within the Oxford Local Plan 2045. This, coupled with the inclusion of the bespoke traffic modelling undertaken for the primary purposes of Habitat Regulations Assessment. Also, by virtue of the location of the Oxford Meadows SAC, has assessed the impact of the Local Plan 2045 on the SRN.

4.6 As set out above, the package of demand management measures being implemented by the County Council, is the most suitable intervention for the levels of growth proposed in the Local Plan 2045 and the specific circumstances (outlined above) within Oxford.

4.7 It is worth noting that although the traffic filters trial has not yet commenced, the County Council has introduced a temporary congestion charge at the locations where the traffic filters are to be sited. While the temporary congestion charge was only introduced in October 2025 so, at the time of writing has only been operational several months, early indications are that traffic volumes in the city (particularly in the city centre), are lower, with associated traffic reductions at the main arterial routes into and out from the city. This, as predicted in the report, has increased the reliability of bus services as well as reducing traffic congestion, and its associated issue.

Background paper 013

Liveable city

This paper addresses community and cultural facilities, healthcare, schools, leisure and recreation and retail.
Relevant Local Plan 2045 Objectives: • Provide neighbourhoods facilities needed to support our daily lives within a short walk from our homes, to support a liveable city. • Develop thriving local centres that support a variety of uses and foster activity throughout the day and night.
Relevant SA Objective(s): 6. To provide accessible essential **services and facilities**.
SEA theme(s): Material Assets, Human Health

1. Introduction

1.1 This paper focuses on Oxford as a liveable city looking more specifically at the community and cultural facilities that help foster a sense of community and belonging, enhancing health and wellbeing.

1.2 The paper provides a context for considering the subject by providing a brief summary of the relevant national and local plans, policies and programmes that currently exist and will influence change in the future. This paper identifies some of the key challenges and future trends that will impact on these facilities. The paper then explores what would happen without a plan and the potential difficulties that the city would face.

2. Policy Framework/ Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National and international context

National Planning Policy Framework (NPPF)

2.1 The NPPF makes it clear that the purpose of the planning system is to contribute to the achievement of sustainable development. Paragraph 8 recognises that this comprises achieving three overarching objectives, which are independent but need to be pursued in mutually supportive ways. These comprise economic, social and environmental objectives. The social objective is required 'to support strong, vibrant and healthy communities, ... and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being' (para 8b); 'Strategic policies should set out an overall strategy for the pattern, scale and design quality of development, and make sufficient provision for:... c) community facilities (such as health, education and cultural infrastructure)' (para 20). 'Non- strategic policies should be used by local planning authorities and communities to set out more detailed policies for specific areas, neighbourhoods or types of development. This can include allocating sites, the provision of infrastructure and community facilities at a local level....' (para 29). Chapter 8 of the framework addresses the promotion of healthy and safe communities suggesting that planning policies and decisions should aim to achieve healthy, inclusive and safe places which 'enable and support healthy lives...' (para 96c).

2.2 The framework also states that 'to provide the social, recreational and cultural facilities and services the community needs, planning policies and decisions should a) plan positively for the provision and use of shared spaces, community facilities(such as

local shops, meeting places, sports venues, open space, cultural buildings, public houses and places of worship) and other local services to enhance the sustainability of communities and residential environments; b) take into account and support the delivery of local strategies to improve health, social and cultural well-being for all sections of the community; c) guard against the unnecessary loss of valued facilities and services, particularly where this would reduce the community's ability to meet its day-to-day needs; d) ensure that established shops, facilities and services are able to develop and modernise, and are retained for the benefit of the community; and e) ensure an integrated approach to considering the location of housing, economic uses and community facilities and services' (para 98). Finally the framework suggests that 'Planning policies and decisions should ensure that new development can be integrated effectively with existing businesses and community facilities (such as places of worship, pubs, music venues and sports clubs). Existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established. Where the operation of an existing business or community facility could have a significant adverse effect on new development (including changes of use) in its vicinity, the applicant (or 'agent of change') should be required to provide suitable mitigation before the development has been completed' (para 200).

Oxford Local Plan 2036

2.3 The Oxford Local Plan 2036 is the current adopted Local Plan. The policy approach to cultural and community facilities is to make accessible a diverse range of facilities; seek to protect existing facilities; and support improvements and more intensive use of existing sites. Section 8 contains strong policies to help realise this strategy:

2.4 Policy V7 on infrastructure and cultural and community facilities seeks to improve access to social and community infrastructure in particular from new development and protect and retain existing cultural and community facilities. The policy also indicates that planning permission will be granted for the alteration and expansion of existing schools, primary healthcare facilities and community centres; and that new schools, primary healthcare facilities and communities centres will receive planning permission where the City Council is satisfied that a number of criteria have been met.

2.5 Policy G5 on existing open space, indoor and outdoor sports and recreation facilities seeks to protect indoor sport and leisure facilities. The policy also indicates that the City Council will, where the opportunity to do so arises, seek public access to private and institutional facilities (e.g. those owned by colleges and private schools) through sharing schemes and joint user agreements. This is considered further within the Public Open Space and Outdoor Sport topic paper.

Corporate Plan

2.6 Oxford City's Council's Strategy 2024-28 was approved by the Council's Cabinet in July 2024. Its five priority areas of focus are:

- Good, affordable homes;
- Strong, fair economy;
- Thriving communities;
- Zero Carbon Oxford; and
- Well-run Council

2.7 To help support thriving communities the Council Strategy aims to focus on areas of highest inequality to improve health, wellbeing, skills and employment opportunities and equal access for everyone. The priorities are:

- working in partnership with communities, organisations, and agencies to reduce inequalities and create thriving communities
- Championing diversity and inclusion in our own work and community partnerships
- Helping people live healthily by providing services, support, and facilities to prevent and manage physical and mental health conditions

2.8 The strategy is designed to be used as a framework to guide thinking and decision-making and resource allocation. To support the delivery of the strategy, the Council will produce an annual Business Plan that will set specific priorities for the year ahead and report on progress against agreed key performance indicators. In turn, the Business Plan will be complemented by Oxford City Council's annual Budget that will allocate resources against the priorities set.

Oxford City Council's Thriving Communities Strategy

2.9 The Thriving Communities Strategy 2023-2027 brings together leisure, culture, and Oxford City Council's work with communities to tackle inequalities. These inequalities are detailed in Oxfordshire's Joint Strategic Needs Assessment (June 2023) which provides information about the county's population and the factors affecting health, wellbeing, and social care needs. The City Council aims to tackle inequalities by encouraging well-designed neighbourhoods and parks where healthy lifestyles are the norm (sometimes called healthy place shaping), developing skills, ensuring growth is inclusive, strengthening communities and improving access. The strategy is about connectivity and collaboration – ensuring we effectively join up our efforts to help create a more equal city. The strategy sits alongside the Housing, Homeless and Roughsleeping Strategy, Citizen Experience Strategy, Oxford's Economic Strategy, and the Net Zero Action Plan.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

Existing community and leisure facilities

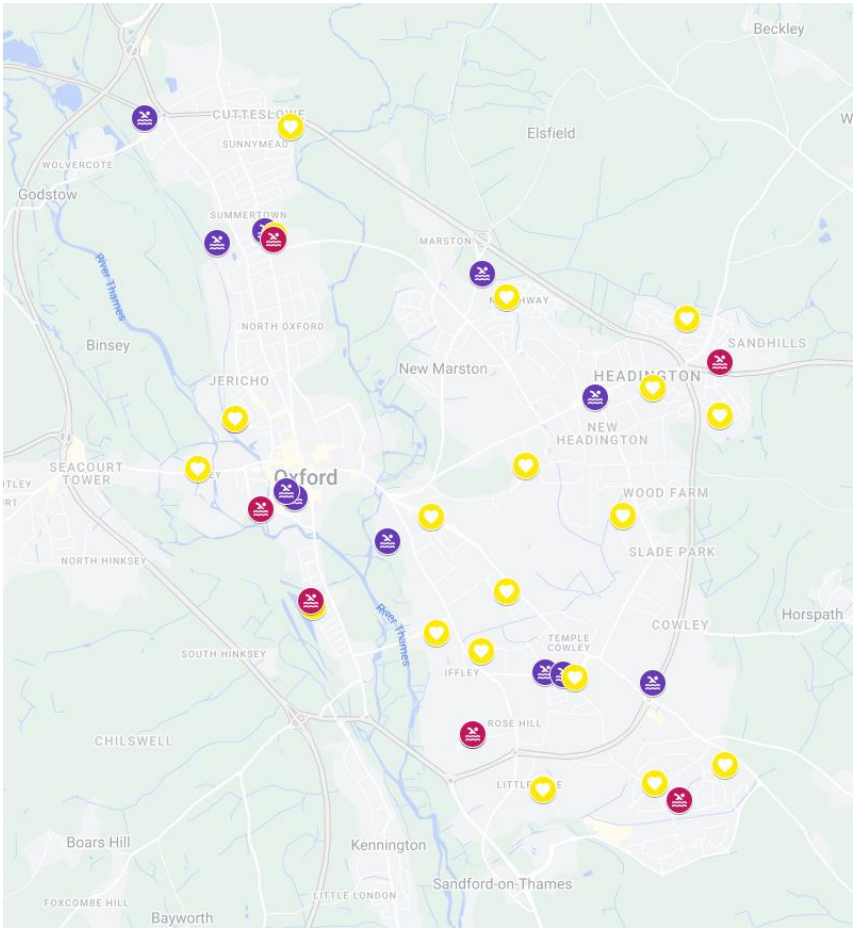

Figure 1. Existing community and leisure facilities (Google, 2024)

City Council leisure centre

Commercial leisure centre

Community centre

3.1 Oxford's leisure centres provide a range of indoor sports including swimming pools, gyms, sports halls, crèches, spinning studios, children's soft play, community and group exercise halls and squash courts. A number of these leisure centres operate on a commercial basis (e.g. provide private membership options). Some leisure centres also provide opportunities for outdoor sports but this is not addressed within this topic paper.

3.2 Oxford City Council Leisure Centre Locations:

- Barton Leisure Centre,
- Ferry Leisure Centre,
- Leys Pools and Leisure Centre,
- Rose Hill Community Centre Gym,
- Hinksey Heated Outdoor Pool,
- Oxford Ice Rink

3.3 There are 23 community centres located across the city owned by the City Council but managed by Community Associations: Barton Neighbourhood Centre, Blackbird Leys, Bullingdon, Cheney, Cuttleslowe, Donnington, East Oxford, Florence Park, Headington, Jericho St Barnabas, Jubilee 77, Littlemore, North Oxford, Northway Sports Centre, Regal, Risinghurst, Rose Hill, South Oxford, The Asian Cultural Centre, The Venue@Cowley, West Oxford, and Wood Farm Community Room. These community centres offer welfare, educational and recreational activities that residents can get involved in. These can include health and fitness opportunities (e.g. yoga classes), sports (e.g. judo and dance), dedicated groups/sessions for parents and children and the elderly, junior and youth entertainment (e.g. Scouts and Guides) and religious groups. Tenants are granted community leases subject to a number of criteria being met by applicant organisations.

3.4 In addition to leisure and community centres there are a number of commercial facilities in the City that overlap with leisure. These include cinemas and theatres, public houses (including social enterprise venues), live music- venues, nightclubs, bowling, karting, laser kombat, private leisure centres/ gyms, children's soft play areas (Partyman), escape rooms, indoor golf and cricket and climbing walls.

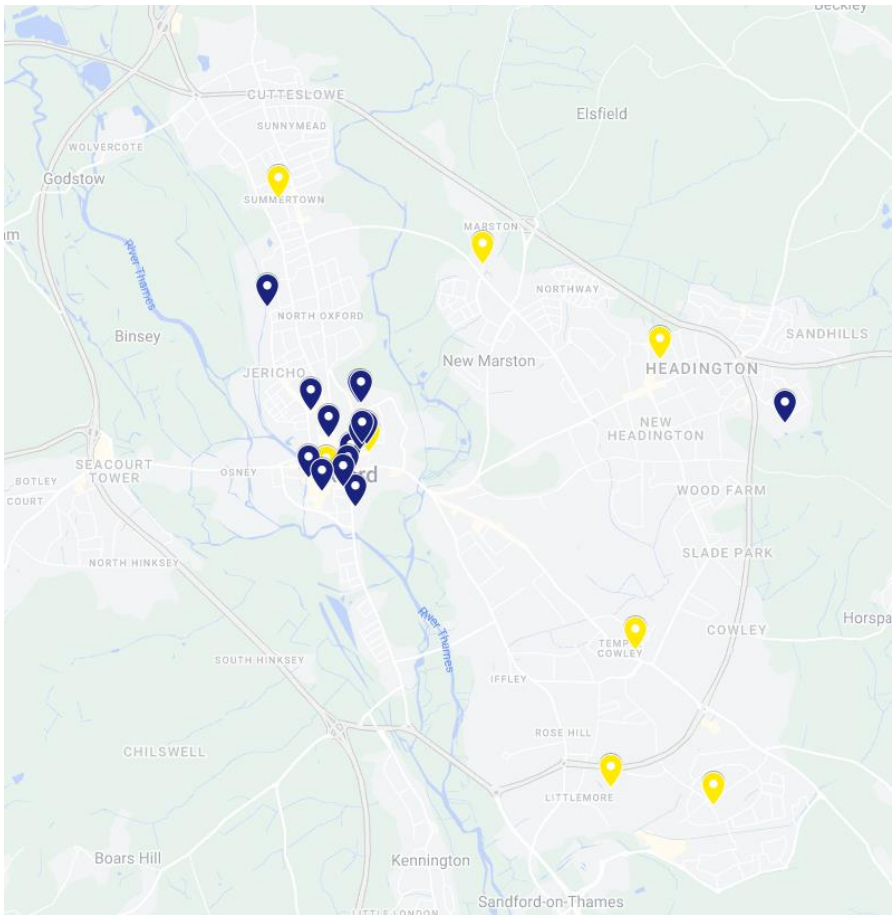

Figure 2: Existing Cultural facilities in Oxford (Google 2024)

Museums and Attractions Libraries

3.5 Cultural facilities in the city include 8 libraries (Barton, Blackbird Leys, Cowley, Headington, Littlemore, Old Marston, Oxford Westgate and Summertown), 13 museums and numerous places of worship. Some of these facilities are commercial, e.g. Theatres, and some venues are linked to the universities. Oxford City has a rich variety of religious communities. As well as offering dedicated places of worship many of the religious facilities offer opportunity for more general community use in a similar way to community centres e.g. church halls.

3.6 There are also a number of leisure and community facilities across the City's schools and universities which are made available for community use through user agreements. There are clearly links between leisure and community facilities and infrastructure: further information can be found in the Infrastructure Topic Paper (015).

Existing Schools and Colleges

3.7 Oxford has over 50 primary schools which are well distributed across the city, allowing easy access to local schools. Secondary schools in Oxford are also distributed fairly evenly across the city, meaning they are also easily in reach of where people live. Secondary schools include Cheney School, Greyfriars Catholic School, Matthew Arnold School (just outside the city boundary, in Botley), Oxford Spires Academy, The Cherwell School, The Oxford Academy, and The Swan School. In addition, there are a number of public schools across the city. The secondary schools vary considerably in terms of their performance. In 2025 (the most recent year performance comparison information is available for) the Cherwell School had an attainment 8 score of 58.3, well above the English state school average of around 46. At the other end of the scale, The Oxford Academy had an attainment 8 score of 33.5, which is below average.

Existing GP practices

3.8 The 2022 Health and Care Act set up new Integrated Care Systems (ICSs) across England, with each ICS having two core parts, an Integrated Care Board (ICB) and an Integrated Care Partnership (ICP). Oxford city is part of the NHS Buckinghamshire, Oxfordshire and Berkshire West Integrated Care Board (BOB ICB). The ICB decides how to spend the NHS budget and plans how to improve people's health, deliver high quality care and get better value for money.

Importance of retail to Oxford's economy

3.9 Oxford is a sub-regional centre which provides a wide range of services and facilities to both the city's residents and those living in the sub-regional catchment area. As such it plays an important role in Oxford's economy. The vibrancy and vitality of Oxford's centres needs to be maintained and enhanced in the future to ensure that they can continue to perform their function and continue to make a significant contribution towards the economic, social and environmental objectives for achieving sustainable development. Oxford is a world-class city with a prosperous economy and a historic core that attracts tourists from around the world. The city centre fulfils many functions both regional and local and will continue to be the main focus for retail together with a wide range of leisure and cultural uses.

Changes in shopping habits

3.10 Retail patterns and behaviours have been changing in recent years with a growth in online shopping, which was only accelerated by the impacts of the Covid-19 pandemic. However, market predictions indicated that there will still be an important role of destination shopping where shopping becomes part of a broader day out linked with eating out and other

leisure activities. When online shopping is so easy there must be other draws to encourage people to visit centres.

Footfall and vacancy rates

3.11 The continued success of Oxford city centre is highly reliant on footfall from tourists, students and office workers, although the impact on spend is not that closely linked to footfall in Oxford, as many of those who usually visit the city centre are not high spenders. For example, students, day tourists and office workers contribute to a lot the footfall in the city centre in normal times, but do not spend very much money. The Authority Monitoring Report 2023/24 shows a city centre footfall comparison of the 2022/23 and the 2023/24 monitoring periods. This comparison shows that for the majority of the year footfall is higher each month during 2023/24 than 2022/23. On average 2023/24 saw more than 100,000 more people per month than in 2023/24. The highest footfall was in August 23, with about 3 million people recorded over that month, surpassing pre-pandemic levels. The vacancy rate of units in the city centre was 5.6% in 2023, compared to an average of 12.5 across the south. This compares to 12.6% in September 2020.

3.12 Therefore, there are many signs that change can be managed in a way that is bespoke to the city's needs, and that will maintain a successful and vibrant centre. The flexible policies introduced in the Oxford Local Plan 2036 have enabled us to respond to the changing retail scene in a way that is appropriate to Oxford; for example the conversion of the Boswell's department store to a hotel has maintained an active frontage with a restaurant open to the public on the ground floor.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of the Sustainability Appraisal)

4.1 It is important that we continue to protect and enhance the city's existing leisure and community facilities, otherwise there is a risk that these facilities could be lost to or replaced with another land use (e.g. housing). This could be detrimental not only to people's health but also their wellbeing. In the absence of a new Local Plan, we would be reliant on the planning policies within the existing Local Plan 2036. Beyond 2036 it would only be national policies that would offer protection and these may not necessarily be detailed or specific enough to protect the diverse range of leisure and community facilities across the city. It seems that demand for retail and service floorspace in key locations such as the city centre and district centres may reduce and change in the future, reflecting the continued growth in online shopping and changes to working practices.

5. Key issues addressed through the Local Plan 2045

Introduction

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to liveable city objectives. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan. The approaches in the submission draft Plan align with the preferred approaches at Regulation 18.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

5.3 The retail and service sector play an important role in Oxford's economy and help to offer a range of job opportunities to local people. The city centre is an important destination for visitors from both overseas and the UK, and is attractive for business trips and conferences. The city centre, district centres and local centres provide a diverse range of uses and services, including retail, pubs, restaurants and offices, together with cultural and entertainment venues, which are important to the functioning of a city and people's well-being. These help to meet the needs of local residents, visitors to the city and those working in Oxford.

5.4 Opportunities for new cultural, community and entertainment uses, together with those in the hospitality sector and residential where appropriate could potentially be at the forefront of a renaissance in the city's key centres.

Town centre uses

5.5 Whilst there may be a move to online shopping, our city centre and local centres have been and will continue to be important for people socially. There are also advantages in terms of clustering uses that attract a lot of people in accessible locations so that a variety of needs can be met in one place, making travel simpler and more likely to be by sustainable modes. The uses also then help to support each other and maintain the strength of these centres, helping them thrive.

5.6 Policy C1 requires new town centres uses to follow a sequential test that looks to locate town centre uses in the defined centres first, and only if it can be shown that there

are no suitable opportunities in these centres may edge of centre and then other locations be considered. This is to try to keep a concentration of uses in the centres, trying to avoid competition that draws people away from established centres, and trying to avoid town centre uses in locations that are not well served by sustainable travel modes. Town centre uses are defined in the NPPF and include a wide range of uses such as shops, restaurants, gyms, health centres and offices. Applicants would be required to demonstrate how they have applied the sequential approach if they are proposing town centre uses outside the centres.

5.7 Retail is no longer a specific Use Class, and the introduction of Use Class E for most commercial uses allows significant flexibility in existing centres. In the Oxford Local Plan 2036, retail frontages were protected. The approach of the Oxford Local Plan 2045 Policy C2 is to protect active frontages at ground floor level, with a threshold percentage of Use Class E. This is to ensure continued activity and interest in these centres so they continue to support and offer a range of facilities and act as a hub.

5.8 To be able to apply this approach it is necessary to define the centres. Being a compact city, Oxford already has a range of centres that are in easy reach of people across the city. If local centres are defined, these should be considered the same as district centres and the city centre in terms of them being a preferred location for town centre uses. However, the NPPF is very clear that it should not include small parades of shops of purely neighbourhood significance.

Community, cultural, leisure and learning facilities

5.9 The importance of adequate availability of community and cultural facilities is evident. The functions they provide can be as a meeting place, a place for leisure and fitness, a place for community and interest groups to meet and so on. Cultural community and leisure facilities help to support strong communities, healthy lifestyles, wellbeing, and a sense of community and belonging. There has been a change in the cultural and leisure landscape as a result of Covid-19, which has in some ways perhaps just accelerated changes. It is important that we continue to protect and enhance the City's existing cultural, educational, leisure and community facilities, otherwise there is a risk that these facilities could be lost to or replaced with another land use. This could be detrimental not only to people's health but also their wellbeing Policies C3, C4 and C5 set criteria to ensure new facilities are located appropriately and potential impacts are mitigated. Existing facilities are also protected. Some flexibility is built-in to ensure changes in needs can be responded to, and to allow, for example replacement facilities that are equally accessible that are achieved by combining and sharing spaces in an enhanced and improved facility, ensuring the most efficient use is made of assets.

Appendix A- Policy options and preferred approaches

Policy options set 013a (draft policy C1): Focusing Town Centre Uses in Existing Centres

Table 1: Policy options set 013a: Focusing Town Centre Uses in Existing Centres

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Allow and protect town centre uses in the city centre, and district centres first.	This supports the city centre and district centres and encourages them to be placed at the heart of their communities. This promotes sustainable travel, and helps ensure that facilities are focused in these locations that can be easily reached by sustainable modes. The concentration of uses also means various needs can be fulfilled in one trip, encouraging people to stay longer. This approach helps to ensure town centre uses are concentrated in existing centres, where there are already good transport facilities (and other facilities such as public toilets, as well as parking for those who need to use it).	The wide range of uses allowed in district centres could lead to competing demands or a particular use could become dominant, which may not be that which is most needed by the community (for example student accommodation or hotels). The policy options relating to active frontages, below, will be important in mitigating this. Use Class E covers a wide variety of facilities, and it includes healthcare such as GPs. This approach would mean new GP surgeries would be expected to be located in district centres and would need to work through a sequential test to show other options are not feasible, which may limit options for locating GPs. However, it is important that GPs are easily accessible, so this approach is justified.
Option b As well as larger district centres, also define local centres.	Local centres are significantly smaller than the district centres, with less variety of uses, but they should be supported as they provide facilities locally in enough variety to serve a range of needs and they help ensure local access. These locations are less likely to be transport hubs and are more tightly woven into residential areas, so may need a slightly different policy approach to district centres.	These local centres vary in character. Defining them as centres means that restaurants and gyms could be introduced into quieter areas and they may attract more people than can easily access the centres.

1510

1118

Option c Apart from for town centre uses, distinguish between city and district centres and local centres in terms of the other types of uses permitted. For example, do not allow student accommodation in local centres, but in larger centres only (if local centres are defined, according to the NPPF they are 'town centres' and so suitable for all main town centre uses).	This ensures that the uses that are most likely to be unsuitable for smaller centres are concentrated only in larger centres, minimising disruption and negative impacts, whilst still encouraging town centre uses in smaller centres to maintain good access to facilities and services.	This limits sites available for sui generis uses, which might still be popular locally.
Option d Do not distinguish between centres at all and allow the same uses in any defined centre.	This increases the range of uses that would be accepted in local centres and increases the locations where needs for student accommodation, hotels and visitor and cultural venues could be met.	Local centres are small and not as suitable for hotel uses, visitor attractions and student accommodation. They generally don't have such strong accessibility and uses that attract a lot of people at once and are less compatible with quiet residential areas could create negative impacts.
Option e Require an impact assessment for retail and leisure proposals outside of centres of a smaller threshold than the default 2,500m2 in the NPPF (currently required in OLP2036 for those of 350m2 or more), demonstrating that there will be no adverse impact on the vitality and viability of the existing centres, and that there is good accessibility by walking, cycling and public	In the context of Oxford, a proposal of 2,500m2 is large, and much smaller proposals outside of centres could potentially have negative impacts. This approach would pick up a larger number of proposals, ensuring negative impacts are avoided or mitigated.	This approach involves an oversight of a larger number of retail and leisure proposals.

1511

transport, and potentially including other criteria such as that there would not be unacceptable harm to adjoining land uses.		
Option f Do not include a policy that sets a sequential approach requirement or criteria for town centre use proposals outside of centres.	The NPPF sets out this approach, so there may be no need to repeat it in local policy.	The NPPF references accessibility and connectivity to centres as criteria for assessing proposals but there are no other locally specific criteria. The Local Plan gives the opportunity to define centres and expectations for them.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a, a with b, c with a&b, d with a&b, e with a/a&b/a&b&c, f **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** The NPPF directs town centre uses to town centres. The local plan can define these areas where town centre uses are to be directed. Town centres may or may not include local centres. There are uses that are not town centre uses that may be most suited to accessible locations. The options explore various ways of defining centres and suitable uses. The options relate primarily to criterion 6. Essential facilities, and criterion 12. Economic growth. Also, they are supporting of the air quality/transport criterion, because protecting centres/guiding uses to these areas helps to support a public transport network and helps people access their needs in sustainable ways. There are slightly different approaches within the options, but largely they all represent minor positives, apart from option for no policy which will be neutral.

1512

Focusing Town Centre Uses in Existing Centres – Proposed policy C1

The preferred approach for the Local Plan 2045 is to include a policy that defines the city centre, district centres and local centres. These centres should be the focus for new main town centre uses. There preferred approach is to distinguish between the larger centres and the local centres particularly in terms of student accommodation, which would not be considered suitable in the local centres.

The preferred approach is therefore a combination of **options A, B, C and E.**

Policy options set 013b (Draft Policy C2): Maintaining vibrant centres

As well as considering what types of uses should be permitted in what types of centres, it is necessary to consider how to protect those existing centres so that they remain vibrant and sustain people's local access to facilities and services.

Table 2: Policy options set 013b: Maintaining vibrant centres

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Designate frontages in the city centre and all district and local centres and require that a high proportion of this remains as Use Class E on the ground floor. The proportion to be set based on maintaining current thresholds, with some leeway for flexibility.	Having 'active' uses at the ground floor helps maintain the vibrancy of centres. Commercial, business and services are uses that attract a lot of people, so these are most beneficially located in the centres, where there are good transport connections, and where there is the benefit of people accessing a variety of facilities at the same time. There would still be a lot of flexibility with this approach to have other uses such as housing on the upper floors.	Permitted development rights that allow a change from Use Class E to housing could mean that the policy threshold is breached without any planning permissions being granted, and that would remove any flexibility for the remaining frontage, and limits the potential of the policy to maintain an active frontage. This will need a strong definition of an active frontage.
Option b Designate frontages in the city centre and all district and local centres but do not require a proportion to remain as commercial, business and services uses - only set criteria for what is expected in a ground floor frontage to bring activity and vibrancy to centres in terms of design and uses.	This approach allows complete flexibility, in the spirit of the change to the Use Class Order. It has flexibility to be applicable whatever future changes to the Use Class Order may occur. Criteria can help to ensure that shop fronts contribute to the design and character of existing buildings and their surroundings and give protection to Oxford's historic shopfronts.	Because the locations where many commercial uses can be located will be so limited, it is important to try to protect them where they are most suitable. Without this protection, there could be a weakening of district centres and the city centre as places where people can access a broad range of facilities at once, and easily, by walking, cycling and public transport.

Option c Do not designate active frontages.	Checking the proportion of active frontages, or assessing whether a proposal maintains an active frontage, does take some time, which would be avoided with this approach.	This approach does nothing to protect the vitality of local centres, so would not help to achieve the aim of a 15-minute city.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a, b or c, or a with elements of b **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** Key criteria are **6. Services** and **12. Economic growth** (keeping high streets alive), potentially indirect impacts on 11. Urban design. Option a and b are both likely to have a minor positive for criterion 6 and criterion 12 because it would support protecting thriving centres (local and district) and maintaining a vibrant street atmosphere. Option b potentially also might have a minor positive impact against 11. Urban Design because incorporating criteria could include considerations about design of shop fronts and reflecting local character. Option c (no local policy) means no protection and would be scored as a neutral impact (it would not actively make the frontages disappear, just means no further protection through local policy). Overall, these are not scoped in for detailed appraisal because impacts are unlikely to be significant.

1514

Active Frontages – Proposed policy C2

The preferred approach for this topic is to include a policy that sets thresholds for the proportion of Use Class E (commercial use) to remain at ground floor level, and also to set criteria to ensure an active frontage. Ensuring a level of activity at street level is vital for the continued success of the centres, as is trying to maintain a range of commercial activity.

The preferred approach is therefore **Option A,** with elements of **Option B.**

Policy options set 013c (draft policy C3): Protection and Alteration of Existing Local Community Facilities

Local Community Facilities include local shops, meeting places, sports venues, ancillary open space, cultural buildings and public houses. These uses can be very important to communities and individuals.

Table 3: Policy options set 013c: Protection and Alteration of Existing Local Community facilities

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Protect local shared spaces and community assets with a policy that would resist their loss, unless set criteria can be met, for example they are to be replaced.	This approach recognises the importance of local community assets and shared spaces and that these make a valued contribution to the health and wellbeing of local residents. The starting position is that these should be protected from loss. The approach recognises that there may be times when existing facilities are no longer needed, or could be replaced with alternative provision that meets a greater need in the local area. It allows for flexibility in such incidences but would require appropriate market-led research and evidence to be provided to underline this case. Promoting 15-minute city concepts is a key aspiration for the Local Plan, defining accessibility in these terms will help to ensure that any re-provision does not force people to use less sustainable modes of transport to continue to use the facility (e.g. car).	It will be difficult to be specific about what evidence would be sufficient to be used to demonstrate that there is no longer a need or overriding demand. It is likely to differ from case-to-case, but more guidance may be helpful in providing clarity in such situations.

1515

Option b Include a policy where planning will be granted for alteration and expansion of existing local community assets with relevant evidence from market research, although potentially preventing F2 shops from expanding so they become Use Class E and could be lost to housing or other commercial uses.	This would recognise the particular importance of community assets to local neighbourhoods and would provide added certainty that applications for development on these sites that would enable them to expand or to provide a better level of service.	The constrained nature of many sites in the city means that, in reality, it may be difficult for many of these facilities to expand – thus the policy may have limited benefit.
Option c Do not have a policy protecting local community assets - rely on national policy, or future national development management policies.	The NPPF does provide support for the provision of 'accessible services' that reflect current and future needs and support communities. It highlights the importance of achieving healthy, inclusive and safe places which 'enable and support healthy lifestyles' and 'promote social interaction'. It is likely that new national development management policies could set out a framework for when loss of facilities is acceptable and may make a local policy redundant.	This option does not provide detailed guidance and advice on how this provision should be made. The Local Plan is the policy vehicle for ensuring that this requirement is planned for to meet the needs of both existing and future demand.

1516

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No

Rationale: With the absence of a specific national policy, it would be appropriate to consider having a policy. The local context supports the inclusion of such a policy, with several potential approaches for its formulation. The options under consideration by the Council explore different strategies for protecting and modifying existing community facilities. These approaches aim to safeguard these facilities, ensuring they are preserved unless it can be demonstrated that they are no longer needed or that a suitable replacement exists.

In terms of sustainability impacts, the different options all score against **criterion 5. inequalities** and **criterion 6. services and facilities** and the level of sustainability impact is unlikely to vary significantly between the options. Option a would have a neutral impact as it offers a cohesive approach to protecting existing local community facilities and outlines a strict criterion which needs to be met in order for the loss of a facility. However, there is still a chance that a community facility could be lost which poses social inequality and health threats, outlined in criterion 5, as communities won't have easily accessible facilities to socialise and exercise. Option b offers a minor positive impact as there is opportunity to expand and alter existing facilities without the risk of development becoming all Class E, preventing the loss of community facilities to housing and commercial use. This also limits the likelihood of social and health inequalities occurring. Option c would have a neutral impact as it would rely on national policy. Although there is no direct national policy, the NPPF does promote healthy and safe communities - it just doesn't outline how to achieve this. Whilst options a, b and, c represent three alternative approaches, some of the options (option a and b) are not strictly alternatives, but rather additional options for a policy to cover and, whilst option a could stand alone, it could also be incorporated alongside option b, as option b is less likely to stand alone. Option c would unlikely be implemented. Overall, the sustainability impacts are not considered significant for any of the criteria, regardless of the option. Additionally, the relevant SA criteria associated with these impacts do not differ notably between the options, so a detailed assessment is not deemed necessary.

1517

Protection, alteration and new local community facilities – Proposed policy C3

The preferred approach for policy addressing community facilities is to generally support new facilities in accessible locations, encouraging community use of facilities if they are private. The preferred approach is also to protect existing facilities unless strict criteria are met, and to allow alteration and expansion of existing facilities. This approach recognises the importance of these facilities to local communities.

The preferred approach in the draft Local Plan is therefore a combination of **options A and B of option set 013d and A and B of option set 013c.**

Policy options set 013d (proposed policy C3): Provision of New Local Community Facilities

Local Community Facilities include local shops, meeting places, sports venues, ancillary open space, cultural buildings and public houses. These uses can be very important to communities and individuals.

Table 4: Policy options set 013d: Provision of New Local Community Facilities

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Generally, support the provision of new local community assets in the city. These should be in an accessible location by walking, cycling and public transport.	These facilities can form an important part of the social fabric of an area, and can support positive health and wellbeing both physical and mental. In combination with option A of Protection and Alteration options above, which seeks to protect existing space, this option would support new facilities coming forward where these would make a positive contribution to the city. Promoting active travel through walking/cycling as part of an accessible city is a key aspiration in the Local Plan.	Whilst this option would support provision, it would not define exactly what is needed and where. Community assets would not always automatically be approved, which would be because they were not suitable, but which may limit opportunities.
Option b Seek to secure community use agreements on all new community and leisure facilities, particularly those within schools and colleges, as well as existing facilities that come forward for redevelopment.	There are a range of private sports facilities in the city which offer limited public use as well as those that are entirely restricted to members of those institutions, including schools and colleges. Where access is opened up to the wider community, this could help improve the range of access to facilities.	Management and operational requirements of certain private facilities, such as those belonging to schools and colleges may restrict wider access for safety/ security reasons. It is likely that community use agreements would need to be explored on a case-by-case basis.
Option c Do not have a policy addressing provision of new local community assets; rely	The NPPF does provide support for the provision of 'accessible services' that reflect current and future needs and support	This option does not provide detailed guidance and advice on how this provision should be made. The Local Plan is the policy vehicle for ensuring that this

on national policy, or future national development management policies.	communities. It highlights the importance of achieving healthy, inclusive and safe places.	requirement is planned for to meet the needs of both existing and future demand.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal? -** No **Rationale:** In terms of options, it would be appropriate to consider having a policy as there is no specific national policy or guidance. Local context supports the inclusion of some sort of policy, with potential options for how best to formulate a policy. The options that the Council have considered represent various approaches to setting policy for the provision of new local community facilities. In terms of sustainability impacts, the different options are all relevant to **criterion 6. to provide accessible essential services and facilities** and the level of sustainability is unlikely to vary significantly between the options. Option a would have a minor positive impact as it allows new facilities to come forward. Option b would also have a slight positive impact as it would ensure public access to new or existing and expanded facilities. Option c would have a neutral impact as it would rely on national policy. There is no direct national policy, but it does promote healthy and safe communities Whilst option a represents a cohesive policy approach, some of the options (options b) are not strictly alternatives, but rather additional options for a policy to cover and, whilst option a could be stand alone, it could also be incorporated alongside option b as this would be less likely to stand alone and option c is less likely to be incorporated at all. There is also a sustainability impact link to **criterion 5. inequalities** as option a is trying to encourage new facilities to come forward and option b is looking at opening up access to previously private facilities to the wider community. This can facilitate social inclusion and access to recreational facilities which in turn links to good health. Whilst options a, b and, c represent three alternative approaches, some of the options (option a and b) are not strictly alternatives, but rather additional options for a policy to cover and, whilst option a could stand alone, it could also be incorporated alongside option b, as option b is less likely to stand alone. Option c would unlikely be implemented. Overall, the sustainability impacts are not considered significant for any of the criteria, regardless of the option. Additionally, the relevant SA criteria associated with these impacts do not differ notably between the options, so a detailed assessment is not deemed necessary.

1519

Policy options set 013e (proposed policy C4): Protection and Alteration of Learning and Non-residential Institutions

Schools, libraries and places of worship all play an important part in servicing the needs of Oxford's communities so their protection is likely to be important. These uses generally fall into Use Class F1 of the Use Class Order 2020.

Table 5: Policy options set 013e: Protection and Alteration of Learning and Non-residential Institutions (including Schools, Libraries and Places of Worship)

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Protect existing learning and non-residential institutions with a policy that would resist their loss, unless justified by meeting a set of criteria such as that there is no longer a need or it is no longer feasible in that location, and/or that suitable re-provision can be made.	This approach recognises the importance of learning and other non-residential institutions. These make a valued contribution to the health and wellbeing of local residents and also are important in learning and skills development, potentially helping overcome inequalities. The starting position is that these should be protected from loss, but this approach is flexible, recognising that there may be times when existing facilities are no longer needed, or could be replaced with alternative provision that meets a greater need in the local area. It allows for flexibility in such incidences but would require appropriate evidence to be provided to underline this case.	It will be difficult to be specific about what evidence would be sufficient to be used to demonstrate that there is no longer a need, or overriding demand, or it is no longer feasible to continue. It is likely to differ from case-to-case, but more guidance may be helpful in providing clarity in such situations.
Option b Set out that permission will be granted for alteration and expansion of existing learning and non-residential institutions.	This would recognise the particular importance of learning and non-residential institutions to local neighbourhoods and would provide added certainty that applications for development on these sites that would enable them to expand or to provide a better level of service.	The constrained nature of many sites in the city means that, in reality, it may be difficult for many of these facilities to expand – thus the policy may have limited benefit.

1520

Option c Do not have a policy protecting learning and non-residential institutions- rely on national policy, or future national development management policies.	The NPPF does provide support for the provision and use of community facilities (such as public houses and places of worship) and other local services to enhance the sustainability of communities and residential environments. It identifies that planning policies should guard against the unnecessary loss or valued services and facilities, particularly where this would reduce the communities ability to meet its day-to-day needs. It is likely that new national development management policies could set out a framework for when loss of facilities is acceptable and may make a local policy redundant.	This option does not provide detailed guidance and advice on how this provision should be made. The Local Plan is the policy vehicle for ensuring that this requirement is planned for to meet the needs of both existing and future demand.

1521

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a, b, a and b, or c **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts. **Screened in for detailed appraisal? -**No **Rationale:** The NPPF requires that strategic policies set out an overall strategy that includes sufficient provision for educational infrastructure (paragraph 20). Previous evidence suggests that it is likely that need over the plan period can be met on existing sites, but it will be important that sites ae protected. The options that the Council have considered represent various approaches to setting policy for the protection and expansion of existing learning and non-residential institutions. In terms of sustainability impacts, the different options are all relevant to **criterion 6. to provide accessible essential services and facilities** and **criterion 5 to reduce poverty, social exclusion and health inequalities**. The level of sustainability is unlikely to vary significantly between the options. Option a would have a minor positive impact as it protects existing uses in most cases. Option b would also have a slight positive impact as it would support expansion of existing facilities. Option c could have a negative impact, as only national policy could be relied on if loss of a facility was proposed, and there is a risk facilities could be lost.

Protection, alteration and new learning and non-residential institutions – Proposed policy C4

The preferred approach for policy addressing learning an non-residential institutions is to generally support new facilities in accessible locations, if set criteria are met. The preferred approach is also to protect existing facilities unless, and to allow alteration and expansion of existing facilities. This approach recognises the importance of these facilities, whilst also ensuring they are appropriately located, recognising that they may have transport and amenity impacts.

The preferred approach in the draft Local Plan is therefore a combination of **options A and B of option set 013e and A of option set 013f.**

Policy options set 013f (proposed policy C4): Provision of New Learning and Non-Residential Institutions

Schools, libraries and places of worship all play an important part in servicing the needs of Oxford's communities so their protection is likely to be important. These uses generally fall into Use Class F1 of the Use Class Order 2020.

Table 6: Policy options set 013f: Provision of New Learning and Non-Residential Institutions

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include criteria for assessing the suitability of proposals for learning and non-residential institutions such as schools, with criteria for assessing the suitability of unallocated sites that may be proposed for these uses, which will include issues such as likely impacts on amenity and traffic and whether they can be mitigated, including access,	Whilst these uses will always bring benefits to the community, there is potential for them to be sited in unsuitable locations, where traffic is generated, where there are problems with access or it causes disruption to local residents; this approach would prevent that happening.	This could prevent much needed uses coming forward if the site is assessed as not suitable.

accessibility, size of site and neighbouring uses.		
Option b Restrict the locations where these uses would be allowed, for example to defined centres only, or to arterial roads and centres.	Some broad location types will, by their nature, be more likely to be suited to this kind of use, and this policy approach is upfront about those, reducing the need to assess against broad critiera.	This may rule out sites which would be very suitable for these beneficial uses.
Option c Do not have a policy for provision of new learning and non-residential institutions.	These uses bring benefits for the community, and this approach maximises the flexibility for them to be brought forward, in any location (suitable as long as other policy requirements are met).	This could lead to proposals in unsuitable locations, which generate traffic, have access issues, which are not close to other facilities for linked trips and which are not as easily accessible.

1523

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a, b, a and b, or c **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts. **Screened in for detailed appraisal? -**No **Rationale:** The NPPF says that a positive approach should be taken to meeting communities' needs in terms of education and development that will widen choice in education. However, it is also the case that not all locations are likely to be suitable for this type of development. Options are therefore set out that explore potential policy approaches to new learning and non-residential institutions, that supports them to varying degrees and that also ensures they are in appropriate locations. The options that the Council have considered represent various approaches to setting policy for the provision of new learning and non-residential institutions. In terms of sustainability impacts, the different options are all relevant to **criterion 6. to provide accessible essential services and facilities and to criterion 5. to reduce poverty, social exclusion and health inequalities.** The level of sustainability is unlikely to vary significantly between the options. Option a and b allow new facilities to come forward, but with certain restrictions to ensure they are appropriately located. Option c, which is to have no policy, means that proposals would be assessed against other policies of the plan and the NPPF, which would be generally positive. Provision of the facilities depends on them coming forward, so all options have a neutral to mildly positive impact.

Policy options set 013g (Draft Policy C5): Protecting Cultural, Social and Visitor Attractions

Most cultural venues and visitor attractions such as theatres, nightclubs, pubs, casinos and concert halls are classed in the planning system as 'Sui Generis', which means use cannot switch to or from them without planning permission and proposals can all be considered on their own merits. These attractions can be important to people's experience and enjoyment of the city, both for visitors and residents, which may warrant their protection, with varying needs of flexibility as it will be necessary to respond to changing interests and demand.

Table 7: Policy options set 013g: Protecting Cultural, Social and Visitor Attractions

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Protect cultural, social and visitor attractions in their current use, and include a criteria-based policy that only allows their loss or change to another attraction or community use if justified against a clear set of criteria that includes requirements for viability and marketing evidence, or replacement.	This approach would help guard against the loss of valued social, recreational and cultural facilities. It would help ensure that such facilities are able to develop and modernise and are retained for the benefit of the community. It is important that evening economy uses can flourish and co-exist with other uses especially where they are found near one another.	It will be difficult to be specific about what evidence would be sufficient to be used to demonstrate that there is no longer a need, or overriding demand, or it is no longer feasible to continue. It is likely to differ from case-to-case, but more guidance may be helpful in providing clarity in such situations.
Option b Protect cultural, social and visitor attractions for those uses (but not necessary the exact use they are in, for example a cinema could be	This approach continues to protect facilities that may be important to people in the local area, or wider area, whilst allowing greater flexibility to respond to changing tastes and demand, for example if visitor numbers to cinemas has fallen so much as to affect their	This would mean that facilities such as pubs, which can be very important to local communities, could potentially change to an attraction that may attract more visitors, but which does not perform the same community function. Facilities such as pubs are often not in centres, so their change to

lost to a pub, or even loss to a community facility could be set out as acceptable in principle). This approach would still include a criteria-based policy that only allows their loss if justified against these.	viability, a currently more popular use would be allowed in principle (subject to other policies and criteria being met).	another use, which is essentially a new use, could conflict with policies that try to direct these uses that attract lots of people to the defined centres.
Option c Do not include a policy that protects existing venues.	This approach leaves the market to respond flexibly to demands and market conditions.	This approach would not help guard against the loss of valued facilities and venues.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a, a and b or c **High-level screening conclusion? -** the options are similar to each other and are unlikely significant sustainability impacts. **Screened in for detailed appraisal? -** No **Rationale:** The NPPF requires that strategic policies set out an overall strategy that includes sufficient provision for cultural infrastructure (paragraph 20). The options that the Council have considered represent various approaches to setting policy for the protection and expansion of existing cultural, social and visitor attractions. These options most directly relate to criterion **12. Economic growth,** particularly the element that relates to cultural provision and tourism and to **criterion 6. to provide accessible essential services and facilities** and **criterion 5 to reduce poverty, social exclusion and health inequalities**. Having a policy has a minor positive impact, helping to ensure these facilities are protected for the benefits they provide in terms of jobs, attracting visitors to the city and contributing to social and cultural well-being. Option c could have a minor negative impact, as only national policy could be relied on if loss of a facility was proposed, and there is a risk facilities could be lost.

1525

Policy options set 013h (Draft Policy C5): Provision of New Cultural, Social and Visitor Attractions

Related to options set 013g about protecting cultural, social and visitor attractions, this options set considers provision of new attractions – what types and where they might be most suitable, and bring most benefits.

Table 8: Policy options set 013h: Provision of New Cultural, Social and Visitor Attractions

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Provide a criteria-based policy to assess the suitability of proposals, which looks at accessibility, environmental and transport impacts to determine the acceptability of proposals for these uses. This may specifically encourage some Sui Generis uses that are considered will fill gaps in provision or be particularly beneficial.	Potential benefits include prevention of impacts such as congestion and providing economic opportunities from locating new uses in accessible and sustainable locations.	The design of new facilities would need to be carefully considered otherwise there could be a potential for conflict with Oxford's historic assets, which has the potential to undermine the city's historic character. Allows for possibility of locating tourist assets away from existing transport hubs.
Option b Allow new cultural, social and visitor attractions in defined centres only.	This approach would continue to encourage new facilities in the most sustainable and accessible locations. In these locations, they also have potential to attract people who will use the other existing facilities of these centres and help to support them. This gives further potential to enhance the vibrancy of the city and district centres.	Potentially increases pressure in these centres as so many uses would only be allowed there. That may also limit these facilities because of competition for a limited number of sites. Has the potential to reduce variety of uses in these locations.

Option c Do not allow new cultural, social or visitor attractions	This could limit the negative impacts of visitors and tourists on Oxford's transport system and communities.	This approach would have a potential negative impact to Oxford's tourism industry and economy. It may not limit visitors, but would just limit their experience. It was also limit opportunities for residents. It could contribute to a decline of the city centre and district centres, with fewer visitors. It would limit opportunities for new attractions that may contribute to the wider understanding and appreciation of Oxford's unique history or increase its accessibility to people and opportunities for enjoyment.
Option d No Policy. Rely on other policies in the Local Plan and national policies where applicable.	Provides flexibility for the provision of these uses.	Reliant on other policies to mitigate any potential negative impacts on transport, heritage, and wider environment.

1527

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a, a & b, b, c, d **High-level screening conclusion? -** the options are similar to each other and are unlikely to have significant sustainability impacts. **Screened in for detailed appraisal? -**No **Rationale:** The NPPF says that plans should take into account and support the delivery of local strategies to improve society and cultural well-being. Therefore it is appropriate for options to explore potential policy approaches to support these facilities to varying degrees and that also ensures they are in appropriate locations. Visitor attractions and cultural facilities can attract large numbers of people and therefore have impacts on local amenity, and it is important they are accessible. The options that the Council have considered represent various approaches to setting policy for the provision of new cultural, social and visitor attractions. In terms of sustainability impacts, the different options are all relevant to **criterion 6. to provide accessible essential services and facilities and to criterion 5. to reduce poverty, social exclusion and health inqualities and 12. Economic growth,** particularly the

element that relates to cultural provision and tourism. The level of sustainability is unlikely to vary significantly between the options. Option a and b allow new facilities to come forward, but with certain restrictions to ensure they are appropriately located. Option d, which is to have no policy, means that proposals would be assessed against other policies of the plan and the NPPF, which would be generally positive. Option c allows no new facilities, but would not affect directly existing facilities, which already ensure a range of provision.

Protection, alteration and new learning and non-residential institutions – Proposed policy C5

The preferred approach for policy addressing protection, alteration and provision of cultural venues and visitor attractions is to support new facilities in accessible locations, if set criteria are met. The preferred approach is also to protect existing facilities as cultural and visitor attractions (allowing flexibility amongst these types of uses) unless criteria are met, and to allow alteration and expansion of existing facilities. This approach recognises the importance of these facilities, whilst also ensuring they are appropriately located, recognising that they may have transport and amenity impacts.

1528

The preferred approach in the draft Local Plan is therefore a combination of **option A of option set 013g and A and B of option set 013h.**

Background paper 014

Grey and Digital Infrastructure

This paper addresses the provision of grey infrastructure (including roads, rail, sewers and energy) and digital infrastructure (including telecoms and broadband) to meet the community's needs and support the growth of the city.
Relevant Local Plan 2045 Objectives: • Create opportunities for supporting the transition to more sustainable/active forms of transport, including by reducing the need to travel, supporting good bicycle parking facilities and avoiding on and off-street car parking where possible across the city. • Curate a built environment that supports and enables people to be physically and mentally healthy. • The city's water resources are utilised efficiently with consideration for the future, whilst water quality is protected and enhanced for the benefit of the wider environment.
Relevant SA Objective(s): 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040. 6. To provide accessible essential **services and facilities**. 8. To reduce **traffic congestion and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. 9. To achieve **water** quality targets and manage water resources.
SEA theme(s): Water, climatic factors, material assets, human health, landscape, population and air.

Policy Options Set 014b (draft Policy I1): Digital Infrastructure to support New Development 17

1. Introduction

1.1 Infrastructure generally consists of facilities and services that meet the needs of the local population and help support development and growth.

1.2 Infrastructure is often broken down into broad sub-groups. These sub-groups are usually made up of following infrastructure categories:

- Physical infrastructure (such as transport, utilities infrastructure);
- Social infrastructure (such as schools, healthcare and community centres);
- Green and blue infrastructure (such as parks, waterways and cemeteries) and
- Digital infrastructure (such as high-speed internet, mobile telecoms and smart grid energy)

1.3 Infrastructure needs can arise from deficiencies in current provision; additional requirements to support new development; or as the result of increased demand due to population growth. This topic paper focuses on physical and digital infrastructure. It sets out an overview of the policy context relating to transport infrastructure provision. However, a more detailed discussion on transport infrastructure can be found in Background Paper 12 – Transport. A discussion about social infrastructure can be found in Background Paper 013 - Liveable city and a discussion on green and blue Infrastructure is covered in Background Paper 005a – Green Infrastructure.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Planning Policy Framework (NPPF)

2.1 Infrastructure provision and delivery to support new development has become increasingly recognised as an important national planning priority in recent years. The most recent NPPF (December 2024), acknowledges the importance of new, upgraded, and/ or expanded infrastructure that is required to support the developmental aims and ambitions of the Labour administration.

2.2 Paragraph 20 of the NPPF states that strategic policies should set out an overall strategy for the pattern, scale and quality of development, and make sufficient provision for: infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk, and provision of minerals and energy; and community facilities (such as health, education and cultural infrastructure).

2.3 Paragraph 35 of the NPPF sets out that Plans should set out the contributions expected from development and that this should set out the levels and types of infrastructure required providing such policies do not undermine the viability of the plan. Both physical and digital infrastructure (both of which are relevant to this topic paper) are included.

2.4 Paragraph 77 off the NPPF sets out that the supply of large numbers of new homes should be “supported by the necessary infrastructure and facilities”. While Chapter 6 of the NPPF sets out the Government’s approach to the supporting economic growth through the planning system. The NPPF now includes digital infrastructure as one of the Government’s five named key sectors supported by the NPPF to “meet the needs of a modern economy”. It also sets out that planning policies should make provision for “new, expanded or upgraded facilities and infrastructure that are needed to support the growth of these industries”. While Paragraph 86 sets out the importance of delivering infrastructure and associated improvements, where it is recognised that identified inadequacies are a potential barrier to investment.

2.5 Chapter 10 of the NPPF recognises the importance of digital infrastructure and sets out that advanced, high quality and reliable communications infrastructure is essential for economic growth and social well-being. The NPPF also stresses the importance of plans supporting the expansion of next generation mobile technology and sets out that full fibre connections should be prioritised to existing and new developments.

Planning Practice Guidance (PPG)

2.6 The Planning Practice Guidance section on Plan-making refers to infrastructure within several different contexts. A selection of these are set out below:

- The potential need for additional cross-boundary infrastructure;
- Understanding if there are barriers to investment (e.g., lack of housing, infrastructure, etc.);
- In working out developer contributions, a proportionate evidence base should include a plan-level viability assessment;
- Providing confidence that new homes will be supported by appropriate infrastructure in a timely manner and providing policy support for identified deficiencies.
- To be able to demonstrate that any critical infrastructure required to support the level of growth proposed in the plan is deliverable within a reasonable timeframe;
- To use the Infrastructure Funding Statement to support infrastructure delivery throughout the plan period.

Oxford Cambridge Growth Corridor

2.7 In January 2025, the Chancellor unveiled new plans to deliver the Oxford-Cambridge Growth Corridor that will boost the UK economy by up to £78 billion by 2035, catalysing the growth of UK science and technology. Sir Patrick Vallance has been appointed as the Oxford-Cambridge Growth Corridor Champion to provide senior leadership to ensure that the Government’s ambitions are delivered. The Oxford-Cambridge Growth Corridor will provide a clear strategy for the entire region backed by funding for housing and infrastructure. A new growth commission for Oxford was also announced in January to review how nationally significant growth for the city and the surrounding area can be unlocked and accelerated.

Oxfordshire Local Transport and Connectivity Plan (LTCP)

2.8 The LTCP5 was published in July 2022 and follows on from the previous Local Transport Plan 2015-2031 (LTP4). The vision is of a net zero travel system for the county that protects the environment and makes for a better quality of life for communities that live there.

2.9 The LTCP is supported by a number of supporting strategies. The objectives of these strategies are to reduce the need to travel, reduce reliance on individual private car use and to promote alternative modes of transport such as walking, cycling and public/ shared transport as natural first choices.

2.10 There is a strong emphasis on promoting a 'decarbonised' transport network, air quality and productivity on a sustainable basis, which includes highlighting role of digital infrastructure in enhancing connectivity and reducing the need to travel.

Local Cycling and Walking Investment Plan (LCWIP)

2.11 Local Cycling and Walking Investment Plans (LCWIPs) are being prepared for several parts of Oxfordshire. The Oxford City LCWIP was adopted by Oxfordshire County Council in March 2020. The plan sets out evidence in relation to achieving a 50% increase in cycling in Oxford. The City LCWIP:

- Lays out a comprehensive cycle network to focus expenditure for best value;
- Identifies a list of infrastructure improvements for both walking and cycling based on best practice and the Cycle and Walking Design Guides;
- Summarises the evidence for supportive measures, such as Low Traffic Neighbourhoods and controlled parking zones; and
- Provides cost estimates for these schemes that can be used in future bids and in planning decisions.

Local Area Energy Plans for Oxfordshire

2.12 In February 2025 an announcement was made that all the Oxfordshire authorities including all district councils and the county council (supported by the Oxfordshire Leaders Joint Committee) are to deliver a Local Area Energy Plan (LEAP) for the county. This will help address climate change and provide recommendations for the development and improvement of energy-related policies, regulations and incentives including securing cleaner, more affordable energy.

Oxford Local Plan 2036 (Infrastructure Policies)

2.13 The Oxford Local Plan 2036 contains several policies relating to infrastructure. These policies help support new development by ensuring that appropriate infrastructure is provided in

a timely manner. For instance, Policy V8 – Utilities, requires planning applications to be supported by information that capacity issues have been explored with the appropriate utilities providers and sets out that development will not be supported without sufficient evidence regarding utilities capacity. Whereas Policy V9 – Digital Infrastructure, supports development that delivers full-fibre broadband connection speeds and appropriate electronic communications infrastructure provided that a set of criteria are met.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

3.1 Infrastructure investment usually either comes directly from new development in the form of developer contributions or direct delivery, or indirectly, through the attraction of central and local government funds associated with new development. Through Local Growth Funds 1 and 2, the Oxfordshire Local Enterprise Partnership (LEP) secured £118.4m to support dynamic economic growth funding numerous infrastructure projects. They were also awarded £24.16m, as part of Local Growth Fund 3, enabling the support more projects to benefit local people and business.

Infrastructure needs can change over time, for instance, as changes in demographics occur, or new technologies emerge, investment in infrastructure does not always keep up with the pace of development, especially in areas where the cumulative effects of smaller developments are felt more acutely, such as in Oxford. When this happens, a deficit is created which can impact on the existing and future population.

3.2 Figure 1 shows the development pressure arising from the planned growth set out in the Local Plan 2036. This area-based analysis divided the city into four broad sectors, each of which has planned housing growth of more than 1,000 units. Development pressure also exists adjacent to the boundary of the city with new around 4,800 new homes planned adjacent to the city's South Infrastructure Area. In addition, there are more than 1,100 homes proposed outside the East Infrastructure Area. A similar number of new homes are also planned (around 1,400) adjacent to the Oxford's North Infrastructure Area. Although these developments are outside the city there is the potential for them to put pressure on existing infrastructure facilities and services in the city.

3.3 Figure 1 also shows the locations of the city's Category 1 employment sites. This shows that there is a cluster of existing employment sites located in the south of the city, which is presently not well-served by public transport. Important infrastructure projects such as the redevelopment of Oxford Station and the re-introduction of passengers on the Cowley Branch Line will improve the connectivity and accessibility of these, and other employment sites in the south of the city across the county and the wider growth corridor.

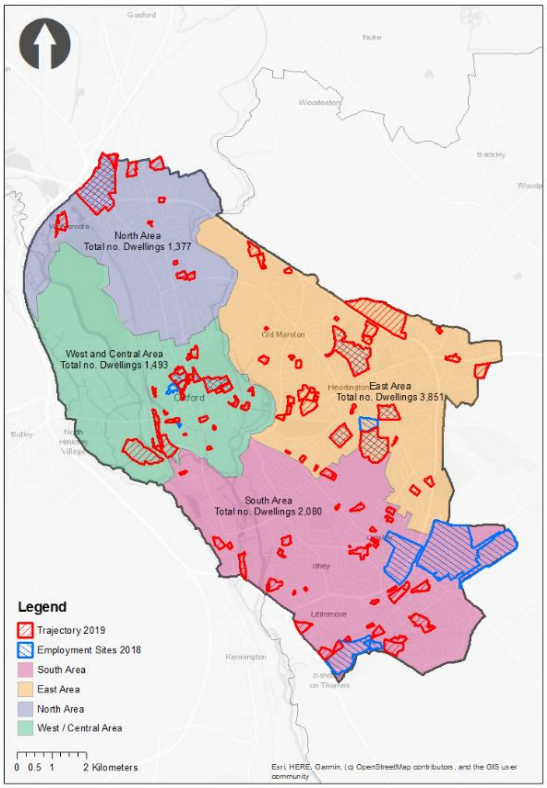

Figure 1: Area-based analysis of the Local Plan 2016-2036 requirements for ca. 11,000 new homes and 25ha of new employment land in Oxford. This map only shows Category 1 employment sites (LP2036)

How is infrastructure funded?

3.4 Currently in Oxford, Section 106 (S106) agreements and the Community Infrastructure Levy (CIL) are the main mechanisms in place for generating funds from development to be invested in infrastructure to help mitigate the impacts of development. S106 agreements can set out legal obligations for on-site infrastructure needs, are often on major sites and can include affordable housing contributions. CIL is a charge levied on the new floor space of new developments and is accumulated from developments across the city to be reinvested into infrastructure needs of the city.

3.5 The City's Infrastructure Funding Statement (IFS) summarises the amount of developer contributions obtained, allocated and spent in the previous financial year. CIL receipts for the 2023/24 monitoring year were just over £5.67 million and S106 contributions in 2023/24 were just over £190,000. The S106 money received was put towards a variety of contributions including affordable housing, highways management, air quality monitoring, and community facilities. Non-financial S106 contributions included public open space, affordable housing and footpath links.

3.6 Oxfordshire County Council's Infrastructure Funding Statement (IFS) is also available online and identifies income and expenditure for education, highways and public transport, fire service, libraries and other county responsibilities.

Analysis of current infrastructure provision

Utilities: Water resources

3.7 Thames Water has a duty to maintain the security of the water supply, and every five years they produce a Water Resources Management Plan (WRMP) which sets out how they plan to meet customer's needs while protecting the environment over the plan period. The latest version WRMP24 published in October 2024 looks ahead to 2075.

Utilities: Wastewater treatment

3.8 The Oxford sewer network manages demand from over 250,000 customers sited in Oxford and the surrounding areas. The catchment is served by the Oxford Sewage Treatment Works (STW), located just outside the city boundary to the south of the city, and Littlemore Pumping Station.

3.9 The Oxford STW is one of the most important structural assets with respect to future development in Oxford. In the past, it has benefitted from some increases in capacity. However, recently further upgrades to the Oxford STW facility have been shown to be needed. These upgrades are to ensure that the Oxford STW is able to both meet current and future demand for growth in the city and the surrounding area.

3.10 Thames Water, the Environment Agency and Oxford City Council met several times in 2024 to discuss the progress of the upgrades required to improve treatment capacity at the Oxford STW. The purpose of these meetings was to provide confidence and evidence that the planned and proposed growth in the surrounding area can be realised in full (and any wastewater arising from it could be satisfactorily dealt with at the Oxford STW). Thames Water has kept Oxford City Council updated and involved in its capacity upgrade discussions. On 20 March 2025, following a rigorous process to find a solution to unlock new homes, an announcement was made that the EA, Thames Water and Oxford City Council agreed a scheme to provide the capacity needed at the Oxford STW. Thames Water has presented a clear, fully costed and funded programme of work that provides the confidence and certainty that water quality will be protected and communities in the area will have the water services they need, allowing projected growth to come forward.

3.11 The City Council has commissioned a new Water Cycle Study to accompany the preparation of the Local Plan 2045 which will analyse the current situation in the water environment, The Water Cycle Study looks at how the likely development proposed through the new Local Plan could potentially impact the water environment.

Utilities: Energy

3.12 Scottish Southern Electricity Networks (SSE) is responsible for delivering electricity distribution across southern England, including Oxford. Throughout the development of the Local

Plan 2036 the Council liaised with SSE in relation to the likely impacts of proposed development allocations in the plan on their networks; and to ensure that any upgrades to the network that may be required to serve the proposed levels of development will be provided in a timely manner. Continuing these conversations to support the production of the Local Plan 2045 are an important part of infrastructure planning especially as more details are known about the quantum and distribution of development.

3.13 Oxford has set out ambitious objectives in relation to cutting carbon emissions and moving towards being a net zero city by 2040. Renewable energy generation technology is likely to play an important role in this endeavour and there is a variety of renewable energy infrastructure schemes around the city.

3.14 The online platform 'The Peoples Power Station' which was developed by the Low Carbon Hub maps a variety of renewable energy and energy efficiency projects across Oxfordshire and a snapshot of the distribution for Oxford is included in Figure 2, which shows that most installed schemes in the city involve small-scale solar photovoltaics. This reflects the constrained nature of Oxford, and the relatively high density of the existing built-up area means that there are limited opportunities for some larger-scale renewable energy projects (e.g., solar farms). However, the city's higher densities also present opportunities for certain renewable energy projects (e.g., district heating), which need numerous potential users within close proximity to one another.

3.15 Renewable and low-carbon energy technologies are currently secured in new developments to comply with the policy requirements of the Local Plan 2036. As such they are usually negotiated through commitments secured through the development management process and are therefore generally funded and provided by developers.

3.16 As well as electricity, gas supply is often regarded as an essential utility provision in new development. The national high pressure gas transmission system is owned by National Grid, but the lower pressure local distribution network in the Oxford area is owned by Scotia Gas Network (SGN).

3.17 As part of the development of the Local Plan 2036, SGN assessed all identified sites to identify if there would be any likely issues with the gas network. The results of the network capacity assessment showed that most of the sites would be unlikely to have any issues connecting to the gas network. It will be important to ensure that any new sites identified through the Local Plan 2045 are able to be satisfactorily accommodated within the existing network.

Digital Infrastructure

3.18 Oxfordshire County Council's Digital Infrastructure Programme aims to improve digital infrastructure across the county and their work includes bespoke projects such delivering GigaHubs with Full Fibre broadband including at more remote locations including village halls, GP surgeries, schools and other public buildings. Other important work involves the delivery of gigabit-capable broadband to around 10,000 premises in Oxfordshire and driving to deliver 5G technology in Oxfordshire as part of a wider regional project across England's Economic Heartland.

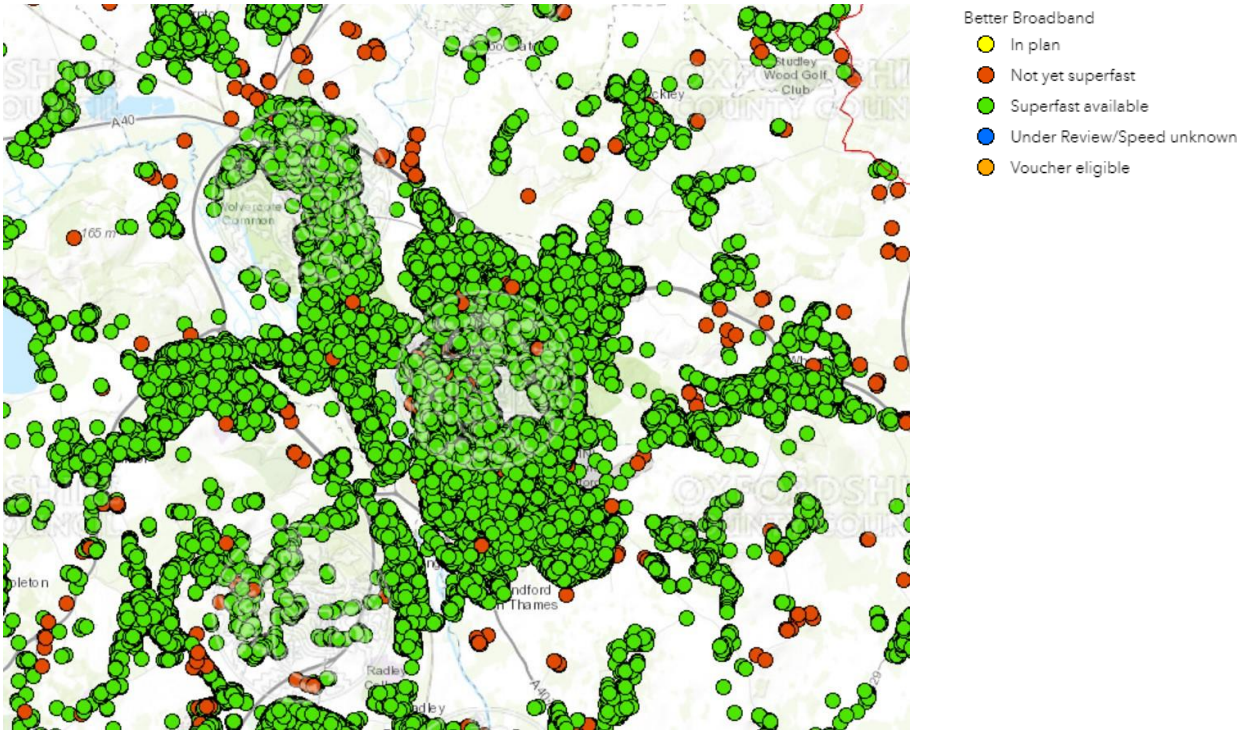

Figure 3: Map of broadband coverage in Oxford City. Source: Digital Infrastructure Oxfordshire.

3.19 Good broadband connections are essential for many highly skilled jobs. Oxford is well covered by superfast broadband connections (speeds of >24Mps). Figure 3 shows the availability of superfast connections across the city is now widespread, although there are still some areas where improvements are needed. Good broadband connections can help support a range of employment opportunities including supporting opportunities that enable flexible and hybrid working styles.

3.20 The County Council has been undertaking work in relation to the roll out of full fibre for commercial buildings, with the aim that this will also support the delivery of high-quality digital infrastructure to surrounding residential properties. Another County Council project is supported by a funding source available from central government which can only be used for the 'final 20%' harder to reach properties and ensure that they have 'superfast' connectivity. Although it is often used to support the delivery of broadband outside of urban areas the fund may apply to some areas of Oxford.

Another important aspect of digital connectivity is coverage of telecoms and mobile phone networks. Coverage varies across the city based upon which of the four main mobile network operators are being used to provide this service, with higher generations of network (up to 5G which is currently being rolled out nationally), being able to offer increased performance and download speeds.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 Infrastructure is needed to mitigate the impacts of new development and support its delivery. A new Local Plan provides an opportunity to review and update the existing infrastructure requirements identified to support the current adopted plan. Without a new plan, any infrastructure schemes needed to support the delivery of new additional development (not previously identified within the current Local Plan) may not be delivered in a timely manner.

4.2 Discussions with key stakeholders and infrastructure delivery partners is an important aspect of the plan-making process because key stakeholders can identify infrastructure and funding gaps needed to support development. Having a clear and up-to-date understanding of the likely future development in an area can assist infrastructure partners with infrastructure planning and funding programmes which often do not align with the Local Plan making process. The likely trends without a new Local Plan could mean that key critical infrastructure issues are not identified at an early stage and this could result in delays to infrastructure delivery. A new Local Plan provides an opportunity to identify and address issues with infrastructure providers and key stakeholders to ensure that infrastructure is delivered in a timely manner to support mitigate the impacts of development.

5. Key Issues through the Local Plan 2045

Overall policy approach to infrastructure provision

5.1 Infrastructure is often delivered by third party providers, whose delivery plans are not always synchronised with the development planning process. Therefore, the Local Plan provides an opportunity to update third-party providers with development projections. The inclusion of infrastructure policies provides a framework by which specific infrastructure needs for different types of development can be identified as much as possible in a transparent and predictable way. Overall this can assist with ensuring infrastructure is delivered in a timely manner to support development.

Land Safeguarded for Infrastructure Policy

5.2 The plan includes a new policy (policy I2: Land Safeguarded for Infrastructure), which did not form part of the Regulation 18 consultation document. The purpose of the policy is to show within the Local Plan 2045, certain infrastructure schemes that are covered by other consenting regimes which fall outside of the jurisdiction of Oxford City

Council's planning powers. The Policy itself covers two specific infrastructure schemes – the Oxford Flood Alleviation Scheme, and East West Rail. The County Council is the determining authority for the Oxford Flood Alleviation Scheme, while East West Rail is a Nationally Significant Infrastructure Project (NSIP). Both infrastructure schemes are at stages within their respective consenting regimes where it is appropriate to include information relating to these schemes within the city's Local Plan 2045. Each scheme is considered in turn. The land safeguarded for the East West Rail Project was the subject of a Safeguarding Direction in November 2025 which introduced specific procedural requirements for development proposals within the affected area. While the Oxford Flood Alleviation Scheme is at an advanced stage in the County Council's development management process.

5.3 Effectively, there are two policy options that were considered. Either to include a policy or not. Neither option is considered to have any significant effects on the sustainability objectives identified within the SA Framework. This is because the safeguarding of land identified within either infrastructure scheme does not significantly affect the ability of locations identified for development that have been identified in the Oxford Local Plan 2045, to come forward. Also, any assessment of whether there was a policy or not would be likely to be broadly similar. However, the inclusion of a policy would be likely to help to support a more transparent and joined-up approach between the different consenting regimes.

5.3 Policy I2: Land Safeguarded for Infrastructure is therefore a policy which provides information about strategic infrastructure schemes (i.e., that cover more than one local authority area) and provides bespoke procedural undertakings for each of the identified schemes The City Council considers that, on balance, given that such a policy would not give rise to any likely significant effects, and would be likely to help support a more transparent approach, the City Council has therefore included such a policy within the Local Plan 2045.

Appendix A – Regulation 18 Policy options sets

- The Local Plan 2045 includes proposed policies that aim to facilitate provision of physical and digital infrastructure in support of development in Oxford. For each potential policy, options for the specific approach that could be taken for the Local Plan 2045 have been considered, and these 'options sets' are set out in tables on the following pages. The tables identify potential positives of the approach, as well as the potential negative or neutral impacts that could arise depending on the approach taken and that have helped inform the preferred position set out for the Regulation 18 consultation.

- Additionally, the options sets have been considered in light of their specific sustainability impacts through a high-level screening against the 12 sustainability criteria forming the assessment process for the separate Local Plan Sustainability Appraisal (explained in greater detail in the main Sustainability Appraisal report). A summary of this screening process is included at the end of each options set table.

Policy Option set 014a (draft Policy S3): Infrastructure Delivery in New Development

5.6 National policy requires local plans to make sufficient provision for a range of different types of infrastructure. This option set looks at two options - Option A considers introducing a policy to require development proposals make a contribution towards or deliver the infrastructure required to meet identified needs. Option B, in contrast considers the positive and negative consequences of not introducing such a policy.

Table 5.1 Policy options set 014a – Infrastructure Delivery in New Development

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option A Include a policy that sets out how and when development proposals are expected to contribute to, or deliver the infrastructure required to meet identified needs. Make specific reference in the policy to the Infrastructure Delivery Plan (IDP) and set out a selection of specific infrastructure projects. Support the use of on- and off-site contributions and identify appropriate delivery mechanisms (e.g., S106, S278, CIL) to support the timely delivery of infrastructure.	Provides clear advice about how and when infrastructure delivery is needed to mitigate the impacts of development. The IDP forms a key part of the evidence base which helps to demonstrate that there is a funding gap and that contributions from development can be sought. Setting out the specific infrastructure projects in the policy can help the plan achieve its vision.	No specific reference about how best to delivery infrastructure projects that are themselves resilient to future climate change impacts. Policy only explicitly mentions rail and bus infrastructure requirements.
Option B Do not include a policy that supports infrastructure delivery in new development.	Limited or uncertain positive consequences of this approach	Likely to cause uncertainty about future infrastructure requirements and associated costs, all of which need to be negotiated through the development management process. This could lead to delays in the infrastructure provision and result in a more resource-intensive development management process, which could

1543

		increase the time taken to determine planning applications. Would not identify and may not result in the delivery of key infrastructure projects required to support the plan's vision.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Option A **High-level screening conclusion?** Significant effects unlikely **Screened in for detailed appraisal?** No **Rationale:** Option A is unlikely to have significant effects on the SA objectives. This is in part because the policy provides a mechanism to support the timely delivery of infrastructure, which itself mitigates the identified impact the level of growth proposed in the plan. When considered against the SA objectives, option is likely to have neutral or minor positive effects on SA Objective 6 Services and Facilities, and may support increased accessibility and connectivity through delivering rail, bus and active travel measures which are likely to have an overall neutral or minor positive effect on SA Objective 8 Transport and air quality as a shift away from non-car modes is more likely with the delivery of improved rail, bus and active travel infrastructure.

1544

Infrastructure Delivery in New Development – draft Policy S3

The preferred approach for the Local Plan 2045 draft policy to take forward is **option A.** This is because the local plan needs to enable infrastructure to be delivered in order to mitigate the impact of the development it proposes. The draft policy provides the mechanism to seek contributions for, or deliver the identified infrastructure needed to support the growth proposed in the plan.

Policy Options Set 014b (draft Policy I1): Digital Infrastructure to support New Development

Table 5.2: Policy options set 014b: Digital Infrastructure to support New Development

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require the provision of high-speed digital infrastructure (integration of gigabit ready physical infrastructure, future proofed construction to allow for integration if not immediately available) in all development, including residential, employment and conversions.	Ensures that development schemes connectivity is delivered in a consistent and measurable manner. Compliance with NPPF (para 119) and building regs.	There may not be any need for specific policy as building regs and NPPF already contain provisions for digital infrastructure and connectivity.
Option b Have no specific policy on digital infrastructure, rely on national planning policy.	NPPF already has permissive approach to communications infrastructure (paras 119 – 123), and local authorities are directed to make decisions on planning grounds only, which can already be covered by other relevant policies in plan. There is already growing provision of high quality infrastructure.	NPPF only addresses the provision of infrastructure by service providers, with no specific requirements for levels of connectivity and access at individual user level. NPPF also requires a specific policy so not having one will be in contravention.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various options (A, B) **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** The options most directly influence **criterion 6. Services and Facilities** and may also have relevance t**o criteria 5. Inequalities,** as uneven access to high quality digital services may be an indicator of spatial and socioeconomic inequality. There may also be relevance to **criteria 1** and **8** as enhanced connectivity could potentially reduce the need for some journeys**.** The impacts are not

1545

expected to be more than minimal in the context of the other policies in the plan. Overall, the likely sustainability impacts between the options are not significant and not complex enough to warrant a detailed appraisal.

Digital Infrastructure for new development – draft Policy I1

The preferred approach for the Local Plan 2045 draft policy is to take forward **option A**. This approach ensures compliance with the NPPF, which is supportive of infrastructure provision and requires a specific policy. It also allows the local plan to make specific requirements and set standards at individual scheme level with regards the type of development, level of connectivity, access and type. It will be possible to ensure delivery of infrastructure at a consistent level that can be effectively monitored, and which is response to the local/regional needs of the city's employers and residents.

New Policy Options Set 014c added since Regulation 18 (draft Policy I2): Safeguarding land for infrastructure

1546

Table 5.2: Policy options set 014c: Safeguarding land for infrastructure

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Include a policy setting out land safeguarded for provision of infrastructure (specifically the Oxford Flood Alleviation Scheme and East West Rail)	Ensures clarity and flags upfront where provisions from other regimes will require involving other bodies. Helps to be clear about what land is needed for successful delivery of these specific infrastructure schemes. The inclusion of a policy would be likely to help to support a more transparent and joined-up approach between the different consenting regimes.	There may not be any need for specific policy as land is already safeguarded outside the Planning regime.
Option b	The land is already safeguarded so there is no need to bring a policy into the Local	Not including the policy or adding the safeguarded land to the policies map

Have no specific policy safeguarding land for infrastructure, rely on national planning policy and other regimes.	Plan to ensure that the land is protected from other development that would prevent the infrastructure being developed.	misses the opportunity to flag this issue at an early stage so that landowners can design their proposals accordingly.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? Various options (A, B) **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** The options most directly influence **criterion 6. Services and Facilities**. Overall, the likely sustainability impacts between the options are not significant and not complex enough to warrant a detailed appraisal. The safeguarding of land identified within either infrastructure scheme does not significantly affect the ability of locations identified for development that have been identified in the Oxford Local Plan 2045, to come forward.

1547

Digital Infrastructure for new development – draft Policy I1

The preferred approach for the Local Plan 2045 draft policy is to take forward **option A**. This approach ensures compliance with the NPPF, which is supportive of infrastructure provision and adds clarity to the Plan. It helps support a more transparent approach, and ensures the need to respond to the safeguarding requirements is flagged at an early stage.

1. Introduction

1.1 This report includes Stage 1 (Screening) and Stage 2 (Appropriate Assessment) of the Habitat Regulations Assessment (HRA) for the Oxford Local Plan 2045 Regulation 19 "Proposed Submission" Document (hereafter the "Reg.19 Plan").

1.2 This HRA report should be read in conjunction with the Oxford City Council Stage 1 HRA Screening Report (hereafter the Oxford HRA Screening Report) published to support the Local Plan Regulation 18 Consultation (27 June – 08 August 2025). The Oxford HRA Screening Report is included at Appendix 1 of this Report.

1.3 This HRA Report (hereafter the "Reg. 19 HRA Report") is presented in two sections:

- Section 1 – HRA Screening, includes:
    - An update of the HRA screening categorisation schedule to reflect the policies and site allocations contained within the Reg. 19 Plan;
    - A discussion about the site allocation screening process;
    - How Natural England's formal response to the Oxford Local Plan Regulation 18 consultation has been addressed; and
    - An update to the Air Pollution Impact Pathway analysis that considers the levels of growth proposed within the Oxford Local Plan Reg. 19 Document and reflects on whether there are any implications of the changes to the dates of the twenty-year plan period.
- Section 2 – Appropriate Assessment includes:
    - A summary of the policies and site allocations contained within the Reg. 19 Plan that were carried forward for further investigation as part of the HRA Stage 2 Appropriate Assessment;
    - A more detailed analysis of likely significant effects of certain identified policies and site allocations in view of the site's conservation objectives;
    - The identification of suitable mitigation measures to avoid or minimise the likelihood of any such effect arising.

Requirements of the Habitat Regulations

1.4 Local Authorities preparing development plan documents must consider whether the relevant plan, either alone or in combination with other plans or projects, is likely to have significant effects on "European sites" that are protected by the Habitat

Regulations. This generally means considering whether the plan would be likely to significantly affect the conservation objectives or the designated features of the site.

1.5 According to Government Guidance on How to carry out an HRA (February 2021), the HRA process can have up to three stages. The stages are:

1. Screening – to check if the proposal is likely to have a significant effect of the site. This will usually involve consideration of likely significant effects in view of the site's conservation objectives and its designated features, for example. If not, you do not need to go through the appropriate assessment or derogation stages.
2. Appropriate Assessment - to assess the likely significant effects of the proposal in more detail in view of the site's conservation objectives and identify ways to avoid or minimise any such effects.
3. Derogation - to consider if proposals that would have an adverse effect on a European site qualify for an exemption.

1.6 This guidance provides advice and recommendations about how to understand and comply with the Conservation of Habitats and Species Regulations 2017 SI No 1012 and the Conservation of Habitats and Species (Amendment) (EU Exit) Regulations 2019 SI No 579.

1.7 This part of the report covers Stage 2 (Appropriate Assessment). Oxford City Council has undertaken the HRA process 'in- house'.

Key HRA Stages explained

Screening for Likely Significant Effects

1.8 Screening is the process which identifies whether a plan or project is likely to result in significant effects to European sites, either alone or in combination with other plans or projects. Government guidance on HRA Screening sets out that when assessing likely significant effects of a proposal on European site, *"You must check if the proposal could have a significant effect on a European site that could affect its conservation objectives"*. There needs to be a causal connection or link between the plan or project and the qualifying features of the site which could result in significant effects - this may be direct or indirect.

1.9 Government Guidance on Appropriate Assessment sets out the implications of the the People over Wind Judgement for Habitat Regulations Assessments. This judgement

clarified that when making screening decisions for the purposes of deciding whether an appropriate assessment is required, competent authorities cannot take into account mitigation measures. Instead, mitigation measures can only be taken into account as part of an appropriate assessment itself.

1.10 All draft policies and potential sites being proposed for inclusion in the Oxford Local Plan 2045 were the subject of an HRA screening for likely significant effects on European sites.

Appropriate Assessment

1.11 The purpose of the Appropriate Assessment stage is to further analyse likely significant effects identified during the screening stage, as well as those effects which were uncertain or not well understood and taken forward for assessment in accordance with the precautionary principle. If required, an Appropriate Assessment evaluating the implications of the plan, either alone or in combination with other plans or projects, in view of the conservation objectives of affected European sites, should accompany the Regulation 19 stage of plan preparation.

1.12 If mitigation measures are needed to overcome any likely significant effects identified through the HRA process, the People Over Wind Judgement clarified that a competent authority may only take account of mitigation measures intended to avoid or reduce the harmful effects of a plan or project as part of an appropriate assessment (rather than at the initial screening stage).

Derogation

1.13 If the Appropriate Assessment stage identifies a significant adverse effect (or effects) on the integrity of a European site, that cannot be suitably mitigated, the plan or project cannot go ahead unless it can be shown to be in the overriding public interest. This is known as 'derogation'.

In-combination effects

1.14 Other plans and projects being prepared or implemented in the area may have the potential to cause adverse effects on European sites. These effects may act in-combination with the effects of the Local Plan, possibly leading to an insignificant effect becoming significant. It is therefore important to consider which other plans and projects could generate similar effects as development within Oxford city, at the same European sites, and which may act in-combination.

1.15 The following list sets out the plans and projects with the greatest potential for in-combination effects with the Oxford Local Plan 2045:

Oxford City Council:

- Oxford Local Plan 2036 (Adopted June 2020)

Cherwell District Council:

- Cherwell Local Plan (adopted November 1996) – saved policies
- Cherwell Local Plan 2011-2031 Part 1 (adopted July 2015)
- Cherwell Local Plan 2011-2031 Part 1 Partial Review – Oxford's Unmet Housing Need (adopted September 2020)
- Cherwell Local Plan 2042 (emerging)

West Oxfordshire District Council

- West Oxfordshire Local Plan 2011-2031 (adopted September 2018)
- Salt Cross Garden Village Area Action Plan (emerging)
- West Oxfordshire Local Plan 2043 (emerging)

South and Vale District Council

- South Oxfordshire Local Plan 2035 (adopted December 2020)
- Vale of White Horse Local Plan 2031 Part 1 (adopted December 2016)
- Vale of White Horse Local Plan 2036 Part 2 (adopted October 2019)
- South and Vale Joint Local Plan 2041 (emerging)

Oxfordshire County Council

- Oxfordshire Minerals and Waste Local Plan (adopted July 1996) - saved policies
- Oxfordshire Minerals and Waste Local Plan Part 1: Core Strategy (adopted September 2017)
- Oxfordshire Minerals and Waste Local Plan (emerging)
- Oxfordshire Local Transport and Connectivity Plan (LTCP) (adopted July 2022)
- Oxfordshire Traffic Filters (trial due to commence following the re-opening of the Botley Road Bridge in 2026)

Other Plans and Projects

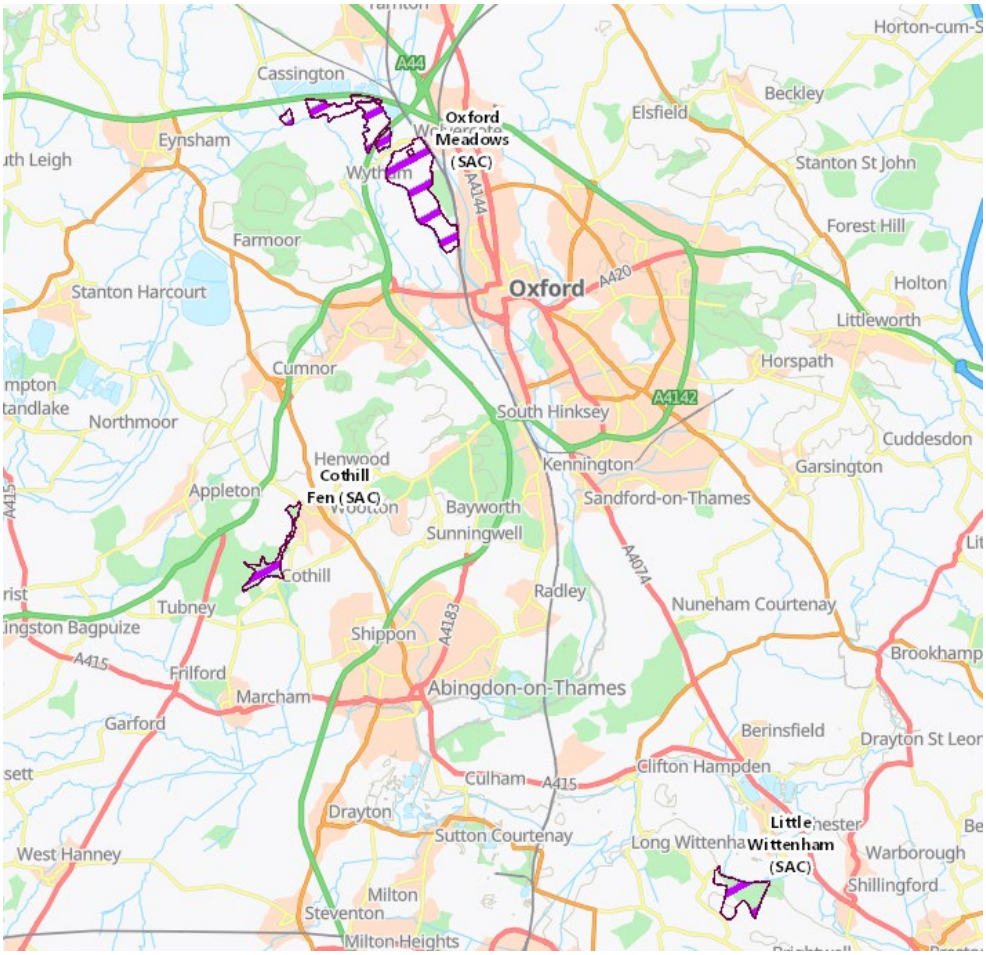
- Oxford Flood Alleviation Scheme (Environment Agency)
- East West Rail Project
- Thames Water Drought Plan, Thames Water (2022)

- Thames River Basin Management Plan, Environment Agency (2025)

European Sites

1.16 Oxford City Council prepared a Stage 1 HRA Screening Report in June 2025, which set out that there are the three European sites within 10km of the Oxford City Council administrative boundary. Figure 1.1 shows the locations of the three European sites within 10km of the Oxford City Council Boundary.

Figure 1.1 Locations of European sites within 10km of Oxford



(c) Crown Copyright and database rights 2024. Ordnance Survey AC0000805307

Source: Magic Maps

1.17 The three sites within 10km of the Oxford City Council Boundary are as follows:

- Oxford Meadows SAC (within and adjacent to Oxford city)
- Cothill Fen SAC (over 5km from city boundary)
- Little Wittenham SAC (over 8km from city boundary)

Qualifying Features

1.18 European sites are designated to conserver a wide variety of habitats of international importance as well as species populations of high conservation significance.

1.19 Each SAC contains protected species (excluding birds), habitats or both. These protected habitats and species are the “qualifying features” as to why each site has been designated. Table 1.1 sets out the qualifying features for each of the "European sites” within 10km of the city.

Table 1.1 European sites within 10km of Oxford City Council Boundary

Name of Site	**Description**	**Qualifying Features**
Oxford Meadows SAC	Together with North Meadow and Clattinger Farm, also in southern England, Oxford Meadows represents lowland hay meadows in the Thames Valley centre of distribution. The site includes vegetation communities that are perhaps unique in the world in reflecting the influence of longterm grazing and hay-cutting on lowland hay meadows. The site has benefited from the survival of traditional management, which has been undertaken for several centuries, and so exhibits good conservation of structure and function. Oxford Meadows is selected because Port Meadow is the larger of only two known sites in the UK for creeping marshwort Apium repens.	Qualifying Habitats: 6510 **Lowland Hay Meadows** (Alopecurus pratensis, Sanguisorba officinalis) Qualifying Species: 1614 **Creeping marshwort** Apium repens
Cothill Fen SAC	This lowland valley mire contains one of the largest surviving examples of alkaline fen vegetation in central England, a region where fen vegetation is rare. The M13 Schoenus nigricans – Juncus subnodulosus vegetation found here occurs under a wide range of hydrological conditions, with frequent bottle sedge Carex rostrata, grassof-Parnassus Parnassia palustris, common butterwort Pinguicula vulgaris and marsh helleborine Epipactis palustris. The alkaline fen vegetation forms transitions to other vegetation types that are similar to M24 Molinia caerulea – Cirsium dissectum fenmeadow and S25 Phragmites australis – Eupatorium cannabinum tall-herb fen and wet alder Alnus spp. wood.	Qualifying Habitats: 7230 **Alkaline Fens**

Little Wittenham SAC	One of the best-studied great crested newt sites in the UK, Little Wittenham comprises two main ponds set in a predominantly woodland context (broad-leaved and conifer woodland is present). There are also areas of grassland, with sheep grazing and arable bordering the woodland to the south and west. The River Thames is just to the north of the site, and a hill fort to the south. Large numbers of great crested newts Triturus cristatus have been recorded in the two main ponds, and research has revealed that they range several hundred metres into the woodland blocks.	Qualifying Species: 1166 **Great crested newt** Triturus cristatus

Source: Joint Nature Conservancy Council www.jncc.org.uk

1.20 Natural England's SSSI condition assessment shows that the majority of SSSI units that make up the three SACs within 10km of Oxford are in a favourable condition. Appendix 1 of the Oxford HRA Screening Report provides further details.

Conservation Objectives

1.21 The Habitat Regulations require the appropriate authority to maintain, or where appropriate, restore habitats and species populations of European importance to favourable conservation status. European site conservation objectives are referred to in the Habitat Regulations. They are used where there is a need to undertake an "appropriate assessment" under the relevant parts of the respective legislation. The conservation objectives are set for each qualifying feature (habitat or species) of each European site (SAC or SPA). Where the conservation objectives are met, the site can be said to demonstrate a high degree of integrity and makes a full contribution to meeting the legislative aims.

1.22 The Oxford HRA Screening Report (Appendix 1 of this document) provides more details about the conservation objectives for each of the SAC in Section 2.

2. Oxford Local Plan 2045 Regulation 19 Document

Context

2.1 Oxford is a small and compact city with a population of 165,200 (according to ONS mid-year population estimates for 2023, released in July 2024). Oxford's total area is only 46 sq km (17.6 sq miles). While some parts of the urban area are densely developed, more than half of the city is open space and more than a quarter lies in the Oxford Green Belt.

2.2 Oxford benefits from a wide range of historic city parks, a unique built heritage which is intrinsically linked to the surrounding hills, and important sites for nature conservation. The city's river corridors (River Thames and Cherwell) are sometimes referred to the as the city's "green lungs" as they make a valuable contribution to the Oxford's green and blue infrastructure by providing space for wildlife to thrive away close to the city's dense urban area. Figure 2.1 shows a map of the Oxford. The salmon pink colour area represents the urban area while the administrative boundary is shown in brown.

Figure 2.1 - Map of Oxford

Oxford Local Plan 2045

2.3 Oxford City Council has produced a Local Plan 2045 Regulation 19 Document. This "Proposed Submission" consultation document sets out the proposed strategy for development in the city until 2045. It includes site allocation policies and a suite of development management policies.

2.4 The Local Plan 2045 Regulation 19 Document:

- Sets a capacity-based housing target which aims to meet as much of the city's identified housing need (using the Government's Standard Method), as possible within the city, with the appropriate consideration of other policy aims.
- Makes provision for more than 9,200 homes under Policy H1: Housing Requirement.
- Seeks to meet identified employment land needs using existing employment sites and through supporting employment at highly accessible locations, namely the city and district centres.
- Enables the modernisation, intensification and regeneration of existing Key Employment Sites, while supporting their diversification (particularly those in accessible locations), by allowing an element of housing delivery subject to specific criteria being met.
- Allows poorly performing existing employment sites to be redeveloped for other uses including housing.

Amendment to the plan period

2.5 For a number of technical reasons, we have amended the plan period to 2025-2045, rather than 2022-2042. Paragraphs 4.8-4.11 consider the implications of this change in date for the HRA.

3. Stage 1 Screening

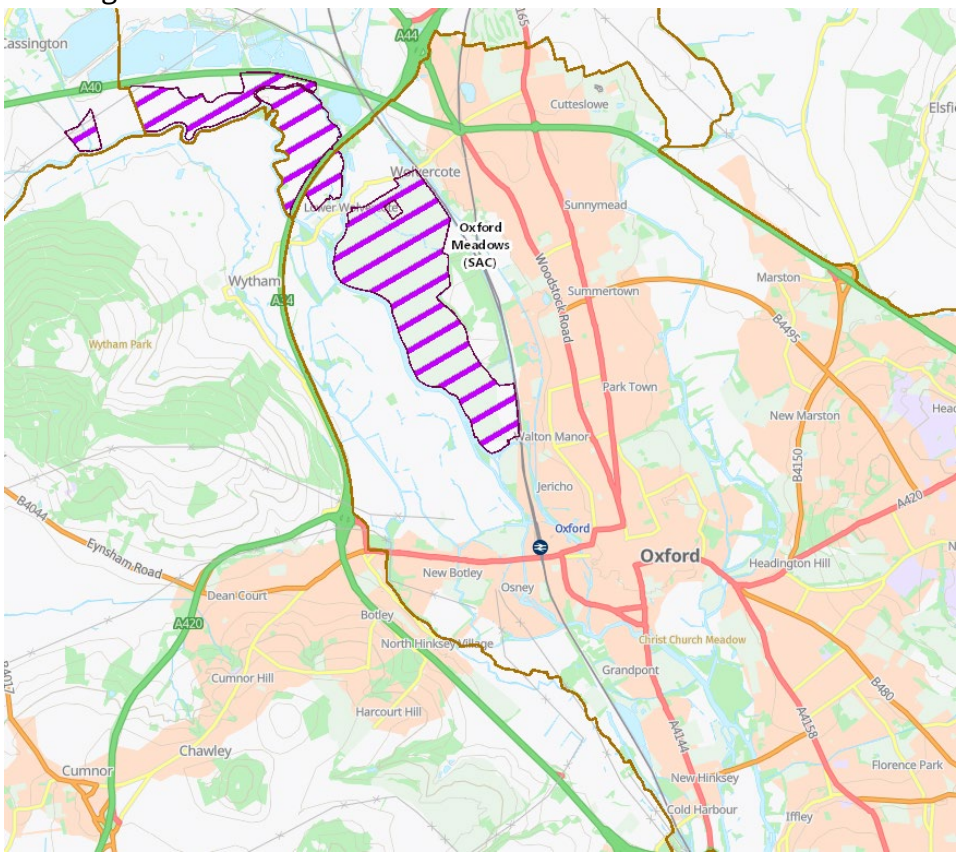
3.1 The Oxford HRA Screening Report published at Reg. 18 sets out that, of the three European sites within 10km of the Oxford's administrative boundary, Cothill Fen SAC and Little Wittenham SAC, were screened out from further assessment. The 10km distance is a widely used, precautionary buffer zone used in HRA screening . The 10km buffer has been widely accepted where European sites contain non-mobile qualifying features (such as the different plant communities found at the Oxford Meadows SAC).

3.2 The Oxford HRA Screening Report found at Appendix 1 of this HRA Report provides more information and details the reasoning and rationale for having done so. This HRA report therefore focuses on the Oxford Meadows SAC.

Oxford Meadows SAC

3.3 Table 1.1 in this report, sets out the reasons for which the Oxford Meadows has been designated an SAC while Figure 3.1 shows a map of the Oxford Meadows SAC.

Figure 3.1 showing the location of the Oxford Meadows SAC



© Crown Copyright and database right 2024. Ordnance Survey AC0000805307 – Source: Magic Maps

3.4 As set out in Chapter 4 of the Oxford HRA Screening Report, in HRA terms, 'impact pathways' are the potential routes or mechanisms by which a plan or project could affect a European site.

3.5 Impact pathways provide a structed approach for assessing whether a plan or project is likely to give rise to significant effects on a European site. If potential significant effects are identified (or cannot be ruled out through the HRA Screening process), then an Appropriate Assessment will be required.

3.6 Each designated site has its own unique set of impact pathways which need to be considered. At a meeting with Natural England in June 2022, it was agreed that the following impact pathways should be considered as part of the HRA Screening to assess the likely significant effects of the Oxford Local Plan on the Oxford Meadows SAC:

- Atmospheric/ Air Pollution
- Recreational pressure/ disturbance
- Water quality and quantity (Balanced Hydrological Regime)

3.7 These are considered in turn below. It is worth noting a discussion of these issues is also considered at Paragraphs 4.18-4.46 of the Oxford HRA Screening Report.

Atmospheric/ Air Pollution

3.8 Atmospheric pollution is a widespread issue. Background air quality is heavily influenced by large point-source emitters including from transboundary sources. Local pollutant sources can also affect designated sites (particularly in relation to protected habitats within SACs), often from road traffic emissions.

3.9 The Oxford Local Plan 2045 is unable to influence some of the underlying causes of background atmospheric pollution (e.g., large point sources). However, the location, amount, type and scale of development proposed through the policies in the Oxford Local Plan 2045 has the potential to affect locally emitted pollutants reaching the Oxford Meadows SAC.

3.10 According to the Air Pollution Information Systems website (APIS), and the Institute of Air Quality Management (IAQM) guidance (2020), the main pollutants affecting vegetation are as follows:

- Nitrogen oxides (NO_x) produced through the combustion process (approximately half of UK emissions are from road traffic; and
- Ammonia (NH_3), the main source of which is usually from agriculture (e.g., from manures and fertilisers).

3.11 These gases can result in direct effects to vegetation through exposure, and indirect effects through deposition to soil and freshwater (dry deposition) or with precipitation (wet deposition).

3.12 Direct exposure of vegetation to NOx and NH3 is harmful, especially in areas close to sources, such as roadside verges. Some vegetation (including lichens, mosses, etc.) is particularly vulnerable to these sorts of toxic effects, which can result in changes to plant growth, difficulties in the plant's ability to assimilate CO2, and other bio-chemical effects.

3.13 Indirect effects through deposition include:

- **Acid deposition**: acid deposition is most likely to affect vegetation indirectly through changes to soil properties. NOx and ammonium (from NH3) react with rain or cloud water to form nitric (or sulphuric) acid. Increases in soil acidity can increase the mobility of certain toxic metals which can result in root damage, stunted growth and reduced microbial activity. These effects can lead to changes in species composition.
- **Eutrophication by nitrogen deposition**: dry deposition of NOx is greatest within large conurbations and close to major roads. Whilst nitrogen is essential for plant growth, excessive amounts can become toxic, as instead of acting as a nutrient, nitrogen becomes a pollutant. Many semi-natural plants are unable to assimilate nitrogen when there is too much available. As a result, these (semi-natural) plants can be outcompeted by plants that can tolerate elevated levels of nitrogen (such as many grass species). This can lead to long-term changes in vegetation and reduced diversity.

3.14 As approximately half of UK NOx emissions are associated with road traffic, nitrogen emissions from traffic generated by residential and commercial development form the focus of this part of the assessment.

Air Pollution at the Oxford Meadows SAC

3.15 As the Oxford Meadows is bisected by the A34 and the A40 runs adjacent to parts of the site, there is the potential for air quality to be impacted by changes in traffic flows associated with the development proposed in the Reg. 19 Plan.

3.16 Chapter 4 of this report includes an update to the air pollution impact pathway HRA Screening (as originally presented in Chapter 5 of the Oxford HRA Screening Report (found at Appendix 1 of this report).

Recreational Pressure/ Disturbance

3.17 Population growth associated with residential development brings the potential for additional visitor pressure on European sites. There are a number of impact pathways which bring the potential for significant effects including:

- Species disturbance (modifying behaviour, increasing predation, reducing feeding and breeding success);
- Habitat trampling/ wear (soil compaction, erosion, direct damage to habitats, expansion of path networks, churning up sediment in water bodies);
- Fire (resulting in direct mortality, habitat removal, long-term changes to vegetation structure);
- Contamination (including litter, nutrient enrichment through dog fouling, pollution from dogs entering watercourses, spread of alien species and pathogens, greywater from caravans, etc.)
- Harvesting (e.g., collection of wood, fungi);
- Grazing issues (impacts on grazing animals, e.g., from feeding worrying by dogs, open gates, road traffic accidents; and
- Visitor expectation including pressure for facilities and public perceptions of management resulting in difficulties achieving necessary habitat and species protection.

Recreational pressure at the Oxford Meadows SAC

3.18 In relation to the Oxford Meadows SAC, the qualifying species likely to be impacted by increased recreational pressure – A. repens (creeping marshwort) - is not particularly sensitive to trampling. It is, however, sensitive to increased nutrient enrichment associated with dog-fouling.

3.19 Chapter 6 of this report presents the Stage 2 Appropriate Assessment for this impact pathway which was carried on the policies and site allocations for which likely significant effects could not be ruled at the Screening Stage. Chapter 6 also includes the findings of the visitor survey undertaken in May 2025 and considers whether

bespoke mitigation measures are required for each of the relevant site allocations and policies.

Water Quantity

3.20 Water Quantity plays a vital role in the health of biodiversity and river catchments. Water levels (depth and volumetric flow) and velocity in the river, and water table levels in the floodplain. These properties can influence rates of siltation and erosion, dissolved oxygen, and pollutant and nutrient concentrations. Low flow rates affect food availability for riparian fauna, may limit migration and dispersal, and can alter the structure, composition and condition of vegetation communities. New homes can require the development of new infrastructure, including the provision of fresh water supply. Increases in water demand can impact the locations where water is abstracted.

Water Quantity at the Oxford Meadows SAC

3.21 Direct rainfall, surface water and groundwater flowing in from outside the area are the three main sources of water that help to maintain a "balanced hydrological regime" at the Oxford Meadows SAC. The Oxford HRA Screening Report concluded that the amount of surface water reaching the Oxford Meadows SAC is unlikely to be affected by the policies and site allocations in the plan. Direct rainfall is important to helping maintain a balanced hydrological regime at the SAC, but is generally considered to be outside the influence of the planning system.

3.22 However, the Oxford HRA Screening Report was unable to rule out likely significant effects of certain site allocations in relation to their potential to influence groundwater recharge and the flow of groundwater to the Oxford Meadows SAC. Chapter 7 of this report presents findings of the Stage 2 Appropriate Assessment, and considers whether mitigation measures are required.

Water Quality

3.23 Water quality is important in relation to the proper functioning of many habitats. The quality of water can be affected by a number of key factors including nutrients, contaminants and dissolved oxygen availability. The two key nutrients of interest in the water environment are phosphates and nitrates:

- Phosphates can be organic and inorganic. Phosphates contribute to the eutrophication of receiving waters and are generally considered to be the "problem" nutrient regarding freshwater. These problems arise as an excess of

phosphate can result in the accelerated growth of certain types of algae. This can lead to direct competition with vascular plants for light and nutrients. This can result in a loss of nutrient sensitive species, and a reduction in the species composition, extent and condition of riverine communities.

- Ammonia is a form of nitrogen which aquatic plants can absorb. While nitrate is the stable "end-product" of nitrification (i.e., the conversion of ammonia into nitrite and ultimately nitrate). Both nitrate and phosphate can contribute to the eutrophication of receiving waters. Nitrates are generally more of a problem in saline coastal regions, where phosphates are considered to have a lesser role.

3.24 New development can alter the quality of the water environment through direct contamination at locations that are hydrologically connected to designated sites. Changes in demand for wastewater treatment can also result in changes to the quality of the water environment.

Water Quality at the Oxford Meadows SAC

3.25 As set out in paragraphs 3.21above, the Oxford HRA Screening Report recognised that direct rainfall, surface water and groundwater flowing in from outside the area are the three main sources of water that help to maintain a balanced hydrological regime at the Oxford Meadows.

3.26 However, the Oxford HRA Screening Report was unable to rule out likely significant effects of certain site allocations in relation to their potential to influence water quality at to the Oxford Meadows SAC. Chapter 8 of this report presents findings of the Stage 2 Appropriate Assessment, and considers whether mitigation measures are required.

4. Oxford City HRA Screening Update

Introduction

4.1 This chapter of the report should be read in conjunction with the Oxford HRA Screening Report, published in June 2025. The Oxford HRA Screening Report is also presented in Appendix 1 of this Report. It provides an update on following topics:

- HRA screening categorisation schedule update to reflect policies and site allocations contained within the Oxford Local Plan Regulation 19 "Proposed Submission" Document
- Natural England's formal response to the Oxford Local Plan Regulation 18 consultation.
- Air Pollution Impact Pathway update that looks at changes to levels of growth and considers whether there are any implications of using a different twenty year plan period.

HRA Screening Categorisation Update

4.2 The Oxford HRA Screening Report (Appendix 3) provides an assessment of the draft policies and site allocations as set out in the Regulation 18 consultation document, based on the screening categorisation schedule recommended by Natural England. It is important that the HRA Screening update considers the policies and site allocations proposed in the Reg. 19 Plan against the screening categorisation schedule to capture any changes made to policies in the plan between the statutory consultation stages.

4.3 The screening categorisation schedule allows policies within no likely significant effects on European sites to be screened out from further assessment so that the assessment process can focus on policy areas and site allocations where there are potential effects.

4.4 The following schedule has been provided by Natural England to screen policy areas:

A – Policies or proposals cannot have any negative impact
B – Effects will be addressed 'down the line' including project level HRA
C – Could have an effect, but would not be likely to have a significant (negative) effect, (alone or in-combination with other plans or projects)
D – Likely to have an effect alone and would require an Appropriate Assessment
E – Likely to have an effect in combination with other plans or projects and which require Appropriate Assessment of those combinations

F – Likely to have a significant effect, alone or in combination with other plans and projects but which would not adversely affect the integrity of a European site

G – Likely to have a significant effect, alone or in combination with other plans or projects and for which it cannot be ascertained that they would not adversely affect the integrity of a European site

4.5 The results of the screening categorisaiton assessment (Reg. 19) update are are presented in Appendix 2 of this HRA Report.

4.6 Finally, it is worth noting that all the policies in the plan were screened against the impact pathways as agreed with Natural England (see paragraph 3.6 above). A summary of the policies and site allocations for which likely significant effects were not able to be screened out following the are presented in Chapter 5 of this Report. As part of the policy screening assessment process, consideration was given to whether or not the policies in the plan would result in any likely direct physical effects on the Oxford Meadows SAC (e.g., land-take). None of the policies or site allocations proposed in the plan resulted in direct physical impacts at the Oxford Meadows SAC. As such, there are unlikely to be likely significant effects from direct physical impacts resulting from the policies and site alloctions proposed in the Reg. 19 Plan on the the Oxford Meadows SAC.

Natural England's formal Reg. 18 Response to Stage 1 Screening

4.7 Natural England responded to the Local Plan Regulation 18 consultation on several issues, including the Habitat Regulations Assessment (HRA) Stage 1 Screening Report (June 2025). Natural England stated:

> *We have reviewed the Habitats Regulations Assessment Screening report June 2025 submitted with the consultation and look forward to receiving the Appropriate Assessment in due course.*
>
> *We cannot currently agree with the conclusion of the Air Quality Screening which concludes that the Oxford Local Plan 2042 is unlikely to have a significant effect on air quality at the Oxford Meadows Special Area of Conservation either alone or in-combination with other relevant plans and projects.*
>
> *We recognise that the Oxford City Local Plan Screening report models a small impact alone. However when considered in combination with other Local Plans and planning applications in Oxfordshire out to consultation, Natural England consider that the cumulative impact from these live plans and applications may highlight a more significant issue and therefore we will require further information at the Appropriate Assessment stage regarding the approach to the 'in-combination' assessment of air quality impacts.*

4.8 Following receipt of this response, Oxford City Council met with Natural England in September 2025 to discuss the issues outlined above and to try to find a way forward that would be satisfactory to both parties.

4.9 At the meeting, which took place on 16 September 2025, Natural England agreed the following, which were subsequently communicated via email on 24 September 2025:

- *We agree to the use of the 2023 traffic modelling data, undertaken as part of the draft 2040 Oxford Local Plan submission as the overall housing numbers are lower for the 2042 Plan in comparison to the previous plan, so this is precautionary.*
- *We agree with the Appropriate Assessment screening conclusion in relation to the Oxford City alone figures which show that they are below the AADT screening threshold.*

4.10 Natural England also provided the following advice in their email dated 24 September 2025 in relation to the 'in-combination' assessment:

- *We advise that further work be undertaken in relation to the in-combination assessment, with inclusion of the latest figures modelled by South and Vale. We suggest Oxford City contact the South and Vale directly to discuss.*
- *We advise that Oxford City use the figures submitted by Cherwell at Regulation 19 stage as part of their 2042 submission when undertaking the in-combination assessment.*
- *There may be other plans and projects to consider in-combination which have arisen in between submissions… so you may need to consider the findings… in-combination*

4.11 It was also agreed at the meeting that the City Council and Natural England would continue to work together to progress a Statement of Common Ground.

4.12 In response to the advice outlined above, the City Council contacted South and Vale to request the latest traffic modelling figures expressed as AADT. South & Vale replied on 19 September 2025 setting out that the latest figures from their modelling were not in the public domain. In a subsequent email on 24 September 2025, South and Vale confirmed that the figures presented in the "Explanatory Note" (see Appendix 6 of the Oxford HRA Screening Report (presented in Appendix 1 of this Report)) are still "current".

4.13 Following a series of letters between the Planning Inspectorate and South and Vale Councils, published on the South and Vale Joint Local Plan Examination webpages, the

most recent dated 07January 2026, the South and Vale Joint Local Plan 2041 examination remains ongoing.

4.14 At the time of writing, the most up-to-date, current and publicly available traffic modelling data for South & Vale remains that, which was presented in the 'Explanatory Note', and which was presented in the Oxford HRA Screening Report.

4.15 Natural England also advised Oxford City to use the "figures submitted by Cherwell at Regulation 19 Stage as part of their 2042 submission". Cherwell's published air quality assessment is not compatible with the city's. This is because the methodology presented in their published HRA (November 2024) does not present its findings as traffic modelling outputs (i.e., AADT). Instead it relies on air quality modelling.

4.16 The most recent compatible publicly available assessment of traffic modelling data from Cherwell was therefore the data contained within the "Explanatory Note" (see Appendix 6 of the Oxford HRA Screening Report (presented in Appendix 1 of this Report)) .

4.17 Natural England's final piece of advice was involved ensuring that there were no additional plans or projects (i.e., planning applications) that had been submitted which potentially may require a project level HRA. At the time of writing, there are no additional plans or projects to consider.

Air Pollution Impact Pathway Update

4.18 This section of the report should be read in conjunction with Chapter 5 of the Oxford HRA Screening Report, published in June 2025. The Oxford HRA Screening Report is also presented in Appendix 1 of this Report. This update is meant to supplement that report, and it seeks to consider the implications of any relevant changes that have taken place between the publication of the Regulation 18 Plan (June 2025), and the Regulation 19 "Proposed Submission" Plan for Oxford.

4.19 The Oxford HRA Screening Report was produced to support the Regulation 18 stage consultation process. As such, the housing numbers and jobs/ employment floorspace figures contained within it were subject to change. This section looks at changes to the levels of growth (i.e., changes to the number of homes and the amount of commercial floorspace (jobs). It also considers whether there are any implications of using a different twenty year plan period.

4.20 Table 4.1 (below) shows the total number of dwellings and commercial floorspace (from which the residential and commercial land use assumptions in the traffic modelling were derived) and compares these figures with the levels of growth proposed through the Oxford Local Plan Reg. 18 Document. This table replicates Table 5.7 of the Oxford HRA Screening Report.

4.21 Table 3.1 shows that a higher number of dwellings and more commercial floorspace were assessed using the agreed the traffic modelling, than were proposed in the Regulation 18 Document. As such, the City Council considered that the traffic modelling took a precautionary approach as it assessed more homes and commercial floorspace than was likely to come forward in the Local Plan Regulation 18 Document.

Table 4.1 – Total dwellings and floorspace (Reg 18 Plan)

	Oxford Local Plan Regulation 18 Document	**Traffic Modelling (DM+DS Scenario)**
Dwellings	9,851	11,491
Commercial Floorspace	500,000sqm	1,172,372sqm

Source: 2023 Atkins Report and Oxford Local Plan Reg. 18 Document

4.22 The next step is therefore to compare the housing numbers or commercial floorspace contained within the Regulation 19 Document with those assessed in the traffic modelling. This is shown in Table 4.2

Table 4.2 – Total Homes and commercial floorspace (Reg. 19 Plan)

	Oxford Local Plan Reg. 19 Document	**Traffic Modelling (DM+DS Scenario)**
Dwellings	9,267	11,491
Commercial Floorspace	550,000sqm	1,172,372sqm

Source: 2023 Atkins Report, Oxford Local Plan Reg. 19 Document and evidence base

4.23 As can be seen in Table 4.2, the number of homes and the amount of floorspace proposed in the Oxford Local Plan Reg 19 document have both changed slightly from the Reg. 18 Plan, however they are both comfortably within the amounts tested through the traffic modelling.

4.24 The City Council therefore considers that the traffic modelling used within the Oxford HRA Screening Report (June 2025) maintains a robust and precautionary

approach in its assessment of the housing numbers and commercial floorspace proposed through the Regulation 19 Plan and that it is still appropriate to rely on it.

Amendment to the plan period

4.25 For a number of technical reasons, we have amended the plan period to 2025-2045, rather than 2022-2042. This next section considers whether there are any implications of this change on the traffic modelling evidence, which underpins the HRA.

4.26 The City Council does not consider that there are any implications for continuing to rely on the existing traffic modelling. This is because, as set out above, the number of homes and floorspace proposed within the traffic modelling is greater than the that proposed in the Plan.

4.27 The traffic modelling also takes a precautionary approach to technical aspects of its design. For instance (as discussed in paragraphs 5.25-26 of the Oxford HRA Screening Report) the traffic modelling uses a base year of 2018, which shows a higher concentration of NOx levels at the Oxford Meadows SAC than the most recent Air Pollution Information Systems (APIS) dataset (modelled data from 2021).

4.28 Given that APIS data is presented as a 3-year average, as such the modelled data from 2021 (i.e., between 2020-2022) could have been impacted by movement restrictions resulting from national lockdowns imposed during the Covid-19 pandemic. Using 2018 as the base year for the transport model means that the base year traffic flows used in the transport model were not affected by lower emissions associated with the pandemic. As such, the continued reliance on the current traffic modelling remains suitably precautionary.

4.29 It is worth noting that the Oxford HRA Screening Report (paragraphs 5.22-5.24) provides an overview of the DEFRA Background Mapping Data for Local Authorities. The Oxford HRA Screening Report recognises the advice provided in paragraph 4.30 of Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitat Regulations (June 2018) (hereafter "NE Air Quality Advice Note 2018) which sets out that background pollutant levels should should be considered later in the process should an appropriate assessment be needed.

4.30 The DEFRA Background Mapping Data provides estimations of background concentrations of specific pollutants (including NOx) This mapping data, like the APIS mapping data, is based on 1km grid squares. The two datasets are broadly aligned for the 2018 and 2021 years and both datasets show NOx levels rates falling by a similar amount over the same time-perid.

4.31 Interestingly, the DEFRA Background Mapping Data provides predictions about future changes in pollutant levels over a longer time-horizon than the APIS dataset. The DEFRA Background Mapping Data predicts that the long-term trend for background NOx levesl at the Oxford Meadows SAC show continued reductions that fall to below 10µg/m^3 by 2040.

Conclusions of the Screening Update

4.32 As the level of growth proposed in the Oxford Local Plan 2045 is comfortably within the level of growth assessed within the traffic modelling, and the base year information contained within it remains suitably precautionary, the conclusions drawn in relation to the 'alone' assessment of air quality impacts (as set out in Chapter 6 of the Oxford HRA Screening Report) remain valid.

4.33 For completeness, this next section sets out the modelled outputs for the Local Plan 2045. Please refer to Chapter 6 of the Oxford HRA Screening Report for further details).

'Alone' Assessment

4.34 Tables 4.3 and 4.4 below show the changes in AADT on the 'affected roads' (i.e., the A34 and A40) resulting from the Oxford Local Plan 2045 'alone'.

4.35 As can be seen from the Tables 4.3 and 4.4 (below) which show the results of the traffic modelling presented within the 2023 Atkins Report, the Oxford Local Plan 2045 'alone' is below the screening thresholds for general traffic flow (i.e., cars and light goods vehicles (LGVs)) and below the screening threshold for Heavy Duty Vehicle (HDVs) on both the A34 and the A40. As such, the City Council considers that the effects of the Oxford Local Plan 2045 'alone' can be screened out from further assessment.

Table 4.3 Change in AADT on the A34 resulting from the Oxford Local Plan 2045 'alone'

	AADT (DS-DM) Cars/ LGVs	AADT (DS-DM) HDVs
A34 (northbound)	-48	-7
A34 (southbound)	+322	-42
Total (Two-way change)	**+274**	**-49**

Source: 2023 Atkins Report

Table 4.4 Change in AADT on the A40 resulting from the Oxford Local Plan 2045 'alone'

	AADT (DS-DM) Cars/ LGVs	AADT (DS-DM) HDVs
A40 (westbound)	-25	+2
A34 (eastbound)	+39	-15
Total (Two-way change)	+14	-13

Source: 2023 Atkins Report

'In combination' Assessment

4.36 In order to calculate the likely effects of Oxford City's Local Plan 2045, 'in combination' with the other emerging local plans, the 'alone' traffic modelling results (as shown above) have been considered cumulatively with the two 'alone' assessments for South and Vale and for Cherwell's Local Plans (this is discussed in more detail in Chapter 6 of the Oxford HRA Screening Report).

4.37 Tables 4.5 and 4.6 show the cumulative two-way change in AADT flows on the A34 and A40 respectively for Oxford City's Local Plan 2045 'in combination' with the South and Vale Local Plan 2041 and the Cherwell Local Plan 2042.

Table 4.5 Two-way change (AADT) on A34 resulting from the Oxford Local Plan 2045 'in combination' with the South and Vale Local Plan 2041 and the Cherwell Local Plan 2042

	AADT (DS-DM) Cars/ LGVs	**AADT (DS-DM) HDVs**
Oxford Local Plan 2045	+274	-22
South and Vale Local Plan 2041	-73	-22
Cherwell Local Plan 2042	-330	-165
Total	**-129**	**-235**

Source: Atkins 2023 Report and Oxford HRA Screening Report

Table 4.6 Two-way change (AADT) on A40 resulting from the Oxford Local Plan 2045 'in combination' with the South and Vale Local Plan 2041 and the Cherwell Local Plan 2042

	AADT (DS-DM) Cars/ LGVs	**AADT (DS-DM) HDVs**
Oxford Local Plan 2045	+14	-8
South and Vale Joint Local Plan 2041	-22	-13
Cherwell Local Plan 2042	-448	+26
Total	**-456**	**+5**

Source: Atkins 2023 Report and Oxford HRA Screening Report

4.38 As can be seen from these tables, the total change in AADT resulting from the Oxford Local Plan 2045 'in-combination' with the South and Vale Local Plan 2041 and the Cherwell Local Plan 2042 results in a change below the identified screening threshold (i.e., less than 1,000AADT for cars/ LGVs and less than 200AADT for HDVs).

Conclusions of the Air Quality Screening Update

4.39 Given the changes in AADT resulting from the Oxford Local Plan 2045 (both 'alone' and 'in-combination' with other plans and projects falls below the screening thresholds for cars/ LDVs and HDVs, the City Council therefore considers that the Oxford Local Plan 2045 is unlikely to have a significant effect on air quality at the Oxford Meadows SAC, either 'alone' or 'in combination' with other relevant plans and projects.

5. Stage 2: Appropriate Assessment

Introduction

5.1 . This next part of the HRA considers those policies and site allocations contained in the Oxford Local Plan 2045, for which it was not possible to rule out likely significant effects on the following impact pathways:

- Recreational Impacts;
- Water Quantity; and
- Water Quality.

5.2 An 'alone' assessment (i.e., looking at the likely significant effects of certain policies and site allocations proposed in the Oxford Local Plan 2045), and an 'in-combination' assessment (i.e., that takes into account a range of other plans and projects) was carried out in relation to each impact pathway.

5.3 The following chapters make up the Stage 2 Appropriate Assessment for each respective impact pathway.

- Chapter 6 considers Recreational Impacts
- Chapter 7 considers Water Quantity
- Chapter 8 considers Water Quality

6. Recreational Impacts

Introduction

6.1 Creeping marshwort (Apium repens) is a low-growing plant which is only found in two naturally occurring locations in the UK – Oxford Meadows SAC being one - and which relies on trampling by cattle to enlarge its territory. Natural England has previously confirmed that A. Repens is not particularly sensitive to trampling but is sensitive to dog-fouling. The increased population that would be housed in Oxford resulting from the Local Plan 2045 could own dogs, and those dogs could potentially have a significant effect on the integrity of the Oxford Meadows SAC. As such, significant effects could potentially arise relating to the increase in Oxford's population, as projected by Policy H1, and some proposed site allocations. Significant effects could also arise due to the potential increase in residential dwellings on the city's employment sites, as set out in Policy E1.

6.2 The following site allocations and Key Employment Sites (Policy E1) are therefore considered as part of the Stage 2 Appropriate Assessment for Recreational Impact.

<u>Site Allocations:</u>

- *Policy SPN1 – Diamond Place and Ewert House*
- *Policy SPN2 – Elsfield Hall, Elsfield Way*
- *Policy SPN3 – Oxford North Remaining Phases*
- *Policy SNP4 – OUP Sports Ground, Jordan Hill*
- *Policy SPN5 – Pear Tree Farm*
- *Policy SPCW1 – Banbury Road University Sites – Parcel B*
- *Policy SPCW2 – Botley Road sites around Cripley Road including River Hotel and Westgate Hotel*
- *Policy SPCW3 – Canalside Land, Jericho*
- *Policy SPCW5 – Jowett Walk (South)*
- *Policy SPCW8 – Osney Mead*
- *Policy SPCW12 – West Wellington Square*

<u>Key Employment Sites (Policy E1):</u>

- *Oxford North*
- *Radcliffe Observatory Quarter (ROQ site)*
- *Oxford University Press*
- *Oxford University Science Area and Keble Road Triangle*
- *Osney Mead*
- *Jordan Hill Business Park*
- *Botley Road Retail Park*

6.3 Findings from public consultation undertaken in 2005 by Scott Wilson as part of their 'Oxford City Green Space Study' revealed that residents of Oxford were generally willing to walk approximately 1,900m to large green spaces. More recent evidence to support the Local Plan 2045 (Green Infrastructure Study, Ethos) considered that the "access standard" for "Destination Parks" such as Port Meadow (which forms part of the Oxford Meadows SAC was 960m (straight-line distance). While the age (circa 20yrs old) of the data underpinning this recreational impacts assessment is acknowledged, and the availability of more up-to-date information, the 1,900m distance screening threshold, was applied at the HRA Screening Stage, and as such, it is used on a precautionary basis for the remainder of this HRA. However, given the age of the underlying data, the City Council will look to update this threshold for the next round of plan-making.

6.4 A 1,900m straight-line distance was therefore applied to the site allocatons proposed in the Reg. 19 Plan on a precautionary basis as the screening threshold for recreational impacts. (See Table A2.2 at Appendix 2 of this HRA Report)

Screening for Recreational Impacts

6.5 All site allocations that exceeded the 1,900m screening threshold were screened out from further assessment.

6.6 A number of sites that exist within the 1900m threshold were also screened out from further assessment. These are the site allocations are located within the West End of the city centre. These sites often propose a mix of uses that include residential development including student accommodation, given their location within the city centre.

6.7 Previous HRA work undertaken by the City Council concluded that sites within the West End benefit from a variety of alternative locations that are more accessible to dog-walkers than the Oxford Meadows SAC. Alternative accessible greenspaces located within and surrounding the West End include the following: Oxpens Meadow, Christchurch Meadow, University Parks, Oatlands Road Recreation Ground, Botley Park, Grandpont Nature Park, Grandpont Recreation Ground and Hinksey Park.

6.8 The following site allocations were therefore "screened out" by virtue of their location with Oxford's West End:

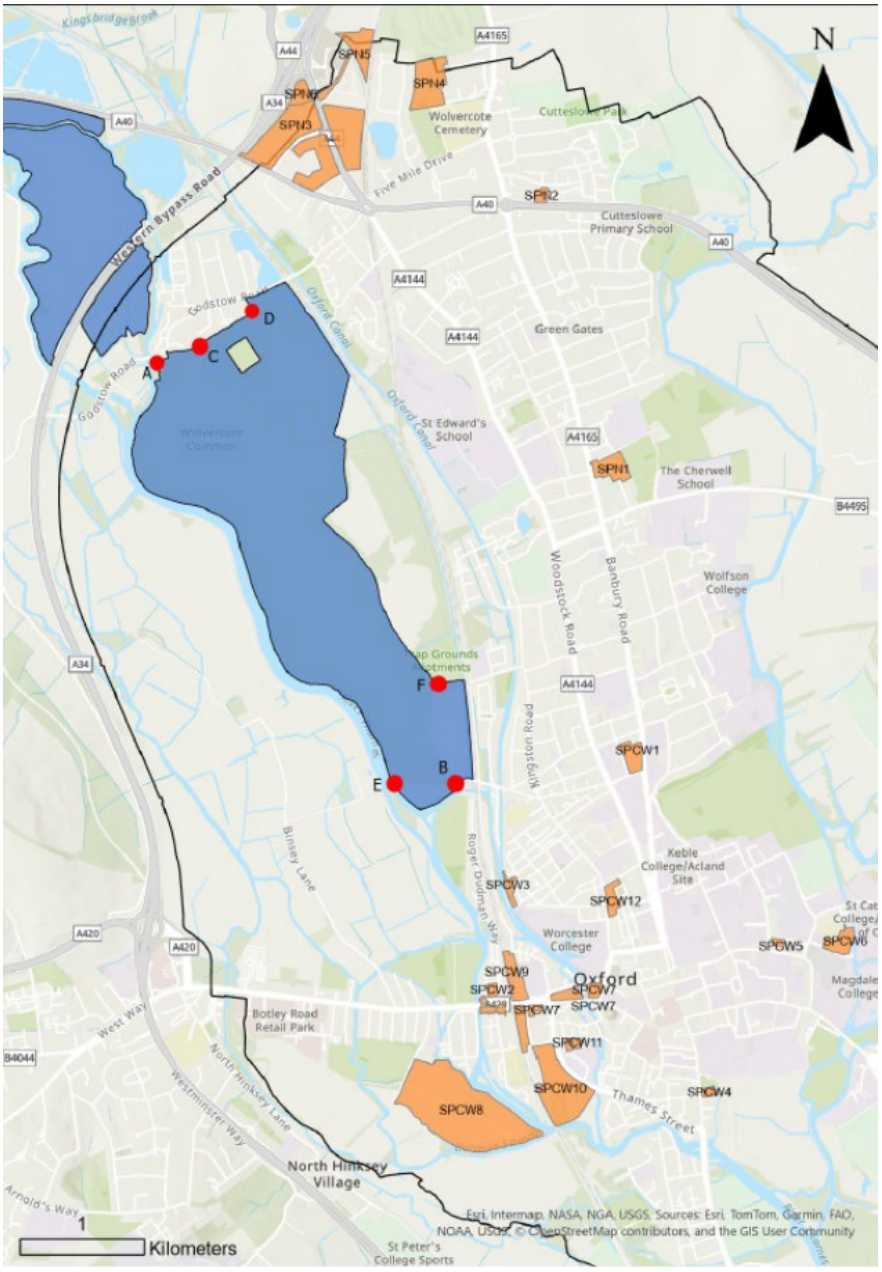
- Policy SPCW7 – Nuffield Sites

- Policy SPCW9 – Oxford Railway Station and Becket St Car Park
- Policy SPCW10 – Oxpens
- Policy SPCW11 – St Thomas School and Osney Warehouse

'Alone' Assessment

6.9 Figure 6.1 shows the locations of site allocations proposed in the Reg. 19 Plan within 1,900m of the Oxford Meadows SAC.

Figure 6.1 – Map showing site allocations within 1,900m from the Oxford Meadows SAC



6.10 Table 6.1 lists the site allocations where residential development could take place, located within 1,900m of the Oxford Meadows SAC.

Table 6.1 Residential site allocations proposed within 1,900m of Oxford Meadows SAC

Site Name	Distance from SAC (m)	No. of Dwellings	Type of development proposed
North Infrastructure Area			
Policy SPN1 Diamond Place and Ewert House	1,280	135	Mixed use inc. Residential or Student Acc.
Policy SPN2 Elsfield Hall, Elsfield Way	1,490	20	Residential
Policy SPN3, Oxford North Remaining Phases*	715	161	Mixed use inc. Residential
Policy SPN4 OUP Sports Ground, Jordan Hill	1,060	90	Residential
Policy SPN5 Pear Tree Farm	1,285	111	Residential
Central and West Infrastructure Area			
Policy SPCW1 Banbury Road University Sites	800	54	Residential or Student acc.
Policy SPCW2 Botley Road sites around Cripley Road including River Hotel and Westgate Hotel	1,070	20	Residential
Policy SPCW3 Canalside Land, Jericho	500	18**	Residential
Policy SPCW5 Jowett Walk (South)	1,800	14	Residential or Student Acc.
Policy SPCW8 Osney Mead	1,360	247***	Residential (including employer linked affordable housing) or Student acc.
Policy SPCW12 West Wellington Square	900	13	Residential (including employer linked affordable housing) or Student acc.
TOTAL Residential		**883**	

** Previous HRA mitigation measures (agreed with Natural England as part of the HRA for the Northern Gateway AAP) are included in Policy SPN3.*

*** Precautionary approach to site capacity - figure taken from approved planning application*

**** subject to further flood risk work*

6.11 It is worth noting that several sites considered as part of the Oxford HRA Screening Report were not taken forward as site allocations as part of the Reg. 19 Plan. These sites are set out below:

- 579 ROQ Site (Radcliffe Observatory Quarter)
- 657 Clarendon Centre

6.12 As recommended by Natural England, a visitor survey to inform the Reg. 19 HRA Report was carried out on six days in May 2025, resulting in 486 interviews. The aim of the survey was to understand how the Oxford Meadows SAC was used by residents of Oxford and by visitors from outside of the city. Appendix 3 shows the results of the visitor survey in full, and they are summarised at Table 6.2. The survey replicates the visitor surveys carried out in 2011 and 2017, which resulted in 332 and 575 interviews respectively.

Table 6.2 – Summary of visitor survey

Total number of visitors recorded during the survey	908
Number of surveyed access points	2
Mean number of visitors per access point	454
Number of hours surveying per access point	48
Total number of access points to the SAC	6

6.13 To interpret the survey data and project the total number of visitors to the site, the calculation shown in Table 6.3 was carried out. The methodology broadly follows that used by Bracknell Forest DC in the Thames Basin Heaths SPA analysis, as recommended by Natural England as best practice.

6.14 Table 6.3 suggests that, as a result of the Oxford Local Plan 2045, the Oxford Meadows SAC could see an increase of 5,213 – 6,951 visits, representing a 1.70-2.27% increase over current numbers.

6.15 The two access points (marked A and B on Figure 6.1) were used as survey points. As these access points are located nearest to the two existing car parks, this means that the survey results have the potential to be skewed towards arrivals by car. There is also the potential to overestimate visitor numbers, as larger numbers are likely to arrive via the car parks than via the other entrances to the site.

6.16 There are 6 access points to Oxford Meadows, shown at Figure 6.1:

- A Wolvercote car park;
- B Car park off Walton Well Road,
- C Godstow Road,
- D right of way at the entrance to Wolvercote off Godstow Road,
- E bridge across the river from Binsey, and
- F bridge at Aristotle Lane.

Table 6.3 Projected visitor numbers based on visitor survey

	Calculation/ reference		Result
Total number of visits over survey period	From survey data	A	908
Percentage of visits over survey period from within postcode sectors OX1 and OX2[1]	From survey data	B	70.4%
Projected total number of visits per annum	See note 2	C	306,600
Projected total number of visits from within postcode sectors OX1 and OX2 per annum	(C ÷ 100) x B	D	215,846
Population of postcode sectors OX1 and OX2	Taken from 2021 Census (see Note 3)	E	68,549
Projected visits per head of OX1 and OX2	D ÷ E	F	Max 3.1
Projected future population arising from new potential development.	See Table 6.1 and Note 4	G	Max: 2,208 Potential to own dogs: 1,656
Projected visits per annum arising from projected future population	G x F	H	5,213 – 6,951
% of projected future visits, as it relates to current projected total visits	(H ÷ C) x 100	I	**1.70 – 2.27%**

Notes:

1. These postcodes broadly represent a 1,900m radius around the Oxford Meadows SAC
2. Mean number of visitors per surveyed access point, per hour = 454/48 = 10
   Total active hours in a day (06:00-20:00) = 14
   Projected mean number of visitors per access point per day = 10 x 14 = 140
   Projected mean number of visitors per access point per year = 140 x 365 = 51,100
   If all six access points had similar numbers of visitors, then projected total number of visits, per year = 6 x 51,100 = 306,600
   This maximum includes small children, elderly people, etc. Most likely the number is less than this figure.
3. Population of Postcode sector OX1 – 27,136 (Census 2021)

Population of Postcode sector OX2 – 41,413 (Census 2021)

4. Average household size at the time of the 2021 Census was 2.5. The maximum number of homes proposed (883 from Table 6.1) multiplied by 2.5 people per household = 2,208. Removing students and employer-linked affordable accommodation (assuming these comprise 25% of new residents), would result in a future population of 1,656 that could own dogs.

6.17 It is not visitor numbers however that are the potential problem, but the impact of dog fouling on the Apium repens. A 2007 Report estimated that dog ownership in Oxford was a maximum of 24%. The survey results showed that 32% of groups visiting the SAC came with a dog, and 30% of respondents came with the main purpose of dog-walking. Although dog-walkers are more likely to visit the SAC, and probably more likely to visit on a daily basis than other visitors. This would re-balance the numbers in the opposite direction.

6.18 Dog-walkers visiting the Oxford Meadows SAC are either likely to visit by car or on foot. Car journeys to the Oxford Meadows SAC are limited by the number of parking spaces available. There are two public car parks linked to the Oxford Meadows SAC. One at the southern end of Port Meadow (close to Jericho), and the other provides parking and visitor access to Port Meadow via Wolvercote. As there are no plans to increase parking at either car park during the plan period, visitors by car will be limited by the number of parking spaces available. In addition to the two public car parks, a very limited amount of on-street parking is available on Godstow Road with direct access to Port Meadow. Lower Wolvercote is not currently the subject of a Controlled Parking Zone (CPZ) and the latest programme for the rollout of new CPZs is currently being worked on by the County Council. However, as no additional on-street parking is planned in this location, visitors to the site are restricted by spaces available.

6.19 Student accommodation does not allow pets, so this accommodation can be screened out of the assessment process. It can also be expected that at least some of the employer-linked accommodation provided by the universities would be for visiting academics coming for short periods, and who are also unlikely to have dogs.

6.20 Additionally, as set out in Table 6.1 (above), most of the proposed sites are further than 500m from the SAC, reducing the likelihood of their residents regularly using the SAC; other recreational facilities will be available to most of the sites. This Stage 2 Appropriate Assessment makes recommendations for site allocation policies proposed in the the Local Plan 2045. It alsy proposes mitigation measures especially to reduce recreational impacts on the SAC, where appropriate.

6.21 The subsequent paragraphs consider each of the sites listed in Table 6.1 with respect to the issues highlighted above:

North Infrastructure Area

6.22 Policy SPN1: Diamond Place and Ewert House is allocated for 135 dwellings and is more than 1,200m away from the SAC. The site allocation policy includes a requirement for at least 10% public open space to be provided on-site. This site is nearly 2km from the SAC on foot (via Aristole Lane footbridge) or 2.5km by car (Port Meadow Car Park South, Walton Well Road). Public open space provided on-site would be usable by residents of the new development and dog walkers who currently use the SAC. Although there is not a prolific amount of public open space in Summertown itself, alternative existing public open space in the locality includes Sunnymeade Meadow (and the adjacent Sunnymeade Park) which is around 1,300m away (on foot) or 950m as the crow flies. The footpath along the River Cherwell to the west also provides an alternative to the SAC. These alternative areas are likely to be more attractive to dog-walkers than the SAC, as the route to the SAC involves crossing the (often busy) Banbury and Woodstock Roads.

6.23 Policy SPN2: Elsfield Hall, Elsfield Way proposes 20 dwellings and is approximately 1.5km away from the SAC as the crow flies. The site allocation is 1.8km (approx.) on foot from the Oxford Meadows SAC principally via sections of the car- dominated A40 North Way. As such, trips to the SAC would most likely need to be undertaken by private car. Alternative public open space exists at Cuttlesowe Park, which is a short walk away (approximately 500m on foot), which represents a much more attractive alternative for dog-walkers. Sunnymead Park is another alternative public open space that is also more accessible from this site than the SAC.

6.24 Policy SPN3: Oxford North Remaining Phases is allocated for 161 dwellings and is 715m away from the nearest entry point to the SAC as the crow flies. This policy benefits from previously agreed mitigation carried forward from the recommendations of the HRA for Northern Gateway Area Action Plan. That HRA recommended specific policy wording to deliver a higher amount of public open space associated with any residential development occurring as part of the development in order to ensure that recreational impacts. Policy SPN3 therefore includes the following policy wording:

> *Planning permission will only be granted for developments that provide usable, well designed and good-quality publicly accessible green open space. At least 15% of the*

total site area must be provided as green public open space; this must be distributed so that at least 15% of any parcel proposed for residential development is green public open space.

6.25 Policy SPN4: OUP Sports Ground, Jordan Hill proposes 90 dwellings and is more than 1km away from the SAC, as the crow flies. This residential capacity figure assumes that the cricket pitch is retained on site. This site is expected to deliver at least 10% public open space on-site, which would be usable by not only the residents of the new development but also dog-walkers who currently use the SAC. Alternative exiting public open space provision in the area includes Cuttleslowe Park, which is a more accessible recreation area than the Oxford Meadows SAC. Access from this site to Cutteslowe Park is via quiet side-roads, whereas accessing the Oxford Meadows SAC would involve crossing the busy Wolvercote roundabout.

6.26 Policy SPN5: Pear Tree Farm proposes 111 dwellings and is 1,300m away from the nearest access point at the Oxford Meadows SAC (as the crow flies). Other alternative opportunities for dog walking exist nearby at equally or more accessible locations to the site allocation (e.g. Cuttleslowe Park, Five Mile Drive Recreation Ground). Also, an increased provision of public open space for dog walking has been secured at Oxford North. Given the distance of the site from the SAC (1,300m straight line), trips to the SAC would most likely need to be undertaken by private car. As there are no proposals to increase the number of parking spaces at the Oxford Meadows SAC, there would not be an increase in visitors to the SAC by car. Thus, policy compliant open space provision should be made onsite.

<u>Central and West Infrastructure Area</u>

6.27 Policy SPCW1: Banbury Road University Sites proposes 54 dwellings and is 800m away from the SAC as the crow flies. The proposed allocation is for a mix of uses including academic institutional uses, student accommodation, and/or residential development. It is likely that the site will come forward for student accommodation which is unlikely to generate any dog-walking activity. University Parks is more accessible from this site than the Oxford Meadows SAC.

6.28 Policy SPCW2: Botley Road sites around Cripley Road including River Hotel and Westgate Hotel proposes 20 dwellings and is over 1km away from the SAC as the crow flies. Alternative public open space exists at Botley Park, which is a short walk away (approximately 550m on foot), which represents a much more attractive alternative for dog-walkers.

6.29 Policy SPCW3 Jericho Canalside. While the site allocation policy proposes does not provide a minimum number of dwellings, at the time of writing an extant planning permission for 18 dwellings exists for this site. Given existence of this extant permission, a precautionary approach has been taken for this site. As such, Table 6.1 assumes that the site has the potential to deliver 18 dwellings. This site is approx. 510m from the Oxford Meadows SAC (as the crow flies).

6.30 The allocation policy for this site should include the following provisions to ensure that should residential development be brought forward at this site, it is able to mitigate any significant effects at the Oxford Meadows SAC.

> *"Development proposals involving residential development should be accompanied by an assessment of potential recreational pressure on the immediate setting including the canal towpath and the Oxford Meadows SAC that may arise from increased numbers of visitors, along with plans to mitigate this impact as necessary."*

6.31 Policy SPCW5 Jowett Walk (South) is allocated for 14 dwellings and is more than 1.7k away from the SAC as the crow flies. The proposed allocation is for residential or student accommodation. As the housing at the site would likely be for students it is likely to generate limited (if any) dog walking activity. University Parks represents a more accessible public open space should any dog-walking activity be generated from the site.

6.32 Policy SPCW8: Osney Mead proposes 247 dwellings (unless further flood risk work undertaken cannot find a solution to ensure the safety of residents). A precautionary approach has been taken (for this site) and an assumption has been made that the residential development is possible (This assumption is for HRA purposes only).

6.33 Osney Mead is more than 1.2km away from the SAC as the crow flies and is proposed for a mix of employment-generating uses, academic institutional uses and residential (including employer-linked affordable housing) and student accommodation. The delivery of student accommodation or employer-linked affordable housing is likely to generate limited (if any) dog-walking activity. The site is close to range of different types of publicly accessible open space, including an extensive network of publicly accessible fields heading towards South Hinksey. While access to the SAC is possible, either via a 2km walk along the bank of the River Thames and across Bailey Bridge, or via a 2km drive along Binsey Lane followed by an 800m

walk to access Port Meadow via Fiddler's Island. It is considered that most future residents would be unlikely to make this journey on a regular basis.

6.34 Policy SPCW12: West Wellington Square is allocated for 13 dwellings and is more than 800m away from the SAC as the crow flies. The site is proposed for academic institutional, student accommodation, and residential including employer-linked affordable housing. As the housing at the site would likely be for students and academics, it is likely to generate limited (if any) dog walking activity. University Parks is also more accessible from this site than the Oxford Meadows SAC.

6.35 In addition to Oxford North, several Key Employment Sites are also located within 1,900m of the Oxford Meadows SAC. These are set out in Table 6.4 below:

Table 6.4 Key Employment sites within 1,900m of the Oxford Meadows SAC

Key Employment Site (name)	**Distance from Oxford Meadows SAC (m)**
Radcliffe Observatory Quarter (ROQ site)	650
Oxford University Press	750
Oxford University Science Area & Keble Road Triangle	1,010
Osney Mead	1,240
Jordan Hill Business Park	1,260
Botley Road Retail Park/ Science District	1,310

6.36 Of the above sites, only Osney Mead has a bespoke site allocation policy, which already makes provision for a mix of uses that include residential (including employer-linked affordable housing) and student accommodation. Osney Mead has been assessed in the preceding paragraphs (see paragraph 4.24-25)

6.37 The two Key Employment Sites nearest to the SAC are the Radcliffe Observatory Quarter (ROQ) on Walton St/ Woodstock Road, and the Oxford University Press (OUP), on Walton St. OUP is a long-standing publishing company with its offices located in the heart of the city. Given the constrained nature of OUP, it is unlikely that residential development could be accommodated at the site. Whereas the ROQ is in the final stages of its transformation from its former use – the Old Radcliffe Hospital – to a modern teaching and research campus for the University of Oxford. As a teaching campus, any residential development delivered at the site is likely to either be student accommodation or employer-linked affordable housing as such, any potential increases in dog-walking are likely to be limited. Also, there is minimal remaining

available land at the site following the completion of the Schwarzman Centre for the Humanities.

6.38 The other sites listed are all more than 1km away from the SAC as the crow flies and are all close to existing alternative public spaces that are more accessible that the SAC or would deliver forms of residential that would result in limited (if any) increase in dog-walking (i.e., student accommodation/ employer-linked affordable housing). As such, any impact of supporting housing delivery on the city's employment sites would be likely to be minimal.

'In-combination impacts'

6.39 The Proposed Submission Draft of the Cherwell Local Plan 2042 Policy KID1 Kidlington Area Strategy provides the policy framework for the site allocations within Cherwell District Council's administrative area that nearest the Oxford Meadows SAC. Policy KID1 sets out that policies PR6a-PR9 from the extant Cherwell Local Plan 2011-2031 are to be retained.

6.40 Policy PR6a – Land East of Oxford Road; and PR6b – Land West of Oxford Road are the only sites within the Cherwell Local Plan that are within 1,900m of the Oxford Meadows SAC. The site allocation policies for these sites are contained within the Cherwell Local Plan 2011 2031 Part 1 Partial Review.

6.41 Policy PR6a – Land East of Oxford Road allocates this 48ha site as a residential-led "urban extension to Oxford city". The policy provides for a net increase of 690 dwellings, a primary school, local centre and the delivery of 11ha public open space as an extension to Cutteslowe Park. In addition, Policy PR6a requires the creation of a green infrastructure corridor on 8ha of land (in addition to the extension of public open space at Cutteslowe Park). PR6b – Land East of Oxford Road is allocated for a residential-led development for 670 dwellings on 32ha of land.

6.42 These are the only sites contained in Cherwell's Local Pan that are within 1,900m of the Oxford Meadows SAC. The number of residential dwellings allocated across the two sites is 1,360 homes. Given average household size is 2.5 (Census 2021), it is likely that this would lead to an additional 3,400 residents (all of whom have the potential to own dogs).

6.43 Table 6.5 shows the 'in-combination impacts' resulting from the population growth resulting from the two residential-led developments proposed through the Cherwell Local Plan 2042.

Table 6.5 Projected 'in-combination impacts'

	Calculation/ reference		Result
Projected future population arising from 'in-combination' impacts	See para. 1.33	J	3,400
Projected visits per annum from projected future 'in-combination impacts' population	F* x J	K	10,706
% of projected 'in-combination impacts' visits, as it relates to current projected total visits	(K ÷ C**) x 100	L	3.49%

** F = 3.1 (see Table 6.3 for further details)*

*** C =306,6600 (see Table 6.3 for further details)*

6.44 The cumulative impact of the additional visits resulting from the Oxford Local Plan 2045 (4,517-6,022 or 1.70-2.27%) and the Cherwell Local Plan 2042 (10,706 or 3.49%) equates to between 15,919-17,657 visits or 5.19-5.76%).

6.45 As set out above, the site allocations within Cherwell propose the creation of additional recreation provision. Policy PR6a includes a requirement for the provision of public open space as an extension to Cutteslowe Park on 11 hectares of land. It is likely that this extension would serve as a more accessible alternative recreation space for dog-walkers than the Oxford Meadows SAC for both the Cherwell site allocations. Given the size and proximity of this recreation provision to the two Cherwell sites, it is considered that this would be suitable recreation provision likely to encourage new residents (in particular, dog-walkers) to use it as an alternative to the Oxford Meadows SAC.

Conclusions

6.46 It is interesting to compare the findings of this year's study, with previous studies. Table 6.6 below shows the key findings from each of the surveys.

6.47 Table 6.6 shows that since 2011, there has been an apparent decline in total visitor number at the Oxford Meadows SAC. While the 2017 survey, which informed the

adopted Local Plan 2036 resulted in a slightly higher number of future 'alone' and 'in-combination' visit and that these resulted in a lower percentage score.

Table 6.6 comparison of findings from previous visitor surveys

	2011	2017 (OLP2036)	2025
Projected total visits per annum	525,600	429,240	306,600
Visits per annum from new population from planned development ('alone')	5,612	10,573 – 14,098	5,213 – 6,951
% of projected future visits as it relates to current visits	1.07%	2.5-3.3%	1.70-2.27%
Visits per annum from new population arising from from 'in-combination' and 'alone' development	8,364	14,977 - 19,378	15,919 - 17,657
% of projected future visits 'alone' and 'in-combination' as it relates to current vists	**1.59%**	**3.5-4.5%**	**5.19-5.76%**

6.48 There is no indication that current visitor numbers are having a detrimental effect on the condition of Apium repens at the Oxford Meadows SAC. The assessment recognises that the majority of site allocations have alternative publicly greenspaces in equally more accessible locations. This, coupled with bespoke policy wording included within the Local Plan 2045, would be likely to result in minimal recreational impacts (dog fouling) at the Oxford Meadows SAC. As such, the Reg. 19 Plan is unlikely (both 'alone' and 'in-combination') to result in significant effects, either alone, or 'in-combination' on the integrity of the Oxford Meadows SAC in relation to recreational impacts.

7. Water Quantity

Introduction

7.1 This next section looks at the impact pathway of water quantity. Maintaining a balanced hydrological regime at the Oxford Meadows SAC is important as Apium repens relies on seasonal flooding to support its growth.

7.2 It is generally recognised that there are three main sources of water that support the plant communities on the Oxford Meadows SAC. These are direct rainfall, surface water, and groundwater that flows in from outside the area. Any of these sources, or a combination, may contribute to the soil water, which supports the plant communities found at the Oxford Meadows SAC.

7.3 Of the three sources of water which support the plant communities at the Oxford Meadows SAC, groundwater recharge and flow has the potential to be directly or indirectly influenced by the policies and site allocations within the Reg. 19 Plan. This is because part of Oxford has been shown to as having some hydrological connectivity with the Oxford Meadows and as such new development in this location has the potential to affect groundwater recharge and flows.

7.4 The policy areas and site allocations for which it was not possible to conclude no likely significant effects in relation to the impact pathway of water quantity are as follows:

Policy Areas:

- *Policy S1 – Spatial Strategy*
- *Policy H1 – Housing Requirement*

Site allocations

- *Policy SPN1 – Diamond Place and Ewert House*
- *Policy SPN2 – Elsfield Hall, Elsfield Way*
- *Policy SPCW1 – Banbury Road University Sites – Parcel B*

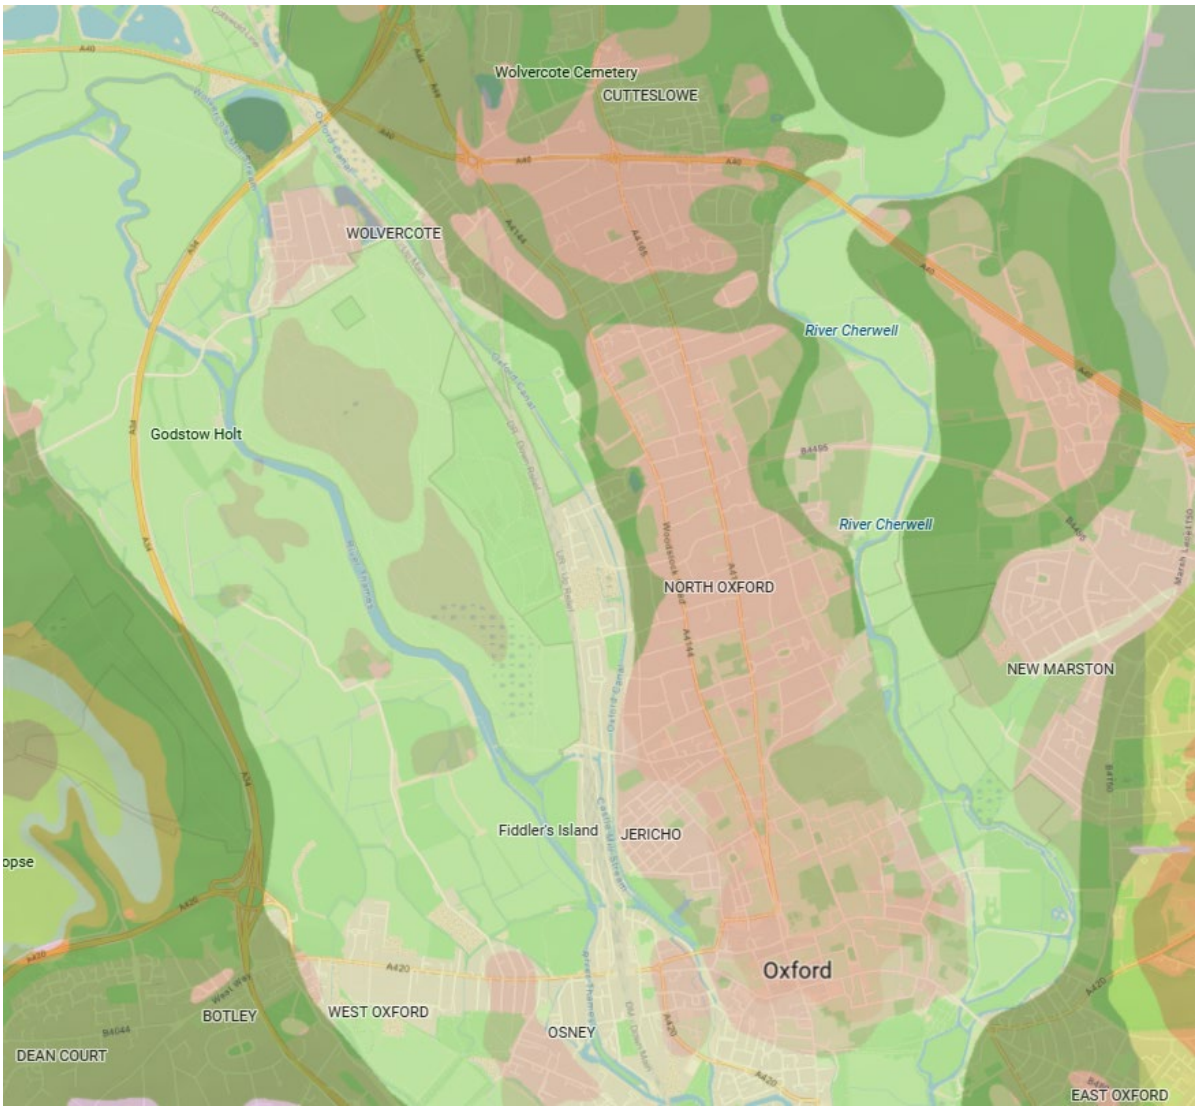
Screening for Water Quality Impacts

7.5 The Botantical Society of Britain and Ireland (BSBI) species account for Apium repens (2016) considers that water level fluctuation at Port Meadow is influenced by an underground aquifer, with the water table raised and lowered depending on the amount of rainfall flowing through the river gravels. The river gravels located in North

Oxford (the North Oxford Gravel Terrace) has some potential for hyrological connectivity with the Oxford Meadows SAC. The sequence of maps of the following pages illustrates the issue.

7.6 Figures 7.1 and 7.2 (below) show the British Geological Survey (BGS) map of the North Oxford Gravel Terrace and a conceptual model of groundwater flow for Oxford that includes the Oxford Meadows SAC.

Figure 7.1 Map showing the North Oxford Gravel Terrace and Port Meadow within the context of Oxford

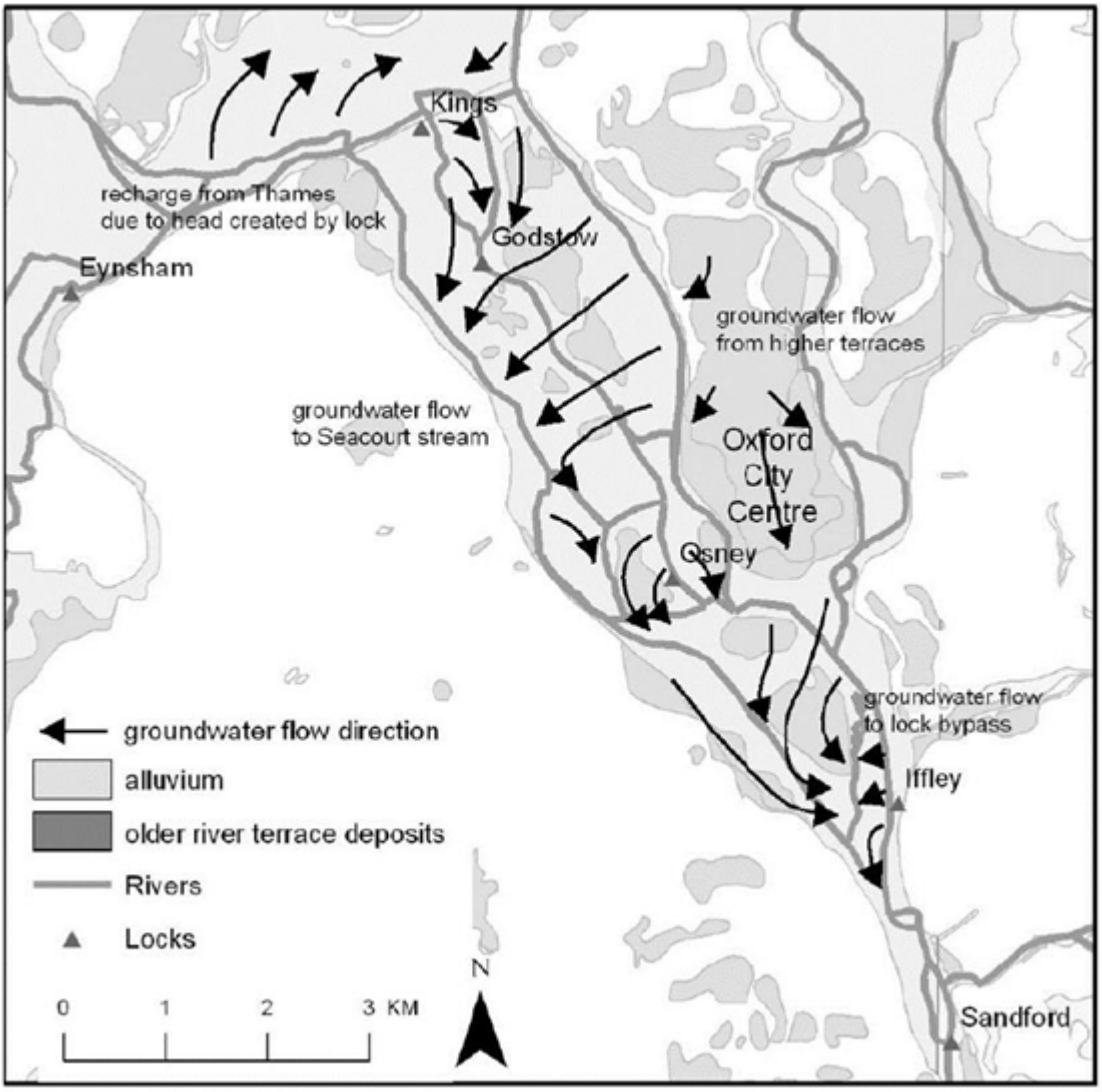


(Source: British Geological Survey – BGS Map Viewer Contains British Geological Survey materials © UKRI [2025])

7.7 Figure 7.1 (above) shows the geology of Oxford, including the Oxford Meadows SAC. The salmon pink colouring reaching from the city centre right up through Summertown and beyond to the north represents the North Oxford Gravel Terrace. While these deposits are a source of groundwater recharge to the Oxford Meadows. It is recognised that this is not the only source of groundwater recharge, as it is likely that there is a much larger groundwater catchment area that serves the Oxford Meadows SAC (HRA for the Northern Gateway Area Action Plan).

7.8 Figure 7.2 shows a conceptual model of groundwater flow for Oxford including the area surrounding the Oxford Meadows SAC.

Figure 7.2 - Conceptual model of groundwater flow in Oxford (2007)



Source: Oxford DEFRA Paper (2007)

7.9 Previous HRAs have taken a precautionary approach which assumes that the direction of groundwater flow follows the direction of travel shown here. The model in Figure 76. .2 shows that groundwater flows from the city centre away from the SAC. This means that proposed development at sites in this area will not affect the hydrology of the SAC since the direction of travel of the groundwater is away from the SAC.

7.10 There are two interlinked issues relating to groundwater. The first is in relation to groundwater recharge. Groundwater recharge is where the surface water recharges the supply of surface water beneath it. Previous HRA work considered the North Oxford Gravel Terrace to be a source of groundwater recharge for the Oxford Meadows SAC.

7.11 The second relates to the flow of groundwater itself to the Oxford Meadows SAC. Previous HRA work has considered that it is important that groundwater flow to the Oxford Meadows SAC is not interrupted. As such, only subterranean (i.e., basement development) is likely to impact the flow of groundwater. This is because the groundwater travels through the aquifer situated where the river gravels meet the underlying bedrock geology – predominantly made up of impermeable Oxford Clay.

7.12 As groundwater cannot flow upstream, any site allocations downstream (to the south) of the Oxford Meadows SAC will be unlikely to have significant effects on groundwater recharge and flow to the Oxford Meadows SAC. As such, site allocations located downstream from the Oxford Meadows SAC have not been considered further as part of this assessment. Site allocations not located on the North Oxford Gravel Terrace were screened out from further assessment.

'Alone Assessment'

7.13 The following sites are situated to the north of the Oxford Meadows SAC and located on the area known as the North Oxford Gravel Terrace:

- SPN1: Diamond Place and Ewert House
- SPN2: Elsfield Hall, Elsfield Way
- SPCW1: Banbury Road University Sites – Parcel B

7.14 Figure 7.3a shows the redline boundary for SPN1: Diamond Place and Ewert House while 7.3b shows the that the entire site is located on the North Oxford Gravel Terrace.

Figure 7.3a Redline site allocation boundary for SPN1: Diamond Place and Ewert House

Figure 7.5b – the extent of Policy SPCW1 located on the North Oxford Gravel Terrace

(Source: British Geological Survey – BGS Map Viewer Contains British Geological Survey materials © UKRI [2025])

7.17 In order to ensure no likely significant effects on the Oxford Meadows SAC development proposals involving subterranean development (i.e., basements) need to be accompanied by a hydro-geological investigation to ensure that they do not adversely impact groundwater flow.

7.18 Similarly, to ensure that groundwater recharge is maintained , appropriately designed SuDS must be incorporated into the scheme.

7.19 The following wording has therefore been included in Policies SPN1 – Diamond Place and Ewert House; Policy SPN2 – Elsfied Hall, Elsfield Way and SPCW1 – Banbury Road University Sites – Parcel B and their supporting "information boxes".

Information box:
This site has been identified as being located in an area identified as having potential hydrological connectivity with the Oxford Meadows SAC

Policy text:
Development proposals must demonstrate that likely significant effects on groundwater recharge and water quality have been avoided, or mitigated where relevant through the use of appropriate measures including SuDS.

Development proposals involving subterranean development must include a hydrogeological investigation which must demonstrate that likely significant effects on groundwater flow have been avoided, or mitigated where relevant.

7.20 The City Council considers that, with the inclusion of the above policy wording within each site allocation policy, these policies will not result in likely significant effects on the impact pathway of water quantity (i.e., ensuring groundwater recharge and flow) at the Oxford Meadows SAC.

7.21 It is important that the Stage 2 Appropriate Assessment also considers how to address development proposals (that do not benefit from bespoke site allocation poliices but which could come forward in this part of the city) that involve basements or that have the potential to impact the amount of groundwater recharge.

7.22 As such Policy G6: Protecting Oxford's Biodiversity including the Ecological Network and the supporting text includes the following wording that relates to the Oxford Meadows SAC:

Extract from Supporting Text to Policy G6

Policy context

- *Oxford has a range of habitats and ecological sites, many benefit from levels of designation including:*
  - *International designations – the Oxford Meadows Special Area of Conservation (SAC), part of which is within Oxford's boundary and that contains certain habitats and species recognised for their importance across Europe…*
- *A number of sites in the city are particularly reliant upon specific hydrological conditions, which means that they are potentially vulnerable to changes in hydrology that could arise from development. For example:*
  - *Oxford Meadows SAC is potentially sensitive to changes in recharge, flows and quality of groundwater stemming from development on the North Oxford gravel terrace…*
- *A Habitat Regulations Assessment (HRA) has been produced to support the Local Plan 2045. This assesses the level of development proposed through the plan both 'alone' and 'in-combination' with other relevant plans and projects against the relevant conservation objectives for the Oxford Meadows SAC. The HRA includes a Stage 1 Screening, and a Stage 2 Appropriate Assessment which proposes mitigation measures to ensure there are no likely significant effects, either alone or in-combination, on the integrity of Oxford Meadows SAC.*

Policy implementation

- *The policy outlines particular considerations around impacts on surface and/or groundwater in relation to Oxford Meadows SAC, the Lye Valley and New Marston Meadows SSSI's. Proposals may need to consider impacts on water quality, as well as disruptions to the flows and quantities of water to these sites.*

Extract from Policy G6

Policy G6: Protecting Oxford's Biodiversity including the Ecological Network

Internationally and nationally designated sites and irreplaceable habitats

When determining planning applications potentially causing significant harm to biodiversity, then the approach set out in Paragraphs 193-195 of the NPPF (or the equivalent in any update) will be applied.

To ensure no likely significant effects on the Oxford Meadows SAC, proposals identified in an area identified as having potential hydrological connectivity with the Oxford Meadows SAC that:

a) *May negatively affect groundwater recharge and/or water quality must demonstrate that likely significant effects have been avoided, or mitigated where relevant through use of appropriate measures including incorporation of SuDS.*
b) *May negatively affect groundwater flow (subterranean development) must include a hydrogeological investigation, which must demonstrate that likely significant effects have been avoided, or mitigated where relevant.*

7.23 The City Council considers that with the addition of this wording within the supporting text and within Policy G6, in addition to the site specific policy wording included within the three site allocation policies, that there will not be likely significant effects on the Oxford Meadows SAC (in relation to the *water quantity* impact pathway).

'In-combination' Assessment

7.24 A number of "other plans and projects" have been considered as part of this 'in-combination' assessment. It draws on previous HRA work undertaken by the City Council and supplements this with a review of a range of plans and projects by third party organisations.

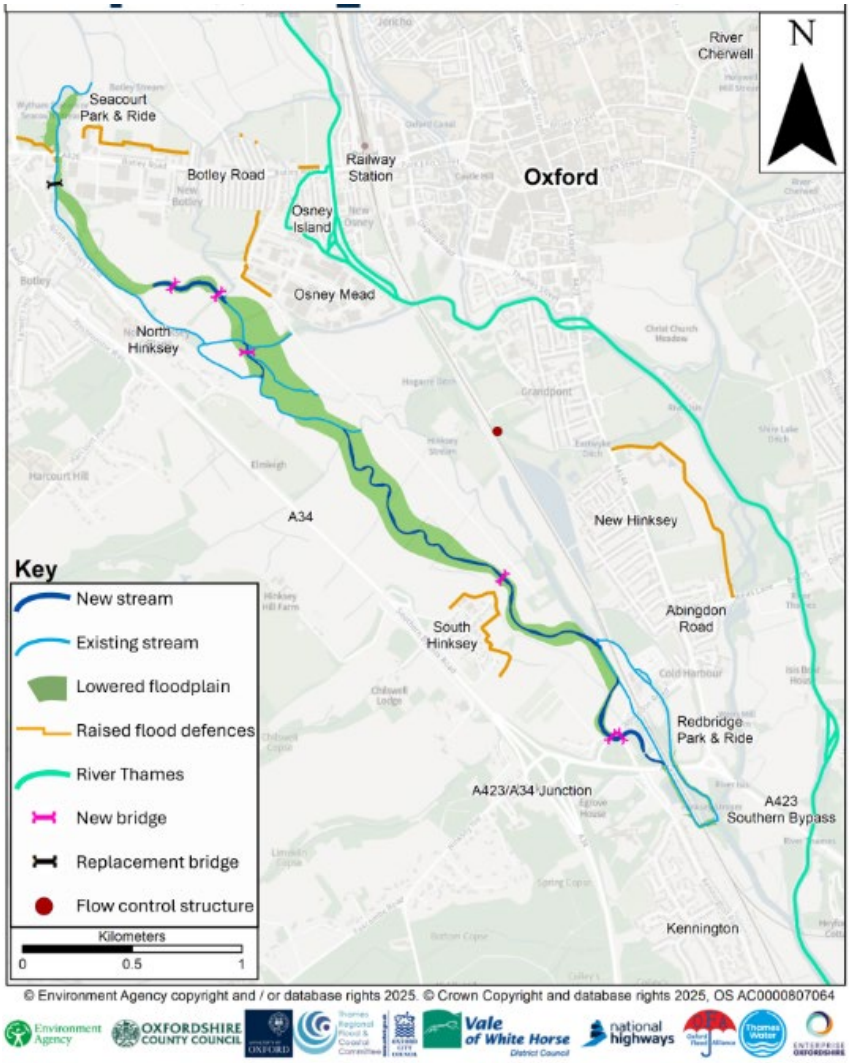
7.25 The HRA Screening Report undertaken to support Thames the Water Drought Plan (2022) confirms that no likely significant effects are anticipated from any of the proposed drought schemes (in particular at Farmoor Reservoir) on the Oxford Meadows SAC, either alone, or in combination with other licenses and consents.

7.26 Thames Water has produced a Habitat Regulations Assessment to support its Water Resources Management Plan 2024. This HRA assessed the likely impact of a variety of infrastructure project options on the numerous "European Sites" across the Thames Water area. As likely significant effects could not be ruled out for several project options at the HRA Screening stage, further HRA work was carried out in the form of a Stage 2 Appropriate Assessment. The Stage 2 Appropriate Assessment proposed various mitigation measures for each of the selected options and concluded that with the implementation of these mitigation measures, likely significant effects on the Oxford Meadows could be ruled out.

7.27 The Environment Agency's flood alleviation scheme for Oxford, which is likely to consist of enlargement of existing watercourse and/ or creating flood relief channels, may affect the flooding regime of the River Thames. Figure 7.6 below shows the map of the scheme design for the Oxford Flood Alleviation Scheme.

7.28 The Environment Agency's flood alleviation scheme for Oxford will create a flood relief channel downstream of the SAC.

Figure 7.6 – Map of the scheme design for the Oxford Flood Alleviation Scheme



(Source: Environment Agency website)

7.29 The Oxford Flood Alleviation scheme is downstream of the SAC, and Natural England has stipulated that a key requirement of the Oxford flood alleviation scheme is that it does not have an adverse impact on the Oxford Meadows hydrological regime.

7.30 Given the HRA work undertaken by other organisations to support their plans and projects concluded no likely significant effects on the Oxford Meadows SAC, there are unlikely to be 'in-combination' effects.

Conclusions

7.31 Given the mitigation measures proposed as part of the 'alone' assessment and coupled with the findings from the 'in-combination' assessment, the City Council considers that the Oxford Local Plan 2045 is unlikely to give rise to significant effects on water quantity (groundwater recharge and flow) to the Oxford Meadows SAC.

8. Water Quality

Introduction

8.1 As set out in Chapter 7 (above), the North Oxford Gravel Terrace is potentially hydrologically connected to the Oxford Meadows SAC. While it was established that maintaining groundwater flows and the amount of water that is recharged to groundwater is important for the plant communities that reside there, the quality of that water is the final impact pathway to be considered.

8.2 Table A2.3 of the Screening Categorisation Schedule (Appendix 2) highlights those policy areas and site allocations for which is was not possible to rule out likely significant effects. This chapter of the Appropriate Assessment therefore focuses on ensuring that the quality of water that is recharged to groundwater is maintained.

8.3 The policy areas and site allocations for which it was not possible to conclude no likely significant effects in relation to the impact pathway of water quality are as follows:

Policy Areas:

- *Policy S1 – Spatial Strategy*
- *Policy H1 – Housing Requirement*

Site allocations

- *Policy SPN1 – Diamond Place and Ewert House*
- *Policy SPN2 – Elsfield Hall, Elsfield Way*
- *Policy SPCW1 – Banbury Road University Sites – Parcel B*

Context

8.4 Oxford is located within the River Basin District covered by the Thames River Basin Management Plan15 (TRBMP). This was last updated by the Environment Agency in 2022. The aim of the River Basin Management Plans is to enhance nature and the natural water assets that are the foundation of everyone's wealth, health and wellbeing, and the things people value including culture and wildlife. The TRBMP describes the challenges that threaten the local water environment in the Thames River Basin District and how these challenges can be managed. It includes data on the condition of the waterbodies within the river basin, with surface waters being assessed for ecological status or potential and chemical status, and groundwaters assessed for quantitative status and chemical status.

8.5 The most recent assessment data available for the waterbodies within Oxford's administrative boundary is presented in Oxford City Council's Water Cycle Scoping Study. That data is represented here for completeness. Table 8.1 below provides a summary of the waterbody status for the main watercourses in Oxford.

Table 8.1 summary of the waterbody status for the main watercourses in Oxford

Waterbody name	Ecological	Chemical
Cherwell (Ray to Thames) and Woodeaton Brook	Poor	Fail
Bayswater Brook	Poor	Fail
Northfield Brook (Source to Thames) at Sandford	Moderate	Fail
Thames (Evenlode to Thame)	Poor	Fail

Source: Oxford City Council Water Cycle Study Stage 1 Report

8.6 Water body ecological status is either poor or moderate within the city. This is due to a range of factors including agricultural land practices, invasive species and drought. However, sewage discharge is a major contributing factor to the failure to reach good status in three of the four waterbodies. Sewage discharges by Thames Water into waterbodies are regulated by the Environment Agency (EA) through a series of permits and licences.

8.7 The Oxford City Council Water Cycle Study Stage 1 Report includes a detailed discussion about the reasons for the scores attributed to each main watercourse and provides suggestions about how and when issues can and should be addressed through the planning system. The overarching message is that any impacts on the quality of water flowing through watercourses in Oxford resulting from development proposals can be satisfactorly addressed through the appropriate use of Sustainable Drainage Systems (SuDS).

'Alone' Assessment

8.8 The 'alone' assessment considers the policy areas and site allocations set out in paragraph 8.3 in turn.

8.9 Policies S1 and H1 are overarching policies from which other policies are put forward to deliver. These policies are not likely to have an impact on the SAC. Instead, it is through the development of site allocation policies and windfalls (for instance, that make up a source of the housing supply set out in Policy H1) that have a potential to impact the Oxford Meadows.

8.10 Paragraphs 7.14-7.16 includes a series of figures that show the extent to which each of the three site allocations are located on the North Oxford Gravel Terrace.

- Policy SPN1 – Diamond Place and Ewert House (see Figures 7.3a and 7.3b)
- Policy SPN2 – Elsfield Hall, Elsfield Way (see Figures 7.4a and 7.4b)
- Policy SPCW1 – Banbury Road University Sites – Parcel B (See Figures 7.5a and 7.5b)

8.11 In order to ensure no likely significant effects on the Oxford Meadows SAC in relation to the water quality impact pathway development proposals must incorporate appropriately designed SuDs (in accordance with the recommendations of the Oxford City Council Water Cycle Study Stage 1 Report – see paragraph 8.7 above). The use of appropriately designed SuDs can satisfactorily address any impacts of development on water quality. In this context, the use of appropriately designed SuDs will ensure that there are no likely significant effects on the quality of water being recharged to groundwater as a result of the policies and site allocations within the Oxford Local Plan 2045.

8.12 As such, the three site allocation policies referenced in paragraph 8.4 (above), all include the wording set out at paragraph 7.19 above, specifically the inclusion of the reference to water quality and SuDS. The key section of the policy is duplicated below:

Policy text:

Development proposals must demonstrate that likely significant effects on groundwater recharge and water quality have been avoided, or mitigated where relevant through the use of appropriate measures including SuDS.

8.13 Paragraph 7.21 above highlights the importance of ensuring that development proposals that do not benefit from a site allocation, but that could still take place in this part of the city (i.e., on the North Oxford Gravel Terrace), do not result in likely significant effects on the Oxford Meadows SAC. While paragraph 7.21 focuses on the amount of groundwater recharge and groundwater flow, it is also important to ensure that the quality of the water is maintained. As such, Policy G6 : Protecting Oxford's Biodiversity including the Ecological Network and supporting text includes some text that relates to the Oxford Meadows SAC (see paragraph 7.22 for further details).

8.14 The entire of the supporting text and policy are not duplicated here, however the specific reference to water quality is duplicated to aid the reader.

Extract from Policy G6

Policy G6: Protecting Oxford's Biodiversity including the Ecological Network

To ensure no likely significant effects on the Oxford Meadows SAC, proposals identified in an area identified as having potential hydrological connectivity with the Oxford Meadows SAC that:

a. *May negatively affect groundwater recharge and/or water quality must demonstrate that likely significant effects have been avoided, or mitigated where relevant through use of appropriate measures including incorporation of SuDS.*

8.15 The Local Plan 2045 also includes a policy on SuDS. The text of Policy G8 Sustatinable Urban Drainage Systems: SuDS is provided in full below:

Policy G8: Sustainable Urban Drainage Systems: SuDS

All development proposals will be required where feasible to manage surface water through Sustainable Drainage Systems (SuDS). Details of the SuDS must be submitted as part of a drainage strategy or FRA where required as part of a planning application submission, and must be submitted prior to determination unless agreed otherwise by the LPA.

SuDS should be designed in a way that incorporates reuse, infiltration, retention or conveyance methods which utilise natural, green and blue infrastructure rather than unnatural, artificial components. Below ground features such as pipe systems or underground attenuation tanks will not be permitted, unless exceptional site conditions justify an alternative approach which has been agreed with the Council. Multi-functionality of SuDS should be maximised in their design, such as where they are incorporated into public open space.

Where a site has potential for contamination, SuDS that rely on infiltration will be discouraged and other suitable methods should be adopted to protect the water environment unless it can be demonstrated that there will be no pathway of contamination. Infiltration SuDS measures would not be encouraged in areas that have shallow groundwater as these measures would not be suitable.

Surface water runoff should be managed to greenfield run-off rates as close to its source as possible, in line with the following drainage hierarchy:

a) store rainwater for later use; then:
b) discharge into the ground (infiltration); then:
c) discharge to a surface water body; then:

d) discharge to a surface water sewer, highway drain or other drainage system; and finally:

e) discharge to a combined sewer (only in exceptional circumstances).

For minor developments, SuDS should be designed in accordance with the City Council's latest SuDS design standards, or any equivalent replacement document. For major developments, SuDS should be designed in accordance with the national standards for sustainable drainage systems (or any national or county-level standards that supersede them). Details of the SuDS must be submitted as part of a drainage strategy or FRA where required as part of a planning application submission, and must be submitted prior to determination unless agreed otherwise by the LPA.

A SuDS maintenance plan should be submitted alongside any planning application for minor or major development, demonstrating how SuDS will be managed and remain effective for the lifetime of the development. The plan must clearly explain what maintenance measures will take place, maintenance responsibilities for all relevant parties, how frequently they will occur and for how long and will be secured by condition.

8.16 The inclusion of the specific wording in the specific site allocation policies and within Policy G6 (i.e., that development proposals *must demonstrate that likely significant effects have been avoided, or mitigated where relevant through use of appropriate measures including incorporation of SuDS)*, introduces a requirement for SuDS to be implemented when development proposals are located in area with potential hyrodological connectivity to the Oxford Meadows SAC.

8.17 Policy G8: Sustainable Urban Drainage Systems (SuDS), when read in conjunction with the requirements of Policy G6, provides suitable mitigation to ensure that any impacts of development on water quality can be satisfactoriy addressed so as not to result in likely significant effects on the Oxford Meadows SAC. Appropriately designed SuDS will also ensure that the amount of water being recharged to groundwater is maintained.

8.18 As such, the City Council considers that specific wording included within Policy G6 alongside the three site allocation policies, in conjunction with Policy G8: Sustainable Urban Drainage Systems (SuDS), will ensure that there are no likely significant effects resulting from the policies and site allocations in the Oxford Local Plan 2045 on the Oxford Meadows SAC, either in terms of water quality, or quantity.

‘In-combination’ Impacts

8.19 The other authorities’ Water Cycle Studies for this current local plan cycle are at various stages of production. As such, Water Cycle Studies to complement the most recent plan stages are not always available.

8.20 Table 8.2 sets out the most recent Water Cycle Studies for each local authority. Each Water Cycle Study presents where there are potential flow capacity or treatment issues for Wastewater Treatment Works (WWTW) in the respective districts. Of the other Oxfordshire authorities, only Cherwell has produced a Water Cycle Study for their most recent Local Plan. The other Oxfordshire authorities Water Cycle Studies are related to their current adopted plans (rather than their emerging plans).

Table 8.2 – Oxfordshire local authorities water cycle studies

Local authority	Date of WCS	Weblink for WCS
Cherwell	January 2023	https://www.cherwell.gov.uk/download/downloads/id/11025/water-cycle-study-stage-1-january-2023.pdf
South & Vale	September 2024	https://www.southandvale.gov.uk/app/uploads/2024/12/CEQ18-Water-Cycle-Study-WCS-Scoping-Report.pdf
West Oxfordshire	July 2025	https://www.westoxon.gov.uk/media/oxuf3hnd/whs10174-wodc-scoping-water-cycle-study_v2-0.pdf

8.21 Each Water Cycle study highlights where there are potential issues at WWTW in the respective districts. For instance, in Cherwell District Council there are potential capacity issues at four out of the twenty-five assessed WWTW, which will require intervention during the plan period. The South and Vale Water Cycle Study highlights capacity issues at six WWTWs which will require attention in the plan period. The West Oxfordshire Water Cycle study highlights that a number of WWTWs have been operating outside their permits in recent years. It also highlights that there are a number of schemes ongoing to address compliance issues.

8.22 As the above constraints are being taken into account by the local authorities, in discussions with Thames Water, they are not expected to act ‘in-combination’ with the Oxford Local Plan 2045.

8.23 It is worth noting that Oxford has one Wastewater Treatment Works at Sandford (downstream of the Oxford Meadows SAC). Thames Water has confirmed that upgrades to the Sandford Sewage Treatment Works are confirmed and are likely to take place in the first half of the plan period. Thames Water confirmed that these works are fully funded and costed and are not impacted by any external factors as they are scheduled to take place with the most recent Asset Management Plan cycle of projects.

9. Conclusions

9.1 The Reg. 19 HRA Report therefore re-affirms the conclusions presented with regard to air impacts in the Oxford HRA Screening Report – that the Local Plan 2045 will not give rise to likely significant effects on the Oxford Meadows SAC in terms of air quality impacts (either 'alone' or 'in-combination').

9.2 It also concludes that the Oxford Local Plan 2045 with the suite of mitigation measures proposed through the Stage 2 Appropriate Assessment, will give rise to likely significant effects on the Oxford Meadows SAC in terms of recreational (dog fouling) impacts, water quatliy impacts or water quality impacts (either 'alone' or 'in-combination').

Appendix 1 – Oxford HRA Screening Report (June 2025)

https://www.oxford.gov.uk/downloads/file/3794/habitat-regulations-assessment-screening-final-report-june-2025

Appendix 2: HRA Screening Categorisation Update (Reg.19)

Table A2.1 – Assessment of the policy areas within the Oxford Local Plan Regulation 19 "Proposed Submission" Document

Reg. 19 Policy Ref	Categorisation	Description of the policy area	Key environmental considerations likely to give rise to significant effects or not
Chapter 1			
Policy S1: *Spatial strategy and presumption in favour of sustainable development*		Strategic policy that sets the overarching ambition for the plan to support the delivery of new homes and jobs and to while protecting the city's important ecological and heritage assets	While this is a strategic policy that focuses on delivering homes and jobs in the city. It does not specifically allocate sites. Other policies in the plan articulate its ambitions through more detailed policy wording. This policy approach is considered to have no likely significant effects on the designated site but the allocations arising from it will need to be considered. As such, this Policy has been considered as part of the appropriate assessment.
Policy S2: *High Quality Design*	A	Policy promoting the use of design guides and design guidance	Unlikely to have significant effects
Policy S3: *Infrastructure delivery in new development*	A	Policy setting out the need for development proposals to make contributions toward infrastructure delivery	Unlikely to have significant effects
Policy S4: *Plan viability*	A	Policy setting out that the policies in the plan should not result development becoming unviable and the mechanisms	Unlikely to have significant effects

		for addressing development viability in individual schemes.	
Chapter 2			
Policy H1: *Housing requirement*		Policy setting out the housing requirement for the plan period. The plan makes provision for 9,267 homes to be delivered in the city.	Policy does not allocate specific sites. The overall housing requirement for the plan is calculated based on assessments of capacity of individual sites. The housing requirement for the plan-period is capacity-based. This means it is an output resulting from a series of technical assessments which consider the capacity, availability, and deliverability of each site. While this policy is considered to have no likely significant effects on the designated site, the site allocations that arise from it will need to be considered. As such, this policy has been taken forward for further assessment as part of the Stage 2: Appropriate Assessment.
Policy H2: *Delivering affordable homes*	A	Policy setting the requirements for the provision of affordable housing	Policy not locationally specific as requires a proportion of affordable homes to be provided as part of qualifying developments.
Policy H3: *Affordable Housing: contributions from other development types*	A	Policy setting out when contributions affordable housing contributions will be sought	Policy not locationally specific and sets out when affordable housing contributions will be sought from a range of development types.

Policy H4: *Employer-linked affordable housing*	A	Policy setting out which locations are suitable for employer-linked affordable housing instead of market housing	The sites referenced in this policy have all been assessed separately as part of the site allocations section. No need to duplicate that assessment.
Policy H5: *Mix of dwelling sizes (number of bedrooms)*	A	Policy setting out the appropriate mix of dwelling sizes to be provided as part of development proposals	Not likely to have significant effects as policy only applies to mix of dwellings.
Policy H6: *Development involving loss of dwellings*	A	Policy setting out approach for development proposals involving losses of dwellings.	Not likely to have significant effects as policy is only dealing with proposals involving the loss of dwellings.
Policy H7: *Houses in Multiple Occupation (HMOs)*	A	Policy setting out the approach taken in considering planning applications for the conversion or creation of new HMOs.	Not likely to have significant effects as policy is concerned with how the location of new HMOs impact the existing residential environment.
Policy H8: *Location of new student accommodation*	A	Policy that sets out appropriate locations in the city for new purpose-built student accommodation. Includes city and district centres.	Summertown is identified as a district centre. As such it is likely that some additional residential and non-residential development will be location on brownfield sites in this location. Any individual sites that are allocated for development in Summertown will be picked up through the technical work underpinning the site application selection process. Any bespoke policy wording needed to mitigate likely impacts of individual sites will be undertaken as a part of the appropriate

			assessment process. This policy, however, is screened out from further assessment.
Policy H9: *Linking new academic facilities with the adequate provision of student accommodation*	A	Policy linking the delivery of new academic floorspace at the universities to whether or not a certain number of students (for each university) is housed in purpose-built student accommodation.	Not likely to have significant effects as the policy does not allocate sites for development. Instead it seeks to ensure that additional academic floorspace that generates increases in student numbers is supported by sufficient student accommodation.
Policy H10: *Homes for Travelling Communities*	A	Policy setting out criteria to be met when considering new residential pitches for travelling communities	Policy unlikely to have significant effects on the Oxford Meadows SAC as it does not outline development proposals that could have a potential impact on the Oxford Meadows SAC.
Policy H11: *Homes for Boat Dwellers*	A	Policy setting out criteria to be met when considering proposals for new residential moorings.	Limited scope and capacity for additional moorings in close proximity to the Oxford Meadows SAC. As such policy unlikely to have significant effects.
Policy H12: *Older persons and other specialist accommodation*	A	Policy setting out criteria to be met when considering development proposals for new older persons and specialist accommodation.	Policy unlikely to have significant effects on the Oxford Meadows SAC as it does not specifically outline locations where there is a higher potential for adverse impacts
Policy H13: *Self-build and custom housebuilding*	A	Policy setting out requirements for delivery of self-build and custom-build housing as part of qualifying developments (sites over 100 homes)	Policy unlikely to have a significant effect as it promotes a requirement on larger residential development proposals, which will themselves be assessed separately as part of this process.

Policy H14: *Boarding school Accommodation*	A	Policy restricting suitable locations for new boarding school accommodation to sites either on, or immediately adjacent to a main teaching campus	Policy unlikely to have significant effects on the Oxford Meadows SAC as it limits new boarding school accommodation to sites very close to the main teaching campus.
Chapter 3			
Policy E1: *Employment Strategy*	D	Policy restricting new employment development to existing employment sites and the city and district centres. Policy also allows an element of housing to come forward on employment sites providing certain key criteria are met.	Summertown is identified as a district centre. As such it is likely that some additional residential an non-residential development will be located on brownfield sites in this location. Any individual sites allocated for development within Summertown district centre will be picked up through the technical work underpinning the site allocation selection process. Any bespoke policy wording needed to mitigate likely impacts of individual sites will be undertaken as a part of the appropriate assessment process. This aspect of the policy is unlikely to have significant effects on the Oxford Meadows SAC. Policy also allows an element of housing to come forward at existing employment sites. This aspect of the policy should be given further consideration as part of the assessment of residential impacts in the Stage 2 Appropriate Assessment.

Policy E2: *Warehousing, storage and distribution uses*	A	Policy restricting the location of warehousing storage and distribtution uses to existing key employment sites	Policy unlikely to have significant impact on SAC as relates to allowing specific type of employment development on sites where employment is already allowed.
Policy E3: *Community Employment and Procurement Plans (CEPPs)*	A	Policy requiring opportunities for local people in the construction and operational stage of developments and training opportunities etc.	Policy unlikely to have a significant impact on Oxford Meadows SAC as it relates to improving training and learning opportunities for local people
Policy E4: *Affordable workspaces*	A	Policy enabling certain key employment to help deliver affordable workspaces	Policy unlikely to have significant impact on SAC as it relates to delivering a certain type of employment floorspace where employment is already allowed.
Policy E5: *Hotel and short stay accommodation*	A	Policy sets out locations where new short-stay accommodation should be located in the city. Locations include city and district centre and main arterial routes into the city.	Summertown is identified as a district centre. As such it is likely that some additional residential an non-residential development will be located on brownfield sites in this location. Any individual sites allocated for development within Summertown district centre will be picked up through the technical work underpinning the site allocation selection process. This policy is unlikely to have significant effects on the Oxford Meadows SAC.
Chapter 4			
Policy G1: *Protection of Green Infrastructure*	A	Policy sets out approach for protecting and enhancing the GI network, defines residential	Policy unlikely to have impacts on the Oxford Meadows SAC as provides protection for GI

1617

		garden land and provides policy protection for trees and ancient woodland and other GI features (e.g., hedgerows)	network and features and provides a definition of residential garden land.
Policy G2: *Enhancement and provision of new green and blue features*	A	Policy about delivering new green and blue infrastructure features as part of new development proposals including public open space and management arrangements.	Policy unlikely to have impacts on the Oxford Meadows SAC as related to delivering opportunities for green and blue features and associated management arrangements.
Policy G3: *Provision of new green and blue features – Urban Greening Factor (UGF)*	A	Policy regarding delivering new GI features in new developments using urban greening factor metric.	Policy unlikely to have impacts on the Oxford Meadows SAC as related to delivering a range of on-site improvements for new developments.
Policy G4: *Delivering mandatory net gains in biodiversity*	A	Policy setting out the percentage of net gain to be delivered as part of developments in Oxford.	Policy unlikely to have impacts on the Oxford Meadows SAC as it sets the amount of net gain required to be delivered as part of new developments in the city.
Policy G5: *Delivering onsite ecological enhancements*	A	Policy seeking ecological enhancements as part of new development proposals	Policy unlikely to have an impact on the Oxford Meadows SAC as it requires developments to deliver a minimum amount of ecological enhancements.
Policy G6: *Protecting Oxford's biodiversity including the ecological network*	A	Policy providing protection of Oxford's ecological network of designated sites and other features of interest	Policy unlikely to have an impact on the Oxford Meadows SAC as seeks to provide for the safeguarding conservation and enhancement of biodiversity in Oxford

Policy G7: *Flood risk and Flood Risk Assessments (FRAs)*	A	Policy setting out how flood risk will be considered as part of development proposals, including when the LPA will require a flood risk assessment.	Policy unlikely to have an impact on the Oxford Meadows SAC as sets out the types of development that require a flood risk assessment.
Policy G8: *Sustainable Drainage Systems (SuDS)*	A	Policy setting out circumstances when Sustainable Drainage Systems (SuDS) will be required as part of development proposals and how SuDS should be incorporated into schemes.	Policy unlikely to have an impact on the Oxford Meadows SAC as it sets out when development proposals will require SuDs and how they should be delivered.
Policy G9: *Resilient design and construction*	A	Policy setting out how design and construction measures that help mitigate climate change have been incorporated into development proposals.	Policy unlikely to have an impact on the Oxford Meadows SAC as it relates ensuring the design of development proposals helps to mitigate the impacts of climate change.
Chapter 5			
Policy R1: *Net zero buildings in operation*	A	Policy setting out how development proposals are to achieve energy reductions to deliver net zero.	Policy unlikely to have an impact on the Oxford Meadows as concerned with how the developments will reduce energy use in their operational stages.
Policy R2: *Embodied carbon in construction*	A	Policy setting out how embodied carbon should be limited focusing on the construction process	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with limiting the amount of carbon used focusing on the construction process

Policy R3: *Retro-fitting existing buildings*	A	Policy supporting retrofit measures to help mitigate and adapt existing buildings to minimise climate change impacts.	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with delivering climate change mitigation and adaptation measures to existing buildings
Policy R4: *Air quality assessments and standards*	A	Policy setting out the circumstances when development proposals require an assessment of air quality to ensure that the impact of new development on air quality is minimised.	Policy unlikely to have an impact on the Oxford Meadows SAC as it sets the requirements when an air quality assessment is required as part of new development proposals.
Policy R5: *Water resources and and quality*	A	Policy to promote water efficiency, SuDS, and which sets out how to deal with wastewater as part of development proposals	Policy unlikely to have an impact on the Oxford Meadows SAC as it sets requirements for water efficiency, water quality and wastewater expected from new developments.
Policy R6: *Soil quality*	A	Policy setting out how development proposals are expected to demonstrate how any impacts on soils have been mitigated.	Policy unlikely to have an impact on the Oxford Meadows SAC as it sets out the requirements for addressing potential impacts on soil quality as part of development proposals.
Policy R7: *Land contamination*	A	Policy setting out the information required to be able to assess applications where there is the potential for impacts from contamination.	Policy unlikely to have an impact on the Oxford Meadows SAC as it sets out a requirement for additional information to be submitted where there is a risk of contamination as part of development proposals.

1620

Draft Policy R8: *Amenity impacts of development*	A	Policy setting out how amenity and environmental health impacts will be considered as part of development proposals.	Policy unlikely to have an impact on the Oxford Meadows SAC as it seeks to mitigate a range of factors which could have an impact on amenity.
Chapter 6			
Policy HD1: *Principles of high quality design*	A	Policy seeks to ensure high-quality design in development proposals.	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with ensuring development proposals are of the highest design quality
Policy HD2: *Making efficient use of land*	A	Policy setting out how development proposals on Listed Buildings should be considered in the planning process	Policy unlikely to have an impact on the Oxford Meadows SAC as it is concerned with how development proposals are assessed on Listed Buildings.
Policy HD3: Designated h*eritage assets*	A	Policy setting out how development proposals that have an impact on Designated heritage assets are assessed	Policy unlikely to have an impact on the Oxford Meadows SAC as it is concerned with the impact of development proposals on Designated heritage assets .
Policy HD4: *Non-designated heritage assets*	A	Policy defines a non-designated heritage asset and sets out the process by which these assets are to be considered when determining planning applications	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with how nondesignated heritage assets are considered during the planning process.
Policy HD5: *Archaeology*	A	Policy setting out how archaeological deposits will be	Policy unlikely to have an impact on the Oxford Meadows SAC as it addresses how

		considered as part of the application process.	archaeological deposits will be considered in development proposals.
Policy HD6: *Views and building heights*	A	Policy seeking to protect views of Oxford's historic skyline.	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with the heights and visual impact of development proposals.
Policy HD7: *Health Impact Assessment*	A	Policy setting out when a Health Impact Assessment should be submitted as part of development proposals and what it should contain.	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with when a Health Impact Assessment should be submitted to inform development proposals and what it should contain.
Policy HD8: *Privacy, daylight and sunlight*	A	Policy setting out how the impacts of development proposals will be assessed in terms of privacy, sunlight and daylight.	Policy unlikely to have an impact on the Oxford Meadows SAC as it relates to how the impact of development proposals will be assessed.
Policy HD9: *Internal space standards for residential development*	A	Policy setting out that internal space standards for residential developments will follow nationally described space standards.	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with quantity of internal space standards as part of new development proposals.
Policy HD10: *Outdoor amenity space*	A	Policy setting out requirements for outdoor amenity space to be delivered as part of development proposals.	Policy unlikely to have an impact on the Oxford Meadows SAC as concerned with amount of onsite amenity space required as part of development proposals.
Policy HD11: *Accessible and adaptable homes*	A	Policy setting out the amount of affordable and market homes to	Policy unlikely to have an impact on the Oxford Meadows SAC as it sets out the proportion of

		be delivered that comply with accessible standards.	accessible and adaptable homes to be delivered as part of development proposals.
Policy HD12: *Bin and bike stores and external servicing features*	A	Policy setting out how external servicing features (including bin and bike stores) will be considered as part of development proposals	Policy unlikely to have an impact on the Oxford Meadows SAC as is concerned with small scale onsite measures.
Chapter 7			
Policy C1: *City, district and local centres*	A	Policy setting out the types of uses suitable for Oxford's city, district and local centres. Policy also includes requirements for sequential test for town centre uses.	Summertown is identified as a district centre. As such it is likely that some additional residential an non-residential development will be located on brownfield sites in this location. Any individual sites allocated for development within Summertown district centre will be picked up through the technical work underpinning the site allocation selection process. This policy is unlikely to have significant effects on the Oxford Meadows SAC.
Policy C2: *Maintaining vibrant centres*	A	Policy sets out how development proposals within the city and district centres can maintain active frontages to help maintain the vibrancy of centres. Includes locally specific	Policy unlikely to have an impact on the Oxford Meadows SAC as related to protection of existing facilities and provision of new ones in suitably accessible locations.

		requirements for each of the city and district centres.	
Policy C3: *Protection, alteration and provision of local community facilities*	A	Policy setting out how local community facilities will be protected when they form part of development proposals. Also sets out support for new community facilities in appropriate locations.	Policy unlikely to have an impact on the Oxford Meadows SAC as related to protection of existing facilities and provision of new ones in suitably accessible locations.
Policy C4: *Protection, alteration ande provision of learning and non-residential institutions*	A	Policy setting out how learning and non-residential institutions will be protected when they form part of development proposals. Also sets out support for new learning and non-residential institutions in appropriate locations.	Policy unlikely to have an impact on the Oxford Meadows SAC as related to protection of existing facilities and provision of new ones in suitably accessible locations.
Policy C5: *Protection, alteration and provision of cultural venues and visitor attractions*	A	Policy setting out how cultural venues and visitor attractions will be protected when they form part of development proposals. Also sets out support for new cultural venues and visitor attractions in appropriate locations	Policy unlikely to have an impact on the Oxford Meadows SAC as related to protection of existing facilities and provision of new ones in suitably accessible locations
Policy C6: *Transport Assessments, Travel Plans and Service and Delivery Plans*	A	Policy setting out requirements for when Transport Assessments, Travel Plans and Service and Delivery Plans	Policy unlikely to have an impact on the Oxford Meadows as it relates to the conditions when

		should accompany a planning application.	certain applications should be accompanied by additional transport-related evidence.
Policy C7: *Bicycle and powered two wheelers parking design standards*	A	Policy setting out how bicycle and powered two-wheeler parking should be provided as part of development proposals.	Policy unlikely to have an impact on the Oxford Meadows SAC as it relates to the amount of cycle parking and parking for powered two-wheelers to be provided as part of development.
Policy C8: *Motor vehicle parking design standards*	A	Policy setting out how parking levels should be assessed as part of development proposals including providing requirements for low-car schemes.	Policy unlikely to have an impact on the Oxford Meadows SAC as provides car parking standards for development proposals including providing requirements for low-car schemes.
Chapter 8			
Policy I1: *Digital infrastructure to support new development*	A	Policy supporting the delivery of appropriate digital infrastructure as part of new development proposals	Policy unlikely to have an impact on the Oxford Meadows SAC as it supports the delivery of appropriate digital infrastructure as part of new development proposals.
Policy I2: *Land safeguarded for Infrastructure*	A	Policy requiring development proposals to undertake specific measures where they occur on of land required for specific named infrastructure schemes governed by separate consenting regimes	Policy unlikely to have an impact on the Oxford Meadows SAC as it requires development proposals to undertake specific measures where they occur on the land identified through this policy.

Table A2.2 – Assessment of site allocations within the Oxford Local Plan Regulation 19 "Proposed Submission" Document

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
		North Infrastructure Area	
	Northern Edge of Oxford Area of Focus (AOF)	The Area of Focus will not allocate specific sites but instead will set out broad infrastructure requirements and other non-site-specific policy aspects	No likely significant effects identified.
SPN1	Diamond Place and Ewert House	Site is located more than 200m away from SAC but within the buffer zone for recreational impacts (1,900m). Site lies within an area of potential hydrological connectivity with the SAC. Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	Potential for recreational impacts on SAC as site allocation policy includes a mix of uses including residential Potential for water quantity and quality impacts due to site's location on the North Oxford Gravel Terrace
SPN2	Elsfied Hall, Elsfield Way	Site is located more than 200m away from the SAC but within the buffer zone for recreational impacts (1,900m) and within an area of potential hydrological connectivity with the SAC. Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling.	Potential for recreational impacts on SAC as site allocation policy includes residential Potential for water quantity and quality impacts due to site's

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
		Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	location on the North Oxford Gravel Terrace
SPN3	Oxford North Remaining Phases	Site is more than 200m away from the SAC. Site allocated for a mix of housing and employment uses. Previous HRA work for the site included screening and appropriate assessment stages. The appropriate assessment concluded that there would be no likely significant effects as a result of the mitigation measures proposed. These mitigation measures were embedded within the previous policy framework (AAP) and have been transferred into the Reg. 19 Plan policy for this site. Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	Previous HRA work suggested mitigation measures to reduce the risk of recreational impacts. Increased amount of public open space provided at the site. HRA for AAP also investigated impacts on balanced hydrological regime and concluded no significant effects.
SPN4	Oxford University Press Sports Ground, Jordan Hill	The site is located more than 200m away from SAC but within the buffer zone for recreational impacts (1,900m). Outside the area of potential	Potential for recreational impacts on SAC as site allocation policy includes residential

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
		hydrological connectivity with the Oxford Meadows SAC. Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	
SPN5	Pear Tree Farm	The site is located more than 200m away from SAC but within the buffer zone for recreational impacts (1,900m). Outside the area of potential hydrological connectivity with the Oxford Meadows SAC. Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	Potential for recreational impacts on SAC as site allocation policy includes residential
SPN6	Red Barn Farm	The site is located more than 200m away from SAC but within the buffer zone for recreational impacts (1,900m) as Outside the area of potential hydrological connectivity with the Oxford Meadows SAC.	Policy E1 allows residential uses to be delivered at employment sites. As such potential for recreational impacts on SAC

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
		Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	
		South Infrastructure Area	
	Cowley Branch Line Area of Focus (AOF)	The whole of the Southern Infrastructure Area lies outside the buffer zones for recreational impacts and outside of the potential groundwater recharge zone for the SAC. Transport modelling that informs the air quality screening takes account of all sites in the plan.	Site allocations and development likely to come forward within this Area of Focus are unlikely to have a significant impact on the Oxford Meadows SAC.
SPS1	474 Cowley Road	All sites listed here are outside the buffer zones for recreational impacts (1,900m) and do not lie in an area of hydrological connectivity to the site.	Sites listed here are unlikely to have a significant impact on the Oxford Meadows SAC due to their location.
SPS2	ARC Oxford		
SPS3	Bertie Place Recreation Ground		
SPS4	Cowley Marsh Depot		
SPS5	Crescent Hall	Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	Sites listed are screened out from further assessment.
SPS6	Former Iffley Mead Playing Field		
SPS7	Kassam Stadium		

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
SPS8	Land at Meadow Lane		
SPS9	Littlemore Mental Health Centre		
SPS10	MINI Plant Oxford		
SPS11	Overflow Car Park at Kassam		
SPS12	Oxford Science Park		
SPS13	Ozone Leisure Park		
SPS14	Redbridge Paddock		
SPS15	Sandy Lane Recreation Ground		
SPS16	Templars Square		
SPS17	Unipart Site		
		East Infrastructure Area	
	Marston Road and Old Road Area of Focus	The entire Marston Road and Old Road Area of Focus lies outside the buffer zones for recreational impacts (1,900m) and does not lie in an area of hydrological connectivity to the site. Air quality impacts of the whole plan (on SAC) have been assessed using transport modelling.	Site allocations and development likely to come forward within this Area of Focus are unlikely to have a significant impact on the Oxford Meadows SAC.

		Central and West Infrastructure Area	
NCCAOF	University Areas North of the City Centre Area of Focus	Areas of focus will not allocate sites but rather set out broad infrastructure requirements and other non-site-specific policy aspects.	No likely significant effects identified.
WEBRAOF	West End and Botley Road Area of Focus	Areas of focus will not allocate sites but rather set out broad infrastructure requirements and other non-site-specific policy aspects.	No likely significant effects identified.
SPCW1 SPCW2 SPCW3 SPCW5 SPCW7	Banbury Road University Sites Botley Road sites around Cripley Road inc. River Hotel and Westgate Hotel Canalside Land, Jericho Jowett Walk Nuffield Sites	All sites listed here are within the buffer zone for recreational impacts (1,900m) and are not located in an area of hydrological connectivity with the SAC. Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	Sites allocated for a ranges of uses including residential. Some also allocated for student accommodation. Sites carried forward for further assessment as part of Stage 2 Appropriate Assessment for recreational impacts

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
SPCW8 SPCW9 SPCW10 SPCW11 SPCW12	Osney Mead Oxford Railway Station and Becket Street Car Park Oxpens St Thomas School and Osney Warehouse West Wellington Square		
SPCW4 SPCW6	Faculty of Music, St Aldates Manor Place	All sites listed here are outside the buffer zone for recreational impacts (1,900m) and are not located in an area of hydrological connectivity with the SAC. Air quality impacts of the whole plan (on SAC) have been assessed using traffic modelling. Results presented in chapter 5 of the Oxford HRA Screening Report and within the Screening Update in Chapter 4 of this HRA Report.	Sites listed here are unlikely to have a significant impact on the Oxford Meadows SAC due to their location. Sites listed are screened out from further assessment.
	Employment Sites		
		All employment sites more than 1,900m from the Oxford Meadows were screened out from the assessment.	

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
E1	Oxford North ROQ Site Oxford University Press Jordan Hill Business Park Banbury Road	All sites listed here are Key Employment Sites within the buffer zone for recreational impacts (1,900m) and are located in an area of potential hydrological connectivity with the SAC. Air quality impacts of the whole plan (on SAC) have been assessed using transport modelling. Results presented in section 5 of this HRA Screening.	Further investigation is needed for those employment sites less than 1,900m from the Oxford Meadows SAC as the plan's employment strategy now promotes an element of housing on all employment sites. As such the Stage 2 assessment will look at these sites in more detail. Potential for water quantity and quality impacts due to site's location on or near the North Oxford Gravel Terrace to be investigated further as part of Stage 2 Appropriate Assessment
E1	Osney Mead Botley Road Retail Park	All sites listed here are Key Employment Sites within the buffer zone for recreational impacts (1,900m) and are not located in an area of hydrological connectivity with the SAC. Air quality impacts of the whole plan (on SAC) have been assessed using transport modelling.	Further investigation is needed for those employment sites less than 1,900m from the Oxford Meadows SAC as the plan's employment strategy now promotes an element of housing on all employment sites. As such the Stage 2 assessment

Ref:	Name	If the policy has no effect, the reason why	Possible impacts on SAC
		Results presented in section 5 of this HRA Screening.	will look at these sites in more detail.

Table A2.3 Sites and Policies within the Oxford Local Plan 2045 with potential impact pathways to the Oxford Meadows SAC

Impact Pathway	Policy areas and sites	Magnitude/ Duration / Location	Conclusions
Air Pollution	*Policy areas:* Policy S1 – Spatial Strategy Policy H1 – Housing Requirement *Sites:* Traffic modelling has been undertaken which considers how the development proposed through the Local Plan ('in-combination' with othe relevant plans and projects) is likely to impact air quality at the Oxford Meadows SAC.	Natural England Guidance on Air Quality suggests that increases in trips under 1,000 AADT (Cars/ LGVs) or under 200 AADT (HDV) can be screened out from further assessment. It is assumed that all sites will be developed within the Local Plan period. Any impacts would therefore occur within this period. Sites put forward across the city have the potential to change traffic flows on A34 and A40 which are adjacent to the Oxford Meadows SAC.	Traffic modelling has been undertaken to support the Local Plan. The results of this modeling are discussed as part of a "Screening Update" presented in chapter 5 of this HRA report. This updates the work previously undertaken as part of the Oxford HRA Screening Report.
Recreational Pressure	*Policy Areas:* Policy S1 – Spatial Strategy Policy H1 – Housing Requirement Policy E1 – Employment Strategy *Site Allocations* Policy SPN1: Diamond Place and Ewert House Policy SPN2: Elsfield Hall, Elsfield Way Policy SPN3 Oxford North Remaining Phases	Policy E1 supports an element of housing on Key Employment Sites Mix of uses includes residential Mix of uses includes residential Mix of uses includes residential	Sites were screened out of this part of the assessment where they were more than 1,900m from the SAC.

	Policy SPN4: OUP Sports Ground, Jordan Hill Policy SPN5: Pear Tree Farm Policy SPCW1: Banbury Road University Sites – Parcel B Policy SPCW2: Botley Road sites around Cripley Road including River Hotel and Westgate Hotel Policy SPCW3: Canalside Land, Jericho Policy SPCW5 Jowett Walk (South) Policy SPCW8 Osney Mead Policy SPCW12 West Wellington Square <u>*Key Employment Sites*</u> *Oxford North* *Radcliffe Observatory Quarter (ROQ site)* *Oxford University Press* *Oxford University Science Area and Keble Road Triangle* *Osney Mead* *Jordan Hill Business Park* *Botley Road Retail Park*	Mix of uses includes residential Mix of uses includes residential Mix of uses includes residential Mix of uses includes residential Mix of uses includes residential Mix of uses includes residential Mix of uses includes residential Mix of uses includes residential The Employment Strategy (Policy E1) creates an opportunity for housing to be delivered on the city's employment sites As such, all Key Employment Sites within 1,900m of the Oxford Meadows are taken forward for further consideration as part of the Stage 2 Appropriate Assessment	Where it was not possible to rule out residential on-site allocations proposed within the 1,900m "buffer zone", these sites were taken forward on a precautionary basis. Creeping marshwort (the Schedule 2 plant) found at Port Meadow is less sensitive to trampling. It relies on grazing (by cattle and horses in this instance) to limit competition and help create the conditions in which it can grow. However, dog fouling is considered more of an issue.
Water Quantity (groundwater flow and recharge)	<u>Policy Areas:</u> Policy S1 – Spatial Strategy Policy H1 – Housing Requirement <u>Sites:</u>	Where sites are located on the North Oxford Gravel Terrace, it is important that the same amount of surface water is able to recharge the groundwater after development is completed.	These sites are all on the North Oxford Gravel Terrace. Policy provision exists in the adopted Local Plan 2036 to ensure groundwater flow and

	Policy SPN1 – Diamond Place and Ewert House Policy SPN2: Elsfield Hall, Elsfield Way Policy SPCW1: Banbury Road University Sites – Parcel B	It is anticipated that all sites will be developed within the Local Plan period. Any impacts would therefore occur within this period. The sites listed are all on the North Oxford Gravel Terrace.	recharge are not impeded by development in this location. The Stage 2 Appropriate Assessment will consider further and make recommendations (as required) to ensure that there are no likely significant effects on the Oxford Meadows SAC resulting from the the policies and site allocations proposed in the Oxford Local Plan 2045.
Water Quality (groundwater recharge)	<u>Policy Areas:</u> Policy S1 – Spatial Strategy Policy H1 – Housing Requirement <u>Sites:</u> Policy SPN1 – Diamond Place and Ewert House Policy SPN2: Elsfield Hall, Elsfield Way Policy SPCW1: Banbury Road University Sites – Parcel B	Where sites are located on the North Oxford Gravel Terrace, it is important that the quality of surface water that is recharged to groundwater is maintained after development is completed. It is anticipated that all sites will be developed within the Local Plan period. Any impacts would therefore occur within this period. The sites listed are all on the North Oxford Gravel Terrace.	These sites are all on the North Oxford Gravel Terrace. Policy provision exists in the adopted Local Plan 2036 to that the quality of surface water that is recharged to groundwater is not significantly affected by development in this location. The Stage 2 Appropriate Assessment will consider further and make recommendations (as required) to ensure that there are no likely significant effects on the Oxford Meadows SAC resulting from the the policies and site allocations proposed in the Oxford Local Plan 2045.

Appendix 3: Oxford Meadows Visitor Survey Report

Oxford Meadows Visitor Survey Report

Introduction

A visitor survey of Oxford Meadows was commissioned to understand how the site is currently used by the population of Oxford and by visitors from outside of the city.

Method

Through discussions with Natural England and investigations of best practice examples, an onsite visitor survey questionnaire was designed.

The survey was carried out:

- on 6 days including a range of weekend and weekday dates (18 May 2025, 19 May 2025, 20 May 2025, 25 May 2025, 26 May 2025, 27 May 2025)
- both within and outside the school "summer" half term
- during four 2-hour periods each day (07:00-09:00, 10:00-12:00, 13:00-15:00, 16:00-18:00)
- at two locations (one to the north at the Wolvercote car park off Godstow Road, and one to the south at the car park off Walton Well Road)

The survey questionnaire asked a series of 11 questions:

<u>About you:</u>

- Question 1: How many adults, children and dogs make up your group?
- Question 2: Which postcode have you travelled from to visit this site?
- Question 3: Which best describes you?

<u>About today's visit:</u>

- Question 4: How did you get here today?
- Question 5: How long have you spent / will you be spending here today?
- Question 6: What is the main purpose of your visit today?

<u>About other visits:</u>

- Question 7: How often do you visit this site?
- Question 8: Do you tend to visit this site at a certain time of day?
- Question 9: What time of year do you visit this site?

- Question 10: Aside from this location do you visit any other places for similar purposes?
- Question 11: What facilities do you think are important to your enjoyment of open spaces in the Oxford area?

Results

486 interviews were conducted, comprising a total of 908 visitors.

Question 1: Size of group as percentage of all interviews (486); and percentage of all interviews (486) with 1 or more dogs

Group size	1 person	2 people	3 people	4 people	5+ people
Total	48%	37%	7%	4%	4%

With dog
32%

Age of visitors, as percentage of responses given (905 visitors)

Age	Under 18	18-40	41-65	65+
Total	9%	36.4%	40.2%	14.5%

Question 2: Postcode of visitor origin, as percentage of responses given (486)

Oxfordshire	%	Outside Oxfordshire	%	Outside UK	%	Combinations	%
OX1	14.6	BS7	0.4	Canada	0.2	OX1/BS9	0.2
OX2	55.8	CB24	0.2	France	0.2	OX3/Manchester	0.2

OX44	0.2	SW3	0.2				
OX1/OX2	0.6						
OX1/OX4	0.2						
OX2/OX4	0.4						
OX2/OX3/OX5	0.2						
OX2/OX10	0.2						
OX5/OX29	0.2						
Total	**94**		**4**		**1.6**		**0.4**

Question 3: Resident or visitor, as percentage of responses given (908)

	Permanent resident of Oxford	Temporary resident of Oxford	Resident elsewhere in Oxfordshire	Visitor/holiday maker
Total	75.6%	9.2%	6%	9.1%

Question 4: Mode of travel to arrive at site, as percentage of responses given (819)

	Walk	Cycle	Bus	Car	Other
Total	49.5%	6.2%	3.7%	37.2%	3.4%

Question 5: Length of visit, as percentage of responses given (483)

	Less than 1 hour	1-2 hours	2-3 hours
Total	50.1%	38.9%	11%

Question 6: Purpose of visit, as percentage of responses given (504)

	Dog walking	Walking	Jogging/ running	Cycling	Family outing	Nature	Other
Total	30.4%	49.8%	5.4%	2%	3.8%	1%	7.7%

Question 7: Frequency of visit(s), as percentage of responses given (635)

	Daily	Weekly	Monthly	Occasionally	Don't know
Total	26%	45.7%	10.9%	11.7%	5.8%

Question 8: Time(s) of visit(s), as percentage of responses given (845)

	Before 09:00	09:00-12:00	12:00-14:00	14:00-16:00	After 16:00	Don't know/ First visit
Total	20.4%	15.6%	13.7%	19.1%	21.4%	9.8%

Question 9: Season(s) of visit(s), as percentage of responses given (520)

	Year-round	Spring	Summer	Autumn	Winter
Total	74.4%	9.4%	11%	4.8%	0.4%

Question 10: Other site(s)/area(s) visited for similar purpose(s), and number of independent mentions (279)

Site/Area	# of mentions	Site/Area	# of mentions
Uni Parks	148	Sunnymead	2
Cutteslowe	26	Acorn Field	1
Shotover	18	Bagley Woods	1
Christchurch	17	Bernwood	1
Florence Park	13	Godstow Nunnery	1
Wytham Woods	11	Iffley Lock	1
South Parks	7	Marston	1
Hinksey Park	5	New College	1
Botanical Gardens	4	Osney	1
Boars Hill	3	Otmoor	1
Cumnor Hurst	3	Radley	1
Abbey Meadows	2	River	1
Burgess Field	2	Thrupp	1
Marston Meadow	2	Trap Grounds	1
Oxford Canal	2	Warneford Meadow	1

Question 11: Rating of importance of individual factors in enjoyment of open spaces in Oxford area, as percentage of responses given (485)
(Key: V: very important / Q: quite important / N: not important)

	Benches			**Litter bins**			**Dog bins**		
	V	Q	N	V	Q	N	V	Q	N
Total	35.7%	14%	50.3%	75.3%	8%	16.7%	57.1%	7.6%	35.3%
	Information boards			**Parking**			**Cycle parking**

	V	Q	N	V	Q	N	V	Q	N
Total	52.6%	9.1%	38.4%	23.9%	8.2%	67.8%	90.1%	5.2%	4.7%

	Wildlife			**Habitats**			**Water**		
	V	Q	N	V	Q	N	V	Q	N
Total	90.1%	5.4%	4.5%	89.1%	5.4%	5.6%	74.2%	10%	16.1%
	Feeling safe			**Quietness**			**Dog off lead**		
	V	Q	N	V	Q	N	V	Q	N
Total	89.1%	6.4%	4.5%	66%	16.1%	17.9%	46.4%	8.2%	4.5%

Analysis

In order to interpret the survey data and project the total number of visitors to the site the following calculation was carried out. The methodology broadly follows that used by Bracknell Forest DC in the Thames Basin Heaths SPA analysis as recommended by Natural England as best practice.

	Calculation and/ or reference		Result
Total number of visits over survey period	Taken from survey data	A	908
Percentage of visits over survey period from within postcode sectors OX1 and OX2	Taken from survey data	B	70.4%
Projected total number of visits, per annum	See "Table 1" below	C	306,600
Projected total number of visits from within postcode sectors OX1 and OX2, per annum	(C/100) x B	D	215,846
Population of postcode sectors OX1 and OX2	Taken from 2021 Census	E	68,549
Projected visits per head of OX1 and OX2 population, per annum	D/E	F	3.1
Projected future population arising from new potential development	See Table 2 below	G	2,208
Projected visits per annum arising from projected future population	G x F	H	6,951
% of projected future visits, as it relates to current projected total visits	(H/C) x 100	I	**2.27%**
Projected future population arising from 'in-combination impacts'	See Table 3 below	J	3,400
Projected visits per annum arising from projected future 'in-combination impacts' population	F x J	K	10,706
% of projected 'in-combination impacts' visits, as it relates to current projected total visits	(K/C) x 100	L	**3.49%**
% of projected 'alone' and 'in-combination impacts' visits as it relates to current total projected visits	I + L		**5.76%**

Table 1

Total number of visitors recorded during this survey	908
Number of surveyed access points	2
Mean number of visitors per surveyed access point	454
Number of hours of surveying per access point	48
Mean number of visitors per surveyed access point, per hour	10
Total active hours per day (06:00-20:00)	14
Projected mean number of visitors per surveyed access point, per day	140
Projected mean number of visitors per surveyed access point, per year	51,100
Total number of access points to the SAC	6
Projected total number of visitors per year to the SAC	306,600

Table 2 – Local Plan 2045 'alone' impacts

'Site'	Number of units	Number of residents
Oxford Local Plan 2045 (sites within 1,900m of SAC	883	2,208

Table 3 – Local Plan 2045 'in-combination' impacts

'Site'	Number of units	Number of residents
Cherwell DC (sites within 1,900m of SAC	1,360	3,400

Points to be Noted:

The interviews were conducted in early summer and visitor access patterns may be different when compared to the rest of the year. The surveys included the school half term period in order to reflect the difference between school holidays and term-time.

The data shows that people going for a walk visit the site the most frequently (dog-walking was the second most frequent purpose of visit). As dogs need exercising on a daily basis, the dog walkers interviewed are therefore likely to represent a relatively constant sample of visitors, and usage would be likely to be similar throughout the year. During the winter, the proportion of dog walkers to other users may be higher as the numbers of people cycling, picnicking, etc., would likely be less.

There are 6 access points to Oxford Meadows (via the Wolvercote car park; via the right of way at the entrance to Wolvercote off Godstow Road; via Godstow Road; via the bridge at Aristotle Lane; via the bridge across the river from Binsey; and via the car park off Walton Well Road). The two survey points that were selected are both car parks and so it is possible that the survey results are slightly skewed towards arrivals by car – although this does not seem to be particularly evident for the southern access point that was surveyed.

Appendix 1 – Further information 50

1. Introduction

The role of the Infrastructure Delivery Plan

1.1 Infrastructure delivery and funding is complex. Establishing a reliable, concise and flexible Infrastructure Delivery Plan (IDP) is therefore important in ensuring that investment decisions are based on a sound understanding of infrastructure needs, maximising the return to the public. Having an up-to-date IDP in place offers greater certainty to service providers, funders and developers about how infrastructure will be delivered, enabling growth and encouraging investment.

1.2 The Local Plan covers the period from 2025 to 2045. It is clear in recognising the importance of identifying infrastructure needs and providing methods for funding and delivery. The preparation of the Local Plan is supported by this IDP, which identifies a number of infrastructure needs and schemes to help meet those needs.

1.3 IDPs should be treated as 'live documents' which provide a snapshot at a point in time. As such, they should be updated regularly as development proposals and other circumstances in the city change. This version of the IDP has been produced to support the Local Plan 2045 Regulation 19 Document, often referred to as the "Proposed Submission" version of the Plan.

2. Policy Context

Introduction

2.1 This policy context review is not exhaustive. It merely provides a flavour of some of the key policies, frameworks and organisations at the national and the local/ regional level which play an important role in infrastructure delivery and planning.

National Context

The National Planning Policy Framework (NPPF)

2.2 At the time of writing, the most recent version of the NPPF was published in December 2024. The NPPF sets out that local planning authorities should prepare robust and evidence-based Local Plans that seek to deliver sustainable development. In fact, infrastructure provision has been integrated within the overarching economic objective for sustainable development. As part of the statutory requirement to produce a Local Plan, national policy places particular emphasis on local planning authorities to plan for the delivery of infrastructure to support future growth.

2.3 The Infrastructure Delivery Plan (IDP) is therefore an important part of the evidence base required to support local plans. One of the purposes of the IDP is to demonstrate that the infrastructure requirements necessary to support the level of housing and employment growth proposed can be delivered.

2.4 IDPs also provide details of the level of funding required, highlight potential funding sources, and outline foreseeable funding challenges. IDPs are a key tool for local authorities when negotiating developer contributions through S106 agreements, or to help evidence the for charging under the Community Infrastructure Levey (CIL)

2.5 Paragraph 16 of the NPPF states that plans should be positively prepared, in a way which is aspirational but deliverable, while contributing to the achievement of sustainable development. Specifically, the NPPF considers that while strategic policies (paragraph 20) should set out the overall strategy for the pattern, scale and design quality of places and make sufficient provision for infrastructure including transport and community facilities, non-strategic policies (paragraph 29) also play an important role regarding infrastructure provision.

2.6 The NPPF considers planning policies should seek to address that lack of infrastructure as a potential barrier to economic growth and investment and highlights the importance of working with neighbouring authorities to develop cross-boundary infrastructure.

2.7 Paragraph 35 states:

Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required, along with other infrastructure (such as that needed for education, health, transport, flood and water management, green and digital infrastructure). Such policies should not undermine the deliverability of the plan.

Planning Practice Guidance (PPG)

2.8 The Planning Practice Guidance (PPG) on Plan-Making (paragraph 059, reference 61-059-20190315) explains the role and function of a Local Plan in delivering infrastructure. It sets out that the Local Plan should identify what infrastructure is required and how it can be funded and brought forward.

2.9 At an early stage in the plan making process, discussion with infrastructure and service providers should be undertaken to collaboratively identify infrastructure deficits and requirements, and opportunities for addressing them. In doing so, local planning authorities should:

- Assess the quality and capacity of infrastructure, and its ability to meet forecast demands. Policies should set out how identified deficiencies will be addressed; and
- Take account of strategic infrastructure, including nationally significant infrastructure, within these areas.

2.10 The PPG also provides that local authorities should ensure that the combined total impact of requests for developer contributions towards infrastructure, and development plan policies more generally, should not threaten the deliverability of the plan. With regards to CIL, the PPG (paragraph 001 Reference ID 25-001-20190901) states that:

The Community Infrastructure Levy (the 'levy') is a charge which can be levied by local authorities on new development in their area. It is an important tool for local authorities to use to help them deliver the infrastructure needed to support development in their area.

Levelling Up and Regeneration Act (2023)

2.11 The Levelling Up and Regeneration Act will strengthen infrastructure delivery, enabling a more strategic and unified approach to infrastructure planning and delivery and allowing planning authorities to plan for infrastructure that is required to support growth and demonstrate the deliverability of their plan.

Planning and Infrastructure Bill

2.12 According to the Guide the Planning and Infrastructure Bill, this piece of legislation is central to the government's plan to get Britain building again and deliver economic growth by speeding up and streamlining the delivery of new homes and critical infrastructure.

2.13 The Planning and Infrastructure Bill includes measures to speed up the delivery of 1.5 million homes and major infrastructure projects, reform the consenting process for Nationally Significant Infrastructure Projects (NSIPs), and proposes to introduce new tools for local planning authorities to help unlock growth.

Local and Regional Context

Oxford Cambridge Growth Corridor

2.14 Originally announced in January 2025, the delivery of the Oxford Cambridge Growth Corridor is predicted to boost the UK economy by up to £78 billion by 2035. More recently in October 2025, this has been supplemented by funding commitments to support key transformational infrastructure projects including the re-opening of the Cowley Branch Line to passenger services and the publication of an Investment Prospectus (October 2025).

Oxfordshire Infrastructure Strategy

2.15 Now in its third iteration, the production of the most recent version of this important strategy is well underway. With a focus on strategic infrastructure, it is anticipated that update to the Oxfordshire Infrastructure Strategy (OxIS) will once again provide useful support for infrastructure funding and delivery.

Oxfordshire County Council

2.16 Oxfordshire County Council is the upper-tier local authority covering Oxford City, Cherwell, South Oxfordshire, Vale of White Horse and West Oxfordshire districts. In this role the County Council is responsible for planning for minerals and waste, as

well as the delivery of education, transport, waste disposal, and community services such as social care and libraries.

2.17 The remaining infrastructure types included within the IDP are the responsibility of service providers and the City Council. The County Council produces a wide range of policy documents for each of its service areas.

Oxford Local Plan

2.18 Oxford City Council is producing a new Local Plan up to 2045. The Local Plan recognizes the importance of identifying and delivering appropriate infrastructure and community facilities to support the amount of development proposed.

2.19 In addition, the Local Plan acknowledges that the funding of infrastructure is crucial and must be delivered in a timely manner to support development. The Local Plan sets out that where development creates a need for new or improved infrastructure, contributions will be sought to make the development in planning terms.

Infrastructure Funding Statement

2.20 The Infrastructure Funding Statement (IFS) is a factual report which summarises the amount of developer contributions obtained, allocated and spent in the previous financial year.

2.21 This annual reporting requirement was introduced as part of the CIL regulations in 2019, with the objective of increasing transparency around how developer contributions are spent on infrastructure.

2.22 As required by the regulations, the contents of this report are divided into three key sections for the previous financial year:

- Information on CIL contributions
- Information on Section 106 Contributions
- Items of infrastructure that CIL is spent on in the next five years (according to the Council's Capital Programme at the end of the previous financial year).

2.23 The Oxford IFS is a live document and should be considered alongside the IDP and used for the Local Plan to inform future funding priorities. As an indication of key areas of expenditure.

2.24 The 2024/25 IFS noted that projects funded through a CIL contribution included:

- Blackbird Leys Regeneration;
- City-wide Cycling Improvements;
- East Oxford Community Centre;
- Oxford North Developer works.

2.25 In addition to this, 15% of CIL receipts can be passed directly to Parish Councils, or 25% in areas covered by a Neighbourhood Plan, to fund locally identified infrastructure. CIL contributions were provided for various organisations including:

- Blackbird Leys Parish Council
- Littlemore Parish Council
- Littlemore Parish Council
- Blackbird Leys Parish Council

3. Funding and Delivery

3.1 This IDP seeks to assess what infrastructure is required to meet growth identified in the Oxford Local Plan 2045, when these infrastructure interventions are required, and how much they will cost.

3.2 There are many sources of funding available for the provision of infrastructure. This section provides an overview of these funding sources to support the delivery of the required infrastructure to support the Plan.

Developer Contributions

3.3 Developer contributions assist in mitigating the impact of development, by providing funding or other non-monetary commitments (e.g., affordable housing provision) to make impacts acceptable in planning terms.

3.4 Developers may be asked to provide contributions for infrastructure in several ways. This may be through Community Infrastructure Levy (CIL) charges, Section 106 agreements with the local planning authority, and Section 278 agreements with the local highway authority for highway-related infrastructure works.

3.5 The previous Local Plan 2036 and its supporting IDP were prepared under the CIL (Amendment) Regulations 2014, which restricted the 'pooling' of separate Section 106 planning obligations. These restrictions meant that authorities were unable to combine more than five obligations to pay for a single piece of infrastructure.

3.6 This restriction was lifted as a result of the CIL (Amendment) Regulations 2019, meaning there is now more flexibility in terms of infrastructure which is able to be funded by Section 106 and CIL.

Community Infrastructure Levy

3.7 Oxford City Council is a Community Infrastructure Levy (CIL) Charging Authority. The Council's CIL Charging Schedule was adopted in 2013, since which time developers have been charged a fixed rate for each square metre (sqm) of new internal floor area that is created.

3.8 The CIL charging schedule is based upon studies of development viability within the city, with higher charges (£172.28 per sqm as of January 2025) for uses such as

residential and retail, and lower charges (£34.45 per sqm as of January 2025) for uses such as general industry and leisure.

3.9 In July 2025, the City Council formally adopted a revised CIL Charging Schedule, which came into force on 15 August 2025. The partial review focused on increasing CIL Rates for Office and R&D uses, which are now charged at the higher rate set out in the previous paragraph.

3.10 The City Council's Infrastructure Funding Statement (IFS) sets out the amount of CIL money process by the Council during each financial year. The 2024/25 IFS sets out that:

- £5.14million of CIL demand notices were issued to developers;
- £4.95million of CIL was received from developers; and
- £9.15million of CIL was spent during the year on projects including East Oxford Community Centre, Blackbird Leys Regeneration, Oxford North Developer works and City-Wide Cycling Improvements.

3.11 The IFS also sets out the schemes on which collected CIL monies will be spent – the Council currently holds just over £14.9 million of allocated CIL funding. This covers a wide range of infrastructure types including regeneration schemes and community facilities.

3.12 The Council allocates CIL to schemes on a case-by-case basis. This is done in response to business cases provided by infrastructure providers, an understanding of need, and the relative prioritisation given to each scheme. This update to the IDP provides important evidence to inform this case-by-case decision making.

Section 106 Contributions

Section 106 (S106) agreements can be made between developers and the Council to provide funding or infrastructure, or to make other legal commitments (e.g., affordable housing provision). Developer contributions are required to meet the following tests:

- Necessary to make the development acceptable in planning terms;
- Directly related to the development; and
- Fairly and reasonably related in scale and kind to the development.

3.13 The latest IFS sets out the amount of S106 money processed by the Council during the 2024/25 monitoring year:

- £351,089.94 of contributions were agreed with developers
- £856,701.04 of contributions were received from developers
- £1,046,290.11 of contributions were spent during the year
- 8 non-monetary contributions were also provided by developers through S106, including the provision of 201 affordable homes.

3.14 The City Council currently holds £13.94million of allocated S106 contributions. These will fund a wide variety of infrastructure types, including community facilities, highways/ transport and travel, green infrastructure and economic development. However, the majority of the unspent allocated contributions are for the provision of affordable housing.

Section 278 Agreements

3.15 Section 278 (S278) agreements can be made between developers and Oxfordshire County Council (as local highways authority) to make permanent alterations or improvements to a public highway, in connection with a planning approval.

3.16 The works covered by a S278 agreement could include changes to the highway to access a site (such as the provision of a new junction, traffic lights or other priority measures), as well as off-site works necessary to mitigate the impact of development (such as improvements to a nearby junction which will experience increased traffic flows).

3.17 A S278 agreement typically gives developers the authority to undertake works themselves (or for a contractor to do so on their behalf), with a requirement that works are completed to the satisfaction of the local highway authority. This means that all the costs associated with works under a S270 agreement are borne directly by the developer – money is not collected by the local authority.

Government Funding

3.18 It is typically expected that funding from developer contributions will not be enough to cover all the infrastructure costs for an area – particularly those which are not directly linked to the impacts of development. Funding from central government is therefore important in addressing funding gaps. These are typically competitive

processes, with funding bids required to demonstrate delivery against national objectives (such as increased rates of house-building or economic growth).

3.19 Government funding streams also tend to run as programmes and / or be awarded in rounds, meaning that the existence of a fund today cannot be taken that a fund will exist in the future.

3.20 Since 2014, OxLEP (now Enterprise Oxfordshire) has secured over £107.5m of investment to transform Oxfordshire businesses and communities through the government's Local Growth Fund. This had had a particular emphasis on infrastructure provision to support economic development. Specific schemes supported by the Local Growth Fund in Oxford include the Northway and Marston Flood Alleviation Scheme, the Centre for Technology and Innovation in Blackbird Leys, and Innovation laboratory space at the Wood Centre for Innovation.

3.21 Recent Government funding announcements include £120 million to re-open the Cowley Branch Line to passengers and create two new stations at Oxford Cowley and Oxford Littlemore.

Provision by Infrastructure Providers

3.22 Some infrastructure provision is made directly by infrastructure providers, as a result of external funding packages. This is particularly the case for utilities, where infrastructure providers develop investment packages for fixed periods of time (typically five years) in response to the levels of growth and pattern of demand changes that they expect. The costs associated with these are then agreed with the relevant industry regulator and reflected in bill payments by consumers.

3.23 Developers also pay connection charges to these providers, agreed between the two parties. They are known costs that should be factored in when considering the viability of development but are effectively third-party and the Council has no role in agreeing the charges nor seeking the money from developers.

Principles of cost apportionment

3.24 At present, according to the IFS, the City Council relies on CIL as the main source of developer funding for infrastructure. However, the City Council is able to supplement money collected through CIL with money collected through S106 for specific infrastructure schemes, where doing so would meet the tests set in

Regulation 122 of the Community Infrastructure Levy Regulations 2010 (as amended) - i.e., that the planning obligation is:

- Necessary to make the development acceptable in planning terms;
- Directly related to the development; and
- Fairly and reasonably related in scale and kind to the development.

4. Key Drivers of Change

4.1 There are a number of key drivers of change which will influence infrastructure planning within Oxford in the future and have therefore been important to consider throughout the preparation of the IDP. These key drivers of change have helped to frame discussions with stakeholders and inform many of the schemes set out in the Infrastructure Delivery Schedule.

Climate Change

4.2 The IDP must be considered within the context of the declaration of a climate emergency by Oxford City Council in January 2019, as well as the broader drive towards a zero carbon future to which Oxfordshire's local authorities, Enterprise Oxfordshire and the city's two universities are committed.

4.3 The Zero Carbon Oxfordshire Partnership (expanded from the Zero Carbon Oxford Partnership in March 2025) has an approved action plan to 2040 outlining the ways in which its wider targets can be achieved. The action plan also includes a set of immediate actions required before 2030 to remain on track. Net zero ambitions must inform decision making across all disciplines, which in turn, are likely to deliver subsequent co-benefits, such as achieving more inclusive growth, levelling up, and emphasising the importance of health and wellbeing.

4.4 While net zero targets must inform decision-making across all sectors, it is fundamental to the planning sector, with IDP's playing an important role in helping to ensure that new development meets these targets.

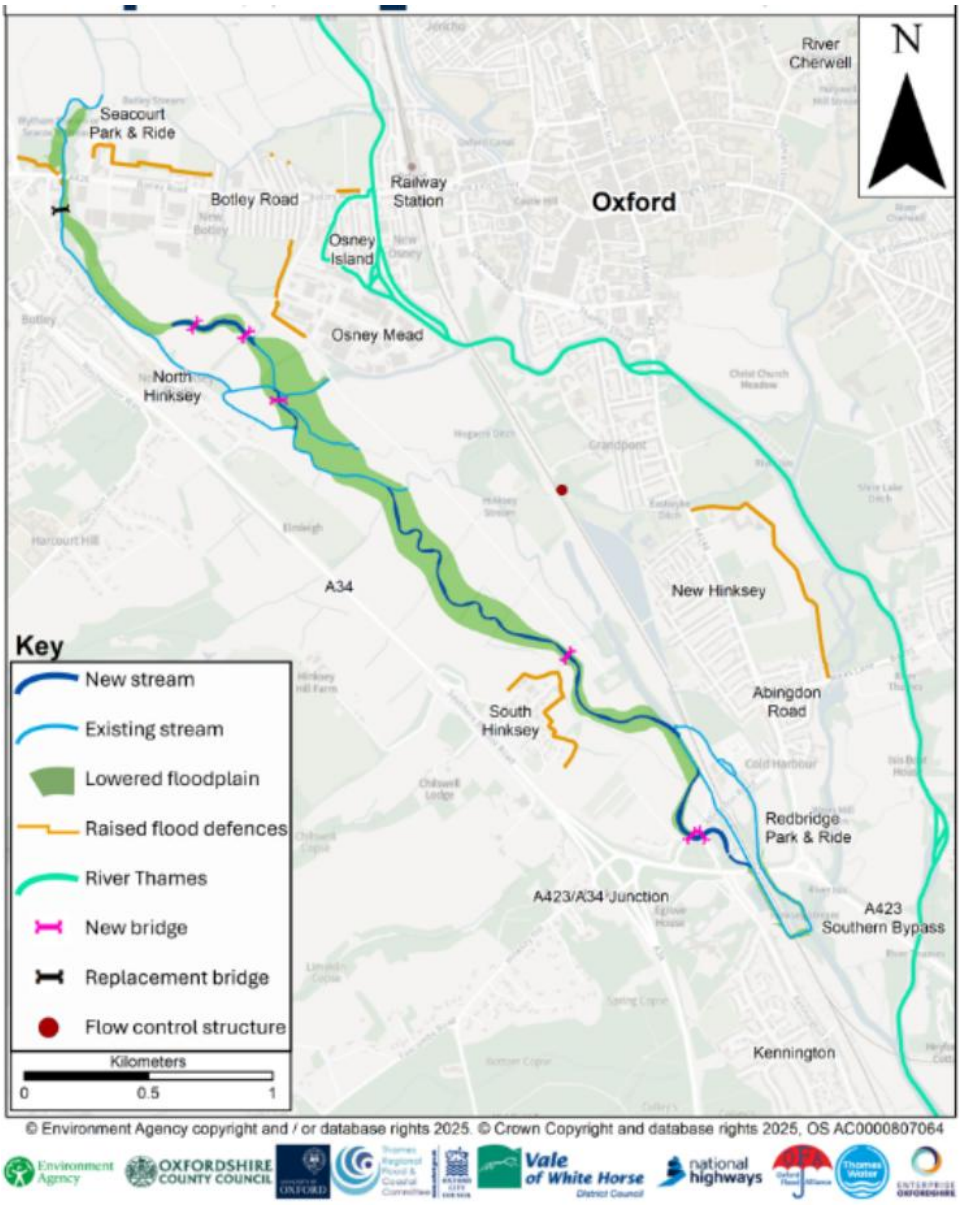
4.5 It is acknowledged that there will be an embedded carbon cost to many of the identified schemes included within the IDP. This includes all the CO2 emitted when producing the materials required to deliver infrastructure schemes, including emissions from construction, all the way through to the emissions produced at deconstruction and disposal at the end of the scheme's lifetime.

4.6 However, many of the identified schemes included within the Infrastructure Delivery Schedule will contribute to climate mitigation, and by delivering these schemes there is likely to be a reduction in carbon emissions compared to the 'do nothing' alternative. For example, without the delivery of sustainable and active travel networks, there is unlikely to be an reduction the amount of travel through

private cars – particularly in new developments. Where possible, the relative costs of carbon from different infrastructure approaches have been considered.

4.7 There is also a need to prioritise resilience to climate change within Oxford, particularly in terms of reducing the risk of flooding to existing properties. The Oxford Flood Alleviation Scheme (OFAS) is therefore an important scheme, the delivery of which, will contribute to climate change resilience. Figure 4.1 shows the proposed route (scheme design) for the OFAS scheme.

Figure 4.1 – Map of the scheme design for the Oxford Flood Alleviation Scheme



(Source: Environment Agency website)

4.8 According to the latest OFAS newsletter (November 2025) following on from the resolution to grant planning permission issued by Oxfordshire County Council's Planning and Regulation Committee in 2024 (subject to a satisfactory S106 Agreement), the Secretary of State approved the Compulsory Purchase Order (CPO) in May 2025. As no objections were received within the statutory six-week period for the CPO, the Environment Agency has been continuing to follow the processes required to implement it. The newsletter also sets out that the Environment Agency "anticipate that construction will start in late 2026". However, they acknowledge that all approvals will need to be secured (including finalising the planning permission).

Importance of Health and Well-being

4.9 Prioritising health and well-being is the second key driver of change that provides the context to the preparation of this IDP. Access to green spaces and spaces for physical activity plays a recognised role in relation to helping to address mental and physical health inequalities. Its availability also promotes and supports more healthy active lifestyles. As such, the provision of accessible outdoor green and recreational space, given the positive contribution they make to the health and well-being of is increasingly important.

4.10 Ensuring that key services and facilities are near to where people live and work also supports health and well-being as can encourage people to use active modes of travel, including walking and cycling, as opposed to relying on the private car for shorter journeys.

4.11 The importance of high-quality digital infrastructure provision within people's homes as well as their workplaces can support continued homeworking arrangements. The provision of high-quality digital infrastructure also has a role in maintaining reduced levels of travel demand for sectors where homeworking is supported. It can also enable digital ways of working for sectors including education, healthcare and business. As such, the rollout for 'full fibre' or 'fibre to the premises' should be prioritised, as identified in the Oxfordshire Digital Infrastructure Strategy.

4.12 It is worth noting that, at the time of writing, the Oxfordshire Digital Infrastructure Strategy is currently being updated, as such terminology, priorities or ambitions stated here may be revised or updated. Please refer to the most recent version of the Oxfordshire Digital Infrastructure Strategy for details.

5. Approach to Growth in Oxford

Oxford's spatial strategy

5.1 Growth in Oxford is constrained by a number of factors. Its historical and natural environment, in combination with issues such as flood risk, mean that many areas simply cannot be developed. The Local Plan 2045 recognises that growth should focus on making the best use of previously developed land. The strategy seeks to prioritise housing delivery across the city, while ensuring an appropriate range of uses can be delivered within the city and district centres to ensure their continued vibrancy and vitality.

5.2 While it can be shown that the city's employment land needs are being met through the modernisation and intensification of existing employment sites, Oxford continues to struggle to meet its identified housing need, which cannot all be accommodated within the city boundary. Accordingly, discussions are on-going with the districts.

5.3 The Local Plan 2042 sets out a number of key themes under which the wider spatial strategy and individual policies are set out:

- A healthy and inclusive city to live in
- A fair and prosperous city with a globally important role in learning, knowledge and innovation
- A green and biodiverse city that is resilient to climate change
- A city that utilises its resources with care, protects the air, water and soil, and aims for net zero carbon
- A city that respects its heritage and fosters design of the highest quality
- A live-able city with strong communities and opportunities for all

5.4 The Local Plan sets out that in order to deliver each of these key elements, infrastructure needs to be funded and delivered in a timely manner to support development. This includes ensuring that roads, local services and facilities can cope with the increased demand resulting from the proposed growth. The Local Plan 2045 also sets out that where new development creates a need for new or improved infrastructure, contributions from developers will be sought to make the development acceptable in planning terms, as well as using CIL to ensure those

who benefit financially from a planning permission will pay towards the cost of funding the infrastructure needed to support that development.

Development sites within Oxford

5.5 This IDP considers the 53 proposed site allocations contained within the Local Plan 2045 Regulation 19 "Proposed Submission" Document. As a tightly constrained urban authority, the majority of the proposed site allocations are on previously developed land.

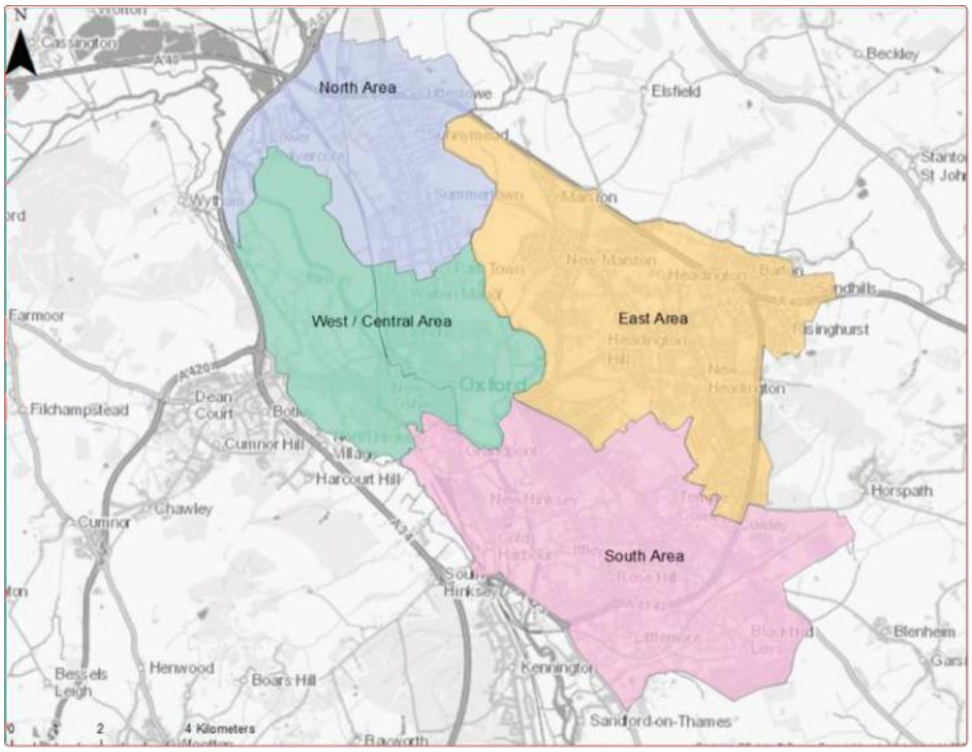
5.6 The distribution of growth across numerous smaller (i.e. non-strategic) sites can present a challenge for infrastructure planning, funding and delivery. Relying on numerous smaller sites often results in there being limited scope to provide on-site infrastructure. This can lead to a reliance on off-site solutions being required (often on third party land) in particular, for higher order infrastructure types which serve larger catchments (e.g., schools). It also means that, although smaller sites in isolation may generate much smaller infrastructure demands individually, the cumulative impact can be significant.

5.7 However, one advantage of the spatial strategy in infrastructure terms is that there is generally existing infrastructure provision in close proximity to development sites. This means that the emphasis is often the expansion of existing infrastructure, rather than on entirely new provision.

5.8 Both within the plan itself, and for the purposes of the IDP the city has been divided into four infrastructure areas (as shown in Figure 5.1). However, it is acknowledged that, due to the nature of development and its associated infrastructure needs (and delivery), it is difficult to draw "hard" boundaries. The four infrastructure areas are as follows:

- **North Area**: includes Summertown, Wolvercote, Cutteslowe and the *Northern Edge of Oxford Area of Focus*
- **South Area**: includes Grandpoint, Iffley, Florence Park and the *Cowley Branch Line and Littlemore Area of Focus*
- **East Area**: includes Marston, Headington, Barton and the *Marston Road and Old Road Area of Focus*
- **Central and West Area:** includes the city centre, Jericho and Osney Mead and also contains the *North of the City Centre Area of Focus* and the *West End and Botley Road Area of Focus*

Figure 5.1 Oxford's infrastructure areas



5.9 The Local Plan 2045 does not propose new employment site allocations, instead it relies on the city's existing network of employment sites to deliver new employment generating uses through an approach of modernisation and intensification. The plan seeks to protect Oxford's larger Key Employment Sites, which support the national and local economy, while introducing a more flexible approach in the city and district centres to support a range of appropriate uses.

Unmet housing need sites beyond the city boundary

5.10 The evidence base for the Oxford Local Plan 2045 demonstrates that Oxford is unable to meet housing need using the Government's Standard Method (NPPF, December 2024). As such, discussions have been taking place with the neighbouring district councils to see whether it would be possible to accommodate any unmet need in beyond what was previously agreed as part of the previous round of Local Plans. The Duty to Co-operate Statement sets out the formal position for all parties.

6. Approach and Methodology

6.1 The approach and methodology for this IDP builds on previous work, including that undertaken by Arup (published in 2022). As set out previously, the IDP is a 'live' document, which means that each iteration provides an opportunity to revisit and re-establish communications and discussions with key stakeholders. Each iteration also provides an opportunity to re-visit the Infrastructure Delivery Schedule to ensure that it contains the most up-to-date information relating to infrastructure requirements, including costs and delivery timescales for each project.

Research and Engagement

6.2 In addition to the consultation as part of the formal plan-making stages, a dialogue is maintained with key stakeholders to discuss infrastructure needs arising from planned development in Oxford. Table 6.1 below shows a broad range of stakeholders involved in infrastructure planning in Oxford and sets out their related infrastructure functions.

Table 6.1 Infrastructure providers involved in infrastructure planning in Oxford

Stakeholder	**Infrastructure Functions**
Oxfordshire County Council	Active Travel || Bus Services || Highways Rail Services Primary Education || Secondary Education Special Educational Needs Provision Social Care Provision Libraries Fire and Rescue Digital Infrastructure
Oxford City Council	Green Spaces || Playing pitches Community Centres || Leisure Centres Cemeteries
Highways England	Highways - Strategic Road Network (SRN)
Buckinghamshire Oxfordshire and Berkshire West Integrated Care Board (BOB ICB)	Primary Healthcare
Thame Valley Police	Policing
Scottish Southern Electricity (SSE)	Electricity Supply
Scotia Gas Networks (SGN)	Gas Supply
Thames Water	Water supply || Wastewater Treatment

Producing the Infrastructure Delivery Schedule

6.3 The Infrastructure Delivery Schedule is based on the most recent conversations with stakeholders. As the IDP is a 'live' document, the starting point for the current Infrastructure Delivery Schedule is the most recent previous iteration.

6.4 Regular ongoing discussions have taken place with members of the planning policy team and key relevant stakeholders, including those listed above, in order to refine the list. Chapter 8 sets out the details of the information included in the Delivery Schedule, the definitions used and the basis on which these were established.

Establishing demand

6.5 Most infrastructure providers are usually able to indicate what infrastructure will be required to support development. However, there are a small number of infrastructure types for which this is not possible (e.g., primary healthcare – see paragraph 7.27 and Appendix 1 for further details).

- **Primary healthcare:** see paragraph 7.27 and Appendix 1 for further details
- **Green infrastructure:** Chapter 4 of the Local Plan 2045 establishes a network of green infrastructure across Oxford. It sets out requirements for this network to be protected from development, and for new development to contribute to its enhancement. This reflects the large expanse of the city's green infrastructure network and means that ratio-based approaches to establishing green space requirements (i.e., a certain amount of space based upon the number of residents in an area) would be inappropriate. However, Policy G2 in the Local Plan 2045 does require 10% of new residential sites over 1.5ha to be delivered as new public open space.

Establishing Infrastructure Costs

6.6 The IDP usually uses the experience of infrastructure providers to establish the costs of each infrastructure item set out in the Infrastructure Delivery Schedule.

6.7 However, for some schemes it has not been possible to estimate a cost, either due to a lack of detail about the scheme at the present time, or because costs have not yet been formulated by the delivery body. In all cases, the costs set out in the infrastructure delivery schedule should be treated as indicative, with more detailed re-calculation being necessary at the time development comes forward, or as funding applications are made.

7. Conclusions by Infrastructure Theme

7.1 This chapter sets out conclusions for each of the infrastructure types considered throughout the preparation of the IDP. Under each theme, the following are set out:

- The pattern of existing provision for that infrastructure type, including any challenges and capacity issues that have emerged through the discussions undertaken with infrastructure providers
- A summary of the schemes set out within the Infrastructure Delivery Schedule (Chapter 9) which have been identified to address the impacts of the growth planned within the Local Plan 2045 or are otherwise required to address wider pressures.

Transport

7.2 This section considers all modes of transport provision within the city. Transport infrastructure is likely to be used by most residents (and visitors to the city) on a daily basis.

7.3 The provision of transport infrastructure, particularly that which supports the transition to zero carbon, therefore has a crucial impact on how the city operates – on the environment, on the economy, and on quality of life. The following infrastructure types are considered:

Existing Provision

Active Travel

7.4 According to the Department for Transport Official Statistics Oxford has a very high rate of cycling – 35.1% of residents cycle at least once a week, compared to an average of 10% for England as a whole. Oxford's cycling rates are surpassed only by Cambridge at a national level.

7.5 The Local Cycling and Walking Infrastructure Plan (LCWIP) for Oxford (was approved by the County Council's Cabinet in March 2020). The LCWIP for Oxford sets out a series of measures and programmes to achieve a transformational change in the levels of cycling and the attractiveness of walking in Oxford.

7.6 Figure 7.1 on the following page shows a map of the LCWIP for Oxford. It shows a large number of low and zero traffic 'quiet routes', for example along the River

Thames corridor. However, the more direct active travel routes to and from the city centre are on street in mixed traffic.

Figure 7.1 – Oxford's Local Cycling and Walking Infrastructure Plan network

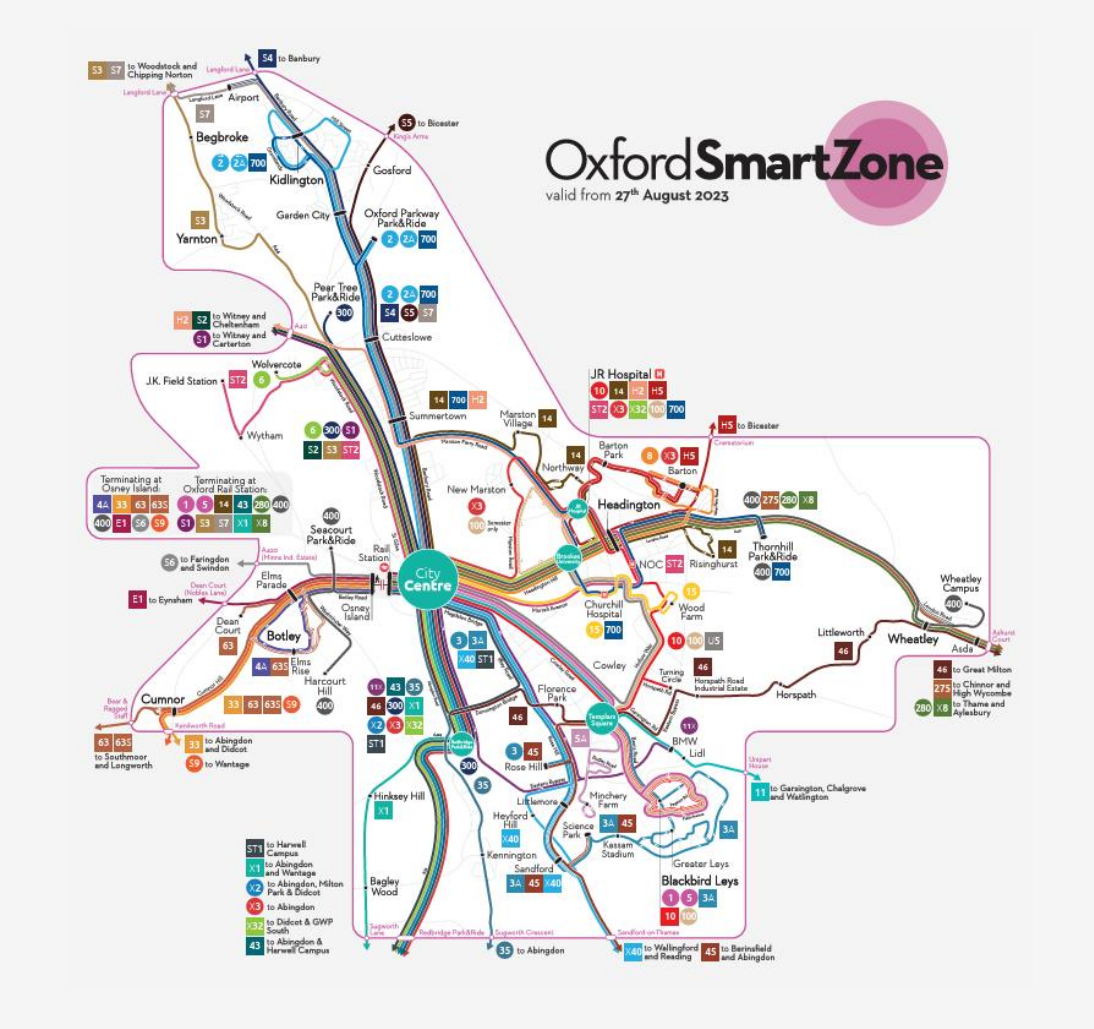
OXFORDSHIRE COUNTY COUNCIL

7.7 According to the Active Travel page County Council website LCWIPS will assist local authorities to:

- identify cycling and walking infrastructure improvements for future investment in the short, medium and long term
- ensure that consideration is given to cycling and walking within local planning and transport policies and strategies
- make a case for future funding for walking and cycling infrastructure.

Bus services

Figure 7.2 Bus services (all operators) within Oxford and adjacent neighbouring authorities



Source: www.oxfordbus.co.uk/services (2023)

7.8 Oxford benefits from a comprehensive network of bus services. Figure 7.2 shows that these primarily serve the arterial routes into and out from the city centre. In

fact, many of the routes multiple overlapping services into the city centre, with high combined service frequencies which generally operate on a 'turn-up-and-go' basis without the need to first check a timetable. More recently, the introduction of bus services There are a smaller number of circumferential services between North Oxford, East Oxford and South Oxford; providing access to major destinations such as the JR Hospital without the need to pass through the city centre.

7.9 Oxford is also served by a comprehensive network of park and ride sites on the edge of the city adjacent to the strategic road network, providing car drivers with viable alternatives to driving into the city centre. These can suffer from capacity constraints at peak times. Oxford's bus services are mostly provided by two operators – the Oxford Bus Company and Stagecoach. SmartZone inter-operator tickets are available, providing passengers with flexibility to catch any bus rather than having to wait for those of a specific operator. More recently, new bus routes including "Service 600" was launched (February 2025) which links the Redbridge and Thornhill park and ride sites, taking passengers via the Science Park, Cowley Centre, and the four main hospital sites, while avoiding the city centre.

Rail Services

7.10 There is currently one railway station within Oxford, located at the western edge of the city centre. This provides five main services, with direct connections to a large part of the UK:

- GWR services to Didcot, Reading and London Paddington.
- GWR services via the Cotswold Line to Worcester.
- GWR local stopping services to Banbury.
- CrossCountry services north to Banbury, Birmingham and Manchester; and s outh to Southampton and Bournemouth.
- Chiltern Railways services to Bicester, High Wycombe and London Marylebone.

7.11 Both the railway station and railway line through Oxford are significantly constrained and according to Network Rail the rail infrastructure in the Oxford Station area is near capacity, with limited flexibility in the event of delays and disruption.

7.12 At the time of writing work is underway to deliver a new "Western Station Entrance" for Oxford Station which includes expanding the rail infrastructure in the area such

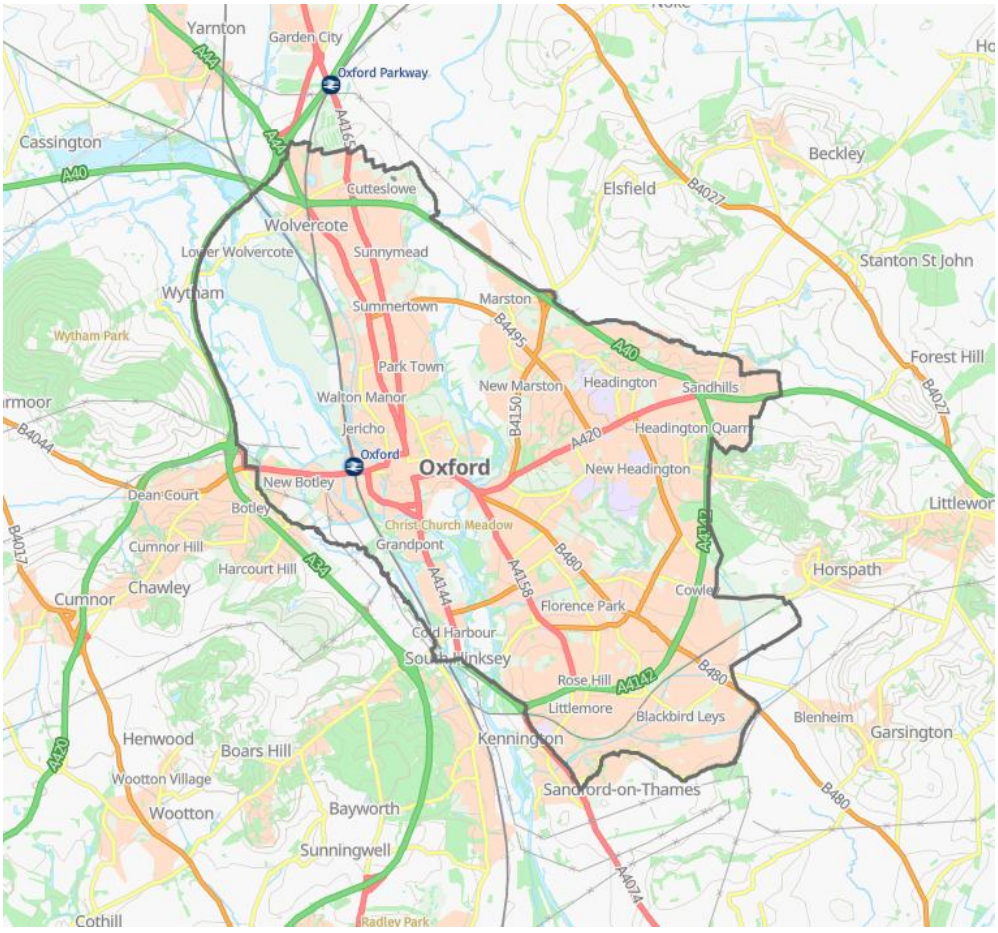
as delivering a new platform and providing additional capacity to delivery East West Rail services.

7.13 North Oxford is also served by Oxford Parkway Station, a short distance from the city's northern boundary within Cherwell District. This provides services on the Chiltern Railways route to London Marylebone.

Highways

7.14 Figure 7.3 shows Oxford's highways network. It has a clear pattern of arterial routes out from the city centre, with a relatively limited range of radial routes. The arterial routes connect to with the ring road which is partly within and partly outside the city boundary.

Figure 7.3 – Map showing the highway network in and around Oxford



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

7.15 Despite high levels of active travel provision within the city and range of high-quality bus services, Oxford still suffers from vehicular congestion and its associated air quality impacts. This partly reflects the historic nature of much of the city, with

many streets physically incapable of handling larger amounts of traffic. This has resulted in the need to restrict through traffic from much of the city centre. Other traffic restrictions include Low Traffic Neighbourhoods (LTNs), and more recently (October 2025), the County Council introduced a "congestion charge" for Oxford applied on certain key routes around the city.

7.16 Part of the Strategic Road Network (SRN) also runs along the city's north-western boundary (A34). Both the A34, and the Oxford Ring Road need to accommodate long-distance vehicular flows as well as supporting local traffic, which can lead to congestion issues.

Schemes to address growth and other needs

7.17 The majority of schemes in the Infrastructure Delivery Schedule are transport schemes, and the majority of these are active travel schemes. The Oxford Local Cycling and Walking Infrastructure Plan (LCWIP) provides a comprehensive set of schemes to improve the active travel network around the city and provide connections to new development sites, with a mixture of on-street and off- street routes. Other notable schemes are the County Council's "Core Schemes" made up of several inter-related schemes including, Traffic Filters, the Workplace Parking Levy and the Zero Emission Zone.

7.18 A cluster of schemes are also included which will improve rail connectivity for Oxford (and the wider rail network). The County Council's recently published Rail Plan for Oxfordshire: OxRail 2040 sets out the scale of transformation required at Oxford Station and supports proposed new stations (including two new stations to support the recently announced Government funding commitment (£120m) to re-open the Cowley Branch Line to passenger services). The re-opening of the Cowley Branch Line to passenger services would enable faster journey times across the city and, in-combination with other rail-related measures (including East-West Rail), would facilitate improved connectivity with the rest of the country.

7.19 East West Rail is nationally important infrastructure project and forms a central part of the government's plans for growth supporting new homes and providing well-connected, sustainable communities across the Oxford-Cambridge corridor. The Secretary of State for Transport issued updated safeguarding directions for the land required for the proposed East West Rail project (part of which lies within the Oxford city boundary).

7.20 The implementation of Neighbourhood Plans in the city can provide opportunities to help address local infrastructure needs. For instance, the Headington Neighbourhood Forum (alongside Headington Action), has produced an Improvement Plan for the Headington's centre. This report suggests a number of potential infrastructure improvements in and around Headington district centre, including transport and public realm improvements.

7.21 Most highway schemes identified in the Infrastructure Delivery Schedule are focused on decarbonisation and reducing the environmental impacts from road traffic. For example, the provision of electric vehicle charging infrastructure and the delivery of the County Council's "Core Schemes" which include the creation of a zero emission zone within the city centre. Other than providing connections to a handful of development sites, there are very few highway schemes with a focus on improving access and reducing journey times for motorists.

Education

7.22 This section considers the full spectrum of education provision within Oxford. The provision of high- quality education infrastructure has a huge role to play in the social fabric of the city, and its location has important interactions with transport given the need to ensure sustainable patterns of movement for education. The following infrastructure types are considered:

Existing Provision

Primary Schools

7.23 There are 32 primary schools in the city, which are generally well distributed. From previous discussions with Oxfordshire County as local education authority, it is understood that the provision of new schools has typically kept up with rates of development in recent decades. Given changing demographics within the city, there is now some spare capacity within a number of the city's primary schools.

Secondary Education

7.24 There are 6 secondary schools around the city in total, again broadly evenly distributed. While no secondary schools are located within the Central and West Infrastructure Area, pupils living in the West Oxford are within a relatively short commute to Matthew Arnold School on Cumnor Hill (Vale of White Horse District). While pupils living in the city centre can access schools in other parts of the city by sustainable modes of travel. As with primary schools, it is understood from previous

discussions with Oxfordshire County Council that there is a spare capacity within the city's secondary schools.

Special Educational Needs Provision

7.25 Oxford has six schools providing special educational needs and disability (SEND) provision. Each of these schools provides specialised provision, reflecting that SEND is generally provided on a county-wide basis. This means that the city's SEND schools serve a wide catchment, with some pupils from Oxford travelling out of the city to schools elsewhere. Oxfordshire County Council has indicated that there are new SEND schools being provided elsewhere in the county at present, with no significant need for new SEND provision within Oxford at the current time.

Schemes to address growth and other needs

7.26 The Infrastructure Delivery Schedule contains two education schemes – both relatively minor (0.5 Form of Entry, equivalent to 105 new pupils) extensions to existing primary schools. The first, at Wolvercote Primary School, would serve growth across North Oxford; with an extension to the new Barton Park Primary School (passive provision for this extension was included as part of the new school's initial construction) serving growth across East Oxford.

Healthcare

7.27 This section considers healthcare provision within Oxford. The provision of the right healthcare infrastructure is crucial to wellbeing and quality of life. The following infrastructure types are considered:

Existing Provision

Primary Healthcare

7.28 According to BOB ICB there are six Primary Care Networks (PCNs) serving Oxford which cover 26 GP practices. Together they serve a registered patient population of 240,000 (July 2025). There is generally a good distribution of GP practices across the city, with some surgeries are clustered together (e.g., around Beaumont St in the city centre and around the John Radcliffe Hospital). From previous discussions with BOB ICB, some GP practices in Oxford are experiencing capacity constraints. These include where smaller existing practices are located in former residential dwellings, in some cases expansion of these property types would be either inappropriate or is simply not possible. Appendix 1 provides additional information regarding primary healthcare including sources of funding and challenges to delivery.

Secondary Healthcare

7.29 Oxford has three main hospitals – the John Radcliffe Hospital providing general care, the Churchill Hospital providing cancer treatment and other specialist care, and the Nuffield Orthopaedic Centre. Additionally, the Warneford Hospitalprovides mental health care (alongside Littlemore Mental Health Centre) while the Manor Hospital provides private care.

7.30 Five of the hospitals are located in relatively close proximity (in and around the Headington area). Together they represent a significant secondary healthcare cluster that serves a wider regional catchment as well as Oxford and Oxfordshire.

7.31 The Oxford University Hospitals Trust was given an *Overall: Requires improvement* rating by the Care Quality Commission (2019) this rating related to the specific condition of operating theatres which have since been addressed. The City Council maintains an on-going dialogue with the main secondary healthcare providers as part of the plan-making process. The Local Plan 2045 includes specific site allocation policies for hospitals within the Oxford University Hospitals and Oxford Health NHS Foundation Trusts.

Social care provision

7.32 The published evidence base for the Regulation 18 Local Plan consultation that took place in Summer 2025 included "Updated Specialist Housing Needs Evidence", which has been subsequently updated to support the Reg. 19 version of the plan. This evidence considered the current situation and demographic profile of the city and established levels of need for specialist housing for the plan-period based on the Government's Standard Method (NPPF, Dec 2024). This shows a need for both sheltered/ retirement housing and extra care housing. However, due the relatively small size of the majority housing allocations in the city, there is limited scope to specifically allocate sites for these purposes. The City Council continues to work with the County Council to secure appropriate opportunities should they arise.

Schemes to address growth and other needs

7.33 The Infrastructure Delivery Schedule includes one healthcare scheme. This is a proposal for a new health surgery in Summertown, North Oxford (BOB ICB's preferred option being for it to be within the Diamond Place redevelopment), allowing the merger and replacement of the existing Banbury Road Surgery and Summertown Surgery. This scheme has the potential to accommodate new patients

from development elsewhere in North Oxford. The BOB ICB has indicated its desire for this scheme to also allow a merger with the existing Wolvercote Surgery.

7.34 Development was completed in 2022 for Northgate within the City Centre, which provided a new surgery allowing the merger of several existing surgeries all located in the city centre. However, it is understood that this does not cater for additional new patient demand.

Green Infrastructure

7.35 This section considers all forms of green infrastructure provision within Oxford. Green infrastructure provides an important amenity for the city and is as important to plan for as what might traditionally be thought of as 'grey' infrastructure, such as utilities. It is likely to be enjoyed on a frequent basis by most residents and visitors – if not to physically use, as a backdrop and visual amenity that frames the city's unique sense of place.

7.36 Green infrastructure also plays a vital role supporting the physical and mental wellbeing of residents. It is key to helping ensure resilience to future climate change impacts. The following infrastructure types are considered:

Existing provision

7.37 Oxford benefits from a diverse array of green spaces including:

- Wide, open flood plain meadows such as those found along the river corridors that help to define the city's unique character;
- Large formal parks such as University Parks and South Park; and
- Smaller amenity green spaces around the city.

Green spaces

7.38 Many green spaces benefit from local, national and even international ecological designations that recognise their biodiversity value. Collectively, these sites serve as a key component of the wider ecological network

7.39 To support the production of the Local Plan, a Green Infrastructure (GI) Study was produced, which includes an audit of existing greenspaces as well as providing indicative costs for the creation and on-going maintenance of greenspaces such as allotments, parks and play-spaces.

7.40 The GI Study sets out a series of recommendations and provides an evidence-based approach for the categorisation of the city's GI network. It recommends that the city's existing GI network should be protected, enhanced (where needed) and recognises the importance of delivering new greenspaces, particularly as part of redevelopment proposals on larger development sites.

Playing Pitches

7.41 Oxford has a wide range of playing pitch provision across all parts of the city. However, not all playing pitches are publicly accessible – many are school playing fields or belong to one of the two Universities or the Oxford colleges. The City Council published a Oxford's Playing Pitch Strategy in 2022, which found that there is currently a shortage of playing pitch provision. However, the strategy does not suggest that additional new pitches are required to meet the shortfall. Instead, it suggests that once those unsecured pitches that have community use are added back in, and sites that are interested in starting to offer community use are considered, as well when planned third generation artificial pitch (3G) developments are included that there appears to be adequate provision for all sports.

Allotments

7.42 Oxford has a good range of allotment sites and sizes spread throughout the city, although it is noted that there are relatively fewer sites in North Oxford. It is understood that the Oxford & District Federation of Allotment Associations has a waiting list, suggesting that there is an undersupply of allotments at the present time, as well as many existing allotments requiring improvement.

Schemes to address other needs

7.43 The Infrastructure Delivery Schedule includes seven green infrastructure schemes. These primarily relate to specific short-term public realm and biodiversity enhancement schemes – some of these would address existing needs, whilst others would serve new development sites in the vicinity.

Community Facilities

7.44 This section considers all forms of community facility provision within Oxford. Community facilities form the backdrop to some of the most important events in our lives – they are places to gather, share ideas, relax, keep fit, learn and much more. Community facilities provide for many of our human needs, and contribute to

quality of life, through reducing loneliness, improvements in mental health and the building of social cohesiveness. The following infrastructure types are considered:

Existing Provision

Community Centres

7.45 Oxford has a large number of community centres that spread across the city. However, the majority of community centres are located within the South and East Infrastructure areas.

Leisure centres

7.46 Oxford has four indoor leisure centres providing a general range of sports and leisure facilities, in addition to two more specialist facilities – the Oxford Ice Rink in the City Centre, and Hinksey Outdoor Pool in South Oxford. These are considered to offer a relatively good coverage of provision, well located relative to growth locations. Some facilities are in need of refurbishment, while others have had projects completed fairly recently. For instance, in 2023, a state-of-the-art heat pump was installed to help heat Hinksey Outdoor Pool and reduce its carbon footprint. The pump extracts heat from the nearby Hinksey Lake and provides up to 79% of the pool's heating needs.

Libraries

7.47 Oxford has eight libraries, spread across all parts of the city. Even though the services offered have changed in response to demand in recent years, they are not generally considered to be constrained. However, a need for improvements at some libraries exists, and these are reflected in the Infrastructure Delivery Schedule.

Cemeteries

7.48 Oxford has four cemeteries – Botley Cemetery (Central and West Oxford), Headington Cemetery (East Oxford), Rose Hill Cemetery (South Oxford) and Wolvercote Cemetery (North Oxford). In addition, Oxford Crematorium is located close to Headington, within South Oxfordshire District.

Policing

7.49 Oxford has two police stations – St Aldates Police Station in the City Centre, and Cowley Police Station in the South Infrastructure Area. From previous discussions with Thames Valley Police, it is understood that these provide sufficient coverage for current policing requirements. However, the policing estate is kept under

regular review, and future development in Oxford brings with it the potential to increase pressure on the existing police infrastructure.

Fire and Rescue

7.50 Oxford has two fire stations – Rewley Road Fire Station in the City Centre, and Slade Park Fire Station in the East Infrastructure Area. From previous discussions with Oxfordshire Fire and Rescue Service and the County Council, these provide sufficient coverage for current fire and rescue requirements. Oxfordshire Council has indicated that the fire and rescue estate is kept under regular review, and that new development within the city has the potential to require new capital spend on fire and rescue. However, Oxfordshire County Council has not identified any specific requirements.

Schemes to address growth and other needs

7.51 The Infrastructure Delivery Schedule includes seven schemes for community facilities, across all community facility types (except policing and, fire and rescue). Six of these relate to the refurbishment or expansion of existing facilities, with only one being directly related to planned growth – a new community centre for the Barton Park development. This reflects the nature of the development planned in the city, which is generally set within and around existing communities. This provides an opportunity to fund and support the viability of valued facilities that already exist.

7.52 The need for capacity increases at existing cemeteries within Oxford is planned to be met at the Shotover Cemetery. In September 2024 Oxford City Council Cabinet allocated £2.4m to deliver a 17 acre “Burial Meadow” including new public green space on City Council owned land located in South Oxfordshire. The site is large enough to accommodate around 45 years of burials.

Utilities

7.53 This section considers all forms of utility provision within Oxford. Utilities infrastructure is essential to the effective day-to-day functioning of our homes, workplaces, leisure facilities and open spaces. The following infrastructure types are considered:

Existing provision

Electricity Supply

7.54 In June 2025, Scottish and Southern Energy (SSE) published their Cowley Grid Supply Point - Strategic Development Plan. The Cowley Grid Supply Point (GSP) (located with Sough Oxfordshire) serves a large area including Oxford. In fact, the majority of Oxfordshire is served by this GSP as well as parts of neighbouring counties including Buckinghamshire.

7.55 The Strategic Development Plan for Cowley GSP is driven by new planned homes and jobs as well as being required to support the transition to net zero. It includes a number of recommendations including immediate actions and longer-term options to address known network capacity issues. Where network specific reinforcements are required to address capacity issues in Oxford, these have been listed in the Infrastructure Schedule.

Gas Supply

7.56 From previous discussions with Scotia Gas Networks (SGN) it is understood that the city's gas supply network generally has capacity for the levels of development proposed in the city. This position would need to be confirmed at the point developers make connection requests to SGN (as capacity could continue to be consumed in the meantime), but this would be a matter between SGN and developers.

Water Supply and Wastewater

7.57 Following the agreement of planned upgrades to the Oxford Wastewater Treatment Works (WWTW), Thames Water are now progressing the planned upgrades in several phases. These phased upgrades will ensure that the Oxford WWTW has capacity for planned development up to 2041. After which, additional upgrades will be needed to ensure that the Oxford WWTW is able to accommodate the level of growth proposed after 2041. It is worth noting that the Oxford WWTW is located just outside the city boundary within South Oxfordshire. However, should rates of house-building increase in the area serving the Oxford WWTW (in line with national Government ambitions to deliver 1.5million homes), this could result in

Flood Risk Mitigation

7.58 Oxford lies at the confluence of two Rivers – the River Thames and the River Cherwell and parts of the city are prone to flooding, including the flood plain meadows either side of the rivers as well as within the parts of the existing built-up area. Climate change is increasing the risk of flooding with more frequent and severe flood events becoming more likely in the future. A Flood Alleviation Scheme

for Oxford has been developed and is being progressed through the planning system. However, delays to the scheme have resulted in increases to the originally estimated costs. Scheme costs have therefore been aligned within the most recent cost estimates from the Environment Agency.

Digital infrastructure

7.59 While the majority of properties in Oxford (99.3%) have superfast broadband and more than 90% are capable of receiving ultrafast broadband, some parts of city (including the city centre) have poor mobile network coverage. The likelihood of additional digital infrastructure schemes may also increase as technology changes. The Local Plan 2045 contains a specific policy about digital infrastructure.

Schemes to address growth and other needs

7.60 The Infrastructure Delivery Schedule contains fifteen utilities schemes, the majority of which relate to reinforcements of city electricity network to meet current and future demand. Two schemes are attributed to the Oxford Wastewater Treatment Works Upgrade. This is because the first scheme addresses wastewater capacity arising from planned development to 2041, whereas plan-period extends to 2045. As such a second scheme will be needed to address wastewater capacity arising post-2041. The Oxford Flood Alleviation Scheme (OFAS) is also included.

7.61 Two scheme relates to digital infrastructure – the progressive countywide rollout of full fibre broadband to commercial buildings and a scheme relating to improvements to the mobile network in Oxford. The first programme is a tactical approach by Oxfordshire County Council, as it paves the way for commercial providers to then extend fibre connectivity to nearby residential properties at their own expense, while the second is to address mobile connectivity issues experienced in Oxford.

8. Infrastructure Delivery Schedule

Schemes included in the Infrastructure Delivery Schedule

8.1 The Infrastructure Delivery Schedule sets out the details of each specific infrastructure scheme currently anticipated within Oxford over the plan period to 2045. These schemes have been identified through:

- Existing schemes already identified in the previous iterations of the IDP, which have not yet been provided, and continue to be needed.
- Engagement with infrastructure providers during the plan-making process.
- The identification of desired interventions and corporate priorities by Oxford City Council, where linked to growth or the need to address existing infrastructure deficits.

8.2 As Chapter 7 indicates, there is a need for new or improved infrastructure across most infrastructure types and themes. However, there are a number of infrastructure types where the IDP has identified a need, but stakeholder discussions have indicated that further evidence is required before specific schemes to meet that need can be identified. For example, whilst there is known to be a need for new GP surgery provision, further work needs to be undertaken by the BOB ICB to establish where and how that need can be met. The Infrastructure Delivery Schedule therefore does not include specific schemes for these infrastructure types, although they should be included in future iterations of the IDP once schemes are identified.

8.3 In total, the Infrastructure Schedule includes 101 separate schemes. Around two-thirds of these are transport schemes, with the remainder covering the other infrastructure themes considered in the IDP. The total combined value of schemes for which it is possible to estimate a cost is some £1.12 billion (excluding Oxford Railway Station, East West Rail, and the various electricity network reinforcements). This is a significant amount, many times more than the levels of funding currently collected through developer contributions by the Council (see Chapter 3). This means that an infrastructure funding gap exists and highlights the importance of partnership working and external funding sources in infrastructure delivery.

Structure of the Infrastructure Schedule

8.4 The Infrastructure Delivery Schedule is set out in the same order as the headings for each infrastructure theme within Chapter 7. It provides consistent information for each infrastructure scheme, across the following columns:

- **Reference** – For ease of reference, each scheme has been given a unique reference number.
- **Infrastructure type** – The infrastructure type under which the scheme sits. Some are cross- cutting across several different infrastructure types.
- **Scheme** – Summary details of the specific scheme; setting out its name, location and what it would achieve.
- **Prioritisation** – To support future investment and funding decisions, schemes have been assigned a recommended priority level based on our assessment of their relative significance (see paragraphs 8.5-8.6 below for further details). It should be noted that the infrastructure priority assigned to individual schemes may not necessarily reflect political and infrastructure provider views. Instead, these are intended to be a practical and pragmatic basis upon which the Council can make decisions when faced with the need to balance competing priorities. The prioritisation should not be interpreted as indicating that lower priority schemes are not necessary to make development acceptable in planning terms, and developers will still be expected to deliver all identified infrastructure needs as far as is viable (See Chapter 3 for more details).
- **Cost –** The current best estimate of cost for each scheme, based upon the most recent published costs provided by infrastructure providers. These are generally subject to indexation (to adjust for inflation and other influences) over time. Actual costs should therefore be treated as indicative, with more detailed re-calculation being necessary at the time development comes forward. For some schemes it is not currently possible to estimate a cost (with that being noted where relevant) – either due to a lack of detail about the scheme at this stage or because costs have not yet been formulated by the delivery body.
- **Confirmed Funding –** The amount and source of funding already confirmed as in place for schemes, where relevant. For schemes where this column is blank, the scheme would need to be funded in accordance with the principles set out in Chapter 3.
- **Delivery Body –** The infrastructure provider and/or public body with responsibility for the delivery of the scheme. Responsibility may be shared between several delivery bodies, with this indicated where appropriate.
- **Delivery phasing –** The broad timescales within the plan period where it is expected that the scheme will be delivered, based upon the time needed to fund and develop the scheme. Where relevant, this also reflects the pace of development in the vicinity which results in the need for the scheme.

- **District area –** The area of the city where the scheme will be located (see paragraph 8.8 below for further details)
- **Source –** The means by which the scheme and the need for it have been identified.

8.5 The three categories traditionally associated with an IDP are as follows:

- **Critical –** Infrastructure that must be provided for development to proceed. This generally includes connections to infrastructure networks and will often be triggered by the commencement of development.
- **Essential –** Infrastructure that will mitigate impacts arising from development. It often addresses demand generated by occupiers of new development (whether residential or commercial) and is usually triggered upon first occupation. Alternatively, essential schemes may be needed to address wider societal pressures, including the climate emergency.
- **Important** - Infrastructure that is required to achieve sustainable growth and deliver high-
quality places. It will generally improve operational infrastructure capacity, and/or deliver wider benefits to society.

8.6 A fourth category of infrastructure category has been introduced for this IDP:

- **Transformational** – Infrastructure that brings significant additional social, environmental or economic benefits in addition to the mitigation or wider benefits delivered by the traditional infrastructure categories.

8.7 For cross-boundary schemes, the prioritisation scoring set out in the schedule is Oxford- centric. Schemes such as T22 (provision of bus services into and through the Bayswater Brook site in South Oxfordshire District) would likely be considered critical in a South & Vale IDP but are only considered as important to Oxford.

8.8 This IDP also specifies the geographical part of the city, in which the scheme will be located. This is one of the following:

- One of the four "infrastructure areas" of the city considered in this IDP
- City-wide – applies to schemes which apply across the city, or which have no fixed location at the current time.
- Locations outside the city in cases where the scheme straddles the city boundary (e.g., for schemes that link with allocated housing sites in neighbouring districts).

9. Infrastructure Delivery Schedule 2045

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
Transport										
T1	Various minor works to the A34, including lay-by improvements, increased signage, improvements to the cycle track along the Western bypass and various other safety improvements	**Transport**	Highways	**Important**	Dependent on scope and scale		Highways England	2025-2035	Central and West Oxford	Stakeholder engagement with Highways England
T2	Zero Emission Zone (Phase II) - part of Oxfordshire County Counci's Oxford Transport "Core Schemes"	**Transport**	Highways	**Essential**	£5,759,000	£5,759,000	Oxfordshire County Council	2025-2035	Central and West Oxford	Central Oxfordshire Transport Strategy (COTS)
T3	Traffic Filters and Supporting Measures - part of Oxfordshire County Council's Oxford Transport "Core Schemes".	**Transport**	Highways	**Essential**	£6,500,000	£6,500,000	Oxfordshire County Council	2025-2035	City-Wide	Central Oxfordshire Transport Strategy (COTS)
T4	Workplace Parking Levy (WPL) to encourage sustainable transport use - part of Oxfordshire County Counci's Oxford Transport "Core Schemes".	**Transport**	Active Travel/ Bus	**Essential**	£3,359,000	Borrowing against future income from scheme	Oxfordshire County Council	2028-2038	City-Wide	Central Oxfordshire Transport Strategy (COTS)
T5	Oxford Rail Corridor Phase 2, including additional platform at Oxford Station (west side), secondary station	**Transport**	Rail	**Essential**	£169,000,000	£169,000,000	Network Rail	2025-2030	Central and West Oxford	Oxfordshire Connect, Stakeholder engagement with Oxfordshire County Council
T6	Oxford Station Masterplan and potential future Oxford Station Development Plan - the Station and the surrounding area including the Becket Street area	**Transport**	Rail/ Active Travel/ Highways/ Bus	**Transformational**	Detailed costs not publicly available		Network Rail/ Oxford City Council/ Oxfordshire County Council	2025-2040	Central and West Oxford	Various including Oxfordshire Connect, ORCS, OxRail 2040: A Plan For Rail
T7	Cowley Branch Line passenger reopening, including improvements to mainline track capacity south of Oxford Station, likely additional track around Hinksey and two new passenger stations.	**Transport**	Rail	**Transformational**	£155,000,000	£120,000,000	Network Rail	2030-2035	Central and West Oxford South Oxford	Oxfordshire Rail Corridor Study
T8	Cowley Branch Line: Public Realm and Connectivity Programme – supporting infrastructure including a pedestrian bridge and active travel improvements	**Transport**	Rail/ Active Travel	**Transformational**	£20,000,000		Network Rail	2030-2035	South Oxford	Stakeholder engagement with Oxford City Council
T9	East West Rail: Nationally important infrastructure project supporting growth across the Oxford – Cambridge Corridor	**Transport**	Rail	**Transformational**	TBC	Phased funding from central government	East West Rail Company	2025-2045	Central and West Oxford North Oxford	Stakeholder engagement with East West Rail Company

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
T10	Orbital bus route between Cowley and Hinksey to introduce bus lanes (in both directions) around the ring road between Cowley Interchange and Hinksey Hill.	**Transport**	Bus	**Essential**	£158,000,000		Oxfordshire County Council	2035-2040	South Oxford	Stakeholder engagement with Oxfordshire County Council
T11	City Centre Corridor Improvements: (West - Hythe Bridge St/ Oxpens Rd/ George St/ New Road), including active travel improvements, linked to LCWIP route CE2 proposal	**Transport**	Active Travel/ Bus	**Essential**	£20,000,000		Oxfordshire County Council	2030-2040	Central and West Oxford	Central Oxfordshire Movement and Place Framework / Oxford LCWIP
T12	City Centre Corridor Improvements: (North - St Giles/ Magdalen St/ Broad St), including active travel improvements linked to LCWIP route CN1	**Transport**	Active Travel/ Bus	**Essential**	£8,000,000	£870,000	Oxfordshire County Council	2030-2040	Central and West Oxford	Central Oxfordshire Movement and Place Framework / Oxford LCWIP
T13	City Centre Corridor Improvements (South & East - High St/ St Aldates), including active travel improvements linked to LCWIP Route CE1	**Transport**	Active Travel/ Bus	**Essential**	£8,000,000		Oxfordshire County Council	2030-2040	Central and West Oxford	Central Oxfordshire Movement and Place Framework / Oxford LCWIP
T14	Banbury Road Corridor Improvements between Cutteslowe and St Giles, including active travel improvements linked to LCWIP Route 4 proposal	**Transport**	Active Travel Bus Highway	**Essential**	£18,000,000	£875,000	Oxfordshire County Council	2035-2040	North Oxford	Central Oxfordshire Movement and Place Framework / Oxford LCWIP
T15	A4165 Corridor Improvements between Cutteslowe and Kidlington roundabout, linked to LCWIP Route 4 proposal	**Transport**	Active Travel Bus Highway	**Essential**	£10,000,000	(Partially funded by developer funding)	Oxfordshire County Council	2030-2040	North Oxford	Central Oxfordshire Movement and Place Framework / Oxford LCWIP
T16	Woodstock Road Corridor Improvements, including active travel improvements linked to LCWIP route 3 proposal.	**Transport**	Active Travel Bus Highway	**Essential**	£18,000,000	£3,200,000	Oxfordshire County Council	2030-2040	North Oxford	Central Oxfordshire Transport Strategy / Oxford LCWIP
T17	Northern Bypass corridor improvements (Cuttleslowe Roundabout to Headington Roundabout), including cycle path upgrade	**Transport**	Active Travel Bus Highway	**Essential**	£25,800,000	(Developer funded)	Oxfordshire County Council	2035-2040	North Oxford	Central Oxfordshire Transport Strategy / Oxford LCWIP
T18	Abingdon Road Corridor Improvements, from Folly Bridge to Kennington Roundabout	**Transport**	Active Travel Bus Highway	**Essential**	£17,606,000		Oxfordshire County Council	2035-2040	South Oxford	Oxford City Council identified scheme
T19	Cowley Road/ Garsington Road/ Watlington Road Corridor Improvements, from Magdalen Road to Grenoble Road, including improvements to Cowley interchange and active travel improvements linked with Route 14 of the LCWIP	**Transport**	Active Travel Bus Highways	**Essential**	£31,187,000	£550,000	Oxfordshire County Council/ Developer Contributions	2030-2040	South Oxford	Central Oxfordshire Transport Strategy/ Oxford LCWIP

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
T20	Iffley Road Corridor Improvements from The Plain to Littlemore roundabout, including active travel improvements linked with LCWIP route 17	**Transport**	Active Travel Bus Highways	**Essential**	£18,048,000	£800,000	Oxfordshire County Council/ Developer Contributions	2030-2041	South Oxford	Central Oxfordshire Transport Strategy/ Oxford LCWIP
T21	B4495 Corridor Improvements (Hollow Way/ Between Towns Road/ Donnington Bridge).	**Transport**	Active Travel Bus Highways	**Essential**	£3,046,000		Oxfordshire County Council/ Developer Contributions	2030-2035	South Oxford	Central Oxfordshire Transport Strategy/ Oxford LCWIP
T22	London Road Corridor Improvements, between St Clements and Green Road roundabout	**Transport**	Active Travel Bus Highways	**Essential**	£17,155,900	£2,225,000	Oxfordshire County Council	2035-2040	East Oxford	Central Oxfordshire Transport Strategy/ Oxford LCWIP
T23	Extension of existing bus routes (funding for additional vehicles) into Bayswater Brook site in SODC, linking to city centre and eastern arc	**Transport**	Bus	**Important**	Dependent on scope and scale		Oxfordshire County Council	2030-2040	East Oxford/ South Oxfordshire	Stakeholder engagement with Oxfordshire County Council
T24	Extension of existing bus routes (funding for additional vehicles) into Northfield site in SODC, linking to city centre and Science Vale	**Transport**	Bus	**Important**	Dependent on scope and scale		Oxfordshire County Council	2030-2040	East Oxford/ South Oxfordshire	Stakeholder engagement with Oxfordshire County Council
T25	Low Traffic Neighbourhoods (LTNs)	**Transport**	Active Travel Highways	**Essential**	£8,000,000	£8,000,000	Oxfordshire County Council	2030-2040	City-Wide	LCWIP and stakeholder engagement with Oxfordshire County Council
T26	Controlled Parking Zones	**Transport**	Highways	**Essential**	£1,000,000	£600,000	Oxfordshire County Council	2025-2035	City-Wide	OxIS (2017)
T27	Provision of additional coach parking within the city	**Transport**	Bus, Highways	**Essential**	TBC		Oxford City and Oxfordshire County Councils	2030-2035	City-Wide	OxIS (2017)
T28	Last mile freight pilot scheme	**Transport**	Bus, Highways	**Essential**	Dependent on scope and scale		Oxfordshire County Council	2030-2035	City-Wide	Zero Carbon Oxford Partnership (ZCOP)
T29	District Centre Improvements (All Centres)	**Transport**	Active Travel	**Important**	Dependent on scope and scale		Oxfordshire County Council	2030-2040	City-Wide	OxIS (2017)
T30	Provision of a pedestrian and cycle bridge from Oxpens to Osney Mead across the river, connecting development sites in these locations	**Transport**	Active Travel	**Transformational**	£14,000,000	£14,000,000	Oxford City Council	2025-2035	Central and West Oxford	Oxford City Council identified scheme/ LCWIP
T31	Horspath Road Junction Improvements	**Transport**	Highways	**Essential**	£4,100,000	£100,000	Oxfordshire County Council	2035-45	South Oxford	Oxfordshire County Council Bus Service Improvement Plan

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
T32	JR Hospital on-site bus interchange and priority measures, cycle parking	**Transport**	Bus Active Travel	**Essential**	£3,000,000	£400,000	Oxfordshire County Council	2030-2035	East Oxford	Oxfordshire County Council Bus Service Improvement Plan
T33	Churchill Hospital additional bus and cycle access, including cycle parking	**Transport**	Active Travel Bus	**Essential**	£2,000,000	£60,000	Oxfordshire County Council	2030-2035	East Oxford	Oxfordshire County Council Bus Service Improvement Plan
T34	Improvements to cycling provision along Botley Road, including active travel improvements linked to route 25 of the LCWIP	**Transport**	Active Travel	**Essential**	£19,590,000	TBC	Oxfordshire County Council	2025-2040	Central and West Oxford	Oxford City Council identified scheme/ Oxford LCWIP
T35	A40 cycle bridge schemes helping to link Bayswater and Barton Park developments to existing cycle network, as well as providing pedestrian access for residents	**Transport**	Active Travel	**Essential**	Dependent on scope and scale		Delivered through Bayswater Brook developers/ landowners	2025-2035	East Oxford/ South Oxfordshire	Oxford City Council identified scheme
T36	Connections to Oxford Parkway Railway Station with a route reserved through Peartree Farm	**Transport**	Active Travel Highways	**Essential**	Dependent on scope and scale		Oxfordshire County Council	2030-2040	North Oxford	Oxford City Council identified scheme
T37	Go Ultra Low Oxford Project Phase II (city-wide) - electric vehicle charging solutions for residents who do not have off-street parking	**Transport**	Highways	**Important**	Dependent on scope and scale		Oxford City Council/ Oxfordshire County Council	2035-2040	City-Wide	Oxford City Council identified scheme
T38	Improve pedestrianisation and cycle links to wider strategic routes into and out from Summertown district centre, including delivery of cycle stands for public cycle parking within Diamond Place redevelopment	**Transport**	Active Travel	**Essential**	Dependent on scope and scale		Delivered through development at Summertown district centre	2030-2040	North Oxford	Local Plan 2045 Policy
T39	Average Speed Cameras and 20mph extensions to ensure better speed control on the main road radials to manage traffic and create more attractive cycle routes	**Transport**	Active Travel Highways	**Essential**	Dependent on scope and scale		Oxfordshire County Council	2025-2040	City-Wide	Oxford LCWIP
T40	Potential bridge across the River Thames to link East Oxford via Jackdaw Lane, including widening and resurfacing of the cycle path and addition of solar lighting	**Transport**	Active Travel	**Important**	£8,000,000		Oxfordshire County Council	2030-2040	South Oxford	Oxford LCWIP
T41	A40 crossing at Collinwood Road	**Transport**	Active Travel	**Essential**	Dependent on scope and scale	To be funded via developer contributions	Oxfordshire County Council	2025-2035	East Oxford	Oxford LCWIP
T42	Improvements to North Oxford Cycle Route, to address pinchpoints and provide surfacing improvements. The majority of this route is along the highway network, but some sections are on third party land, including active	**Transport**	Active Travel	**Essential**	£3,000,000		Oxfordshire County Council	2030-2035	North Oxford	Oxford LCWIP

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
	travel improvements linking with LCWIP route 5									
T43	LCWIP Route 1: Canal Path, including the Canal Towpath Extension and Cycle bridge over the canal linking Nelson Street to the station	**Transport**	Active Travel	**Essential**	£2,500,000		Oxfordshire County Council	2030-2035	Central and West Oxford	Oxford LCWIP
T44	LCWIP Route 2: Walton Street calming and filtering interventions, and Walton Street Shopping QPC	**Transport**	Active Travel	**Essential**	£1,210,000	£356,000	Oxfordshire County Council	2030-2035	Central and West Oxford	Oxford LCWIP
T45	LCWIP Route 3: Wolvercote Roundabout Crossing	**Transport**	Active Travel	**Essential**	£1,825,000		Oxfordshire County Council	2025-2030	North Oxford	Oxford LCWIP
T46	LCWIP Route 6: Marston, including improvements to the lighting and upgrades to the bridge, as well as the Marston QPC	**Transport**	Active Travel	**Essential**	£850,000		Oxfordshire County Council	2025-2030	East Oxford	Oxford LCWIP
T47	LCWIP Route 7: Marston Road, including the crossing from Copse Lane to Marston Road	**Transport**	Active Travel	**Essential**	£200,000		Oxfordshire County Council	2025-2030	East Oxford	Oxford LCWIP
T48	LCWIP Route 8: Northway & Barton, including possible widening of the subway to Barton and a new link path	**Transport**	Active Travel	**Important**	£1,000,000		Oxfordshire County Council	2025-2030	East Oxford	Oxford LCWIP
T49	LCWIP Route 9: Headington Path, improvements to the street lighting and paths	**Transport**	Active Travel	**Important**	£600,000		Oxfordshire County Council	2025-2030	East Oxford	Oxford LCWIP
T50	LCWIP Route 11: Quarry and Risinghurst Route Improvements	**Transport**	Active Travel	**Essential**	£200,000		Oxfordshire County Council	2025-2030	East Oxford	Oxford LCWIP
T51	LCWIP Route 12: Old Road, including extension of the A2H scheme at Old Road. Improvements to Wheatley – Oxford section from Warneford Lane via Shotover remains	**Transport**	Active Travel	**Essential**	£7,035,000		Oxfordshire County Council	2025-2035	East Oxford/ South Oxfordshire District Council	Oxford LCWIP
T52	LCWIP Route 13: Barracks Lane and Horspath including surface improvements, widening and removal of barriers at Barracks Lane, a cycle link at Pony Road, and average speed cameras, as well as the Horspath QPC	**Transport**	Active Travel	**Essential**	£3,085,000		Oxfordshire County Council	2025-2035	South Oxford	Oxford LCWIP
T53	LCWIP Route 15: BBL, including a link road from Maidstone Road to Barns Road and various improvements to Barns Road as well as BBL shopping street re-design and the Barns Road QPC	**Transport**	Active Travel	**Essential**	£9,389,000		Oxfordshire County Council	2035-2045	South Oxford	Oxford LCWIP

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
T54	LCWIP Route 16: Littlemore, including route improvements and a cycle zebra crossing at Long Lane and the Iffley Road QPC	**Transport**	Active Travel	**Essential**	£1,525,000		Oxfordshire County Council	2035-2045	South Oxford	Oxford LCWIP
T55	LCWIP Route 18: Rose Hill, including route improvements and improvements to Cottesmore Bridge - Ringroad	**Transport**	Active Travel	**Essential**	£2,200,000		Oxfordshire County Council	2025-2030	South Oxford	Oxford LCWIP
T56	LCWIP Route 21: South Oxford Path, including surfacing improvements to the South Oxford cycle route	**Transport**	Active Travel	**Essential**	£6,800,000		Oxfordshire County Council	2025-2035	South Oxford	Oxford LCWIP
T57	LCWIP Route 22: South Hinksey Path. Full detail subject to final build-out of the OFAS	**Transport**	Active Travel	**Essential**	Dependent on scope and scale		Oxfordshire County Council	2030-2040	South Oxford	Oxford LCWIP
T58	LCWIP Route 24: West Oxford Path, including surfacing and widening improvements at Oatlands Park	**Transport**	Active Travel	**Essential**	£400,000		Oxfordshire County Council	2030-2035	Central and West Oxford	Oxford LCWIP
T59	LCWIP Route C: Oxford Ring Road, including the widening and resurfacing of Oxford Ring Road, and traffic calming measures in Wolvercote Village, as well as the Upper and Lower Wolvercote QPC	**Transport**	Active Travel	**Essential**	£13,160,000		Oxfordshire County Council	2030-2035	North Oxford	Oxford LCWIP
T60	LCWIP Route CC: City Centre Parking, through delivering the park that bike proposals	**Transport**	Transport	**Essential**	£150,000		Oxfordshire County Council	2025-2030	Central and West Oxford	Oxford LCWIP
T61	City Centre Cycle Hubs Parking	**Transport**	Transport	**Essential**	£3,000,000		Oxfordshire County Council	2035-2045	Central and West Oxford	Oxford LCWIP
T62	Improvements to various routes within West End as identified in the SPD	**Transport**	Active Travel/ Transport	**Important**	Dependent on scope and scale		Oxfordshire City Council/ Oxfordshire County Council/ site landowners	2030-2045	Central and West Oxford	West End SPD
T63	Headington Centre Improvements	**Transport**	Active Travel/ Highways/ Bus	**Important**	Dependant on scope and scale		Oxfordshire County Council	2030-2040	East Oxford	Headington Neighbourhood Forum/ Headington Action
T64	Oxford connecting routes improvements, including path widening and dedicated crossings of main roads	**Transport**	Active Travel	**Essential**	£5,000,000		Oxfordshire County Council	2030-2035	City-Wide	Oxford LCWIP
T65	Green Road Roundabout (A40) London Road - subways. Transform active travel connectivity to Barton and Risinghurst and route 10 to Wheatley and P&R by replacing/improving subways under roundabout.	**Transport**	Active Travel	**Essential**	£10,000,000		Oxfordshire County Council	2030-2040	East Oxford	Oxford LCWIP

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
T66	Improve access to green space and create surfaced circular routes in parks and recreation grounds for fun runs, small children learning to cycle, walks etc.	**Transport**	Active Travel	**Essential**	£5,000,000		Oxford City Council/ Oxfordshire County Council	2030-2040	City-Wide	Oxford LCWIP
Education										
E1	0.5FE expansion to Wolvercote Primary School (1.5-2.0FE), to cater for growth in North Oxford	**Education**	Education	**Essential**	£4,048,158		Oxfordshire County Council/ Academy Trust	2030-2035	North Oxford	Stakeholder Engagement with Oxfordshire County Council
E2	0.5FE expansion to Barton Park Primary School (1.5-2.0FE), to cater for growth in East Oxford	**Education**	Education	**Essential**	£2,710,440		Oxfordshire County Council	2030-2035	East Oxford	Stakeholder Engagement with Oxfordshire County Council
Health-care										
H1	New health centre in the preferred option of Summertown (Diamond Place), consolidating Banbury Road and Summertown surgeries. Potential to also include consolidation of Wolvercote surgery - primarily serving existing demand	**Healthcare**	Primary Healthcare	**Essential**	Dependent on scope and scale		BOB ICB	2030-2040	North Oxford	Stakeholder engagement with BOB ICB
Green Infrastructure										
G1	Oxford CIty Biodiversity Enhancements Programme	**Green Infrastructure**	Green Spaces	**Essential**	Dependent on scope and scale		Oxford City Council	2030-2045	City-wide	Oxford City Council identified scheme
G3	Improvements in accessibility and path network within Oxpens Meadow	**Green Infrastructure**	Green Spaces	**Important**	Dependent on scope and scale		Oxford City Council	2030-2035	Central and West Oxford	Oxford City Council identified scheme
G4	Enhancements in the public realm, including greening, along Oxpens Road to be delivered in tandem with the phases of development that address Oxpens Road to ensure a high quality environment and setting	**Green Infrastructure**	Green Spaces	**Essential**	Dependent on scope and scale		Oxford City Council	2030-2035	Central and West Oxford	Oxford City Council identified scheme
G5	Improvements and enhancements to Cuttleslowe Park through the Oxford North development. Potential to relocate football pitches and manage former area for biodiversity - depends on the outcome of the extension to Cutteslowe Park.	**Green Infrastructure**	Green Spaces	**Important**	Dependent on scope and scale		Oxford City Council	2030-2035	North Oxford	Oxford City Council identified scheme
G6	Integrated GI network required for the north of the city (linked to Cherwell Sites)	**Green Infrastructure**	Green Spaces	**Important**	Dependent on scope and scale		Oxford City Council	2030-2040	North Oxford Cherwell DC	Oxford City Council identified scheme

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source
G7	New high-quality public open space to be provided on-site at Osney Mead, as identified in the Local Plan 2045 and the West End SPD	**Green Infrastructure**	Green Spaces	**Essential**	Dependent on scope and scale		Delivered through development at Osney Mead	2030-2045	Central and West Oxford	Various Local Plan 2045 Policies including West End and Botley Road Area of Focus
Community Facilities										
CF1	Provision of BBL Community Hub as part of wider regeneration efforts within the estate.	**Community Facilities**	Community Centres	**Important**	£550,000	Delivered by developer as part of wider planning application	Oxford City Council/ Developer Contributions	2030-2035	South Oxford	Stakeholder engagement with Oxford City Council/ Oxford City Community Centres Strategy
CF2	Investment into North Oxford Community Centre, to create hub with Ferry Leisure Centre	**Community Facilities**	Leisure Centres	**Important**	£800,000		Oxford City Council	2030-2035	North Oxford	Stakeholder Engagement with Oxford City Council
CF3	Refurbishment and extension of existing Ferry Leisure Centre	**Community Facilities**	Leisure Centres	**Essential**	£14,000,000		Oxford City Council	2030-2035	North Oxford	Stakeholder Engagement with Oxford City Council
CF4	Improvements to and extension of BBL Library to accommodate demand arising from growth in South Oxford Area and SODC - potentially to be amalgamated with BBL community centre project	**Community Facilities**	Libraries	**Important**	Dependent on scope and scale		Oxfordshire County Council	2030-2035	South Oxford	Stakeholder engagement with Oxfordshire County Council
CF5	Improvements to and expansion of the library offer in Headington and Barton to accommodate demand arising from growth in East Oxford	**Community Facilities**	Libraries	**Important**	Dependent on scope and scale		Oxfordshire County Council	2030-2035	East Oxford	Stakeholder engagement with Oxfordshire County Council
CF6	Provision of a community centre for Barton Park, alongside a new local centre	**Community Facilities**	Community Centres	**Essential**	Dependent on scope and scale		Oxford City Council/ Barton Park developers	2025-2035	East Oxford	Oxford City Council identified scheme
CF7	Capacity increases at existing cemeteries within Oxford, including Shotover Cemetery (cross-boundary with South Oxfordshire District Council)	**Community Facilities**	Cemeteries	**Essential**	£2,400,000	£2,400,000	Oxford City Council	2030-2035	City-wide	Oxford City Council identified scheme
Public Realm										
PR1	Public Realm and transport improvements around Botley Retail Park	Public Realm/ Transport	Public Realm/ Transport	**Important**	Dependent on scope and scale		Various	2025-2035	Central and West Oxford	West End and Botley Road Area of Focus (Oxford Local Plan 2045)
PR2	Public Realm improvements (including public spaces) in the West End	Public Realm	Public Realm	**Important**	Dependent on scope and scale		Various	2030-2045	Central and West Oxford	West End Spatial Framework/ SPD
PR3	Central Oxford Movement and Place Framework (COMPF) Projects	Public Realm	Public Realm	**Essential**	Dependent on scope and scale		Oxfordshire County Council	2030-2045	Central and West Oxford	Oxfordshire County Council
Utilities										

Reference	Scheme	Infrastructure Category	Infrastructure Type	Priortisation	Cost	Confirmed Funding	Delivery Body	Delivery Phasing	District Area	Source

Appendix 1 – Further information

A.1 As part of their representation to the Reg. 18 Plan, Berkshire Oxfordshire and Buckinghamshire Integrated Care Board (BOB ICB) provided an update for the IDP. This section (and paragraph 7.27 which discusses Primary Healthcare) sets out some further information about BOB ICB specifically, provides some useful context about Oxford, and includes a discussion about the role of ICBs more widely.

- NHS Buckinghamshire, Oxfordshire, and Berkshire West Integrated Care Board (BOB ICB) is a statutory NHS organisation established in July 2022. BOB ICB has the delegated function of commissioning primary care, including GP services.

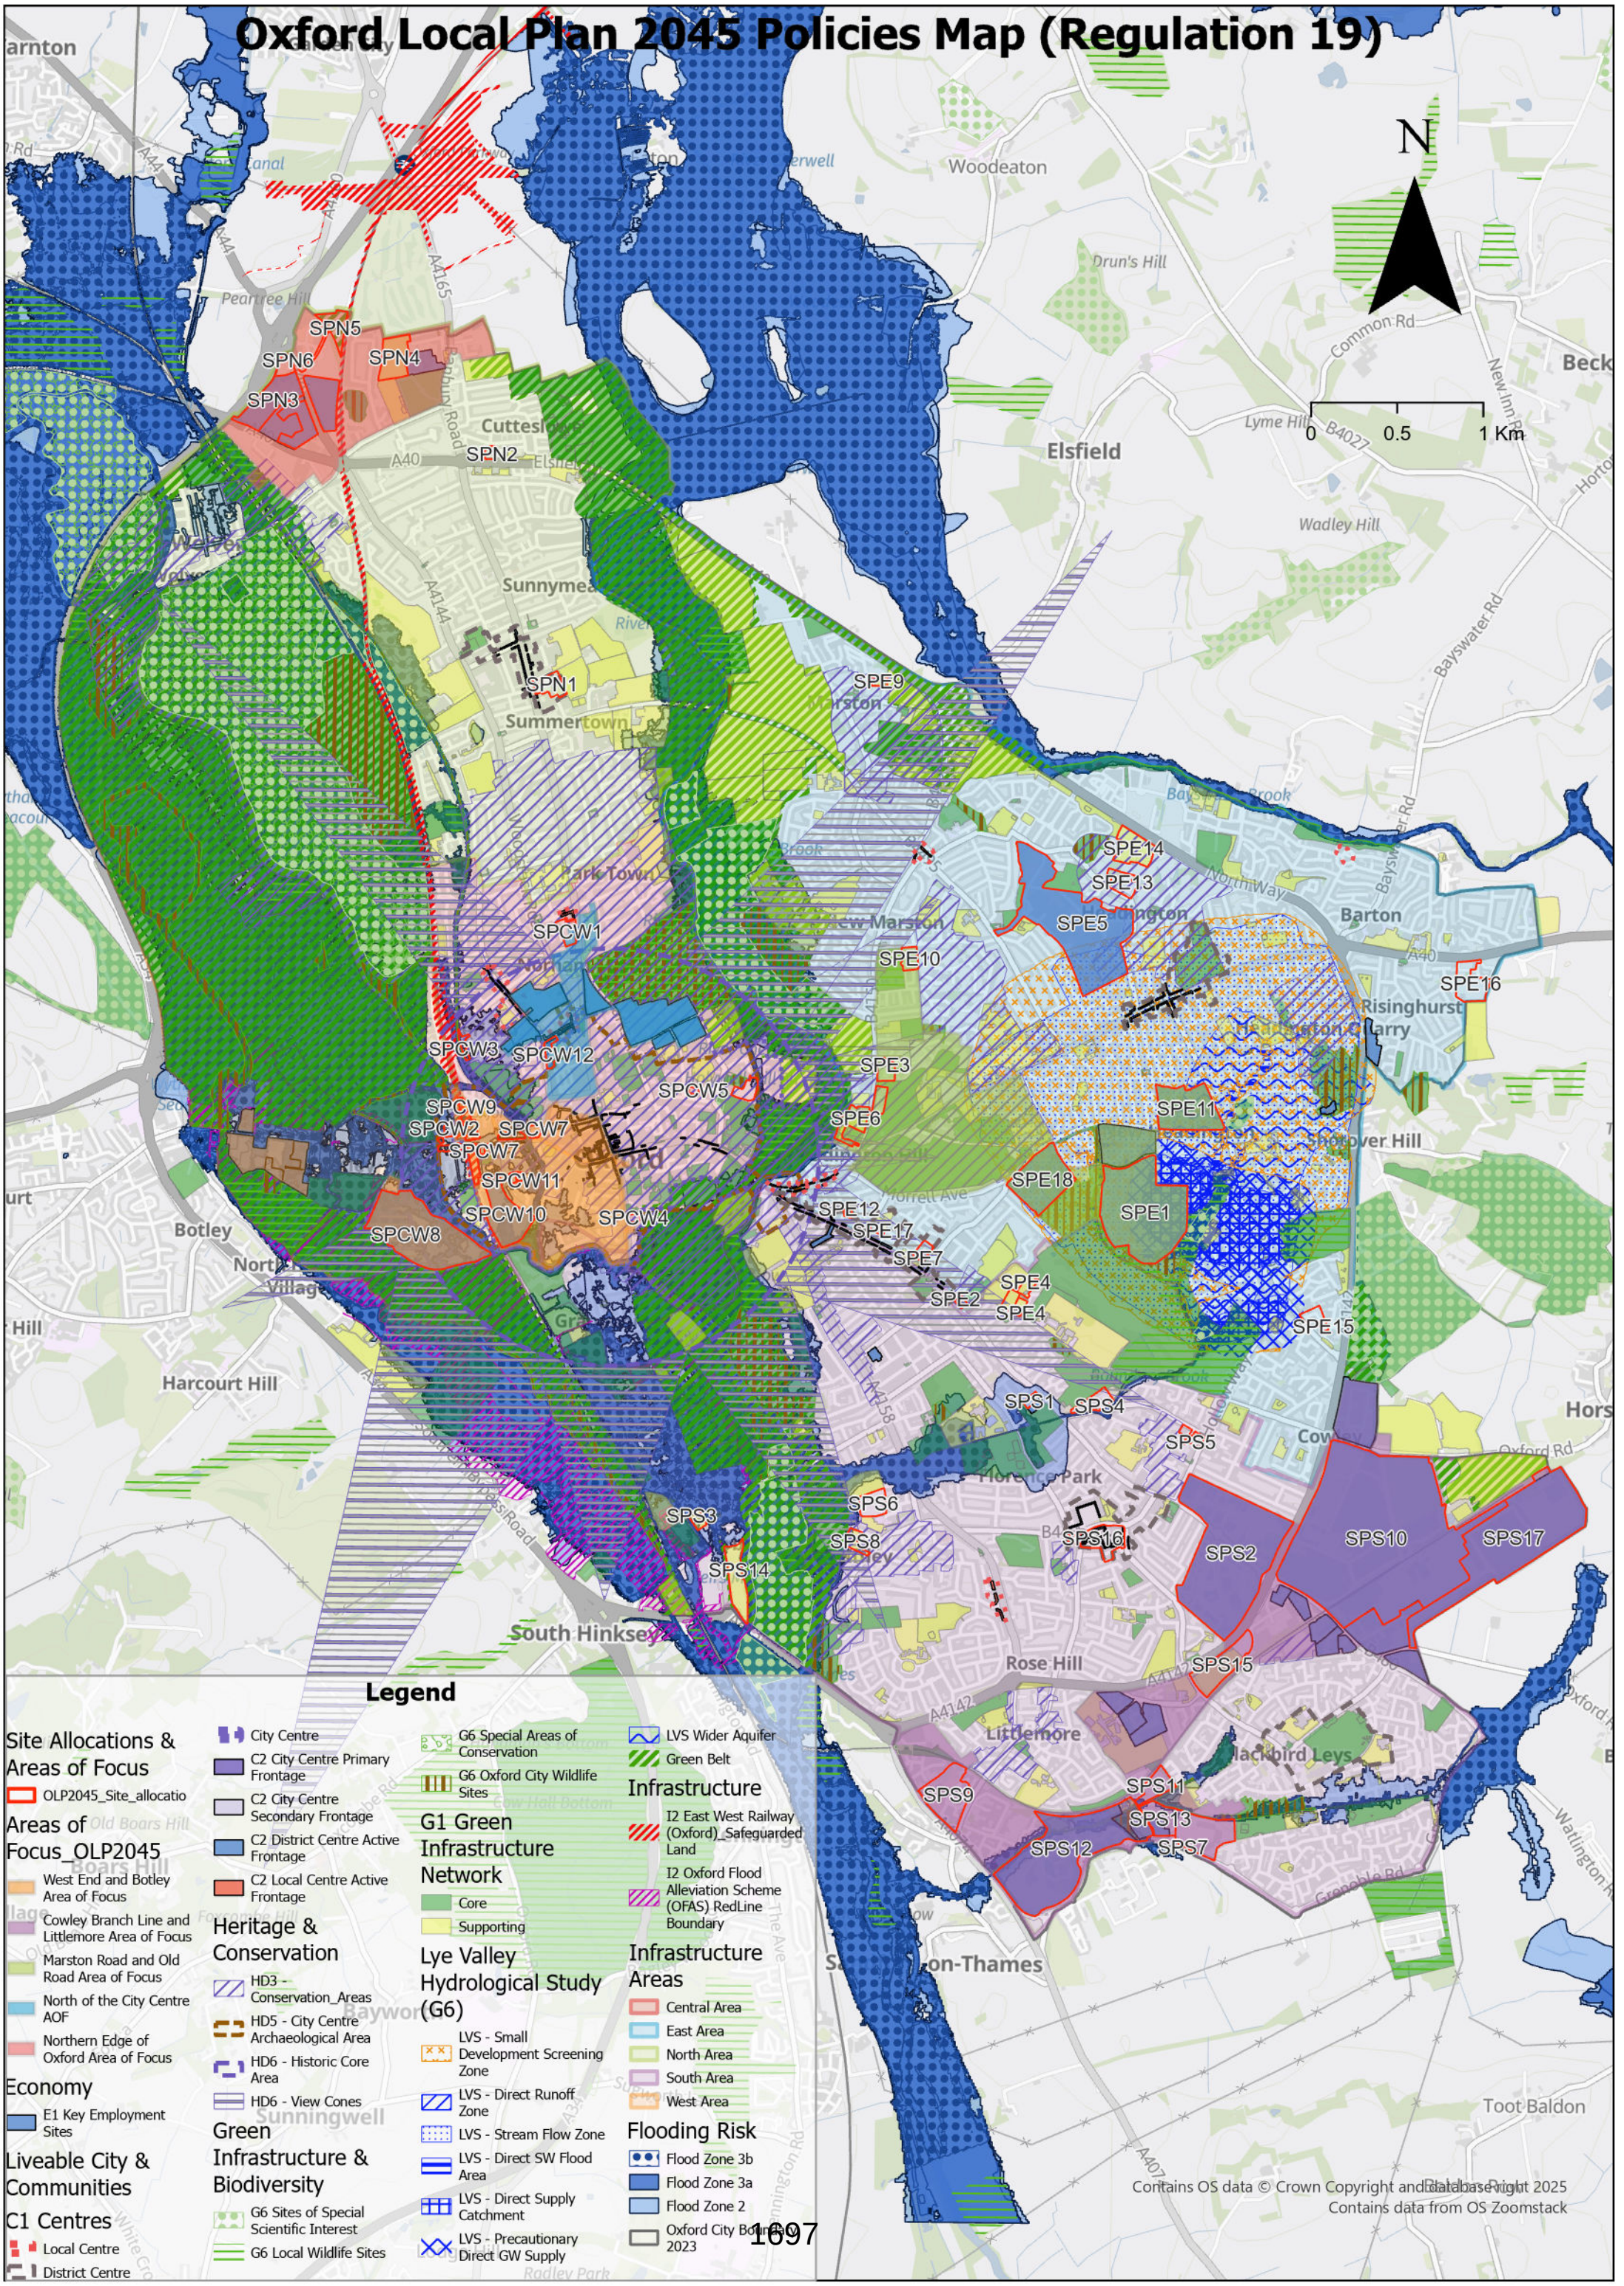
- GP practices collaborate with a range of other health-related organisations and services in their local areas in groups of practices known as primary care networks (PCNs). PCNs bring together a wider range of professionals to work collaboratively and provide high quality support to people when they need it.

- There are 6 Primary Care Networks (PCNs) in Oxford: City – East Oxford; City – OX3; Healthier Oxford City Network; Oxford Central; South East Oxford Health Alliance; and Spires. These PCNS include 26 GP practices, which serve a registered patient population of 240,400 (July 2025)

- Capital funding for improvement of GP premises comes from either NHS England (NHSE), or via the planning system through S106 contributions or CIL. While 100% NHS-funded premises improvement grants are allowed, the availability of funds for such *Improvement Grants* is very limited.

- The ICB needs to ensure that all primary care provisions are operationally and financially viable. The ICB funds Primary Care services via the reimbursement of rents (as approved by the District Valuer) and business rates (based on existing ONS population data). However, the ICB has no dedicated funding for any primary care estates development (including the commissioning of pre-project works or projects relating to new population growth and development).

Oxford Local Plan 2045 Policies Map (Regulation 19)



This page is intentionally left blank

Introduction

The Oxford Local Plan will set out how we want the city to look and feel. It will guide new development to the right locations while protecting and improving the environment and people's quality of life. It will help deliver the new homes, businesses, jobs, shops and infrastructure needed to support the growth of Oxford over the next 20 years and it will be used in determining planning applications and to guide investment decisions across the city.

This Consultation Statement sets out how Oxford City Council undertook consultation on its Oxford Local Plan 2042 Preferred Options document between 27 June to 8 August 2025. This consultation stage was the Regulation 18 consultation and followed the requirements of Regulation 18 of the Town and County Planning (Local Planning) (England) Regulations 2012. The consultation was also carried out in accordance with the commitments in Oxford City Council's Statement of Community Involvement in Planning, which sets out how we will involve the community in the planning process.

This consultation statement covers:

(i) Which bodies and persons were invited to make representation under Regulation 18,
(ii) How those bodies and persons were invited to make such representations,
(iii) A summary of the main issues raised by those representations, and
(iv) How we intend to address the main issues in the Local Plan.

Following the Preferred Options consultation, the decision was made amend the plan period to 2025-2045, rather than 2022-2042, on a number of technical grounds. While the evidence base is being updated to align with this plan period, all representations and comments received to date remain valid and will be taken into consideration for the production of the final submission (Regulation 19 stage) draft.

One of the main principles of the planning system is that local communities and stakeholders should be involved from the outset in the preparation of planning policy documents.

This statement has demonstrated how Oxford City Council has prepared the proposed Oxford Local Plan 2045 in accordance with consultation regulations. Extensive community engagement and stakeholder consultation has been undertaken across each of the main stages of plan preparation including main issues and preferred options. Comments have been received on the proposed plan, Sustainability Appraisal and the plan's evidence base. These representations will be taken into careful consideration and will inform the submission draft of the plan, including amendments to the contents where appropriate.

Local Plan Timeline

Early Engagement Survey (March/April 2025)

The early engagement survey was designed to ask a series of questions to assess to what extent the public and businesses deem certain topics important for the Local Plan to influence and prioritise. This survey was designed to preview certain topics that are prevalent in Oxford City and that can be addressed within a Local Plan. The City Council was also keen to involve those who might not normally engage with planning.

This was a smaller scale exercise as it would build upon the findings and evidence established for the 2040 plan. The compressed timescale meant that a small-scale engagement process (relative to the previous Issues Stage of the Local Plan 2040) was put in place, as much of the findings and evidence base that the withdrawn plan was built upon was considered to still be valid. It would also help us in not losing the momentum generated by the work of the previous plan.

As with the Issues stage for previous plans, this early engagement exercise is not a statutory stage of consultation; it is in addition to the formal requirements (see below). This additional stage was incorporated into the project timetable because it was felt that early engagement, before any policy approaches are drafted, allows people the best opportunity to shape the plan as it develops.

There were seven main topics screened into the survey to gain a sense of how important these are to the respondents and what should be a main focus for the preferred options consultation stage of the Local Plan. The consultation survey was open for six weeks, running from 17 March to 28 April 2025. It was distributed via the Oxford City Council website, social media, press releases, the Oxford City Council newsletter, email lists, and posters in libraries and community centres.

Early Engagement Report Local Plan 2042

Preferred Options (Regulation 18) stage consultation (June/August 2025)

The main consultation document was the First Draft Oxford Local Plan 2042. The draft policies presented in the document are what we have identified as the preferred options, which is the approach that we consider will bring about the most beneficial outcome for a particular subject area when compared to the other possible alternatives. The alternative approaches considered were set out in our Background Papers.

The consultation document was approved by Cabinet on 18th June 2025. It had previously been considered at the Scrutiny Committee on 12th June. The consultation period, which ran from 27 June to 8 August 2025, was to specifically gain people's views on the policy options contained in the document as well as the background papers and other supporting evidence base. The outcomes from this stage of consultation, as summarised in this document, will help the City Council to prepare the Proposed Submission Draft Local Plan.

Proposed Submission Draft (Regulation 19) consultation (programmed for Spring 2026)

Following the analysis of comments on the First Draft Oxford Local Plan 2042 Consultation Document, we will draft a Proposed Submission Document and consult people for a further 6 weeks. Comments must be received in writing (or by email) as they will be submitted to the Secretary of State.

Examination (expected November 2026)

Following the Proposed Submission consultation, there is an opportunity to make minor changes to the Local Plan in response to the comments made, before the document, the supporting evidence base and comments received are submitted to the Secretary of State. An independent examination is then carried out. Those who have made comments to the Proposed Submission Document have the right to ask the Inspector to be heard in person at the examination. The Inspector will provide a Report concluding whether the plan is found sound. If the plan is found sound, any changes

recommended by the Inspector are made and the plan will be taken to Full Council to formally adopt it.

Preferred Options consultation process

Who was consulted?

The City Council conducted an extensive 6-week long consultation exercise between 27 June to 8 August 2025 to publicise the project and engage the Oxford community in the Preferred Options Stage of the plan making process.

The Preferred Options consultation aimed to directly involve residents, workers, employers, students and visitors to Oxford as well as statutory consultees, service providers and other stakeholders with an interest in Oxford.

Direct contact was made by email or post as follows:

- All residential addresses in the post code sectors covering Oxford (door-to-door delivery of questionnaires to approximately 46 000 households)
- Statutory consultees and Duty-to-Cooperate bodies (see **Appendix 1** for list of consultees)
- Additional local groups and organisations who were likely to be interested (see **Appendix 2** for list of consultees)
- Respondents from the Early Engagement Survey who wished to be kept informed of further stages in the Local Plan process (180 persons)
- All contacts on the Planning policy contact list, made up of persons and organisations signed up for updates on the Local Plan and related matters (400+ contacts);

Consultation methods

At this stage in the Local Plan project the material that was published was focussed on presenting the preferred policy options and the evidence base behind them. The consultation focussed on asking consultees whether they agreed with the Council's preferences for the policy options.

A leaflet questionnaire was distributed to all households and businesses through the city which could be returned using Freepost. In addition to being delivered to every household in the city, the leaflet was made available in the 7 local libraries and the central library.

Postal distribution problems unfortunately resulted in delayed leaflet deliveries for some parts of the city. We encouraged affected residents who made queries to return leaflets if they still wished to do so, and we continued to accept returned leaflets for several weeks after the formal closing date of the consultation.

The main element of the consultation was based online via the Council's online consultation portal. There were two questionnaire formats, the first was a 'short form' questionnaire that was based on the postal leaflets – aimed specifically at people who only wanted to provide high level comments or had limited time to respond. The second was an in-depth, or 'longer' questionnaire, through which it was possible to make representations on all the policy options and supporting documents that have been prepared for the plan, as well as general comments on the plan or the process. Representations were also accepted by direct email.

Consultation materials

To make this information accessible and to engage with a wide range of parties/people and levels of interest a range of materials were produced with different audiences in mind:

For people with 5-10 minutes to get involved:

- Leaflet (equivalent 2 sides of A3) with a freepost reply with basic information, a simple 'Strongly Agree – Strongly Disagree' questionnaire and some space for additional written comments;
- Online questionnaire based on the 5 main topics contained in the leaflet survey.

For stakeholders and those with more time/interest:

- First Draft Oxford Local Plan 2042 Consultation Document
- Draft Sustainability Appraisal
- Background Papers
- Structured online questionnaire (on the Council's Consultation Portal) to comment on Preferred Options Consultation Document (in addition to the option of submitting written feedback on the council website, by email or by post).

The materials described above were available:

- On the Council's website,
- In 7 local libraries and the central library,
- As hard copies on request

Promotion of the consultation period/Publicity

The Preferred Options Consultation was publicised through the following channels:

- Publication of an updated Local Development Scheme (LDS) in January 2025;
- Direct notification of residents and stakeholders as described above;
- Publishing information on the City Council webpage, and dedicated page on the consultation portal;
- The City Council's social media channels. There were three paid adverts on Meta (Facebook and Instagram). An economy advert which had 733 link clicks, 19,629 reaches and 36, 478 impressions. A housing advert had 2,082 link clicks, 48,135 reaches, 89,658 impressions. And a biodiversity advert which had 873 link clicks, 14, 835 reaches and 38,864 impressions. There were also three videos on TikTok. A housing video with 55,585 impressions, 40,318 reaches and 375 clicks. An economy video with 26,423 impressions, 18,851 reaches and 148 clicks. A video about sustainability with 22,728 impressions, 16,950 reaches and 103 clicks.
- A press release;
- Posters distributed for display on all community noticeboards in the city; and
- Briefings to Local Councillors.

Consultation events and meetings

We organised a number of face-to-face sessions – including in person 'drop in' sessions at various locations across the city, attended by officers of the Planning Policy team, and a number of online sessions that were subject and topic based for which there was a sign up/booking process for members of the public. These were widely advertised through the posters displayed on all community notice boards, as well as on our website. The events were scheduled as follows:

Date	Time	Location
Saturday 5th July	12.00 - 15.00	The Leys Festival
Saturday 5th July	14.30 - 16.30	Afternoon tea at Littlemore Village Hall
Monday 7th July	16:30 - 18:00	**Online**
Tuesday 8th July	10.00 - 14.00	Barton Community Centre
Wednesday 16th July	11.00 - 13.00	North Oxford Association
Thursday 17th July	11:00 - 12:00	**Online**
Sunday 20th July	9.15 - 12.00	South Oxford Farmers' Market
Wednesday 23rd July	10.45 - 14.15	Town Hall, Long Room
Saturday 26th July	10.00 - 14.00	Wolvercote Mill Community Café
Tuesday 29th July	17:00 - 18:30	**Online**

Structure of this Report

The report provides a comprehensive summary and analysis of all responses received during the consultation period. As outlined above, responses were collected through a short questionnaire and long questionnaire, both of which featured open text boxes to encourage broader comments on the plan and draft policies. In addition, comments and representations were welcomed via email, with statutory bodies also able to submit their responses via email. Each response has been carefully summarised and analysed by chapter and by each draft policy. Findings have been presented in two formats: data drawn from the responses to the quantitative survey from the short and long questionnaires, followed by a table of the summarised public written comments alongside officer responses where appropriate. Summarised responses from statutory bodies are presented in a separate table.

Supplementary information is contained in the appendices, including the list of statutory bodies consulted, local community and amenity groups that were contacted directly, and the leaflet posted to all Oxford City residents.

All Public Responses – Draft Policy S2 8
Statutory Consultee Responses – Draft Policy S2 11
All Public Responses – Draft Policy S3 13
Statutory Consultee Responses – Draft Policy S3 20
All Public Responses – Draft Policy S4 26
Statutory Consultee Responses – Draft Policy S4 30
All Public Responses to the Plan Process Overall 34
All Public Responses to the Whole of Chapter 1 53

Headlines for Chapter 1:

- Strong public voice for provision of more housing which should have adequate infrastructure to support development
- Any developments should be designed to the highest quality and sensitive to the historic environment
- General concern that the amount of development will put a strain on infrastructure, services, and amenities; such as transport, water and sewage, GPs, schools, green spaces, shops etc
- Infrastructure improvements should come before development, not after
- Concern about more cars and pressures on the roads as it's too expensive for people to live so they commute
- Concern that developers can dodge provision of affordable housing too easily through claiming lack of viability
- Some preference for lifting vast majority of regulations on building to allow for more development

- Desire for the Plan to actively address inequalities through tools like citizens assembles, collaboration with community organisations, stronger mention of community-led and cooperative housing and neighbourhood plans
- Mansfield College, Worcester College and Lincoln College express support for the Chapter

All Public Responses – Draft Policy S1

Draft Policy	Topic	Summary	Response
S1	Support	We support policies S1-S3 and particularly welcome the commitments in policy S1 Spatial strategy to prevent new development in locations where it would have a negative impact on green infrastructure and take account of local historic context.	Support noted.
S1	What protection is there for green space outside f)	BBOWT supports S1 f) but asks what counts as "important". What protection is there for green spaces that are not deemed important nor are they public open space nor floodplain?	The detailed approach to protecting GI is set out in Policy G1.
S1	Support but policy should be split in two	We support the general approach to the spatial strategy of the local plan and the aim to ensure that development within the City is located in the right places. Support the City's ambition to address as much of its housing needs within the city boundary as possible, however, this should not come at the expense of the economic potential of development sites such as Oxford North. However, ONV remains of the opinion that the policy should be split into two, one setting out the spatial strategy and a second policy setting out the presumption in favour of sustainable development. Following withdrawal of the Oxford Local Plan 2040 there remains the need for co-operation between Oxford and the surrounding authorities to ensure that the approach to meeting the unmet housing need is agreed. While it is acknowledged that the consultation version of the plan does increase the amount of housing to be provided within the plan period there remains a level of housing still to be provided outside of the boundaries of the city.	The general support is welcomed. S1 as a whole deals with the spatial strategy, so there is no obvious advantage to splitting it. The Plan does not attempt to address housing need at the expense of existing employment sites, which it encourages intensification of.
S1	Templars Square	The redevelopment of Templars Square would make a significant contribution to meeting the aims of Policy S1/ the development proposals should be viewed as one of the most strategically opportunities for the city in terms of its ability to address and	Noted.

Draft Policy	Topic	Summary	Response
		positively contribute to the aims and objectives of the emerging Local Plan.	
S1	Change of use	We support this policy in principle. Whilst the general aims of sustainable development and growth in terms of the delivery of homes, jobs and services are positive, a strategic approach is needed to achieve these aims. This policy touches on a number of key themes without identifying opportunities for growth. We would like to see this policy set out the council's stance in favour of applications for the change of use from commercial to residential within city and district centres. Promoting development of this type would achieve a number of the aims set out in Draft Policy S1. We would also support a policy outlining sanctions against the keeping of vacant units, both residential and commercial, within city and district centres. The repopulation or urban centres will have a significant impact on housing need, preventing the further development of Oxford's green setting.	The support in principle is welcomed. The policy approach for employment sites is only to protect the very largest few in the city and district centres. Most employment sites in these locations are not protected. The Local Plan cannot set a policy with sanctions against vacant buildings.
S1 Spatial strategy		Capacity based approach must be flexible to a) Allow sites of all sizes that meet the presumption in favour of sustainable development to be allocated with the draft Plan; b) Allow sites of all sizes that are not allocated in the draft Plan, to come forward through the Development Management process (planning applications) where they meet the presumption in favour of sustainable development. It is also imperative that there are no restrictions on small sites coming forward through planning applications which support small and medium sized housebuilders. Those SME housebuilders will play a crucial role in delivering the new homes that the country is desperately in need of.	Not every site needs to be allocated. Small sites do not need an allocation policy as there is unlikely to be anything site-specific it would need to cover. However, small sites are not in any way prevented from coming forward, and they are factored into the assumed capacity of the city through application of a windfall forecast.
S1 Spatial strategy	Oxford unmet housing need	The policy outlines how Oxford's development needs will be met but doesn't address the role of neighbouring local authorities in	Policy H1 outlines the housing requirement and unmet housing

Draft Policy	Topic	Summary	Response
		this process. Since Oxford's city boundaries have limited capacity, a significant part of its future housing and employment demands must be met in adjoining areas. The existing plan acknowledges this but relies on a regional strategy that has not progressed. Therefore, a new, agreed-upon approach is needed to address Oxford's unmet housing needs collaboratively. The plan should be bold enough to state that if growth ambitions are to be met in full, cross boundary joint working will be necessary with neighbouring authorities to consider how additional unmet needs can be met.	need is referred to. A formal request has been made of our neighbouring authorities for helping meeting unmet need, and duty to cooperate engagement is ongoing.
S1	SA of spatial strategy	Hallam is concerned that the Spatial Strategy has not been presented as a preferred option alongside any alternatives in the consultation. We can only look to the Sustainability Appraisal in this regard and the growth strategy for the Local Plan where six alternatives have been presented upon which the preferred option is based - a balance between providing for housing and employment land needs whilst delivering on wider local plan objectives. The Spatial Strategy must also be able to express more spatially where growth can be focussed. To some degree the plan sets out Areas of Focus and this could be reflected in the Spatial Strategy.	The SA and six alternatives for the growth strategy show that various options were considered.
S1	Proposed amendment	Minor change proposed to better reflect the duty on decision makers set out under S38(6) of the Planning and Compulsory Purchase Act 2004 (as amended) to have regard to the Development Plan as a whole… Proposed amendment: *"Planning permission will be granted where development proposals accord with the policies of the Plan <u>taken as a whole</u>."*	Amendment made.

Draft Policy	Topic	Summary	Response
S1	Proposed amendment/ modification	Move all text contained within Policy S1 to the supporting text. Policy is ***Ineffective*** as it is mostly aspirational. It allows any development anywhere providing it meets the criteria. It not a policy but a fluffy wish-list. ALL development will generally be a net negative for resident amenity even if it has positives such a housing provision.	Providing criteria to achieve is not considered to be merely aspirational.
S1	Comment – proposed amendment	This new policy should set out a Spatial Strategy for meeting the vision and objectives of the Plan referring to the need to maximise housing delivery in Oxford. The Spatial Strategy should also set out how the proposed development is to be delivered over the plan period and beyond. The Spatial Strategy should follow the approach in the extant Local Plan (i.e. maximising growth in the City and then adopt a hub and spokes approach, with the City being the focus for education, tourism and employment but having good infrastructure links into the surrounding Districts where housing is more readily deliverable). The wording of the Spatial Strategy should fulfil the role of the LP42 and respond to challenges which include "national and international pressures such as rising build costs for new development, a chronic undersupply of housing, climate change and energy insecurity". And to "build upon the positive aspects that make the city so special, whilst also seeking to address the challenges we face through positive planning policies to ensure the optimum outcomes for the environment and its residents, businesses, education, and health institutions". In terms of addressing the undersupply of housing, the wording of the new Spatial Strategy should be similar to the adopted Local Plan 2036 which acknowledged that "addressing the housing issue is a key priority…". The locational text in Chapter 8 of LP42 which is more	The spatial strategy does refer to sustainable locations. The described spatial strategy with spokes into the districts sounds like work that was done as part of the Oxfordshire Plan, which was never completed. It is beyond the scope of the Oxford Local Plan.

Draft Policy	Topic	Summary	Response
		akin to a spatial strategy should also be reflected in the Spatial Strategy, to focus delivery in sustainable locations. The Spatial Strategy should also respond to the importance of Oxford's location, "Oxford is also highly sustainable location for employment in Oxfordshire and the southeast. Enhancements could be made to the already sustainable transport system to take people to jobs here rather than if employment is scattered to less sustainable locations. A concentration of employment in a sustainable location is better than dispersed employment relying on the private car. In particular, the city's economy is shaped by the presence of its two successful universities". Without a clear spatial strategy the LP42 is unsound as it is not positively prepared, effective or justified.	
S1&S2		Cyclox support these policies	Support noted.

Statutory Consultee Responses – Draft Policy S1

Oxford County Council

Topic	Summary of comments	Response
Policy S1 needs to be sufficiently flexible to ensure appropriate developments, e.g., demolishing old buildings and replacing them with new housing, can be found to be compliant with policy, providing there is clear environmental justification as to why their reuse is not feasible/viable.	Policy S1 provides the plan's over-arching strategy. Other policies specifically deal with the reuse of buildings.	No action required. Resolved.
Oxfordshire County Council seeks that the effects of development are mitigated through appropriate conditions, works and contributions to infrastructure.	Noted.	No action required. Resolved.

Topic	Summary of comments	Response
We expect to agree S106 contributions and S278 works in respect of development envisaged in this Local Plan, as well as agreeing the use of Community Infrastructure Levy (CIL) receipts for some infrastructure needs.	Policy S3 sets out more information about S106, S278 and CIL.	No action required. Resolved.

All Public Responses – Draft Policy S2

Draft Policy	Topic	Summary	Outcome
S2	Clarification	We support the reference to the "..wider townscape and landscape" within this policy. We feel that the supporting text could include more detailed information on what this means, and could also include specific reference to the wider green setting of the city. It is also pleasing to see that the supporting guidance in Appendix 1.1 highlights the issue of important views across the city and how these can be both views from the outskirts in towards the historic centre, and those that are from the centre looking out towards the green hills which surround the city.	Support is welcomed. That part of the policy wording will be amended for clarity.
S2	Policy should mention high quality architecture	While we support the general aims of the policy, it does not mention any preference for high quality architecture within the city centre. In a city filled with rich examples of internationally significant architecture, we would like to see the council's stance in favour of supporting examples of high quality architecture within the city centre set out clearly in policy.	This is a strategic policy that addresses specifically the approach in the plan towards design guidance. The plan includes a policy that addresses high quality design (policy HD7), and other policies that affect placemaking such as green spaces (G1, G2, G3), historic environments (HD1, HD2).
S2	Weighting of local design	Draft Policy S2 (Design Code and Guidance) makes reference to development proposals referring to and aligning with the design principles set out in the Botley Road Retail Park Development Brief	Any design guidance will be produced to be in accordance with the policies of the plan. As

Draft Policy	Topic	Summary	Outcome
	codes and design briefs	2022. On adoption, the policies contained within the new Local Plan will carry greater weight in decision making on account of the Local Plan being more up to date than the Development Brief and the nature of the Development Brief being guidance only. This policy weighting should be acknowledged within draft Policy S2 for the avoidance of doubt.	they are not statutory documents they can be amended or updated as technical documents to be in line with the extant local plan policies. Their weighting will be set out in the policy supporting text.
S2	Strengthen design checklist	we consider that this policy and the design checklist at appendix 1.1 could be strengthened. A common complaint across communities is the banality of much new housing development, dissatisfaction with design quality, and frustration with design that is not in keeping with the existing built environment. It is our experience that communities wish to positively influence the design of new housing, ensure that heritage considerations are thoughtfully and pragmatically balanced with quality contemporary design, and achieve design that responds positively to the local context. These straightforward but positively impactful aspirations could be strengthened in Local Plan policy. Larger developments should include a requirement to establish a forum comprised of local organisations/ residents who can have proper input into the design of new developments on an equal footing with other statutory consultees. Such an approach has been shown to lead to developments being more integrated into the current local community and lead to better social and health outcomes for the new residents.	Developers are encouraged to engage with planning officers at the earliest possible stage so that any concerns are identified at the earliest opportunity, and engagement with the local community is also good practice particularly for major schemes. There is a basis for this in national policy and is set out in the City Council‘s Statement of Community Involvement.

Draft Policy	Topic	Summary	Outcome
S2	Local Heritage Assets Design Guidance 'Positive strategy' Modifications	• The following policy is muddled as statutory duties are as below anyway, and implies English Heritage listed assets will not be protected. Final paragraph of the policy states: *In recognition of the significance of Oxford's heritage, and as part of its positive approach to the historic environment, in addition to fulfilling its statutory duties, the Council will: a) identify, conserve and enhance local heritage assets* • Design guidance is not a material consideration unless backed up with an Article 4 restriction. • Bullet point d) of the final paragraph makes reference to a 'positive strategy' in the context of heritage assets at risk. The respondent asks "what is a positive strategy? It is simply waffle. • Whole policy needs to be moved to supporting text. • The word *should,* needs to be replaced with *must*, for the policy to be effective.	• This refers to heritage assets on the local list, which do not have statutory designation. • An Article 4 direction are not required for local design guidance to be a material consideration. • This refers to an approach of proactive engagement with landowners to support and encourage them to explore options for safeguarding the future of heritage assets at risk. Where relevant developers will also be encouraged to consider how their schemes may enhance the setting of such heritage assets or directly contribute to the safeguarding of their future.

Draft Policy	Topic	Summary	Outcome
S2	Support + clarification sought	The inclusion of a Design Checklist at Appendix 1.1 is supported. The reference in the Appendix to the Design Code document should be clarified in terms of whether reference is being made to the National Model Design Code.	Comment noted.

Statutory Consultee Responses – Draft Policy S2

Historic England

Draft Policy	Summary	Response	Outcome
S2	Current title does not reflect the content of the policy. Suggest review, and also consider what a strategic policy on the historic environment should contain and whether policy content needs further update. One topic that could usefully be integrated is promoting opportunities for heritage-led regeneration. Hope the supporting text on heritage at risk from LP2040 Statement of Common Ground (SoCG) can be integrated into the final supporting text.	We agree the title could be changed to be more reflective of the policy. We will also have a think about the additional point and are happy to discuss further through statement of common ground where necessary.	Policy title updated. Council will give further thought to other suggestion re: heritage-led regeneration

Oxfordshire County Council

Topic	Summary of comments	Response
Landscape & Nature Recovery – Landscape		

Topic	Summary of comments	Response
Recommend that the policy and/ or design code includes reference to GI and the requirement to protect existing trees and hedgerows.	Design Checklist sections N1-N4 cover GI. Existing trees/ hedgerows are protected via other policies in the plan.	No action required.
Support design checklist at Appendix 1. It includes a lot of text making it not easy to use. Should consider if the checklist can be presented in more user-friendly way (e.g. more visualisation, interactive methods, etc.). It is not clear what applicants need to submit, or how compliance with the design code will be assessed.	Policy HD7 sets out that the design checklist could be included with a Design and Access Statement submitted alongside a planning application. No change proposed.	No action required.
Innovation Supporting text for Policy S2 should reference the Innovation Framework (available online as part of LTCP. The Innovation Framework requires an Innovation Plan to be produced. This is a mechanism for developers to comprehensively consider the need for innovation and futureproofing in the pre-planning stages of major new developments.	Having reviewed the Innovation Framework, it seems to apply more to infrastructure projects and is already supporting strategy for the LTCP.	No action required.
Urban Design (Placemaking) Require the inclusion of a reference "to carry out work with other local authorities and districts (where applicable) on producing and promoting use of other guidance – e.g., Oxfordshire Street Design Code (currently under development).	The Local Plan includes policy requirements to guide development in the city. As such, the inclusion of such a reference in the plan is not appropriate. We will continue to work with county colleagues to develop any relevant guidance.	No action required.

Do not know	18	5.73%
Not Answered	178	56.69%

Draft Policy	Topic	Summary	Response
S3	Strengthen social infrastructure element of policy	Community First considers that the themes of social infrastructure and community development could be significantly strengthened. To help achieve thriving, sustainable communities it is vital to set out expectations and enable locally-specific strategies to support long-term, on the ground community development support to support the process of new community formation, extend and deepen social and community infrastructure, and build bridges between existing and new residents. DRAFT POLICY S3: INFRASTRUCTURE DELIVERY IN NEW DEVELOPMENT sets out a range of expectations with regard to the provision of physical infrastructure. This policy would be strengthened by including an additional paragraph which considers social infrastructure, for example: *Where appropriate, in relation to the type, size, and scale of a development proposal, developers will be expected to engage early with the Council in order to identify and make to make sufficient provision to support site specific community development activity*.	This is an over-arching infrastructure policy which is supported by the Infrastructure Delivery Plan (IDP). While certain key physical infrastructure projects are referenced in the policy, the policy itself applies to all infrastructure – physical, social, green, etc. The IDP includes a schedule of projects to support planned growth over the plan period. Social infrastructure projects are included within the IDP. There is no need to explicitly reference social infrastructure in this policy as it is covered under the umbrella term of infrastructure.
S3	A more flexible approach suggested.	The infrastructure needs and delivery of an industrial site will differ from residential or mixed-use developments. A more flexible approach that allows for phased delivery would be welcomed.	Paragraph 3 of Policy S3 already includes some wording to ensure that infrastructure improvements are delivered “at a rate and scale to meet the needs that arise from that development or a phase of that development”

Draft Policy	Topic	Summary	Response
S3	More engagement with all stakeholders	Developers should engage with local active travel stakeholders (e.g. Coalition for Healthy Streets and Active Travel, Oxford Pedestrian Association). Oxford railway station should become a central transport hub, incorporating a nearby bus and coach station. Beckett Street car park is the preferred location for this hub due to its proximity and ownership. Urgent consideration needed before finalising housing/employment plans. Relocating the bus station from George Street is key to enabling a high-quality east-west cycle route through the city centre.	See response in box below See response in box below See response in box below Noted Noted
S3	Support for policy, with suggested amendments	Add: Engage with transport stakeholders to understand network opportunities pre-masterplan, to get the best results and avoid potential problems such as cutting off existing or future active travel routes. We specifically suggest that CoHSAT is engaged in any Major Development to identify opportunities or challenges. Change 'rail and bus' to 'rail, bus, active travel and links between these networks'.	The policy itself does not make reference to specific stakeholders as it is intended as an over-arching holistic policy which guides applicants to engage with appropriate/ relevant stakeholders. While active travel measures are supported through the IDP, these are usually delivered through developer contributions (e.g., S106/ S278 agreements. Whereas the policy states "Proposals to enhance the city's rail and bus network will be supported" relates to a much

1718

Draft Policy	Topic	Summary	Response
		The transformation of Oxford railway station should include a new fit-for purpose bus and coach station located close to the railway station, and a site should be allocated for this in the current Beckett Street car park.	broader suite of infrastructure, some which may require planning permission. The policy requirements for Oxford Railway Station/ Becket St car park will be set out in bespoke site allocation policy and any wider infrastructure requirements included within an Area of Focus Policy for the West End/ Botley Road. Neither of these policies include reference to a new bus/coach station. No changes are proposed.
S3	Infrastructure led regeneration	Network Rail welcome the preferred option for Policy S3 which outlines support for proposals that can enhance the city's rail and bus network, including Cowley Branch Line and Oxford Railway Station. However, redevelopment of Oxford Station is expected to act as a catalyst for economic regeneration, attracting investment and supporting new employment in and around the station area. The Local Plan should recognise the strategic importance of infrastructure-led regeneration in supporting the local economy.	Support noted. We can consider whether to incorporate these issues within Area of Focus/ Site allocation policies.
S3	CBL Buffer Zone	The inclusion of text relating to the proposed CBL buffer zone is not enforceable. It does not wholly and exclusively relate to the development and would not be justified, (especially for householder applications). BMW for example (at the end of the	The CBL buffer zone area is the area where financial contributions from *new* trip generating development will be *expected. (emphasis added).*

1719

Draft Policy	Topic	Summary	Response
	Modification/ amendment	line) may benefit but so might others who use it as a transit point to go to Oxford Central. Remove the following text: *Financial contributions from new trip-generating development within a 1,500m buffer zone of the proposed CBL [Cowley Branch Line] stations will be expected"* Unless there is a clear relationship between the proposed development. Contributions to CIL should be provided by city-wide CIL	Developer contributions are not sought from householder applications. CIL applies to minor and major developments in Oxford, while any financial contributions collected through this policy would be through the S106 process. The City Council already as a CIL charging authority already has a CIL tariff in place. The text also includes reference to the paragraph in the NPPF that sets out the tests for developer contributions (para 58 NPPF, Dec 2024). No changes are proposed.
S3	Infrastructure Delivery Plan	A clear, up-front rule that links schemes to an up-to-date Infrastructure Delivery Plan is preferable to ad-hoc negotiations: it gives landowners price certainty, speeds decisions and ensures that roads, bus priority, fibre and drainage scale in step with new homes and labs. The key, however, is to keep the IDP lean and regularly refreshed—no sprawling wish-list that becomes an open-ended tax. Contributions should default to a transparent, per-unit CIL/Section 106 tariff, with viability testing only for genuinely abnormal sites, and there must be scope to swap listed projects if evidence shows a higher-yield use of funds (e.g. bus lanes	The IDP is a 'live' document and is usually updated on an annual basis. Preferred Option Selected for reasons set out in Background Paper

Draft Policy	Topic	Summary	Response
		outranking public-art budgets). In short, the policy should secure essential enabling infrastructure without piling unpredictable, scheme-killing costs onto the very development Oxford needs to stay dynamic and affordable.	
S3	Timing of Infrastructure delivery	An emphasis on appropriate timing of infrastructure requirements would be useful- i.e., do not leave it till the end of the project.	Policy S3 recognises the importance of delivering infrastructure in a timely manner.
S3		I feel it is essential that new developments contribute to local infrastructure, but it would be good to see details of how this would be drawn up and enforced.	The IDP sets out the infrastructure required to support the delivery of the local plan. Policy S3 and the IDP provide the basis for developer contributions. Infrastructure is delivered through legal agreements/ conditions which are enforceable.
S3	Do not include policy	Four respondents considered that no policy on infrastructure delivery was required.	Preferred Option Selected for reasons set out in Background Paper
S3	Use evidence to support infrastructure delivery	It is important that the Council uses its evidence base (including the updated Playing Pitch Strategy) for sport and provides contributions to new sports facilities within the city.	The IDP sets out the infrastructure required to support the delivery of the local plan.
S3	Co-ordinated delivery of active travel routes	Prioritise a public health with a programme to join up and upgrade walking and cycling route into completed networks. Such a programme will pay for itself in health and productivity.	The IDP sets out the infrastructure required to support the delivery of the local plan.

Draft Policy	Topic	Summary	Response
S3	Shared service duct requirements for new development	With new developments, will services be required to be in shared service ducts and thus provide more space for trees especially street trees?	There is no requirement for services to share service ducts. Preferred Option Selected for reasons set out in Background Paper
S3	General comment	No idea what the text above is talking about.	Preferred Option Selected for reasons set out in Background Paper
S3	General comment	Additional infrastructure is needed for new people and developments.	Preferred Option Selected for reasons set out in Background Paper
S3	General comment	This should already be in place	Policy S3 recognises the importance of delivering infrastructure in a timely manner.
S3	Support	Support the policy subject to delivery on an appropriately phased timescale which will be development specific.	Support noted.
S3	Support	Support Preferred option which will ensure that development is more closely linked to infrastructure planning and should therefore encourage sustainable decision-making.	Support noted.
S3	Support	Having a policy seems a good thing to have.	Support noted.
S3 and S4	Support policies	Policy S3 and S4 are critical policies to ensure that policies contained within the Plan are deliverable and underpinned by sound evidence. Support inclusion of draft policy S4.	Support noted.

Statutory Consultee Responses – Draft Policy S3

South Oxfordshire District Council and Vale of White Horse District Council

Draft Policy	Summary	Response	Outcome
Draft Policy S3	Justification for the CBL 1,500m buffer for contributions is needed and confirmation of viability. S3 not fully deliverable as it extends beyond the city boundary. Not within 10mins walk.	Contributions have been viability tested. Policy S3 only applies to sites within city administrative boundary.	No further action.

National Highways

Draft Policy	Topic	Summary of comments	Response
S3	The Local Plan should provide a policy framework to ensure development cannot progress without the appropriate infrastructure being in place. We will support a local authority proposal that considers sustainable measures, which manage down demand and reduce the need to travel, particularly on the SRN. Infrastructure improvements on the SRN should only be considered as a last resort.	Draft Policy S3 – Infrastructure Delivering in New Development advocates this approach. Infrastructure schemes covered in the IDP are included following discussions with key stakeholders.	At the meeting, the City Council and National Highways agreed that the issues raised within National Highways response to the Reg. 18 Plan consultation had been satisfactorily resolved.

Oxfordshire County Council

Draft Policy	Topic	Summary of comments	Response
S3	**Strategic Planning** Support the inclusion of strategic infrastructure projects (e.g., Oxford Station and Cowley Branch Line).	Noted.	No action required.
	Draft Policy S3 provides a defined buffer zone within which financial contributions will be sought. The County Council would prefer the policy to set out a more flexible approach. On this basis, the County is keen to continue working with the City on identifying suitable wording for this section of the policy between the Reg 18 and Reg 19 stages of the plan preparation.	Increasing the flexibility of the approach also reduces the certainty of receiving contributions as each development needs to be determined on a case-by-case basis. We will continue working with county colleagues as the plan production process moves forward.	Worked with the Counnty Council to agree an amendment to Policy S3 to address this issue.
	Place Planning and TDM (Central) Specific refence should be made to the city's Park & Ride (P&R) network alongside rail and bus. Emerging work to update the Oxford Park & Ride strategy suggests a need to provide more capacity serving the city within the plan period. This is linked to employment growth in the city, including redevelopment and intensification of existing and future employment sites as well as policy for more low car development. The County Council's core schemes (trial traffic filters, ZEZ expansion and workplace parking levy) will also increase demand for P&R.	We cannot include infrastructure requirements based on unpublished or emerging work. If the P&R strategy is published in a timely manner, then we can consider updating the IDP	Oxford City Action: Keep a "watching brief" for publication of emerging studies/ strategies

1724

Draft Policy	Topic	Summary of comments	Response
	Emerging work also identifies the need for more consistent and higher quality facilities at existing P&R sites and improved interchange with other modes. Further bus service enhancements are also required to ensure all areas of the city are adequately served by P&R, again, particularly the south-east of the city. **Innovation Hub** New infrastructure should be futureproofed and consider how needs will change over time as both society and technology changes, including the need to mitigate and adapt to climate change. It is important that the Local Plan sets out the need for new infrastructure and infrastructure improvements to consider these changes (e.g. changing grid demands with electrification of vehicles and heat, vehicle automation, greater digital connectivity, 5G/6G etc). **Environment and Circular Economy** The Household Waste Recycling Centre (HWRC) at Redbridge is a critical facility for householders to deliver their waste for reuse, recycling and composting for Oxford residents and beyond. It is anticipated that a HWRC in this location will continue for the foreseeable future.	with any identified P&R schemes that affect the city. See above. When the strategy is published and schemes/ infrastructure projects are identified we can consider their inclusion in the IDP. Draft Policy S3 already includes a reference to "futureproofing" infrastructure. The requirements of the policy are to ensure that new development mitigates any impact by supporting	Oxford City Action: Keep a "watching brief" for publication of emerging studies/ strategies

Draft Policy	Topic	Summary of comments	Response
		infrastructure delivery. It would be for 3rd party infrastructure providers to deliver (and futureproof) any required infrastructure. Thank you for the update. No changes proposed.	

1726

BOB ICB

Draft Policy	Summary	Response	Outcome
Policy S3	The ICB supports Policy S3 and welcomes the proposed engagement with developers to discuss the requirement of the infrastructure. The NHS body which is responsible for the commissioning neighbourhood health services or primary care services should be engaged in any pre-application engagements such as preapplication and planning performance	Noted. Noted.	No further action

Draft Policy	Summary	Response	Outcome
	agreement (PPA), including the delivery of neighbourhood health centres and other primary care health facilities in the city. The pre-application engagement will allow the ICB or as such appropriate body which is responsible for the commissioning neighbourhood health services or primary care services and the relevant PCNs to have further discussions with the Council and potential developers about the appropriate primary care mitigations as part of the wider housing developments. The ICB proposed the following wordings to the Draft Policy S3: “Development proposals to deliver a neighbourhood health centre and new primary care health facilities or improvement works to existing primary care health facilities will be	Noted.	

Draft Policy	Summary	Response	Outcome
	supported subject to the proposal complies with other policies set out in the Document. Developers must engage with the relevant neighbourhood provider, the Integrated Care Board or as such appropriate body which is responsible for the commissioning neighbourhood health services or primary care services to agree with the delivery and funding arrangement of the neighbourhood health centre or the primary care health facility."	Policy S3 is an overarching infrastructure policy which sets out that planning contributions will be sought from development to deliver required infrastructure to mitigate identified impacts from development. Draft Policy S3 sets out that "the standards of infrastructure delivery will be expected to comply with other policies set out in this Plan." Draft Policy S3 already includes an expectation for developers to engage with infrastructure service providers to discuss their requirements.	

Draft Policy	Summary	Response	Outcome
		Including bespoke healthcare requirements are not therefore required because the policy already sets out over-arching expectations relating to engagement and ensuring that infrastructure complies with the other policies in the Plan.	

1729

All Public Responses – Draft Policy S4

Draft Policy	Topic	Summary	Outcome
S4 Viability	Undertaking assessments to support applications	Any assessment of viability regarding affordable housing must be undertaken by a suitably qualified independent viability consultant and that consultant must be agreed by the applicant in advance of any appointment.	Amendment made to policy to clarify this.
S4	Viability Evidence / study	Further work is required to ensure the Plan's assumption (that all planning applications that comply with policies should generally be assumed to be viable) is indeed the case. Testing in respect of older persons housing requires some clarification in terms of the assumptions made and we would encourage the council to engage with providers of such typologies at an early stage.	The Viability assessment of the plan has tested a wide range of development typologies to represent the types of sites that are likely to be developed in Oxford during the plan period. The contributions and

Draft Policy	Topic	Summary	Outcome
			requirements set out in policies are set at a level that the majority of qualifying applications would be able to deliver viably. This includes C2 forms of residential development, which can include communal older persons accommodation, and C3 which would include self-contained older persons accommodation.
S4	Viability Evidence / study	The Council's website does not include any evidence studies relating to Viability. This is a notable omission given that the wording of draft Policy S4 states that "the policies in the Plan have been viability tested". Without the Viability Assessment, it is unclear whether draft policies have been subjected to a whole plan viability assessment, which will then define how easily or not the aspirations can be delivered. Such an assessment would also define the percentage of affordable housing and answer the question of whether a lower level of affordable housing should be considered in order to allow for the environmental improvements sought. It is difficult to comment on individual policies and wider implications (including in relation to future site allocations) without understanding how they impact on the need for housing and employment land and indeed viability overall. Viability evidence to support the plan not published as part of the Reg. 18 consultation. Without viability evidence, the cumulative cost impact of policy requirements (including increased CIL Rates,	The Viability assessment is an iterative process, to test emerging draft policies, inform refinements to policies, and test final policies. At the Regulation 18 consultation the assessment was not published because it was incomplete. Policies requirements are assessed individually and cumulatively as a whole plan, in order to test the full range of policy requirements which an application might be required to deliver.

1730

Draft Policy	Topic	Summary	Outcome
		S106 etc.), cannot be properly assessed. Viability evidence also needs to consider emerging WPL etc.	
S4	Viability Evidence / study	Given the number of emerging policies affecting R&D-led development, the viability evidence must use realistic inputs and test appropriate site typologies, including lab-enabled buildings with high servicing and sustainability requirements. Concerned that a generic, one-size-fits-all viability approach has been taken, which fails to reflect the distinctive operational, ownership and financial realities of specialist sectors such as life sciences. Macro-economic events and interest rate rises can have a significant and long-lasting impact on the property market. It is important that the viability of the development plan is therefore resilient, and that the viability work supports this.	The Viability assessment of the plan has tested a wide range of development typologies to represent the types of sites that are likely to be developed in Oxford during the plan period. The contributions and requirements set out in policies are set at a level that the majority of qualifying applications would be able to deliver viably.
S4	Impact of policy requirements on viability (particularly employment uses)	The Local Plan should not put in place policies that fetter development opportunities from being brought forward or that mean those tasked with major development investment decisions must operate at the margins of viability. Concerned about the cumulative impact of the cost of the proposed policies in the plan (particularly in relation to employment uses), which are in addition to the recent amendment to the CIL Charging Schedule. Those increased costs will ultimately be reflected in rents charged to occupiers. Rising occupier rents on top of tax rises including National Insurance and Business Rates, will reduce the funding available	The policies in the plan have been assessed in the viability modelling to help inform the level of contributions are set at an appropriate rate so as not to fetter development. This is in accordance with the NPPF which requires local plans to be deliverable, meaning that obligations and policy burdens should not make development unviable. The testing has taken into account the recently

Draft Policy	Topic	Summary	Outcome
		for their research and development activities and risks driving many away from Oxford to more competitive locations both within the UK and abroad. That would have a profound and potentially irreversible impact on Oxford's position as a leading centre for innovation. We request that the cost of proposed policy changes, are assessed and considered as part of any transparent decision-making process as part of the Plan progresses. Serious concerns about the viability and deliverability of development within the Local Plan. Paragraph 86(c) of the NPPF is clear that planning policies should facilitate modern economic development, including science and innovation. Introducing further financial burdens (on top of already high land values and infrastructure costs) risks deterring occupiers and investors. Concerned that additional planning costs will mean that key employment sites become undeliverable.	updated CIL rates for employment as well. In the event that it is not viable for a proposal to deliver the full policy contributions, then the Plan also builds in flexibility via the cascade policy in S4, so that proposals can be adjusted until they become viable.
S4	Viability cascade for Residential development	We note that this Policy recognises that imposing the 'low car requirement' in the parking policy (Policy C8) will be very unpopular with residents, will therefore reduce the selling price of properties, and will contribute to difficulty in achieving viability of developments needing other requirements such as having 40% affordable homes.	The viability assessment has tested the impact of Policy C8 and found that the majority of typologies can deliver this requirement along with other policy requirements. Furthermore a lot of proposals would be in locations where C8 policy did not apply.
S4	Viability cascade for Residential development	The overall goal must be to increase the number of houses, it is extraordinary that to maintain viability, car provision, and consequent loss of space for housing, is increased first and then affordable housing provision. It is clearly better to have 10 homes	Viability testing builds in an assumption for developer profit in accordance with the NPPF guidance for a developer profit margin of 15% to 20% of the

1732

Draft Policy	Topic	Summary	Outcome
		with two affordable, than 6 houses, 3 affordable, with space wasted for parking and car infrastructure. This is ineffective as there is no definition of viability, which would be considerably more than breakeven for a developer to proceed with the development.	Gross Development Value (GDV). Agreed that the number of homes is important but so is the affordability of homes, in the context of the affordability crisis in Oxford specifically.
S4	Viability - development costs	The science and innovation sector, like the wider UK development industry, is navigating significant challenges: rising construction costs, global competition, constrained funding conditions, and increasing regulatory obligations.	The viability assessment to inform the plan, takes into account recent, current and forecast future market trends.

Statutory Consultee Responses – Draft Policy S4

Oxfordshire County Council

Draft Policy	Summary	Response	Outcome
S4	**Strategic Planning** Do not support the viability cascade as it is not in line with the county's policies on low carbon or the LTCP objective to reduce car trips. The County Council would like to see developers encouraged to make the best use of land, creating sustainable buildings at	See below for rationale for inclusion of the viability cascade. Other policies in the plan already cover these specific issues. Policy C8 sets out motor vehicle parking design standards. For residential development, this includes setting criteria for low car schemes (0.2 spaces per 20 dwellings) and maximum parking standards that reflect the County Council's residential parking standards for Oxford city. For non-residential parking	This response was sent to the County Council for review. Following a review and further discussions between City and County officers, no further

Draft Policy	Summary	Response	Outcome
	good densities and not using land wastefully on car parking. Draft Policy S4 should be amended to remove a hierarchy that allows the removal/ minimisation of net zero buildings and that allows an increase of car parking contrary to the County Council standards to not be met before there is any consideration of reducing the affordable housing requirement. Instead, all the possible allowances to provide for viability should be considered in the round	developments, the starting point is no additional parking (except for blue badge/ servicing) and a reduction in spaces will be sought at highly accessible sites. Any additional car parking at non-residential developments should be kept to a minimum, with the need being demonstrated through submitted TA. Policy HD8: Making Efficient Use of Land sets out the expected densities for development (i.e., 100dph for the city/ district centres/ 80dph for gateway sites/ 60dph in most other locations. Policies R1-R3 provide the plan's requirements for delivering sustainable buildings. Policy R1 provides that offsetting may be accepted, as a last resort, to offset remaining energy demand that cannot be sourced on-renewably on- or off-site. The policy sets out that the City Council will accept payment into the Council's offsetting fund for this remaining energy demand (secured through an appropriate legal agreement/ S106). Policy C8 and Appendix 7.6 set include vehicle parking standards (both "low car", and the aligned city/ county residential parking standards for Oxford). The viability cascade does not suggest that parking standards would be allowed that was contrary to city/	specific action was identified.

Draft Policy	Summary	Response	Outcome
		county (Oxford) standards but rather that these are effectively the "fall-back" position. National Policy (paragraph 35, NPPF) sets out the plan should set out the contributions expected from development and that such policies should not undermine the deliverability of the plan. Policy S4 provides a viability cascade which sets out the City Council's approach "if the applicant can demonstrate the development to be unviable". While the viability assessment for the plan provides the technical evidence to demonstrate that the policies in the plan (as a whole) should not undermine the deliverability of development, there are 'particular circumstances' (as set out in Paragraph 007 reference ID 10-007-20190509 of the PPG.	
	Place Planning & TDM (Central) This section of the Preferred Options document comes across as overly permissive. What the 'particular circumstances' are and what the relaxed standards would look like would be important. Such instances should be exceptions rather than the rule and any relaxation of standards should be kept to a minimum. In cases where there is no affordable housing requirement, we doubt that there is a need for any relaxation of standards. If allocating car parking spaces to units is considered necessary to make a development viable, a transport assessment may be required to demonstrate this is acceptable however we are concerned that any such policy contained in the Local Plan will		

1735

Draft Policy	Summary	Response	Outcome
	encourage developers to claim that car-free or low car parking requirements affects their viability and that would put the County Council's policies at risk. **Innovation Hub** Before any standards were to be relaxed, consideration of whether the developer has taken innovative solutions into account would be beneficial, i.e., relaxation of standards should be considered only after every alternative has been ruled out, especially in relation to sustainable development. **Climate Action** The County Council notes the preferred option could result in a key aspiration of the Local Plan, to reach net zero by 2040, to be lost if developments enter negotiations based on viability. This is concerning as the cost and emissions savings of implementing net zero standards at the build stage is significantly	Policy S4 sets out that it is the carbon offsetting payments that should be reduced incrementally until viability is achieved (rather than reducing the environmental quality of the development). The ordering in the cascade represents the city's priorities.	

1736

Draft Policy	Summary	Response	Outcome
	lower than achieving later through retrofit, and this additional cost will likely fall onto the occupant.		

All Public Responses to the Plan Process Overall

Topic	Summary of comments	Response
Consultation process- early engagement survey	The early engagement survey had 228 responses from a city of 165,000 residents but inclusive early engagement is critical and should use methods to capture input from many more, and particularly communities who are most difficult to reach. The results from this survey are not mentioned in the PO consultation.	Although the 2042 plan is a new plan, it can build on a lot of the work of the 2040 plan, which itself was informed by extensive consultation. Focus of the early engagement was in setting the scene that there are a few areas where the context has changed, but a lot of existing work to build on. The success of a consultation can't be measured only by the number of responses. The first statutory consultation at Regulation 18 had a much wider reach and bigger response rate. Nevertheless, statutory requirements are exceeded by an early engagement taking place.

Topic	Summary of comments	Response
Consultation questions – Q2: short survey	Wording of Q2 (short questionnaire) is misleading. Taking Care of Our Environment of the Planning Oxford's future: first draft Local Plan 2042 states: *We think it is important that Oxford is a green biodiverse city… We are protecting our important green spaces and features*. Instead, draft policy only protects sites which already have legal protection i.e. SSSIs and SACs. There is no protection for local wildlife sites. Yet many people will have voted in favour of this draft policy, under the misapprehension that it does indeed 'protect ALL our green spaces and features', not just the ones which the Council is legally obliged to protect. The misleading nature of this question invalidates not only the responses given but also invalidates the whole survey.	The plan includes a hierarchy of protection for ecological sites as well as protecting "Core Green and Blue spaces" - Policy G1. Policy G6 protects locally designated sites and sets out strict criteria which must be met, including "satisfactory mitigation and compensation".
Consultation process	Concerns over the complexity of the surveys, arguing this will exclude many from responding and responses will therefore not be representative of Oxford. Suggest introducing 1) Short video explanations for people who struggle with reading	This feedback has been noted and will be looked into for the Regulation 19 consultation and further consultation events.

Topic	Summary of comments	Response
	2.) Sending consultation out in sections (instead of whole plan) with deadline to return 3) have more localised consultation 4) have direct links to different sections on the online survey 5) have the option to save and return to the online survey. Questions are ambiguous and leading. Why is it not possible to vote on the alternative options if you are consulting on them anyway? All consultation material should meet professional standards for qualitative surveys. Furthermore, the list of site allocations should have been provided alongside the short surveys (not just the online surveys).	
Preferred options weighting	No information is given on what grounds preferred options are proposed/favoured and how that takes account of the evidence (e.g. the GI study report concludes Oxford's green spaces should be preserved and enhanced and new created, but only a tiny 'core' of these spaces are protected).	The background papers do set out a number of options in nearly all cases, and explain why the draft policy options were preferred. The background papers also link back

Topic	Summary of comments	Response
		to evidence and other relevant information to inform decisions.
Consultation process	Many planning authorities have a separate consultation on proposed site allocations after the Regulation 18 consultation, and we think that this would have been much fairer, especially as the next stage of consultation is supposed to concentrate on the plan's soundness only. This consultation also seems premature in relation to some of the proposed new site allocations as they are described as being still under investigation. In addition, we have had difficulty responding as there are errors and inconsistencies in the mapping and text, and the background information is incomplete. In our local area the interactive policy map shows more site allocations than are shown on the site allocation map in the online survey questionnaires. This seems likely to confuse or even invalidate some consultation responses. For at least one site (Warneford Hospital) the site assessment information is also missing. Approach to consultation engenders dis-engagement from democratic process. Site at	The proposed sites were included in the Regulation 18 consultation with proposed uses, just without detailed policies, But often there are no detailed policies on any topic at Regulation 18 anyway. The Regulation 18 consultation ran into the school summer holidays, but was largely outside of them.

1740

Topic	Summary of comments	Response
	Meadow Lane remains allocated despite 50 emails objecting to it. Timing of consultation inopportune – start of school holidays when many people in community organisations are on leave or have childcare responsibilities. Hinders community stakeholders being able to give a meaningful & genuine response. We would welcome further & deeper engagement with stakeholders/networks which represent communities in Oxford.	
Headington Neighbourhood Plan is a "material consideration"	The Headington Neighbourhood Plan, (valid until 2026) which went through multiple thorough consultations, generated lots of responses and was approved by the Council must be a Material Consideration. Yet its Green Spaces and Biodiversity policies have been completely ignored. They would be an excellent basis for the policies of the Draft Local Plan 2042. Relevant polices in the HNP are as follows; GSP1: CONSERVING AND ENHANCING PUBLIC ACCESS GREEN SPACE	The Local Plan does not seek to replicate existing policy already contained within the development plan for Oxford. The Local Plan provides an opportunity to set the local planning policy framework for the entire city. Where policies in the Headington Neighbourhood Plan remain up to date, these should be taken account of in the decision-making process.

Topic	Summary of comments	Response
	GSP2: PROVISION OF GREEN SPACE WITHIN DEVELOPMENTS GSP3: CONSERVING AND ENHANCING BIODIVERSITY	
Whole plan	**My objections to the Local Plan are**: 1. lack of transparency over the plan amounting to 'residents should not be allowed to comment or even know what is planned' 2. Where are the background papers for previous rounds of consultation feedback? 3. Why are Green Spaces not protected adequately – but seen as 'development sites' 4. The options on the consultation do not provide any evidence for the decision made 5. If there are background papers to support 'preferred options' – where are the background papers or the justification for these options, and where is the feedback from the alleged Early Engagement?	1. This engagement exercise was intended as a way of enabling residents to see what is planned and to comment. 2. The consultation report for the early public engagement survey was published ahead of the Regulation 18 consultation 3. The vast majority of green spaces are strongly protected 4. Attempts were made to explain why preferred options were put forward.

1742

Topic	Summary of comments	Response
	6. the survey report identified cross cutting themes: the protection of green spaces, sustainable infrastructure(especially sewage and flooding risks), the importance of aligning development with community health and wellbeing – however there is NO INFORMATION on how feedback on critical issues has informed the Preferred Option 7. Where are the background papers to prefer one green space Development site over another? 8. Where is the list of sites allocated for development - vital for residents to know what development is planned for their area and to ensure a strategic overview and not a blinkered generic response- is not provided in the short surveys (printed flyer and short online survey). Only the long online survey, that is least accessible to the majority of residents, gives the list of development sites and asks for feedback on whether these should be allocated 9. Wording is misleading, failing to define commonly used terms such as	5. The options were shown in the published background papers. 6. The explanations for the preferred options do refer to background information where relevant. 7. The Green Infrastructure Background Paper explains the approach 8. The sites were listed within the main document, but were not listed in the short questionnaire because that would have made the questionnaire not short or as accessible or possible to deliver door to door- but the questionnaire explained where ot find the information.

1743

Topic	Summary of comments	Response
	‘important green spaces’ and ‘affordable’ housing. In reality, the term ‘important’ green spaces is limited to ‘core’ green infrastructure with legal protection rather than spaces important to local communities, joined up biodiversity or climate adaptation; the term ‘affordable’ is unclear and undermined as unaffordable in the background documents with the introduction of a new term ‘truly affordable’ - a phrase that is not defined. **The Draft Local Plan will worsen Oxford’s current problems because:** • LP Preferred options 2042 consultation does not achieve a balance between the economic growth agenda and the societal and environmental needs of the city. • Policies promoting economic growth are prioritised and stated as requirements. • Policies around green infrastructure, heritage, place, culture and equality are worded as vague aspirations, merely ‘seeking to’ rather than requiring	9. Care will be taken to ensure important phrases are defined in the Glossary. The plan aims to balance competing needs and considerations. The policies follow standard wording. The majority of the green spaces are strongly protected. There has to be some flexibility to allow reprovision, but many green spaces are strongly protected in situ.

1744

Topic	Summary of comments	Response
	• The majority of the City's green spaces have no genuine protection **This consultation and plan should be rejected on the grounds that** • it hides the criteria/evidence on which the plans are being made • **economic growth appears to be the driver of this Local Plan and not plans which enhance Oxford for residents and which protect the local environment** • consultation with the public has not been in depth despite the claim on the City's website *'We can't get the Local Plan right without input from the community.'*	
Whole Plan	The entire plan is centred around the "ecocidal" model of growth economics. Wealth inequality is increasing. The earth cannot continue to sustain 8billion humans (the global economy and population size need to shrink by about 75%). Without healthy eco-systems and a	Comment noted. The Plan does attempt to balance need.

1745

Topic	Summary of comments	Response
	reliable climate we are going to be increasingly challenged to survive.	
Whole Plan	The plan seeks to introduce a raft of new requirements for development including building performance and ecology. While these are important matters for the local plan they need to be applied within the economic realities of development.	Comment noted- these measures are viability tested.
Policies Map	It is noted that the site is within one of the 'Areas of Greater Potential' identified within Figure 7 of the High Buildings TAN 2018 (area 5A – Cowley Residential Suburb). As described in the TAN, these areas are where proposals for new high buildings are more likely to be appropriate. The site is also within the 'Dynamic Area' 7 – Temple Cowley Centre. We request that these areas and heights are included on the Draft Policies Map, which is currently limited to certain layers. We would also request that the support for growth, regeneration and high buildings is clearly advocated and supported within the site allocation policy for Templars Square.	These areas are not considered appropriate for the policies map, and they provide background information but do not have a specifically applied policy approach.

Topic	Summary of comments	Response
Evidence base	We note that a number of Local Plan evidence base documents are not available at this Regulation 18 consultation stage. This includes an updated Housing and Economic Land Availability Assessment (HELAA). It is essential that these documents are published as soon as possible so that their contents can be used to inform the preparation of the draft Plan and for comments to be made upon them.	The full evidence base will be published at Regulation 19.
Plan Period	The proposed plan period is from 2022 to 2042, which reflects the 20-year plan period in the adopted Plan (2016-2036). There is an issue with the starting date for the period being 2022 given that it is 3 years before the submission of the plan and 4-5 years before its likely adoption date. In addition, whilst the 2042 end date would achieve the minimum 15 year plan period, this is based on the plan achieving the programme in the LDS with the emerging plan being adopted in 2027. Given that this allows no room for slippage, the Group proposes a later date for the end of the plan.	Since the Regulation 18 consultation, the Plan period has been adjusted to a 2025 start date, with a plan period now of 2025-2045. The LDS has been updated to reflect this.
Viability Evidence	The Group is concerned that the current consultation lacks detailed viability evidence to	The Viability assessment is an iterative process, to test emerging

Topic	Summary of comments	Response
	show the proposed policies are deliverable, particularly when combined with existing infrastructure costs like CIL. They stress that, according to planning guidance, viability evidence should be proportionate and part of an ongoing process. They request that such evidence be published for consultation to allow proper scrutiny of the potential impact on both commercial and residential development.	draft policies, inform refinements to policies, and test final policies. At the Regulation 18 consultation the assessment was not published because it was incomplete. Policies requirements are assessed individually and cumulatively as a whole plan, in order to test the full range of policy requirements which an application might be required to deliver.
Duty to cooperate	It is a serious and fundamental concern that whilst the Council have stated that the Plan will be based on a capacity led approach, that no Duty to Co-operate paper has been prepared to address the question of unmet needs. The Plan states only that "discussions will continue about the remaining unmet need to 2042." (paragraph 2.3 of the Reg 18 Local Plan"). Given the Council's approach in the local plan is capacity based, the issue of unmet needs (whatever the figure is – see below), needs to be addressed, given the acute need for housing in the City, and the	Duty to Cooperate work with neighbouring district councils is ongoing to address Oxford's unmet housing need.

1748

Topic	Summary of comments	Response
	importance of the provision of housing to economic growth not only in Oxford, but for the County of Oxfordshire and its contribution to the national economy in terms of significantly boosting the supply of housing.	
Duty to cooperate	To address the "acute housing pressures" in Oxford and the "urgent need for more housing", the Council is encouraged to maximise the provision of housing within the City and then liaise with its neighbouring authorities and other organisations to account for any unmet housing need. This should be done on a regular basis to address the recommendations made by the LP40 Examination Inspectors.	Duty to Cooperate work with neighbouring district councils is ongoing to address Oxford's unmet housing need.
Plan Period	The Council have set the plan period at 2022 – 2042. Using the Standard Method (SM) Oxford housing needs are 1,087 dwellings per annum, (this reflects the latest housing stock data). Over the proposed plan period, 2022 – 2042 this equates 21,740 dwellings, which on the basis of the Council's supply will result in a considerable level of unmet housing need that must be accommodated elsewhere.	The plan period has been adjusted to 2025 – 2045. Policy H1 calculates housing need using the Standard Method, and latest government affordability data.

Topic	Summary of comments	Response
	The Council have chosen the start date of 2022 which is over four years prior to submission of the Plan in April 2026. The base date should be 2025 since the SM takes account of past supply through the affordability uplift to determine housing needs. As set out in the NPPF and PPG local plans are meant to look forward a minimum of 15 years (para 22), past delivery is taken into account through the use of the standard method. The PPG Housing and Economic Needs Assessment Paragraph: 004 Reference ID: 2a-004-20241212 explains how the Standard Method is calculated using the existing dwellings stock for the area and "the most recent data published at the time should be used." As set out in the PPG the Standard Method also requires the affordability adjustment to be based on the most recent data, in this case it is the median affordability ratio 2024 that was published in March 2025. This suggests that the starting point should be in the year to which the affordability ratio relates. Consequently, it follows that the plan period should commence in 2025/26.	

1750

Topic	Summary of comments	Response
	There have been recent examples (West Berkshire Local Plan, Isle of Wight, and North Norfolk Local Plan) where the Inspectors examining local plans have required the plan period to be extended to reflect paragraph 22 of the NPPF and for the starting point of the plan to be brought forward a year to reflect national policy in respect of the assessment of housing needs. The plan period should therefore be 2025 – 2042, resulting in a housing need of 1,087 x 17 = 18,479 homes.	
Plan Period	The Plan period runs from 2022 to 2042. If the Plan is adopted by March 2027, the strategic policies in the Plan will have a maximum lifespan of 15 years. This is supported by ChCh. If there is any slippage or delay in the timetable then the LP42's lifespan will be less than 15 years and will need extending. Should that situation occur then the LP42's housing need will also need to be increased accordingly.	The plan period has been adjusted to 2025 – 2045 and the housing need recalculated to reflect this. Policy H1 calculates housing need using the Standard Method, and latest government affordability data.
Structure of Local Plan Survey	Found the local plan survey difficult to understand due to complexity and time constraints; concerned that many residents will be excluded from the	As well as the long questionnaire, that necessarily covered all

Topic	Summary of comments	Response
	consultation. Urges clearer, more accessible communication to enable meaningful public input.	proposals, there was also a short questionnaire.
General Comments: Ineffective Language/ Objectives not set	A Plan should not be only aspirational but lay out concrete measures by which the stated objectives are to be realised, it is therefore ***ineffective*** where policies are ***fluffy***. Phrases such as "*should have regard for…"*, "*take opportunities taken…", "be informed by…", "into consideration…", "should*", etc. are not ***effective*** as clear goals are not set, and at most belong in the supporting text. The Council seems to impose solutions to issues, enforcing specific solutions on development, therefore this is not ***positively prepared***. Much of the content of policies should be in the supporting text. Frequently, "policies" consist of idle speculation, and vaguely articulated and formed ideas - these are marked as ***fluffy*** or ***waffle***. Verbose site description is	Draft Policies will alll be reviewed to ensure effective and appropriate policy wording.

1752

Topic	Summary of comments	Response
	waffle if not backed up with concrete policies detailing what is and not acceptable given the characteristics. "Reduce" is either meaningless as the baseline is not given, or not related to the application so ultra vires, as the condition must relate to the application. Many policies seem to assume that, if a report is written, the planning result will obtain, without providing any metrics as to what the goals or thresholds are to allow consent.	
General Comment: Repetition between site/ area policies and general policies	Many site-specific policies repeat endlessly concerns that should be, or are, general policies such as car parking, flooding etc, this is ineffective as it can lead to confusion or lack of consistency and is frequently simply wrong eg: *Policies G1 and G3 require protection of existing green infrastructure features and enhancement of*	The Reg. 18 consultation document (June 2025) did not contain any site-specific or area-based policies. The inclusion of specific references within site allocation policies can be useful, particularly when signposting how development at a

1753

Topic	Summary of comments	Response
	greening on site through the urban greening factor. Policy G5 requires onsite biodiversity enhancement, and Policy G2 requires new Green Infrastructure features and enhancement of existing features. It is expected that those requirements will be met in the following ways. Planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon surface and groundwater flow to the Lye Valley SSSI. (JR, Churchill, NOC) Is not only needlessly repeated, but factually wrong – G6 and G7 are the relevant policies.	particular site or area can meet/ achieve wider policy aims.
Sites not up to date	A number of sites listed (e.g.: Marston Paddock) have already been developed but remain in the plan, these are ineffective as already developed.	We will review the list of sites to ensure that they are up-to-date for the next stage of consultation.
Plans Confused With Execution	The requirement to produce a plan (eg Traffic Assessment, SA etc) is confused with the actual goal, which is to achieve specific outcomes. A plan is not a goal, it is a means to a goal therefore these policies are ineffective.	Plans are underpinned by evidence, which inform their production. Certain policies include requirements for additional evidence to be submitted alongside planning applications. This is to assist the

1754

Topic	Summary of comments	Response
		decision-maker in coming to an informed decision.
Policy Map	It is not clear which Policy Map is the authoritative version, all are peppered with errors and omissions and not consistent with each other, rendering the OLP2042 ineffective and unsound. Green Spaces demarcation, possibly due to the illogical and wrong Green Space Survey 2020, is fundamentally incorrect. See Green Spaces (G1-G9)	The current extant policy map is for the adopted Local Plan 2036. A draft Policies Map was produced and consulted on as part of the Reg. 18 consultation (June-Aug 2025).
National DM Policies	The Levelling Up and Regeneration Act 2023 sets out provisions to introduce National DM Policies (NDMPs). NDMPs will implement a suite of national policy provisions for decision making with a view to streamlining Local Plans, enabling plan-makers to focus on matters that are genuinely local whilst also supporting consistent local decisions. Consultation on NDMPs is expected later in 2025 (prior to adoption/ possibly submission of Oxford's emerging Local Plan. Once adopted, Local Plans must not contradict or duplicate NDMPs – as per	Comment noted.

Topic	Summary of comments	Response
	Section 15C(7)(b) of the Planning and Compulsory Purchase Act 2004. ARC recommends the Council closely monitors NDMP developments and considers their implications carefully when drafting and reviewing development management policies.	

All Public Responses to the Whole of Chapter 1

Draft policy	Topic	Summary of comments	Response
Vision & Objectives	Support for heritage and biodiversity principles	Mansfield College supports the vision for the City to provide a healthy and inclusive City with equal opportunities which respects its identity, heritage and maximises the opportunities to enable business, knowledge and innovation to grow. The College also support the principle behind to support biodiversity and to protect the green infrastructure and resources of the City. The College is supportive of the objectives of the Local Plan which align with the College's aim to attract the best students to the City from all social backgrounds and ensuring an appropriate quality of accommodation for all who study in the City.	Support noted.

Draft policy	Topic	Summary of comments	Response
Vision & Objectives	Maximising delivery of homes	All opportunities must be taken to deliver new homes on sites within the City's boundary that are suitable, available and deliverable and meet the requirements of national planning policy. Those opportunities can and must include the development of sites that are in the Green Belt	The Green Belt has been assessed for opportunities, although much of it is functional flood plain, of high importance for wildlife or well used parks, etc, and is not available or developable.
Vision & Objectives	Reducing inequalities	Would like stronger & explicit reference to the following principles for reducing inequalities: • agency & participation – many residents feel excluded from decision making & shaping policies, would also like more tangible opportunities for neighbourhood-level involvement in specific developments. Eg neighbourhood plans, especially in economically-marginalised areas; working with community anchor organisations; more transparency and community involvement in spend of CIL and S106 eg via community covenants; ensure that those who experience housing inequality are given opportunity to input to policies eg travelling communities; using tools like citizens assembles to strengthen participation in complex planning decisions.	The Plan has clear objectives to tackle inequalities and ensure strong communities. It can't, however, control who owns or manages developments.

Draft policy	Topic	Summary of comments	Response
		• Recognise role of Community ownership & stewardship in owning & managing spaces – housing, community buildings, shops, green spaces. Eg stronger mention of community-led and cooperative housing (see Collaborative Housing Hub report). • Strengthening Oxford's Social & Solidarity Economy (SSE) - recognise them as partners in delivering key elements including affordable housing, renewable energy and community facilities.	
Vision & objectives	Environment and landscape setting	The environment is identified as one of the six themes underpinning the Council's vision for Oxford in 2042. We agree that Oxford's environment, particularly its broader landscape setting, is a characteristic feature of the city. Oxford is situated at on the floor of a valley surrounded on all sides by undisrupted green hills, creating the effect of a 'green bowl' around the city. This 'green bowl' provides the backdrop to historically significant views out from the city and is the reason for the protection of Oxford's view cones within policy. Figure 1.2 sets out the underlying objectives associated with each of the six themes and there is no mention of Oxford's broader landscape setting. The protection of the characteristic landscape setting of the city essential to its semi-rural identity should feature more prominently within the objectives associated with Oxford's landscape.	The objectives do cover the need to respect heritage and the importance of green spaces.

Draft policy	Topic	Summary of comments	Response
		We recommend that these objectives are changed to highlight and reflect the significance of Oxford's wider landscape setting.	
Vision & objectives		Worcester College can confirm that it supports the wider visions and objectives set out in the draft Local Plan, with particular support for the acknowledgement of the need to support Oxford's reputation as an international destination for high quality education and learning.	Support noted.
Vision & objectives	Support	We consider that the policies contained within the plan are generally positive. We strongly agree with the plan objectives and the three overarching threads to reduce inequality, address climate change and enable a liveable city. However the proof will be in the delivery. The Plan's objectives and strategy (Figure 1.2, pp 13-14) should say more about supporting the use of public transport and sustainable modes of travel over the use of cars. In addition, in line with NPPF para 124, strategic policies should "set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or 'brownfield' land". We would like to see this principle explicitly recognised within the strategy.	The support is welcomed. The objectives are clear that protection and enhancement of important green infrastructure is a key aim, as is taking: *opportunities for supporting the transition to more sustainable/active forms of transport, including by reducing the need to travel, supporting good bicycle parking facilities and avoiding on and off-street car parking where possible across the city*.

1759

Draft policy	Topic	Summary of comments	Response
Vision & Objectives	Not ambitious enough	The Plan does not meet its evidenced need – whether that is standard method derived or economic growth driven. Lack of affordability undermines economic growth and prosperity and works against the Vision objectives in respect to healthy and inclusive communities and equal opportunities for access to all basic needs to include homes, health, employment, nature and community infrastructure. A Plan that does not deliver sufficient homes, whether that be within its own boundaries, or by securing a robust strategy through which needs can be met cross boundary, will not deliver on a Plan vision that strives to achieve social inclusion and support communities that benefit from equal opportunities including as referenced – opportunities for access to housing. Hallam is not suggesting that the Council should water down its ambition. Indeed, the Vision should be appropriate to the City's prominence, influence and economic success; ensuring those qualities are strengthened and sustained and optimum outcomes for the economy, people and environment are achieved. The Plan must therefore provide a	An overarching thread of the plan is to reduce inequalities, and many policies are intended to work towards addressing this.

1760

Draft policy	Topic	Summary of comments	Response
		strategy to deliver that, with an appropriately planned level of growth.	
Vision & Objectives		Lincoln College support the Plan's overall spatial strategy.	Support is noted.
Vision	Proposed amendment	ChCh generally supports the Vision for Oxford but it does not address two key aspects: 1. the important role that the two Universities play in Oxford; and 2. the acute housing need in the City. The Universities and Colleges play a fundamental role in the social, educational, tourism, and local economy of Oxford, and indeed wider Oxfordshire,. In addition the Universities and Colleges require a functioning ecosystem. Good schools are part of this and access to schools for children of visiting academics is important. The LP42 must encourage and support schools expand and enhance facilities as needed. These points should be recognised in the Vision. Whilst the draft LP42 makes reference to there being a "chronic undersupply of housing", the Vision does not acknowledge this or set out any meaningful approach to addressing it. This should be a fundamental element of the LP42.	The Vision sets out where we think the city should be in 2045. It is not the primary means of setting out how we are going to get there. These points are well covered by other elements of the strategy, including the objective and the strategic policies, as well as by the plan generally.

1761

Draft policy	Topic	Summary of comments	Response
		In terms of the lifespan of the Vision, ChCh notes that the NPPF encourages Local Plans to have a Vision which looks over a longer term period (at least 30 years). In particular, where larger scale development is proposed and to take account of likely timescales for delivery. Whilst this is not a requirement for the LP42 given the lack of large scale development proposals, having a longer term Vision for Oxford (which envisages how Oxford's housing and employment needs will be delivered over the longer term) is important given its inability to meet its identified housing need. To respond to ChCh's comments, the following amendments are suggested to the Vision: "In 2042 Oxford will be a healthy and inclusive city, with strong communities that benefit from equal opportunities for everyone, not only in access to housing, but to nature, employment, social and leisure opportunities and to healthcare. Oxford will be a city with a strong cultural identity, that respects and values our heritage, whilst maximising opportunities to look forwards to innovate, learn and enable businesses, **the University of Oxford and Oxford Brookes University to prosper. The vision is one which addresses the housing needs in Oxford by making efficient use of land in the City and working collaboratively with neighbouring authorities to address any shortfalls in housing delivery and supporting infrastructure**; and supports research and	

1762

Draft policy	Topic	Summary of comments	Response
		development in the life sciences and health sectors which are and will provide solutions to global challenges. The environment will be central to everything we do; it will be more biodiverse, better connected and more resilient. We will utilise resources prudently whilst mitigating our impacts on the soil, water, and air. The city will be net zero carbon, whilst our communities, buildings and infrastructure will be resilient to the impacts of climate change and other emergencies."	
Objectives and Strategy	Support	ChCh supports the objectives for the Plan, which are built off the six themes. In particular the recognition of the help that should be given to Oxford to continue in its role as a national and international destination and support the visitor economy.	Support noted.
Overarching Threads	Support but policies need to go further.	ChCh supports the Overarching Threads to reduce inequalities across the City, and to address climate change. However, the two elements that the Plan does not address in full (as 'overarching threads') are housing (see H1 response), and infrastructure/transport (partly because this is for the County Council). The policies need to include flexibility to provide an inclusive society.	Comments noted.

Headlines for Chapter 2:

- General consensus that housing is needed in Oxford and general support for more affordable housing
- Confusion around the term 'affordable housing'
- General support for affordable housing contributions policies and some objections
- Majority of support towards the affordable housing threshold with some push to make the threshold higher
- Commentary about using empty homes and buildings for housing • Some respondents preferred proposed alternative policy options

Short Questionnaire Responses

Affordable housing

We have used up-to-date evidence of costs and profits in new developments to set an affordable housing requirement- we are proposing that 40% of new developments with more than 10 homes should be affordable, and 80% of those affordable homes

should be social rented housing as this is the most affordable type to best meet needs. To what extent do you agree with this approach?

There were 858 responses to this part of the question.

Draft policy	Topic	Summary of comments	Response
H1	Housing requirement - Exceeding the SM	Would support a housing requirement above the level calculated by the SM. The NPPF para 62 confirms this is possible and that it should not normally have to be thoroughly justified at examination. BP001 does not reference this change in approach. If the sub-region is to meet its economic potential and address the affordability challenge the housing requirement and level of unmet need must be increased. Calculate that from 2036 there is a deficit of 4,550 homes 2,376 homes 2036-2040 (1,087-493), plus 2,174 homes 2040-2042 (1087*2).	The level of unmet need needs to be calculated over the Plan period and discussions with neighbouring districts will take place about meeting that need over the Plan period. A higher than SM housing requirement in Oxford, given its limited capacity, would be essentially setting a requirement for outside the city and would need robust justification at examination, and is not considered to be a justifiable approach.
H1	Housing requirement – using Standard Method	Support the SM housing need figure of 1087dpa (21,740 over plan period) To unlock Oxford's economic potential, its full housing requirement must be met, as housing supports job creation and regional growth. This requires a coordinated cross-boundary strategy with neighbouring authorities, as confirmed by planning inspectors. The housing need should follow the standard method unless there are exceptional reasons to adjust it.	Policy H1 calculates housing need using the Standard Method, and latest government affordability data.

1770

H1	Housing need is higher than Standard Method	We acknowledge that efforts to secure higher growth in the Local Plan 2040 failed at examination. However, basing a housing requirement simply on a calculation of capacity, risks continuing to exacerbate a shortage in housing supply. Should first conclude duty to cooperate	Duty to cooperate discussions cannot be concluded before the capacity is confirmed through the examination process, but discussions are in train.

Draft policy	**Topic**	**Summary of comments**	**Response**

		discussions, before taking forward a strategy that knowingly supresses growth. A significant uplift in the delivery of housing will be essential for contributing to the growth ambitions, which we expect to be established by the Oxfordshire Growth Commission and for the Oxford-Cambridge Corridor. Only when these ambitions are fully understood can there be a full understanding of housing needs to assess against the Standard Method to establish a housing requirement that is able to take account of the exceptionally strong economic growth in Oxfordshire, which, if not supported by adequate provision of housing will continue to lead to problems of affordability, inaccessibility of housing and uncreased unsustainable commuting patterns. Whilst the previous Local Plan Inspectors did not conclude there was sufficient evidence to depart from standard method, that does not infer that the Council's should now settle for standard method as an indication of actual need. Need to undertake more work to understand and identify the actual growth requirements for the city and then work with neighbouring authorities to consider how the needs can best be met. Should reflect locally the Oxfordshire Leaders Joint Committee (OLJC) and the Vision for Oxfordshire. There is a strong case for a higher level of growth than is being provided for in the City Plan, whilst recognising that Oxford City has limited capacity (and this was the case when the adopted City	The Oxford Local Plan 2045 cannot consider the growth needs for all of Oxfordshire. Use of the Standard Method to assess housing need in Oxford is considered to be the most appropriate approach at the current time.

		Local Plan was prepared); it is considered that it is incumbent upon the	

1773

Draft policy	Topic	Summary of comments	Response
		authorities to work together to deliver the significant boost to the supply of homes (following on from the Growth Deal) in accordance with the NPPF and support both the local and national economic objectives some of which are outlined above. It is considered that provision should be made for a higher housing requirement than that based on the Standard Method (this level of growth should not be dismissed purely on the basis that there is insufficient capacity) and we would therefore urge the Council to urgently examine what is needed to support economic growth of Oxford and its hinterland and recognise that the housing needs of Oxford may well be higher than those proposed by the standard method and in doing so explore this strategic issue with neighbouring authorities through the duty to co-operate.	

	Capacity calculation and plan period	The supply would also need to be adjusted; it is noted in Background Paper 001 that the capacity work carried out for the preparation of the Oxford Local Plan 2040 showed a supply/capacity of 9,851 dwellings for the period 2020-2040 i.e. an average of 453 dwellings per annum. (it is noted that this work is being updated) however, the plan period is inconsistent with national policy so delivery from the three years preceding the assessment of housing need will need to be removed from the total housing supply expected in Oxford City. Agree that: "Oxford has acute housing pressures that need to be addressed. The city has an urgent need for more housing, and it is widely recognised that demand continues to outstrip supply." Recognise that Oxford City is a constrained area for development: There is the Green Belt, Flood Zones, and the setting of heritage assets that all impact on available development land. The Council will	The capacity has been updated and recalculated to reflect the 2025-2045 plan period.

Draft policy	Topic	Summary of comments	Response
		need to work with landowners, and its local authority neighbours to explore all options for delivering new homes (including Green Belt review), ensuring that every potential avenue for housing is explored before a 'capacity cap' is identified.	

H1	Plan period start date	HBF does not agree with the Council's decision to use a plan period that starts in 2022, over three years prior to the local plan's expected submission. Such an approach fundamentally misunderstands the standard method which takes account of past supply through the affordability uplift to determine housing needs moving forward. Local plans are meant to look forward at what needs to be delivered with past delivery being taken into account through the standard method. This is clear from paragraph 2a-004 in Planning Practice Guidance (PPG), which notes that when setting the baseline for the standard method the most recent assessment dwelling stock is used.	Since the Regulation 18 consultation, the Plan period has been adjusted to a 2025 start date, with a plan period now of 2025-2045.
H1	Sources of sites and prioritising brownfield first	While it is right for the Local Plan to maximise delivery on previously developed land (PDL); where housing and employment needs cannot be met on such sites, Greenfield sites will be required not only for the overall quantum of development but also to create a rolling supply of housing land (five-year land supply). Capacity should include the Allotments as a housing development site. No stone should be left unturned. Many of the proposed new site allocations for housing are on greenfield land. These should only be approved once all opportunities to use brownfield land have been exhausted. Some of the proposed building sites seem to conflict with many of the advertised priorities	Greenfield sites and allotment sites are both included in the Strategic Housing Land Availability Assessment (SHLAA). The only types of sites not included are those with national designations which preclude development, such as SSSI and Flood Zone 3b (greenfield). National policy establishes that development on brownfield should be prioritised, but not enough sites can be identified on

Draft policy	Topic	Summary of comments	Response

		of the Local Plan, including retaining green infrastructure and respecting heritage sites.	brownfield alone to meet Oxford's housing need so some greenfield sites are also needed, whilst also balancing other priorities and objectives of the Plan.
H1	Should encourage conversion of employment to residential	Plan should encourage the conversion of vacant employment uses (offices, retail) into residential use. The delivery of residential units within the city centre and district centres would bring great benefits. More life would be breathed into city streets, such as Cornmarket Street, if there was a mix of residents, workers and tourists. The preference for mixed use developments should also be mentioned within this policy. While the provision of dwellings is important, to do this successfully within urban centres the activation of ground floor units must be retained. This will help to protect the existing public realm. There is a chronic lack of affordable housing in Oxford. It is such an expensive city in which to buy or rent a house in that essential workers struggle to find a home here and instead travel in from outside the city, contributing to the appalling gridlock on our roads with which all residents are all too familiar. The Plan should seize the opportunity to convert existing brownfield sites into affordable housing rather than turning them over to new work sites (maximizing employment) that will only add to the number of commuters. Empty retail and office space should be actively targeted to create affordable housing.	The plan supports the conversion of employment sites to residential in Policy E1 where the landowner is interested in doing so. Many employment sites in Oxford also qualify for permitted development rights for conversion of office to residential. A particular challenge in recent years is that retaining employment uses often provides a higher return to the landowner.

H1	Process for addressing	there is still uncertainty as to what Oxford's unmet housing needs are without an up to date housing land availability assessment but on the basis of those plans being progressed elsewhere in Oxford it would	Duty to Cooperate work with neighbouring district councils is

Draft policy	**Topic**	**Summary of comments**	**Response**

	unmet housing need	appear that there will still be some unmet housing needs. It will therefore be necessary for OC to work with its neighbours to identify additional supply to meet these needs as part of their duty to cooperate. Agreements must be reached that unmet needs will be met in full and that when new plans are prepared, they will maintain commitment to meeting the housing needs of Oxford and not seek to use preexisting supply to address their own needs, leaving Oxford City with substantial unmet housing needs. Without such agreements there can be no certainty that Oxford's need in their latest plan will be met in full. Para 2.3 explains no process for how the umet need figure to 2042 will be accommodated, this must be fully resolved before Reg 19. Recent updates to national planning guidance have increased the calculated housing need for Oxford and surrounding areas. Given government ambitions and the work of the Oxford Growth Commission, further analysis is needed to potentially raise housing targets, considering economic growth and housing affordability challenges. After this, the emerging plan should identify how much housing can be accommodated within Oxford itself, with the remaining unmet need addressed through agreements with neighbouring authorities. The previously agreed unmet housing figure (14,300 dwellings) from 2016 now needs updating and reconsideration for the new plan period based on current evidence and collaboration	ongoing to address Oxford's unmet housing need.

1779

Draft policy	Topic	Summary of comments	Response
		Unmet need of 11,889 will have to be agreed with the neighbouring Oxfordshire authorities. It is considered that in order to meet the unmet needs is falls to Oxford City to work with its neighbouring authorities to identify additional supply to meet these needs as part of their duty to cooperate. It is considered that agreements must be reached so that unmet needs will be met in full and to ensure that when new plans are prepared, they will maintain commitments to meeting the housing needs of Oxford and not seek to use preexisting supply to address their own needs, leaving Oxford City with substantial unmet housing needs. Without such agreements there can be no certainty that Oxford's need in their latest plan will be met in full.	
H1	Sites in adjoining districts for Oxford unmet need	It is suggested that the remaining unallocated land and Dalton Barracks and Abingdon Airfield is best placed to assist in providing some of the unmet need through the expansion of Dalton Barracks Garden Village site allocation that could provide an additional 2,500 new homes over the current allocation.	Duty to Cooperate work with neighbouring district councils is ongoing to address Oxford's unmet housing need.

1780

H1	Build to Rent and co-living provision	Consider that the Plan (at Policy H1) should also give positive encouragement to the development of BTR schemes as these are ideally suited to smaller brownfield sites located within city centres that can be constructed at high densities. BTR schemes can also make significant reductions to local housing supply figures as a high number of units can be constructed within a short space of time. The draft Local Plan fails to consider in any detail more modern housing tenures such as build to rent or co-living. Such tenures are actively promoted in the latest iterations of both the National Planning Policy Framework (NPPF) and the National Planning	Whilst the NPPF allows for BTR tenure, these types of developments are unlikely to meet affordable housing needs in the Oxford context because they are still not affordable to many people on Oxford salaries.

1781

Draft policy	Topic	Summary of comments	Response

		Practice Guidance (NPPG). The NPPG within the 'Build to Rent' (BTR) chapter (Paragraph: 001 Reference ID: 60-001-20180913) states "as part of their plan making process, local planning authorities should use a local housing need assessment to take into account the need for a range of housing types and tenures in their area including provisions for those who wish to rent". Co-living, a form of build to rent, is a relatively new concept of housing which aims to provide a housing option for single person households, who cannot or chose not to live in self-contained homes or Houses in Multiple Occupation (HMOs). In planning terms this housing type is sui generis non-self-contained market housing and is not considered conventional residential, which would fall under Use Class C3. This type of housing is not restricted to particular groups by occupation or specific needs. In addition, communal amenity space is provided in lieu of private floorspace to create a sense of community and encourage social interaction and engagement between its residents. The private units are appropriately sized to be comfortable and functional for tenant's needs and generally include en-suite bathrooms and limited cooking facilities (e.g. a kitchenette), but with access to larger kitchen facilities elsewhere in the development. It is important to note that the National Housing Space Standards do not apply to this type of accommodation due to its key attribute as a 'cost-effective' alternative form of housing, which would be proven negligible should unit sizes be increased. It is not clear as to whether any assessment has been undertaken into the potential requirement for build to rent homes.	

1782

Draft policy	Topic	Summary of comments	Response
		A plan-led solution to supply will help to ensure that housing is delivered in the most sustainable locations, and that it meets the needs of groups with specific housing requirements, as set out in the NPPF at Section 5. The Draft Plan's Paragraph 2.38 notes this also. Therefore, there is an overriding principle to facilitate the supply of housing to meet specific needs in the city, this should include housing targeted at single households, including co-living. Co-living housing is for single households and in planning terms, falls under sui generis non-self-contained market housing. Therefore, requirements applicable to conventional residential development (Use Class C3) are not applicable to this housing type, and therefore any new policy (or alternatively an extension to Policy 14) should address: • Room space standards – minimum 18 sqm typically. • Internal and external amenity space requirements. • Affordable housing approach – assume PIL typically (see Para 2.9, forth bullet). • Management expectations. • Preferred locations – assume central and accessible typically such as City and District Centers.	
H1	Should go further to find sites for housing	Where major developers are being permitted to use part of their employment sites for other uses, affordable/employee housing should be the first consideration. Specific, proactive allocations should be made for housing, for example on empty retail and office space.	Allocations can't be made for sites where no landowner interest is present. However, where it is, then sites are allocated where appropriate.

H1	Housing Requirement	CPRE support the revised methodology used to ascertain a lower housing need from that identified in the previous Local Plan. We seek	Clarity on unmet need is given in the Draft Submission Local Plan.

Draft policy	Topic	Summary of comments	Response
		an emphasis on all housing need to be provided within the City boundaries, making best use of existing allocated sites, and particularly support the emphasis and policy on existing allocated employment sites reverting to housing. We seek clarity on the unmet housing numbers (if any) which the city council will be seeking to be met by its neighbouring districts and understand that work in being undertaken in this area. We seek all efforts to be made that any such unmet need can be accommodated on existing allocated sites, using higher densities and good design. We will strongly oppose any proposal for unmet housing need to be met in the Oxford Green Belt or in the open countryside generally. CPRE Oxford City seek further interim consultation when detailed housing numbers are available . It is not possible to comment constructively without sight of the overall and detailed site specific housing numbers. It is vital that a further interim stage of consultation is undertaken when housing numbers become available in order that the City meets its duty to cooperate with neighbouring districts and democratic consultation can be incorporated. It is not acceptable that there will be no sight of the detailed housing numbers until the Reg 19 stage, when comment can only be given on legal and compliance grounds.	All attempts have been made to find capacity for housing.

		Therefore, an interim consultation on housing numbers must be undertaken prior to Reg 19.	
H1	Delivery through small sites	It is … unclear as to whether the Council will, as required by paragraph 73 of the NPPF, be delivering 10% of its housing requirement on sites of one hectare or less. Whilst the HBF recognises that Oxford is constrained it should still seek to identify and allocate as many	Sites with a capacity of more than 10 are allocated, and these really are quite small sites, which Oxford does heavily rely on.

1785

		small sites as possible through this local plan rather than rely on windfall	Indeed there are few large sites in Oxford at all.

Draft policy	Topic	Summary of comments	Response
		from such sites. Recent research by the HBF has found that there are 85% fewer small house builders today than there were 20 years ago and that of a survey of 202 SME house builders 87% said they were considering winding up their residential activities in the next three years. Whilst this decline is due to a range of factors, more allocations of small sites would ease the burden on many SME developers and provide more certainty that their scheme will be permitted allowing them to secure the necessary finance that is often unavailable to SMEs until permission is granted.	Sites smaller than 20 do not need a site allocation as there will not be anything site- specific that needs to be said in a site allocation policy, but the generic policies of the plan are adequate.

1786

H1	Evidence underpinning housing need Exclusion of sites under 10 homes (HENA) Modification/ amendment	The HENA used for the calculation is based on a set of mainly generic metrics and calculations ignoring most of the special factors in Oxford. The representation then goes on to critique the HENA. The Government Planning Practice Guidance suggests sites of 5 units or more should be included in Housing and Economic Land Availability Assessments, but Oxford City Council has excluded all sites from a Site Assessment under 10. Important sites listed below (eg: Policy XXX etc) are in their relevant sections are NOT included in the Plan which therefore is unsound as consultation and assessments of sites with important constraints have not been assessed and the community has not been given a chance to give input. Three modifications are suggested, 1. A rerun of the HENA Calculating the actual housing need	HENA evidence not relied upon. It was the supporting evidence for the LP2040 (withdrawn). This Emerging Local Plan relies on Government's Standard Method for its assessment of housing need.

Draft policy	Topic	Summary of comments	Response

1787

		2. Inclusion of all Sites with less than 10 houses (Listed in each Area section) 3. A report detailing how HENA representations were taken into account (which they were not)	HENA evidence not relied upon. It was the supporting evidence for the LP2040 (withdrawn). This Emerging Local Plan relies on Government's Standard Method for its assessment of housing need.
H1	Student accommodation ratio	A significant proportion of the housing supply is a result of student accommodation. This is accounted for in the supply with a 2.5 student bed spaces considered the equivalent to one dwelling. This is 2.5:1 ratio is taken from the Housing Delivery Test which is based on national data as to students per dwelling. However, given the significant amount of student accommodation being built in Oxford the HBF would suggest that a local assessment is required to see whether this is accurate for Oxford and the contribution of student accommodation to overall housing supply is not being overestimated.	The HDT ratio of 2.4 will be applied when measuring Oxford against the HDT, so applying a different ratio would not be appropriate.

1788

H1	General comment	Planning for the right number of new homes is vital to the (OUH) Trust. This is to meet the needs of staff (and affiliated students), and also the continued sustainability of the wider community of Oxford. While the Council will need to maximise delivery on available sites; the Local Plan will inevitably set a "capacity constrained" housing requirement. The Trusts agrees that: "Oxford has acute housing pressures that need to be addressed. The city has an urgent need for more housing, and it is widely recognised that demand continues to outstrip supply." The Trust recognises that Oxford City is a constrained area for development: There is the Green Belt, Flood Zones, and the setting of heritage assets that all impact on available development land. The Council will need to work with landowners, and its local authority neighbours to explore all options for delivering new homes (including Green Belt review), ensuring that every	Comments noted.

1789

Draft policy	Topic	Summary of comments	Response
		potential avenue for housing is explored before a 'capacity cap' is identified. The Trust welcomes the flexible approach that is being taken to the proposed development allocations on its land, which includes the potential for employer linked housing where appropriate, which could contribute to meeting the overall need for new homes in Oxford.	
H1	Heights	When there is such a great need for housing, confusion around only 57 stories	There is no 5-7 storey limit in the plan.

H1	Support for more flats	Build more flats to meet need	The minimum housing numbers assumed will sometimes mean flats are likely to be the solution, particularly in the city centre and district centre, but there are considerations, including viability.
H1	Capacity/constraint based housing requirement	While we broadly agree with the preferred option, which would provide a capacity/constraint-based housing requirement based off what is deliverable within Oxford City Council's boundaries, we consider the policy should include a fall-back allowing for higher density development in the case neighbouring authorities are unable to meet the shortfall in identified housing need. We consider this caveat to be pertinent given the recent breakdown in negotiations for the Oxfordshire Plan 2050.	The densities applied are already in the spirit of maximising capacity.
H1	Disagree with Standard Method Approach	Oxford should start with the full Standard-Method figure as a minimum and treat capacity as elastic: permit gentle densification of suburbs, up-zone transit corridors and retail parks for mid-rise mixeduse blocks, scrap parking minimums, and allow residential on employment land unless a net jobs loss is proven. A rules-based, form-led code would let bottom-up market forces deliver homes swiftly while keeping the city compact, liveable and globally competitive.	These measures are part of the plan, but assumptions of capacity are based on evidence of what may come forward, and can't simply be aspirational numbers based on assuming something will happen that there is no suggestion will practically be able to happen
Draft policy	**Topic**	**Summary of comments**	**Response**
			(e.g. densification across whole estates).

1790

H1	Prioritise housing over employment	More employment might be driving up house prices, meaning people have to commute which isn't sensible in light of the Climate Emergency doesn't make sense. The population needs a good cross section of people to thrive.	Comment noted.
H1	Ambiguity around unmet need	Agreement with standard method but unclear where unmet need figure has come from and why the plan period runs to 2042.	The plan period now runs until 2045. The unmet need is the difference between the calculated capacity and the housing need (as calculated by the standard method).
N/A	Identifying housing sites	All sites earmarked for development over 3 units should be shown as Preferred Options – not merely those over 10 units. This conceals the true impacts of development on city's green spaces.	Sites with development potential are identified within the Strategic Housing Land Availability Assessment (SHLAA). Sites which are unlikely to deliver 10+ dwellings net gain are not included as site allocations.

Statutory Consultee Responses – Draft Policy H1

Cherwell District Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

H1	Note that the Government's standard method is to be used and this is welcomed. The Local	Dialogue is ongoing with the other Oxfordshire districts about our	Dialogue to be ongoing.
Draft Policy/Evidence base/topic	**Summary of comment**	**Response**	**Outcome**
	Plan 2036 contained a level of unmet housing need for which the other Oxfordshire districts made provision for. Cherwell committed to delivering 4,400 homes in 6 partial review sites. No request has been made yet by Oxford City Council for help accommodating any additional unmet need. Any additional unmet housing need must be rigorously examined and Cherwell DC would want to explore through Duty to Cooperate process whether the city can accommodate any additional unmet need within its own boundaries.	capacity assessment and likely request for unmet need. The agreed unmet need links to the 2036 Plan. That leaves 6 years of unmet need ot the end of the 2042 Plan. The need might not be greater in numbers, but will be extended in years, and an acknowledgement of this from our neighbours would be helpful. We understand that we must attempts to find housing capacity where we can, but a lack of acceptance of whether or not we have cannot mean that discussions of the unmet need in the plan period to 2042 cannot take place.	All methodology and details behind capacity calculations to be shared. Formal request for unmet need to be made.

1792

Draft Policy	Summary	Response	Outcome
Draft Policy H1	Support the use of SM to inform Oxford's housing needs. We welcome the fact that with the capacity-	The SM is the basis for the calculation of the housing need.	Engagement on capacity calculations has been ongoing.
Draft Policy	**Summary**	**Response**	**Outcome**
	based housing target and unmet need of 14,300 already taken by surrounding district there is more than enough to cater for the amount of unmet need this plan generates. Request, as has been committed to, engagement on capacity calculations prior to Reg 19.	At the Regulation 18 stage it was not clear whether the unmet need would be above or below the 14,300 previously agreed for the previous round of local plans. The SHLAA to support the Regulation 19 consultation finds a capacity of 9,267 over the Plan period, which gives an unmet need of 12,473.	

1793

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

Policy H1 Housing Requirement	**Strategic Planning** Using a capacity-based requirement will not meet the housing need identified through the Standard Method (Dec, 2024) and will generate an element of unmet housing need. The exact amount of unmet housing need was not set out in the PO document.	Noted.	No Action Required

Draft Policy/Evidence base/topic	**Summary of comment**	**Response**	**Outcome**

1794

	The County Council will review any updated work on capacity when it is available. The Reg. 18 document only discusses the housing requirement in Oxford and does not discuss how the arising unmet need will be addressed.	Noted.	No Action Required
	The County is keen to understand the implications of any additional unmet housing need arising as new strategic housing allocations are likely to have infrastructure requirements (e.g., transport/ education), and other issues relevant to the County's statutory functions.	Noted.	No Action Required
	Concerned about trip generating growth contrary to LTCP targets and whether the cost of infrastructure can be met.		
	The County Council wishes to be involved in future discussions about housing need numbers and can act to support the Districts and City in highlighting issues where there are differences in approach and offering	Noted.	No Action Required

1795

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
	a way forward for example in relation to infrastructure needs. The County Council's position has been, and continues to be, that any site allocations should be well located in relation to the people they are intended to accommodate. Therefore, Oxford's unmet housing need should be met on sites close to Oxford, either with good existing walking, cycling and public transport links or the ability to provide such links funded from development. The number of homes to be delivered in the 2022-42 plan period (9,851) is less than the number of homes to be delivered in the 2016-36 plan period (10,880). The Reg.19 consultation should set out the numbers and detail the reasons such as whether landowners are now not seeking to redevelop their sites and why as there could be scope for further increasing the housing requirement.	We look forward to continued discussions with district and county colleagues as we seek to resolve issues of unmet housing need and associated infrastructure implications. Noted.	Continue relevant discussions through DTC Forum/ etc. No Action Required

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome
		The Reg. 19 Plan and supporting evidence will include SHLAA (Strategic Housing Land Availability Assessment), which includes details of landowner ambitions for sites in the city.	No Action Required

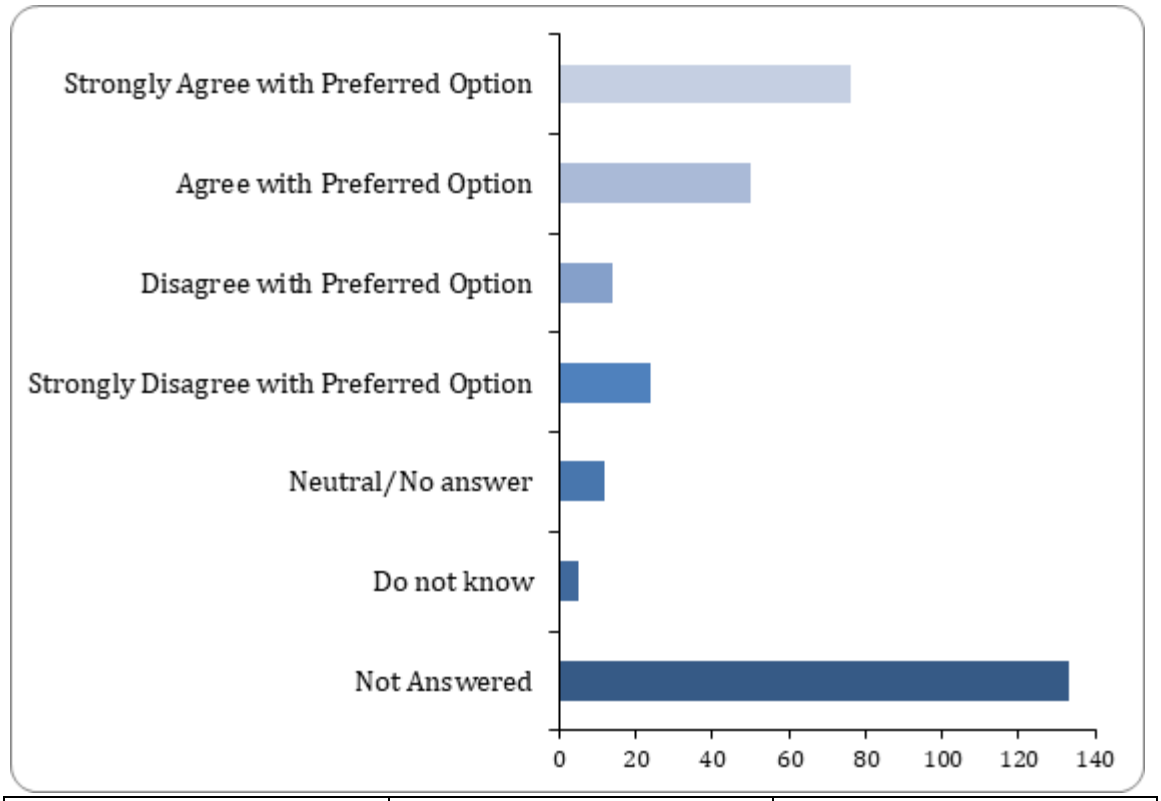
There were 181 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	76	24.20%
Agree with Preferred Option	50	15.92%
Disagree with Preferred Option	14	4.46%
Strongly Disagree with Preferred Option	24	7.64%
Neutral/No answer	12	3.82%
Do not know	5	1.59%
Not Answered	133	42.36%

Draft policy	Topic	Summary of comments	Response
H2	Prioritising Social Housing	Social rent should be prioritised as past policies in Oxford have not made homes genuinely affordable. Policy needed on limiting the number of unoccupied houses e.g. planning restrictions on short-term lets.	Social rent is prioritised.
H2	Objection to reducing affordable housing target	Object to reducing affordable housing from previous target of 50% to 40%. Government policy now requires social rent, so this is a missed opportunity.	The Viability evidence indicated that it was not feasible to continue the 50% affordable housing target for this plan period. Whilst some developments would be able to deliver this rate of contribution, a significant proportion would not.
H2	Amend policy to remove viability provision	Whilst supporting the intent of Policy H2, the wording must be altered and strengthened to ensure it delivers results. Developers often cite viability to replace social rent homes with other "affordable" options, and this must be prevented. It is CPRE Oxfordshire's view that sites which are not viable for social housing for rent should not be considered.	The NPPF requires that developer contributions should not make sites unviable

1800

H2	Viability - justification needed for affordable housing contribution above national 20%	National policy requires a 20% affordable housing discount (Paragraph: 002 Reference ID: 60-002-20180913) so any diversion from this must consider the current viability and deliverability challenges facing the residential sector. Request that regards be given to development viability on a site-by-site basis.	The 20% minimum rent discount set out in national guidance is specific to the category of affordable private rent homes. It is not a general principle for all affordable housing types.

Draft policy	**Topic**	**Summary of comments**	**Response**
H2	Application of policy to BTR	More clarity needed on affordable housing requirements for build-torent developments. National policy states that '20% is generally a suitable benchmark for the level of affordable private rent homes to be provided (and maintained in perpetuity) in any build to rent scheme' (Paragraph: 002 Reference ID: 60-00220180913).	Whilst the NPPF allows for BTR tenure, these types of developments are unlikely to meet affordable housing needs in the Oxford context because they are still not affordable to many people on Oxford salaries.

1801

H2	Viability study – testing of typologies	In the plan wide viability assessment (BNP Paribas 2023) it is unclear how sheltered or extra care typologies have been tested. Typology 19 is described as 'C2 care scheme - flats' extending to 60 flats with an average GIA of 4,376 m2. It is unclear how non saleable floorspace has been factored in. Unless further testing has been undertaken specifically examining a full range of older person housing typologies, it appears that there is insufficient evidence regarding the viability of this typology. The typology tested appears to be a hybrid typology incorporating various elements of extra care and 'a care scheme'. Some clarity is required on the assumptions made to ensure that all appropriate costs are included and realistic so that a judgement can be made in respect of traditional sheltered and extra care typologies.	The requirement for affordable housing contributions from older persons accommodation applies only to selfcontained units, and therefore excludes most typologies.
H2	Exemption of older persons and specialist housing from affordable housing requirement.	Various examples of LPs where affordable is concluded as not viable for older persons and specialist housing, so those developments are exempt from affordable housing contributions. Eg Fareham policy HP5, Swale LP, and Birmingham & Charnwood LP. Oxford should examine a similar exemption. By not adopting a different policy in respect of housing for older people, the policy is adding uncertainty and an unnecessary layer of cost and delay to such proposals.	The Plan Viability Assessment indicates that in the context of Oxford, a significant proportion of these development typologies would be able to deliver affordable

Draft policy	**Topic**	**Summary of comments**	**Response**

		See the Retirement Housing Consortium paper entitled 'A briefing note on viability' prepared for Retirement Housing Group by Three Dragons, May 2013 (updated February 2016 ('RHG Briefing Note'). The RHG Briefing Note establishes how sheltered housing and extra care development differs from mainstream housing and looks at the key variables and assumptions that can affect the viability of specialist housing for older people. These key variables include unit size, unit numbers and GIA, non-saleable communal space, empty property costs, external build cost, sales values, build costs, marketing costs and sales periods and significantly variable benchmark land values. We are also aware that the RHG Briefing Note is being updated and indeed we are informing that process. Sales and marketing costs for older persons housing schemes are typically 6% of GDV and this should be used within the older persons modelling. Sales periods of older persons' housing schemes are typically longer for retirement and extra care housing than general needs housing. There is a typical 18 month build period before sales can commence. Sheltered and Extra care schemes cannot be phased but must be fully operational and completed from month 1 of sales/occupation. As detailed within the RHG Briefing Note, once sales commence a rough guide is that 40% of units will be sold at the end of the first year of sales, 30% during the second year of sales and 30% during the third period. This should be considered within the viability modelling and amended accordingly. These longer sales periods should therefore be incorporated into the Viability Assessment, especially for sheltered housing. It is recommended that a standard allowance of £5,000 per unit is assumed as a typical average empty property cost - to cover Council Tax liability on unsold units and service	housing contributions as part of a viable proposal.

		charges (which will be applicable to the whole building from day first resident moves in). This	

1804

Draft policy	Topic	Summary of comments	Response
		increases to £10,000 for extra care accommodation to reflect higher costs particularly in maintaining care, communal and catering facilities, staff, and services and reflecting a slower sales rate than Retirement Living. PPG sets out that 'For the purpose of plan making an assumption of 15-20% of gross development value (GDV) may be considered a suitable return to developers.' However, for specialist housing for older people there is a clear precedent for a return of not less than 20% of gross development value primarily because of the risks associated with such developments. This is consistent with the Inspector's conclusions for appeals such as McCarthy Stone proposal at Redditch (Appeal Ref: 3166677), Churchill Retirement Living proposal at Cheam (Appeal Ref: 3159137) and the Churchill Retirement Living scheme at West Bridgford (Appeal Ref: 3229412) in 2019. 20% profit should therefore be assumed for specialist housing for older people.	
H2	Support for policy	We support this policy and believe that new affordable homes should be at genuinely and permanently affordable social rents.	Support is welcomed

1805

Draft policy	Topic	Summary of comments	Response
			for Build to Rent developments.
H2	Appendix 2.1 - Method for calculating affordable housing contributions	'D' is not described sufficiently clearly and should be clarified.	Noted, will review definitions in Appendix.
H2	Glossary Definition of affordable housing	Refers to glossary definition of affordable housing (page 184 of draft document). It is unclear whether the phrase Affordable Private Rent used in a iii) and Affordable Rent used in a i) are intended to be the same.	Affordable rent is defined as at least 20% below market rents, and Affordable *Private* rent would also be at least 20% below market rents but is a class of affordable housing specifically defined by national policy

Statutory Consultee Responses – Draft Policy H2

South Oxfordshire District Council and Vale of White Horse District Council

Draft Policy	Summary	Response	Outcome

Draft Policy H2	The preferred tenure split of 80% social rented does not align with the Specialist Housing Needs Assessment, which gives a 65:35 split.	The tenure split is aimed at prioritising and maximising social rented housing because it meets the needs of those in greatest housing need.	No further action.

1807

Policy H2 Delivering Affordable Homes	**Strategic Planning and Infrastructure teams** It is disappointing that the AH requirement is being reduced from 50% to 40%. We understand that the 40% requirement is based on viability.	The Local Plan viability study provides evidence for affordable housing and other proposed policy requirements	No Action Required
	It is not clear why delivery of the government mandated proportion of 'First Homes' is not expected.	Footnote 31 to paragraph 66 of the December 2024 NPPF sets out that First Homes are no longer mandatory but instead can be delivered where local planning authorities judge they meet local need.	No Action Required
	In relation to 'unmet need' housing sites, would the emerging Oxford Local Plan's 40% requirement undermine the currently adopted 50% requirements in neighbouring district's local plans. We have also raised a similar query in our comments on the recent Cherwell Local Plan Regulation 18 consultation where 30% affordable housing is proposed to apply to new	Sites allocated in neighbouring authorities' local plans to meet Oxford's unmet housing need are outside the jurisdiction of the city. It is for each individual authority to set policies for planned development in their areas.	No Action Required

1808

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

1809

	sites, but 50% affordable housing requirements apply to some existing allocated sites. The County Council has a particular interest in affordable housing given its social care role. We want to see provision being made for affordable forms of housing catering for those who are older or who have specialist needs, particularly in the form of affordable extra care housing which is set in our Market Position Statements on this topic. In the Districts, we are asking for a requirement in those Local Plans to provide an affordable extra care housing development of at least 60 units as part of the affordable housing component of very large sites. We do not think there are any proposed allocations in Oxford City where such a requirement would be suitable, as sites are smaller. Even Oxpens is expected to be an unsuitable site for such a requirement. We anticipate some extra care housing being delivered at a small number of sites in adjacent Districts to meet the City's need e.g. at Bayswater Brook. We would be	Noted (see box H4 below). Noted. Draft policy	Topic	Summary of comments	Response
H3	Support for policy	The approach to the supply of conventional affordable housing, as a financial payment which is subject to viability (as set out in Policy H3) is broadly supported. Support the caveat which does not require affordable housing contributions from student accommodation which is on sites which are within an existing or proposed University or College Campus site. With regards to PBSA development that falls outside of these categories, we recognise the PBSA to conventional housing ratio is 2.5:1, we therefore consider this policy to be appropriate. The University should be providing a lot more houses. The City is turning into a student campus. Developments are for students at the expensive of residents who actually pay council tax. The Universities should be made to contribute more to the City and residents.	Support is noted. The emerging policy seeks financial contributions towards the delivery of affordable housing from PBSA developments of 24 or more student units, reflecting the 2.4 ratio set out in the Housing Delivery Test measurement rulebook.
H3	Objection to policy	It is not clear from the Council's evidence base that there is any justification to support this policy, without rendering development for student accommodation unviable.	Viability testing for LP2045 indicates contributions from PBSA are viable.

1814

H3	Objection - Unjustified	In line with previous comments to the withdrawn Local Plan, the Universities do not support this option given that student accommodation is already an affordable form of housing that relieves pressure on the University of Oxford and Oxford Brookes University wider housing market. The controls over location of student accommodation mean that there is limited competition with mainstream housing, which means this policy is unlikely to be justified.	Noted.
H3	Support for alternative option	A number of people said they preferred alternative option 1 rather than the Preferred Option. Comments in support of this include:	The reasons for the preferred option are set out in background paper 002.

Draft policy	**Topic**	**Summary of comments**	**Response**

1815

		• the delivery of new sites should not be at the expense of housing for Oxford residents. Any funds raised could contribute towards buying back existing family housing currently used to house students. • Education establishments MUST make a greater contribution to Oxford than is presently the case. • All new developments of this kind should have a duty to contribute towards affordable housing given the need in Oxford, no matter the size of the development. • We recognise that students do not pay council tax, and in many cases there is also no CIL payable if the institution has charitable status exemption. We therefore believe that all purpose built student accommodation should make a financial contribution to housing by way of compensation. • All initiatives to fund further affordable housing should be pursued. • The draft plan itself states that many sites for student accommodation could equally be suitable for non-student homes. The plan also makes it clear that contributions will not be required from either proposals within existing or proposed university or college campus sites OR renovations of existing sites. i.e. they will only be required from units creating a net gain. Although the plan voices a concern in that "any contributions should not disadvantage the delivery of sites," the delivery of new sites should not be at the expense of housing for Oxford residents. Any funds raised could contribute towards buying back existing family housing currently used to house students.	

1816

Draft policy	Topic	Summary of comments	Response
H3	Support for alternative option	Prefer alternative option 3 because this might reduce the creation of social housing ghettos, by distributing social housing more evenly across neighbourhoods, and not creating "estates" with concentrations of social housing in only some neighbourhoods where more social housing concentration is accompanied by anti-social behaviour, drug dealing, fly-tipping, unkept rubbish strewn bins and gardens etc. It is better that student areas take some of the social housing load, as do all other areas, including affluent areas etc.	The reasons for the preferred option are set out in background paper 002.
H3	Support for alternative option	The Plan itself concedes that “any contributions should not disadvantage the delivery of sites,” and notes that on-site affordable units are seldom practical in PBSA. A more supply-led, proportionate approach would either (i) apply the contribution only to **larger schemes—say 50 rooms or more—**or (ii) forgo it altogether where the development demonstrably substitutes for private HMOs. By keeping the pipeline of student accommodation flowing, Oxford maximises both housing choice and affordability without relying on complex transfer payments that can inadvertently choke off the very supply the city needs.	The reasons for the preferred option are set out in background paper 002.

1817

H3	Policy/ glossary wording misalignment	Exemption from contributions towards affordable housing provision welcomed for new student accommodation that is within an existing or proposed university or college campus site. This exemption must include the Centre for Islamic Studies sites on Marston Road (i.e., Government Buildings and Harcourt House) as development of student accommodation is integral to the development of academic and institutional facilities. Currently the glossary definition does not reflect the draft policy requirements. The draft policy suggests that existing and proposed	The sites referred to are in use as a car park and a small business estate/ cadet accommodation. If these sites come forward for development that meets the definition of 'campus development' that matches what they are allocated or proposed for, then they will be exempt from the policy. For clarity, the Glossary has been amended to say:

1818

Draft policy	Topic	Summary of comments	Response
		campuses should be exempt from the requirement for financial contributions, while the glossary definition only includes existing campuses. The glossary should be updated to include proposed campuses, including the Centre's allocated sites, to properly reflect policy H3 and avoid future confusion.	Campus: Accommodation occupied by an educational institution and comprising academic institutional uses including academic (teaching, seminar and lecturing spaces), research (laboratories and special facilities) and/or administrative uses (offices and administrative functions).

H3	Applicant specific text Modification/ amendment	At each and every Local Plan, Oxford City Council has tried, under pressure, to give existing Universities preferential treatment, each and every time the Inspector throws it out as a policy cannot be dependent on applicant identity. Remove applicant specific text, make effective	Draft Policy H3 only contains "applicant specific text" in relation to the locations/ circumstances where affordable housing contributions will not be sought from purpose-built student accommodation.
H3	Seeking exemption from contributions towards affordable housing	Lincoln College is promoting an existing College site for graduate accommodation - the site would not be suitable for market housing. Seeking confirmation (via pre-app advice) that contributions would not be required for affordable housing.	The glossary definition of 'campus' is: Accommodation occupied by an educational institution and comprising academic institutional uses including academic (teaching, seminar and lecturing spaces), research (laboratories and special

1819

Draft policy	**Topic**	**Summary of comments**	**Response**

			facilities) and/or administrative uses (offices and administrative functions). The site being promoted is currently in use as sports provision, there is no existing accommodation and therefore contributions are likely to be required for affordable housing.
H3	General comment	As well as the locations listed in the policy, we support student accommodation being provided on arterial roads. These locations are generally sustainable for public transport and active travel, and these busier locations can be more suitable for young people than families. Students can also be very beneficial for local shops on arterial roads, as demonstrated by Iffley and Cowley Roads in East Oxford.	Draft Policy H10: Location of new student accommodation sets out where planning permission would be granted for student accommodation. The intention of the policy is to ensure a balance is struck between providing accommodation for students, but also for all other types of housing needed within the city. Allowing student accommodation along arterial routes has the potential to significantly change their character which could have a negative impact on the local community.

1820

H3	General comments	This is an unwarranted tax on landlords and students. This is totally mixing up objectives and unnecessarily skewing aims and outcomes.	Securing contributions towards affordable housing from new purpose build student housing can contribute towards the supply of

Draft policy	**Topic**	**Summary of comments**	**Response**

1821

		I assume the contribution is from the developer, not the students. I think the financial burden will fall ultimately on students. If you are proposing to do this then you are probably considering to provide too much affordable housing. Please don't do this! Just get on with building housing and don't slow things down with restrictions!! The need to take pressure off the ladder is the main thing. Fine tune in later years! Housing is a crisis the important thing is to make rapid progress! You should force the university/colleges to provide one accessible dwelling for every student accommodation room it builds. I think there is a balance that needs to be struck between student housing and other housing, both affordable and general housing requirement. This city, especially some parts of it, is in danger of being swamped with student housing, either new built or in existing stock (i.e. HMOs) The policy is unjustified as the economic gain or loss will be the same for existing or new campuses or institutions, further, provision of student housing of itself removes students from the housing market. Ineffective as student accommodation can be provided by nonuniversity institutions (Boarding schools, Language schools)	affordable homes as many sites for student accommodation could equally be suitable for non- student homes, from which a percentage of affordable housing would have been sought. The preferred option seeks to strike a balance between the accommodation needs of students and other types of housing. Payment liability would fall on the applicant/ developer.

1822

Draft policy	Topic	Summary of comments	Response
		All of these screams are pushing prices up for the consumer, in this case the students, which already have difficulties paying back their loans. This is a problem created by a University that follows a blind 'growth is good' mantra, at whatever costs to the city. Student accommodation makes this place more soulless and is expensive, meaning that this further contributes to making oxford the most unfair place to live - is your future for oxford a place for the born wealthy, foreign investors and every street looking the same?	

1823

H3	Higher thresholds required.	The current thresholds is insufficient, it should be less than the 10 unit or 25 room threshold as this creates a loop-hole for developers to build smaller developments on the remaining sites - which are by definition going to be small. The financial rate per room should be higher. We should not unfairly impose additional costs on developers building larger developments while not imposing them on smaller developments. Every new purpose-built student room pulls a student out of the private rental market, easing pressure on family homes and reducing overall rents. Policy H3's low threshold—financial contributions from schemes as small as 25 beds or ten self-contained units—risks slowing delivery of this dedicated stock, because the levy is set on a	The threshold is as same as that for residential developments.

1824

Draft policy	Topic	Summary of comments	Response
		comparable basis to residential development and calculated against land value.	

H3	General Comment	Student developments should make contributions to local leisure and entertainment hubs. One problem with the city is there are only a couple of social focal points (Cowley road/Jerico). This is part of the traffic and transport problems, everyone is trying to get to the same place. New Student developments should create/seed those sort of hubs in new places.	The policy seeks contributions towards affordable housing as this can help contribute towards the supply of affordable homes in Oxford.
H3	General Comment	The student housing sector should play a stronger role in supporting affordable housing in the wider community.	Noted.
H3	Viability	In a city where suitable sites are scarce and landowners already face a menu of Section 106 and CIL costs, even a modest per-bed charge can tip marginal schemes into non-viability.	Viability testing for LP2045 indicates contributions from PBSA are viable.
H3	General Comment	The present situation has led to student accommodation being developed on a commercial basis because it is more profitable than other housing. 25 student rooms are enough to cause a significant impact on a neighbourhood and it is important that developments of this size are sensitively done and with proper management organised and not just put up wherever a developer can find a space. NB This policy should apply to university and college developments and not just commercial ones.	The policy does not apply to development within university campus sites or redevelopment of existing PBSA that is currently and will continue to be owned and/or managed by the universities. This is because development on those sites would not displace mainstream residential development or reduce opportunities for the provision of affordable housing.
Draft policy	**Topic**	**Summary of comments**	**Response**

1825

H3	Support for alternate option	Why should student housing developments contribute to 'affordable housing'. Building student accommodation takes students out of other housing stock releasing it for general use. The whole concept of subsidised housing is unfair. If the city needs and the market can support student housing, let it built and do not tax it differently.	The reasons for the preferred option are set out in background paper 002.
H3	Support for alternate option	Students are on the lowest incomes in the city, requiring additional contributions to push up their rent is wrong. I favour option e.	The reasons for the preferred option are set out in background paper 002.
H3	Support for alternate option	Decent student accommodation is key to the city and should not be discouraged.	The reasons for the preferred option are set out in background paper 002.
H3	General comment	Prefer to seek a financial contribution from all student accommodation developments, but towards social rent housing rather than "affordable".	The reasons for the preferred option are set out in background paper 002.

Draft policy	Topic	Summary of comments	Response
H4	Comments in support of policy	As most older-person accommodation development is going to be increasingly by commercial entities they too must contribute more to Oxford. Ambivalent between preferred option and alternative 1.	Support noted.

1830

H4	Alternative options	Several comments support alternative option 1 – i.e.: • housing developments for old people shouldn't be approved with free rein for profit only- they must contribute to society. The only exception to this should be if the development is converting disused or derelict buildings or brownfield sites, • Having a threshold of more than 10 self-contained units creates a loop-hole for developers to build smaller developments on the remaining sites - which are by definition going to be small, All new developments of this kind should have a duty to contribute towards affordable housing given the need in Oxford, no matter the size of the development. • Agree with Option 1 or a lower limit for the preferred option, the same as for student housing. • We should not unfairly impose additional costs on developers building larger developments while not imposing them on smaller developments. • All affordable and all financially contributing Some comments were in support of alternative option 2 – i.e. • Every new unit of specialist older-persons housing allows a household to "right-size", releasing larger dwellings back to the general market and easing city-wide affordability	The reasons for the preferred option are set out in background paper 002. The policy seeks to strike the right balance.

1831

Draft policy	Topic	Summary of comments	Response

		pressures. Oxford faces a need for roughly 1,100 extra-care and supported units by 2042, yet suitable sites are scarce and typically small. Imposing an affordable-housing levy on schemes of just 10 self-contained units—the draft H4 threshold —risks deterring precisely the modest, infill developments that can be delivered quickly within the city boundary. • The Plan acknowledges that on-site provision is usually inappropriate for retirement complexes and that viability testing must not "disadvantage the delivery of sites". In a highcost land market, even a well-intentioned payment-in-lieu can erode residual land value to the point where owners hold rather than redevelop. The result would be fewer specialist units, slower turnover of under-occupied family homes, and greater pressure on adult-social-care budgets. A calibrated, supply-led policy would therefore: Apply the contribution only to larger schemes (≥ 20 units) where economies of scale exist, or waive it where a proposal demonstrably frees generalmarket housing. • By raising the threshold, Oxford would secure more specialist accommodation and, indirectly, more family housing— advancing both affordability and welfare without constraining vital supply (only levy contributions on schemes of 20 + units) Comments in support of alternative option 3: • This option might reduce the creation of social housing ghettos, by distributing social housing more evenly across neighbourhoods, and not creating "estates" with	

1832

		concentrations of social housing in only some neighbourhoods.	

1833

Draft policy	Topic	Summary of comments	Response
		• It is better that older person areas take some of the social housing load, as do all other areas, including affluent areas etc. Others preferred alternative option 4 commenting as follows: • Don't discourage accommodation for the elderly from being built. • Bespoke accommodation for the elderly makes it easier for people to downsize, freeing up houses elsewhere. • There should be no requirement for contributions from older persons accommodation. Such accommodation at reasonable cost would encourage older people to downsize and so release family sized housing which is badly needed. At present there is very little housing for older people in Oxford suitable for people who do not need or wish to move into a care home. • This type of development needs to be encouraged and could free up housing stock.	

1834

H4	General Comments	Self-contained older-persons accommodation will increasingly be necessary - this isn't a money-making enterprise (unlike student accommodation) - and the low-paid people who work at them will need to live somewhere close too. Affordable housing should accompany self-contained older-persons accommodation, but not to the point at which no developers can afford to build self-contained older-persons accommodation. I would prefer specifying seeking contributions from private and forprofit older-persons developments.	The policy allows for a pro rata approach to determine the level of contributions for mixed use developments. Contributions are not being sought for developments of less than 10 self contained units.

Draft policy	**Topic**	**Summary of comments**	**Response**

1835

		This is totally mixing up objectives and unnecessarily skewing aims and outcomes. Keep the formula transparent and subject to viability review, avoiding ad-hoc negotiations that add delay. Prioritise rapid delivery of age-appropriate homes—through gentle density and mid-rise formats—as the most effective, market-driven path to affordability city-wide. Let the market decide the cost of housing and what should be built, not interventionist policies to benefit preferred groups. If the city needs units for the elderly then let it get built without extra penalty. Old people on pensions are often on fixed incomes. Rental prices are already so expensive in oxford. Affordable housing needs a rethink before you start claiming money from everyone for it. Again a hidden tax on people who want to retire. Another unwarranted tax.	
H4	General Comment	The preferred option appears to penalise older retired people rather than the developers - the main one being the University - who are pushing for constant growth and profit at whatever costs to residents. Their fixation on growing the University and providing profitable	Payment liability would fall on the applicant/ developer.

1836

Draft policy	Topic	Summary of comments	Response
		accommodation for students is why there is pressure on housing/places for older people.	
H4	General comment	Prefer to seek a financial contribution from all self-contained older persons accommodation developments, but towards social rent housing rather than "affordable".	The reasons for the preferred option are set out in background paper 002. The policy seeks to strike the right balance.

Statutory Consultee Responses – Draft Policy H4

Oxfordshire County Council

Draft Policy/Evidence base/topic	Summary of comment	Response	Outcome

Policy H4 AH contributions from selfcontained older persons acc.	**Strategic Planning and Infrastructure teams** In order to deliver affordable extra care housing units, generally a minimum of 60 units are needed for a scheme to be viable. Therefore, if the requirement for affordable housing is 40%, we would agree that unless a total of 150 units are proposed, it may be difficult to separate off an affordable element of extra care housing.	Noted.	No Action Required
Draft Policy/Evidence base/topic	**Summary of comment**	**Response**	**Outcome**

1838

	Nothing in text that specifically ring-fences contributions from older persons housing to deliver affordable extra care accommodation. It appears that the contributions gained from affordable housing on self-contained older persons housing will, like other contributions, go into a pot for affordable housing generally. The County Council would like to see some provision being made within the affordable housing pot for extra care housing for older people and specialist needs. This may not need to be addressed by any change of policy in the Local Plan, but instead by a working arrangement, perhaps addressed through a memorandum of understanding. The contributions could be pooled into a pot for future supported housing projects.	That is correct. There is no specific ring-fencing of contributions for affordable extra care housing. We will continue a dialogue with the County Council on this issue, which could be addressed outside of the plan-making process.	No Action Required No immediate action required related to the plan-production process however further discussions with county colleagues may be required in the future.

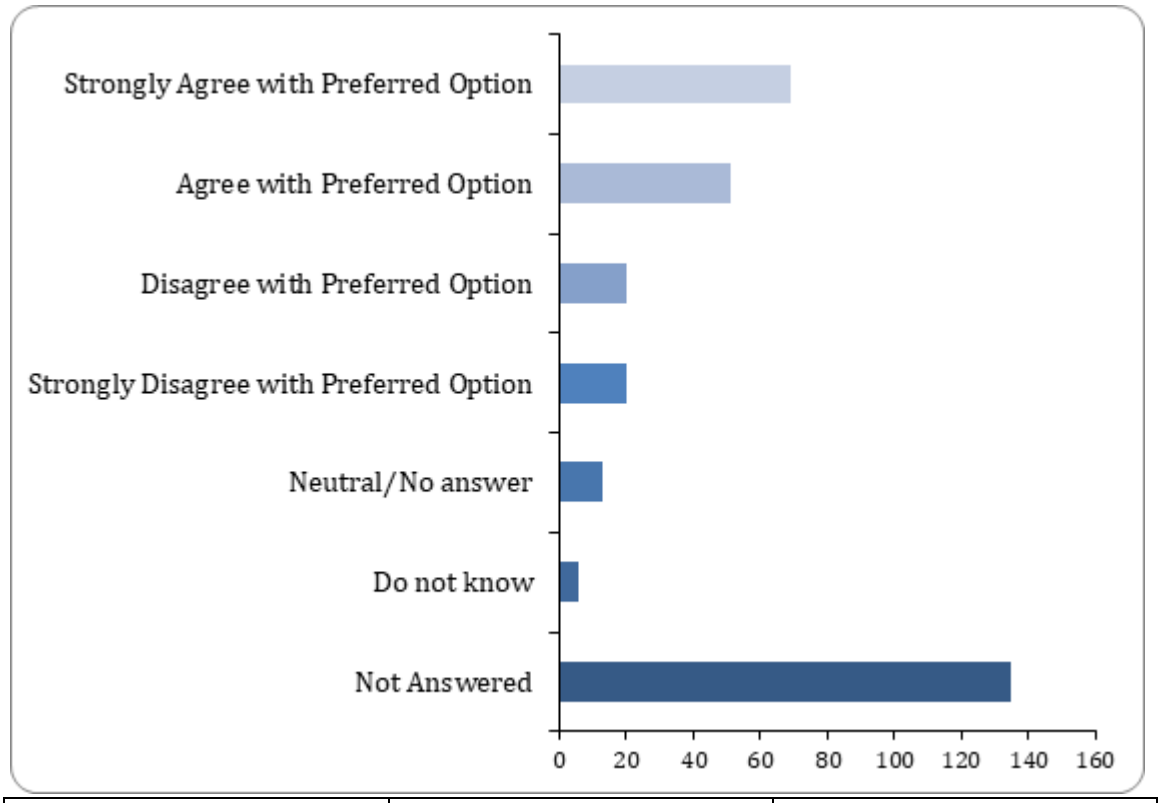
Please tell us what you think about policy options set 002d (draft policy H5): Affordable housing: financial contributions from new commercial development.

There were 179 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	69	21.97%
Agree with Preferred Option	51	16.24%
Disagree with Preferred Option	20	6.37%
Strongly Disagree with Preferred Option	20	6.37%
Neutral/No answer	13	4.14%
Do not know	6	1.91%
Not Answered	135	42.99%

Draft policy	Topic	Summary of comments	Response
H5	Lack of evidence base	No clear evidence has been provided showing a causal link between commercial floorspace and additional affordable housing need. No analysis has been undertaken that relates to job creation by use class, the share of workers needing housing locally, or the portion of need attributable to individual schemes. The policy also lacks clarity on key matters, such as the calculation methodology.	The calculation is set out in the Draft Submission Oxford Local Plan. Employees are people and people need to live in homes, and there is a significant need for affordable housing in Oxford, so the policy approach is considered justified.

H5	Support option c	Multiple responses from developers support option c. Requiring contributions would harm commercial investment in Oxford. A similar policy to option a) was tested and found unviable between 20012016. It is unhelpful that there is no up-to-date viability assessment in support the proposed policy. Seeking a contribution would not meet all three tests for planning obligations set out under Paragraph 58 of the NPPF as the obligation is not necessary to make commercial developments acceptable in planning terms and not directly related to the development. The current market cannot absorb the additional costs, especially after a recent large increase in commercial property charges (CIL) ie. a 400% increase in the levy charges for Class E, B2 and B8 uses. Regarding option a), major commercial developments already deliver significant financial contributions towards delivery of infrastructure, highways improvements and public transport improvements, including towards the delivery of the Cowley Branch Line. Regarding option a) and b), OCC have not undertaken and/or published a viability assessment at this stage. OCC should ensure that the viability assessment contains careful analysis on development at Botley Road	The viability assessment shows this approach is viable. The 2036 Plan did not include this approach as it was no longer viable. The viability profile has changed considerably. The Draft Policy is very clear that this requirement applies only to new developments.

1843

Draft policy	**Topic**	**Summary of comments**	**Response**

		Retail Park, Osney Mead and other commercial developments coming forward. In the absence of additional supporting text and draft policy wording for option b, there are also concerns over contributions being applied more than once to the same site and development. Should such a policy be adopted (either in the case of Option A or Option B), safeguards would need to be put in place in the policy and supporting text, limiting its application to new developments only. The policy should be clear in stating that it is not applicable to: (i) any subsequent changes of use applications between the employment land use classes; or in relation to (ii) any applications relating to alterations or extensions to the new buildings. Without these safeguards in place, the viability of maintaining and improving existing employment buildings for future use will be called into question, particularly during downturns in the economy.	
H5	Support option c- reduced chance social housing ghettos	Anti-social behaviour problems partially caused by an overconcentration of social housing would be reduced- better that commercial areas take some of the social housing load.	Comment noted.
H5	Small sites too	Unfair to impose additional costs on developers buildings larger developments, but not smaller ones.	The threshold is consistent with national guidance on when these contributions are required.
H5	Support option b, expressing concern about option a	Multiple responses support option b but emphasise that this is without seeing a viability assessment. Carefully consider the impact on local and national economy, particularly key employment and revenue generating sectors such as life sciences, research and innovation. These sectors are critical to the city's long	The viability assessment fully reflects other needs and requirements such as contributions to the Cowley Branchline and the update CIL Charging Schedule. The

		term economic resilience and global competitiveness. For instance, the risk of making	
Draft policy	**Topic**	**Summary of comments**	**Response**
		investment in the Oxford Knowledge Cluster unattractive compared to other locations where such levies are not in force. Impact on OUH. The commercial success of these sectors is steadfastly in the national interest and central to government policy as set out within the Government's 'Plan for Change' and incorporated in to key national policy within the 'Modern Industrial Strategy' (June 2025) and 'National Planning Policy Framework' (December 2024). Closer to home, undermining the commercial viability of development risks the delivery of the significant infrastructure needs, such as the Cowley Branch Line. Brining housing to employment sites brings activity at otherwise quiet times.	contributions are set at a level that is well within what is assessed to be viable, keeping in mind all costs and other requirements.
H5	Support for option a (preferred option)	All employment sites require workers, and a proportion of them will require affordable housing. These sites generate significant profits and drive up lad values, reducing available space for the community, so they should contribute to addressing the housing crisis by contributing to the cost of providing affordable housing.	Support welcomed.

Draft policy	Topic	Summary of comments	Response
H6	Support for policy	Multiple comments express support for the policy as it aligns with the definition of Affordable Housing in the NPPF that identifies that homes "for essential local workers" can be considered as part of any requirement.	Support welcomed.
H6	Add site 024 into policy (Government Buildings and Harcourt House)	Consider that specific reference should be made to site 024 (Government Buildings and Harcourt House) within policy H6. Rationale is set out below: The Centre has a need and duty to provide affordable housing for its permanent staff working in the teaching, administration or other essential, on-site support services. The city's restricted housing market and extremely high house prices make it very difficult to recruit and retain essential staff. The same is true for early career academics who are forced to turn down positions because they cannot afford Oxford rents. This problem must be addressed if the city is to attract the brightest and best, without whom it will be difficult to hold on to its reputation as a world leader in scholarship, which in turn impacts the surrounding economy.	Policy H4 in the draft Regulation 19 Plan indicates that the sites identified as appropriate for employer-linked affordable housing includes "Campus sites of the colleges of the University of Oxford and of Oxford Brookes University. These are sites with academic accommodation existing at the time of the adoption of the Local Plan, and where academic institutional use would remain on the site, even with the development of some employerlinked housing".

H6	The main employer in the city should deliver new homes for their staff or provide significant contributions to	Ever increasing expansion of the main employers – Oxford University, OUHT and Brookes, BMW, are the root cause of housing need in the city. The Headington hospitals (e.g., JR, Churchill and NOC) have capacity for 1000s of homes in highly sustainable locations, by developing existing car parks for new homes would reduce the need to travel and save the surrounding countryside and the few remaining green spaces in the city. Either employers in the city should provide	Policy H3 in the Draft Submission Oxford Local Plan is aimed at helping address the housing need created from new employment. Policy H4 enables employers, in certain circumstances, to provide for their own staff.

Draft policy	Topic	Summary of comments	Response
	housing delivery in the city Proposed Modification	housing or pay significant contributions towards new homes based on their increasing staff numbers. They cannot simply create housing need, traffic problems and dump the consequences onto the taxpayer and ordinary citizen. The policy is too complex and restrictive. Better solutions such as allowing market housing or straight sale of land would provide more homes. Mandatory contributions to housing with discounts where on-site housing is provided, and further discounts where destination parking space is used. Allow market component as incentive to delivery. General housing should be allowed. A contribution to housing stock is valuable however it is delivered and should be determined by the landowner. Sites should not be listed as this is not effective as the list given is not the same as the Site Policies, Headington Hall and Ruskin are both absent.	

1852

H6	No justification for policy	We are concerned that Criterion (f) requires an unspecified and potentially unjustified level of control and approval over the employer's affordable housing approach. We accept that the controls identified in criteria a) to e) should be controlled through a legal agreement, however we consider that criteria f i) to f iii) exert an unacceptable and unworkable degree of control over assets which are not in the control of the City Council. We therefore request that the policy is modified to read as follows: " f) A legal agreement will be required to secure the benefits of this policy. ~~In addition, the legal agreement will be used to: i) agree the allocations policy; ii) agree an appropriate re-letting of units in the property in the event that there are units vacant for more than 6 months; iii) agree that if the employer decides they no longer have a~~	The legal agreement to secure the affordable housing policy as negotiated with the applicant is considered a reasonable approach, necessary to ensure the benefits are realised.
Draft policy	**Topic**	**Summary of comments**	**Response**

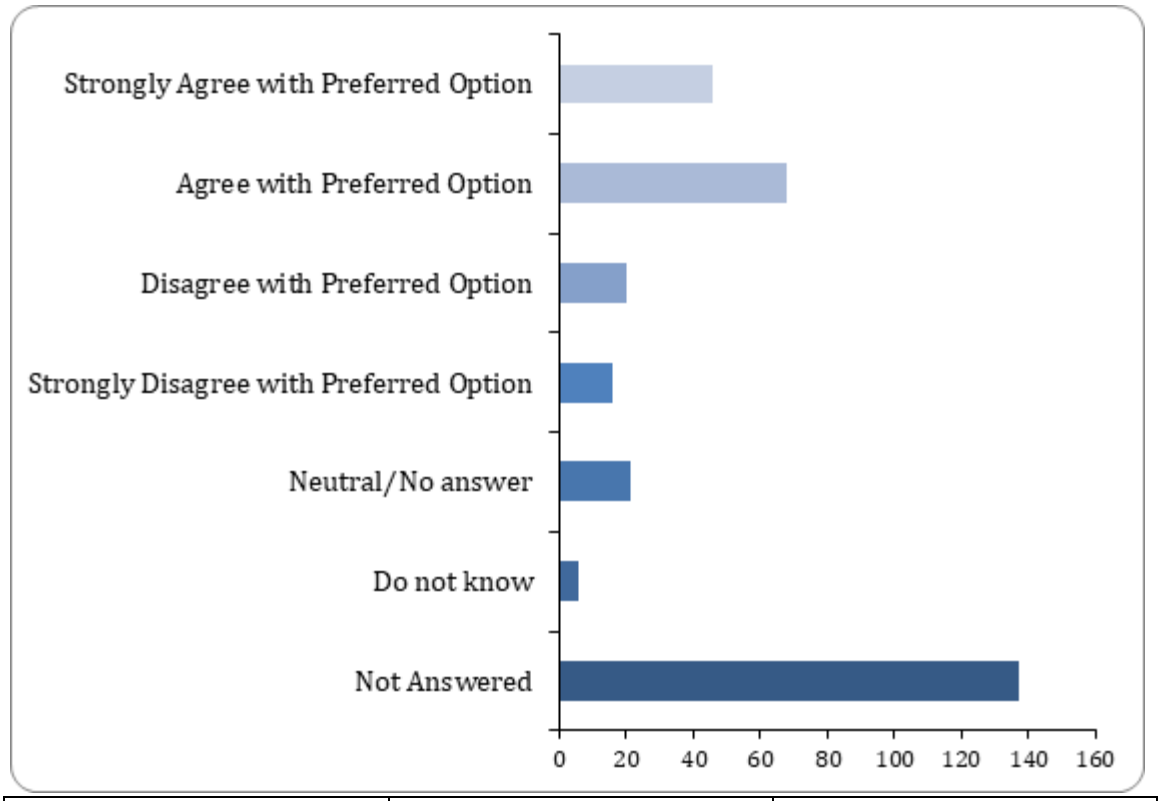
All Public Responses – Draft Policy H7

Please tell us what you think about policy options set 001b (draft policy H7): Mix of dwelling sizes (number of bedrooms).

There were 177 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	46	14.65%
Agree with Preferred Option	68	21.66%
Disagree with Preferred Option	20	6.37%
Strongly Disagree with Preferred Option	16	5.10%
Neutral/No answer	21	6.69%
Do not know	6	1.91%
Not Answered	137	43.63%

Draft policy	Topic	Summary of comments	Response
H7	Application to BTR	The Council could usefully clarify whether the Mix of Dwelling Sizes (Policy H7) applies to Build to Rent (BTR). It is very uncommon for BTR to accommodate 4-bedroom units as the Council's evidence base recognises.	H7 allows flexibility for proposals to respond to site context and local needs, as well as market demand and design considerations. The prescribed housing mix only applies to the affordable element, and there is flexibility in the policy if it can be shown as not feasible on a specific site.
H7	Policy should specify space standards as well as housing mix	CPRE are supportive of the mix of dwellings but are concerned that on recent housing developments the social rent / affordable element is mostly made up of one or two bedroomed flats often located in blocks adjacent to main roads. Since the lack of housing for those in need is one of the main drivers for allowing development in the first place a minimum floor area should be set for the social/ affordable element as a condition for planning permission rather than only the number of units.	We will continue to apply the Nationally Described Space Standards to new residential development, including for the affordable element. This policy outlines minimum floor areas for different dwelling types and occupancies.

H7	All staff housing schemes should be exempt	The preferred option for Policy H7 sets out a prescribed housing mix, which proposals for 25+ homes, or sites of 0.5ha+ are expected to comply with, unless it can be shown not to be feasible. Employerlinked affordable housing is exempt from this requirement; however, it is considered that all staff housing schemes should also be exempt on the basis that they are likely to have their own bespoke housing requirements. Contrary to wider ambitions within the plan for making efficient use of land, requiring all schemes to comply with the prescribed housing mix may also preclude higher density developments, in locations where they may otherwise be appropriate.	H7 allows flexibility for proposals to respond to site context and local needs, as well as market demand and design considerations. The prescribed housing mix only applies to the affordable element, and there is flexibility in the policy if it can be shown as not feasible on a specific site.

1859

Draft policy	**Topic**	**Summary of comments**	**Response**
H7	New policy: extensions	Many houses in Oxford are getting extensions, suggesting that houses are too small in general. Houses should be built to easily have one or two bedrooms added in a logical place. This would keep the initial price down and allow affordable extensions in the future.	National policy/permitted development rights already allow for modest household extensions without planning permission.
H7	Fuelling overpopulation (climate considerations)	The rationale behind offering 5-bedroom affordable homes should be clarified due to overpopulation and climate mitigation.	The housing mix is informed by the assessment of housing need in Oxford.

H7	Questioning the 10 units threshold	10 units is too small (they support a more flexible policy). Another comment wants it to be lowered to 5 units because most developments in their neighbourhood (Summertown) are less than 10 which they don't want to encourage.	10 units was chosen because that is the definition of major development. A higher threshold for example with a 25-unit threshold, would be more likely to fail to meet identified needs and could lead to an imbalance in housing mix. Alternatively, a lower threshold would be too small to get a mix onsite.
H7	Lack of clarity	Several comments say policy wording could be clearer e.g. it is unclear if a one-bedroom apartment would be a "home" or not. One person says confusing wording has stopped them from giving input.	Any self-contained residential dwelling is classed as a home. Noted, further explanation is provided in the supporting text and background papers.
H7	Support for preferred option	Several people support the policy, saying that diversity is needed in developments e.g. to avoid areas where no one with small children can move in which could be detrimental for local schools. Some support with no stated reason.	Noted and appreciated.

Draft policy	**Topic**	**Summary of comments**	**Response**

1860

H7	Alternative options	Several comments support option b, i.e. including a mix for both market and affordable homes, with no stated reason. Many comments support option c, i.e. not specifying a mix for any type of development but requiring 2-3 types of unit size in larger developments. They argue this would allow developers to better respond to market signals. Several comments against any policy relating to housing mix, either with no stated reason, or for reasons such thinking we should not interfere with the housing market as it will disincentivise developers.	Including both market and affordable homes would not allow for a flexible response to the market. Sites that are best delivered as flats, for example, may not come forward at all if there is a lack of market interest in 3-bedroom flats, for example. Not specifying a mix is more likely to fail to meet identified needs and lead to an imbalance in sizes of new units of both market and affordable housing. The absence of a policy on housing mix is likely to result in not having the optimum housing mix being delivered for the city. For example, one-bed flats are the smallest and cheapest to build and delivery would be likely to heavily skew towards these.
H7	Only prescribe a mix for affordable homes	Newmark consider the current policy contradicts itself as it starts by only relating to AH, but it later implies a mix would be set for both AH and market homes.	The respondent has misinterpreted the draft policy which does in fact only apply to

Draft policy	Topic	Summary of comments	Response
		We consider a unit mix should only be prescribed for the AH.	affordable housing (not market housing). The first part applies to affordable housing (for rent or ownership), and the second part only applies to affordable ownership.
H7	More council housing and housing cooperatives	One person does not support any of the policy options as they argue that there is an overreliance on market housing: there should be more council homes and housing cooperatives instead.	There are other policies in the Local Plan which seek to deliver social rent housing and community-led development (H2 and H13).

Do not know	5	1.59%
Not Answered	135	42.99%

Draft policy	Topic	Summary of comments	Response
H8	Short lets	As worded this does not explicitly cover the loss of a permanent home to a short term let or holiday home. This should be clarified in the policy, or put in a separate policy. Policy should also include permanent residency requirements on all new housing granted planning permission and restrict the number of short-term lets.	It's beyond the scope of the plan to restrict lets.
H8	Support	Support this policy and the contribution it will make towards retaining the existing housing stock.	The support is welcomed
H8	Subdivision is positive	Subdivision increases housing options, so this policy makes no sense. Can create flats for young, who need them. The policy should not include the blanket presumption against subdivision of existing family houses. There is an over-whelming need for single person housing and some family accommodation converted to this is beneficial.	The policy does not prevent subdivision at all, as long as the dwellings created meet space and other amenity standards.
H8	Subdivision should be restricted	This is a quick earner for a developer cashing in on short supply of first time housing and just generates problems for families trying to find a bigger place.	The mix of dwellings policy for new developments, as well as the market and practicalities will work together to ensure family units are still available.
H8	Object in principle	There should be no restrictions on the loss of dwellings. Let free market dynamics prevail.	Given the strong need for new housing, allowing loss would not be a good response.

H8	Strength of exceptions	Will these be strong enough? Will they be worked around by powerful vested interests?	The criteria set out only a few exceptions, which are considered sensible exceptions that will not be easily worked around.
H8	Include CLTs	This policy should include the encouragement of community land trusts.	This isn't something prevented by the policy.
H8	No mention of vacant properties	This policy is ineffective as it does not cover abandoned or vacant properties. (or a policy is missing)	Separate workstreams look at this issue, but it is not something that
Draft policy	**Topic**	**Summary of comments**	**Response**
			can be addressed by the planning system.

Draft policy	Topic	Summary of comments	Response
H9	Request for added flexibility	We consider HMOs offer an affordable solution for some individuals as opposed to renting individually or buying a property. We do however recognise that high concentrations of HMOs can result in changes to the character of the local area and can contribute to amenity issues and parking issues. However, we consider criterion a) (relating to the proportion of HMOs in a 100-metre street length) should not apply to the [Oxford Health NHS Foundation] Trust's sites. The Trust requires complete flexibility to provide staff accommodation on its sites and its considered that criterion a) as currently drafted could unacceptably limit the supply of new HMO accommodation on the Trust's sites. We therefore request that an exclusion is incorporated to Criterion a) to clarify that it applies to public streets rather than those within a privately owned estate, such as those owned by the Trust.	Comments acknowledged. An addition has been made to Appendix 2.2 (point vi) to make it clear that criterion a does not apply to roads within private nonresidential sites.

1870

H9	Objection to policy	We understand the Council's definition 'new purpose-built HMO' means the same thing as 'co-living' accommodation or 'purpose-built shared living' accommodation. We do not agree that prohibiting this type of development is the right approach. The provision of purpose-built co-living allows for existing family homes, which have been poorly converted and are being used as HMOs (whether by students or house-sharing young professionals), to be freed up. Furthermore, the planning system can ensure that newly built co-living accommodation can be controlled and managed properly, which is not always the case with HMOs owned by individual landlords, and often managed poorly.	New purpose-built HMO could potentially have negative impacts leading to additional harm to local amenity, the character of a neighbourhood or additional demand on local services. They could also be put forward with the intention that they will house students and act like student accommodation to circumvent draft policy H8 which seeks to ensure student accommodation is delivered only in the most suitable areas. The preferred option is

1871

Draft policy	**Topic**	**Summary of comments**	**Response**
			therefore to not permit this type of development.

H9	Limit for proportion of HMOs too high	We believe the proposed limit of 20% on the proportion of HMOs among dwellings within 100 metres of a new HMO is too high, and should be reduced to 10%.	Whilst reducing the threshold could lead to a reduction of HMOs in certain areas it is recognised that HMO offer the only available and affordable solution to many. Existing Local Plan Policy H6 includes a 20% threshold, and it is considered appropriate for this to be taken forward in the new local plan.
H9	"Unrelated individuals' not defined	The phrase "Unrelated individuals" is not explained or defined. Does this mean a family with two unconnected students must now be classified as an HMO? This would be ineffective as it would have a negative effect on student housing provision, discouraging families from renting bedrooms.	An owner occupier can have up to 2 lodgers living in the property, for the purposes of the Housing Act 2004, the property would not be considered an HMO. Owner occupier includes the registered owner and any member of their household. Any subletting in a rented family home where there are 3 or more people from 2 or more households would likely result in an HMO being formed.

Draft policy	**Topic**	**Summary of comments**	**Response**

			In most cases, summer school students who are hosted by a family are unlikely to be deemed as occupying the property as their main or only home, they are essentially guests. Further guidance is provided in Appendix 2.2 of the draft plan which states that buildings NOT counted as HMO include a homeowner together with up to two lodgers.
H9	General comment	How is "area" to be defined? is radius the distance from an existing HMO?	Appendix 2.2 illustrates how the policy will be applied.
H9	Support for alternate options	A number of people said they preferred alternative options. Comments include: • why is the threshold currently 20%? What are the considerations? • Oxford HMOs are already restrictive, we should not restrict them further. • HMOs fill an important gap in Oxford's rental market, offering lower entry rents when studio flats are beyond reach. The policy as drafted would cap HMOs at 20% of properties within 100m and rule out any new purpose-built schemes. Such tight micro-thresholds dampen supply, push sharing households into adjoining districts and risk an unlicensed "shadow" HMO	The reasons for choosing the preferred option are set out in BGP 003: Specialist housing. The 20% threshold is in the existing adopted policy and is effective.

Draft policy	Topic	Summary of comments	Response
		market—outcomes that neither improve neighbourhood character nor housing affordability. •	
H9	General comment	Will anything be done where HMO are already over the 20%?	How the policy will be applied is set out in Appendix 2.2.
H9	General comment	Call a halt to planning permission being given in advance or retrospectively for HMOs. There are too many, and the residential character of areas with them - eg the Lye Valley estate - is being undermined.	Applications are determined in accordance with existing Local Plan policy H6.
H9	General comment	There should be no increase in the current percentage limit on HMOs as this is important in limiting the creation of new HMOs in areas that already exceed the limit. Consideration should also be given to reducing the proportion of HMOs in areas where limits are already exceeded and tackling associated legacy issues such as parking pressures. Conversion to short term lets, which aggravates local housing shortages, should be prevented.	There is currently no planning law to allow councils to restrict numbers and location of short term lets.

H9	General comment	There should be a better register of HMO (for some fly very much under the radar), and if planning permission was given for two family dwellings which turned out to be built as HMOs (or used as AirBandB rental) these should be retrospectively have their permission withdrawn.	Oxford City Council is required under the Housing Act 2004 to maintain a register of current HMO licences, temporary exemptions from HMO licensing and interim management orders. The Regulations only permit publication of licences that are in force and so prohibit publication of pending or expired licences.

1875

Draft policy	**Topic**	**Summary of comments**	**Response**
H9	General Comment	HMOs can blight an area as there may be poor management leading to nuisance of all type for the neighbours. They also cause a loss of community cohesion when a family home becomes an HMO. This is one reason why the concentration of HMOs should be resisted. HMOs run by colleges and universities should be included in the policy. Although they may (but are not always) be better managed than commercial HMOs their effect on the local community will be equally damaging.	The policy seeks to strike a balance, it does not include HMO run by universities and colleges as policy H8 seeks to ensure that student accommodation is delivered only in the most suitable areas.
H9	General comment	I have spent half my life in Oxford in HMOs, it's an essential to the city and allowing early careers people to move here. Me feeling is the quantity and quality is controlled by supply and demand.	Noted.

H9	Lack of clarity	Consideration should be given to the increase in very large HMOs or clustering of several HMOs in a single building. It is not clear that the preferred option would deal with additional problems which they cause and the policy needs adjusting to ensure that it will do so.	The policy includes a requirement for applications for HMO to comply with good practice guidance on HMO amenities and facilities. Further adjustments are not considered necessary.
H9	General comment	You need a mixture of owner-occupied, private rental and HMO rental in an area or it'll just look shabby and feel dangerous. Take Ridgefield Road and Cricket Road, for example - the houses on these roads should be as desirable as any other 30s-built houses in Cowley but I wouldn't walk down either of these roads after dark (put it that way). Any harsh restrictions on HMOs just lead to unauthorised HMOs and bad conditions/poverty/crime etc.	The policy seeks to strike a balance between restricting the location of HMOs and allowing them to be part of a mixed and balanced community.

Draft policy	Topic	Summary of comments	Response
H10	Clarification of policy clauses	Confirm how clause a) is operated / monitored over time, and further guidance required for clause b), regarding the expected indoor amenity space ratio to bedspaces.	Criterion a) is likely to be secured through planning condition. There are no set size or other requirements for indoor amenity space, the requirement is simply that there is some.
H10	Support policy flexibility outside term time	Support the continued allowance of other occupants outside of term times, where a management plan is in place. This supports not only the local economy but the College, through the use of space for conferences and/ or additional tourist accommodation. It would be helpful if the policy elaborated on the types of other occupants, for example, by saying it can be visitors paying per night and who might not be in education. This should not constitute a material change of use given the use would be restricted to students in full time education during term time, which is most of the time.	Support welcomed.
H10	Locational aspect – general support	Support but suggest that wording be adjusted to confirm that if the criteria are unable to be met, then there is a requirement to demonstrate that there are no reasonable alternatives available.	The policy sets out what are considered to be suitable locations, of which there are sufficient to meet the requirements of what is Policy H10 in the Draft Submission Oxford Local Plan.

H10	Additional restrictions to arterial roads	Policy should be amended to include an additional restriction to principal/arterial roads. This is to exclude student accommodation on side roads leading from district centres so as to prevent further issues	Restricting even further to arterial roads only within the centres is considered to be too restrictive

Draft policy	**Topic**	**Summary of comments**	**Response**
		of student noise etc. Support very strong restrictions on parking associated with student accommodation.	and could rule out too many sites that are suitable.

1880

H10	Locational aspect is too restrictive - list of suitable locations should be expanded	Suitable locations should also include along arterial routes and those sites within a 15-minute walking distance of a campus/college. It is considered that the arterial routes in/out of Oxford present a logical and suitable option for locating new student accommodation given the frequency of public transport services along these routes and ease of access to/from both educational and social facilities and the reduced sensitivity of the residential environment. There are other policies in the Plan which address concerns relating to unacceptable changes in character to residential streets and ensuring that new development does not lead to adverse amenity impacts. The appropriateness of the location should be judged on a case-bycase basis. There might be a location that is outside of a centre / existing campus, and which has good public transport links to a university, and which has characteristics that make it unsuitable for conventional residential housing. The policy would be restrictive to both universities and the delivery of student accommodation by third party providers, given its interaction with Policy H11. Without the allocation of new sites, there needs to be greater flexibility on windfall locations to help both Universities meet the requirements of the threshold in Policy H11.	Sites within a 15-minute walking distance of a campus may well be wholly unsuitable sites.
H10	Objection – should include all universities and	The Policy is dependent on the identity of the applicant, which favours existing institutions and is an attempt to limit competition. There are not two but three universities in Oxford, as University of	The policy is not dependent on the identity of the applicant.

1881

Draft policy	Topic	Summary of comments	Response
	boarding/ language schools	West London owns Ruskin Campus. The policy should also apply to boarding/ language schools and other institutions which don't have a campus.	
H10	Increase provision of purpose-built student accommodation	Recognise that provision of student accommodation can impact upon the availability of private market dwellings due to potential occupancy by students. Increased provision of student accommodation can therefore release these dwellings back into the marketplace. Provision of purpose-built-student accommodation positively impacts on the wider housing availability in the City by providing more accommodation at a higher density, thereby releasing housing stock back to the community.	Provision of student accommodation can free up market housing, but it can also compete for sites with market housing that delivers on-site affordable housing. The policy approach is about managing the impacts of student accommodation by ensuring it is in suitable locations.

1882

H10	Amount of new student accommodation required should be justified	Student accommodation is already extensively used by non-students, including UNITE students accommodation, but especially in Oxford University Colleges where the university term lasts for less than half the year. Rooms are let out even in term time on a bed and breakfast basis and before they are allowed any more student accommodation, colleges should be required to demonstrate the use of their existing rooms and why they are not all used for students. Due to colleges' charitable status, the colleges renting out their facilities provides unfair competition to anyone trying to run a hotel or B and B in Oxford.	The policy does restrict occupation to those on longer courses. It does also allow use of the accommodation outside of term-time, which makes efficient use of the site and can help meet the needs of other types of students such as language students visiting Oxford outside of term times.
H10	Support	Support preferred option.	The support is welcomed.
Draft policy	**Topic**	**Summary of comments**	**Response**
H10	Support Alternative Option 3	New student accommodation should only be built on existing campus or student accommodation sites. Developing sites in other locations has led to a continued loss of family homes and areas which could have been developed for private residential use to meet the housing need have been replaced with development by educational establishments.	The Local Plan is required to understand and attempt to meet all types of housing need. There are sufficient sites in the outlined locations, but further restriction would not be justified.
H10	General comment	There should be restrictions on students generally bringing cars to Oxford in this policy, not just to only campus and accommodation sites. Student parking is already a problem in private HMOs.	Policies are restricted to what can reasonably be achieved through the planning system.

H10	General comment	This policy should expressly reference the need for student accommodation, and it should expressly support new accommodation that meets this need, not restrict it. Additionally, management restrictions should not be placed on new student accommodation.	The Local Plan is required to understand and attempt to meet all types of housing need, including for students. Without proper management of student accommodation, all the benefits of providing it for full time students are lost and the universities will have little or no control of meeting their thresholds for student numbers living within their own accommodation.

Draft policy	Topic	Summary of comments	Response
H11	Objection – don't link new academic floorspace with need for additional student accommodation	Too restrictive and will not allow leading institutions like the University of Oxford to expand and grow as it needs to, especially at a time when the UK is in desperate need for economic growth and innovation. Growth should be enabled, not held hostage, if the city wants both affordable housing and a thriving research ecosystem. Do not cap the number of students who live in the private market, they should be able to choose whey they wish to live.	The thresholds are set above current levels and within what is achievable by the end of the threshold period, even with the forecast growth in student numbers requiring accommodation. It is a way of managing the potential negative impacts of student accommodation, without being overly restrictive.
H11	Objection – thresholds set too low	The data in the most recent Specialist Housing Needs Evidence by Iceni indicates that Policy H11 does not seek to support new accommodation to meet the universities' need. This is because it restricts any development that would expand University of Oxford and Oxford Brookes by more than 2,500 and 5,750 students respectively, however, these caps are around the same numbers as the new student accommodation beds needed. Therefore, the need will be present with or without the expansion restriction as proposed. The policy should be supporting development to meet this need, rather than restricting universities from expanding beyond the bed need.	The policy only applies to certain students - those in the defined list of students requiring accommodation. It is carefully calculated to be achievable, based on the expected growth in numbers of students requiring accommodation, and forecast increases in student rooms.

1887

H11	General comment	Policy H11 makes development of new and improved university facilities reliant upon development of additional student accommodation. Consequently, policies which influence the development of student accommodation are integral to the achievability of the Local Plan's objectives. Policies which prevent the	The requirement for contributions to affordable housing from student accommodation is considered justified, and has been viability tested. It is not
Draft policy	**Topic**	**Summary of comments**	**Response**
		delivery of student accommodation, particularly on strategic sites, would undermine the delivery of the Local Plan as a whole and render it unsound. This is considered particularly relevant on the issue of affordable housing contributions from student accommodation discussed under policy H3.	considered to hinder development of additional student accommodation.
H11	University of Oxford Colleges should each be considered separately	Although Worcester College is a constituent college of the University of Oxford, it is a separate legal entity to the University. On this basis, it would not be reasonable for the College to have facility restrictions placed upon them whilst they cannot fully control other institutions. The College would seek additional wording such as; "Unless demonstrated that facilities associated with constituent colleges will have no impact on existing accommodation requirements for the relevant college".	This approach has applied to the university as a whole for decades and the University is able to supply necessary monitoring each year across the colleges. The needs as a whole, and the expected growth in student numbers of the university, have been considered when setting the policy.

1888

H11	Clarity over review period	Agreeable to the proposed thresholds for the maximum number of students living in non-university owned accommodation. However, there is ambiguity of what the required information or process would be after 2033, or the terms of this review. This does not enable the Universities to undertake strategic planning with any certainty and would be grateful for further discussions on this element of the Policy.	Text has been added to clarify this.
H11	General support for policy	Several Colleges and others generally support the objective of Draft Policy H11.	Support noted.

1889

Draft policy	Topic	Summary of comments	Response
H11	Support Alternative Option 1	Favour a free market approach - the private rental market will invest in student accommodation if the demand is there. Have students in private rental accommodation city wide to avoid overconcentration in certain neighbourhoods.	A free market approach could not at the same time ensure students were spread across the city.
H11	General comment	'Students' must include both undergraduates and graduates. Increase in numbers of postgraduate students must be closely monitored as the numbers continue to increase as fast as the Universities build new accommodation. Also set long term targets to ensure year on year reductions in student numbers living in non-student dedicated accommodation. The intention is to reclaim housing for council housing or for keyworker part rent/part buy.	The definition in the plan of students requiring accommodation does not exclude all postgraduates.

Draft policy	Topic	Summary of comments	Response
H12	Preferred Option	Who would determine the criteria referred to in the preferred option? They may be impossible to meet.	The criteria in the preferred option have been informed by the latest Gypsy and Traveller Assessment (2024), as well as ensuring that the context is relative to Oxford's constrained area.
H12	Support Alternative Option 1	Sites should be allocated to meet the identified need - travelling communities have as much right as anyone else to live in Oxford. Also provides clarity to all about where the sites will be located. If the expected assessment of need for this type of site demonstrates that a site in Oxford is needed, we would encourage the council to find space for this within the city's boundaries. It is better to have a well-managed facility which can be cleaned and have the necessary provisions such as water, power, lighting and refuse collection, rather than to react on a case-by-case basis.	The latest evidence indicates that Oxford City does not have a need, therefore there is no justification to allocate sites. Should any proposals be submitted, the criteria as set out in the draft policy would ensure that these provisions would need to be met on site.

H12	Support Alternative Option 2	Default to national policy Traveller communities are a big nuisance in terms of causing antisocial behaviour and environmental problems for the surrounding communities. They should not be encouraged or allocated sites.	There would not be any policy to help in the assessment of the impact, should a site come forward if only national policy was relied on. The December 2024 update to the Planning policy for traveller sites made clear that the Government's
Draft policy	**Topic**	**Summary of comments**	**Response**
			overarching aim is to ensure fair and equal treatment for travellers, whilst also respecting the interests of the settled community.

1894

H12	Designate stopping sites	Through freedom of information requests, Friends, Families and Travellers found in 2024 that there is a lack of transit site provision across the UK, despite repeated recommendations from national and international bodies. The Council should search for sites that can deliver temporary stopping places for Travellers. Oxfordshire County Council's 2024 needs assessment highlighted that there are currently no transit pitches available in Oxford City, yet across Oxfordshire there were 22 reported encampments between May 2022 to October 2023. Even if sites are not designated, the council should identify areas that could potentially be used by travellers "on hand" so that they may be efficiently allocated space rather than being caught up in an endless waiting process.	Noted. The latest Gypsy and Traveller Assessment recognises that all Oxfordshire authorities should work together to address the lack of stopping sites in the County.
H12	General comment	Any proposals for traveller sites should be carefully scrutinised to ensure they do not negatively impact local neighbourhoods.	The draft policy makes it clear that all criteria in the policy would have to be met for a proposal to be acceptable.
H12	General comment	This will only work if engaging with the travelling community.	The travelling community have been involved and were a key part of informing the data in the latest

Draft policy	Topic	Summary of comments	Response
H13	Support Alternative Option 1	Search for sites to allocate new moorings. The 2024 assessment concedes that despite a need being identified in Oxford, there is limited potential. Allocating even a small, well-screened strip – perhaps by repurposing disused wharfage or incorporating moorings into a wider regeneration scheme—would give boat dwellers a legitimate, serviced option and ease pressure on land-based housing. This is a more pro-active approach where moorings can be prepared with sanitation, water and power facilities, and be considerate of other waterway traffic and users. Reacting case by case is inefficient.	This will not necessarily result in delivery of sites if there is no landowner interest. Searches for suitable sites show there are few potential sites in Oxford remaining. Some actions, such as converting visitor moorings to residential, can't be brought forward through the planning system.
H13	Support Alternative Option 2	Do not allocate sites or set out policy criteria	This would result in a lack of clarity and consistency of approach with no planning policy framework by which to assess planning applications.
H13	Provides a more affordable way of living	Boat dwellings are one of the few remaining unique and affordable ways for people from a diversity of socio-economic backgrounds to live and work in Oxford - it's essential that mooring spaces be increased gradually over time in line with other increases in dwelling spaces.	They can provide a more affordable way of living, although this isn't always the case due to cost of boat maintenance etc.
H13	Object to all proposed options	Disagree with all options. A new policy shared with neighbouring local authorities should be created which allocate sites for new permanent moorings based upon a realistic, independent assessment of demand.	This will not necessarily result in delivery of sites if there is no landowner interest.

H13	General comment	There seems to be no oversight and management of these boat sites. Many boats are either half-sunk or in disrepair and are an eye-sore. Need stricter controls and monitoring over exteriors areas to manage this.	Noted. In Oxford, the control of residential moorings falls under the Environment Agency for the
Draft policy	**Topic**	**Summary of comments**	**Response**
			River Thames and the Canal and River Trust for the Oxford Canal.
H13	General comment	Hopefully you are engaging with relevant local communities to find out if they are happy with this.	The boat dwellers community have been involved and were a key part of informing the data in the latest Boat Dwellers Assessment (2024).

Draft policy	Topic	Summary of comments	Response
H14	Support	Support for preferred option	Support welcomed.
H14	Policy should go further	The housing needs data referenced within the supporting text has been superseded by the June 2025 study which demonstrates a significantly larger requirement for older persons housing of all types. The policy should recognise the benefits to the wider housing stock (releasing underoccupied homes) as well as the many savings and health benefits associated with the provision of such housing. As drafted, the policy is negative ("will only be granted where…"). We recommend that this draft policy is rewritten and suggest the following by way of example. *Proposals for specialist and supported housing will be strongly supported where applicants provide evidence of appropriate existing transport and other services within the vicinity of the proposal site. Over the plan period, targets will reflect the latest evidence of housing need (at the time of writing being the June 2025 Housing Needs evidence base).*	The Specialist Housing Needs Assessment has been updated in November 2025. The policy wording is consistent with other policies in the plan.
H14	Sufficient exterior space	There must be enough green space, easy access for visitors, parking spaces, etc.	Agreed- the intention is that the criteria ensure this.
H14	No policy	There should be no policy interfering in this or relating to elderly persons or supported accommodation in any way.	It is considered important to ensure a good quality living environment for everyone.

H14	Ensure no 'ghetto'	It is important there are no areas with homogenous demographics- it must be mixed. Preferred option fine as long as that's avoided.	In Oxford any delivery of this kind of housing will be limited in size and part of a mixed-use area because of the nature of development opportunities.
H14	Does not need to be in the city/no requirement in	There may be more space and less pressure on local infrastructure outside the city. Many elderly people do not work and this may help reduce housing costs in the city for working residents. There is not an	The policy approach is to ensure what does come forward is suitable, but not to make it a
Draft policy	**Topic**	**Summary of comments**	**Response**
	city/prefer option 4	over-whelming housing need for older persons accommodation. There are, however, hundreds of single homeless people in desperate need. Therefore, the priority is elsewhere.	requirement that would then be competing with other needs.
H14	Quality of care homes	What can be done to encourage better access to affordable, publiclyowned or communal-ownership structures for care homes that have a high quality of care?	Many solutions will be outside the planning system.
H14	Balance requirements against delivery	This type of accommodation can help free up family homes, so it's important it's not restrictive, but it's also important that it is good quality.	Agreed, and the criteria will attempt to strike the right balance.
H14	Prefer option 2	Prefer option 2 or wonder if it cannot be incorporated into option 1 as it sounds like a good idea to ensure a mix of housing and types of residents.	Option 2 is not mutually exclusive to the preferred option, but it is not favoured for the reasons set out in Background Paper 003

BOB ICB

Draft Policy	Summary	Response	Outcome

1908

Policy H14 Older Persons and Supported accommodation	The ICB published its Primary Care Strategy in 2024, and it sets out that the population of BOB will increase over the next 10 years in particular the older population who make the greatest use of healthcare services. GP appointments would need to increase by 55% and this would represent an unsustainable level of growth in terms of available funding and workforce if there is no change to the existing care model.	Noted. Noted.	No further action

1909

Draft Policy	**Summary**	**Response**	**Outcome**

	Considering the scale of this type of development in the City will be limited, the ICB considers that robust evidence should be requested to identify appropriate primary care mitigation measures to accommodate this extra demand.	Appropriate primary care infrastructure required to mitigate the level of development proposed in the Local Plan should be identified and projects/ schemes set out in the IDP. It is not the role of the City Council to identify healthcare infrastructure, nor is it the role of developers.	
	The ICB notes that the Council has published a technical advisory note related to Health Impact Assessment (HIA). The ICB considers that the submission of a HIA would be appropriate evidence to demonstrate the provision for older persons and other specialist accommodation would not exacerbate the capacity of the nearby existing primary healthcare provisions. The ICB should also be consulted in this type of planning application.	Noted.	

1910

Draft Policy	Summary	Response	Outcome
	BOB ICB propose the following amendment to Policy H14: Planning permission for accommodation for older people and supported and specialist care will only be granted where it: a) Is located with good access to local facilities and services including public transport, shops, and healthcare facilities; and ~~b) Includes the submission of a Health Impact Assessment (HIA) is to provide an assessment of the impacts of the proposals in healthcare provision and any mitigation measures are identified~~ in the scheme; and b) c) Is located close to or as part of a mixed community and will contribute positively to the creation and/or maintenance of mixed and balanced communities; and c) d) Is appropriate for the neighbourhood in terms of form, scale, and design…	The Plan already contains a policy (HD10) which sets out when an HIA would be required. As the threshold is for "major development" (i.e., 10 or more homes or 1,000sqm or more of employment floorspace), this would mean that development proposals for accommodation for older people would already produce an HIA for such proposals. Inclusion of a requirement in this policy is therefore not required as it is already covered in the HIA policy.

Draft policy	Topic	Summary of comments	Response
H15		ONV notes that policy H14 is not effective when applied to higher density housing schemes that the plan is aiming for to make efficient use of land. In particular, schemes that include apartments or flats. In such developments it is not practical to have self-build properties. It may be possible to allow people to fit out an apartment, but this could be difficult in terms of noise and disturbance for adjacent occupiers and location of services etc. A suitable caveat should be added to the list in the policy as currently it only excludes flatted development on brownfield land. The concerns noted above would arise on brownfield or greenfield sites.	On greenfield sites there is far more option to deliver a variety of housing types.
H15	Policy should be more ambitious	Community-led housing is supported via DRAFT POLICY H15: SELFBUILD & CUSTOM HOUSEBUILDING. However, this policy offers much less CLH ambition than in the emerging South and Vale, Cherwell and West Oxfordshire Local Plans. These have drafted more detailed policies in support of community-led housing, in line with the requirements of the new NPPF. The Oxford Plan could very usefully and straightforwardly include a policy for community led housing such as that included in the South Oxfordshire District Council and Vale of White Horse and Vale of White Horse joint submitted Local Plan *(JLP policy copied in text).* Such a policy would also recognise and much better reflect the pioneering role that the City Council has historically taken (and continues to do so) with regard to the promotion and advocacy of community-led housing.	The needs in Oxford are very different to those in the more rural areas surrounding it. The NPPF says that planning authorities should seek opportunities, through policies and decisions, to support small sites to come forward for community-led development for housing and self-build and custom-build housing. The local plan policy is generally supportive, but it is not considered it needs to go further.

			In Oxford, mall sites are the norm, and all that is available to meet most needs.
H15	Feasibility	On complex and constrained brownfield sites such as Templars Square, where comprehensive, higher density mixed use development is required and design and active frontages are a key element of the	The policy acknowledges that there are sites where the policy may not be appropriate, such as

Draft policy	**Topic**	**Summary of comments**	**Response**

1915

		masterplan, this policy creates challenges in terms of feasibility, construction programme/phasing/management, and limits the ability to optimise the housing delivery on-site. We therefore request that the policy includes wording to prioritise comprehensive development and site optimisation, over rigid application of the 5%. We also request that it is acknowledged that this percentage target may be challenging to achieve on constrained and complex urban sites and is not required to be met at the Templars Square site.	brownfield sites with flatted developments.
H15	Site threshold	challenge the increased threshold for the provision of land for selfbuild from 5% on sites of 50 units or more to 100 units or more, making it more difficult for community-led housing groups to acquire land for self-build affordable housing projects.	The threshold is set for self-build at a level sufficient to meet forecast needs over the Plan period, whilst also ensuring a large enough group of plots come forward to be feasible to deliver.
H15	Support for preferred option	We seek assurance that such self-build and custom housing is bound by the same policies as other development and specific mention that Policy G1 and G4 apply.	Developments which come forward under H15 would also be subject to the other relevant policies in the plan, the same as any other development propopsal.
H15	Support for option 2	Support of more freedom and pushing the policy	Support is welcomed.
H15	Support the policy but encourage more environmental initiatives	Provide incentives for ecological net-positives of the buildings to look at environmental and social benefits	Environmental and social measures to be delivered through any development would be addressed through other policies in the plan.

H15	Support to try and help affordability issues	A few comments all agreeing this is a good policy and should be pushed forward by the council to address affordability and pushing social cohesion	Support is welcomed.

Short questionnaire responses

Employment Sites

We have identified what we think are key employment sites in the city that we should protect. These are sites that support Oxford's internationally important role in education, research and health, and also those that support a diverse and strong economy. We are not protecting any employment sites in the city centre or district centres, to give full flexibility in those areas, for example to allow for offices to change use to housing. To what extent do you agree with this approach?

There were 884 responses to this part of the question.

1926

Draft policy	Topic	Summary of comments	Response
E1	Support	We support the preferred option to attempt to meet employment needs, while balancing other uses, in particular housing. We consider that designated employment sites, such as Oxford North, are the best locations for intensification of employment uses to meet employment needs. ONV support the preferred option of seeking to maximise existing employment sites to ensure that best use is made of those allocated, to meet employment needs. Supporting the intensification of the city's existing key employment sites will enable employment land needs to be met on existing sites where successful clusters can be established. ONV notes the proposed provision of housing on non-designated employment sites. This is recognised as being a potential source of housing numbers supporting the Council's ability to meet housing need. Oxford North is a mixeduse site and the land uses identified include residential development and commercial/ employment development. The site allocation policy for Northern Gateway/	Support noted. Support noted. Support noted.

		Oxford North has not yet been released however, this should allow for flexibility over the location of the uses	

1937

Draft policy	Topic	Summary of comments	Response
		within the allocation to ensure that development can respond to market demand. We strongly support the preferred option of supporting new employment uses through intensification at existing employment sites and sites specifically allocated for employment uses in the plan. This option would not allow any new employment-generating uses outside of these locations and we support employment needs being directed to existing employment sites.	Support noted.

1938

E1	Support – ARC Oxford	We support the preferred option to attempt to meet employment needs, while balancing other uses, in particular housing. We consider that designated employment sites, such as ARC, are the best locations to support intensification of employment uses to meet employment needs. We support the preferred option of seeking to meet employment land needs through appropriate modernisation and intensification of the city's existing employment site network, which would include ARC. Supporting modernisation and intensification of the city's key employment sites will enable employment land needs to be met on existing	Support noted. Support noted. Support noted.

1939

Draft policy	**Topic**	**Summary of comments**	**Response**

		sites through a mixture of refurbishment of existing buildings and new build development. RLMIS has no plans at this time to deliver housing on its site at ARC, but recognises housing is a key locational consideration for companies. There could be scope for allowing some housing on employment sites provided it supports their economic function. Where there is scope to deliver housing on other key employment sites in the City, we support the preferred option to allow an element of housing delivery on existing employment sites (subject to other policy requirements being met). We strongly support the preferred option of supporting new employment uses (through modernisation and intensification) at existing employment sites and sites specifically allocated for employment uses in the plan only. This option would not allow any new employmentgenerating uses outside of these locations and therefore support employment needs being directed to existing employment sites, such as ARC Oxford.	Conditional support noted. Support noted.
E1	Support for policy	The [OUH] Trust supports Policy E1, and the continued identification of its hospital sites as 'Key Employment Sites' at Appendix 3.1.	Support noted.

1940

Draft policy	Topic	Summary of comments	Response
		The aspiration to protect and make the best use of existing employment sites is a particular positive for the Trust given the importance of the three hospital sites to the city in terms of the number of people employed and the services provided.	Support noted.
E1	Support – Suggested wording	It is supported that emerging policy E1 considers new employment generating uses within the city centre as an acceptable location for delivering new, modernised and intensified employment floorspace. It is suggested with respect to the initial paragraph of the draft policy that it is updated to 'All new development for employment purposes…' as opposed to 'All new development on employment sites'. It is understood that the sentiment of the first paragraph is applicable to employment development more broadly rather than only being applicable to allocated/existing employment sites. This clarification and amendment would ensure the policy is effective.	Support noted. The city's employment sites include hospitals, teaching and research campuses, and sites allocated for a range of employment generating uses. It is important that the key principles outlined in the first paragraph of Policy E1 are applied uniformly across the city's diverse network of employment sites rather than restricting their application to development for "employment purposes" (an undefined term).

E1		The Group supports the flexibility in the draft policy, which protects the most important 'key' employment sites, whilst also allowing for their intensification including complementary housing to create mixed use sites.	Support noted.

Draft policy	Topic	Summary of comments	Response
		Given the scale of the City's housing requirement, it is right that all options should be considered, including employment sites. However, in those circumstances where employment sites (either in whole or part) are given over to other uses, it is essential that there remains sufficient employment land for the economic potential of Oxford to be fully realised.	The policy includes criteria to ensure that, even where a loss of employment floorspace is proposed at Key Employment Sites, the employment use can be retained and the number of jobs in employment generating uses are retained.

E1	Greater flexibility needed to align with NPPF	The Universities welcome the latest evidence presented in the 'Oxford City – Employment Land Needs Assessment Interim Report' (June 2025), which is generally more aligned to the data submitted within the Universities' representations during the last round of planmaking. However, the Universities consider that greater flexibility is needed on the list of permissible locations for new employment uses and clarification is needed on what defines an 'employment site'. Currently, the preferred options for Policies S1 and E1 collectively seek to direct new employment land to existing employment sites whilst prioritising housing elsewhere. However, in the absence of a definition of 'employment site', the policy poses a potential	Noted. Given the city's well-publicised inability to meet housing need (standard method, NPPF, Dec 2024) and widely acknowledge barrier to economic growth that this brings, coupled with the very healthy "demand-led"

1943

Draft policy	Topic	Summary of comments	Response

		barrier to the development of employment uses on certain redundant brownfield sites which may lend themselves to employment-generating uses. Furthermore, the Universities consider that in their current guise, Policies E1 and S1 risk conflict with the overarching vision of the Local Plan to support Oxford's international standing for research and development. Reflecting Paragraph 68 of the NPPF ("the Framework"), which required policies to be "be flexible enough to accommodate needs not anticipated in the plan", it is suggested that a sequential approach could be added to the policy, to enable new employment generating uses where they would not undermine other priorities of the plan.	employment land supply position puts the city in a strong position to meet all identified employment land needs in the plan-period. The plan's strategy to support new sites for housing is therefore critical to the further economic success of the city. The Reg. 19 plan will provide clear definitions of employment sites and appropriately sub-categorise them. While supporting Oxford's key economic strengths forms part of the overarching vision for the plan, delivering new homes in the city is a key priority as well. Given the brownfield and strategic greenfield opportunities that remain undeveloped across the city's network of Key Employment sites, we consider there is sufficient flexibility to accommodate any employment needs not anticipated by the plan. However, as stated previously, as Oxford is unable to meet currently identified housing need, the plan's overarching strategy (S1) and employment strategy (E1) provide clear support for economic growth by seeking to reduce its barriers, which include housing affordability issues. Noted – see above.

Draft policy	Topic	Summary of comments	Response
		Whilst this option is not considered within Background Paper 004, such an approach would achieve an appropriate balance between land use pressures, ensuring the Plan conforms to the Framework.	
E1	Support draft policy preferred option over alternatives.	The policy is supported. Although the policy appears to be supportive of a range of employment land uses, it doesn't reference the nature/type of acceptable uses and should ensure that it is responsive to market demands to allow for the delivery of employment types in accordance with the needs of the local market.	The policy supports "employment generating uses" defined in the appendix. A specific policy is included for B8 uses as these often have bespoke requirements/ needs etc.

1945

E1	Clarification suggested	Policy E1 seeks to support and protect employment uses. However, it supports the loss of employment uses on sites that are not designated for employment uses, and where housing is proposed. It also supports the provision of housing on designated sites, taking a balanced judgement approach where the employment function of the designated site is not harmed. In both these circumstances it would be helpful if the policy said that student or co-living types of housing are supported. Both types meet housing needs (in terms of the NPPF and NPPG), and it might be that such housing types are	Noted. Noted. Policy E1 does not specify the type of residential development that should be come forward. As the acceptable locations for student housing are covered elsewhere in the plan, it would not be appropriate to support them at all employment sites. The policy therefore provides a general support for residential development and does not specify precise types.

1946

Draft policy	Topic	Summary of comments	Response
		more appropriate alongside employment uses than conventional housing.	

E1	Policy should go further	We welcome the proposed more flexible approach to the use of employment sites for housing, but as indicated above in relation to policy H1, we think this could go further. The policy should explicitly recognise that creating new employment opportunities also creates additional housing need that cannot be accommodated within the city, adding to congestion and carbon emissions. The city already has significantly more jobs than residents of working age so the provision of new homes should be prioritised over employment.	Support noted. This Local Plan uses the Government's Standard Method (NPPF, Dec 2024) to calculate housing need. The plan does not allocate any additional sites for employment purposes. The plan's strategy seeks to promote housing and limits new employment generating uses to existing employment sites, the city and district centres and sites in lawful use for the proposed employment use class.
E1	Objection	The policy is unjustified as there is no provision for extra employment to provide extra housing, only permission to do so. The relentless expansion of the OUHT, the Universities and associated research centres is the primary driver of housing need in the city, but E1 permits expansion with no contribution to housing. If a business wants to downsize and allocate space for housing, this is specifically prohibited, which is unjustified.	The policy sets out a permissive approach to housing delivery across the city's employment site network. Where relevant, site allocation policies provide minimum housing numbers. Policy E1 allows the loss of "existing employment sites not designated as Key Employment sites" to other uses, while actively supporting their loss to housing. Preferred Option selected for reasons set out in Background Paper

1947

Draft policy	Topic	Summary of comments	Response
		Work from Home leads to reduced need for space with different workgroups having office days on different days of the week. This is an economic decision taken by the employer. OCC has no role in this.	While it is noted that working from home can reduce premises needs for certain sectors, other sectors (e.g., manufacturing/ research & development often cannot operate successfully without the workforce being present on site.
E1	Policy as written not effective	Hallam does not support the proposed employment strategy due to its failure to identify clear requirements for employment land and how or where needs will be met. The preferred option is based on a criteria-based approach that seeks to focus and intensify development at existing employment sites and city and district centre locations whilst resisting development resulting in the loss of floorspace at key employment sites. A more effective employment land strategy is required. It should quantify employment land and floorspace requirements, express the spatial priorities where provision can be made and ensure flexibility for the market and growth in current and emerging sectors.	Employment land needs evidence will be consulted on at the next statutory consultation stage (Reg.19). Noted. The City Council is confident that the employment land strategy, which supports the modernisation and intensification of existing employment sites will be sufficient to meet identified land needs and ensure flexibility for market growth in current and emerging sectors, while addressing key barriers to economic growth, i.e., lack of housing and infrastructure.

1948

E1	Suggested amendment	CPRE have repeatedly called for some development on various sites listed as Key Employment Sites many of which have sat empty for decades.	Noted.

Draft policy	**Topic**	**Summary of comments**	**Response**

1949

		The worst examples, being the Osney Industrial Estate and the Unipart site but there are many others. For example, there are still empty sites available on the old British Leyland site at ARC Oxford dating from the 1990's and representing now 30 years of being effectively Brownfield sites. If there is no real expectation that these sites will be actively developed, then protecting them as Employment sites makes no sense. The City Council have singularly failed to deal with this issue claiming quite wrongly that Oxford is full. ignoring Osney Mead and the many other vacant sites in Oxford. In CPRE's view the draft Policy should state that: *"if a site or part thereof has not been used for substantive employment purposes for a period of 10 years or more then it shall not be subject to the Proposals involving housing listed in the Employment strategy and be subject to normal planning requirements for housing development. Car or commercial vehicle storage/ parking would not be regarded as substantive employment. In relation to smaller*	Neither Osney Mead Industrial Estate nor the "Unipart" site, are completely vacant. Both are long-standing site allocations and are actively in use for a range of employment purposes. There is 3ha of vacant land at ARC Oxford (without planning consent). Discussions with all landowners suggest that they are keen to bring forward development at their sites within the plan period. We do not accept this modification. Storage and distribution uses are a recognised employmentgenerating use under the Use Classes Order. The plan provides a permissive approach to housing on employment sites. Preferred Option selected for reasons set out in Background Paper.

1950

Draft policy	Topic	Summary of comments	Response
		developments (formerly Category 3 sites) the suggested proposals should not apply." Further owners should pay enhanced business rates if they fail to redevelop vacant sites.	

1951

E1	Clarification sought.	Draft policy allows for housing to be supported on employment sites where the objectives of the policy are met. Policy E1 differs from that in the adopted local plan (and previous 2040 plan) it that it only proposes two categories of employment site – Key Employment Sites and non-designated employment sites. However, there appears to be no mechanism in the LP42 to change category outside of a review of the Local Plan. It is therefore suggested that a mechanism is provided in the LP42 to review the categorisation of employment sites on an annual basis and update the list within Appendix 3.1 of the Plan. Conflict between the wording in the policy - states that "planning permission will be granted for the loss of any non-designated employment sites to other uses, proposals for housing will be supported" and the section relating to housing which sets out a number of criteria to meet where housing is proposed, including –	Noted. That is correct. As part of the plan-making process, existing employment sites (over 0.25ha) were assessed against specific criteria. We do not propose to undertake this assessment annually. We do not consider that this is a conflict. The policy is clear that for existing employment sites not designated as Key Employment Sites, that housing, in principle will be supported, however, the objectives set out parts c)h) of the policy need to be assessed by the decisionmaker.

Draft policy	**Topic**	**Summary of comments**	**Response**

		"avoiding the loss of or significant harm to, the continued operation or integrity of successful and/or locally useful, business and employment sites". Who determines the above is also a concern, as all employment sites are locally useful? These conflicts should be clarified.	Preferred Option selected for reasons set out in Background Paper.
E1	Support	Support identification of ARC Oxford as a 'Key Employment Site' (Appendix 3.1)	Support noted.
E1	Wider contextual comment	Oxford remains the most sustainable location for employment in the county. The continued intensification, regeneration and modernisation of ARC Oxford can meet that demand and support local, regional and national economic growth.	Support noted.
E1	Housing on Employment sites	ARC does not object to the newly introduced principle that housing (in the future, where justified) could be realised on the site.	Lack of objection noted.
E1	Other uses	In addition, ARC would support hotel or aparthotel uses.	Site allocation policies will set out appropriate uses for each site.
E1	Employment land needs	Get out of the property market.	Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	Within the preferred option, require a clause to re-categorise existing commercial land to housing land or mixed use	Policy E1 enables housing to come forward at existing employment sites. Preferred Option selected for reasons set out in Background Paper

E1	Employment Land Needs	Alternative Option 1 preferred Reasons include:	Preferred Option selected for reasons set out in Background Paper

Draft policy	Topic	Summary of comments	Response
		- Employment drives prosperity which in turn will support housing and taxation - The market should have more flexibility in determining the most appropriate uses that meet market dynamics at the time of development - being over prescriptive may impact the delivery of any type of development.	

1954

E1	Employment Land Needs	Request Alternative Option 1 is progressed to ensure employment needs are fully met within Oxford. Alternative Option 1, focusing on meeting all identified employment land needs within Oxford's boundary, is essential to sustaining the city's economic vitality and supporting its key sectors, particularly research and development, life sciences, and advanced manufacturing. The preferred option, which prioritises other uses such as housing even where employment needs cannot be fully met, risks undermining Oxford's long-term economic resilience. While we recognise the acute need for housing, this should not come at the expense of employment land that is critical to the city's innovation ecosystem and broader regional economy.	The lack of housing (and infrastructure) has often been cited as a barrier to economic growth in Oxford. The plan's strategy for employment and housing reflect the different relative positions in terms of need. (i.e., unable to meet housing need within city, whereas given strong supply of employment floorspace Oxford is likely to be in a strong position able to meet employment land needs). Preferred Option selected for reasons set out in Background Paper

Draft policy	**Topic**	**Summary of comments**	**Response**

		Alternative Option 1 offers a more balanced and proactive strategy. By actively investigating ways to meet employment land needs within the city, including the identification of new, appropriately located sites, it ensures that Oxford can continue to support high-value job creation, attract investment, and retain its competitive edge.	
E1	Employment Land Needs/ Best use of Employment sites	Alternative option 1 seems to provide some solutions. Given that working from home is so common nowadays, it is hard to understand the employment land needs in Oxford. Plus, lots of shops move to online, the council may consider how to maximise the use of unoccupied office sites. to balance such needs.	Preferred Option selected for reasons set out in Background Paper. While working from home has become more common for certain sectors (e.g. traditional office workers), the type of employment land coming forward in Oxford (e.g., R&D), often requires the workforce to come into the workplace on a regular basis.
E1	Employment Land Needs	Support Alternative Option 2: (10) Reasons include: - It is more likely to succeed in the long term. - Councils have a poor record of decisionmaking in this area. - Stop intervening, let the market find the right balance. - Let the market decide the most appropriate employment land - Don't over-manage, let a thousand flowers bloom.	Preferred Option selected for reasons set out in Background Paper

Draft policy	Topic	Summary of comments	Response
		- Option two based on the existing framework is sufficient - Long live the market!	
E1	Employment Land Needs	At present housing is the important thing but there should be no strict rule here. Helping the economy expand is important as well.	The policy supports the economy by not allocating new additional sites in employment-generating uses and allows employment sites to modernise and intensify to support the expansion of floorspace, without impacting further on Oxford's limited land availability.
E1	Employment Land Needs	I don't like the increase in business and science parks around the edge of the city. They should be better integrated with some kind of local infrastructure, including housing.	Re: infrastructure - The plan supports the re-opening of the Cowley Branch Line to passenger services, which has recently (October 2025) been provided with £120m of Government funding to support it. New homes are proposed as part of strategic site allocations in neighbouring authorities to meet previously agreed unmet housing need.
E1	Employment Land Needs	I don't really know what this means. We should be encouraging employers to locate in oxford, especially small business, entrepreneurs, and transforming the city centre from the tourist shop and takeaway desert it is now to a mosaic of independent shops.	The Reg.18 Plan included draft Policy E4 which is designed to support affordable workspaces for certain sectors. While Policy E1 itself supports a range of uses within the city and district centres.

1957

E1	Employment Land Needs	I think a joint up approach is needed. We need jobs to contribute to public finances as well as good and safe housing.	Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	Prioritising housing on employment sites will slow and complicate decision making around the evolution of employment in the city; which is tending towards densification, higher value uses,	The plan's strategy does not seek to prioritise housing on employment sites but rather to prioritise any new site allocations to support housing delivery. The Employment Strategy supports the modernisation and

Draft policy	**Topic**	**Summary of comments**	**Response**

1958

		and R&D, often in uniquely suitable locations for this sort of economic growth. Adding the need to consider housing into decision making on the future needs of employers is unnecessary. In the past the City has co-operated with Cherwell on unmet housing needs. This will hopefully continue, but there is also an opportunity to co-operate on employment needs. For example, the Science North area, stretching from Oxford North and Oxford Parkway, through the University of Oxford's Begbroke Science Park, Oxford Technology Park and London Oxford Airport, is emerging as a strong rival to Science Vale in the south and as a further link along the Knowledge Spine stretching from Didcot to Bicester. There is, moreover, 4,400 homes for Oxford's unmet need committed in this location. In our Opinion, the spatial strategies in the Oxford Local Plan need to connect with and plan for Science North. This will provide for the housing and employment needs of the City, set a plan for the related infrastructure, all in a highly sustainable and market-aligned way. For example, Bloombridge is planning to submit the application for Phase 2 of Oxford	intensification of the city's larger "Key Employment Sites". Where losses of employment floorspace are proposed on "Key Employment Sites" certain criteria need to be met, while the loss of non-designated employment sites to other uses is allowed, Policy E1 supports housing at these sites. The plan's strategy for employment and housing reflect the different relative positions in terms of need. (i.e., unable to meet housing need within city, whereas given strong supply of employment floorspace Oxford is likely to be in a strong position able to meet employment land needs). Economic Evidence will be published at next consultation stage (Reg. 19) to confirm. Re: "Science North" - this is outside the city boundary and should be supported by appropriate infrastructure. The County Council is currently responsible for developing active and sustainable travel schemes and they should be involved with regards to any infrastructure linkages.

		approximately 90,000 sq m of technology, quantum and life sciences space, linked to the City via the excellent public and accessible transport infrastructure in this area.	
E1	Employment Land Needs	Employment and housing should be equally prioritised as they go hand in hand Surely employment and housing provision are two sides of the same coin? Situations where mixed use if the appropriate solution?	The plan's strategy for employment and housing reflect the different relative positions in terms of need. (i.e., unable to meet housing need within city, whereas given strong supply of employment floorspace Oxford is likely to be in a strong position able to meet employment land needs). Mixed-use sites will be appropriate in certain locations (e.g., city and district centres) Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	The University assumes that more is better, but in fact standards are slipping in some areas in the face of an obsession with growth.	Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	Agree that priority should be given to the communal and social needs first, such as good housing and access to green spaces and community spaces.	Support Noted.
E1	Employment Land Needs	There's no point creating more employment if so many employees have to live outside Oxford.	Preferred Option selected for reasons set out in Background Paper

E1	Employment Land Needs	Revise ideas for the Oxpens site in order to conform to this draft policy. Eg priority throughout this area for council/keyworker/self-	Having regard to national policy, the city and district centres are suitable for a wide range of uses including employment, retail, hotels and residential uses.

Draft policy	**Topic**	**Summary of comments**	**Response**
		build homes from existing empty built environment including above commercial units.	Preferred Option selected for reasons set out in Background Paper

1962

E1	Employment Land Needs	Oxford's global research clusters depend on a steady pipeline of modern labs, offices and lightindustrial floorspace. Consciously favouring housing over employment whenever a trade-off arises would push high-value firms further from the city, lengthen commuting and erode the very wage growth that underwrites local prosperity. The draft Plan itself notes that demand for R&D space is "being delivered at pace" and already commands premium rents city-wide; constraining supply will only magnify that pressure. The evidence base also recognises that existing employment sites can be "intensified significantly" and that brownfield retail parks such as Botley Road are naturally converting to laboratories under the new Class E rules. Rather than ration floorspace, the pragmatic course is to keep policy flexible: encourage vertical extension, allow mixed-use redevelopment of low-density plots, and let new sites come forward wherever they satisfy environmental and transport criteria.	The plan's strategy for employment and housing reflect the different relative positions in terms of need. (i.e., unable to meet housing need within city, whereas given strong supply of employment floorspace Oxford is likely to be in a strong position able to meet employment needs). Preferred Option selected for reasons set out in Background Paper

Draft policy	**Topic**	**Summary of comments**	**Response**

		Alternative 2 does exactly that. By relying on clear, city-wide design standards and the normal NPPF tests, while lifting blanket locational bans, the Council can accommodate both jobs and homes, letting price signals direct land to its highest-value use. In a space-constrained city, the surest route to inclusive growth is to remove bottlenecks, not choose winners.	
E1	Employment Land Needs	I am not sure of the merits or otherwise of prioritising housing over employment needs. I would have thought it was important for employment to be available for people who live in the city but am not sure how these priorities interact.	Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	I don't think we need more employment at all. Oxford does NOT need growth, but it does need accommodation for those who are already here.	Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	This seems rather vague. Employment has been prioritised over housing over recent decades leading to significant proportion of workers commuting from well beyond Oxford boundaries.	The plan's strategy for employment and housing reflect the different relative positions in terms of need. (i.e., unable to meet housing need within city, whereas given strong supply of employment floorspace Oxford is likely to be in a strong position able to meet employment needs). Preferred Option selected for reasons set out in Background Paper

1964

E1	Employment Land Needs	Note explicitly the need for the provision of housing to outpace the growth in housing	Preferred Option selected for reasons set out in Background Paper

Draft policy	Topic	Summary of comments	Response
		demand stimulated by new or densified commercial development.	
E1	Employment Land Needs	Put employment elsewhere where it is needed	Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	We support the preferred option. We were pleased to see that this policy reflects the need for housing in Oxford to catch up with job provision.	Support noted.

1965

E1	Employment Land Needs	Increasing housing stock must be prioritised above developing new employment sites. Otherwise, planning policy will exacerbate the number of workers forced to live outside the city due to unaffordable housing. Although we welcome a more flexible approach to using employment sites to help deliver new housing, the provisions in Policy E1 and Appendix 3 remain overly restrictive. They offer only limited flexibility and continue to place excessive emphasis on maintaining high levels of employment. We encourage the council to monitor the job-tobed ratio in the city and set out a plan and policies aimed at narrowing this gap.	Policy E1 does not allocate new employment sites and supports the modernisation and intensification of existing employment sites. It is important to protect Key Employment sites as they include a range of sites that support both the local and national economy. A monitoring framework will be produced to support the plan.
E1	Employment Land Needs	There is no employment crisis in Oxford. Please take great care to prioritise housing where sustainable sites for increasing employment are proposed, instead of job-creation: 55,000 new	The plan's strategy for employment and housing reflect the different relative positions in terms of need. (i.e., unable to meet housing need within city, whereas able to meet employment needs).

1966

Draft policy	**Topic**	**Summary of comments**	**Response**

		workers can never be housed in the City and will simply make any lack of housing worse. I am opposed to calling on surrounding councils and green belt to take on construction projects to accommodate something that Oxford should not entertain.	Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs/ Best use of employment land	Expansion of or acquisition of sites for conversion to education purposes should be expressly considered as employment uses	Local Plan already contains separate policies relating to academic institutions. Preferred Option selected for reasons set out in Background Paper
E1	Employment Land Needs	There is no point building more and more dwellings if there's nowhere for more and more people to work.	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	Allowing 'brownfield sites' for housing is eminently sensible.	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	Support Preferred Option Reasons provided include: - To ensure a higher level of protection to employment sites, unless these sites are demonstrably poorly performing. - Yes, modernisation and retrofitting of existing spaces, and not using more land for employment purposes. - Oxford should concentrate protection on the core campuses and business parks that anchor its life-science and	Preferred Option selected for reasons set out in Background Paper

1967

		advanced-manufacturing clusters, while	

Draft policy	Topic	Summary of comments	Response

1968

		allowing tired, low-density sites in secondary locations to switch to highervalue uses; doing so unlocks land for much-needed homes, channels investment into modern multi-storey labs on the key sites, and prevents an inefficient blanket freeze that would trap obsolete sheds and offices in perpetuity—thereby maximising both job creation and housing delivery within the city's tight boundary. - I think important employment sites should be protected. - Support preferred option which focuses on increasing employment locations only through intensification and modernisation of existing sites. - I agree with allowing/ changing the loss of poorly performing sites to other priority uses e.g., housing. For example, the much-missed Co-operative Bank has been an eye-sore since before the pandemic.	
E1	Best use of employment sites	Support rely solely on national planning policy.	Preferred Option selected for reasons set out in Background Paper

1969

E1	Best use of employment sites	I disagree with all the options. More employment and growth is not going to benefit the life of those already in the city.	Preferred Option selected for reasons set out in Background Paper

Draft policy	**Topic**	**Summary of comments**	**Response**
E1	Best use of employment sites	Be flexible. Employment matters too	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	There is very little unemployment in Oxford.	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	We note our concern that even intensification could lead to increases in housing need and thus add further pressure to the city's housing provision.	Housing need calculations are based on the Government's Standard Method (NPPF, Dec 2024). Preferred Option selected for reasons set out in Background Paper

E1	Best use of employment sites	Draft Policy E1 sets out clear support for the intensification and modernisation of both Key Employment Sites and any other employment sites where the site is located within a district or city centre. It is recommended that a higher level of protection be afforded to existing employment sites to prevent change of use unless there is robust evidence provided to demonstrate that it is poorly performing in employment use. Wording should also be included which allows for the redevelopment of employment sites for suitable employment uses.	Noted. All employment sites over 0.25ha were assessed and the Key Employment Sites were selected where they scored well against the assessment criteria. Policy E1 already sets out a higher level of protection for Key Employment Sites. Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	The city should divest its property holdings.	Preferred Option selected for reasons set out in Background Paper

Draft policy	**Topic**	**Summary of comments**	**Response**
E1	Best use of employment sites	Agree, take initiative to protect employment, do not rely on national initiatives alone.	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	Any opportunity to change to housing from commercial use should be taken.	Preferred Option selected for reasons set out in Background Paper

E1	Best use of employment sites	I think changing employment sites to housing is fine if the market supports that	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	Always consider impact on existing communities.	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	Encourage working from home where possible to make room for housing	The type of employment floorspace coming forward (i.e., R&D), often requires the workforce to come into the workplace rather than being able to work from home. Also, Different organisations have different work from home policies. Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	What grieves me are the number of exceedingly ugly building such as the large structures in Speedwell Street or the intrusive Oxfordshire County Council offices which do not reflect the character of the city.	Preferred Option selected for reasons set out in Background Paper
E1	Best use of employment sites	The currently adopted Local Plan classifies the MINI Plant as a Category 1 site, and it is noted that the 2042 Preferred Options consultation	Preferred Option selected for reasons set out in Background Paper

Draft policy	**Topic**	**Summary of comments**	**Response**

		document has maintained and streamlined this classification of the MINI Plant into simply a “Key Employment Site”. It is essential that manufacturing uses at the MINI Plant continue to receive this highest level of policy protection to enable the company’s operations to expand and modernise within a stable policy environment.	
E1	Housing on Employment sites	Support Option 1	
E1	Housing on Employment sites	Support Alternative Option 1 Reasons provided include: - Housing is a crisis at present - If there is a greater need for housing, then let it be built on employment sites. There’s no point in maintaining places of employment if people don’t have places to live. - it will help preserve existing employment sites. - Housing would not be an appropriate use at the MINI Plant given its manufacturing use. - We support principle of allowing housing delivery on employment sites provided that other policy	Preferred Option selected for reasons set out in Background Paper

1973

		considerations are met. We would go further to say that this	

1974

Draft policy	Topic	Summary of comments	Response
		should be encouraged to ensure a mixed use of sites.	
E1	Housing on Employment sites	Housing should be secondary to employment. Housing can be anywhere, does not need to be ring-fenced where employment is.	Preferred Option selected for reasons set out in Background Paper
E1	Housing on Employment sites	The city shouldn't be able to allow as it shouldn't be in the property market.	Preferred Option selected for reasons set out in Background Paper

E1	Housing on Employment sites	Bring it on!	General comment/ statement. Preferred Option selected for reasons set out in Background Paper
E1	Housing on Employment sites	Yes...appropriate mixed use	Preferred Option selected for reasons set out in Background Paper
E1	Housing on employment sites	Does not specifically allow an element of housing delivery on existing employment sites	Preferred Option selected for reasons set out in Background Paper
E1	Housing on employment sites	It depends a bit how close any potential residential units will be to suitable infrastructure (shops, public services, transport etc.).	Preferred Option selected for reasons set out in Background Paper
E1	Housing on Employment sites	Evaluate each employment site to determine if it is beneficial to local people. Cultural centres should not be focused as an easy route to housing just before their income is not as excessive	Employment sites over 0.25ha were all assessed against set criteria including specific local objectives. Preferred Option selected for reasons set out in Background Paper
E1	Housing on Employment sites	I think this [*housing*] should be required not just allowed.	Preferred Option selected for reasons set out in Background Paper

Draft policy	**Topic**	**Summary of comments**	**Response**
E1	Housing on Employment sites	Densification for housing seems to be a solution where 4 or 5 story flats that don't interrupt the skyline can be built in areas of	Policies that set out appropriate residential densities are included elsewhere in the plan. Preferred Option selected for reasons set out in Background Paper

1975

		existing employment sites - and in city centre sites.	
E1	Housing on Employment sites	It is recommended that all Key Employment Sites are protected from policy driven inclusion of residential development, unless it can be demonstrated that this residential development does not impact the role and function of the key employment site. The priority should remain modernising and intensifying in line with the existing employment use.	Preferred Option selected for reasons set out in Background Paper
E1	Housing on Employment sites	Some sites which are currently in commercial use e.g. the retail parks off the Botley Road, and the Osney Mead industrial state, should be allocated by the council entirely for housing, ideally affordable housing. Developers (including the university and colleges) should NOT be allowed to build yet more labs on these sites. Such commercial developments potentially provide more jobs (for the university) but do not address the problem of where those workers are to live. Most people (particularly young people) can't afford to live in Oxford, so they are forced to live outside and to commute in, adding to traffic problems in and around the city.	Preferred Option selected for reasons set out in Background Paper Permitted development rights already exist to support the conversion of these spaces to residential.

		Additionally, there should be an active policy to turn currently empty spaces above shops in the	

1977

Draft policy	Topic	Summary of comments	Response
		city centre into affordable living accommodation for citizens (not university students).	

E1	Housing on employment sites/ Location of new employment uses	Protection of mixed-use sites (e.g. Retail, restauration) as well as residential sites from conversion to hotels Expansion of or acquisition of sites for conversion to education purposes should be expressly considered as employment uses and should not be permitted if it results in loss of residential dwellings of any size.	Policy E5 deals with hotel and short stay accommodation. Local Plan already contains separate policies relating to academic institutions and includes a policy to prevent the loss of dwellings. Preferred Option selected for reasons set out in Background Paper
E1	Housing on Employment sites	If employment land is able to accommodate labs and other employees with regular use within flood risk areas, want to see this land available for allocation to housing as well.	Plan includes separate policies to govern appropriate development in flood risk areas, supported by national policy. Preferred Option selected for reasons set out in Background Paper
E1	Housing on Employment sites	Please reject construction on Oxford's flood plain.	Plan includes separate policies to govern appropriate development in flood risk areas, supported by national policy. Preferred Option selected for reasons set out in Background Paper
E1	Location of New Employment	Reasons provided include: - may attract new SMEs and the creative economy.	Preferred Option selected for reasons set out in Background Paper
E1	Location of New Employment	Support Alternative option Reasons provided include: - Less rigid - allows for a plan-led, limited, and strategic release of new employment	Preferred Option selected for reasons set out in Background Paper

1978

Draft policy	Topic	Summary of comments	Response
		sites without compromising the protection of existing housing land. This strikes a more effective balance between competing land-use pressures. - The market should have more flexibility in determining the most appropriate uses that meet market dynamics at the time of development - being over prescriptive may impact the delivery of any type of development. - It is important not to hamper Oxford's thriving economy by making employment creation difficult. - seems okay too but am not an expert on employment sites.	
E1	Location of New Employment	Rely solely on national policy Reasons provided include: - Simpler - Let housing and employment coexist /exist freely, as needed, wherever needed. - Don't interfere or intervene. Let the market decide. - We shouldn’t be adding more restrictions	Preferred Option selected for reasons set out in Background Paper

E1	Location of New Employment	If the preferred option went ahead, provisions for transport links to these sites might need to be considered.	Preferred Option selected for reasons set out in Background Paper.

Draft policy	**Topic**	**Summary of comments**	**Response**
E1	Location of New Employment	Judge each case on its merits. Generally, the principle is ok - but not to be followed slavishly.	Preferred Option selected for reasons set out in Background Paper

1980

E1	Location of New Employment	Oxford's economy is dynamic and rapidly evolving, particularly in sectors such as life sciences, research, technology, and advanced manufacturing. A more flexible policy that enables some employment development outside of currently designated sites will allow the city to respond to emerging opportunities and market demands, especially where existing sites may be constrained or nearing capacity. Permitting new employment uses adjacent to existing employment sites allows for logical and coordinated expansion of successful clusters (e.g. near hospitals, science parks, or research campuses), where businesses benefit from agglomeration, infrastructure, and workforce proximity. Allowing new employment sites to come forward as part of mixed-use developments, including residential, is consistent with national planning principles and Oxford's broader sustainability objectives. This supports walkable communities, reduces commuting distances, and makes more efficient use of land.	Policy E1 supports the expansion of successful clusters through modernisation and intensification of employment-generating uses at existing sites, supported by any necessary infrastructure. Preferred Option selected for reasons set out in Background Paper.
Draft policy	**Topic**	**Summary of comments**	**Response**

E1	General comments	A flourishing oxford economy needs to allow new businesses and employers find new sites for competition. I do not support new employment sites before housing, and I do not support ANY new employment sites in the city centre. No loss of housing to accommodate commercial use should be allowed - even in the centre. The MINI Plant is suitable for new employment uses that supports its primary manufacturing use. Don't build in Green Belt	Preferred Option selected for reasons set out in Background Paper
E1	Criteria based approach to employment	A blanket rule that confines all fresh employment floorspace to current sites and city/district centres "planning permission will not be granted … outside of these locations" ignores Oxford's acute shortage of modern lab and office space, already driving premium rents in every quarter of the city. Allowing wellconnected plots immediately adjacent to key campuses to come forward (and, where viable, pairing them with housing) would expand capacity, shorten commutes and curb price inflation without sacrificing existing dwellings. A criteria-based green light at the margin is far more pro-growth than a hard red line.	A significant pipeline of Research and Development (R&D) space is coming being delivered in the city. Significant floorspace already has permission/ is under construction. This is all on existing sites/ within the city and district centres and through lawful changes of use within Use Class E. Preferred Option selected for reasons set out in Background Paper

Statutory Consultee Responses – Draft Policy E1

Cherwell District Council

Draft Policy	Summary of comment	Response	Outcome
E1	The policy says new employment generating uses will be acceptable only on exiting employment sites and the city and district centres, but says that outside of these locations non-designated sites can only be regenerate for employment purposes if certain criteria are met. B8 uses are not always regarded as the most appropriate use within the city. The approach set out should be reviewed so that the policy can reflect the emerging and future assessment of need for such uses, rather than to try and impose this restrictive approach.	This is not the intention of the wording, which will be reviewed. We are not quite sure what is being asked for in terms of B8 uses. Our evidence base demonstrates that there is limited demand for these uses in the city because there are not suitable sites- they are generally too high in value and they are not on the strategic road network and they are too small. A policy approach that requires sites to remain in this use or new sites to come forward for this use as opposed to other uses such as housing does not seem a sensible approach and we're not entirely sure what is intended with this suggestion.	Tweaks have been made to the policy wordin to add clarity.

1983

South Oxfordshire District Council and Vale of White Horse District Council

Draft Policy	Summary	Response	Outcome
Draft Policy E1	Concerned that the ELNA shows that draft policies will result in wider economic impacts on the Oxfordshire economy. It is not clear how key employment sites were identified. More information, including criteria, is needed in the background paper.	ELNA looks at Oxford's city's land needs only, which creates the conditions to meet Oxford's identified land needs within the city. The employment sites were assessed using specific criteria.	We will be publishing the methodology for identifying Key Employment Sites in a Background Paper at Reg. 19 stage.

Oxfordshire County Council

Draft Policy	Summary of comment	Response	Outcome

1984

E1 1985	**Strategic Planning** Re: loss of non-designated employment sites to housing: Policy E1 is not clear in that the approach should be for housing first and other non-employment uses second. Although housing in sustainable locations must be the focus, the policy as worded could result in land-use conflicts and loss of employment, which is still important for the City. Therefore careful consideration must be given to this policy. In addition, infrastructure demands from new housing on these formerly employment locations need to be taken into account and mitigated by these new housing developments, where the County Council's expectations are that these become highly	It will be for landowners to decide whether further employment uses, or an alternative use is proposed at a nondesignated employment site. The plan sets out that housing would be supported at non-designated employment sites (subject to the policy criteria). Noted.	Overall, editorial changes to Policy E1 aid its legibility and clarity. These changes have regard all comments made by the County Council, in particular, those from the County

Draft Policy	Summary of comment	Response	Outcome

1986	sustainable, net zero ready and adequately serviced housing developments. We welcome future conversations with the City Council to assist in the drafting of the wording for this policy as the current criteria include matters of particular interest to the County Council such as being well connected to public transport and active travel opportunities. **Place Planning and TDM (Central)** Linked to comment at draft policy S3 - new employmentgenerating uses and intensification of existing sites, coupled with low car parking, will increase demand for P&R, as well as bus and rail. **County Council Property and Estates Team** Oxfordshire County Council Property and Estates Team notes that this draft policy currently categorises employment sites into three categories: 1) Key Employment Sites; 2) Employment sites located within a city or a district centre; and	We will maintain a dialogue with the county on relevant matters. Noted. The City Council considers that two categories of employment sites exist. Designated sites and nondesignated sites. Sites located in the city and district centres are generally non-	Property and Estates Team.

Draft Policy	Summary of comment	Response	Outcome

1987

1988	3) Non-designated employment sites	designated employment sites and do not need their own specific designation.	
	Oxfordshire County Council Property and Estates Team supports the objectives of this draft policy as a whole, although it is considered that it is restrictive and lacks the inclusion of a proportionate element that is required to enable sustainable development.	Noted.	
	The second paragraph of this draft policy states: *"The only locations that are suitable for new employment-generating uses are existing employment sites and the city and district centres. Planning permission will not be granted for proposals for employment-generating uses outside of these locations."*	Noted.	
	First, this paragraph introduces a new category of employment sites other than those listed above, which are the "existing employment sites". Oxfordshire County Council Property and Estates Team considers that for the sake of improving clarity, this should be replaced with either "Key Employment Sites" or specified that this part of the draft policy refers to existing employment sites within the city and district centres.	As the plan introduces no new employment site allocations, all employment sites (both "key" and "nondesignated" are existing employment sites.	

Draft Policy	Summary of comment	Response	Outcome
1989	Second, the second part of this draft policy is considered to be quite restrictive and onerous, as it fails to take into account the proportionate element of a development proposal. Paragraph 86 (e) of the NPPF highlights that planning policies should be flexible enough to accommodate needs not anticipated in the plan in response to changes in economic circumstances. It is the view of Oxfordshire County Council Property and Estates Team that this part of the policy should be revised to state that: ***"Planning permission will not be granted for <u>Development</u> proposals for employment-generating uses outside of these locations will not be supported, <u>unless they are in accordance</u> with the development plan as a whole and it can be***	The city and district centres are appropriate locations for new employment-generating uses. As such, we do not wish to restrict new employment-generating uses to existing employment sites within these accessible locations. Policy E1 is aligned with the plan's overarching strategy which supports housing delivery. Emerging evidence shows that the city's employment land needs can be met wholly on existing	

	demonstrated that…" (include criteria mentioned in fourth paragraph of this draft policy text) Equally, the first part of the fourth paragraph states: *"Planning permission will only be granted for the intensification and modernisation of all other employment sites where that site is located within the city or a district centre."*	employment sites. As such no new site allocations are needed. New employment-generating uses can therefore come forward at existing sites or on sites within the city and district centres.	

Draft Policy	**Summary of comment**	**Response**	**Outcome**

1990

1991	Oxfordshire County Council Property and Estates Team considers that planning permission should not automatically be granted for employment development within these locations, as they could conflict with other policies of the development plan. Accordingly, Oxfordshire County Council Property and Estates Team considers that the wording should change to demonstrate that these types of proposals will be supported. Paragraph 6 explains that development proposals seeking the net loss of employment floorspace on Key Employment Sites will not be granted planning permission, unless the number of jobs in employment-generating uses is retained and the employment use can be maintained. Oxfordshire County Council Property and Estates Team considers that this part of the draft policy, as it is currently drafted, lacks the appropriate clarity that would enable development proposals to achieve sustainable development. Oxfordshire County Council Property and Estates Team is concerned is that using the number of jobs that will be retained to assess development proposals is not appropriate, as different economic circumstances apply to small, medium	The proposed amendment weakens this position and potentially undermines the city's ability to deliver homes. This paragraph does not automatically grant planning permission, instead it sets out that the principle of intensification and modernisation is acceptable in this location. Other policies in the plan specifically deal with other requirements (e.g., net zero, urban design, heritage etc.). These all need to be taken into account when coming to a decision. Noted. As Key Employment Sites are larger sites (over 0.25ha), this policy would	

1992		ensure that any loss of employment floorspace	

Draft Policy	Summary of comment	Response	Outcome
1993	and large businesses. Therefore, it is considered that this part of the draft policy should be reconsidered to include a proportionate element in order to ensure that sustainable development can be achieved. The last paragraph of this draft policy states that development proposals for residential development on all employment sites will be assessed by a "balanced judgement" which will take into consideration a number of "objectives". Oxfordshire County Council Property and Estates Team considers this part of the draft policy to be confusing, as it is unclear as to the purpose and weight this "balanced judgement" would attract in decision making. It is also unclear as to whether this would fall within the assessment carried out by a decision maker when conducting the planning balance or it would consist of a separate process. Last, it is unclear as to the weight each of the six proposed objectives should attract in decision making. It is therefore difficult to ascertain whether it would be expected of a decision maker to attach equal weight to all of them, when carrying out their assessment.	at these larger sites would not result in a loss of jobs. While it is clear that there are concerns about using the number of jobs as a metric to assess floorspace losses at Key Employment sites, no other specific metric is proposed or suggested. No change proposed. The phrase 'a balanced judgement' was an amendment made by a Planning Inspector. These are the issues that the case officer needs to consider when determining such an application. There is not a separate process. The weight needs to be applied through a "balanced judgement" which considers all aspects. We will discuss with our DM colleagues to ensure that they can follow the policy.

Support with suggested amendments	Policy E2: Should go beyond 'promote the use of freight consolidation centres where possible' and aim to proactively identify potential sites for consolidation centre(s) for more efficient distribution into the city.	Preferred Option selected for reasons set out in Background Paper
Support in principle	ONV supports the principles behind this policy, however, considers that the flexibility of the policy should depend upon the appropriateness of the location rather than whether there is a demonstrable need for the use on the site. Oxford North, for example, has very good access to the strategic highway network and could be considered an appropriate location for some warehouse and storage use.	We will consider this issue when drafting the Reg. 19 policy. Noted.

1996

Support freight consolidation and local B8 uses. Object to B8 uses supporting national economy.	CPRE support an exemption for freight consolidation if the aim of this is specifically to decrease the number of delivery journeys required by road. We support for loss of B8 uses, but the word "generally" must be deleted in order to make this policy possible to apply in practise.	Support Noted. The word "generally" in this context is not contained in the policy. It is in the supporting text and refers to some of the characteristics of new large-scale B8 uses. We consider it is

Topic	Summary of comments	Response
	Specifying support for new B8 uses if required to support locally recognised employment sites is a useful clarification we support, but declaring support for B8 sites that support the national economy once again removes clarity and undermines the aim to intensify employment sites and decrease the total number of B8 sites in Oxford.	appropriate, given the context in which it is used. Support for local B8 uses noted as is objection to policy support for B8 uses supporting the national economy. Preferred option selected for reasons set out in Background Paper.

1997

Policy is overly restrictive and inappropriate.	Whilst it is acknowledged that larger Clas B8 facilities can consume a lot of land, they are essential in a local economy and they don't always need to consume large areas of land. They provide diversity and opportunities to local residents and support other uses. Such uses around Oxford should be viewed in a positive light. The Mini Plant Oxford (BMW) and Unipart sites are the only significant key employment sites conducive to the delivery or a diverse range of employment uses including B8 (by virtue of their size and location). Draft Policy E2 appears to aim to allow such a use, but the requirement to demonstrate that the use is essential to support the operational requirements of that key employment site is inappropriate and overly restrictive. It's worded so it has to be	Noted. Noted. We will consider these comments when drafting this policy for the next stage of consultation (i.e., Reg. 19).

1998

Topic	**Summary of comments**	**Response**
	essential to support other development on the same key employment site, which is nonsensical.	
General principle supported	ARC supports the general principle of Draft Policy E2. Supports the flexibility of E2 in that the policy supports new B8 uses, while also allowing their loss within key employment sites.	Support noted.

Policy tests	ARC questions whether the policy tests relating to whether its provision/loss is 'essential' to the Key Employment Site is required. This should be determined by market conditions.	We will consider these comments when drafting this policy for the next stage of consultation (i.e., Reg. 19).
Support existing approach	Reasons provided include: • Restrict B8 uses to nationally important sites only.	Preferred Option selected for reasons set out in Background Paper
Support Preferred Option	Support preferred option	Preferred Option selected for reasons set out in Background Paper
Support Freight consolidation pilot	Reasons provided include: • Strong support for freight consolidation if the aim of this is specifically to decrease the number of delivery journeys required by road. • would be valuable to enable LGV/ HGV freight to be moved to electric delivery vehicles.	Preferred Option selected for reasons set out in Background Paper
Object to Freight consolidation pilot	Reasons provided include:	Preferred Option selected for reasons set out in Background Paper

Topic	**Summary of comments**	**Response**

1999

	• reject idea of freight consolidation centre in any single location. • Council should prioritise increasing freight transfers from HGV and other goods vehicles to cargo/e-cargo bike enterprises at a wide variety of lay by sites or comparable to help reduce large vehicles entering Oxford on as many routes as possible. • Also, cooperation with other local authorities to make this a common policy to assist in traffic reduction should be pursued and implemented. • The specific exemption to enable a 'pilot' of a suitably located freight consolidation centre is highly problematic. Too many so-called 'pilots' do not have clearly defined objectives, are not adequately monitored and evaluated, allowing them to proceed. They should be fully transparent and re-designated as phase 1 projects if that is the intention.	
Support further restrictions	Reasons provided include: • If an employment site requires a massive warehouse to be viable then it shouldn't be built in an area with such restricted space. Build a different type of employment site	Preferred Option selected for reasons set out in Background Paper

2000

Topic	Summary of comments	Response
	that makes better use of both the location and where the warehouse would have to be. • Land within the city is too scarce for this use.	
Rely solely on National Policy	Reasons provided include: • More bureaucracy • Don't create an interventionist policy • Let the free market decide	Preferred Option selected for reasons set out in Background Paper
No warehousing on new sites.	Warehousing etc should not be allowed on new sites at all. It is an ineffective use of scare space and provides little employment. It is not Oxford City's role to support the national economy.	Preferred Option selected for reasons set out in Background Paper
No B8 on green belt	No new warehouses should be built on green belt sites	Preferred Option selected for reasons set out in Background Paper
Support loss of B8 uses	Support for loss of B8 uses, but the use of the word "generally" would make this policy impossible to apply in practise.	The word "generally" appears in the supporting text rather than the policy in relation to a description of "large scale B8 uses". It is appropriate given its descriptive context.

2001

Support local B8 uses but not national	Specifying support for new B8 uses if required to support locally recognised employment sites is a useful clarification but declaring support for B8 sites that support the national economy once again removes clarity and undermines the aim to intensify	Preferred Option selected for reasons set out in Background Paper
Topic	**Summary of comments**	**Response**
	employment sites and decrease the total number of B8 sites in Oxford.	
Land values enough to deter inefficient uses	I would expect the high cost of land in the city to mostly suffice to deter inefficient uses.	Preferred Option selected for reasons set out in Background Paper
Unlikely to be needed	Major storage sites rarely need to be located within the city.	Preferred Option selected for reasons set out in Background Paper
MINI Plant Oxford	The MINI Plant is suitable for new B8 employment uses that support its primary manufacturing use	Preferred Option selected for reasons set out in Background Paper
General comment	Do not understand the question	Preferred Option selected for reasons set out in Background Paper
Too much jargon	I don't really understand this - e.g. sizing of these warehouses etc. Would need de-jargonising and more detail to be able to take a view.	Preferred Option selected for reasons set out in Background Paper

Topic	Summary of comments	Response
General Comment	CEPP submissions should be supported by compelling evidence.	Noted.
support	Support as genuine mechanism for supporting community wealth building. Should be strengthened to reference “community & solidarity economy” businesses within the local economy and recognise the role that these “social trading” businesses play in inclusive development.	Support noted.
CEPPs may not be practical.	For many small occupiers a CEPP requirement may not be practical or reflect their realities. The draft policy should recognise that a CEPP must be proportionate with the type of development and employment. It is recommended that the policy is an encouragement, not mandatory requirement to provide flexibility. Alternative Option 1 is supported.	CEPP requirement only applies to qualifying developments as set out in policy. Preferred Option selected for reasons set out in Background Paper
Clarity in relation to student accommodation	Policy E3 relates to the provision of Community Employment and Procurement Plans where developments are proposed which include the provision of 50 or more dwellings or where they propose 1,000 Square metres of non-residential employment space. The policy is unclear on how this would relate to uses such as student accommodation and clarity is required on that. This matter was raised as part of the previous 2040 local	The equivalent number of dwellings that relate to student accommodation is usually calculated using the most recent ratios set by the

		Government. We will consider how to address this issue more widely as it

Topic	Summary of comments	Response
	plan submission and has not been addressed as part of this latest consultation.	likely impacts more than this policy in isolation.
Objection	Policy promotes too much government interference in the operation of business.	Noted.
Support	The approach to Community Employment and Procurement Plans is supported.	Noted.

2006

Object to mandatory CEPPs	CEPPs should not be mandatory for all commercial schemes. This adds to viability concerns. The mandatory expectation that all developments of a certain threshold "must" address "all" of the listed interventions risks imposing rigid and overly burdensome obligations on proposals. The cumulative cost and complexity of implementing all the listed criteria may not be possible. Many of the listed criteria (e.g., use of local labour or enforcing Oxford Living Wage policies on contractors and occupiers) may not be deliverable or enforceable across all schemes.	CEPP requirement only applies to qualifying developments as set out in policy. A Viability Assessment of the financial implications of policies in the plan will be published at the next consultation stage. The Reg. 18 policy did not impose a mandatory requirement but rather that "CEPPS will be expected to consider all the following criteria". We will review wording, taking this point into consideration when drafting the Reg. 19 version of this policy.

2007

Topic	**Summary of comments**	**Response**

Amendment	ARC therefore recommend that Policy E3 be amended to remove the rigid "only be granted" condition, instead framing CEPPs as a potential tool of securing social value in proposals. The listed interventions (a-i) should form a flexible menu that can be tailored by development scale and context.	The intention of the policy is that the list (a-j) forms a flexible menu. The Reg. 18 document set out that CEPPS will be expected to consider all criteria a)-j). We will review wording, taking this point into consideration when drafting the Reg. 19 version of this policy.
	ARC notes the Council states a TAN will be needed to expand on various aspects of the policy – it considers this TAN should be published before or alongside Regulation 19 to provide much-needed clarity to the policy.	Noted.
	ARC recommends removing the requirement for schemes below the threshold to submit written statements. The administrative and resource burden of preparing bespoke employment-related statements for minor planning applications will likely be disproportionate to the scale and impact (and potential value) of such developments. Furthermore, the practical ability of monitoring or securing any proposed outcomes does not exist – resulting in this being a box-ticking exercise adding unnecessary cost to developers whilst delivering little measurable value.	We consider that the production of a written statement for development below the threshold is proportionate. If developers view this process as a "box-ticking exercise" that is a shame as when done well, CEPPs can provide valuable opportunities both for local people and businesses.

2008

Topic	Summary of comments	Response
Require CEPPs	Reasons include: • Procurement plans for major developments should be required to demonstrate a particularly high standard of ethical and sustainability criteria.	Preferred Option selected for reasons set out in Background Paper

2009

Encourage CEPPs	Reasons include: • Not all applications need to prepare a Community Employment and Procurement Plan. Currently Oxford secures this through a S106 agreement which is the most appropriate way forward as it can be assessed on a site-by-site basis. • BMW support alternative option 1, to recognise those occasions where a Community Employment and Procurement Plan would not be appropriate or feasible (e.g. specialist materials or construction methods). • It is important not to discourage businesses from setting up in Oxford. • Every additional compulsory document increases the cost and risk of bringing forward major schemes, particularly for smaller developers who are crucial to Oxford's infill housing and lab refurb pipeline. • Training and local hiring targets are laudable, yet they can be secured through voluntary agreements, sector charters or postconsent s106 negotiations without turning the planning gateway	Preferred Option selected for reasons set out in Background Paper

Topic	**Summary of comments**	**Response**

	into another compliance hurdle that slows delivery of homes and workspaces the city urgently needs. • Plans are likely to be totally ineffective in delivering training and education and will merely be an extra cost for applicants.	
Rely solely on National Policy	Reasons include: • Don't impose requirements on builders, let them build. • It isn't the responsibility of the city planners to mandate that employers plan to continue employing labour.	Preferred Option selected for reasons set out in Background Paper
General comment	Avoid complications at this stage that might deter house builders.	Preferred Option selected for reasons set out in Background Paper
Objection	This is virtue signalling and will result in no benefit except to consultants who will create meaningless unenforceable plans and strategies	Preferred Option selected for reasons set out in Background Paper
General comment	A good policy but doesn't it create more red tape for developers and cost for Council?	Preferred Option selected for reasons set out in Background Paper
General comment	But it would be better still to consider whether endless growth and development is what is needed.	Preferred Option selected for reasons set out in Background Paper
Support local opportunities	• Strongly agree that local jobseekers and local suppliers should have first right of refusal to opportunities created in Oxford. • To promote employment opportunities for local people.	Preferred Option selected for reasons set out in Background Paper

Topic	Summary of comments	Response
	• Local businesses, designers, contractors and employees should be prioritised strongly • It sounds like a good idea to source labour and materials locally to provide local employment and reduce the environmental impact of the supply chain. • Local businesses, designers, contractors and employees should be prioritised strongly. • Clause to ensure that these plans are locally led and have clear evidence of local inputs and stakeholder engagement.	
Support Oxford Living Wage	We would strongly support an additional policy that requires employers to pay employees and indirectly employed workers (such as contractors) the Oxford Living Wage.	The Oxford Living Wage is already included as a potential “criterion” for consideration under the CEPPs Policy.

2012

In principle support (with suggested amendments)	Support inclusion of policy requiring CEPPs however a stronger focus on local procurement is needed to properly align with national policy. The failure to use local businesses in the procurement of major projects in Oxford needs to be corrected. If the policy focuses on the engagement of local businesses rather than individuals, this will have a much greater and longer-lasting beneficial	Support noted.

Topic	**Summary of comments**	**Response**

2013

	effect on the local economy and the environment. The distances travelled will be far less, the numbers of people engaged will be far more, and the businesses will keep them employed after the project has concluded. If the policy covers not just construction jobs but also the design jobs and supply jobs which are all part of the procurement process, then that will have a wider positive impact too. Suggest this wording for the policy E3: *Planning permission will only be granted for proposals……where they are supported by a site-specific Community Engagement and Procurement Plan (CEPP). The CEPP must identify how the procurement process has already and will ahead:* A. *optimise the potential for local businesses to undertake as much as possible of the work in the design, supply and construction processes, for instance by the tendering of discrete work packages rather than combining them into larger contracts and by setting eligibility criteria which are viable for smaller businesses,* B. *use a method of assessment of tenders and bids which gives appropriate weight to:* • *lower carbon footprint through travel and other measures,* • *levels of local employment,* • *commitment to the Oxford Living Wage,*	The policy already includes "criteria" e) and h) which expect applicants to consider: e) Procuring a proportion of on-going supply chain needs locally; h) Procuring a proportion of construction materials locally. The introduction of local planning policy requirements (in the manner suggested here) to govern the specific tendering processes of individual businesses and organisations would fall outside of the remit of local planning policy. Preferred option selected for reasons set out in Background Paper.

2014

Topic	Summary of comments	Response
	• *training programmes,* • *and community engagement.* *The CEPP will set a target for the percentage of the total expenditure on the project that is to be delivered through local businesses and will record the actual percentage upon completion. This data will be available upon demand by OCC and then to the public.* *The City Council will use a condition to ensure the CEPP is adopted and followed by the applicant.*

Topic	Summary of comments	Response
Viability	It is noted that Nuffield Sites are expected to deliver affordable workspace as part of their Masterplan and that details of the size, marketing, servicing and the management of these spaces should be set out in an affordable workspace strategy. We note that the definition of affordable workspace states that such spaces is to be available for rent set at an agreed rate below the commercial rent. It is understood, based on the current drafting of the Local Plan that the percentage reduction below the commercial rent is not defined and is to be agreed with OCC as part of the planning process. Our understanding is that any commercial rent reduction will need to be based on the ability of any scheme, i.e., in this case Nuffield Sites, to present a proposal that is capable of being financially deliverable and therefore able to absorb such costs as part of any viable scheme. Affordable workspace has a significant impact on viability and is a core and fundamental consideration in terms of development feasibility and deliverability.	Noted. The Local Plan Viability Study is to be published at the next consultation stage (i.e., Reg. 19).
Concerns about practicalities of implementation.	Operational requirements of major manufacturing/research units and logistical units may make it challenging to integrate smaller workspaces unlike with typical offices). The expectation to deliver as part of a phased development is also problematic because a critical mass will be needed to make it viable.	Preferred Option selected for reasons set out in Background Paper.

Topic	Summary of comments	Response
Would Support Encouragement of Affordable Workspaces subject to clarifications.	The provision of an affordable workspace strategy as part of masterplans should not prejudice owners of plots who are not party to masterplans which may or may not be prepared by third parties. In addition, it is unclear which companies would qualify for affordable workspace, particularly at SME level, and what percentage of floorspace would be expected to be delivered as affordable. Clarification on these matters is critical to understand how the policy will operate in practice and the cost of the policy on future developments. Any provision of affordable workspace should be subject to viability assessment to ensure that it does not prevent appropriate development coming forward. Therefore, in order to protect sites which may be caught by this policy it is suggested that amendments to the wording is included to ensure that viability of plots is not adversely affected. Alternative Option 1 which seeks to introduce text in the local plan encouraging employers to deliver affordable workspace in the city may be more appropriate, subject to clarification on the matters set out above.	Noted. The definition of "affordable workspaces" provides a selection of key sectors. No specific percentage is set – it is for the developer-led affordable workspaces strategy to determine. A Viability Assessment of the financial implications of policies in the plan will be published at the next consultation stage. Preferred Option selected for reasons set out in Background Paper.

2019

Object – Counterproductive to employment delivery	Requiring affordable workspace to be delivered in developments could be counter-productive to the delivery of employment developments. Provision of affordable workspaces will impact the overall scheme viability (particularly combined with increased CIL and potential affordable housing	Noted.

Topic	**Summary of comments**	**Response**

	contributions etc). Rental levels in the City are increasing due to demand for space and Oxford's appeal as a hub for research and development. This demand is out stripping supply, especially for laboratory space and any requirements that potentially decrease delivery would exacerbate the supply vs demand imbalance and hence push up rents. Furthermore, seeking to convert Category 3 employment sites to housing runs counter to the approach set out in policy E4 to provide more affordable workspace. In other areas, principally London Boroughs, new affordable workspace has been delivered most effectively via low-cost reuse and/or refurbishment of existing buildings to produce workspace at lower rents. This is especially relevant to Category 2 and 3 sites. However, ONV does support the need for a range of sizes of workspace in Oxford to meet the demands of smaller businesses. It is delivering this at Oxford North to meet a range of needs, including incubator space and smaller co-working areas. However, the general approach should be reconsidered in terms of affordable workspaces.	A Viability Assessment of the financial implications of policies in the plan will be published at the next consultation stage. While the plan does support the loss of existing employment sites not designated as key employment sites to housing (subject to certain criteria) it also enables their regeneration for employment purposes. Support for a range and sizes of workspaces (but not specifically affordable workspaces) is noted.
Provision inappropriate in some circumstances	Whilst the difficulties experienced by SME's and Social Enterprises in finding affordable workspace is understood, this must be considered on a case-bycase basis. In some circumstances it would be inappropriate for this to be provided, particularly where development is for a specific end user rather than speculative development. In terms of Oxford Science Park, it is understood	Preferred Option selected for reasons set out in Background Paper.

Topic	Summary of comments	Response
	that the intention for Oxford Science Park was to incentivise the best R&D businesses from around the world to lead and progress AI and science-based projects, to rival and compete against Cambridge and other locations globally. Placing restrictions on its use will compromise the ability for this to be achieved. Furthermore, it is noted that the Council now requests considerably higher rates of CIL for Class E Offices and R&D floorspace. There is concern that this would place a significant burden on affordable units. It is therefore requested that this policy is removed or, alternatively, the Oxford Science Park is removed from the list of sites where affordable workspace must be delivered.	A Viability Assessment of the financial implications of policies in the plan will be published at the next consultation stage.
Objection to preferred option	Policy not supported by robust or quantified evidence and the rationale that large floorplates exclude SMEs is inaccurate. ARC delivers large floorplates specifically designed to be subdivided or flexibly let. Many SMEs at ARC occupy these formats. There is no clear assessment of unmet demand, market failure, or how mandatory provision would resolve this. Overall, as drafted, the burden of demonstrating market failure falls on the applicant, which is contrary to the Local Plan's role to assess and address such issues.	Preferred Option selected for reasons set out in Background Paper.

Topic	Summary of comments	Response
	Singling out certain sites while exempting others raises fairness and effectiveness concerns.	
AW requirements	Any requirement for AW must be narrowly defined, supported by clear evidence by use class and typology, and viability tested. A requirement should differentiate between different site types and ownership/funding structures (e.g. lab campuses, logistics parks, mixed-use areas) – lab-enabled buildings, in particular, involve much higher build and operational costs.	Glossary provides a definition of affordable workspaces. Preferred Option selected for reasons set out in Background Paper
Details left to a TAN	The Council notes further details would be deferred to a future TAN, this is unacceptable and introduces uncertainty and risks reliance on guidance rather than policy.	TANs are often used to provide Technical Advice for applicants/ decision-makers. Preferred Option selected for reasons set out in Background Paper.
Support flexibility of policy	Osney Mead is included within the policy as a site expected to deliver a strategy for affordable workspace. The rationale for the policy (i.e., to facilitate a broader range of businesses within the City), is appreciated by OUD.	Support noted.

Topic	Summary of comments	Response
	Policy does not include a specific percentage requirement. This approach is supported by OUD as it allows flexibility for the provision of affordable workspace to be subject to development viability.	
Require affordable workspaces in line with Draft Policy E4	Reasons include: • Strongly Support E4 Preferred Option which sets out the principle that larger workspace developments need to include an affordability strategy as a part of their masterplan. This is intended to ensure that where there is employment space this is accessible for smaller business and social enterprises. • The preferred option would add a full policy and is therefore the strongest stance. We would also be interested in seeing if this could be applied to retail units in order to provide affordable premises for local independent retailers.	Support noted.

Encourage affordable workspaces	Reasons include: • While the principle of providing AW is accepted is often something developers would like to provide, this is highly dependent on scheme viability, and in a market where many commercial developments are already facing financial strain, requiring developers to provide this would likely stifle otherwise viable projects. • Do not consider it is appropriate to require developers to provide both AW as well as a contribution towards affordable housing (as currently required by H5) - this creates an unfair burden on the developer and	A Viability Assessment of the financial implications of policies in the plan will be published at the next consultation stage. Viability assessment considers cumulative financial implications of policies in the plan.

2025

Topic	**Summary of comments**	**Response**
	creates significant additional costs over and above a reasonable and appropriate level. • We consider this policy would adversely impact Class E focussed development in Oxford. • Policy approach is unsound without more evidence on proportional justification and viability. The Council could instead encourage affordable workspace delivery.	Preferred Option selected for reasons set out in Background Paper.

Rely Solely on National Policy	Reasons include: • Avoid complicated restrictions. Not necessary. • Do not incorporate the concept of affordable workspace in the Local Plan • A free-market solution seems sufficient here. If high-value workplaces outcompete others, good, they're higher value. • Unclear how a larger company should be expected to support a smaller rival, as policy that only included social enterprises justified, seems to be too much interference in normal market operation. • Such policies are unlikely to be enforceable.	Preferred Option selected for reasons set out in Background Paper.
Support principle subject to viability and flexible	Do not object in principle to inclusion of a policy requiring the provision of affordable workspaces. Supporting access to workspace for a diverse range of businesses and organisations is important for maintaining Oxford's economic diversity and resilience.	Policy E4 does not set out a requirement to deliver a specific amount of affordable workspace but instead requires an affordable

Topic	**Summary of comments**	**Response**

application of policy.	However, any requirement for affordable workspace must be reasonable and proportionate to the scale and nature of the proposed development. It is essential that such obligations are clearly defined, commercially viable in their own right, and do not unduly impact the deliverability of scheme, particularly where developments are already contributing to other planning priorities such as affordable housing or sustainability measures. We encourage the Council to ensure that the policy includes flexibility in its application, with consideration given to site-specific circumstances, market conditions, and the overall viability of development proposals.	workspace strategy (AWS) to be produced to support development proposals on the specific list of sites. Preferred Option selected for reasons set out in Background Paper.
Policy compliance monitoring needed	Also needs careful monitoring of compliance and sanctions for noncompliance, if you are to send a supportive signal to those who would benefit for more affordable workspaces.	We will consider issue of monitoring/ compliance/ delivery/ implementation as we draft the Reg. 19 policy E4.
Encourage discounted workspaces through TAN guidance, grants or on council-owned sites.	Requiring every big R&D or office project to carve out subsidised space risks repeating Oxford's housing mistake: load viability costs onto new supply and you simply get less of it. The Plan itself recognises that premium rents stem from a shortage of modern floorspace, not from developer indifference, and that any affordable-workspace offer must clear a "minimum size" and be underpinned by a detailed management plan and legal agreement. Those layers add delay and cost, deterring precisely the investment that would expand capacity and cool prices for all tenants, SMEs included. A stronger economy-of-scale solution is to encourage discounted studios and labs (via TAN guidance, targeted grants or city-owned sites) while letting high-value	Preferred Option selected for reasons set out in Background Paper.

Topic	Summary of comments	Response
	schemes proceed quickly, thereby increasing total stock, fostering competition and giving small enterprises a wider choice of locations without mandating cross-subsidies that may never stack up.	
General comments	Workplaces that can't sustain themselves aren't long term viable. Commercial development should be minimal Care needed to avoid making development requirements too onerous Subject to demand. There are empty workspaces around the place...question of scale?	Preferred Option selected for reasons set out in Background Paper.

Consider additional reference to level of need within policy/ supporting text.	We agree with Policy E5 in that it supports hotels in the city and district centres, allocated sites, and on Oxford's main arterial roads where there is frequent and direct public transport to the city centre. The policy could be further improved if it made reference to the number of hotel beds needed. The Council's evidence-based document regarding hotels is the Hotel & Short Stay Accommodation Study for Oxford (March 2023), by Bridget Baker Consulting Ltd. It sets out that by 2040, there will be a need for 2,475 new hotel beds. We think that this number is significant and should be referenced in the policy.	Support noted. We will consider making a reference to the overall need for bedspaces in the Reg. 19 Plan.

2032

Consider whether suggested additional issues should be covered by this policy/ policies in the Local Plan	Tourism is a significant sector of Oxford's economy and with it brings its own pressures and problems. It is disappointing to see that there is only one policy within the Local Plan which addresses this issue. Whilst we welcome a policy which seeks to restrict and manage short stay accommodation across the city, there are many other impacts of tourism that need to be managed. Other issues that the policy (or other standalone policies) should cover include impact of tourism on the city's historic core, how the public realm could be improved to accommodate large groups, how tourists arrive and depart from the city and how and where coach parking could be provided.	Support for policy noted. Preferred Option selected for reasons set out in Background Paper. These issues seem to extend beyond the remit of local planning policies. The County Council are in the process of producing a movement and place framework (COMPF). How best to address wider issues including tourist coach parking is also being looked

Topic	**Summary of comments**	**Response**
		at outside of the Local Plan process.

Increased flexibility for loss of hotel/ short stay accommodation where sites allocated for comprehensive mixed-use development.	It should be made evidence in the policy that flexibility should apply with regard to the application of this policy against wider plan policies to enable development to be delivered to meet the ambitions of the Local Plan and in particular with reference to the Nuffield Sites. It is suggested that supporting text is incorporated which supports a flexible approach toward loss of short stay accommodation where site allocations are supported for comprehensive mixed used redevelopment, as well as an additional bullet point included in the policy itself regarding the list of circumstances where the loss of short stay accommodation is supported. This additional bullet point could be incorporated/read as follows: • Or forms part of comprehensive, mixed used development scheme.	Preferred Option selected for reasons set out in Background Paper. Policy already includes appropriate criteria to support loss of hotel/ short stay accommodation.
Policy should state that new homes are always the priority.	Whilst CPRE support the intent of this policy the provision of homes should always be prioritised over short stay accommodation, such as hotels, and this should be stated in policy. Need tighter wording in the policy from 'must' to 'would'.	The policy supports new hotel and short stay accommodation in line with national policy (i.e., within the city and district centres. It also provides support for new hotel and short stay accommodation on arterial roads for the reasons set out in the Policy/ Background Paper. Outside of these locations, housing is prioritised.

2034

Prioritise housing	Reasons include: • The city should prioritise meeting the needs of its residents and those who contribute to the local community first, before expanding space for tourism. • Tourism often drives up the cost of living, making it increasingly difficult for local people—especially workers and families—to afford a decent quality of life. • Ensuring affordable housing, services, and amenities for residents must come before catering to tourists, so that the community can thrive sustainably and inclusively. • Short stay accom unless in hotels should not be priority. Local housing should. More Short term rentals, Airbnb etc should be discouraged.	Preferred Option selected for reasons set out in Background Paper.
Role of student accommodation (outside term-time) to support visitor economy.	The policy identifies that tourism is an important contributor to the local economy and identifies that the locations in which tourist accommodation will be supported. Elsewhere in the Local Plan it is recognised that the use of student accommodation outside of term time is supported therefore, there is the potential to provide support in this policy for the use of student accommodation outside of term time for short stay accommodation which would support the local economy through the provision of tourist accommodation.	Noted. The Plan already recognises the secondary role that student accommodation can play (outside of term-time) in supporting the visitor economy. As such, there is

2035

Topic	Summary of comments	Response
		no need to duplicate that reference in this policy.
Support and suggested amendment to include specific reference to changes of use.	Ch Ch supports this policy - Tourism is important to the economy of Oxford, in particular the City Centre. Christ Church is a major tourist destination and as such it is important that tourist and short stay accommodation is provided to support this and maximise the length of time visitors stay in Oxford. The policy should include reference to change of use in the first sentence. Currently it only covers new development but change of use of existing buildings is also key, for example the former Boswells store.	Support noted. Reg. 18 Plan draft policy E5 includes the phrase "new sites". We will consider whether this phrase suitably covers changes of use when drafting the Reg. 19 version of the policy and supporting text.
(New acc.) Support preferred policy approach	Support preferred option	Support noted.

Support new hotel/ short stay acc. in city and district centres / allocated sites only	Reasons include: • accommodation for tourists is vital for the local economy, but it also exerts pressure on housing for residents. Hence, I feel sites on the main arterial roads would be better used for long-term accommodation	Preferred Option selected for reasons set out in Background Paper.

Topic	**Summary of comments**	**Response**
	• I am strongly in favour of restricting new short stay accommodation and am supportive of the idea to restrict this in residential areas. I am not sure about the inclusion of entire arterial routes.	
Support new hotel/ short stay acc. anywhere in Oxford.	Reasons include: • Draft Policy E5 artificially throttles supply just when the Plan itself recognises "strong demand" and the economic value of longer visitor stays. • A broader criteria-based policy would allow under-used brownfield land or mixed-use schemes anywhere in Oxford to add rooms, easing pressure on both residential rents and weekend traffic without sacrificing quality, because applications would still need to satisfy access, noise and H8 "no loss of dwellings" safeguards. • In a land-constrained city, expanding capacity, rather than rationing locations, is the surer route to a vibrant visitor economy and a healthier housing market.	Preferred Option selected for reasons set out in Background Paper.

Outside city and district centres, resist new short stay acc. anywhere in the city	Reasons include: • Hotels and proper B and Bs should be encouraged in non-residential areas, but other short stay accommodation restricted as much as governments rules allow. Air Band B and similar businesses cause the loss of homes and often result in nuisance for neighbours. In addition, they lack proper controls on fire and other risks.	Preferred Option selected for reasons set out in Background Paper.

Topic	**Summary of comments**	**Response**
Rely solely on National Policy	Reasons include: • Try to be as un-prescriptive as possible, let the market, supply and demand, define what is provided/invested in. • The Council should not be meddling in area. They will just make everything more expensive. • Should encourage more 3 and 4 star hotel capacity • Council policies ought to focus on reducing this growth and prioritise residential housing.	Preferred Option selected for reasons set out in Background Paper.

Further restrict new hotels/ short-term lets.	Responses include: • We need to keep Oxford a place where people can live. no more short stay accommodation, hotels etc. I am not sure which one of the options to choose but you need to really stop Airbnb and chains. its destroying oxford • No need for additional short stay accommodation in the City centre. • Where a short-stay accommodation is proposed in the centre, it should be either long-term accommodation or a service, like a convenience store, an event's venue, anything for the community. • Many other cities have, for example, restricted Airbnb's. • Tourism has a disproportionate impact and can price out residents from their own cities. Tourists, unlike students, do not live in Oxford,	The Government is in the process of introducing specific legislation to address short lets (including Airbnb). However, permitted development rights exist for temporary changes of use. Preferred Option selected for reasons set out in Background Paper.

Topic	**Summary of comments**	**Response**

2039

	they are not residents, they do not vote for you. You represent the residents. • Do not allow more Airbnb type accommodation • Why is there no Option 2: resist expansion of short-stay accommodation! And do not protect existing short-stay accommodation! • We do not need more short-stay accommodation. We need residential communities. • You can create a different economy instead. Use buildings for long term housing and for shops and service for residents, or as highlighted in another section, for other businesses offering employment.	
Do more with student acc. to support tourism	More use should be made of university accommodation to house tourists within the city rather than using our existing space to accommodate people who don't live & work here.	Preferred option selected for reasons set out in Background Paper.
Evidence/ audit of existing hotels needed	Oxford City Council's Planning Department has been suffering from 'hotel fever' for some time. The provision of short-term accommodation when many tourists are coach visitors and will not stay in Oxford means that an independent assessment is needed to judge whether current short stay accommodation is sufficient to meet actual demand at present, and projected demand based on post-Covid trends.	A Hotel and short stay accommodation study forms part of the evidence base. Preferred Option selected for reasons set out in Background Paper.

Topic	Summary of comments	Response
Are more hotels needed?	Does Oxford need more accommodation for tourism? The City is overrun with coaches and large groups in the centre overwhelming local people on the pavements. Of course, Oxford is a heritage site, but surely there must be limits or people will be put of visiting as it becomes so unpleasant.	Preferred Option selected for reasons set out in Background Paper.
Don't lose housing to Airbnb/ short lets	Really important that we don't lose too much housing to Airbnb or short lets.	The Government is in the process of introducing specific legislation to address short lets (including Airbnb). However, permitted development rights exist for temporary changes of use. Other policies in the plan protect against the loss of dwellings.
Already a lot of hotels in Oxford.	There also seem to be a great many hotels in Oxford. Oxford is diminishing with too much tourism - how much do tourists actually spend, for example? The streets and experience of the city is much less than it was 20 years ago...we don't want to be the next Venice or Barcelona!	Preferred Option selected for reasons set out in Background Paper.

New hotels/ short stay acc. Should not impact residential dwellings	Given the number of hotels/amounts of short-stay accommodation currently in the pipe-line, I think that OCC need to draw a line. I think that new accommodation should only be agreed with the proviso as stated in the draft	Preferred Option selected for reasons set out in Background Paper.

Topic	**Summary of comments**	**Response**
	plan that it does not result in the loss of a residential dwelling OR the site is not suitable for provision of residential dwellings.	

2042

General comments	Tourist accommodation should not be a priority when there is a housing crisis for local people. Should consider a tourist tax to stay Tourist taxes and other measures to restrict tourism will lead to worse finances for Oxford. Most tourists are day trippers. Do we really need more accommodation? Please consider existing communities before allowing permission for new developments. Tourist should rely on hotels or similar Too many hotels and student blocks already- to the detriment of affordable housing Restricting to arterial roads only is unhelpfully strict. More and more people are using Airbnb. This policy doesn't seem to have a huge impact. If tourist accommodation is lost to housing, then that is a good thing! This policy is weak around supporting a fair use of short stary accommodation in the centre that would not protect against loss of accommodation for workers and student	Local Plan seeks to balance competing needs including for new tourist accommodation and new homes. Preferred Option selected for reasons set out in Background Paper.

Topic	**Summary of comments**	**Response**

2043

(Existing Tourism etc) support expansion in city and district centres and at arterial routes.	Support preferred option.	Support noted.
(Existing Tourism etc) do not include a policy	Reasons include: • Try to be as unprescriptive as possible, let the market, supply and demand, define what is provided/invested in. • Stop meddling! • Why would you protect it? If there is demand let it expand if not let it be removed. • The Council is busy creating more and more policies and restrictions which just add cost to developers and to Council officers.	Preferred Option selected for reasons set out in Background Paper.
Do not support expansion of existing short stay acc.	Reasons include: • Allowing the expansion of existing short-stay accommodation risks further increasing housing costs and reducing availability for local residents. Protecting these accommodations without strong restrictions may encourage more properties to be converted from long-term homes to tourist rentals, worsening the housing crisis. I believe stricter controls or limitations are needed to prioritise	Preferred option selected for reasons set out in Background Paper

Topic	Summary of comments	Response
	affordable housing for the community over tourism-related short stays. • No, as above, be very cautious about expansion of short stay accommodation - the criteria would need to be very tight! • The expansion of short-stay accommodation should be resisted. We need long-term homes for ordinary people, not yet more tourist accommodation.	
Temporary changes of use	Consideration given for alternative use even for a period of time. Could mean classification/license not loss but paused? could be very helpful with temp accommodation pressures.	Permitted development rights allow temporary changes of use already without the need for planning permission.
(Existing) - what are criteria?	Thought would have to be given to the criteria, and I am very concerned about the number of properties being illegally used for short lets (i.e., they are not properly registered).	The criteria were listed in the main policy document. Preferred Option selected for reasons set out in Background Paper.

General comment	Locking every hotel or guesthouse into perpetual tourist use would hamper the city's ability to repurpose sites for higher-value needs—especially housing—when market signals change; Oxford's land base is tight, and flexibility is paramount.	Preferred Option selected for reasons set out in Background Paper.
Topic	**Summary of comments**	**Response**
	By simply allowing expansion where viable and applying the usual design, transport and amenity criteria to any proposed loss, the Council can safeguard visitor beds when demand is strong while still freeing under-performing premises to become homes, labs or mixed-use schemes when that better serves residents and the wider economy. A light, criteria-based approach keeps supply responsive instead of ossified, advancing both tourism and housing objectives without unnecessary regulation.	
General comment/ clarity issues	Not clear what short stay means, is this hotels? Probably don't need more hotels in Oxford. Don't allow Air B&B and second homes for tourism rents.	Preferred Option selected for reasons set out in Background Paper.
General comment	Seems that this needs more work, guiding/regulation any short stay accommodation is important.	Preferred Option selected for reasons set out in Background Paper.

Statutory Consultee - Draft Policy E5

No statutory consultee comments.

All Public Responses to the Whole of Chapter 3

Draft policy	Topic	Summary of comments	Response

Chapter 3	Economic Strategy	As expressed in previous consultation responses, we have a fundamental concern about the very significant imbalance between the high number of jobs in the city and the much lower number of economically active residents, which has led to many problems including high levels of commuting into the city, traffic congestion, a shortage of housing and very high housing costs. We would like to see more being done to ensure that people can live in Oxford closer to their jobs.	The plan's strategy for employment and housing reflect the different relative positions in terms of need. (i.e., unable to meet housing need within city, whereas given strong supply of employment floorspace Oxford is likely to be in a strong position able to meet employment land needs). The plan's employment strategy seeks to limit new employment generating uses to existing employment sites, the city and district centres and sites in lawful use for the proposed employment use class and introduces a generally permissive approach in relation to housing delivery across the existing employment site network.

2048

Headlines for Chapter 4:

- Consensus regarding the importance of Oxford's network of green spaces to the character and setting of the city as well as the well-being of its inhabitants and for climate resilience
- Green spaces are a finite resource, not easily re-created when lost or damaged
- It should be explicit that greenfield will only be developed if no brownfield sites are available or meet needs
- Lots of support for initiatives and policies that protect the environment and creation of additional green spaces
- Push to work with local wildlife groups to maintain and enhance and educate people about local wildlife
- New developments must be constructed to latest green and sustainability standards and flooding
- Mitigating flooding and sewage issues should be prioritised

Draft policy	Topic	Summary of comments	Response
G1	Ambiguity in policy wording	As drafted, the policy suggests that parts of the hospital sites may constitute land in category G1C: All other Green and Blue Spaces. These areas form undeveloped land within a 'Key Employment Site'. These areas could be critical to securing employment floorspace, or other important hospital requirements. It is therefore unreasonable to ascribe a level of protection that would prevent development delivery. The Trust therefore suggests that Key Employment Sites are given additional consideration or dispensation in the proposed policy. Draft Policy G1 also introduces extended criteria for tree loss, now requiring evidence of tested alternative layouts to preserve trees (apparently regardless of quality), as well as general evidence that these have been minimised in accordance with BS 5837:2012. The Trust considers the current drafting of this provision in Policy G7 of the adopted Local Plan remains sufficient. Requiring extensive evidence for all trees as proposed – regardless of quality – adds disproportionate burden. BS.5837:2012 already embeds a structured, evidence-led approach which must be taken into account in planning	The categorisation does not preclude development proposals coming forward, and it will be made clear in the policy/supporting text that reprovision can be made on a qualitative as well as quantitative basis, which allows consideration for improved or more functional green features even where the footprint is reduced (see policy G3). A requirement for 'like for like' alternatives will mainly be applicable in situations involving specific function (e.g. sports pitch, play space etc.), which will also be outlined in the final policy wording/supporting text. The policy criteria with respect to tree loss follows the current adopted policy approach and also takes into consideration the Urban Tree Canopy

2056

		applications and design of development that does not need to be repeated in local policy.	standard contained in the Natural England GI framework.

2057

Draft policy	Topic	Summary of comments	Response

G1	Unjustified as surplus requirements not considered	In the case of Core Green and Blue Spaces, the proposed policy does not allow the loss to be balanced against the public benefits of the proposal, thereby setting a higher test than national policy. Moreover, the policy does not enable surplus requirements to be taken into account, thereby preventing the redevelopment of any underutilised greenspaces e.g. sports facilities in the future. In comparison, the NPPF (Paragraph 104) sets out protection for greenspaces unless they are surplus or can be reprovided. In the case of Supporting Green and Blue spaces, harm can only be mitigated by ensuring reprovision either to the same standard or higher. Again, this fails to take into account surplus requirements, or any other public benefits which may outweigh the harm caused. In addition to the concern that the reason for designation is not evidenced or necessary, institutions should be given a freer hand to plan their estates having regard to broader planning objectives when applying for planning permission.	Any development proposals with the potential of affecting 'Core' designated green spaces would at the minimum be required to demonstrate that they do not result in loss or harm, and that the proposed uses are complimentary, compatible or provide enhancement to the designated spaces. In a situation where facilities such as sports pitches (typically categorised as 'Supporting' GI) are within a Core designated space, it is likely because such a space also performs a core function in the GI network, such as active flood storage, or forms part of the setting of a designated heritage asset. Categorisation as a Supporting GI space does not preclude development proposals coming forward, and it will be made clear in the policy that reprovision can be made on a qualitative as well as

2058

Draft policy	Topic	Summary of comments	Response
			quantitative basis (see policy G3) - the requirement for 'like for like' reprovision will mainly be applicable in situations involving specific function (e.g. sports pitch, play space etc.). The determination of what facilities may be deemed as surplus will be made on the basis of assessments by relevant departments in the council.

2059

G1	Supporting green spaces should have more protection	Supporting Green spaces that are within the inner parts of the city should be protected from development to avoid a future in which the impact of the urban heat island effect gets ever worse. For example, the green spaces to the north of Cowley Road that are currently sports fields have been included as proposed site allocations, even though they play a vital role in all of the above aspects, and are adjacent to one of the least green parts of the City, East Oxford, which already suffers very high summer temperatures during heatwaves. If despite our concerns such sites are taken forward as site allocations, or have planning applications for development on them, we consider that it is essential that there is policy in place that means that there must be a minimum of 50% green space (in addition to gardens within the urban development), including a variety of habitats	Green spaces categorised as supporting spaces will only be considered where any harm or loss is mitigated by replacement to the same standard or higher. Additional evidence will be required from applicants that broader considerations are taken into account specifically for sports facilities and amenity spaces – including a demonstration that spaces can be reprovided in such a way that there are no deficits against demand, opportunities are taken for suitable alternative provision where that is appropriate, or that

2060

Draft policy	**Topic**	**Summary of comments**	**Response**

2061

		including trees, and wetlands, which will benefit both wildlife and people. Whilst some areas of the green space could be accessible, a significant proportion (except on the very smallest of sites) should be set aside as a nature reserve with high quality natural habitats and an in-perpetuity management plan, managed through a CIC, Trust or similar. The nature reserve part of the green space should be screened to reduce disturbance to wildlife but could be enjoyed by people through viewing areas and depending on their scale, footpath networks. BBOWT greatly welcome the preferred option, particularly the text: "All spaces in the network would be treated with equal protection, based on presumption against any net loss (because being a part of a network means that it would be challenging for them to be replaced elsewhere)."	consideration has been taken of any specific local needs, or particular deficiencies in a type of space. Open public spaces (parks, playgrounds etc) will only be deemed surplus to requirements if it is identified as such by relevant departments in the city council like the communities and parks teams.
G1	Disagree with supporting green space classification	Disagree with Headington Quarry Park, Barton Road Park, Ruskin Fields among others being downgraded from 'Core' to 'supporting' green spaces, giving them little protection. Emphasise the benefits to public wellbeing, especially for local young people.	Core spaces are designated as such because of fundamental characteristics that make their reprovision impossible or impractical, which in practice often applies to designated ecological sites (e.g. SACs, SSSIs etc), flood storage, designated heritage sites etc.

			While supporting spaces may not have

Draft policy	Topic	Summary of comments	Response
			statutory designations, they still play important roles for public amenity and wellbeing, as well as environmental functions. Core (G1A) and supporting spaces (G1B) are afforded a higher level of protection than the minimum mandated in the NPPF (which is applicable to G1C 'all other green/blue spaces').

2062

G1	Objection to tiered GI	The proposed wording is a deviation from Policy G1 of the adopted Local Plan, which does not rank Green Infrastructure and confirms that planning permission will not be granted for development that would result in harm to the Green and Blue Infrastructure network, except where it is in accords with relevant mitigation or exceptions identified in supplementary policies. Based on the above, this policy wording and allocation methodology is objected to for a number of reasons: 1. The allocation for Core and Supporting arbitrarily draws a line between one and the other, without any reasonable balance being provided to a sliding scale of quality both internally within individual Green Infrastructure, or when comparing the lowest quality Core against the highest quality Supporting.	The NPPF includes a requirement for plans to distinguish a hierarchy of nationally and locally designated sites, to allocate land with the least environmental and amenity value, and to take a strategic approach to maintaining a network of green infrastructure (para 188). The proposed hierarchy in the policy is consistent with the approach required by national policy and has a framework for how it applies to the Oxford context. Core spaces are designated as such because of fundamental characteristics that make their

2063

Draft policy	**Topic**	**Summary of comments**	**Response**

		2. The assumption that Core 'spaces cannot be moved/re-provided sufficiently without compromising the overall character and function' is subject to each site's individual merits and proposals. For example, Core areas may have lower quality sub-areas within them. This conclusion should not be drawn at this stage and result in a blanket in-principle ban on development within designated areas. 3. The proposed wording conflicts with the aim of the policy as outlined at Paragraph 4.6 as outlined above, which seeks to protect Green Infrastructure from 'inappropriate development', requiring mitigation where development comes forward. 4. The Core policy wording has no flexibility for the scale of green or blue infrastructure, scale of existing and proposed development, exceptional circumstances, or the possible wider reprovision or enhancement of the infrastructure. The following updates are requested: 1. The principle of 'Core' and 'Supporting' be removed, in line with Option A of the Background Paper, as well as the approach currently within the adopted Local Plan. The overarching policy wording should seek protection, but acknowledge that the loss may be justified	reprovision impossible or impractical, or their loss will have a significant adverse impact to the character or GI network of the city. In practice the designation will apply to designated sites (e.g. SACs, SSSIs) or sites of heritage significance or scheduled sites. Other national policy considerations will also apply to such sites. There are no situations envisaged whereby planning permission that results in loss or harm to such spaces would be acceptable. Any development proposals with the potential of affecting 'Core' designated green spaces would at the minimum be required to demonstrate that they do not result in loss or harm, and that the proposed uses are complimentary, compatible or provide enhancement to the

2064

		subject to adequate re-provision or enhancements, and / or sufficient	

2065

Draft policy	Topic	Summary of comments	Response
		justified evidence of the need for the development in the context of wider site function and use. OR 2. Alternative policy wording for Core sites, with the allowance for development in 'exceptional circumstances', as recommended by Option B of the background paper.	designated spaces. Formulating 'exceptional circumstances' will be a subjective exercise and run risk of depriotising spaces that may still bring about benefits

2066

G1	Justification unclear	The grounds of Mansfield College are categorised as Private Open Space (group G1B). The justification behind this categorisation is unclear especially as many other smaller areas of space associated with other colleges are not categorised in the same way. The background paper sets out reasons why sites may be categorised as important Green infrastructure including biodiversity reasons, heritage reasons or climate change reasons. There is no assessment on the biodiversity of the site, it doesn't appear to be recorded as important from a heritage point of view (acknowledging that the adjacent buildings are listed), nor is the site within the floodplain. For Category G1B sites the policy allows for planning permission to be granted where any harm/ loss is mitigated through 'sufficient reprovision', although this is not defined. The policy also identifies that this should be on site. There is no consideration in the policy for those sites which have restricted space and no other options for development opportunities, such as	The categorisation of a green space or feature as G1B (supporting) can depend not only on specific functions but other considerations such as user amenity, relationship to and impact on the setting of other buildings etc. The categorisation does not preclude development proposals coming forward, and it will be made clear in the policy that reprovision can be made on a qualitative as well as quantitative basis, which allows consideration for improved green features even where the footprint is reduced (see policy G3). A requirement for 'like for like' alternatives will mainly be applicable in situations involving specific function (e.g. sports pitch, play space etc.), which will

Draft policy	**Topic**	**Summary of comments**	**Response**

2067

		Mansfield. The competing need of the College and the Council's desire to retain green spaces which are not accessible to the public could be considered to sterilise the College's ability to meet the needs of its students, particularly in relation to student accommodation.	also be outlined in the final policy wording/supporting text.
G1		Ok. But exercise judgement. There are too many college sports grounds only used a little. If one were to become a car park that would be a good thing. Never say never.	Comment noted.
G1	Objection to approach	This consultation fails to identify or map a network of Oxford's green blue infrastructure. This is a significant omission which affects the validity of the consultation and which cannot be justified given the existence of the longstanding Green Infrastructure Report (2022) and the availability of the results of the Local Nature Recovery Strategy consultation responses report (January 2025) and liaison with the LNRN. An interim consultation which maps Oxford Green Blue Infrastructure and includes findings from the LNRS must be undertaken prior to any Reg 19 consultation. Oxford's green space network should encompass and connect all of the existing green - blue infrastructure in the city and identify sites where	An interactive policies map including layers showing the GI network was published by the launch of the Reg 18 consultation, and links to it were provided on the council webpages and consultation materials which all remain active. Improvements to the public interface will be made in response to user feedback on a continuous basis. The NPPF includes a requirement for plans to distinguish a hierarchy of nationally and locally designated sites, to allocate

2068

		new genuine brownfield development can connect	land with the least environmental and

2069

Draft policy	Topic	Summary of comments	Response

		with this network. In addition, Oxford's nature network should connect with green infrastructure beyond the city boundaries. This policy should include the Oxford Earth Academy work on the Oxford Education Nature Park. There should be a presumption against any loss of trees, hedgerows and woodland. No losses should only occur except in truly exceptional circumstances e.g.: safety. All Green space should be protected; there should be no hierarchy. The preferred option requires identification/designation of green and blue infrastructure sites for protection. You suggest a hierarchy of protection for spaces within the Green Infrastructure network of green spaces, in which ecological function takes priority over recreational/health functions. In the last GI study, Bertie Park was cited as an example of a small, but multi-functional site. In spite of the fact that it is a highly valued community space, it would be at the bottom of the hierarchy. You state that planning permission will only be granted for proposals relating to sites at the bottom of the hierarchy "where any impacts are	amenity value, and to take a strategic approach to maintaining a network of green infrastructure (para 188). The NPPF also sets out the strict conditions for when loss of open space, sports land/buildings and pitches can be lost (para 107). The proposed hierarchy in the policy is consistent with the approach required by national policy and has a framework for how it applies to the Oxford context. The hierarchy consists of three levels of protection. The core (G1A) and supporting spaces (G1B) are afforded a higher level of protection than the minimum mandated in the NPPF (which is applicable to G1C 'all other green/blue spaces'). The conditions for approving development affecting supporting spaces (G1B), such as Bertie Park, will

2070

		mitigated by ensuring sufficient reprovision, ideally onsite, and to the	be required to sufficiently reprovide affected

Draft policy	Topic	Summary of comments	Response
		same standard or higher, or if it can be demonstrated in the application that current provision is surplus to requirements." There is no detail on how you determine whether a site is "surplus to requirements". Draft policy "would seek to protect all public and private green infrastructure in the city from inappropriate development and ensure that, where it comes forward, development mitigates any potential impacts." "Seek" means that you are not necessarily going to protect GI, and if it comes forward for development, instead of replacing recreation spaces with equivalent or better, you make clear your intent to "mitigate any potential impacts." The following statement is even worse: "the draft policy also sets out conditions by which certain types of green space may be lost to other forms of development, however, there may also be additional considerations which would apply to applications that affect certain types of spaces including how these might need to be reprovided." You claim to clarify this in section 4.2 where you actually make clear your intention to depart from national guidance with reference to Parks and gardens, accessible greenspace	spaces to the same standard or higher and the approach aligns with national policy. The policy wording and supporting text will set out the means by which the standard of reprovision will be assessed. Open public spaces (parks, playgrounds etc) will only be deemed surplus to requirements if it is identified as such by relevant departments in the city council like the communities and parks teams.

2072

		and amenity greenspaces: "Where relevant, applicants will have to demonstrate consideration of how any	

2073

Draft policy	Topic	Summary of comments	Response

		loss can be mitigated, especially if this is located in an area which already suffers from a deficit." How would OCC determine whether a mitigation in an area which already suffered a deficit was adequate? OCC needs a clearly stated policy reflecting national guidance, which protects our recreational spaces, especially in working class areas.	
G1	Option A and low quality green spaces	Whilst supporting option A generally, disagree with option A's wording: *This would allow us to release poorer quality spaces for other needs.* Question who assesses this and what is factored into it? All green space should be protected, and brownfield land should be prioritised. TPOs cannot protect trees alone and TPO protection can be invalidated (e.g. if signs of sickness in tree). Do not allow mature green healthy trees to be felled for development. Do not agree with option D's wording that additional tree protections beyond TPOs could be considered too onerous.	The highlighted wording is from a section of the supporting background paper that contains possible opposing arguments to adopting the preferred option. Our response to this line of argument is contained in the same section.
G1	Mitigation against loss of trees	It should be acknowledged that mitigation against loss of existing mature trees and hedgerows is often inadequate, simply replacing with new trees or hedges will not replace the existing biodiversity.	This policy and others in the plan (G2, G3, G6) incentivises the retention of existing green infrastructure and natural features in development proposals and limits the loss of established features such as

2074

Draft policy	Topic	Summary of comments	Response
			mature trees and hedgerows to exceptional circumstances in line with Government guidance and substantial evidence backing or mitigation arrangements.
G1		Strongly agree with protections for green spaces. I would adjust the policy slightly to reflect a 'biodiversity first' approach, for example where you allow for the removal of living trees, instead of saying, "...where it is clearly justified" gives space for putting developers' concerns above the concerns of our lessening biodiversity. Perhaps this could be reworded to say, "Loss of woodlands, hedgerows and trees is not permitted. In situations where this is unavoidable, there must be two full ecological surveys to show two opinions, and there must be a rewilding plan for biodiversity gains, with an appropriate assigned ongoing plan and budget for supporting the establishment of a the new green area."	The circumstances where the loss of trees are highly limited in the policy and will be subject to justification by substantial evidentiary backing and mitigation arrangements. Other plan policies such as the greening factor (G3) and BNG (G6) policies also incentivise the retention of mature green infrastructure features, which in themselves contribute greatly to policy compliance where they are retained.

2075

G1	Protection of green space around designated sites	Major national sites of biodiversity importance (SSSIs SACs), and arguably local biodiversity sites also, should never have adjacent lower quality green land developed – important for buffering and supporting function of these sites. For example: can be crucial in rainwater supply to fen springs in SSSI/LWS fens hundreds of metres away.	Policy G6 sets out the requirements for the avoidance of adverse impacts on designated sites, including requirements for distance buffers. The policy wording and supporting text includes references to studies produced

Draft policy	Topic	Summary of comments	Response
			by the council, Natural England and others, and applicants will also be required to demonstrate that they have taken into consideration the recommended actions in their schemes.
G1	Protection of local biodiversity sites within G1 network	Draft policy protects only the sites which already have legal protection I.e. SSSIs and SACs. Local sites should be protected in same way as sites that are already nationally designated. Loss of local wildlife sites cannot be mitigated in respect of the biodiversity functions that are lost.	This is incorrect, draft Policy G1 includes all locally designated sites that form a part of policy G6's ecological network as 'core' parts of the network (because these functions cannot be easily reprovided). This includes the LWSs, OCWSs and LNRs.

2076

G1	Policies in neighbourhood plans	Green Spaces and Biodiversity policies of Headington Neighbourhood Plan have been ignored – would be a useful basis for the policy.	Policies for the local plan are developed on the basis of a broad evidence base and consultation, which have to be coherent as a whole and applicable to all areas and sectors of the city with as few exceptions and caveats as possible. Local plans policies also carry more weight than neighbourhood plan policies unless the latter cover issues that are not addressed in the local plan.

2077

Draft policy	**Topic**	**Summary of comments**	**Response**

G1	Scope of policy too wide	Treating every green fragment as sacrosanct, with a presumption against any net loss simply because it sits inside a city-wide "network", locks low-value, poorly located scraps of land into perpetual idleness and blocks the gentle infill Oxford needs. The draft G1 text even classes the smallest "supporting" and "other" spaces alongside the historic flood-meadows under the same nearabsolute protection. That would make it far harder to swap a redundant verge or disused private lawn for new homes plus a better-designed pocket park nearby—an outcome the NPPF explicitly allows where open-space quality is improved. A calibrated, site-by-site designation (Alternative 1) still gives strong, tailored safeguards to the genuinely strategic assets (core floodplains, SSSIs, heritage gardens, main sports pitches) while letting modest, ecologically poor plots be upgraded or relocated if a scheme secures equal or higher amenity and biodiversity value.	Small green spaces have the potential to bring about local amenity and environmental benefits, which can be cumulative across a wider area where they can be linked. For the city as a whole the cumulative benefits are best harnessed when green spaces are considered as part of a coherent network. As a spatially constrained city with limitations on the amount of significant new green spaces within its boundaries, the retention of green spaces is even more important. The network approach is also in alignment with the NPPF. The policy approach does not preclude development in suitable locations, although the emphasis is on the development process becoming a way for the delivery of enhanced/improved green infrastructure.

2078

G1	Residential Garden Land	Policy should generally prevent creation of nonpermeable surfaces especially on house	An Article 4 direction requires a specific broader process that is

Draft policy	Topic	Summary of comments	Response
		frontages in favour of guaranteed SUDS or other green areas – to allow rainfall penetration and mitigate impacts on drainage systems in relation to flood risk. Policy should go further and not allow SuDS either in Lye Valley catchment as this is not sufficient to mitigate loss of natural surface cover. Can Article 4 permitted garden development rights be removed within the defined catchment area of the Lye Valley?	led by the wider council and outside of the local plan framework. Qualifying schemes will be subject to the UGF requirements of policy G3, which is intended to incentivise the integration of natural surface cover. However the methodology is simple to use and developers at all scales and types will be encouraged to apply it on their schemes. Policy G6 addresses the protection of the ecological network including the Lye Valley SSSI.

2079

G1	Residential Garden Land	We support most of this policy but have concerns about the consequences of the policy to allow building on residential garden land. We would like to see a requirement for consultation/engagement with surrounding residents, beyond what is generally required, as in some locations this may have a significant impact upon the amenity of nearby homes. We would like to see further creativity when building on residential garden land, to explicitly off-set by creating further green corridors with pocket parks, community gardens/tiny forest gardens in areas of	This aspect of the policy is more likely to apply to be applicable in built up areas that are already previously developed and not under any GI designation. In any case any proposals will be expected to be compliant with the requirements of all relevant policies.

2080

Draft policy	Topic	Summary of comments	Response
		social/green deprivation, which will have multiple positive effects including health, happiness, food growing, carbon sequestration and enhancement of biodiversity. This should be an essential prerequisite when paving over/ building on any garden spaces.	

G1	Objection - Re-provision	The policy is unsound and ineffective, as it is mathematically impossible for a development which reduces green space, to “reprovision” elsewhere, which is also green space. The term is not explained in the glossary. Green space in allocated sites is not even marked as such, it does not even officially exist.	The requirements for reprovision and the basis on which it may be considered acceptable will be described in the policy wording and supporting text. Reprovision can be made on a qualitative as well as quantitative basis, which allows consideration for improved green features even where the footprint is reduced (see policy G3). A requirement for 'like for like’ alternatives will mainly be applicable in situations involving a specific function (e.g. sports pitch, play space etc.). Site allocations will have specific requirements in relation to green infrastructure provision,

Draft policy	**Topic**	**Summary of comments**	**Response**

2081

			which will be site specific – where green spaces already exist, they will be identified in the policy wording along with guidance on where they can be retained or enhanced. Other relevant policies will apply in addition.
G1	Objection – Residential Garden Land	The conflict between Residential gardens in designated green space protections in Policy G1 must be resolved in favour of Green Space protection, or Core Green space could be lost where land is in both as in the Lye Valley example above. • G1 - It is unclear whether designated green space designation prevails over residential garden building in policy G1 • G1 - para b) is entirely redundant.	This aspect of the policy is more likely to apply to be applicable in built up areas that are already previously developed and not under any GI designation. In any case any proposals will be expected to be compliant with the requirements of all relevant policies.
G1	Omissions in designated GI network	The Oxford draft local plan policy map identifies a number of sites around Osney Island designated as G1 (green and yellow – presumably corresponding to the G1A and G1B mentioned in the draft policies, p.66) and Greenbelt. However it crucially fails to recognise both the main river, from where it passes under the railway up to Botley Road, and the Osney	Blue corridors are already subject to strong protection through national policy, and other policies in the Local Plan (see policy G7 on flood risk). Banks to watercourses are addressed in requirements for policy G2 (10m buffers to watercourses). The expectation

2082

		Stream, as part of the ecological network in the area. It is curious that the local	

Draft policy	Topic	Summary of comments	Response

2083

		primary school and church are marked G1A (green) when the far more significant river network, including its banks, is not marked. This needs to be rectified and these areas should be designated G1A. We suggest the banks of the rivers are marked with a green line, and the marina and Osney Lock Hydro (currently missing from the map) are marked green. Members of the Osney community participated in the consultation last year on the County Council Local Nature Recovery Strategy (LNRS). As a result, both the main river corridor and the Osney Stream are marked green on the draft LNRS map – making them part of the nature recovery network. The draft Oxford local plan map is inconsistent with the draft LNRS map and should be brought into line with it. The suggestion of marking additional areas In green proposed in the previous paragraph would achieve this. We are concerned that a failure to clearly designate these stretches of river as G1A leaves them as 'other spaces' which could create ambiguities about whether the stated biodiversity policies, which we support, apply to this area.	is that this should ensure these spaces are not built upon and incentivises their renaturalisation where possible to improve the benefits they provide for people and nature. The LNRS mapping highlights suggested areas where habitat creation and improvement actions could be delivered to offer the greatest benefit towards local biodiversity priorities where opportunities arise. The elements in those maps play a different role to the designations under policy G1 and is therefore not something we are looking to completely mirror due to the differing purposes. Many of the Local Plan's protected spaces will be able to offer opportunities to support the types of measures the LNRS identifies, and we will continue to consider where it is possible to align with various elements

2084

			of the LNRS and its general priorities as we further

Draft policy	Topic	Summary of comments	Response
			develop the Local Plan, even if this will apply in other policies other than G1.

2086

G1	Objection – policy not effective – amendments suggested	There appear to be overlaps between the GI policies and also conflicts with the wider aspirations and proposed allocations of the Plan. Policy G1 refers to protection of green infrastructure (GI). The Plan defines core and supporting GI which is difficult to differentiate on the interactive policies map and will result in difficulties in interpretation given the scale of mapping involved. In addition, it is questioned how the land has been identified and defined, for example, areas within Christ Church that are shown as "core" GI are actually paths and compost bins. In addition, the policy is very strict and does not allow any loss of or harm to any Core GI. This is too restrictive. In relation to Supporting GI the policy requires re-provision ideally on site. It is hard to see how this can be achieved without demolition of buildings? Policy should be amended to provide some flexibility, especially given the inaccuracy in the mapping and assessment criteria and clarity provided around how the Council considers mitigation on site could be achieved. In relation to loss of trees on a site, it is not always possible to re-plant on the site and make efficient use of the land. As such some cascade to planting	Any development proposals with the potential of affecting 'Core' designated green spaces would at the minimum be required to demonstrate that they do not result in loss or harm, and that the proposed uses are complimentary, compatible or provide enhancement to the designated spaces. Formulating 'exceptional circumstances' will be a subjective exercise and run risk of depriotising spaces that may still bring about benefits. Categorisation as a 'supporting space' does not automatically preclude development proposals coming forward, and it will be made clear in the policy/supporting text that reprovision can be made on a qualitative as well as

2087

Draft policy	Topic	Summary of comments	Response
		trees nearby should be considered. As drafted the policy is not effective and will impact on the wider development policies in the plan seeking to make efficient use of land. It would make sense to combine the criteria in this policy with those in policy G6. Suggested Amendment: 1. Provide more detailed mapping to accurately define the location of the GI features and change the colour coding to better differentiate between the categories. 2. Provide more flexibility in the policy to ensure it takes a positive approach to development. 3. Consider combining the policy with Policy G6.	quantitative basis, which allows consideration for improved or more functional green features even where the footprint is reduced. Creating a standalone G1 policy as opposed to consolidation with G6 is considered to be a more effective way of addressing the wide range of green spaces that may warrant protection on grounds other than biodiversity or ecology, such as heritage significance, local amenity etc. The policies map is under constant review and improvements in accuracy and usability are made on an ongoing basis following user feedback, which is always welcomed.

2088

G1	GI within Key Employment Sites/ future site allocations (ARC)	The undeveloped plots at ARC Oxford (Plot 3000; 8200/8400; and 9200) may constitute land within the G1C category. These plots form undeveloped land within a 'Key Employment Site'. These sites (and the consented proposals at Plot 2000) are	The policy approach behind the G1C is consistent with NPPF approach. Spaces in this category are likely to be fragmented, smaller or have

Draft policy	**Topic**	**Summary of comments**	**Response**
		critical to securing employment floorspace. It is unreasonable to ascribe a level of protection that would prevent these coming forward. ARC requests these sites are excluded from the G1C space designation, or any other designation that would undermine their status.	other characteristics that reduce their multifunctionality in a GI network context. This categorisation does not preclude development if it is demonstrated that there is reprovision or that the space is surplus to requirements, as appropriate to the application.

2089

G1	"Loss of trees" criteria too strict	Do not support introduction of "extended criteria" for tree loss set out in G1 that requires evidence of tested alternative layouts to preserve trees (regardless of quality), as well as general evidence that these have been minimised in accordance with BS 5837:2012. Extant Policy G7 (OLP2036) remains sufficient. Requiring extensive evidence for all trees as proposed (regardless of quality) adds a disproportionate burden. BS.5837:2012 already embeds a structured, evidence-led approach which must be taken into account in planning applications and design of development that does not need to be repeated in local policy.	The policy criteria with respect to tree loss follows the current adopted policy approach and also takes into consideration the Urban Tree Canopy standard contained in the Natural England GI framework.
G1	Loss of Tree criteria not strict enough	We also have concerns about the tree policy in 4.1.e) which sets the replacement of lost trees at "minimum of no net-loss of tree canopy cover".	The policy criteria with respect to tree loss follows the current adopted policy approach and

2090

Draft policy	**Topic**	**Summary of comments**	**Response**

		We feel that this is not ambitious enough due to the important role played by trees in nature recovery and climate mitigation. The policy could be replaced by a minimum of 1.5 times the amount of tree canopy lost. This is also particularly important when planting new trees, as many will be lost due to extreme climatic fluctuations, so to plant ambitiously and hopefully is to be encouraged.	also takes into consideration the Urban Tree Canopy standard contained in the Natural England GI framework.
G1	Exemptions of private spaces	The City should focus on areas, such as parks, which are owned and managed by the city. Private developments should not be subject to so-called green planning permission requirements.	All green spaces in the city, particularly those that perform ecological functions such as flood storage and biodiversity sites, have a cumulative impact on the natural environment of the city whether or not they are public or private., which makes it prudent to have policies that address how development affects them. It is also a requirement of national policy to have an approach in place.
G1	Recommended amendments to strengthen policy	The policy could be further strengthened by: - specifying minimum buffers for ancient woodland and other irreplaceable habitats - setting an overall canopy cover target for the Oxford City Council area	

2091

		- requiring that new planting is from suitable species and UK sourced for biosecurity	

Draft policy	Topic	Summary of comments	Response
		- targeting new planting at areas prioritised in the Local Nature Recovery Strategy and/or of low tree equity. The Oxford Urban Forest Strategy made the connection between areas of deprivation and low tree cover. That connection is mapped further in the UK Tree Equity scorecard and map https://uk.treeequityscore.org/ which identifies the neighbourhoods in greatest need of new tree cover. We recommend this approach be integrated into the Local Plan.	

2092

2093

G1	Strongly disagree with preferred option	What will happen to sites which are not to be considered part of the Green Infrastructure Network? You say that you intend to go beyond the requirements of the NPPF. Green spaces are covered by the NPPF "golden rules" (s.156-7). These don't mention reprovision, so talk of mitigation may be appropriate, however NPPF s.104 which covers public open space has very specific requirements requiring not mitigation, but reprovision of open space. The wording of NPPF s.104 should be reproduced in the 2042 plan. You propose identifying a network of GI/BI sites for protection. The spaces "to be most strongly protected are those that provide a multitude of functions." This is logical. The list of functions is long: Accessibility, Tourism, Heritage, Food	The policy approach is based on a hierarchy of protection for green spaces, with a requirement for reprovision of spaces identified as Supporting GI (which includes recreation and sports grounds) ideally onsite. The wording is consistent with the NPPF. Spaces identified as Core GI are so because they have functions that are specific to that site and cannot be replicated or reprovided anywhere else, e.g. functional flood plains,

Draft policy	**Topic**	**Summary of comments**	**Response**

		production, Formal sports, Children's play, Youth facilities, Tranquillity, Biodiversity, Carbon storage, Climate change adaptation. The local plan should use this list to inform development of sites, rather than as an excuse to shut them down. You suggest a hierarchy of protection for spaces within the Green Infrastructure network, in which ecological function takes priority over recreational/health functions. Firstly, recreation space should not be at the bottom of the hierarchy. Secondly, the local plan should not require mitigation for loss of recreation sites. It should reproduce the wording of NPPF s104. Conflating green and public open space results in vagueness of statements such as those underlined below: "limited opportunities to provide new space means that loss of existing green features needs to be carefully considered and resisted wherever necessary" and "sets out conditions by which certain types of green space may be lost to other forms of development, however, there may also be additional considerations which would apply to applications that affect certain types of spaces including how these might need to be reprovided." Such statements could be used to support any decision.	designated sites (SSSIs, SACs) etc. Open public spaces (parks, playgrounds etc) will only be deemed surplus to requirements if it is identified as such by relevant departments in the city council like the communities and parks teams.

2094

Draft policy	Topic	Summary of comments	Response
		The local plan should clarify the criteria which will be used to determine whether GI is expendable.

G1	Welcome identification/protection of those spaces forming part of the Green Infrastructure core network G1A and G1B. Encourage Council to include existing green infrastructure features such as irreplaceable and priority habitats in addition to ancient woodland, veteran trees and important hedgerows, within the protected network. Flag that the Green Infrastructure Framework Principles and Standards for England should be used to help meet NPPF requirements for GI. They include recommended standards to inform policy for the quality and quantity of multifunctional green space including the production of GI Strategies, access to natural	Thanks and welcome the support. We consider that irreplaceable habitat is sufficiently protected through national policy and policies of the Plan refer to this elsewhere. Significant areas of priority habitat are located within areas that are protected by the core network, as well as on the ecological sites. Policies G1 and G6 then set out requirements where development impacts priority habitat elsewhere. We have referred to the GI Framework in drafting the Local	No further action proposed at this time.
Draft Policy	**Summary**	**Response**	**Outcome**
	green space standards, urban greening factors and good design principles.	Plan, including incorporating the Urban Greening Factor into local policy.	

G1 and site allocations	Note that several proposed site allocations impact on the GI Core network, particularly on G1B assets. Suggest that site allocation policies impacting G1 spaces include an estimate of the likely quantity of sufficient on site GI reprovision required to mitigate for any losses, the type of reprovision required and if it is not possible to provide the reprovision on site, then identification of options/locations for offsite delivery to another part of the network within the city.	It is not possible to accurately estimate this at plan-making stage as it is highly dependant of the detail of any subsequent application. The allocations will make clear where they include parts of designated GI network and that the requirements of policy G1 apply. Where possible we will suggest ways that applicants could meet the requirements.	Ensure relevant allocations flag presence of GI network and where possible set out broad suggestions for meeting the requirements of policy G1 where a proposal would impact these spaces.

2097

Draft Policy	Summary	Response	Outcome
G1	Policy G1 - Figure 4.1 – Sport England is concerned that the hierarchy proposed in Figure 4.1. Playing fields should be protected from development, change of use or development	The Plan sets out criteria by which development proposals are to be assessed. Draft Policy	Summary	Response	Outcome

2098

	NPPF are met. Figure 4.2 – Sport England has the same concerns with this suggested policy text as it seeks to rewrite the clear tests in National Planning Policy Framework (paragraph 104). For example, it is welcome that the Council is updating its Playing Pitch Strategy. This is the appropriate document for assessing whether or not a playing field is surplus to requirements (paragraph 104). Sport England recommends that the Council reviews paragraph 103 and 104 of the NPPF and seeks to protect much needed sport and recreation facilities and identify new opportunities to meet needs. The draft policy fails to do this instead it appears to discuss how they can be removed rather than protected. Draft Policy G1 – the council needs to draft a new policy that conforms with paragraphs 103 and 104 of the NPPF, referencing existing open space, sports and recreational buildings and land, including playing fields and formal play spaces, which the NPPF advises should not be built on. Sport England does not object to the Council having green infrastructure policies (see NPPF paragraphs 188 and 199 and the definition on page	playing fields, sports pitches etc) and the criteria are consistent with the requirements of paras 103 and 104 of the NPPF. The Plan is not intended to be an assessment tool for determining whether or not a space is to be considered surplus i.e. suitable to be lost with no reprovision. The Playing Pitch Strategy currently in development will be part of the evidence base that will provide a quantitative and qualitative analysis of current provision and expected need for such spaces in the city. Where proposed schemes affect supporting spaces, evidence will be required from applicants that broader

G2	Support for preferred option	This could provide desperately needed green infrastructure links and their health and environmental benefits for the City, its quality of life, nature recovery etc.	Support is noted and welcomed.
G2	General comment	To balance new developments with green offsetting carbon contributions.	Comment noted.
G2	Clarification	The Draft Policy states that for residential sites of 1.5 hectares and above, new public open space of 10% of the area covered by residential development is required. It states that for mixeduse sites, the area of residential use should be used for that calculation. We request further clarification is provided, as to whether this new space should comprise hard of soft landscaping. It is assumed that by 'area', the Plan is referring to 'plot' area or building footprint, however it would be helpful for this to be clarified in the wording. It would also be helpful to clarify how to calculate in the case of buildings with nonresidential ground floor uses with residential above.	The requirement will apply to the overall plot area. The type of landscaping can be a design choice, however applicants are advised to take into consideration other relevant policies to ensure they are compliant with their requirements, e.g. the Urban Greening Factor policy and the Biodiversity Net Gain policy.

2116

G2	Should be case by case basis	The preferred option for Policy G2 sets out that 'For residential sites of 1.5 hectares and above, new public open space of 10% of the area covered by the residential development is required. For mixed-use sites, the area of residential use should be used for that calculation'. [We] consider that requirements for Public Open Space should be considered on a case-by-case basis, taking into	A case by case approach risks inconsistent application which will hamper how we monitor the effectiveness of the policy, and will not give certainty to developers or local communities on what the open space provisions

Draft policy	**Topic**	**Summary of comments**	**Response**
		account site context and surroundings, on the basis that prescribed requirements may unintentionally suppress the quantum of housing delivery, contrary to overarching priorities for the Plan.	are. and a lack of certainty for developers on what the expectations.

G2	BBOWT	Support but would like this text added: “Require green and blue infrastructure features on all new development……Require open space as percentage of site area on larger sites and all other new development to include green and blue infrastructure features.” For the policy to be effective we consider that clarity is required as to the definition of larger sites in order to ensure that the requirement for a percentage of site area to be open space is delivered. We would suggest that what is currently defined as major development (e.g. larger than 10 houses or equivalent) would define larger sites, and that 50% should be green space. A significant proportion of this green space should be nature rich, with some of it on sites larger than 1 hectare defined as nature reserve, with no access or managed access.	The policy will include a residential development site size threshold for which there will be a mandatory requirement for on site open space provision.
G2	General comment	Ok but only for academic and commercial. Housing the priority for development.	Comment noted.
G2	General comment	The problem is untrammelled development. Tokenistic inclusion of 'blue and green	Comment noted.

Draft policy	**Topic**	**Summary of comments**	**Response**
		infrastructure features' does not compensate for the loss of actual, functioning green spaces.	

2118

G2	General comment	Much as I like the intent and idea here, I think we're deceiving ourselves if we take the approach that development won't have an overall deletive environmental effect for the city, but we need to choose to do it anyway.	Comment noted.
G2	General comment	New developments take ages for vegetation to mature. Co2 absorption is so much more efficient with mature trees. Stop chopping down mature trees!!	Comment noted.
G2	Support for alternative option	Specific quality standards should be adopted as referred to in Alternative Option 1	Using a target such as described in Alternative Option 1 would not necessarily be effective as greenspace may not be evenly distributed, located close to centres of population, accessible, or of quality. Work on the Local Plan 2036 also identified the challenge of managing the provision of open space at a fixed ratio to population in Oxford as most developments are on small sites. It is therefore considered more effective to measure and provide

2119

Draft policy	Topic	Summary of comments	Response
			greenspaces on a more localised basis.
G2	Support preferred option	Support the option but disagree that green features on sites can be designed in ways that allow them to perform multiple benefits for the local area particularly biodiversity. Biodiversity and human recreation never go together – overly used areas for recreation do not allow biodiversity to persist – trampling etc destroy habitat. Examples include hay meadows of New Marston Meadows SSSI; King Georges Field,	The requirement applies to provision on new development. We agree that multifunctionality works best if the uses are complementary and appropriate for the type of development.

2120

G2	Policy requirements detrimental to development	Mandating bespoke green- and blue-infrastructure features for every development—on top of the Urban Greening Factor, biodiversity-net-gain rules and existing open-space levies—adds yet another cost layer that will either shrink site capacity or push build prices higher, eroding housing affordability. A rigid percentage of land for new open space on larger plots may look benign, but in a city where land trades at £5-10 million per hectare it effectively taxes every flat and lab bench, slowing supply and undermining the very climate goals it claims to serve. Oxford already benefits from extensive riverside corridors and historic parks; incremental, market-led greening (roof terraces, pocket gardens, tree-lined streets) will emerge where it enhances value without the need for another prescriptive policy.	The requirement for public open space is very carefully defined. It is particularly important in a densely packed city (where a lot of open space is not public) that, at the same time, there is access to open space. It is also important that the open space is of a sufficient size to be useable. Therefore, only the largest sites will be required to provide this. These sites themselves are generating new demand. It has been viability tested.

Draft policy	**Topic**	**Summary of comments**	**Response**

2121

G2	Focus on minimizing impermeable surfaces	An important focus should be on the need for permeable surfaces and minimisation of impermeable surfaces which is very important for water management/flood risk management and can contribute to greening/bluing. 'The potential for these benefits is lost if there is an overuse of artificial, impermeable surfacing materials like concrete, artificial lawns and tarmac.' This needs to be explicitly specified for all proposed developments subject to planning applications and consideration given to use of impermeable surfaces in areas such as domestic front and back gardens	The policy approach is addressed in policy G3 (Urban Greening Factor).
G2	Increase thresholds for minimum greenspace requirements	We welcome the holistic factors in this list of enhancements to the GI and BI, and the fact that public access, connectivity and community food growing are included. We would advocate for further hierarchy or prioritisation of certain features. For example, addressing climate change should take priority over heritage and appearance. We would like to see the bankside ecological buffer zone of at least 15 metres (rather than 10 metres) to protect our essential BI. There should also be a sliding scale of "new public open space" so that 10% is a minimum, but with a prerequisite that in socially / green deprived areas this scale could be increased to ensure developers don't plan for too dense areas in areas	The 10% public space requirement in larger developments is intended as a minimum and there are no impediments to going larger. A sliding scale will make it difficult to implement a consistent approach across all developments – most potential development sites in the city already tend to be small or constrained, and often in built up contexts, which would make the delivery of usable open

2122

		already lacking in green publicly accessible areas. Denser	

2123

Draft policy	Topic	Summary of comments	Response
		areas however will be encouraged within areas with ample green public spaces.	space alongside needed development challenging.

G2	Maintenance of new GI features	We note that the developers will be responsible for maintenance of GI for only the first five years, but this should be with genuine engagement with the local community. Then there should be ongoing consultation around the maintenance of green spaces around residential/community buildings to allow for community maintenance - working alongside developers and owners (not just a legal contract in perpetuity which enforces site owners to take the most "efficient" management actions)	Maintenance and management plans are expected to be organised as part of the design/construction process at as early a stage as possible. There is scope in the policy for different options to be considered depending on the context of the application, including community stewardship arrangements where practical.
G2	Provision for Recreation	The "Raising the healthiest generation in history report" (RHGIH 2024) quotes MP Natalie Elphicke saying "[The NPPF] lists bats. Why are we not listing children?" It recommends that "any childfriendly approach should set out clear 'quality asks' and not create vague principles that add barriers to development and house building." But the draft plan doesn't even create vague principles. The only time that the recreational needs of children/youth (apart from in the contexts of private gardens and LTNs) are specifically addressed is in Figure 4.2. which deals with mitigation of loss. Recreation is an	Recreation for all ages and abilities is one of the multifunctional benefits of green spaces identified in the plan. The wording of the policy and supporting text will reflect this. Where there are statutory requirements for development, particularly with established assessment tools and metrics, they will

2124

Draft policy	Topic	Summary of comments	Response
		afterthought. The recommendation is that "the provision of green and blue infrastructure are considered at the earliest stage in the design process" to offer "multi-functional benefits" which include health and wellbeing. But "the priority" is wildlife and flora, rather than recreation. When listing the range of factors used to determine the quality of GI the recommendation is that the "potential for recreation and movement should also be considered." Recreation shouldn't be lumped in with green infrastructure. The list of "tools and metrics" to inform assessments of existing GI includes the British Standards for Trees, but for recreation there is a recommendation that "a mixture of play features for young people will enhance wellbeing – these spaces do not have to be overly designed or dominated by fixed equipment, but could also be comprised of wild areas and facilities that encourage engagement with nature and free-play."	be the basis for monitoring the effectiveness of the policies.
G2	Strengthening tree policy	Welcome the mention of trees in point d). Suggest strengthening the policy with additional reference to the Local Nature Recovery Strategy.	Comment noted.

2125

G2	Disagree with preferred option	Because space is at a premium in Oxford, the draft plan proposes that GI should be able to "perform multiple roles that support the sustainability of a development and its occupants." This makes sense, but it does not make sense for multifunctionality to be the driving force. The 2022	Multifunctionality does not preclude a space from having a primary function. It allows the plan to recognise and cater for spaces that have additional functions

Draft policy	**Topic**	**Summary of comments**	**Response**

2126

		GI study picked out Bertie Park as a small, multifunctional park, but its primary function is recreation. The draft says "Where new open space is provided, the type of provision should be tailored to address existing needs or deficiencies in access locally." For larger applications with public open space provision, the suggestion is that engagement with the local community will help inform the type of space needed. For smaller applications it is unclear. But most consultation carried out by OCC is a waste of money. Many feel strongly about local issues, but few want to fill in forms either online or on paper. Many believe that it will make no difference. The draft policy states "In situations where the proposal relates to replacement provision that is mitigating losses elsewhere, this will need to be demonstrated to be equally or more accessible for people of all ages and abilities by walking, cycling and public transport to local users of the existing site where relevant." This would mean that councils would never be able to restrict access on sites where joy riding has been a problem, or access to bicycles where footpaths are not suitable for dual use, or include features to	such as biodiversity value, flood storage etc so that adequate policy protections can be applied where relevant. The planning application process includes a statutory consultation period where members of the public can make representations on a scheme. Developers are encouraged to engage with planning officers at the earliest possible stage so that any concerns are identified at the earliest opportunity, and engagement with the local community is also good practice particularly for major schemes. The format of *scheme specific* early stage consultations are decided by the developer without the involvement of planning, even with council housing company

2127

		prevent escape of livestock. It would therefore be helpful to	schemes. Participating in consultations

2128

Draft policy	Topic	Summary of comments	Response
		require that replacement sites do not pose any of these challenges to provision of access.	is the best way to have input on the content of a scheme, particularly at an early stage. Accessibility in this context only means that a space can be easily reached by local residents without having to use a private car, and that it can be used by people of all ages whether or not they have a disability. It has nothing to do with facilitating criminal activity such as joyriding, allowing bicycles on footpaths, allowing livestock to roam free or removing restrictions that promote public safety.

2129

G1/ G2/ G3		Local Plan 2040 para.8.66 (Reg. 19 plan) set out that there was a limited presence of GI features at ARC Oxford. This meant that it was likely to score below the minimum thresholds for green surface cover (Policy G3 – UGF (LP2040)). *"As such, proposals will need to ensure that an appropriate proportion of green features are incorporated into the design of development to meet the minimum targets set out in the policy, demonstrated through*	The thresholds for UGF in the plan are markedly lower than the recommended minimum contained in Natural England's GI Framework which informed this policy, in recognition of the constrained nature of development sites in Oxford. Thresholds for non-

Oxfordshire County Council

Draft Policy	**Summary**	**Response**	**Outcome**
Policy G2 Enhancement and provision of new GI and BI	**Landscape and Nature Recovery – Biodiversity** When providing new public open space as a replacement for losses elsewhere (page 72), it may be helpful to refer to the requirement for biodiversity to be considered and a net gain to be delivered.	Policy G4 relates to how Oxford will deliver mandatory BNG.	No Action Required

Draft Policy	Summary	Response	Outcome
	The maintenance and management arrangements (page 73) also link to biodiversity net gain. It may be useful to clarify that the management period of 5 years would be a minimum with longer encouraged and if BNG is being delivered a minimum of 30 years would be required.	BNG is discussed in full in Policy G4.	No Action Required
	Landscape and Nature Recovery – Landscape Policy makes reference to provision of GI as a "fundamental component" in the design of new development. What is meant by a 'fundamental component' and how will this be assessed? This section would benefit from more detail. Should this policy include a link to the design code in Appendix 1?	Fundamental component – it will be for the decision-maker to determine what makes up a fundamental component when coming to their decision on planning applications. Assessment: The policy sets out that features should be highlighted clearly within the Design and Access Statement (where required) and/ or on landscape/ elevation plans…	No Action Required No Action Required No Action Required

2133

	Urban settings can be challenging environments for new planting and the right species choice and ongoing management are very important. The principle of the		

2134

Draft Policy	Summary	Response	Outcome
	right tree in the right place should be applied and reflected in the policy.	The principle of the right tree in the right place is already included with the Council's Urban Forest Strategy.	
	Larger growing trees that are suitable for the local conditions should be chosen where space permits as these have the potential to offer greater environmental and visual benefits than small trees in the long-term.	Noted.	No Action Required
	The Local Plan does not appear to set a target for tree canopy cover. Consideration should be given to whether this should be included in this policy or one of the other green infrastructure policies.	We can consider the inclusion of a canopy cover target within the plan.	Oxford City Action: Consider further whether to include a canopy cover target in the plan
	Public Health		No Action Required

2135

Draft Policy	Summary	Response	Outcome

2136

	Point e) should go further and implore the developer to consider how GI can be used to provide shade in relation to key urban realm features such as benches, gathering spaces and residential frontages. Point i) refers to community growing space but as per our previous consultation comments, this should also have its own standalone policy. **Environment team – Countryside Access** Further to our comment on Policy G1, there is also a need to provide for new public rights of way, and that should be referred to in Policy G2. **Innovation Hub**	This is already covered in the context of "urban cooling", which is specifically mentioned in the policy We do not consider that community food growing warrants it own policy as it is already covered elsewhere in the plan (e.g., Green and Biodiverse city – objective 4; Policy HD13 – outdoor amenity space, Appendix 1: Design Checklist, section N2 and other metrics including UGF). Any new routes should be identified through the IDP	No Action Required No Action Required No Action Required

2137

Draft Policy	Summary	Response	Outcome
	Innovative green infrastructure such as moss/green walls or shelters, green roofs etc should also be considered within this policy. Smart green roofs can provide an approach for climate change adaptation by collecting flood water and providing a cooling function in heatwaves.	Noted – Green roofs considered within Policy G8: SuDS.	Oxford City Action: Consider whether G2 is right place for these issues. No Action Required
	Urban Design (Placemaking) Paragraph 4.7 should include a reference to green and blue infrastructure being used to form place identity, in addition to health, wellbeing and environmental benefits.		No Action Required
	In relation to higher density areas/taller buildings, vertical green should be considered. Could more be said on this as this is a significant issue particularly in the city centre? (e.g., in paragraph 4.8)	We will consider whether this is the appropriate place to discuss these issues.	No Action Required
	'Larger developments will be expected to include on-site public open space such as small parks...' Play should not just be confined to a playground, other play elements	Green roofs/ walls are considered under Policy G8: SuDs.	No Action Required

	(play on the way, play affordances) can easily be		
Draft Policy	**Summary**	**Response**	**Outcome**

2139

2140	incorporated into developments where appropriate, e.g. Giant boulders instead of bollards, or undulating grass/hills rather than perfectly flat, building ledges or boundary treatments to offer seating or an affordance to balance, climb, jump from etc. (Paragraph 4.8) Greening should be structurally diverse (by type, e.g. low-level planting to bushes to trees), not just by species. Developers should also be expected to assess existing green infrastructure and identify where and how their site can strengthen the green network by creating new 'patches' or connecting with existing corridors. Where there are watercourses, greening should still be considered in relation to improving water quality. Greening can be used as natural filter for surface runoff which may otherwise be polluting the blue network. Could be point 'k' in policy.	Agreed however, ensuring the delivery of small parks to support new developments is also important. The other measures would benefit from inclusion within a public realm/ landscaping strategies for the city rather than in a policy providing new public open space. Noted. Plan includes a bespoke water quality policy – R5 and the “natural” filtering of water occurs through SuDS (Policy R8)	

Historic England

Draft Policy	Summary	Response	Outcome
G2	Encourage the Council to refer to the scope for new green and blue features to enhance the significance of heritage assets in Oxford and enable that significance to be better appreciated. Reference to setting of assets is also merited. This would help explain criterion G.	The policy sets out a number of functions that could be targeted including enhancing the historic environment. To expand on all of these points in supporting text could make it very long, particularly as the key message is that multifunctionality should inform the design process. We will consider whether additional detail is needed in the accompanying Technical Advice Note.	No further action at this time.

Option	Total	Percent
Strongly Agree with Preferred Option	57	18.15%
Agree with Preferred Option	53	16.88%
Disagree with Preferred Option	35	11.15%
Strongly Disagree with Preferred Option	9	2.87%
Neutral/No answer	15	4.78%
Do not know	7	2.23%
Not Answered	138	43.95%

Draft policy	Topic	Summary of comments	Response
G3	BBOWT support alternative option 1	Whilst we support the preferred option we consider that to be most effective it needs to apply to the vast majority of developments. Our preference is for "Alternative Option 1: The scale of application of the UGF tool could be mandatory across all developments in the city."	The support for use of the UGF tool is welcomed. We consider the threshold for requirement proportionate.

2144

G3	Object – Doesn't align with NPPF	It is requested that this policy be deleted. The NPPF states that Local Plans should take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure (paragraph 188) and local planning authorities should take opportunities to improve biodiversity when assessing individual applications (paragraph 193). The incorporation of draft policy G3 will result in an unnecessary additional policy hurdle when the protection of green spaces and achieving net gains in biodiversity can be already achieved under draft Policies G1, G2, G4 and G5. It is recognised that the provision of new green spaces as part of development proposals is constrained. However, this requirement puts significant pressure on applicants which have limited site areas and which have certain functions that also need to be achieved in those spaces. The use of the policy to prevent the loss of space would essentially sterilise the potential for development which, if allowed, could achieve wider benefits such as the release of general housing back into the market. For example, at Oxford North, where the site was	The UGF is a tool intended to ensure new developments incorporate a good level of greening, which has a variety of positive impacts. The measures proposed to achieve this requirement may overlap with requirements for protection and BNG, but for example even where BNG is off site there should still be green infrastructure on the site, and this may be part of protecting and enhancing existing but in some cases there will be no or little existing and there are benefits to it being introduced. The meaures needed by the policy have been broadly tested on the site allocations and are achievable. A whole range of creative options are available that have limited impacts on the

2145

Draft policy	Topic	Summary of comments	Response

		greenfield land it would be impossible to recover this position through other greening features. As such the criteria to have "no reduction in baseline score" is unlikely to be achievable and the criteria should be deleted. It is noted that the Urban Greening Factor works alongside biodiversity net gain but provides a 'simpler' output. However, it is questioned why this additional layer of calculation is required as where it has been introduced elsewhere (mainly in London) this tends to have been prior to the introduction of the minimum biodiversity net gain requirements in Local Plans.	development space, and developments without green features will not create good or attractive places that people want to work or live in. A tweak has been made to the policy regarding the baseline score on green sites, to make it more achievable.
G3	Support – Suggest amendment	It is welcomed that the updated draft policy wording provides further information on the expectation with regard to the green coverage in new developments. The draft policy states that major development proposals should demonstrate that there would be no reduction in baseline score and achieve a minimum score of 0.3 for residential or predominantly residential schemes. We request that the policy wording is adjusted to make clear that this is a target rather than minimum.	The scores contained in the policy are intended to be a minimum. The required score has been set at the level it has, to encourage as much as possible the achievability of application for constrained sites with limited developable areas. It is markedly lower than the recommended minimum in the Natural England Green Infrastructure Framework.

2146

G3	Object – Not justified	It is recognised that the provision of new green spaces as part of development proposals is constrained however, this requirement puts significant pressure on applicants who have limited	The required score has been set at the level it has, to encourage as much as possible the achievability of application for

Draft policy	**Topic**	**Summary of comments**	**Response**

2147

		site areas and who have certain functions that also need to be achieved in those spaces. Mansfield College may seek to expand the provision of student accommodation on the campus and this may involve the loss of some of the current green space to enable this to happen. The use of the policy to prevent the loss of space would essentially sterilise the potential for development at the site which, if allowed, could achieve wider benefits such as the release of general housing back into the market. It is noted that the Urban Greening Factor works alongside biodiversity net gain but provides a 'simpler' output. It is questioned why this additional layer of calculations is required as where it has been introduced elsewhere this tends to have been prior to the introduction of the minimum net gain requirements of Local Plans. It is considered that this policy is not fully justified nor does it allow any scope for flexibility where circumstances indicate that it would sterilise development.	constrained sites with limited developable areas. It is markedly lower than the recommended minimum in the Natural England Green Infrastructure Framework. The UGF methodology is not intended as a replacement for detailed ecological analysis and associated metrics such as DEFRA Biodiversity metric, even though they have complementary aims. Metrics such as BNG are linked to a wider ecological context, which can allow for offsetting and off site contributions in the appropriate circumstances, whereas the intention for UGF is to localise the benefits that come from the onsite establishment of natural features including climate adaptation, mental and physical health and wellbeing and biodiversity.

2148

G3	Doubt about viability/achievability	Concern about investment needed for ecological expertise which the Council probably doesn't have	The tool is an online system/software which doesn’t

Draft policy	Topic	Summary of comments	Response
		or big enough team to do this. It would only become plausible with the development of a fundable budget to cover it.	require advanced technical knowledge. UGF can be completed through tools such as excel and google earth so not overly expensive
G3	Object – concern about misuse and undermining BNG	UGF is a blunt tool that is open to misuse and can in certain circumstances conflict with others such as BNG. I would want it to be subordinate to BNG and/or open space standards	The policy states UGF is to be used alongside BNG
G3	Support – thinks could go further	Suggested deeper more comprehensive ecological surveys before larger developments Greening should be along boundaries to mitigate climate change	
G3	No policy, leave to national policy	The extra level of complexity for a constrained city that needs to prioritise brownfield, leave to national policy of 10%	The biodiversity net gain requirement does align with national policy. The UGF is a separate requirement, which is particularly important in a constrained city, where biodiversity net gain may be off site, to ensure sites incorporate green

2149

			infrastructure with its many benefits.
G3	Suggested wording	We welcome the use of the "Urban Greening Factor (UGF) with particular attention on the naturalness of surface cover with particular emphasis on natural coverage." However, the target baseline score seems low in ambition.	The target scores have been tested and represent an achievable and good level of greening.
Draft policy	**Topic**	**Summary of comments**	**Response**

2150

		• 0.3 for residential or predominantly residential schemes • 0.2 for predominantly non-residential schemes Is too low as a baseline score. We would encourage others to read Natural England report: Urban Greening Factor for England – Development and Technical Analysis - NERR132This report highlights that the average target is 0.4 (40%)= residential 0.5 =greenbelt 0.3 = non-residential. We would recommend these levels to be the minimums for Oxford. The aim to get a local average of higher than these, such as Helsinki with 0.8 We would also like to see a sliding scale with lower socio-economic areas specifically highlighted as a higher target, such as a maximum minimum in the most deprived areas = 0.7.	

2151

Statutory Consultee Responses – Draft Policy G3

Oxfordshire County Council

Draft Policy	Summary	Response	Outcome

Policy G3	**Landscape and Nature Recovery – Biodiversity / Landscape**		

Provision of new green and blue features – UGF	UGF is not mandatory for all developments. However, we wonder whether greatest green infrastructure benefits could be achieved if it was mandatory for all developments, especially if located in areas of existing GI deficiency unless particular circumstances and reasoning are demonstrated.	It is a requirement for larger developments and encouraged on smaller ones. Larger (major) developments can offer the most scope for a wide variety of improvements.	No Action Required
	Major development should be defined.	Major development is defined in the NPPF (10 or more homes or 1,000 sqm non-residential floorspace).	No Action Required
	The application of UGF for non-major developments should be considered here as a way for smaller developments to demonstrate a measurable net gain in biodiversity to satisfy NPPF and local planning policy when they are exempt from the mandatory BNG requirement.	Policy already encourages smaller (minors/ householders) to apply the UGF.	No Action Required

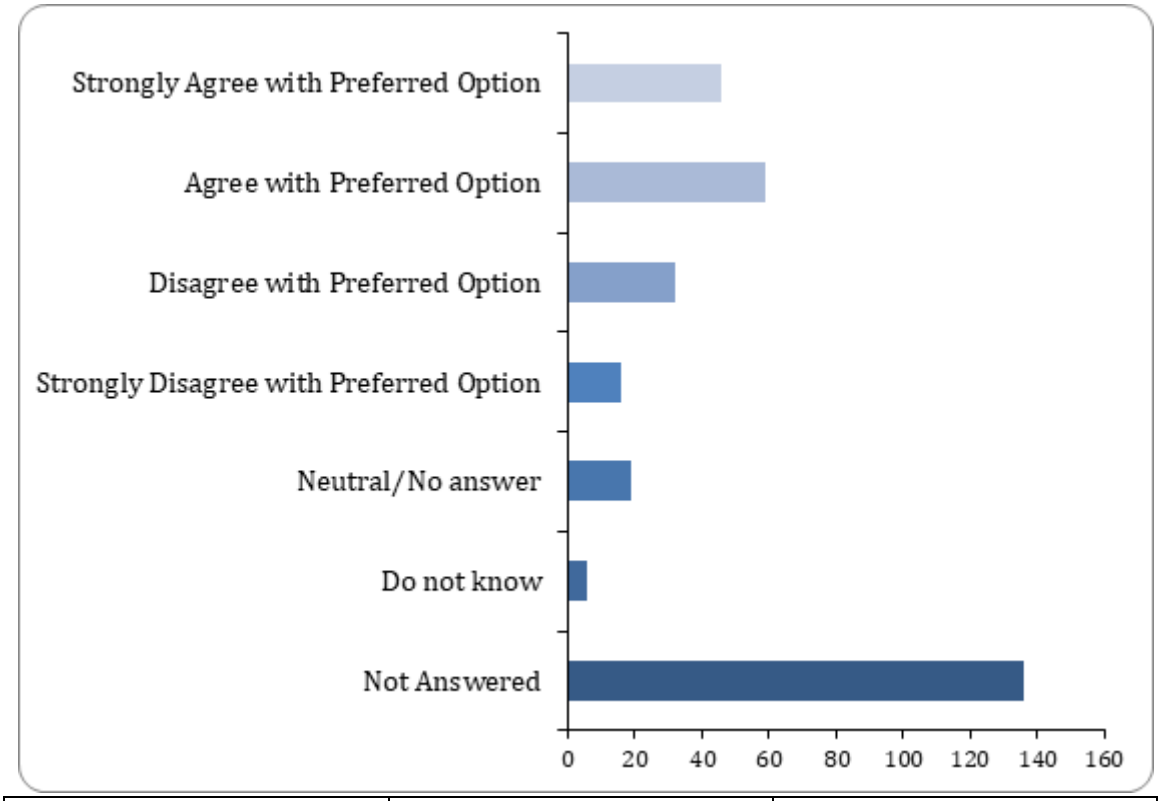
Please tell us what you think about Policy Options Set 005d (draft policy G4): Delivering Mandatory Net Gains in Biodiversity.

There were 178 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	46	14.65%
Agree with Preferred Option	59	18.79%
Disagree with Preferred Option	32	10.19%
Strongly Disagree with Preferred Option	16	5.10%
Neutral/No answer	19	6.05%
Do not know	6	1.91%
Not Answered	136	43.31%

Draft policy	Topic	Summary of comments	Response
G4	Support	Agree with the preferred option of draft policy G4 to align with the statutory net gain requirements under the Environment Act (2021) to deliver 10% net gain and to follow the hierarchy of prioritising delivery of net gains onsite and where this is not feasible, delivery off site. If landowners/developers are able to achieve more, that is still possible and strongly encouraged under such as policy approach. there is no evidence for a policy which requires biodiversity net gains greater than 10%.	The support is welcomed.
G4	Potential legislation changes for small sites	The City Council will be aware of proposals under consultation by the Government to remove the 10% requirement for small and medium sized sites. Draft Policy G4 will need to evolve to reflect any changes to legislation in this regard	Comment noted.
G4	Unnecessary	This draft policy repeats national requirements and is therefore unnecessary and should be deleted.	The requirement is set out nationally, but the policy adds additional local context about how it is implemented.

G4	BBOWT	Whilst we welcome the hierarchy set out and hence we have ticked “Agree with preferred option”, we consider that the alternative option of seeking greater than 10% net gain should be taken forward, in addition to the hierarchy as set out in the preferred option. We recommend 20% net gain is sought. This is supported by the work done by the Oxfordshire LNP https://www.olnp.org.uk/lnp-projects/advocating-	

Draft policy	**Topic**	**Summary of comments**	**Response**

2156

		for-20-biodiversity-net-gain-bng . In addition all the other District level authorities in Oxfordshire are taking forward Local Plans asking for above 10% in one way or another, for example a standard 20%, or 20% on major development. We consider that there is equally justification for 20% to be sought within Oxford City as anywhere else in Oxfordshire and that 20% should be sought. BBOWT also recommends that content is included within a net gain in biodiversity policy to ensure that all habitat retained, enhanced or created (whether it is on-site or off-site) for the purpose of achieving both no net loss, and net gain, is retained forever (e.g. in perpetuity - for at least 125 years). Otherwise, the no net loss or net gain merely becomes a temporary net gain, and ultimately over time development will result in a large net loss to biodiversity.	
G4	Mechanism for offsite payment	Should establish a mechanism and or policy for such off-site delivery of BNG to be achieved by financial transfers to local environmental charities e.g. BBOWT and Earth Trust.	This mechanism is not in place and can't be managed by Planning.
G4	Monitoring	Onsite and offsite BNG should be monitored with a clear maintenance plan for onsite BNG.	
G4	Offsite land which is recipient of BNG should be exempt from development	Where BNG is delivered offsite according to the hierarchy, the recipient green space should henceforth NOT be considered for development	

		for a minimum of 30 years in line with the BNG requirement.	
Draft policy	**Topic**	**Summary of comments**	**Response**
G4	There should be no hierarchy to work through- straight to offsite is fine	Every extra rung on the ladder before buying statutory credits adds transaction costs, legal complexity and delay- especially in a land-scarce city where suitable receptor sites are rare. This squeezes viability. The DEFRA metric and credit market guarantee ecological uplift already, so this approach has no measurable gains.	There are opportunities within Oxford, and it is considered important that the policy ensure these opportunities are taken where possible.
G4	Should be onsite	Proposals should be modified to ensure net gain is onsite. It can be very creative, such as a roof garden. If it can't be achieved, the site is unsustainable.	The requirement is simply not feasible to provide onsite on the majority of the constrained sites in Oxford, however creative the solutions are.
G4	Exceed 10%	Cambridge and other development-stressed LPAs have done this, why not Oxford? 20% better covers the large margin of error in BNG.	It is now required that exceeding the 10% requirement is robustly justified, with reasoning that we think it would be difficult to apply in Oxford.
G4	Comment on uses it applies to	Comment that it should not apply to housing, to encourage housing. Comment that it may be difficult on industrial sites.	The basic requirement, including

2158

			what it applies to, is set nationally.
G4 and G5	Objection	Must include provision for where the habitat is NOT swappable, it is not permitted.	Comment noted.

Statutory Consultee Responses – Draft Policy G4

Sports England

Draft Policy	Summary	Response	Outcome
G4	For information, Sport England has recently published guidance on biodiversity net gain to help show how biodiversity measures can be incorporated into playing fields without compromising their intended sporting use or long-term protection. https://www.sportengland.org/guidancehttps://www.sportengland.org/guidance-and-support/facilities-and-planning/planning-sport/our-planning-role-guidance-and-tools/BNGand-support/facilities-and-planning/planning-sport/our-planning-role-guidance-and-tools/BNG#:~:text=About%20the%20guidance,10%25%20net%20increase%20in%20biodiversity.	Comments noted.	No further changes proposed.

Oxfordshire County Council

Draft Policy	Summary of comment	Response	Outcome

2159

Policy G4 Delivering mandatory BNG	**Landscape and Nature Recovery – Biodiversity** A BNG of 20% is encouraged in line with other emerging local plans in Oxfordshire. It is recommended that prioritisation should be given to delivering ecological habitat enhancement and creation within ecological networks at county level over delivering habitat enhancement and creation outside of ecological networks within Oxford city outside of the LNRS.	Oxford is a small, constrained city with limited opportunities to deliver the mandatory 10% net gains. Increasing the requirement to 20% would not result in more biodiversity net gain in the city but rather an increase in delivery outside of Oxford. District Plans already propose 20% BNG across Oxfordshire. It is important that BNG impacts are received locally. Noted.	No Action Required No Action Required

Draft Policy	**Summary of comment**	**Response**	**Outcome**

2160

	Encouragement should also be given to using offsite offset areas outside of ecological networks within Oxfordshire as a step before considering sites further afield. It is considered that this approach would be more aligned to the Local Nature Recovery Strategy (LNRS) once published. The encouragement of delivering more technically offsite difficult habitats that may deliver lower BNG units (due to the application of the difficulty multiplier within the metric) where feasible is welcomed and this approach should also be considered for onsite habitats where feasible.	See response above.	No Action Required
	Public Health We concur with the Landscape and Nature Recovery Team that we'd want to see a BNG minimum net gain of 20%.		No Action Required

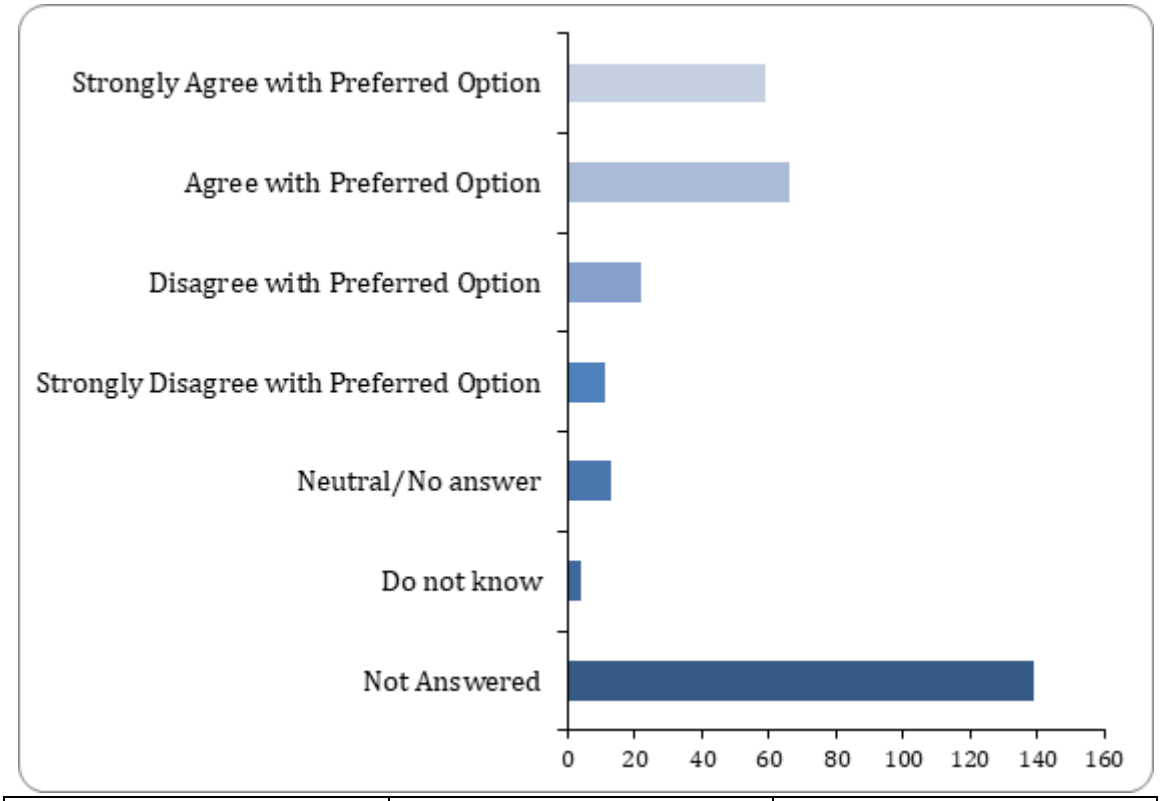
2161

All Public Responses – Draft Policy G5

Onsite biodiversity

Please tell us what you think about Policy Options Set 005e (draft policy G5): Protecting and enhancing onsite biodiversity

There were 175 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	59	18.79%
Agree with Preferred Option	66	21.02%
Disagree with Preferred Option	22	7.01%
Strongly Disagree with Preferred Option	11	3.50%
Neutral/No answer	13	4.14%
Do not know	4	1.27%
Not Answered	139	44.27%

Draft policy	Topic	Summary of comments	Response
G5	Support	It is important to take all opportunities for enhancement (some mentioning there should be more mention of trees).	The support is welcomed.
G5	Superfluous, do not have policy	It is considered superfluous to impose additional prescriptive requirements, in addition to mandatory Biodiversity Net Gain, on all sites. It may be more appropriate to impose such prescriptive measures only on sites where BNG is provided offsite, to ensure a degree of support for wildlife is still provided on-site in these circumstances. The requirement duplicates other requirements and adds consultant fees and squeezes value.	Whilst there are overlaps between several policies, they do also all have a slightly different purpose and function. It will generally be the case that features designed-in in response to one policy will also help meet the requirements of another policy.
G5	Support alternative option	Prefer option 1, 2 or 3	Noted
G5	Local Nature Recovery Strategy	The Local Nature Recovery Strategy (LNRS) has yet to be published, and this should be acknowledged within the Plan. A further stage of consultation should be undertaken to include LNRS guidance. Failing this, it should be stated that this Plan will adhere to guidance from the LNRS when available. All green spaces should be protected and there should not be a hierarchy.	The LNRS is in the process of being finalised and will be adhered to.

2164

G5	Not enough or strong enough	What is more important is protecting existing. If wildlife and habitats are destroyed they can't be replaced. Bird and bat boxes are not biodiversity. Ecologists should be required, not just encouraged.	Other policies do also protect existing green infrastructure.

Draft policy	**Topic**	**Summary of comments**	**Response**
G5	More flexibility needed.	Alternative option 1 is preferable. There should be flexibility for design solutions that recognise sitespecific conditions and challenges in greening certain constrained sites (e.g. brownfield industrial). If it must be tick box, then there should be space for designers to incorporate their own natureinspired ideas. It must be customisable to fit what's appropriate to the surroundings.	The policy does have flexibility as there is no prescriptive use of any particular measure, and measures appropriate to the site can be selected.
G5	BBOWT	BBOWT strongly welcome the inclusion of this policy, and the preferred option.	Support welcomed.
G5	Viability	It is unclear how these requirements are factored into viability testing.	Whole plan viability testing has taken place, which includes all policies with a potential 'cost' implication.

2165

G5	Suggested amendment	CPRE recommend that on-site biodiversity enhancements be made mandatory for all developments, regardless of whether BNG has been delivered on-site or not. We also propose that the wording in the following sentence be strengthened by replacing "should seek to" with "must": “All extensions and new-build development must incorporate ecological enhancements into landscaping or building facades/roof spaces, tailored to the priority habitats and protected	This is the intention of the Policy G5. Comment is noted.
Draft policy	**Topic**	**Summary of comments**	**Response**
		species present within the site and surrounding area.” Regarding the sentence: “Seeking advice from a suitably qualified ecologist on the ecological enhancements selected is encouraged,” we suggest clarifying that such advice is required only for minor and major developments. Requiring this for household extensions could create unnecessary barriers for homeowners.	

2166

G5	These aspects should not contribute to BNG or mitigation	• Tree planting should not be judged as contributing towards BNG especially young trees which easily die and decay without maintenance, releasing carbon • Bird and bat boxes – maintenance issues and are unlikely to be used • Green roofs – maintenance issues	Regulations around BNG are separate.
G5	Should not apply to extensions	Do not disagree with the principle of Draft Policy G5. However, greater clarification should be provided that the provisions relate to new builds and not conversions of buildings.	This is considered to be clear.

2167

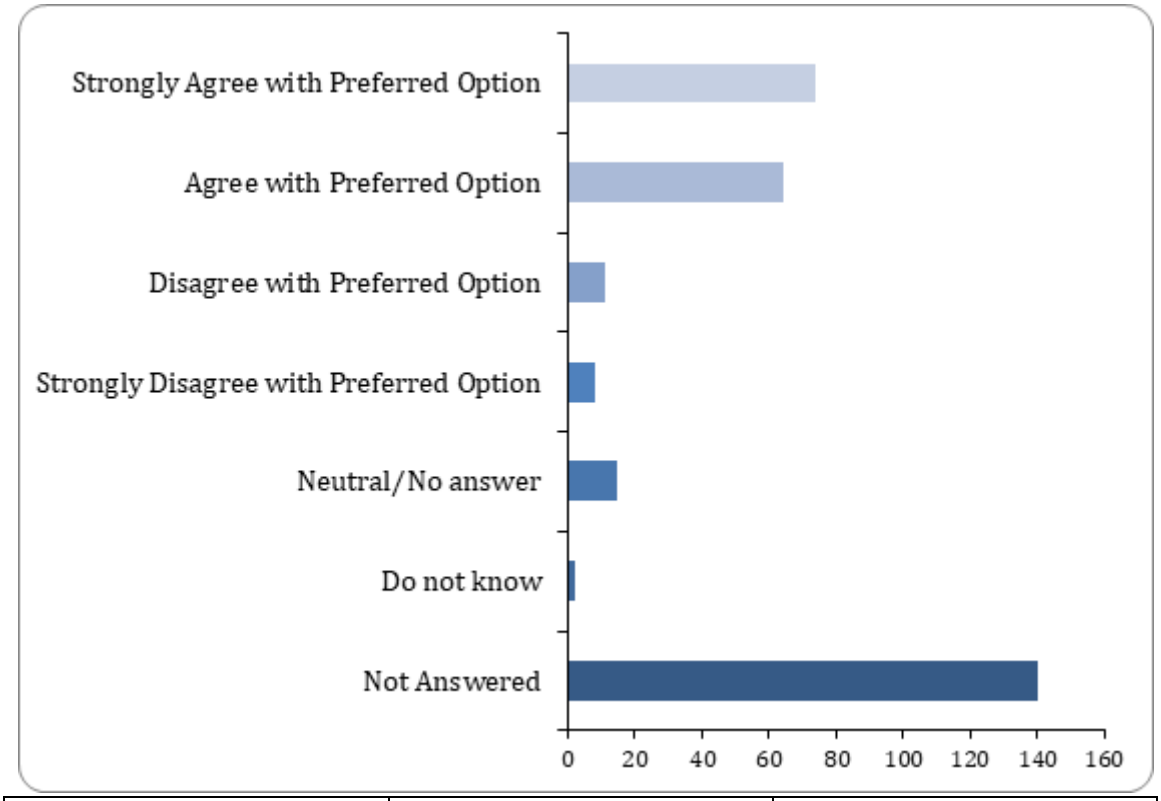
All Public Responses – Draft Policy G6

Ecological network

Please tell us what you think about the policy options set 005f (draft policy G6): Protecting Oxford's ecological network

There were 174 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	74	23.57%
Agree with Preferred Option	64	20.38%
Disagree with Preferred Option	11	3.50%
Strongly Disagree with Preferred Option	8	2.55%
Neutral/No answer	15	4.78%
Do not know	2	0.64%
Not Answered	140	44.59%

Draft Policy	Summary	Response	Outcome
G6	General support for aspects of policy	Welcome the inclusion of specific policy with respect to the hierarchy of sites such as SACs, SSSIs, LWSs, OCWSs, pLWSs, pOCWSs. Also welcome the inclusion of specific policy wording relating to particularly vulnerable sites such as the Lye Valley SSSI and Oxford Meadows SAC with requirements re hydrology, although feel this should go further.	The support is welcomed.

2171

G6	Irreplaceable habitats	Strongly consider additional wording needed in relation to irreplaceable habitat. The preferred option text states: “Reiterate national guidance for how to deal with irreplaceable habitats.” But we could not find text that does that, or that addresses the following text in the NPPF: “193…..c) development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons70 and a suitable compensation strategy exists;” We consider this text	The intention was to set this out in supporting text to the policy (which was not a part of the consultation), as it is not necessary to repeat national policy (which already sets strong protection for irreplaceable habitats). Whilst we would contend that it is not necessary for the policy to repeat national policy, we have however incorporated an amendment into the policy wording in response to this comment.

2172

Draft Policy	Summary	Response	Outcome
		should be included as policy text in the Policy in order for the policy to be sound. We suggest that this is best placed directly after the policy in relation to SACs. Similar text has been included in the draft Local Plans of several adjoining authorities.	

G6	Priority habitats and species	Whilst we welcome the inclusion of text relating to priority habitats and species in the draft G6 policy text we do not consider it to be worded sufficiently strongly to be effective in delivering the intention of the following NPPF text: "192….b) promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity." Alternative wording is needed and recommend the approach taken in the draft SODC/VoWHDC Local	A significant amount of priority habitat is located on land in Oxford that is protected strongly through the Ecological site designations and the Core Green Infrastructure network protections (biodiversity value was a key element that informed the Core GI network designation). Remaining areas of priority habitat are then protected through the wording highlighted in the comment. This is considered to be a proportionate and pragmatic approach which is in keeping with the NPPF.

2173

Draft Policy	Summary	Response	Outcome
		Plan or that in the draft Cherwell DC Local Plan.	

G6	Oxford City Wildlife Corridors	Oxford City wildlife corridors have played a key role in conserving wildlife within the City and their importance and role in planning should continue and be included in planning policy. We consider it vital that this latest Local Plan continues the emphasis on the importance of protecting the Oxford City wildlife corridor network, as in Policy of the Oxford Core Strategy to 2026 which stated in Policy CS12, with our underlining: "Local sites: No development should have a significant adverse effect upon a site that is designated as having local importance for nature conservation or as a wildlife corridor, save in exceptional circumstances where the importance of the development outweighs the harm, and where it is possible to compensate for the damage caused by providing adequate replacement habitat."	Whilst G6 protects the designated sites, policy G1's green infrastructure network (which also includes G6's sites) protects a wider range of green spaces in its core designation layer. This include sites that provide a wider biodiversity function including acting as corridors, though they might not be designated. The Local Plan also emphasises the importance of protecting and enhancing linkages between green spaces through its green infrastructure policies (G1 and G2).

2174

Draft Policy	**Summary**	**Response**	**Outcome**

G6	Protection of Lye Valley (and other calcareous locations) not enough due to impacts on ground/surface water flows	Comments flagging the vulnerabilities of Lye Valley (and other calcareous locations) from increasing development leading to reduced groundwater, and increased scouring from surface water via urban drainage. The current wording of G6 in relation to groundwater/surface water flows is "a very considerable weakening from the current Local Plan 2036" (Policies RE3/RE4). For instance, Lye Valley and similar areas are only mentioned in the supporting text, not the policy itself.	The policy sets out a framework of protection for all the SSSIs from the impacts of inappropriate development (on top of the requirements in national policy). Each SSSI is susceptible to different types of impact/adverse effect, and the key ones are set out within the policy. The policy then specifically flags that areas like Lye Valley are susceptible to impacts on groundwater/surface water flows and folds in the requirements set out previously in separate policies in Local Plan 2036. As such, we disagree that this has been weakened.

2175

G6	Policy specific to protection of lowland fen habitats the Lye Valley	Whilst welcoming reference to protecting the Lye Valley in G6 – stronger requirements within a separate policy are needed. Also to ensure protection of alkaline spring-fed lowland fens found within and around the city. These lowland fen habitats are UK priority habitats, and also are irreplaceable habitats, so that the NPPF	National policy already sets strong protection for irreplaceable habitats which does not need to be copied in the Local Plan. Policy G6 sets a framework of protection for habitats of various types from adverse effects of development, and this would include lowland fen wherever it is found and other habitat that forms part of designated sites like the Lye Valley. However, as per earlier response, we are happy to add

Draft Policy	**Summary**	**Response**	**Outcome**

2176

		policy on irreplaceable habitats applies to them. This habitat is exceptionally rare and cannot be recreated elsewhere as it is dependent on a combination of geology and geography with a calcareous spring-fed water source of the right quality and quantity. This occurs at only a few locations in the UK. The fens are highly vulnerable to changes in water quality and quantity which may arise from development within their catchment. They are also vulnerable to trampling damage, increases in nutrients (from dog mess and air pollution), and changes in the grazing regime (which may be inevitable due to increased recreational pressures) that may be needed at some sites to maintain the plant species that make a fen special.	reference to the national requirements for development impacting irreplaceable habitats in the policy.
G6	Formal identification of calcareous emergence areas	Request formal identification of calcareous emergence areas including,	The role of the policies map, where this would need to happen, is not in identifying every type of habitat and location in the city. Other mapping resources are available for these purposes. There

Draft Policy	Summary	Response	Outcome
		but not limited to, Headington Hill and Dunstan Park, Ruskin College.	are a wide range of habitat and geological considerations which might be of relevance, not just calcareous areas. To attempt to identify all these would not only over complicate the policies map, and there may be other areas which have yet to be identified (e.g. arising from future surveys).
G6	Net gain needs to be onsite	Net gain needs to be achieved on site, not hived off to some other area which may have had a perfectly workable environmental community before then, and which may be too far away for residents to benefit from it. Net gain elsewhere is unlikely to be able to offset impacts of development on certain species e.g. loss of buildings/trees of importance for bats.	The Environment Act sets out how net gain should be approached. Policy G4 seeks to further set out our local preferences for onsite in first instance. G6 seeks to ensure impacts on existing species are appropriately addressed (e.g. following the mitigation hierarchy).
G6	Additional requirements for protecting the Lye Valley from adverse effects.	Varoius comments including: Add a statement that says: "Planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon surface and groundwater flow to the Lye Valley	An additional statement (or a full policy) is not considered to be necessary. Policy G6 already sets out that development would not be permitted where it would have an adverse effect on any SSSI. The policy explains that an adverse effect could

2178

			include various impacts including (but not limited to) hydrological

Draft Policy	Summary	Response	Outcome
		SSSI" to apply to all development, not just designated sites. Include a specific policy to address future issues which could impact the Lye Valley specifically, including risk of pollution from the sewer network as infrastructure ages, as well as new boreholes supporting heat networks of nearby buildings	impacts in relation to surface or groundwater. This requirement applies to all SSSIs including the Lye Valley and would be relevant to development anywhere within the impact risk zones that could lead to adverse effects on a SSSI like the Lye Valley. The supporting text of the policy will flag that there are particular hydrological impacts that the Lye Valley is sensitive to.

2179

G6	No further development in groundwater catchment	Request an Article 4 Direction in both groundwater and surface water catchment areas of the Lye Valley to reduce cumulative impacts of redirection of water to urban drainage. SUDS are unacceptable as they will fail and require maintenance.	The process for implementing an article 4 direction is complex, and must be justified and proportionate. It is also a separate process to the preparation of the Local Plan. Nevertheless, with the Local Plan the Council has sought to include a range of policies for reducing surface water run-off and reducing its water quality impacts (e.g. Draft Policy G8 and R5) as well as generally increasing green surface cover on sites to mitigate impacts of urbanisation (Draft policy G3).

2180

Draft Policy	Summary	Response	Outcome
G6	All development sites should need to assess potential indirect impacts on flora and fauna	"Any planning applications near the Boundary Brook or Lye Valley/SSSI/LNR/LWS etc) will also need to assess the potential for additional indirect impacts on the flora and fauna of those area." should be a statement that applies to all development, not just particular sites.	Policy G6 sets out protection for all these types of designations and applies to any development that could have adverse effects.

G6	Policy currently excludes natural habitats	"Proposals with a reasonable likelihood of adversely impacting semi-natural habitats" requires rewriting as it excludes natural habitats.	Whilst definitions vary, semi-natural habitat is typically defined as being any wild/natural habitat that has at some point been influenced by human activity, even if this was historic. This is generally the case (to varying degrees) across the majority of the city, which is why we typically use this term. However, for completeness, we are happy to amend the reference to natural or semi-natural habitats.
G6	Protection of nondesignated sites	The main priority of the Headington Neighbourhood Plan is "to conserve green space and increase public access and biodiversity". Do not believe that council is protecting important green spaces and features and requiring biodiversity	G1 protects a network of green infrastructure - core and supporting spaces as well as green features elsewhere. Equally open spaces benefit from some protection through national policy. G6 adds protection for national or local designated sites where there is particular

Draft Policy	**Summary**	**Response**	**Outcome**

2181

		enhancements and new green features on sites. The requirement for developers to protect non designated green spaces is too weak (i.e. it is easy for developers to justify loss by showing they have "considered the information from various sources where relevant", or claiming "exceptional need". All of Oxford's remaining green spaces should be protected with a requirement to improve their quality, access, connectivity and number.	biodiversity importance. G6 also sets out how potential impacts on habitat or protected species (regardless of where they are located) should be addressed. We will try to ensure that this broader picture of protection is set out clearly in the supporting text of the Local Plan.
G6	Biodiversity – suggested supporting text for biodiversity or a similar policy	Rep contains detailed wording suggestions regarding Great Crested Newt District Licence Scheme and a glossary to be added to the biodiversity policy or a similar policy.	We've reviewed the proposed wording but the level of detail goes beyond the scope of the policy and would potentially be more helpful to reference in some way through the supporting Technical Advice Note we intend to prepare to support the policy.
G6	Policy requirements for local sites	Various comments relating to the wording*: Where proposals result in habitat loss within a LNR or LWS, they must retain and enhance the interest*	Policy G6 needs to be read in conjunction with the protection for the green infrastructure network (policy G1). Local wildlife sites are protected through policy G1 as 'core' spaces

2182

Draft Policy	Summary	Response	Outcome
		features for which the site was selected.' Hard to see how this would provide any satisfactory outcomes,a ppears to mean that a developer can build on most of a nature reserve but retain or plant a couple of native trees to represent the site that had been lost. A few token bits of 'wildlife' cannot substitute for the loss of a whole location, its ecosystem and biodiversity. The protection of local sites and other green spaces must be increased, not just the legally designated sites (SSSI, SAC). The Policy should state categorically that they MUST not be either developed or harmed by any development. This is particularly important in Headington which has seen huge developments in recent years and which continues to be the location for new major developments eg the Warneford site.	which would prevent development on them. Policy G6 then sets out additional considerations which might apply, e.g. if development happens near by that could result in adverse effects on the functioning of these spaces.

2183

Draft Policy	Summary	Response	Outcome
G6	Local authorities should be identifying and protecting existing habitats	Several comments say that local authorities should be identifying and protecting existing habitats, not leaving it to the applicant.	The Local Plan designates a network of habitats of national, county-wide and city importance. Separate policy G1 also protects a range of green spaces because of their identified importance to nature. Policy G6 simply requires that where applicants propose development, their approach is informed by a good understanding of potential ecological interest on their site and that they respond to this accordingly.
G6	Overall wording needs to be stronger	Many comments argue the wording needs to be strengthened so that policy "requires", instead of "seeking to ensure".	Comments noted – the requirements in the policy vary in strength depending on which elements of the ecological network they respond and their level of designation/sensitivity.
G6	Measuring value of ecological habitats	Further clarification is needed on how to measure the value of ecological habitats for the purpose of compensation.	The level of detail this would require is not something that can be easily captured within the policy or supporting text. The policy sets the framework for what is expected, but the approach to assessing ecological value on a site in order to meet these requirements will depend on the context of the site, the potential ecological features of interest and the type of application proposed.

Draft Policy	Summary	Response	Outcome
G6	No hierarchy – all nature must be protected and green corridors encouraged	Against a hierarchy of nature as it suggests some sites are expendable if not deemed important enough. Having isolated 'special' sites is ineffective as there is a need for joined up corridors and a critical mass of these.	National policy is clear that Local Plans should identify a hierarchy of international, national and locally designated sites. The Local Plan sets out various levels of protection for nature and green infrastructure beyond just the designated sites in the hierarchy.
G6	OCWS – Rock Edge	Rock Edge SSSI is showing increasing wildlife diversity of limestone flowers due to improved management and now worthy of OCWS designation.	Noted – the site will benefit from core protection in the green infrastructure network aswell as SSSI protections in national policy and policy G6.

2185

G6	Require developers to engage with environmental charities	There should be a policy or mechanism which requires funded engagement with local environmental charities such as with the Earth Trust or Berks Bucks & Oxon Wildlife Trust. This should be enforced by the Council to protect Oxford's ecological network.	It would not be appropriate for the Local Plan policy to dictate specific groups that applicants should pay to engage with. The policy sets the framework for how existing ecology needs to be protected when proposing new development. How applicants meet the requirements will depend on context of the site and potential ecological features that may be present, as well as the type of development proposed. There is no one-size-fitsall approach. We would be happy to consider referencing local groups and expertise as part of the supporting Technical Advice Note that we

2186

Draft Policy	Summary	Response	Outcome
			envisage preparing to support the policy in future.

G6	Defer to national policy with bespoke guidance for the handful of designated locations in Oxford	A few comments would prefer to remove local policies for protecting and enhancing on site biodiversity, instead relying on national standards and policies. Multiple comments say there should be bespoke guidance for the handful of locations that face proven risks, while letting BNG and EA regimes govern the rest.	A local policy is necessary to protect the range of locally designated sites in the city which are not protected in the same way as national sites in national policy. It also allows the Council to set out particular considerations and local requirements which are tailored to the variety of habitats and species present in Oxford.
G6	Noise and light pollution	Multiple comments say the policy should explicitly include noise and night-sky light pollution.	The policy currently names 'impacts from artificial light' as a potential impact however, as stated in the policy, this list is not exhaustive.
G6	General comments re: SSSIs in city	The number of wildlife SSSIs in poor condition is bad news for the city and evidence that wildlife is not thriving in many despite the condition assessments. Natural England's condition assessments are too out of date to be useful – disagree with condition assessment for New Marston	The condition assessments from Natural England are the most current source of information available to us, though we are aware that they have not been updated for some time. The Local Plan takes a precautionary approach to the SSSIs' protection, including mitigation requirements in any site allocations within proximity to the SSSIs and general

Draft Policy	**Summary**	**Response**	**Outcome**

		Meadows SSSI as overall favourable – no longer the case. Table of SSSIs should separate out the geological ones and whilst being in favourable status, this is for separate reasons to ecology.	requirements outlined in G6 that would apply to proposals elsewhere. We will try to ensure that the distinction between geological SSSIs and others is more clear when we reference them going forward.
G6	General comments re: local wildlife sites in city	Impression is given that all local wildlife biodiversity sites of merit and importance to the city have yet been identified and designated, but the city is far from having a full audit of wildlife rich areas and there are many with merit that are not designated (e.g. areas of Cutteslowe Park). Ecological Designation is biased towards sites the council actually owns, but there are many more designation-worthy sites in other land ownership e.g. half of Christchurch floodplain meadow; areas of calcareous alkaline spring-fen all around Headington; Ruskin College.	We acknowledge that there is a range of ecological potential outside of designated sites – this is why the first part of the policy sets out expectations for proposals (criteria a-c) which would apply anywhere in the city where there is a reasonable likelihood of adversely impacting semi-natural habitats or protected species.
G6	Allotments	Allotments can be crucial biodiversity areas for pollinating insects, even in urban areas. They are also a key part of	Allotments are protected in the Local Plan under Policy G1 including the three examples listed.

2188

Draft Policy	Summary	Response	Outcome
		'improving the health and well-being of people' (one of the Local Plan's objectives). They provide opportunities food growing, recreation, relaxation and socialising on its open spaces. Therefore, Brasenose Farm, Fairacres and Cutteslowe allotments should be protected and not be classified as grey belt.	

2189

G6	Wildlife sites connectivity	Wildlife sites within and outside the city are connected through green corridors. Support for city wildlife sites and green connectivity is not emphasised and should be. Dark zone connecting Magdalen Wood East and Magdalen Wood West is important for species movement e.g. bats and should be maintained. Green wildlife bridge across the ring road in this area is needed. Also flag concern that any building just outside the city limits has the potential to break/block the essential green	Policy G6 needs to be read in conjunction with the protection for the green infrastructure network (policy G1). We protect a much broader range of sites in the city as either core or supporting green infrastructure and part of the rationale is supporting a linked up network across the city. Policy G2's criteria also includes strengthening links between green spaces, particularly ecological sites
Draft Policy	**Summary**	**Response**	**Outcome**
		connectivity upon which wildlife within the city depends.	

2190

G6	Protecting Lye Valley	• Update to all Site Policies that impact the Lye (MROFAOF, SPE7, SPE6, SPE8) Request a formal survey and policy demarcation of ground, Thames Water and surface water catchments for the Lye Valley and other areas as per Lambeth where floods have, and could potentially, cause damage.	Policy G6 sets the framework of protection for the sites within the Lye Valley and sets out what applicants are expected to do to avoid adverse effects wherever proposals could lead to them. The specific site allocations that are located within impact risk zones for the Lye Valley will include requirements for mitigating risks also. Flood risk is dealt with through policy G7 and mapping of flood risk is included in the Strategic Flood Risk Assessment.

2191

Statutory Consultee Responses – Draft Policy G6

Natural England

Draft Policy	Summary	Response	Outcome
G6 – protection of SAC/SSSIs	Welcome the commitment to safeguard key sites within Oxford's ecological network which include Oxford Meadows SAC and the numerous SSSIs. Encourage the Council to identify those site allocations which are proposed on land immediately adjacent to the SAC and SSSI's and stipulate within the allocation policy	We are undertaking a Source Pathway Receptor Analysis for the SSSIs as well as Habitats Regulations Assessment for the SAC and this will help identify all the relevant sites that might impact on these	Source Pathway Receptor Analysis and HRA work to be published alongside Reg 19 consultation. Key findings will be reflected in relevant allocations including sitespecific mitigation

Draft Policy	Summary	Response	Outcome

	that appropriate buffering and delivery of habitat supporting the interest features of the designated site will be required.	designations, in line with your comment. We will ensure any recommendations from that work, including sitespecific mitigation requirements, are reflected in the relevant allocation policies.	requirements where necessary.
G6 – Irreplaceable and priority habitats	Encourage the Council to be ambitious in terms of the protection, enhancement and strengthening of the ecological network and suggest that you include a commitment to the protection of irreplaceable habitats and priority habitats such as lowland fen, within the policy wording.	See our other response re: priority habitats. In relation to irreplaceable habitats, whilst we would contend that it is not necessary for the policy to repeat national policy, we have however incorporated an amendment into the policy wording in response to this comment (and others).	Policy updated for Reg 19.
G6 - LNRS	Encourage the Council to consider the Oxfordshire Nature Recovery Network and emerging Oxfordshire Local Nature Recovery Strategy. LNRSs have been designed to help local planning authorities deliver existing policy on conserving and enhancing biodiversity and to reflect this in the land use plans for their area. Given that national guidance on LNRSs and their	The Council has sought to ensure the LNRS is reflected in several ways through the Local Plan. We have included specific references to it and the opportunities it identifies within certain site allocations, and have made sure the offsite BNG	No further action proposed at present.

Draft Policy	Summary	Response	Outcome
	relationship to strategic planning is still in development, it is recommended that Local Plan policy recognises and references its support to the delivery of the emerging NRN and LNRS covering the area.	hierarchy references LNRS areas within its steps where onsite BNG is not feasible. Policy G6 protects designated sites which are identified as having existing importance in the LNRS, meanwhile policy G1 protects a network of green spaces, many of which are also opportunity areas for enhancement identified in the LNRS.	

2193

Sports England

Draft Policy	Summary	Response	Outcome
G6	Sport England is concerned about what this policy means for any playing fields or other sports facilities within these designated areas. It is not unusual for grass pitches to be located next to or within local wildlife sites (or similar designations). With reference to the playing pitch strategy and other	The policy relates to mitigating adverse impacts or additional pressures to designated sites that may arise as a result of new development. There are unlikely to be locations where there are permitted established uses that are incompatible with the sensitivities to designated sites.	No further changes proposed.

Draft Policy	Summary	Response	Outcome
	documents that record playing fields and recreation facilities the Council must carefully balance any new policies that could prevent Oxford's residents from enjoying the outdoors and keeping physically active. Often natural areas can benefit humans and nature so encouraging policies that support but must be given appropriate consideration in an urban environment.		

2194

Oxfordshire County Council

Draft Policy	Summary of comments	Response	Outcome
Policy G6 Protecting Oxford's biodiversity	**Strategic Planning** The Oxford Meadows Special Area of Conservation is the largest SAC in the county and much of it lies within Oxford City's boundary. This SAC, together with Sites of Special Scientific Interest and areas identified as at risk of flooding cover much of the other undeveloped land in the City, and therefore these issues are very significant in the Oxford City context. This policy	Noted.	No Action Required

Draft Policy	Summary of comments	Response	Outcome

2195

	establishes the importance of protecting sites in accordance with a hierarchy, which is welcomed. **Landscape and Nature Recovery – Biodiversity** It is appreciated that groundwater catchment areas for Oxford Meadows SAC, Lye Valley and New Marston Meadows SSSI's have been specifically highlighted within this policy. It may be useful to highlight that other designated sites may also be impacted hydrologically, and this should be considered as part of an application. Reference to Road Verge Nature Reserves (RVNRs) as a type of non-statutory designated site would be welcomed within this policy. Further information regarding RVNRs and RVNRs within Oxford city can be found at https://www.oxfordshire.gov.uk/sites/default/files/file/countryside/RVNRSurveyReport.pdf. The supporting text to the policy includes references to the emerging Oxfordshire Local Nature Recovery	We are not considering hydrological evidence for other designated sites. We can consider the inclusion of a reference to this within the policy/ plan. We can consider this if the study is published/ adopted in	No Action Required Oxford City Action: Consider proposed wording going forward. Oxford City Action: Consider proposed wording going forward.

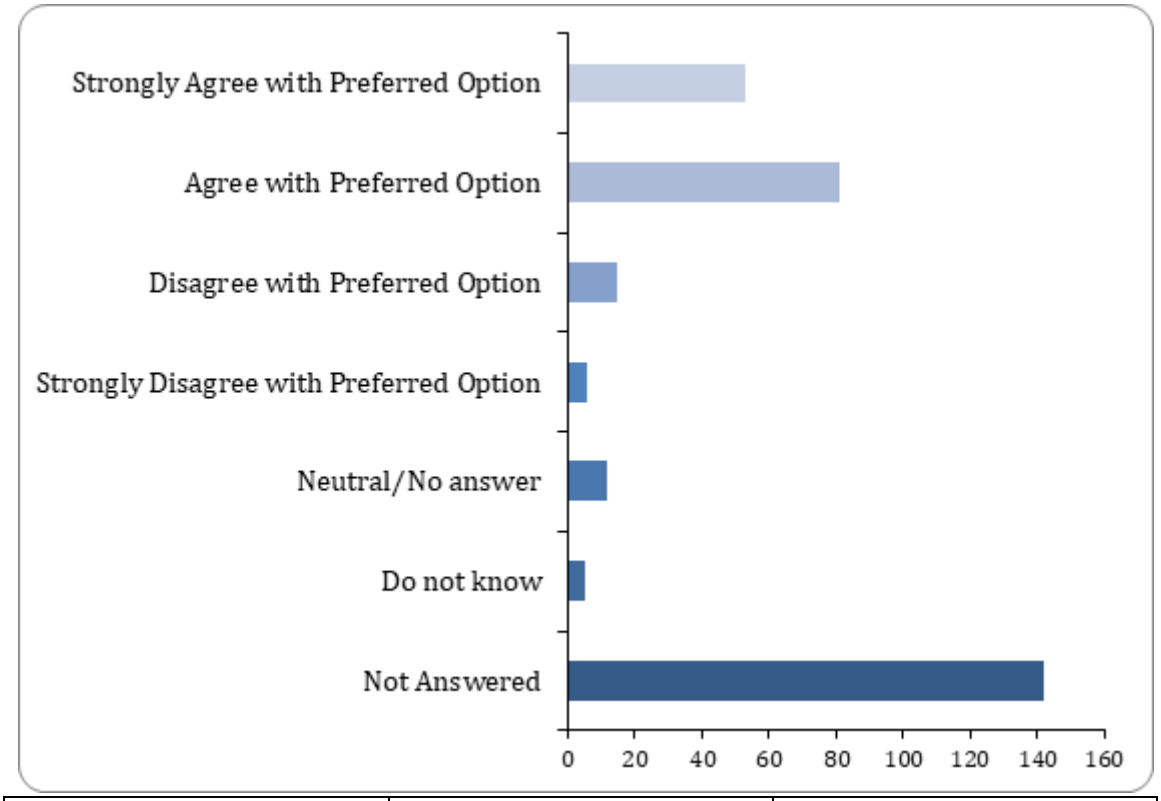
All Public Responses – Draft Policy G7

Flood risk

Please tell us what you think of policy options set 007a (draft policy G7): Flood Risk and Flood Risk Assessments

There were 172 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	53	16.88%
Agree with Preferred Option	81	25.80%
Disagree with Preferred Option	15	4.78%
Strongly Disagree with Preferred Option	6	1.91%
Neutral/No answer	12	3.82%
Do not know	5	1.59%
Not Answered	142	45.22%

Draft policy	Topic	Summary of comments	Response
G7	Policy is ineffective	Policy is ineffective as development in Flood Zone 1 areas has caused by run-off repeated flooding in Flood Zones 2 and 3. All development must demonstrate net-zero greenfield runoff rates to stop downstream flooding. Increasing and intensive urbanisation including from transport infrastructure is a far greater cause of floods than climate change, yet it is not even acknowledged. Requirement of a proportional FRA for all flood zones including offsite cumulative risk, as well as ensuring that sites in Flood Zone 1, that are surrounded by Flood Zone 2/3 land would still require safe access/ egress during a flood event.	All sources of flooding must be considered for any site including risk of surface water flooding in Flood Zone 1. The Level 1 SFRA considers the cumulative impact of development on flood risk within the catchment. Safe access/ egress to the site would be assessed as part of the planning application.
G7	Preferred Option	Agree with Preferred Option, but not with point k), as redevelopment should be allowed to encroach into Flood Zone 3b as it could still result in a decrease in flood risk through careful design.	The Environment Agency has been clear that this approach is unacceptable. Careful design can avoid redevelopment of a site encroaching on Flood Zone 3b.

2200

G7	Support Alternative Option 1	Strongly agree with Alternative Option 1 - prevent development of greenfield sites within flood zone 3a, but with specific exemptions (e.g. for allocated sites).	National policy does allow for some types of development in Flood Zone 3a but for more vulnerable development such as housing, the Exception Test

Draft policy	**Topic**	**Summary of comments**	**Response**
			would be required and need to be passed.
G7	Support Alternative Option 2	Strongly support Option 2 - just rely on national policy. This policy should only include locally specific flood risk mitigation requirements that are not previously covered in national policy. National policy already demands a sequential test, an exception test and site-specific FRAs. The requirements in Policy G7 would add blanket FRAs for a minor development in the city which is considered too onerous and would slow brownfield intensification.	Oxford has a unique flooding environment and particular constraints on development in the city. There is a risk that a more generalised approach misses opportunities to address this.

2201

G7	Do not allow development in the flood plain	No development should be allowed on the flood plain. They are also important ecological habitats for nature plants, insects and animals.	This approach could restrict opportunities for utilising land for other uses, e.g. to meet the city's housing need, which could come forward designed in a way that is safe from flooding, does not displace flood risk elsewhere, and is in accordance with the NPPF.
G7	Do not allow development in Flood Zone 3	No development should be allowed in Flood Zone 3b. Should be a ban on development on low-lying Flood Zone 3 land as flood defences do not protect against groundwater flooding.	This approach could restrict opportunities for utilising land for other uses, e.g. to meet the city's housing need, which could come forward designed in a way

2202

Draft policy	Topic	Summary of comments	Response
			that is safe from flooding, does not displace flood risk elsewhere, and is in accordance with the NPPF. All sources of flooding must be considered for any site, including groundwater.

G7	Climate change not considered	The whole plan envisages much too much development on land prone to flooding e.g. many of the specified sites. Climate change means there will be an increased risk of storms and flooding, and the categorisation of land may already be out of date. It is unreasonable to expect residents or businesses whose neighbouring property becomes liable to flooding to suffer this so that developers can benefit from building on flood prone land.	National guidance is clear that flood risk must be considered now and for the lifetime of development – climate change projections are considered.
G7	Other sources of flooding	Applicants should be required to consider flooding from all sources, not just fluvial. Additional controls are required re basements which should be forbidden in 3b and 3a where fluvial flooding has occurred in last 10 years. Assumptions must be made that flooding will become more frequent, both fluvial and pluvial, as evidence is already suggesting. The flood risk maps do not adequately take account of pluvial flood risks, especially where	National policy and guidance dictates that all sources of flooding must be considered. In March 2025, the Environment Agency updated their mapping for flood risk which included showing surface water flood risk.

2203

Draft policy	**Topic**	**Summary of comments**	**Response**

		large scale development has taken place in the neighbourhood.	The policy states that proposals for basement accommodation within Flood Zone 2 or 3 will not be permitted due to the unacceptable additional risks associated with this type of accommodation.
G7	Importance of natural flood prevention measures	Any natural flood prevention measures such as tree planting and rewilding would be preferable to more concrete and drains. Policy needs to stress more clearly that the biodiversity value of the SuDS scheme must be maximised. Water that is currently retained by the extensive vegetation and the clay soil such as at North Oxford Golf Club will enter the drainage system so much more quickly in the future once it is developed.	Draft Policy G8 addresses Sustainable Drainage Systems (SuDS) and the importance of green SuDS.
G7	Canal & River Trust	Navigation authorities should be consulted by the local planning authority concerning sites adjacent to, or which discharge into, canals – especially where these are impounded above natural ground level. Happy to help with the evidence for the SFRA where possible, despite the PPG not	Noted.

2204

Draft policy	Topic	Summary of comments	Response
		specifically recommending consultation with the Canal & River Trust.	

Environment Agency

Draft Policy	Summary of comments	Response	Outcome
Policy G7 Flood Risk and FRAs	Suggested a couple of minor changes to the wording in the policy in respect of criteria e) and n).	Agree with the suggested amendments.	Criteria e) and n) of the Policy has been amended to incorporate the suggested wording.
	Detailed comments were received in respect of the OFAS (Oxford Flood Alleviation Scheme), Strategic Flood Risk Assessment (SFRA) and the proposed site allocations.	Noted – work is ongoing to resolve comments.	These comments will be addressed in detail in the Statement of Common Ground

	The reference in the policy to the multi-functionality of SUDS is supported. It is recommended that SUDS are designed in a way that they are attractive spaces that offer landscape, visual, ecological and recreational benefits	Noted.	No Action Required

Thames Water

Draft Policy	Summary	Response	Outcome
G7 Flood risk	Generally support Policy G7 as it is in general accordance with the NPPF and the PPG, particularly support the reference to sewer flooding.	Support welcomed.	N/A
G7 Flood risk	Flag that often infrastructure for sewage treatment is located close to rivers. It is likely that these existing works will need to be upgraded or extended to provide the increase in treatment capacity required to service new development. Flood risk sustainability objectives should therefore accept	Noted.	N/A

Draft Policy	Summary	Response	Outcome
	that water and sewerage infrastructure development may be necessary in flood risk areas.		

G7 Flood risk	Flood risk policies should also make reference to 'sewer flooding' and an acceptance that flooding can occur away from the flood plain as a result of development where off site sewerage infrastructure and capacity is not in place ahead of development.	The policy is clear that applicants need to consider flooding from all sources, which would include sewer floording. It also sets out that an FRA should demonstrate that the proposed development would not increase flood risk offsite;	No further change proposed at this time.

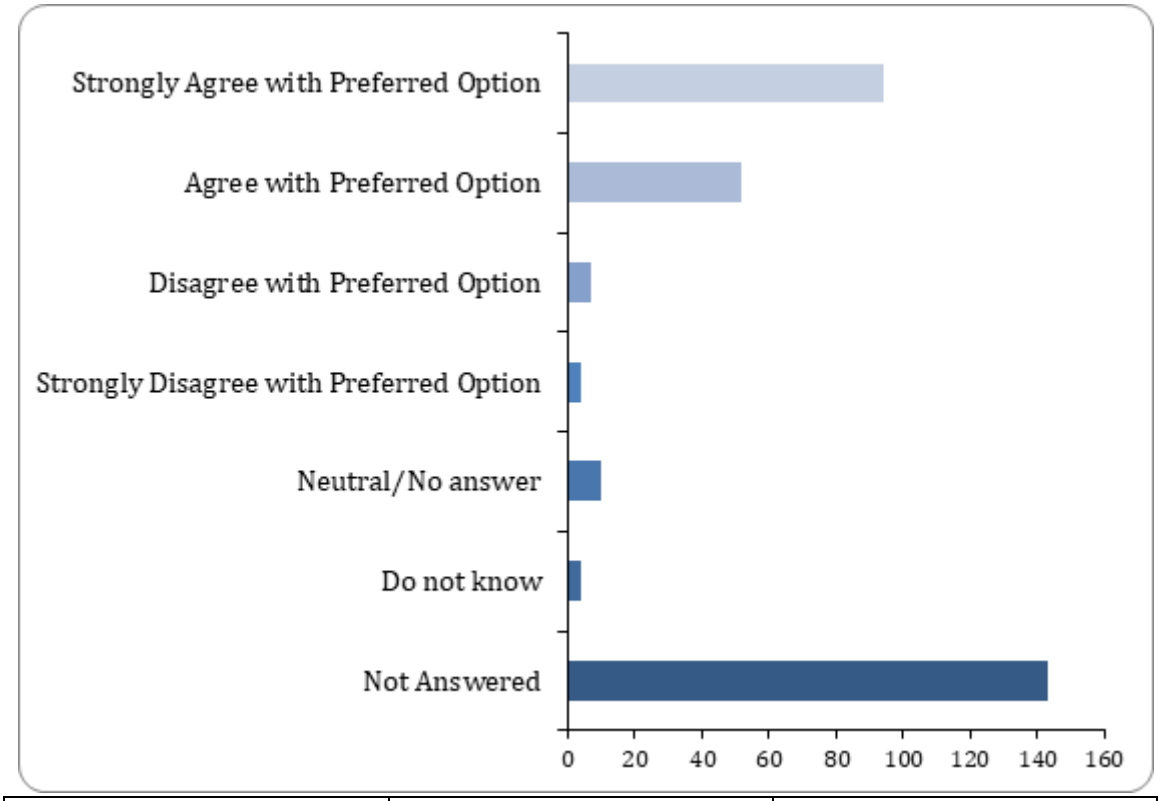
2208

All Public Responses – Draft Policy G8

Sustainable Drainage Systems

Please let us know what you think of policy options set 007b (draft policy G8): Sustainable Drainage Systems (SuDS).

There were 171 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	94	29.94%
Agree with Preferred Option	52	16.56%
Disagree with Preferred Option	7	2.23%
Strongly Disagree with Preferred Option	4	1.27%
Neutral/No answer	10	3.18%
Do not know	4	1.27%
Not Answered	143	45.54%

Draft policy	Topic	Summary of comments	Response
G8	Additions to Preferred Option	Developers should first be encouraged to integrate closed-loops systems into their designs, such as systems to catch and clean or reuse greywater (e.g. handwashing and showers to flush toilets); urine-diversion dry composting toilets; rainwater harvesting. Object to discharge to a combined sewer even in exceptional circumstances. This should not be built in at the design stage.	Noted. This is at the bottom of the drainage hierarchy, and it is expected that applicants would need to sufficiently demonstrate why all other options would not be possible.
G8	Support Alternative Option 1	Development should not be allowed on sites where SuDS are not feasible. There should be no exceptions from the requirement to provide for satisfactory drainage of all new properties. There is a danger that arguments for sites not being feasible will be put forward. Do not rely on national policy – should be done locally as requires local knowledge.	The draft policy echoes Paragraph 181, bullet c) of the NPPF (2024) which expects SuDS to be incorporated as part of any planning application *"unless there is clear evidence that this would be inappropriate".* Support for additional details is welcomed.

G8	Support Alternative Option 2	Do not include a policy about SuDS but rely on national policy instead.	Guidance in national policy about SuDS is limited in terms of 'good design' and regarding wider objectives (e.g. water

Draft policy	**Topic**	**Summary of comments**	**Response**
		National guidance already obliges major schemes to incorporate SuDS and demonstrate they mimic natural run-off. Draft Policy G8 would go much further, demanding SuDS on every application and banning grey SuDS. The cost of this would mean very little brownfield development in Oxford would come forward.	quality). The policy provides additional detail, e.g. design standards which are specific to Oxford.
G8	Local requirements	Reduce the mandatory development site size for SuDS to 50/5000sqm/100, especially where upstream from previously flooded downstream sites. 100 dwellings far too high. 20 would be better.	As per the NPPF (2024), SuDS should be incorporated as part of any planning application unless there is clear evidence that this would be inappropriate.
G8	Grampian condition required	A Grampian condition for all development in Oxford should be required to ensure Thames Water can manage surface runoff.	It is not practical to do this - each planning application is assessed on their own merits.

G8	Green SuDS and drainage hierarchy	Add that actual SUDS mean areas of vegetation - preferably including trees - to ensure long-term drainage effectiveness. Without enforcement, SUDSs are alleged rather than effective. Actively discourage the use of paving or decking. Encourage use of water butts to capture rainwater and then use it to water gardens. This reduces the	The draft policy can only apply to new development, but green SuDS are prioritised. Any new proposals must submit a maintenance plan demonstrating how SuDS will be managed and remain effective for the lifetime of the development.

2213

Draft policy	Topic	Summary of comments	Response
		amount of water in drains and allows absorption of surface water.	Drainage hierarchy in this policy prioritises storing rainwater for later use.
G8	Drainage concerns in Lye Valley	No further development (including house extensions) should be permitted to connect to the Thames Water sewer network within the Lye Valley fen catchment. Smaller extensions are only acceptable if they connect to a soakaway but not into the surface water drainage system. SuDS infiltration in Lye Valley is insufficient as a replacement for loss of natural surface cover.	It is not practical to have a blanket ban on development in the Lye Valley. Each planning application is assessed on their own merits. The draft Policy acknowledges that infiltration will not always be the most suitable means of SuDS.

G8	Inconsistency with national policy	Para.182 of the NPPF states that SuDS should be "*proportionate to the nature and scale of the proposal*". It is not proportionate to require all development proposals to provide SuDS and the caveat "*where feasible*" does not appropriately cover the conditions where SuDS would not be required.	The draft policy echoes Paragraph 181, bullet c) of the NPPF (2024) which expects SuDS to be incorporated as part of any planning application "unless there is clear evidence that this would be inappropriate".
G8	More flexibility in policy required	Draft policy is too rigid. Below ground features should be allowed in situations where site constraints exist e.g., groundwater, contamination, land-use efficiency, whilst still enabling SuDS to be used where appropriate.	Green SuDS are often considered at too late a stage in a scheme. If they are considered in the conceptual and design stages, they are more likely to be able to be well-designed into
Draft policy	**Topic**	**Summary of comments**	**Response**
			the proposal. They can provide a multitude of benefits that grey SuDS can't, including providing open space for recreation, habitats to support wildlife and adaptation to other climate hazards such as overheating.

2214

Draft Policy	Summary	Response	Outcome
	existing (older) surface drainage systems with sustainable urban drainage systems (SuDS).		

Statutory Consultee Responses – Draft Policy G8

Natural England

Draft Policy	Summary	Response	Outcome
G8	Fully support the requirement for SuDS on all new development. Recommend that SuDS are linked up wherever possible (including with other greenspace) to achieve greater benefits for water management and wildlife, to contribute to green infrastructure and support robust ecological networks. Given the risks to water quality which can be presented by antiquated drainage systems, also advise considering whether developments could be supported and encouraged to replace	Welcome the support and agree with the comments, though we would suggest these are better placed in supporting guidance which could help in implementing the Local Plan's requirements.	Consider how these points could be picked up in a future Technical Advice Note in due course.

Oxfordshire County Council

Draft Policy	Summary of comments	Response	Outcome

Policy G8 SuDS	**LLFA** The policy refers to the Local Standards produced by the LLFA. This reference should be removed and/or replaced in the policy text with reference to any National Standards. The local standards are currently being reviewed following the DEFRA update Standards on 19th June 2025 and could be considered to not be up to date. Where a policy relies on these standards it needs to be able to be updated as the standards may develop further in the future.	We can consider how to address this issue. However, presumably once the LLFA standards have been updated, there will be no longer a need to rely on the national standards?	Oxford City Action: Consider proposed wording going forward.

Thames Water

Draft Policy	**Summary**	**Response**	**Outcome**
G8 SuDS	Support Policy G8 in principle. Flag that it is the responsibility of the developer to make proper provision for drainage to ground, watercourses or	Noted – the SuDS policy sets out various requirements which seek to ensure an	No further change proposed at this time.
Draft Policy	**Summary**	**Response**	**Outcome**
	surface water sewer in accordance with the drainage hierarchy.	appropriate drainage strategy is pursued including prioritising green, multifunctional SuDS features where possible before other options.	

2216

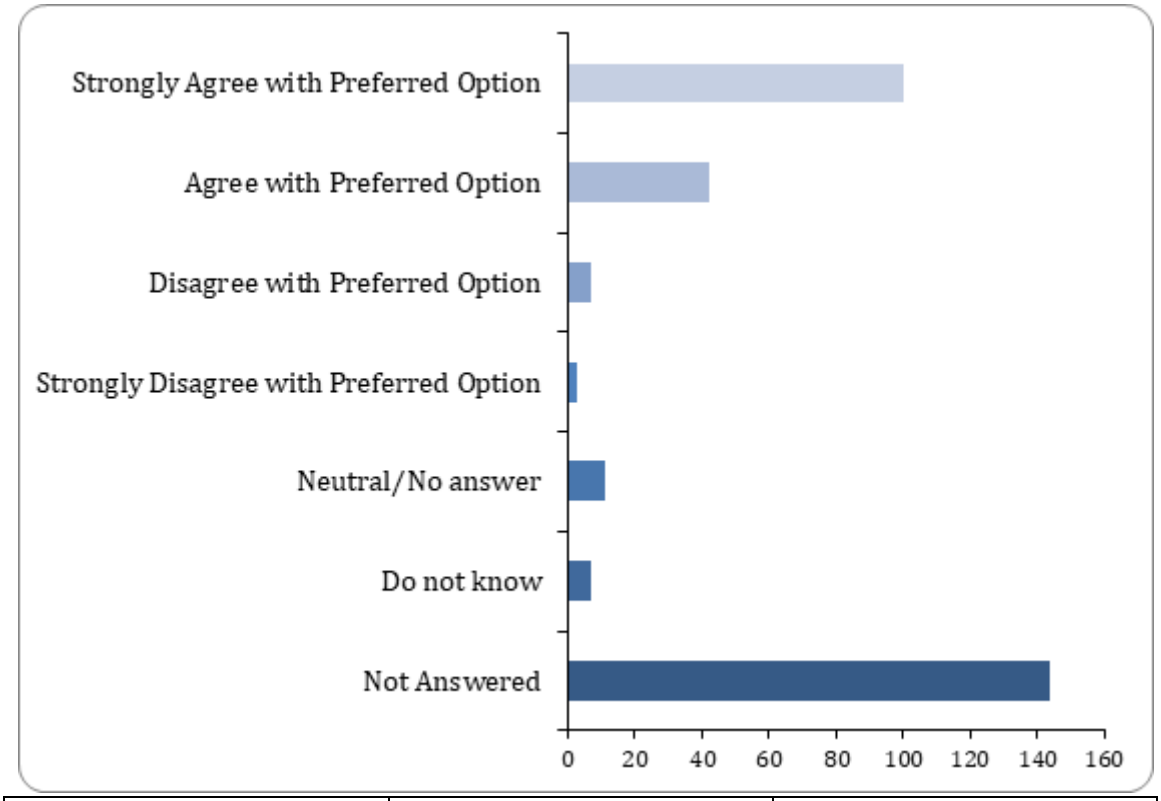
G8 SuDS	Limiting the opportunity for surface water entering the foul and combined sewer networks is of critical importance to Thames Water. Thames Water have advocated an approach to SuDS that limits as far as possible the volume of and rate at which surface water enters the public sewer system.	Policy R5 – water resources and quality sets out requirements for separating foul and surface water on new development and encourages applicants to take opportunities to separate these on existing development.	No further change proposed at this time.
G8 SuDS	Flag that SuDS don't just help with flooding but also improve water quality; provide opportunities for water efficiency; provide enhanced landscape and visual features; support wildlife; and provide amenity and recreational benefits.	Agreed, the policy context (supporting text) will set this out clearly.	Updated policy to be published as part of Reg 19.

All Public Responses – Draft Policy G9

Resilient design and construction

Please tell us what you think of policy option set 008d (draft policy G9): Resilient design and construction.

There were 170 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	100	31.85%
Agree with Preferred Option	42	13.38%
Disagree with Preferred Option	7	2.23%
Strongly Disagree with Preferred Option	3	0.96%
Neutral/No answer	11	3.50%
Do not know	7	2.23%
Not Answered	144	45.86%

Draft Policy	Summary	Response	Outcome
G9	Preferred option	Support option 1 - Promote sustainable development, climate adaptation, energy efficiency and offsetting adverse environmental effects. More likely to ensure requirements are not watered down in practice.	Noted
G9	Preferred option	Comments in support of option 1, other comments were expressing support for 2 and/or option 3.	Noted – the background paper set out the rationale for the Council's preferred option.
G9	General support for the policy	All elements covered by the policy are extremely important.	Noted – support welcomed.

G9	Adaptation should be prioritised over carbon reduction.	Climate adaptation (to overheating, rain) should take priority over carbon footprint.	Noted – however, we do not consider it to be an 'either/or' choice. There are important reasons to pursue both aspects of the climate change response. Cutting emissions helps to avoid impacts of more pronounced hazards in future, but adapting to risks now helps to lessen their impacts, particularly where these cannot be avoided, and can secure multiple other benefits for people.

2221

Draft Policy	**Summary**	**Response**	**Outcome**
G9	Need for proportionality for minor development.	Policy objectives are reasonable but also important to ensure proportionality of such requirements for minor developments or they will be unaffordable.	Noted – whilst the policy sets out the key things an application should respond to, it is flexible in the level of detail an application should provide, allowing this to be proportionate to the scale of the development.

G9	Additional costs for residents	Concern about more costs imposed on residents.	See response above re: the flexibility allowed for in how applicants respond to requirements. We would add that incorporating these resilience measures into a development during construction should be cheaper and easier than retrospectively trying to incorporate these into a building in future after it has been constructed. A resilient development can also help to save occupants in terms of the costs that could arise when a hazard like flooding or overheating hits by lessening the impact and helping to recover quicker.
G9	No need for local policy and/or concern	Should defer to national requirements. Some requirements e.g. Noise, lighting, dust and fumes are already tightly	Concerns noted, however, the Council considers the policy to take a pragmattic and proportionate

Draft Policy	**Summary**	**Response**	**Outcome**

2222

	about additional complexity to planning process	controlled through the NPPF, Building Regulations, the Environmental Protection Act and construction-management conditions. Bespoke local rules simply repeat those safeguards while forcing applicants to commission yet another impact statement and negotiate yet another set of mitigation measures, increasing cost and delay without delivering any extra protection. Concern about more complexity in planning process and whether the Council will have resource to assess applicants' submissions or defend the requirements.	approach to ensuring new development is designed to incorporate resilience to current and future climate change. This responds to the increasing climate change risk that faces the city (and the fact that Oxford is already at increased risk compared to other areas in the county). Whilst some requirements may be nationally set, other elements are not enforced nationally. The policy is clear that where evidence has been produced to meet other requirements, this can be referenced. It also helps to ensure that other elements of climate risk are considered.
G9	No need for local policy	Comments expressing no need for local climate policies, or that the Council should not meddle and should leave decisions to developers and their investors – no further reason given.	Noted – see earlier responses which set out why we consider this policy to be important.

Draft Policy	**Summary**	**Response**	**Outcome**

G9	Requirements should be stronger for new build and retrofit.	Requirements for new build/retrofits to have solar PV, heat pumps, green roofs in selected location should be made stronger.	These requirements are set out in other policies e.g. R1 deals with requirements for renewables and G2/G3 deal with requirements for additional greening.
G9	Policy should have defined catchments	Policy needs to define catchment ranges over which its requirements apply.	The policy applies across the city though certain risks will be higher in certain areas depending on proximity to certain hazards (e.g. flood plain).
G9	Requirements should apply to all sites/development	Requirements should apply to all sites/developments.	Noted – the policy applies to all proposals excluding householder applications (though these may be subject to other requirements elsewhere in the Local Plan). There is, of course, nothing preventing householders from following the principles of the policy also, and this would be encouraged.
G9	Assessments/mitigations should be informed by expertise	Assessments/mitigations should draw upon the (funded) expertise of local environmental charities i.e. BBOWT and Earth Trust.	The policy does not specifically flag particular stakeholders that applicants should engage with as this could change throughout the plan's lifetime and will also depend on the

2224

Draft Policy	Summary	Response	Outcome
			context of each application. Where necessary, applicants may of course benefit from additional expertise to inform particular aspects of their application and this would help in evidencing how they have met the requirements.
G9	Support addressing risks of overheating	Experience of working in buildings constructed before concerns about heatwaves/overheating were common shows that preparing for these impacts is essential. Some classrooms becoming unusable in heatwaves. Need good design/ventilation as well as trees to mitigate impacts.	Noted – the policy emphasises the need for addressing overheating and having a cooling strategy (addressing inside and outside exposure to heat) as one of its criteria.
G9	Should assume future impacts will be worse	Should assume that the worst floods in the future will be worse than those in the past.	In principle, this would align with a precautionary approach, although the picture of how flood risk is likely to change in future depends on various factors and will not be the same everywhere. We have incorporated wording into the introduction to the subsection of the chapter containing policies G7-

Draft Policy	Summary	Response	Outcome
			G9 which flags to applicants how we expect climate hazards in the city to worsen over time.
G9	Development in flood plain not suitable	Site which is part of a flood plain such as Marston Rd. and land behind and surrounding St. Clements Church seems not to be a good candidate for building on.	Where proposing development in areas of flood risk, applicants will be expected to follow the requirements of the Local Plan's flood risk policy alongside this policy.
G9	Require ground water and surface water studies	Require professional ground water and surface water studies and their impacts on ALL developments.	This is not considered to be a proportionate approach – some development has more risk of adverse impacts on ground water or surface water than others. Other policies set out requirements for additional evidence where necessary in response to potential impacts e.g. on flood risk (G7) or ecology (G6).
G9	Groundwater	Do not address ground water / Do not address ground water and surface water impacts on sensitive sites.	See response above

Draft Policy	Summary	Response	Outcome
G9	Excess water demand and hosepipe bans	Already have excess water demand and hosepipe bans.	The Local Plan includes a separate bespoke policy on water resources and water quality (policy R5). This policy cross refers to that policy and emphasises the need for water saving measures in light of added stresses on resources that are expected as summer become hotter and drier in future.
G9	Lye Valley	Current drainage flowing into Lye Valley needs to be assessed. Development is the biggest threat to the Lye Valley and should not be permitted. Lye Valley is an amazing resource and should definitely be strongly protected.	See responses against policy G6 in relation to Lye Valley. The policy applies to all proposals excluding householder development, wherever they are proposed in the city. Particular areas are neither scoped in or out of where the policy applies.
G9	Extend same approaches for Lye Valley to wider city.	Agree with approach and flag that what is good for the Lye Valley could and should become applied throughout the Oxford City Council area.	Noted – in a general sense this may be true, however, there could be other contextual considerations which will impact levels of climate risk in different parts of the city and

			should inform the interventions incorporated

Draft Policy	Summary	Response	Outcome
			into a development to address climate change hazards.
G9	Protect green and blue infrastructure	Protect our green and blue infrastructure at all costs.	Separate policies in the Local Plan seek to protect the green infrastructure network (see policy G1 in particular). The supporting text to G9 will also emphasise the valuable role green features can provide for adaptation.
G9	Policy should apply to sensitive nondesignated sites	Should apply also to sites that are sensitive but not currently designated as protected/sensitive sites.	As per earlier response, the policy applies to all proposals excluding householder development, wherever they are proposed in the city. Particular areas are neither scoped in or out of where the policy applies.

G9	Overdevelopment in city	Concerns about overdevelopment in the city.	Concerns noted, however, new development is a necessary part of how the city will continue to function and support residents and businesses in the future. The Local Plan's role is ensuring that this development comes forward in the right way. The policies of the Plan need to be read as a whole. There are a
Draft Policy	**Summary**	**Response**	**Outcome**
			range of policies throughout chapters 4 and 5 which seek to mitigate the impacts of development, and/or secure improvements in the environment.
G9	BBOWT	Concern that the wording of Policy G9 does not seem to refer to and/or conflicts with the need for protections for Lye Valley and Lowland Fens habitats more generally.	The policy has a completely different focus – specifically, it is about driving more climate resilient design in new development. Protections for the Lye Valley and other habitats are dealt with through other policies – e.g. policy G6.

All Public Responses to the Whole of Chapter 4

Draft policy	Topic	Summary of comments	Response
Chapter 4	Explicitly state that greenfield will only be developed if no brownfield sites are available/meet needs	The consultation for the 2040 Local Plan in 2022 included this policy option: "Option for policy approach - Allow development on greenfield sites only if no brownfield sites are available and needs are not being met on brownfield sites." which BBOWT supported. We would have welcomed a similar option being available in this 2042 Local plan consultation. In considering this policy area we ask that the Council takes into consideration that in the report for the Issues Consultation for the Local Plan to 2040, 81% of respondents rated: "Safeguarding the natural environment and its wildlife habitat" as being "Very important", and that in total 96% of respondents rated it as being either "Very	A number of growth strategies are considered in the Sustainability Appraisal. Ultimately, the approach taken by the Plan is that all green spaces have been considered against the GI strategy for the level of protection appropriate to them, and the majority of green spaces in the city are strongly protected because of their value.

2232

Draft policy	Topic	Summary of comments	Response
		important" or "Important". And that 85% of respondents rated: "Preserving open spaces" as being "Very important", and that in total 98% of respondents rated it as being either "Very important" or "Important". Comparing these questions to all of the other questions that were structured in the same way in the 2040 Local Plan consultation, these two showed by far the highest % in the "Very important" category. We ask that Oxford City Council responds to this very strong indication from the people of Oxford of how important to them biodiversity and green spaces are by taking forward in the next stage of the plan policies that are exemplary and ground breaking in facilitating both the protection and enhancement of the biodiversity and green spaces of Oxford, protecting both accessible green spaces and those that are not open to the public. The survey for the 2042 Local Plan now under development gave the following results indicating very strong support for protection and enhancement of biodiversity in the City: "72.43% of respondents declared biodiversity to be very important them and	

2233

Draft policy	Topic	Summary of comments	Response
		15.68% declared biodiversity to be slightly important to them."	
Chapter 4	Supportive	Cyclox support all policies in this chapter	Support is noted and welcomed.
Chapter 4	Supportive	We very strongly support all these policies, especially E1 Protection of green infrastructure which we believe should be given very strong weight, reflecting the importance of Oxford's network of green spaces to the character and setting of the city, the well-being of its inhabitants and climate resilience. There should be clear recognition that existing green spaces are a finite resource, not easily recreated when lost or damaged.	Support is noted and welcomed.

2234

Chapter 4	General comment – Greater Oxford Nature Park	Oxford is not only important because of its urban wildlife, but also because of the access to these green spaces. The majority of these sites are publicly accessible, with footpaths along the Cherwell winding through the extent of central Oxford. I have regularly been able to lead wildlife education sessions here for both adults and students from primary school age to master's degree level. This is an incredibly important aspect of working in Oxford's green	Proposals for the Greater Oxford Nature Park is part of wider proposals for the Greater Oxford authority area, which is beyond the scope of the current consultation.

2235

Draft policy	**Topic**	**Summary of comments**	**Response**

		spaces – everyone should be able to share, enjoy, and learn within them. Despite impressive efforts from education officers in organisations such as the Oxford Earth Academy, there remains much potential for wider outreach and education across the green space in Oxford. With the new Local Plan, there is a remarkable opportunity to join up and uplift these important green fragments across the city. It is critical that these green spaces are protected from the impacts of future development in Oxford. Damaging developments have already progressed despite major losses in biodiversity and in access for people to green space, such as in Spindleberry Nature Park in East Oxford.	
Chapter 4	General comment – Greater Oxford Nature Park	I am supporting the suggestion that is being discussed by a growing number of people that we need to value our green spaces in and around the city for nature based education. To be effective these spaces need to be accessible from schools and communities, biodiverse and	Proposals for the Greater Oxford Nature Park is part of wider proposals for the Greater Oxford authority area, which is beyond the scope of the current consultation.

Draft policy	Topic	Summary of comments	Response
		varied, connected with wildlife corridors to other sites to maintain biodiversity as this expands the effective space for species that need space, and large and diverse enough to cope with the numbers of young people in the city that need access to green spaces. Oxford has a really valuable asset in its 75+ green spaces which have a good level of biodiversity across the city. We could recognise these as a Greater Oxford Nature Park and develop a nature education strategy to boost the skills of our young people.	
Chapter 4	General comment	Please keep Oxford green and do not develop the green spaces around, thanks	Comment noted.
Chapter 4	General comment	Definition needs to be wider to include meadow, grassland, scrub, abandoned brown field site. All biodiverse sites and the connections between them.	Comment noted.

Chapter 4	Climate change and biodiversity	A network makes a lot of sense, and should be linked as much as is feasible. Climate change and the biodiversity crisis is by far the biggest	Comment noted.

Draft policy	Topic	Summary of comments	Response
		challenge we face... Too often planning application include a lot of greenwashing - it is difficult to quantify biodiversity loss and how to offset it. There could be a department employing ecologists... I am generally supportive of all things green. Hope you include schemes such planting pollinator friendly species, severely limit the use of pesticide, get on top of water pollution wherever possible, and so on.	

2238

Chapter 4	Policies do not align with plan objectives	The perceptive and sympathetic comments re: value of green spaces to the community and wildlife contrast strongly with the draft policies which allow developers to get around any planning constraints in respect of green spaces. Draft policies do not sufficiently protect our green spaces and wildlife from development - to the detriment of our community, environment and wildlife itself. The Draft Plan's approach is largely homocentric, concentrating on how a green	The plan introduces a Green Infrastructure (GI) Network and categorises green and blue spaces "Core", "Supporting", and "All other". This evidencebased categorisation provides an appropriate system of protection across the entire network as the most valuable green spaces are protected.

2239

Draft policy	**Topic**	**Summary of comments**	**Response**

		space benefits people rather than on its intrinsic value to wildlife itself. To develop land – whether for housing or other uses – is to privatise it. This Local Plan will result in privatising land which should be publicly accessible and depriving the community of amenities which benefit them. The Draft Local Plan prioritises development over the health and well-being of its citizens. This is not acceptable. It is not what people want.	
Chapter 4	Statutory weight of policies	Other concerns are held about the exemptions built into these policies. Having developed strong policies, we do not want developers to be able to easily avoid following them. As with other sections in this document, we would like to see more detail on the cases where exemptions to local plan policies will be allowed. We would also like to reiterate the need for developers to maintain biodiversity offsets in the medium to long term, to ensure this net gain is not lost.	Once fully adopted the local plan is a statutory document, and all planning decisions in Oxford will be required be in compliance with the policies it contains. The policies and supporting text will clearly set out the criteria against which proposals will be assessed. Exemptions do not

2240

Draft policy	Topic	Summary of comments	Response
			apply as a matter of course for all policies and where they exist, will be narrowly focussed in order to make the policy more effective while not undermining the overall objective.
Chapter 4	Short survey wording	The statement within the wording of Question 2 of the Short Survey – which states *we think it is important that Oxford is a green biodiverse city….We are protecting our important green spaces and features* – is misleading. This is not what the Council is doing.	Comment noted.

Headlines for Chapter 5:

- General support for policies in this chapter
- Recognising the urgent need for these policies, and those in Chapter 4, to promote sustainable development, climate adaptation, energy efficiency and offsetting adverse environmental effects
- Support for carbon neutral development and more effective building design
- Concerns around carbon offsetting
- Further clarification requested over the scope of the policies
- Support for solar panels on housing and businesses
- Water quality and infrastructure should be a priority, and policies should go further

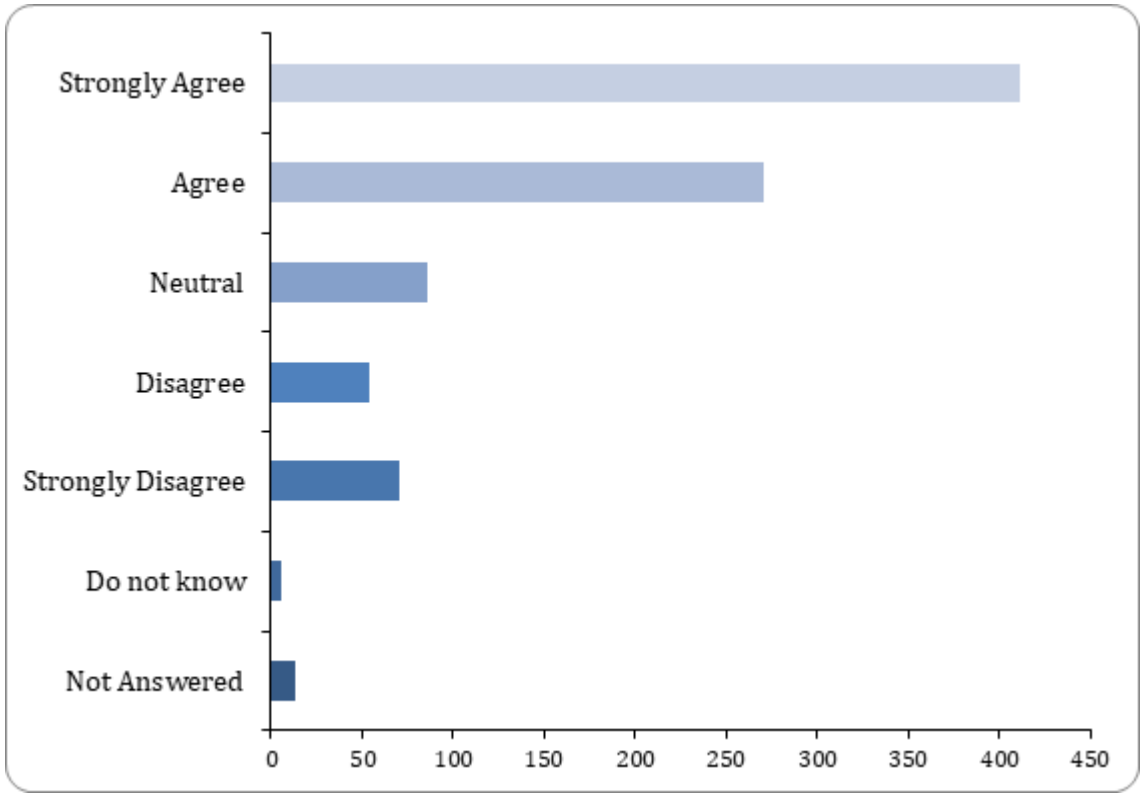
2244

Short Questionnaire Responses

Net zero carbon

We have drafted a policy that requires all new buildings are net zero carbon in operation from adoption of the plan. In a few exceptional cases, payment to offset carbon impacts will be allowed (for example for hospitals, which need to use more energy than it is likely can be generated onsite). To what extent to you agree with this approach?

There were 898 responses to this part of the question.



Option	Total	Percent

Strongly Agree	411	45.12%
Agree	271	29.75%
Neutral	86	9.44%
Disagree	54	5.93%
Strongly Disagree	70	7.68%
Do not know	6	0.66%
Not Answered	13	1.43%

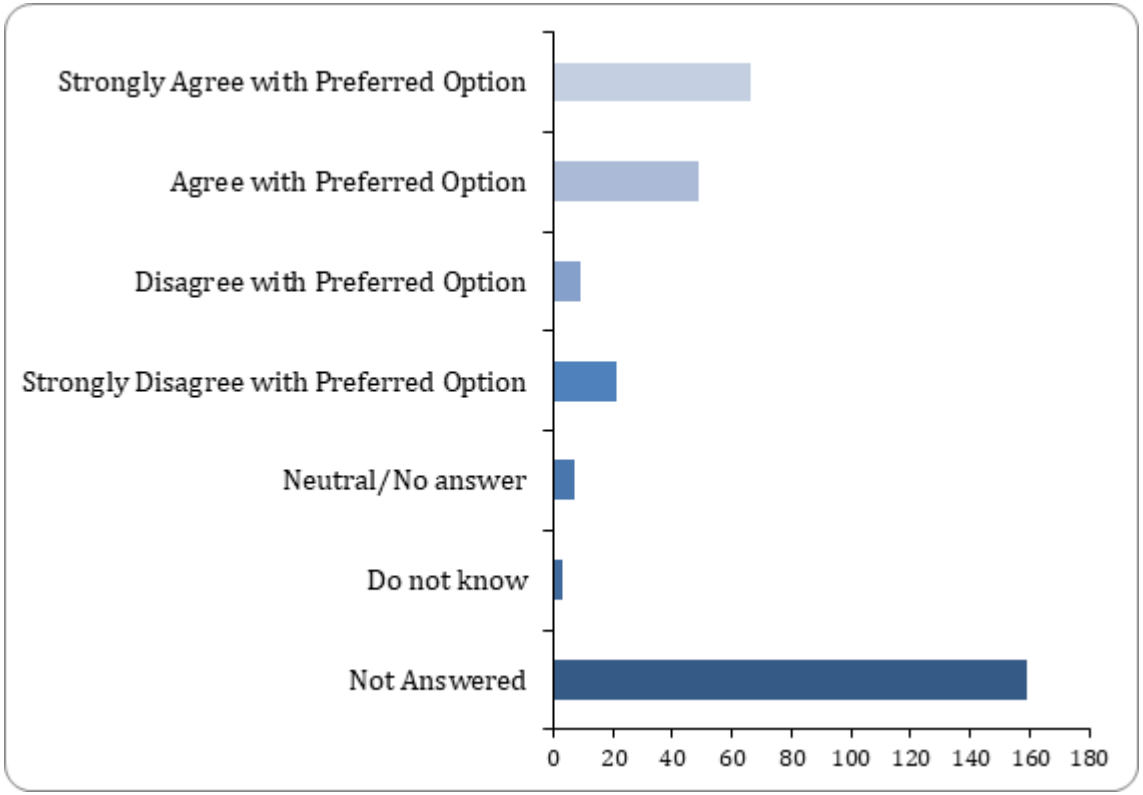
All Public Responses – Draft Policy R1

Please tell us what you think about policy options set 008a (draft policy R1): Net zero carbon buildings in operation. If you have any additional comments please put them in the comment box below.

There were 155 responses to this part of the question.



Option	Total	Percent
Strongly Agree with Preferred Option	66	21.02%
Agree with Preferred Option	49	15.61%
Disagree with Preferred Option	9	2.87%
Strongly Disagree with Preferred Option	21	6.69%

All Public Responses – Draft Policy R1

Draft policy	Topic	Summary of comments	Response
R1	Preferred option	Support for different options in consultation e.g. some flagged support for alternative option 1, whilst others supported option 2.	Noted.
R1	BBOWT	BBOWT strongly agree with preferred option.	Support welcomed.
R1	Support high standards	Support use of the energy efficiency hierarchy. Ambitious targets of measuring energy usage adhere to Passivhaus standards.	Support noted and welcomed.
R1	Welcome wording re: high energy demand non-resi uses	Various comments welcomed the changes to the policy requirements that have been made following previous representations (during Local Plan 2040 preparation), particularly in relation to ensuring that the exceptionally high energy demands of non-residential uses such as R&D/labs/hospitals are acknowledged and that higher EUI targets will be accepted where it is robustly justified.	Noted and support welcomed.

2248

R1	Should incentivise going further	Preferred approach should be minimum, with incentives offered for greener design of buildings.	The policy sets a strong, minimum baseline within the boundaries of what is technically feasible and viable (which we have to ensure to deliver a 'sound' plan through the examination process). We have tried to ensure that climate change is an overarching thread that runs throughout the plan – which emphasise its importance as an issue to be addressed in a variety of ways. Going further than the minimum is of course to be welcomed.

2249

R1	Oxford should lead the way	Oxford should lead the way and is well placed to deliver exemplary design.	Agreed – the strong suite of policies across the chapter as well as elsewhere (e.g. design policies) seek to encourage this.

R1	Policy should go further – all buildings should have solar PV	All new buildings should have solar pv on roof. Easier to install pv during construction than as retrofit. At least require that houses and new buildings have roofs that face the right direction. Buildings should go beyond net zero carbon emissions to optimising renewable energy generation where possible.	Whilst we agree in principle, the policy is technology agnostic in that it does not specify applicants should focus on any one technology. This leaves flexibility to respond to site conditions and also future-proof policy for new technological advances should they emerge. The requirement for matching energy demand through sufficient renewable energy generation seeks to ensure the capacity of microrenewable energy generation increases in tandem with energy demand. Implicitly this will most often be in the form of rooftop solar pv, but could be via other technologies where this could be more sustainable. Nevertheless, all new development should contribute to renewable energy generation, as would accord with the principle of this comment. Going beyond net zero is of course to be welcomed, we

2250

			have ensured that the supporting text

2251

			flags this could be possible in some instances.

R1	Should expand to incorporate BREEAM.	Policy R1 and its Energy Use Intensity (EUI) figures could be expanded upon to create some equivalency to BREEAM UK and/or other standardised measurements of development sustainability that are industry-recognised.	Noted – as the Local Plan is proposing high standards across various sustainability policies it was not considered necessary to require applicants to pursue separate certification, however, we will look to reference best practice standards in our supporting Technical Advice Note and applicants are not prevented from pursuing them if they desire.
R1	Oppose any allowance for applicants to avoid targets.	Strongly oppose any policies that enables applications to avoid the targets. If applications cannot meet the targets - even in exceptional cases - they should be refused. Also concerned about how the Council can enforce whether developers comply with the policy. If they do not comply with the meeting the targets - then strict sanctions should be enforced.	The policy sets out requirements that will need to be met for applicable planning applications. The approach to net zero design however is still evolving and there are potential challenges for certain typologies of development. Therefore, the policy sets out clear approaches to follow in circumstances where the criteria cannot be met. This is considered to be the most transparent and pragmatic way to set out how such situations will be dealt with in the face of

2252

			the known (and unknown) challenges in implementing the

2253

			new policy, whilst also maintaining the strongest position we can on this issue. Applicants would need to submit an energy and carbon statement detailing how they have met these requirements and the permission would be granted subject to a condition that the development is built in accordance with submitted documents. Were an applicant to fail to build in accordance with the condition they could be subject to enforcement action.

2254

R1	Policy goes too far or is wrong priority	Approach is excessive. Net zero is contentious and politically charged. Milder policy needed with focus on adaptation. Oxford has more pressing problems than net zero/carbon reduction. Oxford has negligible impact on climate change. Should fund new technologies if this really is a priority.	National policy is clear that we need to support the transition to net zero by 2050 and take a proactive approach to mitigating and adapting to climate change. The city has a local net zero target of 2040. It is also a legal requirement of the plan-making process which would be tested for as part of examination. Beyond the benefits for reducing impacts on climate change, the policy has other drivers - including air quality (no direct burning of fossil fuels contributing pollutants),
			increasing energy security (more uptake of local generation), and increasing resilience to fuel poverty for occupants.

2255

R1	Policy is wrong priority	Net zero is too expensive. Poverty and erosion of local services should trump eco concerns. Net zero will kill Oxford's economy. Affordable homes should be priority.	The impacts of climate change are unequal and expected to hit the most vulnerable, including those in financial or health deprivation particularly hard because they are less able to absorb or recover from the impacts. As such these concerns are intrinsically linked (it is not one priority instead of another such as affordable housing). See response above for why this policy is important for reasons beyond mitigating climate change impacts. In relation to cost of the policy, its development is informed by viability testing alongside other policies in the Local Plan.
R1	If not net zero right now, should push for net zero ready.	As well as off-setting, should require that buildings that cannot be fully carbon zero right now, be designed in such a way to facilitate becoming carbon zero at a future date e.g. capacity to install a heat pump or other.	Agreed. The energy offsetting requirement does not replace the need for meeting the other criteria of the policy – including no fossil fuels – which would ensure it is net zero ready.
R1	Requirements are too onerous	Concerned that these requirements would be too onerous and discourage new development.	This could be in relation to a couple of factors. Too onerous to

2256

			achieve technically or in terms of ensuring a development is financially viable. On the first issue, the literature review included in the evidence base sets out the range of evidence from across the country that net zero in operation is technically feasible on many types of development. Where there could be challenges, we have included mechanisms in the policy – e.g. allowance for offsetting. On financial viability, the whole plan viability report details the testing of the policy alongside other requirements in the Local Plan which has informed the policy approach.
R1	Agree no fossil fuel should be allowed	Comments agreeing we should permit no fossil fuel use in new buildings.	Noted, welcome the support.
R1	Fossil fuels should be available as an alternative	Fossil fuels should be available as an alternative in case of power outages.	Noted. The policy aligns with local and national objectives.

R1	Wood-burning stoves	Would net zero houses ban open fires or wood-burning stoves? Another comment that wood-burning needs to be addressed through advertising and public education.	The policy sets the requirement for net zero development – it does not prescribe specific methods of heating which should be used to achieve this. Separate policy on air quality would also
			apply and any application proposing wood burning would need to comply with that as well as other local requirements – e.g. the city's smoke control zone which was expanded in 2024.
R1	Onsite renewable energy preference to meet energy balance	Concern that the high energy needs of some types of development (e.g. labs, life science buildings), mean it is wholly unrealistic for all energy needs to be met through onsite renewables. Non-residential uses will inevitably be required to pay an 'energy offsetting' fee.	Noted, however, meeting energy demand through energy that is generated renewably is a key component in net zero carbon design. The policy is as flexible as possible about how this is achieved. It does not require energy demand to be met through renewables onsite only, other options are allowing applicants to utilise offsite locations elsewhere in the city, or paying into the offset fund.

2258

R1	Onsite renewable energy preference to meet energy balance	Requirement that all energy needs are to be met on-site through renewables before looking to offsite options is inefficient (e.g. requires designing for peak demand and would often lead to a lot of excess energy being sent to an already congested grid) and could mean the energy is simply wasted. Approach is also costly and will affect financial viability.	Matching energy demand with renewables, ideally onsite, is a key element of net zero carbon buildings in operation. The policy does allow for offsite solutions where matching energy demand through renewables onsite is not fully feasible.
R1	Onsite renewable energy preference to meet energy balance	Restrictions on sites with valuable heritage may not be appropriate for on site generation, further restricting the options available to the applicant.	The policy does not require all renewable energy demand to be met onsite, this is just the preference to reduce need for
		Another comment flagged the concern that the requirement to achieve energy generation to match needs on site is in conflict with other policies of the plan (such as Policy HD8, which seek to ensure best and efficient use of land.	offsite solutions. Where insurmountable heritage constraints did apply, this could be a reason for looking to offsite (or offsetting) to meet some of the energy demand. Policy HD8 is clear that net zero carbon design is one of the considerations that should inform built form/efficient use of land.

2259

R1	More area-wide approach needed	Policy should be revised to support a more effective, area-wide approach - such as Local Area Energy Plans - and express interest in working with local authorities to develop this strategy.	Comment noted – the policy is focussed on design at the scale of new buildings, this does not mean that the Council is unsupportive of broader areawide approaches.
R1	EFW incinerator energy	Assume that energy use which is to be met through equal amounts of new renewable energy generation (ideally onsite) does not include the use of EFW incinerator energy? This is the dirtiest method of providing heating etc	The policy is not explicit about any particular technology that should be used to meet the requirements of the policy. The preference is that applicants will utilise the most effective and sustainable technologies for their particular site to meet the requirements. It is considered unlikely that an EFW solution would be put forward to meet energy needs of a specific development, but where that were the case, it would need to conform will all the policies in the
			Local Plan including those on air quality and amenity.

2260

R1	More detail needed in relation to energy offsetting approach	Various comments wanting more detail on how the energy offset mechanism will be applied, including in relation to: - More transparency on what the charge will be and how it is calculated, as supported by evidence. - How the Council will use these contributions, as no fund, or schemes have been established to ensure that the contributions will deliver appropriate offsetting.	It is envisaged that the offsetting fee will be published on the website and updated when necessary (e.g. to reflect inflation). This will give applicants clarity on pricing in advance. The draft process for calculating the offsetting contribution will be set out in draft in the Reg 19 background paper and would ultimately be published as part of a Technical Advice Note. The way the fund will be managed and the fees utilised for projects will be further developed as the Local Plan progresses towards adoption, though this is a separate workstream to the Local Plan's development itself. We agree that it is important that the funds are utilised as effectively and transparently as possible, and to fund projects which deliver true offsetting within the city.

R1	Offsetting charge impact on viability	Concern offsetting charges lead to uncertainty around the financial cost on development. This is a further financial burden on commercial development which further calls into question the viability of such developments.	See response above which sets out how we will convey the price and proces for determining offset fee in advance to applicants.
			Policy S4 details how viability concerns arising from offsetting will be addressed and includes a mechanism by which these can be reduced incrementally if needed, though the development will still need to meet the other requirements of R1.
R1	Audit trail for offsetting fund.	Council will need to ensure that it has a suitable audit trail for payments made and projects delivered and the amount of carbon offset.	Noted and agreed – this will be considered further as the process for managing the offset fund is further developed, which is a separate consideration to the Local Plan development.
R1	Oppose offsetting	Requirement that compensatory renewable energy capacity be onsite is a silly gimmick and should certainly not be law.	Offsetting is an option that can be used as a last resort, the preference is for applicants to meet the policy requirements in full through onsite solutions.

R1	Offsetting as last resort	Offsetting should be used only in extreme.	Agreed, the draft policy set out that it should only be considered as a last resort.
R1	Offset mechanism is a get out clause. If needed, should be spent appropriately.	Oppose the offset allowance – this is a get out clause for developers. If needed, offset fund should be directly used/ring-fenced by the City Council for the retrofitting of community buildings for community energy hubs, such as local schools, nurseries, village halls and community centres. Particularly targeting areas of highest fuel poverty.	Offsetting (as a last resort) is the most pragmatic way to address the challenges that some types of development will face in the context of existing technological constraints. Funds can help to deliver retro-fit to existing buildings which currently contribute to emissions. The process for spending funds and identifying suitable projects is subject to further work alongside the Local Plan. It is important that the funds are used to deliver true offsetting that would not happen otherwise and be in line with the objectives of the policy. We agree that, where possible, it would be valuable for these projects to also secure wider public benefits such as delivering retrofit to community buildings and those in greatest

2263

			need, although the explicit criteria will need to be considered further.
R1	Have alternative forms of energy use rating been considered?	Despite different EUI targets for high energy use developments, concern that these and space heating demand targets are not useful for a number of building types which can make implementation more challenging. The use of the Display Energy Certificates (DEC) could be considered as this methodology allows for various building types within its methodology.	Using Energy Use Intensity as the key performance metric provides for a standardised approach to measuring performance across all buildings. All buildings should be able to calculate performance using EUI (overall energy use, divided by gross internal floor area). The specific EUI targets they can feasibly achieve may differ between typologies (hence different targets for resi/nonresi/high

2264

			energy uses in the policy). It is also the performance
			metric recommended by a growing body of industry.
R1	Support in principle	Where applicants have limited land control, delivering renewables offsite is not likely to be achievable and, where the City already recognises a significant shortfall in land available to meet the City's need for housing, it is questioned how reasonable an approach this is.	The policy also allows applicants to pay into an energy offsetting fund where they are unable to deliver renewables onsite or on land elsewhere in their control.

2265

R1	Objection (focus on viability)	Unclear how requirements have been tested in respect of sheltered and extra care housing proposals. Of the viability testing undertaken in respect of older person's housing in the 2023 study, there are multiple scenarios where even in the highest value bands and lowest benchmark land value scenarios, 0% affordable housing is viable and indeed, some of the land values generated are negative. This implies that there will be situations where the various sustainability enhancements are unviable for this typology. Recommend that viability evidence is updated to reflect comments before any enhancement costs such as proposed here may be considered viable.	The policy's development is being informed by whole plan viability testing. Comments from this consultation will be taken onboard where applicable.
R1	Concerns over viability and deliverability	The requirements of the policy may harm the viability of large schemes because of other requirement burdens. Meeting both regulated and unregulated energy targets entirely through onsite renewable energy is unlikely to be deliverable. The requirements add a costly compliance layer that the Plan itself admits will be "more challenging" and may require offset payments for high-energy research labs and hospitals. Viability impacts will push applicants to cascade and end up trimming off other public benefits like affordable housing.	The policy's development is being informed by whole plan viability testing. As set out above, where applicants are unable to provide enough onsite renewable energy generation to meet energy demand, the policy allows for other options (e.g. offsetting). The viability cascade as set out in policy S4 sets out a clear strategy for how contributions should be

2266

			reduced, beginning with energy offsetting (development will still need to meet other requirements of R1), before looking to other topics like affordable housing.
R1	Policy exceeds national requirements	Concern that the Council is pushing for energy efficiency standards of new homes that go beyond the Future Homes Standard (FHS). Also concern that Council is going against Written Ministerial Statement of 2023. It was flagged that requiring net zero in line with building regulations has various advantages including requiring the same approach that all developers can understand and which can be rolled out at scale. Any jump in standards also necessitate phased transitional arrangements to enable market to adapt. Some comments were that the Council should stick to national standards (and set no local standards) in light of this. If going beyond current or future standards it must be done in a way that is consistent with national policy and Council should fully assess consequences (e.g. viability and feasibility).	Relying on national standards alone, even with the uplift that will be brought in through the Future Homes and Buildings Standard would not deliver truly net zero buildings in operation. The local policy is important for supporting the local net zero target of 2040; reducing the number of buildings that will require retro-fit in future; as well as reducing exposure of future occupants to risks of fuel poverty. The approach proposed is consistent with net zero carbon policies that are increasingly being adopted across the country and as is reccomended by various national bodies.

2267

R1	Alternative standards should be used – more aligned to Future homes standard	A pragmatic route would be requiring net-zero-ready fabric (national Part L uplift, no new gas) and let developers meet unregulated loads through market-led efficiency gains and grid-scale decarbonisation— as the Future Homes Standard is designed to do—while still encouraging onsite renewables where they are technically and economically rational.	Noted, see response above.

R1	Policy forces householders to seek alternative ways of heating extensions to main house.	The policy is not justified and is ineffective. Forcing householders (condition 4) to heat their existing homes with gas, but then with an entirely new method (non-gas) for a new extension. An acceptable solution should be to achieve a net improvement, e.g. a householder can insulate the rest of the house at the same time as the extension construction.	The draft policy set out that extensions are expected to comply with criteria 1-3, unless they would result in the creation of a self-contained dwelling or non-residential unit, in which case all criteria apply. As such the requirement for no fossil fuel in the extension is only engaged in the latter case (where the extension would result in selfcontained dwelling). We will look to whether there is a way to make this clearer in the Reg 19 draft.

2268

R1	Policy is overly prescriptive, lacks flexibility	Draft Policy R1 is overly prescriptive, lacks flexibility, and lacks a tested, evidence-based exemption process which risks deterring investment key employment sectors. Example given relates to proposed 20 kWh/m^2/yr cap on space heating and the blanket ban on fossil fuels - Lab buildings often have unavoidable high energy use due to mechanical ventilation, pressurisation systems, and internal environmental controls.	The policy sets key energy performance standards but allows for flexibility in how these are achieved – e.g. not being prescriptive about technologies. There are also mechanisms in the policy which set out what applicants should do if any requirement can be shown to be not feasible.
R1	Policy is not supported by evidence	Policy is not underpinned by sufficient evidence.	The policy draws on a range of evidence that supports the technical feasibility of delivering net zero (and the situations where it is more of a challenge) that has been produced across
			the country from a variety of comparable local authority areas. This is summarised in the Literature Review. The policy is also supported by the range of analysis set out in the net zero carbon background paper.

2269

R1	Policy creates substantial uncertainty for complex science and innovation facilities	Policy creates substantial uncertainty for complex science and innovation facilities. Requiring 100% on-site energy generation is unrealistic for R&D campuses (due to have high energy loads and limited roof or land space for renewables).	As covered earlier, where onsite renewable energy generation to meet energy demand is not achievable, there are other options allowed for in the policy.
R1	Policy could have various negative impacts for design and expense.	Requirements could distort site design, waste land, or necessitate expensive, inefficient infrastructure.	We have set the policy to be as flexible as policy to enable variations in site context and needs of different proposals whilst still requiring key performance standards to demonstrate net zero in operation.
R1	National policy does not support need for full selfsufficiency.	National policy supports low-carbon design and energy hierarchy principles, not full self-sufficiency.	The city has a local net zero target of 2040 and the national requirement is 2050. The policy sets requirements which will help to ensure that new development that will exist beyond both of these dates would not require extensive retro-fit in future. It will also help to address other challenges like air pollution, energy security and fuel poverty.

2270

R1	Lack of published viability testing	Viability of these requirements have not been tested through a published viability assessment. When coupled with other policies, it risks pushing R&D schemes beyond deliverable limits.	The whole plan viability testing will be published at the next stage of consultation. The development of the policy is informed by viability testing alongside other policies in the Local Plan.

2271

R1	Policy should do more regarding heat networks	Policy is limited in what it says about heat networks. Words like 'consider' are too easy to ignore. Central government policy (DESNZ) is strongly towards the delivery of heat networks in urban areas and Local Plan should be a catalyst. It is suspected that connected to a heat network will be cheaper than other solutions. It is recommended that the Policy be strengthened by mandating connection or, failing that, mandating a business case to be undertaken with an existing HN operator to demonstrate that a connection is not viable. Wording should state that it is an "*expectation*" or "*requirement*" to connect where networks are available and have capacity. Also, limited acknowledgement or support given to assist overcoming challenges to the development of heat networks in Oxford i.e., extensive heritage assets and rivers	The policy sets out a framework of performance standards for ensuring new buildings are net zero in operation. There can be a variety of technological solutions that would enable the various criteria to be met. The Local Plan continues the approach of the adopted Local Plan in not explicitly favouring any one technology – so as to allow the most sustainable solution to come forward for each site, depending on its context. This also allows for future-proofing of the policy where new or improved technological solutions become available. We are aware that heat networks can be seen as playing an important role in certain contexts and have explicitly flagged this as a consideration in the policy – however, we would maintain that

2272

			flexibility should be retained for applicants to pursue the most sustainable option for the proposed development. We would be open to exploring how further support for applicants pursuing heat network connection could be expanded upon in supporting guidance for the policy such as the intended Technical Advice Note that is envisaged.
R1	Connecting to existing energy networks as an alternative to onsite generation.	Alongside on-site generation of renewable energy, policy should give equal weight to connections to existing renewable / LZC energy technologies (e.g., district heat networks) to fulfil heating requirements of developments. As currently worded, could discourage developers from connecting existing networks. Additional wording suggested to add to the energy hierarchy requirement – allowing connection to offsite heat source alongside onsite renewables.	As set out above, we acknowledge that there can be a variety of technological solutions that would enable the various criteria to be met – this could include connection into a heat network where available. We disagree that the wording would discourage applicants from pursuing this option where it is the most fitting solution for their site and for meeting the policy requirements.

R1	More clarity needed on types of applications policy applies/does not apply to	Policy sets out requirements for additional deliverables/ supporting energy-related information for all new development but does not distinguish between different types of development (and their nuances). E.g. Policy sets out that the Council would expect this information to support planning applications for renewable / LZC developments, (despite it being irrelevant to such developments). Should seek to introduce policy wording/ supporting text to confirm that this would not apply to renewable / net zero carbon technology development (such as energy centres/ infrastructure associated with district heat networks and other renewable energy development).	The starting point of the policy is that all new buildings should be net zero carbon in operation. It is acknowledged that various types of development will have their own nuances and requirements. The policy sets out what is expected of proposals where compliance with the requirements is not possible and allows for applicants to justify this.

2274
