8 Reports from the Scrutiny Committee

The Scrutiny Committee will meet on the 30th of June 2026. The Committee and its Working Group will consider the following reports:

- Annual Review of the Council of Sanctuary Framework
- Private Sector Housing Enforcement Policy
- HRA policies

Scrutiny's discussions and recommendations on the reports will be circulated as a supplement to the agenda.

9 Thames Valley Strategic Authority Proposal: Update and Implications for Oxford City

19 - 24

The Transition Director submitted a report to invite Cabinet to note Oxfordshire County Council's veto of the systemwide Expression of Interest to Government, which would have enabled the creation of a Thames Valley Strategic Authority with enhanced powers and funding for the region. Cabinet is further requested to reaffirm its commitment to working collaboratively with Thames Valley partners and Government to reassess devolution in light of the 'minded to' decision on Local Government Reorganisation, with the clear aim of advancing a renewed proposal that includes Swindon and remains open to Buckinghamshire.

Cabinet is recommended to:

1. Note Oxfordshire County Council's decision to veto the Thames Valley Foundation Strategic Authority proposal;
2. Agree that the Council Leader and Council officers to work with counterparts in other Thames Valley councils to review the position following the Government's decision on Local Government in Oxfordshire and West Berkshire;
3. Note that officers will work with counterparts in the other 12 councils to further develop the Expression of Interest proposal against any updated policy position around devolution set out by the new Prime Minister;
4. Agree the commitment to continue to support Swindon's involvement as a willing partner in a Thames Valley Strategic Authority – and keep the door open for Buckinghamshire's inclusion too, if they change their position.

10 Local Development Scheme 2026-2031

25 - 40

The Director of Planning and Regulation submitted a report to request that Cabinet approve the Local Development Scheme 2026-2031, which sets out the work programme for the Oxford Local Plan 2045.

Cabinet is recommended to:

1. **Approve** the Local Development Scheme 2026-2031;
2. **Authorise** the Director of Planning and Regulation Services to make any necessary minor corrections not materially affecting the document prior to publication.

11 Oxford Local Plan 2045 Next Steps

41 - 3366

The Director of Planning and Regulation submitted a report to request that Cabinet recommend that Council approve the Proposed Submission Draft Oxford Local Plan 2045 for submission to the Secretary of State for formal examination.

Cabinet is recommended to:

1. **Recommend** Council to authorise submission of the Oxford Local Plan 2045 to the Secretary of State for examination, including the minor amendments made according to recommendation 3;
2. **Recommend** Council to approve all the supporting statutory documentation including the Sustainability Appraisal, Habitats Regulation Assessment, Infrastructure Development Plan (IDP), Policies Map, Regulation 18 Consultation Statement, Regulation 19 Consultation Statement and Equalities Impact Assessment (Appendices 2-7 & 9); 18 October 2019 .
3. **Recommend** Council to authorise the Director of Planning and Regulation, after consultation with the Lead Cabinet Member, to make any necessary minor editorial corrections to the Submission Draft Oxford Local Plan 2045, IDP, Sustainability Appraisal and Habitats Regulation Assessment, Policies Map, and to agree the supporting evidence base prior to submission;
4. **Recommend** Council to authorise the Director of Planning and Regulation, after consultation with the Lead Cabinet Member, to invite the examining inspector(s) to recommend any modifications considered to be necessary in accordance with section 20(7C) of the Planning and Compulsory Purchase Act

2004.

12 Local Authority Housing Fund Round 4

3367 - 3388

The Director of Housing submitted a report to seek the required budget provision and the necessary project approval and delegations to enable the Council to proceed with entering into the national Local Authority Housing Fund Round 4.

Cabinet is recommended to:

1. **Approve** receipt of the Local Authority Housing Fund Round 4 (LAHF R4) funding of £1,719,354 to deliver 4 temporary accommodation units and 4 units for resettled Afghan families
2. **Recommend** to Council, to approve the allocation of £808,000 of the LAHF R4 grant funding in substitution of approved HRA borrowing for the delivery of the temporary accommodation element of LAHF R4.
3. **Recommend** to Council, to approve the allocation of £898,500 of the LAHF R4 grant funding to a new General Fund capital budget for the payment of a capital grant of 898,500 to a Registered Provider to deliver the 'resettlement' element of LAHF R4.
4. **Delegate** authority to the Director of Housing in consultation with; Cabinet Member for Regulation of the Private Rented Sector and Preventing Homelessness, the Group Finance Director and the Director of Law Governance and Strategy, to select a Registered Provider delivery partner and enter into a grant agreement with them to part fund the purchase of 4 units for resettled Afghan families.

13 Annual Review of the Council of Sanctuary Framework 2025-2028

3389 - 3464

The Director of Housing submitted a report to provide an update to Cabinet on the progress made in Year 1 of the Council of Sanctuary Framework 2025-28 and to seek approval for the implementation of the Year 2 Action Plan.

Cabinet is recommended to:

1. **Note** the progress made in Year 1 to implement the Council of Sanctuary Framework and Action Plan and the emerging risks

and challenges for delivery over the next year and beyond

2. **Approve** the adoption of the new Framework Action Plan for Year 2 (26-27); and
3. **Delegate** authority to the Director of Housing, in consultation with the Cabinet Member for Housing and Communities, to update the Action Plan when required to respond to emerging risks and challenges.

14 HRA Policies

3465 - 3574

The Director of Housing submitted a report to request that Cabinet recommend that Council approve the following policies: complaints, lifting equipment and lifting operations, voids.

Cabinet is recommended to:

1. **Recommend** full Council to approve the draft Complaints Policy
2. **Recommend** full Council to approve the draft Lifting Equipment and Lifting Operations Policy
3. **Recommend** full Council to approve the draft Voids Policy

15 Private Sector Housing Enforcement Policy

3575 - 3610

The Director of Planning and Regulation submitted a report to Cabinet to request approval of the Private Sector Housing Enforcement Policy for adoption.

Cabinet is recommended to:

1. **Approve** the Private Sector Housing Enforcement Policy (at Appendix 1) for adoption.
2. **Delegate authority** to the Director of Planning and Regulation, in consultation with the Director of Law and Governance and the Portfolio Holder, to approve future updates to the policy where such changes are consistent with the overall policy approach and reflect changes to legislation or relevant case law.

16 Park and Ride Charges

3611 - 3618

The Director of Regeneration, Economy and Sustainability submitted a report to request that Cabinet introduce temporary discounted combined ticket charge funded by Oxfordshire County Council.

Cabinet is recommended to:

1. **Approve** amending the fees and charges schedule as it relates to the Park and Ride 16 hour combined bus and parking tickets as set out in Appendix 1 to be implemented as soon after this decision as practicable and to run until 31 March 2027.

17 Thames Valley Spatial Development Strategy (SDS)

3619 - 3640

The Director Planning & Regulation submitted a report to Cabinet to note the development of, and governance arrangements for, a Thames Valley SDS.

Cabinet is recommended to:

1. **Note** the governance and development of the Thames Valley Spatial Development Strategy
2. **Agree** to officer and member involvement in the early programme stages as outlined in this report, in particular with regards to the governance model and assisting in the development of the Thames Valley SDS.

18 Development and Governance Decision to Direct Award OCC's Water Supply and Wastewater Contract

3641 - 3708

The Director of Regeneration, Economy and Sustainability submitted a report to Cabinet to request that Cabinet Delegate authority to the Deputy Chief Executive - Place to Direct Award the Council's Water Supply and Wastewater Contract to Anglian Water Business (National) Limited t/a Wave Utilities on a 2+1+1 contract term, subject to final contract price; and delegate authority to the Deputy Chief Executive - Place to make non-substantive changes to the framework should they become necessary.

Cabinet is recommended to:

1. **Approve** Delegate authority to the Deputy Chief Executive - Place to Direct Award the Council's Water Supply and Wastewater Contract to Anglian Water Business (National) Limited t/a Wave Utilities on a 2+1+1 contract term, subject to final contract price; and delegate authority to the Deputy Chief Executive - Place to make non-substantive changes to the framework should they become necessary.

19 **Procurement of a high-support service for accommodation for single homeless individuals** 3709 - 3738

The Director of Housing submitted a report to Cabinet to request approval of the commencement of a procurement exercise for accommodation with high support in Oxford from 1st April 2027.

Cabinet is recommended to:

1. **Give** project approval for the commencement of a procurement of an accommodation support service for individuals with multiple and complex support needs who are experiencing homelessness;
2. **Delegate** to the Director of Housing (following conclusion of the procurement) in consultation with the Group Finance Director, Director of Law Strategy and Governance and the Cabinet Member for Regulation of the Private Rented Sector and Preventing Homelessness), the authority to award a contract within the relevant budget.

20 **Appointments to Outside Bodies** 3739 - 3760

The Director of Law, Governance and Strategy (Monitoring Officer) submitted a report to Cabinet to request that Cabinet agree appointments to Outside Bodies for the 2026/2027 Council Year.

Cabinet is recommended to:

1. **Approve** appointments to charities, trusts, community associations and other organisations as set out in Appendices 1A – 1D; and note the appointments to partnerships as detailed in Appendix 1E;
2. **Note** the guidance for appointees in Appendix 2; and
3. **Delegate** authority to the Director of Law, Governance and

Strategy, in consultation with the Leader of the Council, and where appropriate with other group leaders, to make any changes to appointments to Outside Bodies as required during the council year 2026/2027.

21 Dates of future meetings

Meetings are scheduled for the following dates:

- 19 August 2026
- 16 September 2026
- 21 October 2026
- 18 November 2026

All meetings start at 6.00 pm.

Matters Exempt from Publication

If Cabinet wishes to exclude the press and the public from the meeting during consideration of any of the items on the exempt from publication part of the agenda, it will be necessary for Cabinet to pass a resolution in accordance with the provisions of Paragraph 4(2)(b) of the Local Authorities (Executive Arrangements) (Access to Information) (England) Regulations 2012 on the grounds that their presence could involve the likely disclosure of exempt information as described in specific paragraphs of Schedule 12A of the Local Government Act 1972.

Cabinet may maintain the exemption if and so long as, in all the circumstances of the case, the public interest in maintaining the exemption outweighs the public interest in disclosing the information.

Information for those attending

Recording and reporting on meetings held in public

Members of public and press can record, or report in other ways, the parts of the meeting open to the public. You are not required to indicate in advance but it helps if you notify the Committee Services Officer prior to the meeting so that they can inform the Chair and direct you to the best place to record.

The Council asks those recording the meeting:

- To follow the protocol which can be found on the Council's website
- Not to disturb or disrupt the meeting
- Not to edit the recording in a way that could lead to misinterpretation of the proceedings. This includes not editing an image or views expressed in a way that may ridicule or show a lack of respect towards those being recorded.
- To avoid recording members of the public present, even inadvertently, unless they are addressing the meeting.

Please be aware that you may be recorded during your speech and any follow-up. If you are attending please be aware that recording may take place and that you may be inadvertently included in these.

The Chair of the meeting has absolute discretion to suspend or terminate any activities that in his or her opinion are disruptive.

Councillors declaring interests

General duty

You must declare any disclosable pecuniary interests when the meeting reaches the item on the agenda headed "Declarations of Interest" or as soon as it becomes apparent to you.

What is a disclosable pecuniary interest?

Disclosable pecuniary interests relate to your* employment; sponsorship (ie payment for expenses incurred by you in carrying out your duties as a councillor or towards your election expenses); contracts; land in the Council's area; licenses for land in the Council's area; corporate tenancies; and securities. These declarations must be recorded in each councillor's Register of Interests which is publicly available on the Council's website.

Declaring an interest

Where any matter disclosed in your Register of Interests is being considered at a meeting, you must declare that you have an interest. You should also disclose the nature as well as the existence of the interest. If you have a disclosable pecuniary interest, after having declared it at the meeting you must not participate in discussion or voting on the item and must withdraw from the meeting whilst the matter is discussed.

Members' Code of Conduct and public perception

Even if you do not have a disclosable pecuniary interest in a matter, the Members' Code of Conduct says that a member "must serve only the public interest and must never improperly confer an advantage or disadvantage on any person including yourself" and that "you must not place yourself in situations where your honesty and integrity may be questioned". The matter of interests must be viewed within the context of the Code as a whole and regard should continue to be paid to the perception of the public.

Members' Code – Other Registrable Interests

Where a matter arises at a meeting which directly relates to the financial interest or wellbeing** of one of your Other Registerable Interests*** then you must declare an

interest. You must not participate in discussion or voting on the item and you must withdraw from the meeting whilst the matter is discussed.

Members' Code – Non Registrable Interests

Where a matter arises at a meeting which ***directly relates*** to your financial interest or wellbeing (and does not fall under disclosable pecuniary interests), or the financial interest or wellbeing of a relative or close associate, you must declare the interest.

Where a matter arises at a meeting which affects your own financial interest or wellbeing, a financial interest or wellbeing of a relative or close associate or a financial interest or wellbeing of a body included under Other Registrable Interests, then you must declare the interest.

You must not take part in any discussion or vote on the matter and must not remain in the room, if you answer in the affirmative to this test:

> "Where a matter affects the financial interest or well-being:
>
> a. to a greater extent than it affects the financial interests of the majority of inhabitants of the ward affected by the decision and;
>
> b. a reasonable member of the public knowing all the facts would believe that it would affect your view of the wider public interest You may speak on the matter only if members of the public are also allowed to speak at the meeting."

Otherwise, you may stay in the room, take part in the discussion and vote.

*Disclosable pecuniary interests that must be declared are not only those of the member her or himself but also those member's spouse, civil partner or person they are living with as husband or wife or as if they were civil partners.

** Wellbeing can be described as a condition of contentedness, healthiness and happiness; anything that could be said to affect a person's quality of life, either positively or negatively, is likely to affect their wellbeing.

*** Other Registrable Interests: a) any unpaid directorships b) any Body of which you are a member or are in a position of general control or management and to which you are nominated or appointed by your authority c) any Body (i) exercising functions of a public nature (ii) directed to charitable purposes or (iii) one of whose principal purposes includes the influence of public opinion or policy (including any political party or trade union) of which you are a member or in a position of general control or management.

How Oxford City Councillors and members of the public can engage at Cabinet

Addresses and questions by members of the public (15 minutes in total)

Members of the public can submit questions in writing about any item for decision at the meeting. Questions, stating the relevant agenda item, must be received by the Head of Law and Governance by 9.30am two working days before the meeting (eg for a Tuesday meeting, the deadline would be 9.30am on the Friday before). Questions can be submitted either by letter or by email (to cabinet@oxford.gov.uk).

Answers to the questions will be provided in writing at the meeting; supplementary questions will not be allowed. If it is not possible to provide an answer at the meeting it will be included in the minutes that are published on the Council's website within 2 working days of the meeting.

The Chair has discretion in exceptional circumstances to agree that a submitted question or related statement (dealing with matters that appear on the agenda) can be asked verbally at the meeting. In these cases, the question and/or address is limited to 3 minutes, and will be answered verbally by the Chair or another Cabinet member or an officer of the Council. The text of any proposed address must be submitted within the same timescale as questions.

For this agenda item the Chair's decision is final.

Councillors speaking at meetings

Oxford City councillors may, when the chair agrees, address the Cabinet on an item for decision on the agenda (other than on the minutes). The member seeking to make an address must notify the Head of Law and Governance by 9.30am at least one working day before the meeting, stating the relevant agenda items. An address may last for no more than three minutes. If an address is made, the Cabinet member who has political responsibility for the item for decision may respond or the Cabinet will have regard to the points raised in reaching its decision.

Councillors speaking on Neighbourhood issues (10 minutes in total)

Any City Councillor can raise local issues on behalf of communities directly with the Cabinet. The member seeking to make an address must notify the Head of Law and Governance by 9.30am at least one working day before the meeting, giving outline details of the issue. Priority will be given to those members who have not already addressed the Cabinet within the year and in the order received. Issues can only be raised once unless otherwise agreed by the Cabinet. The Cabinet's responsibility will be to hear the issue and respond at the meeting, if possible, or arrange a written response within 10 working days.

Items raised by Cabinet members

Such items must be submitted within the same timescale as questions and will be for discussion only and not for a Cabinet decision. Any item which requires a decision of the Cabinet will be the subject of a report to a future meeting of the Cabinet.

Minutes of a meeting of the Cabinet on Wednesday 17 June 2026

www.oxford.gov.uk
OXFORD CITY COUNCIL

Committee members present:

Councillor Brown
Councillor Railton
Councillor Linda Smith
Councillor Rowley
Councillor Turner
Councillor Arshad
Councillor Lygo

Officers present for all or part of the meeting:

Caroline Green, Chief Executive

Tom Hook, Deputy Chief Executive - Citizen and City Services

Alistair Rush, Group Director Finance

Emma Jackman, Director of Law, Governance, and Strategy

Jonathan Malton, Committee and Member Services Manager

Dr Brenda McCollum, Committee and Member Services

Paula Redway, Culture and Community Development Manager

Annette Osborne, Strategic Procurement Manager

Apologies:

Councillor Chapman sent apologies.

1. Declarations of Interest

None.

2. Minutes of the previous meeting

Cabinet resolved to approve the minutes of the meeting held on 15 April 2026 as a true and accurate record.

3. Addresses by members of the public

None received.

4. Councillor addresses on any item for decision on the Cabinet agenda

None.

5. Councillor addresses on Neighbourhood Issues

None received.

6. Items raised by Cabinet Members

None.

7. Reports from the Scrutiny Committee

Scrutiny Committee met on the 9th of June to consider the following report.

- Establishment of Scrutiny Standing Working Groups and Review Group

Jonathan Malton, Committee and Member Services Manager, presented the report. He outlined the creation of the Scrutiny Working Groups and Scrutiny's gratitude for Officers' work over the previous year.

8. Delegation to purchase fleet vehicles 2026/2027

The Interim Group Finance Director submitted a report to Cabinet to request that Cabinet delegate authority to the Interim Group Finance Director for the 2026/27 financial year to award any fleet contracts valued in excess of £750k following a compliant procurement process.

Annette Osborne, Strategic Procurement Manager, presented the report. She noted that this was a similar report to the one which Cabinet had approved in the previous year. She outlined the recommendations of the report and the procurements they believe will be undertaken in the coming year.

Councillor Linda Smith asked what opportunities there were in the procurement process to buy British vehicles to support British manufacturing and the British economy.

The Strategic Procurement Manager said that procurements for fleet were mainly call off contracts from a range of frameworks. She said that supplier selection was dependant on suppliers listed on a framework. She said that the Council had specific requirements for vehicles which limited where they could procure them from. She said that where possible they would try to build this in, but this would not always be possible.

Cabinet resolved to:

Delegate authority, to the Interim Group Finance Director for the duration of the 2026/27 financial year to award contracts with values over the Key Decision threshold for the purchase of fleet vehicles.

9. Grant Allocations to Community & Voluntary Organisations 2024/25

The Director of Communities and Citizens' Services submitted a report to highlight to Cabinet the positive impact of Oxford Community Impact Fund 2024-25.

Councillor Linda Smith presented the report. She said that the report outlined how they had used the Community Impact Fund in 2024/2025. She said that this represented a big investment into communities each year and that the report outlines how they were distributed in the year under consideration. Councillor Smith noted the grant contributions from the fund to groups which have particularly positive impacts for people across the city.

Councillor Smith described how they had simplified the grant application process in 24/25 and how they had focused the grant awards to address inequality in the city. However, she said that they had not let up on their approach to monitoring organisations to ensure that they use grants in an impactful way. She thanked the Officers for their work in this area and the positive impact possible through their community grant programs.

Councillor Brown said that it was great to see the positive difference being made by such a range of organisations across the city with this funding.

Councillor Arshad asked how many new groups applied for funding each year. Paula Redway, Culture and Community Development Manager, said that they had a campaign to encourage new groups to come forward. She said that in the previous round over 20% of applicants were newcomers to the program.

Councillor Brown thanked the team for their work to make the process simpler and their integration of support for applicants.

Cabinet resolved to:

1. **Note** the social value and economic impact of the fund – see appendices 1-4

10. Dates of future meetings

Cabinet noted the dates of future meetings.

The meeting started at 18:00 and ended at 18:12.

Chair …….. **Date: Wednesday 8 July 2026**

When decisions take effect:
Cabinet: after the call-in and review period has expired
Planning Committees: after the call-in and review period has expired and the formal decision notice is issued
All other committees: immediately.
Details are in the Council's Constitution.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	**8 July 2026**
Report of:	Mish Tullar – Transition Director
Title of Report:	Thames Valley Strategic Authority Proposal: Update and Implications for Oxford City.

	Summary and recommendations
Decision being taken:	Cabinet is invited to note Oxfordshire County Council's veto of the systemwide Expression of Interest to Government, which would have enabled the creation of a Thames Valley Strategic Authority with enhanced powers and funding for the region. Cabinet is further requested to reaffirm its commitment to working collaboratively with Thames Valley partners and Government to reassess devolution in light of the 'minded to' decision on Local Government Reorganisation, with the clear aim of advancing a renewed proposal that includes Swindon and remains open to Buckinghamshire.
Key decision:	No
Cabinet Member:	Councillor Susan Brown, Leader of the Council, Cabinet Member for Partnership Working, Inclusive Economic Growth and Culture
Corporate Priority:	The Council Strategy 2024 to 2028.
Policy Framework:	The Government's English Devolution White Paper.

Recommendation(s): That Cabinet resolves to:

1. **Note** Oxfordshire County Council's decision to veto the Thames Valley Foundation Strategic Authority proposal;
2. **Agree** that the Council Leader and Council officers to work with counterparts in other Thames Valley councils to review the position following the Government's decision on Local Government in Oxfordshire and West Berkshire;
3. **Note** that officers will work with counterparts in the other 12 councils to further develop the Expression of Interest proposal against any updated policy position around devolution set out by the new Prime Minister;

4. **Agree** the commitment to continue to support Swindon's involvement as a willing partner in a Thames Valley Strategic Authority – and keep the door open for Buckinghamshire's inclusion too, if they change their position.

Information Exempt From Publication	
State in here what information is to be exempt from publication – where it is, attach it as an appendix and name the appendix as you describe It here	• None

Appendix No.	Appendix Title	Exempt from Publication
None		

Introduction and background

1. Councils across Berkshire, Oxfordshire and Swindon including Oxford City Council have been working together for over 18 months to develop a strong Expression of Interest proposal to Government for a new Strategic Authority for the Thames Valley region.
2. This work has been supported by businesses, public service organisations and local leaders across the Thames Valley, who recognise the opportunity to better coordinate growth, investment and delivery of strategic services across a shared economic area.
3. A Foundation Strategic Authority could bring significant benefits, including devolved powers over transport and adult skills, improved coordination of infrastructure and housing, and increased access to significant government funding.
4. With a potential economy growth opportunity worth approximately £97bn in gross value added, the Thames Valley is a region of national significance, behind only London and Greater Manchester.
5. Significant work has progressed over the past 18 months, involving officers and leaders of 13 councils, coordinated by a senior officer employed by Oxfordshire County Council, to develop and refine a strong proposal and engage with Government to maximise the potential opportunity. In December 2025 Government amended its policy to require that a Foundation Strategic Authority must first be established, and can demonstrate it is functioning effectively, before transition to a Mayoral Strategic Authority with a directly elected mayor – which unlocks greater powers and enhanced level of Government funding.

6. On 24th March 2026 an Expression of Interest letter was submitted to Govt on behalf of Oxfordshire and Berkshire, confirming a wish to develop a formal devolution proposal for a Foundation Strategic Authority. It was signed by the leaders of Oxfordshire County Council and Slough Borough Council.
7. On Tuesday 16th June 2026 Thames Valley council leaders received a letter from the Devolution Minister encouraging the submission of the Expression of Interest that would see the creation of a Foundation Strategic Authority, as a stepping stone towards establishing a Mayoral Strategic Authority .
8. The very next day, at a meeting of councils held in Reading on Wednesday 17th June 2026, held to finalise the joint submission to Government, the Leader of Oxfordshire County Council ("the County Council") vetoed the devolution proposal.

Implications of the Oxfordshire County Councils decision

9. The County Council's decision to veto the proposal:
    a. Considerably reduces the likelihood of establishing a Thames Valley Mayor in the near term. An elected Mayor could provide a single, clear regional voice to government, help secure inward investment, and support decision-making on strategic growth; capable of rising above local politics to make the difficult decisions needed to deliver on the area's growth potential.
    b. Brings 18 months of constructive partnership working to a halt and removes for now, an opportunity to secure additional investment and greater local decision-making for Oxford and the wider region.
10. For Oxford, this impact is significant. A Foundation Strategic Authority would have enabled the city to:
    a. Bring decision-making that currently sits with government closer to residents and businesses
    b. Access new government funding and investment
    c. Strengthen delivery of housing, transport, energy and water infrastructure and jobs in a coordinated way
    d. Improve the integration of public services across the region.

Recommendations

One of the key requirements Government set for Local Government Reorganisation (LGR) is that proposals must demonstrate how they support and integrate with existing or planned devolution arrangements. There remains strong support for the creation of a Strategic Authority among the majority of Thames Valley councils, therefore it is recommended that the Council Leader and officers work with counterparts to review the position once the Government has announced its decision on LGR for Oxfordshire and West Berkshire.

The prospect of a new Prime Minister could see a review of Government devolution policy and potentially a strengthening of its commitment to bring forward those areas of the country that don't yet have strategic authorities. Officers will monitor any Government announcements on devolution over the coming months and work with

colleagues to in the other Thames Valley councils to further develop the Expression of Interest proposal against any updated policy position.

In discussions on devolution to date Oxford City Council has stated its clear support for Swindon's inclusion in any Thames Valley strategic authority. Cabinet is asked to reaffirm the commitment to continue to support Swindon's involvement as a willing partner in a Thames Valley Strategic Authority – and keep the door open for Buckinghamshire's inclusion too, if they change their position.

Alternative Options Considered

11. No alternative options have been developed to date. Councils across Berkshire, Oxfordshire and Swindon, including Oxford City Council, have been focused on this proposal over the past 18 months and devolution has been assessed to bring many benefits to Oxford and other parts of the Thames Valley region that are not otherwise available.

12. The County Council's veto at the final stage of agreeing the devolution Expression of Interest was unexpected. Its decision was made without consultation with Oxford City Council or other district councils in Oxfordshire or across the wider Thames Valley. It followed recent positive engagement with Government and broad support from councils across the region, including within Oxfordshire itself.

Implications of Local Government Reorganisation

13. The County Council's veto has no immediate statutory implications for Local Government Reorganisation, although Government has been clear that one of its criteria for assessing LGR proposals is that they must demonstrate how they support and integrate with existing or planned devolution arrangements.203

14. The County Council's decision is likely to delay and potentially reshape progress to devolution.

Other implications

15. While the County Council's veto does not prevent future progress, it introduces delay, uncertainty, and strategic risk.

Financial implications

Oxford City Council has contributed a total £20,300 to date to support Thames Valley systemwide work needed to progress a Devolution proposal. There are no other direct financial implications arising from this report.

Without a strategic authority in place, Oxford and other areas of the Thames Valley are likely to continue to miss out on significant levels of Government funding now being channelled through such bodies.

Legal issues

16. Whilst there are no direct legal issues arising from this report directly, without agreement of the constituent Councils at this stage the establishment of a Strategic Authority and devolution are not possible.

Level of risk

17. There are no direct risks arising from this report.

18. Without the structure of the Foundation Strategic Authority, there is a risk that Oxford, and the wider Thames Valley may miss future funding opportunities, as national funding is increasingly directed through such bodies.

Equalities impact

19. There are no direct equalities impacts arising from this report

Carbon and Environmental Considerations

20. This report is not seeking key decisions. There are no direct carbon and environmental considerations arising from this report.

Conclusion

21. Oxford City Council does not consider the County Council's veto to be final.

22. Local Government Reorganisation is expected to lead to new local governance arrangements within the next two years, which may provide future opportunities to progress devolution.

23. The Council remains committed to working with regional partners and local stakeholders to secure the best possible outcomes for Oxford, including continuing to advocate for greater devolution, investment, and the powers needed to deliver sustainable growth and tackle inequalities.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	**8th July 2026**
Report of:	**Director Planning and Regulation**
Title of Report:	**Approval of Local Development Scheme 2026-2031**

	Summary and recommendations
Decision being taken:	To approve the Local Development Scheme 2026-2031, which sets out the work programme for the Oxford Local Plan 2045.
Key decision:	Yes
Cabinet Member:	Councillor Anna Railton, Cabinet Member for Planning and Zero Carbon Oxford
Corporate Priority:	Strong, fair economy Good, affordable housing Thriving communities Zero carbon Oxford A well-run council
Policy Framework:	The Local Plan is a statutory requirement, and the LDS sets out the timetable for its production. The scope of the policies is wide and encompasses all of the Council's corporate priorities

Recommendation(s): That Cabinet:

1. **Approve** the Local Development Scheme 2026-2031;
2. **Authorise** the Director of Planning and Regulation Services to make any necessary minor corrections not materially affecting the document prior to publication.

Appendix No.	Appendix Title	Exempt from Publication
Appendix 1	Local Development Scheme 2026-2031	No

Appendix 2	Risk Assessment	No

Introduction and background

1. The Oxford Local Development Scheme (LDS, Appendix 1) is a project plan that sets out timescales for the preparation and revision of documents forming part of Oxford City Council's Development Plan, and other planning policy documents. The Local Plan is the name for the document that contains the majority of the Council's statutory planning policies. The focus of the work programme set out in the LDS 2026-2031 is the Oxford Local Plan 2045.
2. The LDS provides details on what the Development Plan documents will contain and the geographical area they will cover. The LDS is an important tool to enable local communities and interested parties to keep track of the progress of Development Plan documents and to ensure that they are aware of when opportunities for involvement are likely to arise. It is a statutory requirement that all local planning authorities prepare and maintain a LDS. The LDS 2026-2031 will come into effect from the date of approval and will supersede the existing version of the LDS 2025-2030. The Oxford Local Plan 2045 will be prepared to that timetable as far as is practicable. Any changes to the LDS timetable prior to submission of the document to the Secretary of State may need a further decision of Cabinet.
3. The currently approved and published version of the LDS 2025-2030 needs updating to delay the target date for submission of the plan to the Secretary of State for examination. Subsequent stages are dependent on the Planning Inspectorate, so are only indicative estimates, but a delay has also been assumed for all subsequent stages. The reason for the delay to submission is that an injunction has been granted preventing submission whilst the High Court deals with a Judicial Review request made by a claimant. This will not be resolved by the June date as shown currently for submission in the LDS.

Local Development Scheme for the Oxford Local Plan 2045

4. The proposed timeline in the updated LDS has the effect of delaying submission of the Local Plan from June 2026 to a target date of July 2026, with the subsequent milestones also adjusted, although these can only be indicative as once the Plan has been submitted the City Council will hand control of the programme to the Planning Inspectorate. The LDS unusually shows a target date for submission, with other potential dates as well, and also it shows two alternative timeline scenarios. Officers deem this necessary and appropriate in order to deal with the uncertainty around the timelines for a court hearing on the submission injunction/JR. This approach will enable officers to respond promptly to decisions of the court and submit the Plan in a timely manner. The second scenario, as a backstop position, involves a potential second Regulation 19 consultation. If Cabinet approves the return of the Plan to Council to make a

fresh decision to submit, there is a risk that Council would wish to make a substantial change to the Plan that affects the overall strategy. This would require a repeat of the Regulation 19 exercise. Including this alternative scenario prevents the need for a further report to amend the LDS again in such circumstances.

5. Officers consider that there will be no negative effects for other parties through the flexible approach in the LDS. The City Council will continue to liaise closely with the Planning Inspectorate to facilitate submission as soon as possible.
6. In setting the timeline for the Oxford Local Plan 2045 it is important to consider that the Oxford Local Plan 2036 remains the extant plan for planning decisions. This is important, because within 5 years from adoption a plan is considered in-date (assuming other conditions are met), but after that it must be weighed against national policies such as the standard method for assessing housing need. The Local Plan 2036 was adopted in June 2020 which is now over 5 years ago. It is therefore important that there will be minimal time from the date five years after adoption of the Oxford Local Plan 2036 to adoption of the new Local Plan 2045.
7. Another key consideration in setting the timeline is that only plans submitted before 31st December 2026 can be examined under the Planning Act 2004. After that date, submitted plans must have followed the wholly new local plan process as enabled by the Levelling Up and Regeneration Act 2023, the secondary legislation enacted in March 2026, most notably the Town and Country Planning (Local Planning) (England) Regulations 2026, and anticipated new national planning policy and guidance.
8. The Oxford Local Plan 2045 will replace the Oxford Local Plan 2036. This document, as well as any neighbourhood plans, will form the statutory Development Plan for Oxford. Following the Council meeting to approve the pre-submission draft of the OLP2045, on 26th January 2026, that draft can be used as material consideration for development management decisions; its weight will be limited initially but increases as it proceeds towards adoption.
9. The Oxford Local Plan 2016-2036 has sufficient flexibility to deal with a twenty-year period and the policies within it place Oxford in a strong position to manage growth and change effectively over this period. The Oxford Local Plan 2036 will remain a relevant and appropriate plan to guide development in the city until such time as it is replaced.

Alternative Options Considered

10. The only alternative option would be not to update the LDS, but it is clearly expected of the Council to keep LDSs up to date with the anticipated work programme for plan making.

Implications of Local Government Reorganisation

11. There are no implications for Local Government Reorganisation from this report, as it is simply an update to the work programme for plan-making.

Financial implications

12. There are limited financial implications from this report, which sets a revised timetable reflecting a delayed submission of the plan. The revised submission date changes very little in terms of the resource needed to progress the local plan. The implication is a subsequent delay to latter stages of plan preparation, which stretches the end of the plan production period during which Planning Policy team and legal resource is required, although it also delays deployment of the same resources to a new plan and this can be accommodated within existing budgets.

Legal issues

13. The preparation and publication of the Local Development Scheme is a statutory requirement under Section 15 of the Planning and Compulsory Purchase Act 2004 (as amended). The Council is required to monitor compliance with the timescales for document production and their revision set out in the LDS and to make this information publicly available. Compliance with the LDS is monitored and published through the Council's Authority Monitoring Report.

Level of risk

14. A risk assessment has been undertaken (Appendix 2). All risks have been mitigated to an acceptable level.

Equalities impact

15. There are no equalities impacts arising from this report. An Equalities Impact Assessment is not necessary for this report as it merely proposes a timetable for producing a local plan. The Council will continue to monitor equalities impact as the revised local plan is developed.

Carbon and Environmental Considerations

16. The LDS is merely a timetable and work programme, so it does not itself have any environmental impacts.

Appendix 1: Gantt chart of the LDS work programme 2025-2030 8

1) Introduction

1.1. The Planning and Compulsory Purchase Act 2004 introduced the requirement for councils to prepare and maintain a Local Development Scheme (LDS). The LDS specifies which local development documents are to be development plan documents and sets out the work programme for the preparation of documents to be included in the Development Plan. This document supersedes the 2025-2030 Oxford LDS from December 2025.

What is the Local Development Scheme?

1.2. This LDS is a five-year project plan for preparing documents and provides the starting point for the local community, businesses, developers and other interested parties to find out what the City Council's current planning policies are for the area. It includes 'milestones' to inform the public about opportunities to get involved with the plan making process and to let them know the likely dates for involvement. The LDS is published on the City Council's website at www.oxford.gov.uk/lds.

2) Oxford's Development Plan

2.1. Oxford's Development Plan contains a range of documents to guide development within Oxford. Applications for planning permission are to be determined in accordance with the Development Plan unless material considerations indicate otherwise. Council-produced documents within the statutory Development Plan are subject to community and stakeholder involvement, and an independent examination by an Inspector to ensure that the necessary legal requirements for the preparation of the document have been met and the document is 'sound'. All these documents are subject to the European Strategic Environment Assessment Directive and will incorporate a sustainability appraisal to ensure that they accord with the principles of sustainable development. They must be consistent with the National Planning Policy Framework (NPPF).

2.2. Supplementary Planning Documents (SPDs) provide further details and guidance to supplement policies. SPDs are adopted by the City Council following public consultation, and are not part of the statutory Development Plan.

Documents in Oxford's Development Plan

2.3. Currently, the statutory Development Plan consists of:

- Oxford Local Plan 2016-2036 (June 2020)
- Barton Area Action Plan (December 2012)
- Northern Gateway Area Action Plan (July 2015)
- Headington Neighbourhood Plan (July 2017)
- Summertown and St Margaret's Neighbourhood Plan (April 2019)
- Wolvercote Neighbourhood Plan (June 2021)

Oxford Local Plan 2036

2.4. The Oxford Local Plan 2016-2036 was adopted in 2020 and superseded the following documents:

- Saved policies of the Oxford Local Plan 2001-2016 (November 2006)
- Oxford Core Strategy (March 2011)
- Sites and Housing Plan (February 2013)

2.5. The Adopted Policies Map (2020) illustrates graphically the policies and proposals of the adopted Local Plan. The Policies Map (2020) reflects the policies of the Oxford Local Plan 2036.

Neighbourhood Plans

2.6. The Localism Act introduced new rights and powers to enable communities to get directly involved in planning for their areas. Neighbourhood planning allows communities to come together through a parish council or formal neighbourhood forum and produce a neighbourhood plan. Neighbourhoods can decide what they want to cover in their neighbourhood plan. They may allocate land for development, or influence the type and design of development that comes forward. Neighbourhood plans must however be in general conformity with the strategic planning policies already adopted by the City Council. They should not promote less development than set out in the Local Plan and/or undermine its strategic policies. They are also subject to an independent examination and need to be approved by a majority vote in a local referendum.

2.7. Once plans are adopted they will become part of the Development Plan. To date, Oxford City Council has formally designated five neighbourhood areas where plans are being led by neighbourhood forums. Three Neighbourhood Plans, Headington, Wolvercote and Summertown and St Margaret's, are made. Two more are being prepared: Blackbird Leys and Littlemore

Other Documents

2.8. In addition to the Oxford Development Plan there are several other important planning documents:

- Statement of Community Involvement in Planning (June 2021)
- Annual Monitoring Report
- Community Infrastructure Levy (CIL) Charging Schedule (July 2025)
- West End SPD

Statement of Community Involvement in Planning (SCI)

2.9. The Statement of Community Involvement in Planning sets out how the Council will involve the community in the planning process, including Local Plans and Development Management. It sets out the activities that the Council will undertake to reach stakeholders and the public during the various stages of preparation of Local Plan documents. The most recent SCI was adopted at Cabinet on 16th June 2021. It can be viewed at www.oxford.gov.uk/sci.

Annual Authority Monitoring Report

2.10. Each year the City Council produces an Authority Monitoring Report, which is approved at the City Cabinet in the autumn. The Authority Monitoring Report has the following main functions:

- to measure progress made in respect of the planning documents being prepared;
- to review the effectiveness of the adopted planning policies;
- to monitor the extent to which policies and targets in adopted documents are being achieved against a range of indicators.

2.11. The most recent Authority Monitoring Reports produced by the City Council can be viewed on the City Council's website at www.oxford.gov.uk/amr.

CIL Charging Schedule

2.12. The Community Infrastructure Levy (CIL) was introduced by the Planning Act 2008 as a tool for local authorities to help deliver infrastructure to support the development of their area, based on the principle that most development has some impact on infrastructure and should contribute to the cost of providing or improving infrastructure. Oxford City Council is the charging authority for the Community Infrastructure Levy in Oxford, meaning it sets and collects the levy, coordinates the spending of the funds and reports on this spending annually.

2.13. Oxford City Council commenced charging CIL on 21st October 2013. The Charging Schedule sets out the tariff per M^2 of various development types. A partial review of the CIL Charging Schedule, focused on employment floorspace, was adopted on 14th July 2025.

West End and Osney Mead Supplementary Planning Document (SPD)

2.14. This document sets a framework for future developments in the West End and Osney Mead area of Oxford. It is intended to help ensure the area can achieve its regenerative potential by a cohesive understanding of public realm enhancements and infrastructure needed and design considerations, to manage sites coming forward over time.

3) Work Programme for 2026-2031

3.1. During the period covered by this LDS, the City Council will commence / continue work on the following documents:

Development plan documents

- Oxford Local Plan 2025-2045
- Neighbourhood Plans

Other documents

- Annual Authority Monitoring Report

Development Plan documents

Local Plan 2025-2045

3.2. Government guidance expects that all Plans are reviewed every 5 years. That is to say that the Plan must have been reviewed by the date 5 years after adoption in order for there to be an up-to-date plan. The Local Plan 2016-2036 was adopted on 8th June 2020 and contains policies based on relatively recent evidence. The Oxford Local Plan 2045 will replace the Oxford Local Plan 2036. This document, as well as any neighbourhood plans, will form the statutory Development Plan. Following the council meeting to approve the submission draft Oxford Local Plan 2045 on 26th January 2026, that draft can now be used as a material consideration for development management decisions on planning applications; its weight will be limited initially, but increases as it proceeds towards adoption.

3.3. Given that a Local Plan takes considerable time to produce, a review was started a relatively short time after the adoption of the Local Plan 2036. Work began on the Oxford Local Plan 2040 in 2020. The timetable for this document was set with the intention that it would be adopted by June 2025, five years after the adoption of the Oxford Local Plan 2036. The Oxford Local Plan 2040 was submitted for examination in March 2024, with a recommendation after an initial set of hearings that it be withdrawn.

3.4. The withdrawal of the Oxford Local Plan 2040 meant that that plan in the form it was previously agreed no longer existed. It had to be reviewed, and that review means it is, in legal terms, a different document that must therefore follow all statutory processes. That meant that the statutory consultations (Regulation 18 and Regulation 19) were repeated, most recently the Regulation 19 consultation which took place 30th January to 13th March 2026. The next step for progression of the Oxford Local Plan 2045 is for it to be submitted to the Secretary of State in order that it can be independently examined by the Planning Inspectorate.

3.5. Only plans submitted by December 2026 can be examined under the Planning Act 2004. The Oxford LDS 2025-2030 anticipated submission of the Oxford Local Plan 2045 to happen in June 2026. From the end of the Regulation 19 consultation on 13th March 2026, preparation for submission has been underway. However, this intended submission in June has been prevented by a High Court order not to

submit the plan prior to the determination of a judicial review claim or further order of the Court.

3.6. Predicting the exact timing of submission is difficult because it is dependent on several factors, including the timing of a potential Court hearing and/or the possibility of returning to Council for another decision on submission. Any return to Council has potential to result in a need for a second Regulation 19 consultation. Therefore, the timetable in Appendix 1 sets out two possible scenarios. It sets the target submission date as the earliest possible time, which would be in August. However, the timetable also recognises that submission, whilst it will happen as early as possible, could take place at any time up to the end of the year.

Neighbourhood Plans

3.7. Two neighbourhood plan areas have been defined but do not yet have a made neighbourhood plan, which are Littlemore, and Blackbird Leys. Work on these will take place during this LDS period. Littlemore is just awaiting a Council decision to make the plan.

Other documents

Annual Authority Monitoring Report

3.8. Each year the City Council produces an Authority Monitoring Report. This will be taken for Cabinet approval in December 2026 for publication in December 2026. The Authority Monitoring report published in December 2026 will be reporting on the monitoring year 2025/26.

OXFORD CITY COUNCIL

To:	**Cabinet**
Date:	**8th July 2026**
Report of:	**Director of Planning and Regulation**
Title of Report:	**Proposed Submission Draft Oxford Local Plan 2045**

Summary and recommendations	
Decision being taken:	Cabinet is requested to recommend that Council approve the Proposed Submission Draft Oxford Local Plan 2045 for submission to the Secretary of State for formal examination.
Key decision:	Yes
Cabinet Member:	Councillor Anna Railton, Cabinet Member for Planning and Zero Carbon Oxford
Corporate Priority:	Support thriving communities, Enable an inclusive economy; Pursue zero carbon Oxford; Deliver more affordable housing
Policy Framework:	The Local Plan is a statutory requirement. The scope of the policies is wide and encompasses all of the Council's corporate priorities

Recommendation(s): That Cabinet:

1. **Recommend Council to authorise** submission of the Oxford Local Plan 2045 to the Secretary of State for examination, including the minor amendments made according to recommendation 3;
2. **Recommend Council to approve** all the supporting statutory documentation including the Sustainability Appraisal, Habitats Regulation Assessment, Infrastructure Development Plan (IDP), Policies Map, Regulation 18 Consultation Statement, Regulation 19 Consultation Statement and Equalities Impact Assessment (Appendices 2-7 & 9);

3. **Recommend Council to authorise** the Director of Planning and Regulation, after consultation with the Lead Cabinet Member, to make any necessary minor editorial corrections to the Submission Draft Oxford Local Plan 2045, IDP, Sustainability Appraisal and Habitats Regulation Assessment, Policies Map, and to agree the supporting evidence base prior to submission;
4. **Recommend Council to authorise** the Director of Planning and Regulation, after consultation with the Lead Cabinet Member, to invite the examining inspector(s) to recommend any modifications considered to be necessary in accordance with section 20(7C) of the Planning and Compulsory Purchase Act 2004.

Appendix No.	Appendix Title	Exempt from Publication

Appendix 3	Habitat Regulations Assessment	No
Appendix 4	Infrastructure Development Plan	No
Appendix 5	Policies Map	No
Appendix 6	Regulation 18 Consultation Statement	No
Appendix 7	Regulation 19 Consultation Statement	No
Appendix 8	Risk Assessment	No
Appendix 9	Equalities Impact Assessment	No

Introduction

1. The purpose of this report is to seek approval for the Proposed Submission Draft Oxford Local Plan 2045 (Appendix 1) for submission. Following Council approval in January, this document was published on 30th January 2026 and made available for public comment until 13th March 2026, in line with the requirements set out in Regulation 19 of the Town and County Planning (Local Planning) (England) Regulation 2012.
2. A Regulation 19 Consultation Statement summarises the responses that were received during this period (Appendix 7, to be taken into account). All comments in full, together with the Consultation Statement, will be submitted alongside the Local Plan and its evidence base to the Secretary of State for examination. An Inspector from the Planning Inspectorate will be appointed to carry out an independent examination including hearings in public to assess whether the Plan is sound.

Background

3. Production of a local plan is a statutory requirement of the City Council as a planning authority. The Local Plan is important because it sets the planning framework for the city, with statutory policies that will inform decisions on all planning applications in the city. The Plan sets out how the city should look and feel, guiding development to the right locations, ensuring it meets the needs of the city and its communities, and making sure new development is well designed to make best use of resources, including by making efficient use of land.
4. The Oxford Local Plan 2036 was adopted in June 2020 and so became 5 years old in 2025, this means the policies are no longer automatically considered up to date. The NPPF states that where local plan policies are more than 5 years old, housing land supply should be measured against the standard method calculation of housing need. As was reported in the Annual Monitoring Report in December, this means that Oxford no longer has the required 5-year housing land supply and the "tilted balance" applies. This means that the starting point when assessing developments is that they should be supported unless the policies of the NPPF protect assets of particular importance, or where specific adverse impacts clearly and significantly outweigh the benefits.
5. In the absence of up-to-date policies in a local plan, planning decisions must be made in accordance with the presumption in favour of sustainable development set out in the National Planning Policy Framework (NPPF). This limits the ability of the local planning authority to apply its locally relevant policies when making decisions. It is therefore important that the Draft Local Plan progresses quickly towards adoption, which is best achieved by having a 'sound' plan that meets the Government's tests. The Planning Inspectorate will assess the Plan against these tests and make the final call on whether these tests are met or the policies need amendment.
6. The policies in the Proposed Submission Draft Oxford Local Plan 2045 have been informed and are supported by an extensive evidence base, including a whole-plan viability assessment. The proposed policies have been prepared carefully to meet the Government's tests of soundness set out in paragraph 36 of the NPPF, which are that it is positively prepared, justified, effective and consistent with national policy. Alternative options for all policy approaches have been considered, but the proposed policies are considered to be those that best meet the aims of the plan's strategy overall and the tests of soundness. More detailed explanation of the key features and policies of the Plan are provided in Background Paper 1.
7. It is important to note that the Oxford Local Plan 2045, having been developed under the provisions of the Planning Act 2004, must be submitted before 31 December 2026. This date is confirmed in the National Planning Policy Framework (NPPF) Consultation dated 24 September 2024. After that date, submitted plans must have followed the wholly new local plan process as enabled by the Levelling Up and Regeneration Act 2023, the secondary legislation enacted in March 2026, most notably the Town and Country Planning (Local Planning) (England) Regulations 2026, and anticipated new national planning policy and guidance. It will not be possible therefore to submit this Plan

after December 2026, missing this date would require work to begin on a wholly new plan under the new provisions of the Levelling Up and Regeneration Act and associated regulations.

Sustainability Appraisal, Strategic Environmental Assessment and Habitats Regulation Assessment

8. It is a legislative requirement (The Planning and Compulsory Purchase Act 2004) that the Council undertake Sustainability Appraisal during the preparation of its Local Plan. The purpose of Sustainability Appraisal is to help promote sustainable development by assessing the extent to which the emerging plan, when judged against reasonable alternatives, will help to achieve environmental, economic and social objectives. The Sustainability Appraisal process incorporates Strategic Environmental Assessment, which is required by separate legislative requirements (The Environmental Assessment of Plans and Programmes Regulations 2004) in order to ensure that potential environmental effects are given full consideration alongside social and economic issues during the preparation of a draft plan.
9. A Sustainability Appraisal, incorporating Strategic Environmental Assessment, (Appendix 2, to be taken into account) has been carried out alongside the development of the Local Plan 2045. A non-technical summary is included in the Sustainability Appraisal. This iterative work built upon an interim SA report published as part of the earlier Regulation 18 (Preferred Options) consultation and has informed the development of the Local Plan and its policies.
10. A Habitats Regulation Assessment (HRA, Appendix 3, to be taken into account) appropriate assessment (as required by the Conservation of Habitats and Species Regulations 2017 (as amended)) has also been carried out to assess any potential negative impacts of development on the Oxford Meadows Special Area of Conservation (SAC), and suggested mitigations are included in relevant site allocation policies.
11. The Sustainability Appraisal and HRA were published alongside the Proposed Submission Draft Local Plan in January and were also available for consultation. Responses received with regard to the Regulation 19 SA and HRA are also reported in Appendix 7.

Consultation and engagement

12. Engagement has already provided an important input in forming and shaping the Proposed Submission Local Plan. Engagement and consultation on the Oxford Local Plan 2045 has been consistent with the Statement of Community Involvement in Planning and appropriate to the stage. Public engagement has involved: the early engagement survey 17th March-28th April 2025, the Regulation 18 preferred options consultation that took place from 28th June- 8th August 2025, following Cabinet approval on 18th June 2025, and the Regulation 19 proposed submission draft consultation took place from 30th January-13th March 2026, following full Council approval on 26th January 2026. Alongside the evidence base and Government policy, engagement at the early non-statutory stage and at Regulation 18 has been important in informing policy direction,

together with professional judgement. A summary of the Regulation 18 consultation responses and how they informed the draft submission plan is appended for consideration (Appendix 6: Regulation 18 Consultation Statement).

13. The Regulation 19 publication is not a consultation in the standard sense. Instead, the aim of the recent Regulation 19 (Proposed Submission Draft) consultation stage is to ask for views on whether the Plan meets the tests of soundness set out in paragraph 36 of the NPPF, with the aim of allowing interested parties the opportunity to make representations on the draft plan and subsequently participate in the independent examination. Comments received at this stage are sent to the Secretary of State on submission of the Plan for consideration by the Inspector as part of the examination.

Legal challenge

14. A legal challenge was made to the decision taken by Council in January to both approve the Proposed Submission Draft Local Plan for consultation and thereafter to submit it (subject to any main modifications as agreed) for examination. This claim was made on the basis that Council ought to have considered both the Regulation 18 and Regulation 19 Consultation Statements when deciding to submit the Plan. An injunction was issued preventing submission of the plan until that challenge was resolved. Officers consider the challenge is defensible. However, given the Court's workload and likely date of a hearing, there is a high possibility that awaiting the Court date and outcome could lead to the Plan never being able to be submitted by the deadline of the end of the year, meaning that all work on it thus far would be wasted. Rather than take this risk, officers consider that the Council should make a fresh decision on whether or not to submit the Local Plan, taking into account the representations made at both the preferred options (Regulation 18) and pre-submission (Regulation 19 stages). This will ensure that the procedural issues raised by the claimant in the High Court challenge are addressed through a fresh decision to submit the plan. In those circumstances, there would be no basis for the injunction to be maintained.

15. This report seeks a fresh decision of Council to approve the Local Plan for submission. Once submitted, the objections made at Regulation 19 will be considered in full by the Planning Inspector who will ensure a public hearing of all the outstanding issues in detail. This process is designed to test, challenge and, if necessary to ensure soundness, refine the policies as drafted. Once the Inspector's report has been received there will be a further opportunity for Council to consider its findings and decide whether to adopt the Plan.

Limitations on ability to make modifications

16. At this stage, following the Regulation 19 publication and submission of views on soundness, there is very limited scope to make changes to the Plan in response. The City Council should only submit a Plan that it considers to be sound which, by definition, is one which does not need any significant modification. The City Council can request that the Planning Inspector considers proposed modifications to the Plan during the Examination process in line with

recommendation 4. These will only be taken forward by the Planning Inspector if they are considered necessary to overcome soundness issues.

17. In this context, a proposed change to the Plan which is considered significant in terms of the overall strategy and objectives of the Plan and which would require consultation and sustainability appraisal should not be made after publication of a proposed submission plan under Regulation 19. Where a significant change is required for soundness reasons after publication of a proposed submission plan, a further period of consultation on both the modification and any necessary sustainability appraisal would be required before the plan could be submitted.

18. During the examination the Inspector may themselves identify modifications to the plan which they consider are necessary for soundness. This can include, for example, modifications to the wording of policies or removing a site from the local plan before adoption. At the end of the hearings, all the modifications that the Inspector considers are required to make the Plan sound will be consulted on together with a sustainability appraisal report addressing the proposed modification. When any are taken forward in the Inspector's report as recommended modifications, they will become part of the Plan which is brought to Cabinet and Council for adoption.

Next steps

19. Subject to Council approval the Local Plan will be submitted (together with a large evidence base and all the comments made through the consultation period) to the Secretary State through the Planning Inspectorate. Officers have been liaising with the Planning Inspectorate to facilitate an examination as soon as possible after submission.

20. Following the examination, the Inspector's report will be published which will recommend either that the Plan is sound, or that it can be made sound with some modification, or that it is unsound and cannot be adopted. Any modifications which the Inspector proposes (in line with recommendation 4 of this report) will be subject to further consultation. When there is a sound Plan which can be adopted a report will come back to Council for that decision.

Implications of Local Government Reorganisation

21. Adopting a new Local Plan ahead of LGR will mean that the successor authority will have an up-to-date Local Plan for the Oxford area from day one which can be used to make planning decisions, offering continuity of service. This will allow the new authority the time and space that will be required to embark on the development of a new Local Plan, which will in time replace it.

Financial implications

22. Production of a Local Plan is a significant and multi-year financial commitment. In particular the costs associated with examination are notable. Work on the Oxford Local Plan 2045 has been structured to be able to progress whilst minimising financial implications. The budget of the Planning Service is drafted and has been approved with this service pressure in mind. The work required has been assessed as capable of being resourced by existing Planning Policy

staff and existing Planning Policy budgets and reserves. This situation will be kept under review as the Local Plan progresses through the last stages of production.

23. It should be noted that in the event that the Oxford Local Plan 2045 is not submitted by the end of the year deadline, and as such work would need to start from the beginning on a wholly new plan, this would entail significant additional costs that are not budgeted for. In addition to the staff costs involved, considerable resource is required to secure the consultant advice and background studies necessary to support a Local Plan. It would be likely that all the studies supporting the Local Plan 2045 would need to be replaced by new commissions with a considerable cost to the City Council.

Legal issues

24. As outlined in this report, officers consider that the correct processes were followed leading to Council's resolution to submit the plan in January and that the legal challenge is defendable. Nevertheless, due to delays obtaining a Court hearing date which could prejudice the ability to submit the plan before end of December 2026, a fresh resolution from Council is sought, with the benefit of the consultation reports appended to the report, in order to address the one ground of legal challenge.

Level of risk

25. A risk assessment has been undertaken (Appendix 8). All risks have been mitigated to an acceptable level.

Equalities impact

26. The Equalities Impact Assessment is attached as Appendix 9. A number of the policies contained in the Submission Draft Oxford Local Plan 2045 will help address inequalities within the city if adopted.

Carbon and Environmental Considerations

27. The council is committed to addressing the effects of, and reducing our contribution towards, climate change. In 2019, the council declared a climate emergency and has committed to a series of actions. The Submission Draft Oxford Local Plan 2045 has sustainability, climate change and climate adaptation and mitigation as core themes running throughout the plan. The document seeks to reflect this across all the chapters, whether it is through design policies, parking policies, flooding, drainage or how to ensure the most efficient use of land. The Plan is supported by a Sustainability Appraisal and Habitat Regulations Assessment.

Background Paper:

1. Details of the Submission Draft Oxford Local Plan 2045

Background Paper: Details of the Submission Draft Oxford Local Plan 2045

1. The Submission Draft Oxford Local Plan 2045 offers a range of policies with supporting text. These range from strategic policies to more detailed policies to be used in development management decisions. The Plan is comprehensive and will replace the Local Plan 2036. Any adopted Neighbourhood Plans will be the only other documents containing statutory policies after the Northern Gateway AAP expires in 2026. The sections below briefly summarise the key points from each chapter of the Plan.

Vision and Strategy

2. The first step in any local plan is to understand needs and the next step is to try to meet these needs, within the bounds of key objectives for the plan. Of primary importance is that the plan seeks to alleviate the housing crisis whilst aiming to achieve sustainable development. A Sustainability Appraisal is attached as Appendix 2 and a Habitat Regulations Assessment (HRA) as Appendix 3.
3. The Vision for Oxford in 2045 is that it will be a healthy and inclusive city, with strong communities that benefit from equal opportunities, not only in terms of access to housing and jobs, but to social and leisure opportunities, to healthcare and to the natural environment. Oxford will continue to be a city with a strong cultural identity, that respects our heritage, whilst maximising opportunities to look forwards, to innovate, learn and enable businesses to prosper. The city will be supported to continue to make advancements in the life sciences and low carbon sectors. The protection of the environment is central, ensuring the city maintains its biodiversity, is well connected in terms of blue and green infrastructure and is resilient to climate change. We will utilise resources prudently, while mitigating impacts upon the natural environment. The city will be net zero carbon by 2040, while our communities, buildings and infrastructure will be more resilient to the impacts of climate change or other emergencies.
4. The vision and strategy chapter contains a suite of policies that set out key features of the strategy. These include locational policies that support easily accessible facilities, and a plan-wide viability policy that sets out when viability evidence must be submitted and a cascade for relaxing the policy approaches considered as having the most impact on viability, if robustly justified and supported by strong evidence. This approach will ensure that we bring forward as much development, specifically housing, as possible in the plan period.

A healthy, inclusive city to live in

5. Chapter 2 is concerned with the delivery of housing. There is an urgent need for new homes in Oxford, but a limited and constrained supply of land available for development in the city. The very high need for new housing means that general market prices for renting and buying are prohibitive for many. The challenges the workforce may face in finding accommodation mean that employers struggle to find and retain staff.
6. The NPPF requires that the overall housing need is understood and puts forward the Standard Method as the only method by which this need should be

calculated. The Standard Method for Oxford calculates the need as 1,087 dwellings per annum. There is not sufficient capacity within Oxford for new housing to meet this need. Policy H1 sets instead a housing requirement, which is based on the assessed capacity. Every effort has been made to find capacity, but the Plan does result in unmet need. A formal request for help with unmet need has been sent to the neighbouring authorities in Oxfordshire, and all have agreed to help meet this need, noting that provisions in existing plans already go a long way, if not the whole way, towards helping to meet this unmet need arising from Oxford.

7. In addition to the overall housing need, various individual housing needs must be considered, and local plans are expected to attempt to meet these needs. The need for affordable housing is particularly significant in the city and amounts to 692 units per annum, and of this 446 per annum need is for those who cannot afford to either buy or rent. Social rented housing meets the needs of those most excluded from the housing market. Regardless of how high the need is, any policy requirement set for affordable housing must be viable and therefore deliverable. The intention of Policy H2 is to maximise the amount of social rented homes that can be provided and to set the affordable housing contributions at a level that can generally be afforded, which is 40% of housing schemes over 10 units. The requirement is set at a level that should ensure the majority of developments are viable, which will limit the amount of viability evidence that will need to be assessed at the planning application stage. The policy requires 80% of affordable homes to be social rented. There will be schemes that have specific features that mean this level of affordable housing cannot be afforded, so when justified, Policy S2 sets out a cascade approach. In addition, Policy H3 sets out when contributions towards affordable housing will be sought, including from purpose-built student accommodation, certain types of elderly persons accommodation and certain employment-generating uses.

8. Policy H4 seeks to provide employer-linked housing which recognises the challenges that employers face in both recruiting and retaining staff in Oxford given the shortage of housing and its affordability. This acute staffing issue impacts on the operation and provision of key services such as schools and hospitals. Employer-linked housing involves the development of housing by specified key employers in the city, on their own specified sites, to provide a means of delivering affordable housing for their own staff. For example, the NHS provide staff accommodation within the hospital sites.

9. The large number of students resident in Oxford has an impact on the availability of general market housing. Policy H8 aims to ensure new student accommodation is built only in suitable locations and is limited to those on courses of a year or more who are receiving the greatest and longest-term educational benefit. It prioritises students of the two universities to assist with the economic aims of the Plan in supporting the universities. Policy H9 ensures that where new academic and teaching facilities are proposed that support additional students, that these students' accommodation needs can be met. In the case of the universities this will be measured by the set threshold of students living outside of university accommodation such as student halls.

A prosperous city with a globally important role in learning, knowledge and innovation

10. Chapter 3 is concerned with Oxford's economy. The Submission Draft Oxford Local Plan 2045 sets out policies that seek to identify and plan for the employment needs of the city over the plan period whilst recognising the balance of other land uses, particularly housing. Existing employment uses will be supported through the intensification, modernisation and regeneration of existing employment sites, including university and hospital sites (Policy E1). The strategy is that employment needs over the plan period can be met on existing sites. Key employment sites outside of the city centre and district centres are protected for their importance to the economy. Within the city centre and district centres, full flexibility is allowed for, with no protection of sites (although new employment uses could be located here, recognising that Use Class E includes many commercial uses and new employment uses could take place as a lawful use). Other policies are intended to help ensure benefits of the successful economy are widely felt, such as the requirement for Community Employment and Procurement Plans (E3) and the Affordable Workspace policy (E4).

A green, biodiversity city that is resilient to climate change

11. Chapter 4 is concerned with protecting and enhancing green and blue infrastructure, delivering net gains in biodiversity and building in resilience to flooding and promoting sustainable drainage and resilient construction methods. Ensuring people have access to a network of green and blue infrastructure, such as green spaces, is important in Oxford, and these networks need to be protected, as well as new green and blue infrastructure provided in new development where opportunities arise.

12. The policy approach in the Local Plan recognises the multi-functional benefits of our GI network and seeks to ensure that we protect (Policy G1) a range of spaces and features for the benefit of the city now and into the future, where possible enhancing these (Policy G2) and providing new features to strengthen that network. Policy G3 requires use of the Urban Greening Factor tool to encourage greening on new developments. The policies set out the requirements that seek to ensure applicants identify/assess and protect existing habitat value and add biodiversity and green features. Policy G4 sets out how the 10% biodiversity net gain (BNG) required through the Environment Act 2021 should be delivered. In addition to BNG, new development offers the opportunity to support additional biodiversity in the local area through sensitive and well thought out design that incorporates wildlife friendly measures that can support nature, such as bird and bat boxes, insect homes and wildflower meadows (Policy G5).

13. The way we design and build has a key role to play in both mitigating and adapting to the impacts of climate change. Other policies in this chapter are concerned with climate resilient design, including by managing flood risk (Policy G7).

A city that utilises its resources with care, protects the air, water and soil and aims for net zero carbon

14. Chapter 5 includes policies that seek to ensure that new development comes forward in a way that does not further exacerbate climate change. If development is to be truly sustainable, then the city's natural resources must be appropriately stewarded to protect the natural environment, also ensuring public health is not negatively impacted by poor air and water quality.

15. Draft policies support the City Council's target of being a net zero carbon city by 2040. Policy R1 provides requirements for the carbon efficiency of buildings once they are in operation and throughout their lifetime. Policy R2 focuses on emissions associated with the lifetime of the development, including the construction process (embodied carbon), and Policy R3 is concerned with the importance of retrofitting existing buildings in the city, and also says that carbon efficiency benefits which a scheme may bring are a public benefit that may be weighed against heritage impacts. Policies R4-R8 are concerned with environmental quality, including of air, water and soil, and with environmental health impacts of development.

A cultural city that respects its heritage and fosters design of the highest quality

16. Chapter 6 is concerned with policies that respect the city's heritage and foster high quality design. Delivering high quality urban design is about more than just how a building or street looks. It is also about ensuring development functions positively for the people who live and work there, including taking account of the need to adapt to climate change, and that development is attractive and easy to move around, particularly for pedestrians and cyclists.

17. Policy HD1 then sets out the principles of high-quality design, which need to show that it is responsive to its context, creates or enhances local distinctiveness & ensure that the amenity of the natural environment is protected. Policy HD2 is concerned with ensuring new developments make efficient use of land. The policy includes criteria to ensure that a proposal makes the best use of its site capacity. New development should respect and respond to the city's heritage and archaeology.

18. Policy HD3 sets out the criteria for assessing the impacts of new developments on designated heritage assets and the importance of ensuring that they are protected and enhanced and that applications affecting them are informed by heritage assessments to weigh the impacts of proposals on both the significance of the asset and their settings. Policy HD4 deals with non-designated heritage assets and Policy HD5 with archaeology.

19. The city's historic views into and across the city are encapsulated in the view cones, and design should fully consider and respect these key views. Policy HD6 then goes on to consider specifically design in relation to views & building heights.

20. Additional policies focus on the well-being of new and surrounding occupants, including the need for a Health Impact Assessment for larger developments.

These ensure that proposals meet privacy, daylight and sunlight requirements, as well as internal and external space standards.

A liveable city with strong communities and opportunities for all

21. Accessibility to valued facilities, services and cultural opportunities is important for making strong local communities that enable people to thrive. Oxford is generally well serviced by local centres, so the focus of this chapter of the plan is on policies (Policies C1 and C2) that protect them and focus new similar developments to those locations, which are already accessible, allowing linked trips and supporting continued success of those centres.

22. The policy approach is to minimise the need to travel and prioritise sustainable modes of transport (Policies C6 and C7). The approach towards motor vehicle parking is to continue to seek a downward pressure on public, residential and non-residential parking across the city (also Policy C8). Urban spaces should be created for people to move around safely, rather than designed to prioritise cars, as these are safer, healthier, more attractive and enjoyable environments to live in.

Development sites and infrastructure

23. In order to guide the right type and level of development to the optimal location, whilst fully considering the city's constraints, the Plan contains site allocation policies and Areas of Focus policies. The latter are defined areas across the city anticipated to experience more change as a result of new development (in some cases including development across the city boundary) during the Plan period. Every effort has been made to identify as many sites for allocation as possible, so as to reduce the level of unmet housing need. This work has also involved a detailed search within the Green Belt. The revised NPPF makes it clear that, when there are unmet needs within a planning authority area, the planning authority is required to look to the Green Belt to meet those needs (paragraph 146). Several "calls for sites" have been held asking landowners and developers to nominate potential sites. These streams of work and follow up investigations through the development of the Strategic Housing Land Availability Assessment (SHLAA) have combined to result in the proposed allocation of 53 sites, the vast majority for housing development, including some sites newly identified in this Plan.

24. New development across the city results in additional infrastructure needs. This could range from the requirement for additional capacity at a city school, the introduction of a new cycle or pedestrian route or a contribution to a community or health facility. An Infrastructure Delivery Plan (IDP), which details the key infrastructure needs within the city has been produced with the engagement of utility and health providers and the county council, and is attached as Appendix 4. The following tables summarise the development sites which have been investigated through the SHLAA process and are proposed to be taken forward as policy allocations in Chapter 8, and which are shown on the Policies Map (Appendix 5). Table one identifies those with a current allocation in the Oxford Local Plan 2036. Table two identifies those newly identified sites. Table three

lists sites which have been considered through the SHLAA, but which are not included in Chapter 8 for specific reasons, which are set out.

Table 1: Sites with allocation policies in Chapter 8 that are currently allocated in the Oxford Local Plan 2036:

SHLAA ref	Site allocation name	Minimum housing number anticipated (or stated if no residential expected)
587	ARC Oxford	employment
006b	Banbury Road University Sites - Parcel B	54
008a	Bertie Place Recreation Ground	25
11	Canalside Land, Jericho	0 in allocation as, in the event of an alternative application, housing numbers will be heavily dependent on the proposed arrangement of uses on site (including boatyard/ community centre/ public open space) in conjunction with flood mitigation measures.
12	Churchill Hospital	0 in allocation as hospital use primary need
16	Cowley Marsh Depot	83
17	Crescent Hall	75
018	Diamond Place and Ewert House	135
21	Faculty of Music	23
104	Former Iffley Mead Playing Field	84
24	Government Buildings and Harcourt House	68
70	Island Site	59
26, 234	Jesus College Sports Ground	40
27	John Radcliffe Hospital	0 in allocation as hospital use primary need
028a	Kassam Stadium	290
389	Land at Meadow Lane	allocation does not state number as characteristics of site means this must be led by detailed proposals that respond to heritage and biodiversity sensitivities.
117	Land surrounding St Clement's Church	50
32	Lincoln College Sports Ground	24
31	Manor Place	43
574	Manzil Way Resource Centre	0 in allocation as medical use primary need
114e	Marston Paddock extension	20
497	MINI Plant Oxford	employment

42	Nuffield Orthopaedic Centre (NOC)	0 in allocation as medical use primary need
586	Osney Mead	247
028b	Overflow carpark at Kassam Stadium site	100
439	Oxford Brookes Marston Road Campus	42
001a1	Oxford North remaining phases	161
075 (a & b)	Oxford Railway Station and Becket Street Car Park	52
588	Oxford Science Park	employment
049	Oxford University Press Sports Ground, Jordan Hill	90
76	Oxpens	450
001e	Pear Tree Farm	111
001c	Red Barn Farm	employment
113	Redbridge Paddock	200
54	Ruskin Campus	30
289	Sandy Lane Recreation Ground	300
124	Slade House	0 in allocation as medical use primary need
14	Templars Square	500
38a2	Thornhill Park (phase 2)	402
61	Union Street Car Park	15
120	Unipart House	employment
63	Warneford Hospital	0 in site allocation policy as hospital the principal use of the site.
65	West Wellington Square	13
81	Worcester Street Car Park and Public House	Part of the Nuffield sites allocation (with Island Site and South of Frideswide Square) that has a minimum housing requirement of 59)

Table 2: Sites with allocation policies in Chapter 8 that are not currently allocated in the Oxford Local Plan 2036. (N.B. some of these sites have been previously allocated or were being considered in the Oxford Local Plan 2040, but they do not have a current site allocation policy relating to them):

SHLAA number	**Site name**	**Minimum housing number anticipated**	**Description**
516	474 Cowley Road	14	Former Powells Timber Yard
613, 614, 615	Botley Road sites around Cripley Road including River Hotel and Westgate Hotel	20	A mix of uses exist and some reprovision expected, but some conversion and intensification will result in more residential

204	East Oxford Bowls Club	10	Disused and vacant site was a bowling green
20b2	Elsfield Hall, Elsfield Way	27	Wider site including car park previously allocated and previous car park now includes housing. Building currently in use as offices and gym
664	Jowett Walk (South)	14	College accommodation to be intensified including additional student accommodation
624	Land south of Frideswide Square		Part of the Nuffield sites allocation that also includes the Island Site and Worcester Street Car Park, but only the other two parts were included in the OLP2036 (all three were included in the OLP2040). 59 units minimum across the three parts of the site
33	Littlemore Mental Health Centre, Sandford Road	0	No minimum number in policy, but 81 assumed in the SHLAA against all Oxford Health Trust sites. Redevelopment and intensification expected on this site, including staff/student accommodation
028c	Ozone Leisure Park & Minchery Farmhouse	employment	No residential expected and in lawful use for other uses
428	Rectory Centre	21	Anticipated to come forward as part of the Oxford Health Trust's rationalisation of its sites
463	Ruskin Field	28	Ruskin Field does have an allocation policy in the OLP2036, but the red line allocation for the policy has shifted to the northern part of the site
616	St Thomas School and Osney Warehouse	10	Redevelopment of small brownfield site with heritage interest

Table 3: Sites that have been considered (i.e. they passed the first stage of filtering), but that are not proposed to have a site allocation policy:

SHLAA number	**Site name**	**Reason site has not been taken forward for an allocation**
440	1 Pullens Lane	Site includes house with significant garden, which was initially considered large enough for 10 dwellings (the allocation threshold), but more detailed assessment suggests the very significant amount of green infrastructure, particularly trees, on the site might make that difficult to achieve. Site could come forward as windfall
660	2 Harberton Mead	Detailed assessment suggests the site does not have capacity for 10 dwellings (the allocation threshold). Could still come forward as windfall
173	Bayards Hill Primary School Part Playing Fields	At the current time there is not enough information to suggest it can come forward without unacceptable loss of playing pitch.

657	Clarendon centre	Work commenced on approved scheme
467	Edge of Playing Fields, Oxford Academy	At the current time there is not enough information to suggest it can come forward without unacceptable loss of playing pitch.
658	Land off Harolde Close	Further investigation of ecology and general developability suggests it does not have capacity for 10 dwellings.
43	Old Road Campus	Put forward by the University as intention to intensify further, but limited intensification within same use on this site does not require an allocation policy
665	Oriel College Sports Ground and adjoining land (comprising 263 and 639)	Very sensitive site for heritage - important as green space to the character of Bartlemas Conservation Area, and the setting of the Bartlemas Farmhouse and chapel. Also, not apparent that sports use could be provided within the site, alongside development.
111	Oxford Stadium (Greyhound stadium)	Site put forward for housing by landowner, and considered. However, current community uses mean it could not also support housing, so allocation would require the loss of those uses.
579	ROQ Site	Site is part of an area of focus and does not need a specific site allocation policy
62	University of Oxford Science Area & Keble Road Triangle	Site is part of an area of focus and does not need a specific site allocation policy
Multiple	Green Belt sites, particularly in Marston Gap	The Green Belt was considered again, as required by the NPPF. Large amounts of Green Belt within Oxford are not developable because they are functional flood plain and/or strongly protected for their biodiversity value (SSSIs). Other sites were looked at, but many were ruled out because development of them would be contrary to the strategy of the plan (Core Green Infrastructure areas, e.g. University Parks). Of the remaining areas, landowner interest was then gauged. This was minimal, but there was interest in two sites to the east of the current development sites on the western edge of Old Marston, another site which was the Extension of the Marston Paddock Development (put forward for allocation), and another site which was the playing field of Hertford College. The sites in the Marston Gap have been ruled out on transport grounds, based on detailed comments from the Highways Authority. There is no likely prospect of suitable access, and the sites are isolated and would be car-dependent. The Hertford College Playing Field is in sports use. The College suggested the site for housing, but also said they ideally want to retain the sites in sports use, and they do not have alternative plans in train for reprovision of the pitches. Therefore, it seems premature at this point to allocate it as a housing site, as it is not clear how that would come forward.

CHAPTER ONE

INTRODUCTION AND STRATEGY

WHERE WE ARE

Oxford is an attractive place to live, work, study and visit, and is home to a diverse range of communities. Its environment is characterised by a wealth of built heritage that reflects many centuries of settlement, interspersed with high quality green and blue spaces that harbour a variety of ecologically important habitats.

The city has a broad, multi-faceted and active economy, with one of the highest concentrations of knowledge intensive businesses in the UK. This is enhanced by its historic role as a world-renowned seat of learning, with two universities and a strong research and innovation sector.

However, this attractiveness and success brings challenges for our people, the lives they lead and jobs they have, their communities and the environment. High demand for land results in high land values; congestion on the city's roads makes movement difficult and exacerbates poor air quality in certain areas; and the supporting infrastructure needs to keep pace with a changing and growing city. These challenges are intensified by national and international pressures such as rising build costs for new development, a chronic undersupply of housing, climate change and energy insecurity.

The role of this Local Plan is to carefully manage and guide new development so that it seeks to address the challenges we face and build upon the positive aspects of the city that make it so special. The Local Plan contains positive planning policies to ensure the optimum outcomes for the city's residents, environment, businesses, education and health institutions.

This Local Plan for the period 2025-2045 supersedes the Local Plan 2036 and the other relevant parts of the development plan including the Northern Gateway Area Action Plan. The vision for Oxford in 2045 seeks to address the strengths and challenges identified above.

In 2045 Oxford will be a healthy and inclusive city, with strong communities that benefit from equal opportunities for everyone, not only in access to housing, but to nature, employment, social and leisure opportunities and to healthcare.

Oxford will be a city with a strong cultural identity, that respects and values our heritage, whilst maximising opportunities to look forwards to innovate, learn and enable businesses to prosper.

The vision is one which supports research and development in the life sciences and health sectors which will continue to provide solutions to global challenges.

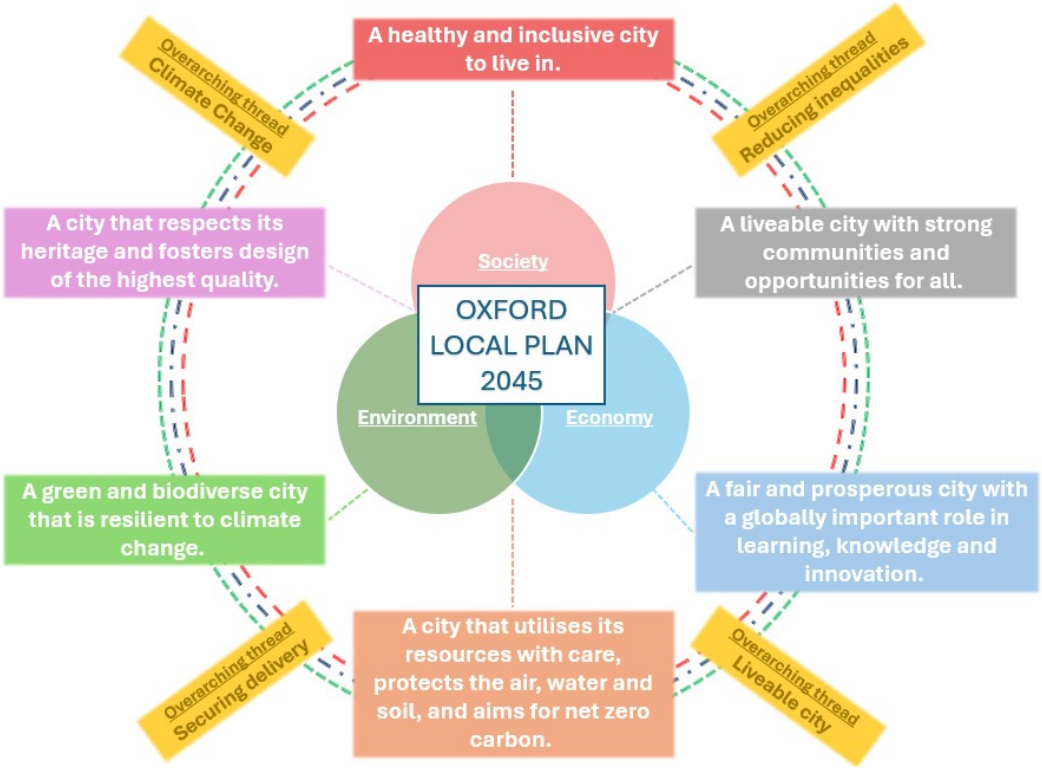
The environment will be central to everything we do; it will be more biodiverse, better connected and more resilient. Resources will be utilised prudently whilst mitigating our impacts on the soil, water, and air.

The city will be net zero carbon, whilst our communities, buildings and infrastructure will be resilient to the impacts of climate change and other emergencies.

OBJECTIVES AND STRATEGY

The vision for the city in 2045 is divided into key six themes which are illustrated in Figure 1.1. These are based on society, economy and environment as the three pillars of sustainability, and three themes which fall at the intersections of those pillars. Taken together, the six themes represent what we consider to be a sustainable future for Oxford. The themes are supported by a number of underlying objectives; in practice there will often be overlaps with some objectives being of relevance to more than one theme.

Figure 1.1: The six themes underpinning our vision for Oxford in 2045 – adapted from the three pillars of sustainability (society, economy and the environment)



Local Plan 2045 theme	Underlying Local Plan 2045 objectives ***The Oxford Local Plan 2045 will...***
A healthy and inclusive city to live in.	• Maximise capacity for delivering homes across the city and set a housing requirement that seeks to meet the needs of different groups as far as possible. • Provide access to affordable, high-quality and suitable accommodation for all.
A green and biodiverse city that is resilient to climate change.	• Secure strong, well-connected ecological networks and net gains in biodiversity. • Be resilient and adaptable to climate change and resistant to flood risk and its impacts on people and property. • Protect and enhance Oxford's green and blue network. • Provide opportunities for sport, food growing, recreation, relaxation and socialising on its open spaces.
A fair and prosperous city with a globally important role in learning, knowledge and innovation.	• Maximise the benefits of the city's strengths in knowledge, healthcare and education while supporting economic growth in key sectors including science and innovation. • Recognise the valuable contribution that supporting a range of businesses (including SMEs) can make to innovation and economic diversity. Help to create the conditions in which all businesses can prosper. • Create opportunities for everyone in the city to access employment. Support local people giving them access to training, education and

	apprenticeships to make the most out of new job opportunities created in the city. • Help Oxford to continue in its role as a national and international destination and support the visitor economy by encouraging longer stays and higher spend in Oxford.
A liveable city with strong communities and opportunities for all.	• Provide neighbourhoods facilities needed to support our daily lives within a short walk from our homes, to support a liveable city. • Develop thriving local centres that support a variety of uses and foster activity throughout the day and night. • Value diversity whilst fostering greater inclusivity within our communities. • Create opportunities for supporting the transition to more sustainable/active forms of transport, including by reducing the need to travel, supporting good bicycle parking facilities and avoiding on and off-street car parking where possible across the city.
A city that respects its heritage and fosters design of the highest quality.	• Ensure well-designed buildings and public spaces that feel safe, that are sustainable, and that are attractive to be in and travel to. • Protect and enhance our valued and important heritage. • Curate a built environment that supports and enables people to be physically and mentally healthy.
A city that utilises its resources with care, protects the air, water and soil, and aims for net zero carbon.	• Ensure Oxford is ready for a net zero carbon future. • Ensure our resources, including land, soil, and raw materials, will be protected and used prudently, with consideration for replenishment and renewal. • Contribute towards continued improvement in the city's air quality and its further limit impacts upon public health. • Ensure the city's water resources are utilised efficiently with consideration for the future, whilst water quality is protected and enhanced for the benefit of the wider environment.

OVERARCHING THREADS

In response to the complexities of planning in such a challenging but dynamic city and alongside a need to urgently respond to inequality and climate change, there are four particularly important threads which are wound throughout the Local Plan and supported by multiple policies across the different chapters. These relate to key issues and challenges facing the city which require a multi-faceted response and that are relevant to all six themes underpinning the vision and all of the objectives. As such, all the proposed policies will help to address these key issues.

The first overarching thread is that of **reducing inequalities** in the city. The Local Plan chapter 2 puts forward a range of requirements aimed at supporting access to affordable

housing, as well as a good mix of housing, in order to help address housing inequality. Equally, chapter 3 sets out policies which seek to support the economy, including addressing unequal access to employment and training through options for policies requiring employment and skills plans as well as provision of affordable workspaces. Polices that are proposed for protecting, enhancing and providing new green infrastructure in chapter 4 are intended to help preserve access to and improve the natural environment across the city and there are other policies located in the document which also respond to this overarching thread.

The second thread is that of **addressing climate change.** In terms of reducing our emissions, the proposed policies of chapter 5 most directly address this issue covering topics such as net zero development, embodied carbon and supporting retrofitting of existing buildings, however, policies elsewhere in the Local Plan also address good urban design, parking, and bike storage which can enable people to live lower carbon lifestyles. Equally, a diverse range of policies can support adaptation and resilience to the expected impacts of climate change, from resilient design and construction, to flooding, green infrastructure and most of these sit within chapter 4, though other policies such as urban design and health impact assessment will also contribute.

The third overarching thread which runs throughout the document is that of **enabling a liveable city** and ensuring that communities are well supported and well served by having access to the basis of their daily needs within an easy walking distance of their homes. The Local Plan's proposed strategic policies discussed later in this chapter include a spatial strategy which sets out where types of development ought to be focused in the city and helps support this theme. Within subsequent chapters, there are policies which are put forward to focus on more specific aspects of provision that we want to see in our neighbourhoods to help ensure the right balance of needs are met. These include policies on the protection of a network of green spaces across the city (chapter 4), as well as policies which address the provision of community facilities (chapter 7).

The fourth overarching thread is **securing delivery.** The strategy and policies of this Local Plan will only reduce inequality, address climate change and enable a liveable city if they are implemented and delivered upon. The City Council is clear in Policy S1 that applications which accord with the Local Plan will be approved without delay. To help facilitate the speedy progress of proposals through the planning process the City Council has set out in the policies clear expectations and requirements. Where policies require supporting evidence, this is to ensure that planning officers have all relevant information from the outset to enable speedy decision making. The City Council wants this plan to be being delivered quickly and to secure the real change envisaged in the vision.

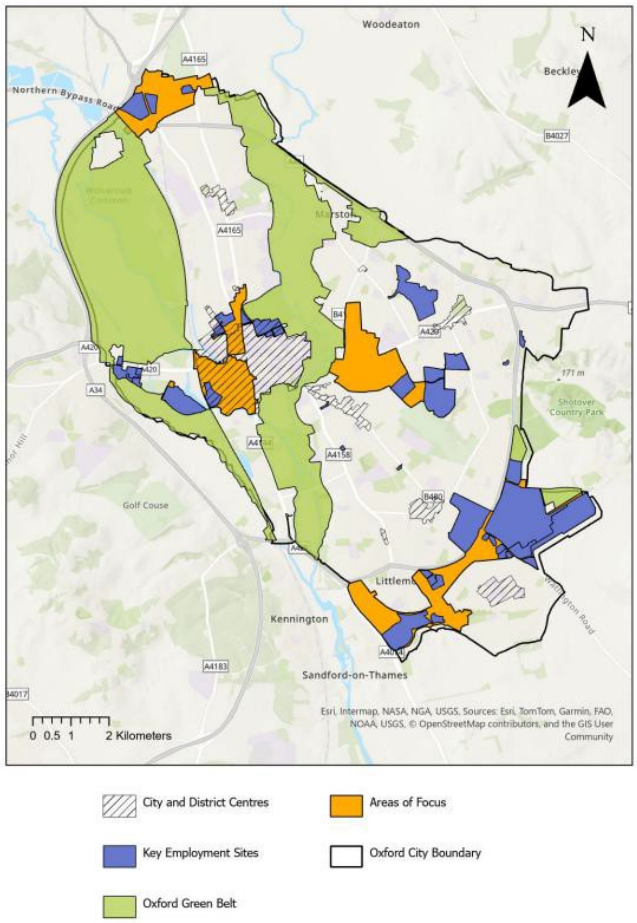
SPATIAL STRATEGY AND PRESUMPTION IN FAVOUR OF SUSTAINABLE DEVELOPMENT

Policy Context

- The aim of the plan is to understand and try to meet the city's needs, without having detrimental effects on economic, social and environmental sustainability objectives.
- The Plan sets a housing requirement, in Policy H1, that seeks to meet housing needs as far as possible using a capacity-based approach.
- The Local Plan's policies focus on delivering sustainable growth for Oxford, compliant with the presumption in favour of sustainable development in the National Planning Policy Framework (NPPF) that meets the objectives, including by delivering affordable housing, supporting an inclusive economy, ensuring the protection of our green and blue networks and natural resources and supporting the city in moving towards being net zero carbon by 2040.
- The spatial strategy focuses on supporting Oxford's strengths in research and development, particularly related to health and education.
- The spatial strategy responds to climate change and the need to address and attempt to reduce it, including by carefully locating development so that facilities can be reached by sustainable travel.
- The spatial strategy is designed to ensure development responds appropriately to the context of the site, including heritage, green space, flooding and amenity.

Policy Implementation

- Applications that accord with the Local Plan will be approved without delay.
- The Key Diagram below shows the spatial strategy. The district centres and the city centre are transport hubs and service centres, where mixed-use, high-density developments are expected. The Key Employment Sites are where intensification of employment use is to be concentrated. Policies in Chapter 8 of the Plan set out requirements for the areas of focus. Oxford has significant green spaces, in particular the green corridors along the two major rivers, which broadly coincide with the area of Green Belt within the city. Areas of Focus have specific policies in Chapter 8.



POLICY S1: SPATIAL STRATEGY AND PRESUMPTION IN FAVOUR OF SUSTAINABLE DEVELOPMENT

Planning permission will be granted where development proposals accord with the policies of the Plan taken as a whole.

The City Council, through its policies and decisions, will positively pursue sustainable development and achieve sustainable growth in the delivery of homes, jobs and services to create a network of healthy, well-connected, high-quality areas where people want to live, play, learn and work in line with the vision and objectives of the Local Plan. To help achieve this it will aim to ensure development is located to:

a) Ensure the continued strength and vibrancy of district and local centres so they continue to attract people and support a range of facilities that meet people's immediate needs conveniently within their local area;

b) Whilst ensuring active frontages are retained, allow flexibility of uses within the city centre and district centres so that they can respond quickly to changing needs and economic circumstances and to ensure a wide mix of uses including housing is encouraged;
c) Ensure new development is focused on areas with opportunities for sustainable travel links;
d) Ensure activities that attract large numbers of people are centrally located in the city centre and district centres first, so they are easy to reach by walking, cycling and public transport;
e) Focus new employment development on existing sites, redeveloping and intensifying to make best use of those sites and prioritising housing elsewhere;
f) Ensure new uses are in locations where they will not harm the amenity of existing neighbouring uses;
g) Direct new development away from locations where it would have a negative impact on important blue and green infrastructure networks, public open space, and result in loss of flood plain, also ensuring efficient use of land, helping to maximise opportunities on brownfield sites first.; and
h) Take account of local historic context and respond appropriately to heritage significance.

When determining development proposals, the Council will take a positive approach that reflects the presumption in favour of sustainable development contained in the *National Planning Policy Framework* (NPPF). The Council will work proactively with applicants with the aim of finding solutions that mean that proposals can be approved wherever possible, to secure development that improves the economic, social and environmental conditions in the city.

All new proposals for development must conform with the principles of securing sustainable development, which ensures that the city is ready for a net zero carbon future, natural resources and raw materials are used prudently and considerately, the air quality of the city is improved, and human health is safeguarded.

Planning applications that accord with the policies in this Local Plan (and, where relevant, with policies in any neighbourhood plans adopted in the future) will be approved without delay, unless material considerations indicate otherwise.

Where there are no policies relevant to the application, or relevant policies are out of date at the time of making the decision, then the Council will grant permission unless material considerations indicate otherwise, considering whether:

i) The application of policies in the National Planning Policy Framework that protect areas or assets of particular importance provides a clear reason for refusing the development proposed; or
j) Any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the National Planning Policy Framework taken as a whole.

HIGH QUALITY DESIGN

Policy context

- Good design is a fundamental part of achieving many of the aims of the Plan. It is not just about creating aesthetically pleasing buildings, but also about placemaking, strengthening the connection between people and the places they share, promoting a sense of identity and people's health and well-being.
- The wider fundamental considerations include the need to make efficient use of limited land in the city, local character and history, the transition to net zero development, the delivery of improved energy efficiency, adaptability and resiliency to a changing climate, creation of spaces for nature and wildlife and nature, and providing multifunctional spaces that support the wellbeing of people.
- Oxford's heritage is a unique and irreplaceable resource, which has a fundamental role in shaping the city's character and cultural offer. Within this context, high quality, well designed new developments will likely become the heritage assets of the future. Good design can also help new development to sit more appropriately on challenging sites or in certain locations which are more sensitive to change.
- Some parts of the city will experience change in accordance with the policies of the development plan at a pace that may be rapid. Development proposals in these areas will require added design consideration so that their impacts are managed to avoid harms and maximise the benefits that new development can bring about.

Policy Implementation

- All development proposals will be expected to have been derived from a comprehensive approach to design from the outset and will be expected to

demonstrate this through supporting material including a Design and Access Statement, Planning Statement or other means to address the checklist provided in Appendix 1.1.

- Policies elsewhere in the Plan also set requirements which help to secure high quality design, and to conserve and enhance historic assets, and character.
- Specific locations such as Areas of Focus, site allocations and city and district centres have associated design guidance as part of their respective policies.
- In addition, the City Council is committed to preparing, reviewing and adopting (as appropriate) development briefs, local design codes or guidance when a need arises, and will support neighbourhood planning groups who wish to produce design guidance for their areas.

POLICY S2: HIGH QUALITY DESIGN

A holistic, considered approach to design will help ensure that design proposals meet a wide range of policies of the Local Plan, and is an important element of ensuring efficient use of land is made. The design checklist set out in Appendix 1.1 should be used to inform design and ensure that a comprehensive approach is taken from the outset, which includes consideration of:

- Context,
- Built form,
- Movement,
- Public spaces,
- Identity and character,
- Nature and green infrastructure,
- Resources,
- Homes and buildings,
- Lifespan.

For Areas of Focus, the City Centre and District Centres, and other areas with more detailed guidance, proposals should refer to and align with the design principles set out in the Local Plan or in supporting documents such as SPDs and development briefs. The City Council will be proactive in producing additional local design codes or guidance when a need arises with the involvement of the local community, landowners and other stakeholders, and will support neighbourhood planning groups who wish to produce design guidance for their areas.

In recognition of the significance of Oxford's heritage, and as part of its positive approach to the historic environment, consideration is given by the Plan to ensuring the continued conservation and enjoyment of the historic environment, as part of good design achieved by bespoke policies (HD1-HD6), and individual site allocation and area of focus policies in Chapter 8. Opportunities for heritage-led regeneration are supported, and the Plan strategy supports the conservation and appreciation of key characteristics of the city's townscape and urban landscape.

INFRASTRUCTURE DELIVERY IN NEW DEVELOPMENTS

Policy context

- The success of new development and the response of local communities in which it is located is often linked to the provision of infrastructure to ensure that increased demand and pressures (e.g., on local roads, services and facilities) are addressed.
- Infrastructure needs to be funded and delivered in a timely manner. Developer contributions and the delivery of infrastructure will be sought through the most appropriate mechanism available, using the Community Infrastructure Levy (CIL) and planning obligations (e.g., Section 106 (S106) or S278 agreements)
- The Community Infrastructure Levy is a tariff in the form of a standard charge on development. This applies on the basis that almost all development has some impact on infrastructure, so should contribute to the cost of providing or improving infrastructure.
- Planning obligations are used to make new development acceptable in planning terms; legal obligations that must meet specific statutory tests; and are enforceable and run with the land.

Policy implementation

- The Infrastructure Delivery Plan (IDP) forms part of the evidence base for the Local Plan. The IDP is a 'live' document, that is regularly updated and includes:
    - An assessment of the city's current infrastructure and identified requirements;
    - Evidence of a funding gap between committed and required infrastructure;
    - An Infrastructure Delivery Schedule that highlights infrastructure projects needed to support the city's planned development needs to 2045.

- A range of public and private bodies are responsible for delivering infrastructure and facilities to support development and the wider population, for example education, health, emergency services, transport, utilities and environmental provision. The City Council has worked with these providers in developing this plan, however, additional early engagement with the relevant body or provider should be undertaken when those elements form a part of the proposal or would have a particular impact on them.
- Delivering certain infrastructure projects has the potential to deliver transformational improvements, and to collectively increase the accessibility to a wider workforce across the city and the wider Oxford to Cambridge Growth Corridor area as well as bringing significant localised benefits. The Infrastructure Delivery Plan identifies key transformational projects, such as:
    - Oxford Railway Station (incorporating public realm, capacity and interchange improvements and will enable the delivery of East-West Rail).
    - Re-opening of the Cowley Branch Line to passenger trains (and the delivery of new stations to service key employment sites in the south of the city such as Oxford Science Park and ARC Oxford.
- It is likely significant funding will be required to deliver these transformational opportunities. As such, certain sites within the Cowley Branch Line Area of Focus (Policy CBLAOF) will be expected to help contribute to their delivery.

POLICY S3: INFRASTRUCTURE DELIVERY IN NEW DEVELOPMENT

The Council will work with infrastructure providers, developers and other key stakeholders to support the delivery of the infrastructure necessary to enable the development set out in the Local Plan. The projects required to support the Local Plan strategy are identified within the Infrastructure Delivery Plan. The Infrastructure Delivery Plan will be reviewed to ensure infrastructure information remains up to date and is monitored effectively.

Developers will be expected to engage early with the Council and infrastructure service providers to discuss their requirements. Developers must demonstrate they have explored existing infrastructure capacity, and how this could be future-proofed, with appropriate providers and demonstrate that they have made sufficient provision. Where appropriate, and where there is an identified shortfall across the city, opportunities should be taken to maximise infrastructure provision on suitable sites.

Development proposals, including those allocated in this Local Plan that give rise to a need for infrastructure improvements, will be expected to mitigate their impact, both individually and cumulatively, and at a rate and scale to meet the needs that arise from that development or a phase of that development. The standards of infrastructure delivery will be expected to comply with other policies set out within this Plan.

Planning permission will be granted subject to the provision of (or appropriate funding towards) the required level of infrastructure to support the development. Infrastructure identified within the Infrastructure Delivery Plan or through negotiations on individual planning applications will be delivered either through on-site provision or off-site contributions and secured by S106, S278 or other appropriate agreements and the Community Infrastructure Levy (CIL) or its successor as well as other identified sources of funding as set out in the Infrastructure Delivery Plan.

Development proposals which rely on the delivery of critical infrastructure projects to support the development, will only be permitted prior to completion of that project or where appropriate, a phase of that project which has been identified as necessary in the IDP, where the council is content that the infrastructure or phase of that infrastructure will be in place within a reasonable timetable from the date of permission.

Proposals to enhance the city's rail and bus network will be supported. In particular, proposals for improvements to Oxford Railway Station that increase network capacity and support the Cowley Branch Line (CBL) will be supported. Oxford Railway Station should be transformed to facilitate integrated transport with enhanced entrances, additional secure cycle storage, cycle racks, new bus interchange facilities and new priority public areas.

Enhancements to public transport accessibility in the south-east of the city are needed to support the anticipated intensification of existing employment uses and new residential development. Supporting existing public transport and the reopening of the Cowley Branch Line to passengers would enable a reduction in car use to this area. Financial contributions from new trip-generating development within a 1,500m buffer zone of the proposed CBL stations will be expected in order to achieve public transport enhancements in this area, including, amongst other sustainable transport measures, the delivery of the CBL. Outside the 1,500m buffer area, financial contributions from new

trip-generating development would be sought on a case-by-case basis. These will be tested in accordance with Paragraph 58 (or updated equivalent) of the NPPF.

PLAN VIABILITY

Policy Context

- The NPPF (paragraph 35) requires that policies for contributions should not undermine the deliverability of the Plan.
- Planning Practice Guidance sets out that viability assessment should not compromise sustainable development but should be used to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan.
- As such, the Plan needs to deliver development that is viable, and a Local Plan viability assessment has informed the level of contributions sought in policies.

Policy Implementation

- Where a site faces exceptional costs that could not have been anticipated in the whole plan viability assessment (for example, land contamination which requires remediation), the policy sets out the basis for negotiations relating to viability, the council's priorities for contributions, and the expectations for evidence required to demonstrate viability.
- The viability assessment for the Plan identifies the policies which are likely to have the greatest potential impacts upon site viability include the parking Policy C8, net zero buildings in operation Policy R1, and the affordable housing contributions Policies H2 to H5). The policies identified as being most impactful on viability will not apply in all cases.
- Where the combined impact of policies in the Plan results in a site being unable to deliver a viable development because of a site-specific circumstance, development should proceed in a way that ensures maximum compliance with planning policies. The policy guides the process of making amendments to proposals to ensure viability in a way that the intention of the policies is met as far as possible (the "cascade").
- The policy prioritises delivering affordable housing in this stepped cascade approach. So whilst negotiations will be on a case-by-case basis, the retention of affordable housing delivery will be prioritised over other policy considerations.
- The City Council will work with applicants to understand where the largest costs savings can be made in terms of items that may trigger non-compliance with policy

(such as energy offsetting or parking) and will weigh up the planning (and public interest) merits of doing so but will actively engage with developers before any negotiation is undertaken.

POLICY S4: PLAN VIABILITY

The policies in the Plan have been viability tested and planning applications that fully comply with them will generally be assumed to be viable.

The City Council will always expect developers to have considered the financial implications of affordable housing policy requirements, and local market indicators, when purchasing the land for development.

If the combined impact of the policies in the Plan do result in a site being unable to deliver a viable development, and if an applicant can demonstrate particular circumstances that justify the need for a viability assessment, negotiations will take place on an 'open book' basis, informed by robust evidence in the form of an independent viability appraisal carried out by independent assessors appointed by the City Council in agreement with the applicant.

If the applicant can demonstrate through an open book approach, the development to be unviable, the relevant cascade approach below should be worked through with the City Council until development is viable as follows:

Housing viability cascade

Step 1) Where it is clearly demonstrated that any offsetting against the targets in Policy R1 Net Zero Buildings in Operation cannot be fully achieved, payments towards energy offsetting should be reduced incrementally until viability is achieved. The development itself must remain free of fossil fuel use to ensure that it is net zero carbon ready and does not conflict with Net Zero Carbon targets for the city and nationally.

Step 2) If the development remains unviable after step 1, and the low car requirement in the parking policy impacts upon site viability, then this must be clearly set out in the planning application, including setting out the site-specific circumstances that lead to it being unviable. In the first instance, allocating spaces to units should be considered. If the development is still not viable, increasing the number of spaces incrementally, up to the maximum parking standards, which will be no more than one space per unit for residential schemes.

Step 3) If on relevant sites (of 10 or more units), following the adjustments in steps 1 and 2 to achieve viability, it can be robustly proven that meeting the affordable housing policy requirements will make a site unviable, then the following further steps should be followed:

Firstly, reduce the number of affordable housing units provided by reducing the intermediate housing element only, whilst retaining the social rent element in full; **Secondly**, if the development is still not viable, continue to reduce the amount of social rent incrementally until viable.

Contributions from employment-generating uses viability cascade

If on relevant sites (of 1000sqm or more net gain) for employment-generating uses it can be robustly proven that the combined policy requirements will make a site unviable, developers and the City Council will work through a cascade approach that prioritises contributions to affordable housing in the following order until a scheme is made viable.

Step 1), where it is clearly demonstrated that any offsetting against the targets in Policy R1 Net Zero Buildings in Operation cannot be fully achieved, payments towards energy offsetting should be reduced incrementally until viability is achieved. The development itself must remain free of fossil fuel use to ensure that it is net zero carbon ready and does not conflict with Net Zero Carbon targets for the city and nationally.

Step 2), affordable housing contributions - If the development remains unviable after step 1, payments towards affordable housing should be reduced incrementally until viability is achieved.

Contributions from mixed use sites

For mixed use sites, the viability cascade should be applied on the employment-generating uses in the first instance, ahead of the affordable housing cascade, in order to prioritise the delivery of onsite affordable housing.

CHAPTER TWO

A HEALTHY INCLUSIVE CITY TO LIVE IN

INTRODUCTION

It is important we try to provide for all types of household needs and circumstances, including families, single people, the elderly and those with special needs. Good quality, affordable housing is an important element of enabling people's stability and security. Good and sufficient housing can improve our social, environmental and economic wellbeing. It helps to create stronger communities that can attract investment and skilled workers.

This chapter sets out policies for the following topics:

- Housing need and requirement and delivering affordable homes
- Creating mixed and balanced communities

HOUSING NEED AND REQUIREMENT AND DELIVERING AFFORDABLE HOMES

Oxford has acute housing pressures that need to be addressed. The city has an urgent need for more housing, and demand continues to outstrip supply. This exacerbates inequalities by leading to high property prices and a limited supply of affordable housing. This means that many lower paid essential workers cannot afford to live in the city and employers experience high staff turnover and vacancy rates which can affect their operation. This is particularly apparent in the city's schools, hospitals, care homes, public transport services, the building industry and the universities. Therefore, the supply of available and affordable housing for all is a priority for people, the economy and the services on which we all rely, including healthcare and education.

HOUSING NEED AND REQUIREMENT

Policy Context

- The *National Planning Policy Framework (NPPF)* sets out the Government's objective of significantly boosting the supply of homes and stresses the importance of bringing forward a sufficient amount and variety of land where needed.

- Delivery of housing is a priority for the City Council, and the Local Plan's strategy is to maximise housing delivery while balancing protection of other important assets such as biodiversity, open space and functional floodplain.
- The minimum housing need figure for Oxford has been calculated by using the Government's Standard Method as set out in National Planning Policy and guidance. The housing need in Oxford is for 1,087 new dwellings per annum. However, this need is greater than the capacity of the city to deliver it. The assessment of capacity (set out in the Strategic Housing Land Availability Assessment 2026) is 9,267 homes over the plan period, or 463 dwellings per annum.
- The Local Plan must set out a total housing requirement for the plan period to 2045, setting out the number of houses that are required to be delivered each year. Local Plans should seek to meet identified needs, and in establishing a housing requirement figure should show the extent to which their identified housing need can be met over the plan period.

Policy Implementation

- Every effort has been made to maximise the identified capacity in the city through the Strategic Housing Land Availability Assessment (SHLAA) and a Green Belt assessment.
- A range of policies that prioritise residential development over other uses, design policies including Policy HD8 on efficient use of land and Policy H6 on Employer-Linked Housing work together to maximise delivery of housing.
- However, the calculated housing need is greater than the capacity identified. Therefore, the housing requirement is less than the housing need, and results in a level of unmet need in Oxford.
- The Council is continuing to work with adjoining authorities to deliver sites in adjoining districts to help meet Oxford's housing needs to address the unmet housing need.

POLICY H1: HOUSING REQUIREMENT

Provision will be made for at least 9,267 new homes to be built in Oxford over the plan period 2025-2045 (average of 463 per annum).

Measures in the Local Plan to promote housing delivery include:

a) Making site allocations for residential uses in this Plan (see Chapter 8: Site allocations);
b) Promoting the efficient use and development of land/sites; and
c) Prioritising housing across the city and by allowing an element of housing on all employment sites if suitable.

DELIVERING AFFORDABLE HOMES

Policy Context

- Oxford is one of the least affordable places in the country, resulting from a combination of high housing demand, high land values, reducing land availability, and a shortage of homes. Housing is so expensive, in absolute terms and compared to average salaries, that many people are priced out of the market.
- "Affordable" homes models (for ownership or discounted market rent) are often not affordable in the Oxford context and are out of reach for many households. This means that in Oxford, social rent is the only option for many people who are not able to access market housing, or even other tenures of affordable housing,

- Securing new affordable housing as part of larger developments is a significant way that more affordable homes can be provided in Oxford.
- The NPPF also sets out 'Golden Rules' for Green Belt development relating to affordable housing provision requirements, including that, to reflect that they are likely to be cheaper to develop, a higher level of affordable housing than elsewhere should be sought if viable.

Policy Implementation

- The policy seeks to deliver housing that is genuinely affordable in Oxford to help ensure that Oxford is a sustainable and inclusive city, with mixed and balanced communities.
- Social rent is the priority tenure of affordable housing, with a lesser proportion provided as intermediate forms of affordable housing.
- Viability testing indicates the levels of contributions set out in the policy are viable for the majority of development typologies likely to come forward during the Plan period in Oxford. However, where there are exceptional circumstances that mean viability is a challenge then Policy S4 sets out a cascade of adjustments that proposals should work through until the site becomes viable.

POLICY H2 DELIVERING AFFORDABLE HOMES

Planning permission will only be granted for residential development if affordable homes are provided in accordance with the following criteria:

On self-contained residential developments (including Use Classes C3 and C4 but excluding self-contained student accommodation, older persons accommodation and employer-linked housing) where sites* have a capacity for 10 or more homes (gross), a minimum of 40% of units on the site should be provided as homes that are truly affordable in the context of the Oxford housing market. On sites in the Green Belt or released from the Green Belt, this should be a minimum of 50%. The following criteria apply in all cases:

a) At least 80% of the affordable units on the site should be provided as onsite social rented dwellings. The remaining element of the affordable housing may be provided as intermediate forms of housing onsite provided that they are affordable in the Oxford market;
b) The affordable homes must be provided as part of the same development (i.e. on site) to ensure a balanced community;
c) Where affordable housing is provided onsite it should incorporate a mix of unit sizes (see Policy H7 on mix of dwelling sizes).

Where the gross number of dwellings (including conversions and changes of use) proposed falls below the thresholds set out above, the Council will consider whether the site reasonably has capacity to provide 10 or more dwellings that would trigger a requirement to contribute towards affordable housing. This is to ensure that developers may not circumvent the policy requirement by artificially subdividing sites or through an inefficient use of land.

*site area includes everything within the red line boundary of the planning application, which may include existing properties which are being materially altered.

AFFORDABLE HOUSING CONTRIBUTIONS FROM OTHER DEVELOPMENTS

Policy Context

- Securing contributions towards affordable housing from new student accommodation, older persons accommodation and employment-generating uses can help contribute towards the supply of affordable homes in Oxford, which is important because many sites proposed for those uses could equally be suitable for homes, from which a percentage of affordable housing would have been sought under Policy H2.
- This requirement also helps to ensure that the provision of affordable homes is not disadvantaged in the market in comparison with these other uses.
- Direct provision of new student accommodation with affordable bedspaces targeted at students considered to be in need of low-cost rent does not negate the requirement for contributions. This is because discounted student accommodation bedspaces are, by their nature, provided for students who do not live in the city full time, and it does not contribute to meeting the city's affordable housing need.
- Employment-generating uses can impact on affordable housing needs by encouraging workers in housing need to move to Oxford to take up new jobs generated by the proposed use of the new development. As such this policy seeks financial contributions towards affordable housing provision.

Policy Implementation

- Financial contributions are required on a comparable basis so that the development of sites for residential is not disadvantaged in the market or viability terms.

- Financial contributions are more likely to be appropriate than on site provision as many qualifying schemes are likely to be designed in a way which would be challenging for registered landlords to manage the affordable housing units or are unlikely to be appropriate because of the different housing needs and lifestyles. Management agreements and other restrictions (e.g. low car parking) may also be imposed related to those uses, which are also not necessarily appropriate to general housing in all locations.
- For new student accommodation, the policy does not apply to development within university campus sites or redevelopment of existing purpose-built student accommodation that is currently and will continue to be owned and/or managed by the universities.

POLICY H3: AFFORDABLE HOUSING CONTRIBUTIONS FROM OTHER DEVELOPMENT TYPES

The City Council will seek financial contributions towards the delivery of affordable housing from proposals for new purpose-built student accommodation, new older people's accommodation and new employment-generating uses.

The contribution will be required only from the number of units creating a net gain or the additional floorspace that is new to employment-generating use. For mixed-use developments a pro-rata approach will be used to determine whether a contribution is required, and how much this should be. The usual affordable housing contributions policies will apply to any residential elements of mixed-use developments. The contribution will be calculated using the formulas in Appendix 2.1.

On proposals for new purpose-built student accommodation

a) A financial contribution will be sought towards the delivery of affordable housing from proposals for new student accommodation of 24 or more student units (or 10 or more self-contained student units). Alternatively, the affordable housing contribution can be provided on-site where both the City Council and the applicant agree that this provision is appropriate.
b) Contributions towards affordable housing provision from new student accommodation will not be sought where:
    - The proposal is within an existing or proposed university or college campus site, as defined in the glossary; or
    - The proposal is for redevelopment of an existing purpose-built student accommodation site which at the date of adoption of the Plan is owned by a university, and which will continue to be owned by a university to

meet the accommodation needs of its students after the redevelopment.

On proposals for new self-contained older persons accommodation

c) A financial contribution will be sought towards the delivery of affordable housing from proposals for new self-contained older persons accommodation of 10 or more self-contained units. Alternatively, the affordable housing contribution can be provided on-site where both the City Council and the applicant agree that this provision is appropriate.

On proposals below the thresholds for contributions

d) Where the number of dwellings or units proposed falls below the relevant thresholds to require affordable housing contributions set out in A or C , the Council will consider whether or not the site reasonably has capacity to provide the number of dwellings that would trigger a requirement to make a contribution towards affordable housing. This is to ensure that developers may not circumvent the policy requirement by artificially subdividing sites or an inefficient use of land. This policy will apply to all types of development including conversions and changes of use.

On proposals for new employment-generating uses

e) A financial contribution will be sought towards the delivery of affordable housing from proposals for major employment-generating uses (defined in Glossary), or flexible E-Class uses which could be used for employment-generating use, delivering a net gain in floorspace of 1000sqm GIA or more.

f) Where description of development is listed as flexible class E, it will be assumed that all of it is employment-generating (unless specified otherwise in the planning application). This is to avoid proposals circumventing the policy and providing appropriate contributions towards affordable housing.

EMPLOYER-LINKED AFFORDABLE HOUSING

Policy Context

- Employers in Oxford, including critical services such as the NHS, are facing significant challenges in recruiting and retaining staff because of the shortage of homes that are affordable to local people working in Oxford on average Oxford salaries. People can be discouraged from taking jobs in Oxford if they cannot afford to live close enough to their place of work.
- Many jobs in Oxford still require people to attend their workplaces because they are jobs that are not possible to do remotely, such as in frontline healthcare,

teaching in schools and universities, as well as those working in manufacturing and R&D labs, cleaning and servicing. Many of these workers may find themselves living away from the city, with expensive and time-consuming commutes, or living in shared accommodation in Oxford that is too small for their needs. People with no option but to rent a room in a house-share can be prevented from moving on with their lives with a partner or family.

- Employer-linked housing is a bespoke approach that was introduced in Oxford in the LP2036. It involves housing being developed on specified sites, by specified key employers, to provide a means of delivering affordable housing for their own staff. This allows those employers to help to address their own recruitment and retention issues by providing housing on their own land.
- For most of the specified sites, employer-linked housing will only be one element of use on the site, for example operational hospital uses will be retained on the hospital sites.

Policy Implementation

- The policy provides an alternative means of delivering affordable housing, to supplement the affordable homes delivered via Policy H2.
- Employer-linked affordable housing provides 100% affordable housing.
- The policy is designed to enable delivery of on-site affordable housing on sites that would not be suitable for delivering housing to the usual requirements of Policy H2. It is not intended as an alternative to H2, it is a supplementary approach to be used only in specific circumstances.
- The policy is restricted to specified sites and specified employers, which have been chosen for their suitability, availability and potential capacity to cater to the housing needs of essential workers, and also to avoid the policy being used to circumvent normal affordable housing contribution policies or the provision of social rented housing.
- The tenure mix and size of dwellings on employer-linked sites needs to respond to the needs and circumstances of the employees, there is not a one size fits all approach.
- Additional criteria in the policy collectively ensure that the benefits truly outweigh the compromises.
- In the event that market housing is also provided on the site then Policy H2 is engaged on the market housing element. The employer-linked affordable housing could then contribute to the requirement for the intermediate element within Policy H2 but could not be relied on to meet the social rent tenure requirement within Policy H2.
- In the event that over time the employer no longer has a need for the employer linked housing, the legal agreement will also ensure that 40% of the units are

transferred to a registered provider or the City Council as affordable housing, with a tenure split that reflects affordable housing Policy H2, and not sold on the open market.

POLICY H4: EMPLOYER-LINKED AFFORDABLE HOUSING

Planning permission will be granted on the following sites for employer-linked affordable housing for rent.

The sites identified as appropriate for employer-linked affordable housing are:

- Campus sites of the colleges of the University of Oxford and of Oxford Brookes University. These are sites with academic accommodation existing at the time of the adoption of the Local Plan, and where academic institutional use would remain on the site, even with the development of some employer-linked housing
- Slade House
- Manzil Way Resource Centre
- Littlemore Mental Health Centre
- Warneford Hospital
- West Wellington Square
- Osney Mead
- John Radcliffe Hospital
- Churchill Hospital
- Nuffield Orthopaedic Hospital

Where this policy is applied, the standard affordable housing requirements of Policy H2 will not apply, except to any market housing element on the site or under those circumstances identified under criterion f)iii).

An affordable housing approach will need to be agreed with the Council setting out how the proposed affordable homes will be developed and managed by the employers (or by development partners on their behalf) to meet the housing needs of their employees.

All of the following criteria must be demonstrated as part of the planning application and will be secured through the relevant planning permission:

a) The employer has an agreed affordable housing approach in place setting out access criteria and eligibility, rent policy and rent levels, approved by the City Council and with an appropriate review mechanism in place; and

b) 100% of the housing should be available to be occupied by those employees who meet the requirements of the affordable housing approach agreed with the City Council and be available in perpetuity; and
c) The occupation of the housing will be limited to households where at least one member works for the employer linked to the site (for the duration of their employment). This also applies to social care workers who work for but are not employed directly by Oxfordshire County Council and to some NHS staff who are not directly employed by the NHS; and
d) An occupancy register should be kept and made available for inspection by the City Council at any time; and
e) Planning applications must be accompanied by a detailed explanation and justification of the approach proposed and the mechanisms for securing the requirements of this policy; and
f) A legal agreement will be required to secure the benefits of this policy. In addition, the legal agreement will be used to:
    i) agree the allocations policy;
    ii) agree an appropriate re-letting of units in the property in the event that there are units vacant for more than 6 months;
    iii) agree that if the employer decides they no longer have a need for the housing, then the affordable housing requirements detailed under Policy H2 will be applied.

CREATING MIXED AND BALANCED COMMUNITIES

Local planning authorities are required to plan for the needs of groups with specific housing requirements. These include but are not limited to, those who require affordable housing, families with children, older people, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes. There is also a need to plan for sufficient student accommodation, whether it consists of communal halls of residence or self-contained dwellings, and whether or not it is on a campus. Helping to meet specialist housing needs is important to creating mixed and balanced communities.

MIX OF DWELLING SIZES (NUMBER OF BEDROOMS)

Policy context

- The NPPF sets the expectation that within the overall aim of meeting an area's identified housing need, an appropriate mix of housing types for the local

community should be sought. This policy contributes towards this by shaping the mix of dwellings sizes (number of bedrooms).

- To inform the % requirements in Policy H7, evidence from the Specialist Housing Needs evidence (2025, Iceni) was combined with factors from the affordable housing register including mix of unit sizes, need to downsize and the existing housing stock.
- Some sites and locations will be more suitable for different types of dwelling.
- The plan should aim to meet the full variety of needs over the plan period, which includes the need for family housing, with sufficient flexibility to respond to changing needs over time.

Policy implementation

- The % requirements have been proposed as a range to allow for flexibility, in response to constraining elements such as site size or layout.
- The % mix set out in Policy H7 should be understood as relevant only to the affordable housing element of a site, not the market element. However, the overall mix should still be explained and justified. The relevant evidence base that may inform the appropriate mix includes the Specialist Housing Needs evidence (2025, Iceni), consideration of the housing register, demographics, household sizes and trends over time. Also relevant is the nature of the site, local context and the need to make efficient use of land.

POLICY H5: MIX OF DWELLING SIZES (NUMBER OF BEDROOMS)

Planning permission will be granted for residential development where it is demonstrated that it will deliver an appropriate mix of dwelling sizes that responds to the site context, including local needs, and that it results in mixed and balanced communities. Evidence to support the proposed mix should be proportionate to the application and may include evidence from the Specialist Housing Needs Evidence, market demand and design considerations. Evidence should also demonstrate regard to the housing register and current requirements if the below mix for affordable housing does not apply.

Proposals for 25 or more homes (gross) (C3 residential) or sites of 0.5ha and greater, and which are outside of the city centre or district centres, will be expected to comply with the following mix of unit sizes for the affordable housing element, unless it can be shown not to be feasible (this does not apply to employer-linked affordable housing):

Mix of dwelling sizes for affordable housing (for rent and for ownership):

Size of dwelling	% of the affordable housing element
1 bedroom homes (all 2 person unless by agreement based on specific need)	20-35%
2 bedroom homes	30-45%
3 bedroom homes	25- 35%
4+bedroom homes	5-15%

For affordable rented forms of homes for those 65 and over, the mix should be 35-50% 1 bed and the remainder 2-bed+.

For affordable ownership forms of homes with 10 or more units of affordable home ownership types (excluding employer-linked housing):

Size of dwelling	% of the affordable housing element
1 bedroom homes (all 2 person unless by agreement based on specific need.	20-30%
2 bedroom homes	45-55%
3+ bedroom homes	20- 30%
4+bedroom homes	5-15%

LOSS OF DWELLINGS

Policy context

- Oxford cannot meet its full housing need, and as such it is important to ensure that the existing stock of homes is protected.
- However, it is also the case that the lack of available land and sites in Oxford can constrain development of other facilities needed to support the local community, which sometimes are best delivered by conversion of an existing house.

Policy implementation

- The policy generally resists any net loss of dwellings, including for short-term lets.
- The policy allows some flexibility in particular circumstances, in order to allow facilities important to the local community to come forward. Where this does

happen, the policy requires that the conversion is done is such a way that the unit could be converted back to a dwelling in the future.

- The policy also ensures that the proposed use is compatible with neighbouring uses and does not give rise to unacceptable impacts on the local area.

POLICY H6: DEVELOPMENT INVOLVING LOSS OF DWELLINGS

Planning permission will not be granted for any development that results in the net loss of one or more self-contained dwellings on a site (this includes all HMO that are suitable for occupation by a single household), except in one of the following circumstances:

a) Where essential modernisation is proposed to make living accommodation acceptable, and it can be shown that loss of a unit is essential for operational reasons or to secure space standards; or
b) A change of use of a C3 dwelling or dwellings to a non-self-contained C2 extra care, specialist or supported housing, sheltered accommodation or care home is proposed; or
c) A change of use of a dwelling to form a primary care facility, dentist, children's nursery or local community hall or meeting place (Use Class F.2) (defined as a building or parts of a building, or space that is open and accessible to the local community, providing services or activities that the local community wants and needs).

In such cases, the following criteria should all be satisfied:

d) It must be demonstrated that the layout of the unit retains capacity to be turned back into a residential unit in future; and
e) The scale and nature of the proposed use is compatible with neighbouring uses and with the surrounding area and is not likely to give rise to unacceptable impacts and effects from noise, nuisance, traffic, or on-street parking.

HOUSES IN MULTIPLE OCCUPATION (HMO)

Policy Context

- The NPPF sets out an expectation that within the overall aim of meeting an area's identified housing need, an appropriate mix of housing types for the local community should be sought. This policy contributes towards this by shaping the approach for the supply of HMO.

- HMO offer the only available and affordable solution for many people as renting individually or buying a property in Oxford is too expensive.
- It's important to monitor and control the supply of this type of home as high concentrations of HMO can result in changes to the character of the local area.

Policy Implementation

- A percentage threshold has been included to ensure there is not an overconcentration of HMO in certain streets/ areas of the city
- The policy includes a requirement for HMO applications to comply with good practice guidance on HMO amenities and facilities
- The policy does not allow new purpose- built HMO as this type of accommodation reduces potential for delivering housing that meets greater needs (e.g. social rented housing).

POLICY H7: HOUSES IN MULTIPLE OCCUPATION

Planning permission for conversions to or new HMO, will only be granted where:

a) The proportion of buildings that are used in full or part as a licensed/ pending licensed HMO, within 100 metres of street length either side of the application site's principal elevation, does not exceed 20%; and
b) The development complies with the City Council's good practice guidance on HMO amenities and facilities, or any equivalent replacement document.

For the purposes of this policy, street length is measured as:

i) 100m either side of the mid-point of the principal elevation of the proposed development, including principal elevations that wrap around corners or that are broken by a road or footpath; and
ii) 100m either side directly opposite the mid-point of the principal elevation of the proposed development, including principal elevations that wrap around corners or that are broken by a road or footpath; and
iii) All buildings opposite the principal elevations described above.

Appendix 2.2 illustrates how this will be applied.

Applications for changes from C4 HMO to a Sui Generis HMO must be compliant with point b) above.

New purpose-built HMO will not be permitted.

LOCATION OF NEW STUDENT ACCOMMODATION

Policy Context

- It is important to acknowledge, support and build on the vital economic and educational role of the universities and other educational institutions, whilst managing potential adverse impacts that a large number of students resident in Oxford may have on established communities and on the availability of general market and affordable housing.
- The Planning Practice Guidance (PPG) recognises that encouraging more dedicated student accommodation may provide low-cost housing that takes the pressure off the private rented sector and increases the overall housing stock.
- The City Council accepts that some additional student accommodation should continue to be provided to meet the accommodation needs of both universities. However, aiming to accommodate all students in purpose-built student accommodation is not a sensible approach for a number of reasons:
    - Purpose-built student accommodation will not be suitable for the whole student body.
    - It could use up sites better suited to general housing.
    - It could lead to a dominance of student accommodation resulting in less availability, loss of opportunities to bring forward affordable housing and result in a high proportion of transient occupants in the area that would undermine the desire to deliver mixed and balanced communities.
    - Not all types of students have the same accommodation needs or impacts on the community, for example post-graduate researchers and those on vocational courses tend to be working alongside their course and student halls may not be suited.
    - Some students may already live in or near the city at home, and they do not need accommodation.
- Delivering student accommodation in only the most suitable locations can help to ensure that quieter residential streets are not subject to unacceptable changes in character or increased activity.
- Student accommodation is generally not used for every week of the year, giving opportunities for efficient use of student accommodation outside of semester or term-time, if well managed.

Policy Implementation

- Occupation of new student accommodation is limited to full-time students enrolled on courses of one academic year or more.

- The policy allows for slightly more flexibility towards location of post-graduate accommodation than graduate accommodation, reflecting its slightly different impacts.
- The policy ensures that existing student accommodation sites are not lost to other uses and that any loss, must be provided for by at least an equivalent amount of new student accommodation.
- The policy does not restrict use of the accommodation outside semester or term-time by allowing it to be used by short-stay visitors.
- Larger schemes are required to include indoor communal amenity space for students to gather and socialise, which should minimise impacts outside the accommodation.
- The policy allows only operational and disabled parking for new student accommodation.

POLICY H8: LOCATION OF NEW STUDENT ACCOMMODATION

Planning permission will only be granted for student accommodation in the following locations:

- On or adjacent to an existing* university or college campus or academic site, or hospital and research site, and only if the use during university terms or semesters is to accommodate students being taught or conducting research at that site; or
- In the city centre or a district centre; or
- On a site which is allocated in the development plan to potentially include student accommodation.

In addition, if purpose-built postgraduate accommodation already exists at a particular location, subject to meeting criteria a) to e) below, new purpose-built postgraduate accommodation will be granted planning permission adjacent to existing postgraduate accommodation.

Planning permission will only be granted for student accommodation if:

a) Student accommodation will be restricted in occupation to full-time students enrolled in courses of one academic year or more, subject to the provisions of criterion e below; and
b) For developments of 25 or more bedrooms, the design includes indoor communal amenity space for students to gather and socialise; and

c) A management regime has been agreed with the City Council that will be implemented on first occupation of the development (to be secured by a planning obligation); and
d) The development complies with parking standards that allow only operational and disabled parking, and the developer undertakes and provides a mechanism to prevent residents from parking their cars anywhere on the site, (unless a disabled vehicle is required), which the developer shall thereafter monitor and enforce; and
e) A management strategy is agreed if it is intended there will be occupants other than students meeting the definition set in criterion a) outside of term times; and
f) It provides affordable housing contributions where required in compliance with Policy H3.

Planning permission will not be granted for development that would lead to the loss of student accommodation linked to an educational institution unless new, alternative student accommodation is available for occupancy, within a reasonable and acceptable timeframe, by students of the same institution. New accommodation should be equivalent in amount, mix and affordability to the rooms being lost.

*An existing university or college campus or academic site is one that exists at the time the Plan is adopted

LINKING NEW ACADEMIC FACILITIES WITH THE ADEQUATE PROVISION OF STUDENT ACCOMMODATION

Policy Context

- Higher education institutions offer courses for students of 18+, many of whom move to live in the city and therefore generate additional accommodation needs.
- In order to balance competing demands on land in Oxford, there is a need to ensure that the expansion of numbers of students at higher education institutions does not occur without consideration of how they will be accommodated. Minimising the number of students who are reliant on living

outside of university-provided accommodation so that housing can be retained for market and affordable housing is a priority for this Plan.

- Not all students have the same needs, for example those on vocational courses with work placements away from Oxford (e.g. student teachers, nurses) would not require accommodation for that period, and postgraduates may have different needs to undergraduates.
- The threshold levels for each institution have been reconsidered and have been based on the latest forecasting needs for each university, whilst ensuring they are still effective. They are to be re-considered from the academic year starting in 2033 as forecasting student numbers becomes less reliable over time.

Policy Implementation

- The threshold is limited to the number of full-time taught course students living in Oxford requiring accommodation.
- Not all expansion of these institutions will create additional accommodation capacity for students, and if institutions can demonstrate that their proposals for academic or administrative accommodation will not generate an associated increase in capacity for student residences then the policy does not apply. Where that increased capacity for students is generated, it should be demonstrated that the additional students may be accommodated through provision of additional university-provided student accommodation.
- From 2033, it will be considered whether the thresholds are still achievable, and if not, information will be needed to explain the current situation and the impacts of a proposal to inform decisions at the planning application stage. The annual Authority Monitoring Report will be used to identify the current numbers and set a threshold above this, reflecting any anticipated short-term changes, for the year ahead.

POLICY H9: LINKING NEW ACADEMIC FACILITIES WITH THE ADEQUATE PROVISION OF STUDENT ACCOMMODATION

Planning permission will only be granted for new, redeveloped or refurbished academic, research or administrative facilities for higher education institutions where it can be demonstrated that either:

a) The new facilities would not generate or facilitate any increase in student numbers; or

b) There is a plan in place for managing the accommodation needs of the additional students, either because the institution has sufficient existing accommodation, or because sufficient accommodation has been identified as being available. For Oxford Brookes University and the University of Oxford this criterion will be measured and can be demonstrated through application of the threshold of the number of qualifying students living outside of relevant student accommodation, as follows.

University of Oxford

Planning permission will only be granted for new/redeveloped or refurbished academic or administrative facilities (that generates or facilitates an increase in student numbers) for the University of Oxford, where the number of full-time taught course students living in Oxford requiring accommodation, does not exceed the level of university owned or managed accommodation by more than the following thresholds at the time of the application:

- Until the academic year starting in 2033: 3,100
- Academic year starting 2033 onwards to be negotiated based on consideration of the situation at the time.

Oxford Brookes University

Planning permission will only be granted for new/redeveloped or refurbished academic or administrative facilities (that generates or facilitates an increase in student numbers) for Oxford Brookes University, where it can be demonstrated that the number of full-time taught course students living in Oxford requiring accommodation, does not exceed the level of university owned or managed accommodation or known purpose-built student accommodation by more than the following thresholds at the time of the application:

- Until the academic year starting in 2033: 5,750
- Academic year starting 2033 onwards to be negotiated based on consideration the situation at the time.

The reference to full time, taught course students requiring accommodation excludes those students who were resident in Oxford before applying to study at the university and who continue to live at their pre-application home address while studying. Appendix 2.3 provides more detail on how compliance with the thresholds will be calculated.

HOMES FOR TRAVELLING COMMUNITIES

Policy Context

- The Council has worked collaboratively with neighbouring authorities on the Oxfordshire Gypsy and Traveller, Travelling Showpeople and Boat dwellers Accommodation Assessment. This includes taking into account waiting lists and whether there are members of the travelling community living in bricks and mortar. It does not identify current or forecast need for Gypsy and Traveller and Travelling Showpeople accommodation in Oxford. This Plan therefore does not make any specific site allocations for new sites in Oxford but provides criteria to assess any proposals for new sites that may come forward during the Plan period.

Policy Implementation

- The criteria-based policy provides a framework for assessing planning applications for these types of specialist housing should they be submitted.
- Gypsies and Travellers and Travelling Showpeople are defined as two separate groups with different criteria applicable to each. The relevant criteria should be applied, depending on which group the application is for.

POLICY H10: HOMES FOR TRAVELLING COMMUNITIES

Proposals for permanent or transit residential pitches or yards for Gypsy, Traveller, or Travelling Showpeople in Oxford will only be granted planning permission where all of the following criteria are met:

a) The applicant or updated City Council evidence base has adequately demonstrated a clear need for the pitch/yard in the city, and the number, type, and tenure of pitches/yards proposed, which cannot be met by a lawful existing or available allocated site; and
b) The pitch/yard is accessible to facilities and services including local shops, healthcare, education and employment by walking, cycling and public transport; and
c) The pitch/yard has safe and convenient vehicular, pedestrian and cycle access, including adequate access for emergency services and the other types of vehicles that could reasonably be expected to use or access the pitch/yard; and
d) Proposals make adequate access to or provision for essential on-site facilities that meet best practice for modern Traveller pitch/ yard

requirements, including, play areas, and provision for servicing including water supply, electricity and recycling and waste management (and for Travelling Showpeople space for the storage and maintenance of equipment appropriate to their business activities): and

e) The pitch/yard will provide an acceptable living environment and the health and safety of the pitch/yard's potential residents should not be put at risk. Factors to take into account include: flood risk (pitch/yard should not be located in Flood Zone 3a or 3b), site contamination, air quality, and noise; and

f) The pitch/yard is located, and can be managed, so as not to have unacceptable adverse impact on the amenity of nearby residents or other existing uses, or the appearance or character of the surrounding area. Appropriate boundary treatment and landscaping should be capable of being provided.

HOMES FOR BOAT DWELLERS

Policy Context

- Residential boats and their dwellers on both permanent and temporary visitor moorings contribute to the cultural and housing diversity of Oxford and provide a type of accommodation that can be more affordable.
- There are also boat-dwellers whose transitory nature generates a significant demand for temporary moorings, including those who identify as Bargee Travellers, as well as those who continuously cruise.
- The City Council has worked collaboratively with neighbouring authorities on the assessment of need for accommodation for boat dwellers. The analysis of houseboat need suggests that there is additional need for residential moorings across waterways in Oxfordshire, the majority of need arising from Oxford, which has a need with a range of 20-50 additional moorings.
- There is limited potential for additional sites in Oxford because of constraints such as the need to maintain safe navigation of the main river channels and avoiding conflict with the operational requirements of both the Canal and River Trust and Environment Agency.
- The City Council welcomes opportunities for the establishment of new moorings and will produce further planning guidance for those seeking to deliver new moorings in the city.

Policy Implementation

- The criteria-based policy provides a framework for assessing planning applications for this type of specialist housing if sites do come forward.

POLICY H11: HOMES FOR BOAT DWELLERS

Planning permission will only be granted for new residential moorings on Oxford's waterways where all of the following criteria are met:

a) Proposals do not impede navigation, navigational safety, or operational requirements of the waterway including use of footpaths;
b) Proposals will maintain or enhance the amenity, visual character, water quality, historic and ecological value of the waterway or nearby land;
c) Proposals are close to existing services and amenities including potable water, electricity (including consideration of demand and need for EV boat charging) and waste disposal;
d) Proposals are served by adequate pedestrian/cycling access and public transport facilities and services including shops, healthcare, education and employment, and vehicular access for emergency vehicles; and
e) Proposals have investigated impacts of flood risk and addressed provision for safe access/egress and/or evacuation plans where appropriate.

OLDER PERSONS AND SUPPORTED ACCOMMODATION

Policy context

- Nationally, the population is aging, and whilst Oxford has a younger than average age profile of residents (12% aged 65+ compared to 19.8% in the South East, 2024, ONS), the population of those 65+ in Oxford is expected to grow by around 35.9%-38.7% by 2045 (representing 7,336-7,905 additional people in this age range).
- The NPPF lists older people (including those who require retirement housing, housing with care and care homes) and people with disabilities as groups whose housing needs should be understood and attempted to be met.
- The Oxfordshire County Council Specialist Housing Need Assessment 2024, and the Oxford Updated Specialist Housing Needs Evidence (Iceni, 2025) that expands on it, give a recent picture of the need for supported housing in Oxford.
- For market accommodation, it is expected that the market will respond by bringing forward specialist housing types.
- To be viable, specialist housing developments need to be of a reasonably large size, so that there are enough rooms to justify the on-site staff and facilities.

Because of the lack of large sites in Oxford, there are limited opportunities to allocate parts of sites specifically for this use.

- People in this housing type may have limited mobility and it is important that they are in accessible locations so residents do not become isolated.

Policy implementation

- Provision of new extra-care and elderly persons' accommodation is generally supported by the policy approach.
- The criteria are intended to ensure that supported accommodation is well designed, with good access to local facilities, and that it is well integrated into a mixed community.

POLICY H12: OLDER PERSONS AND OTHER SPECIALIST ACCOMMODATION

Planning permission for accommodation for older people and supported and specialist care will only be granted where it:

a) Is located with good access to local facilities and services including public transport, shops and healthcare facilities; and
b) Is located close to or as part of a mixed community and will contribute positively to the creation and/or maintenance of mixed and balanced communities; and
c) Is appropriate for the neighbourhood in terms of form, scale and design; and
d) Includes internal rooms, gardens and amenity space of appropriate size and quality for residents
e) Provides affordable housing contributions where required in compliance with Policy H3.

Planning permission will not be granted for the loss of existing specialist care accommodation unless it can be demonstrated that provision is to be replaced or that there is a not a need for the facility.

SELF BUILD AND CUSTOM HOUSEBUILDING

Policy Context

- As required under section 1 of the Self Build and Custom Housebuilding Act 2015, the City Council is required to keep a register of those seeking to acquire serviced plots in the area for their own self-build and custom house building. They are also subject to duties under sections 2 and 2A of that Act to have regard to this and to give enough suitable development permissions to meet the

identified demand. Self and custom-build properties could provide market or affordable housing.

- Proposals for community-led housing will be supported because of the benefits they are expected to bring in terms of community cohesion, permanent affordability and sustainable development.
- Community-led housing can be delivered through several approaches including community land trusts, co-housing and co-operatives and can involve homes that are market sale, shared ownership, market or affordable rent, rent to buy, or a combination of all. There are several organised groups with ambitions for providing community-led housing in Oxford.

Policy Implementation

- A percentage threshold has been included to help deliver a supply of sites for self-build and custom housebuilding
- The threshold only applies to sites of 100 or more homes in order to avoid potential adverse impacts on the design/layout of the site
- A time limit is specified so that if the plots don't sell they can still be brought forward with the rest of the site (and would need to comply with normal policies about affordable housing).
- This policy doesn't apply to certain types of development because delivery of self-build within these kinds of development is not likely to be feasible.

POLICY H13 SELF-BUILD AND CUSTOM HOUSEBUILDING

Proposals for self-build and custom-build housing will be supported as a way of enabling people to meet their own housing needs.

On residential sites of 100 homes or more, 5% of the site area developed for residential use should be made available as self-build/custom-build plots. Plots will be part of the market housing element of the scheme, unless they are conditioned to be brought forward as housing that meets the affordable housing definition.

Plots should have services (water, foul drainage and electricity supply) to the boundary and access to the public highway. Plots should also have surface water drainage, telecommunications services, and access to a fuel or energy source in line with policy R1.

A legal agreement will be used to ensure that if the self-build plots have not sold after six months of marketing, then dwellings should be built and brought forward

in the normal way, in accordance with other policies regarding affordable housing and housing mix.

The following development types are excluded from this requirement: Employer-linked affordable housing; student accommodation; other C2 or Sui Generis types of accommodation; and residential development in conversions or on brownfield sites where only flatted development is provided.

Community-led housing

Proposals for community-led housing will be supported because of the benefits they are expected to bring in terms of community cohesion, permanent affordability and sustainable development.

Community-led housing will not necessarily meet the requirements for self-build or custom build but has potential to if the community-led housing group have the primary input into the final design and layout.

BOARDING SCHOOL ACCOMMODATION

Policy Context:

- There are many boarding schools in Oxford with children aged 18 and under. Most of these schools are campus-based, so that the children live in accommodation on the teaching campus.
- Because these types of developments are for children, they are not counted in calculations of housing need, or in monitoring of housing completions, but they do sometimes seek similar types of sites to residential developments.
- If boarding accommodation comes forward outside of the main school site, this could have a variety of negative implications such as:
    - Preventing the site for coming forward for alternative residential uses for which there is a greater need
    - It could lead to children being accommodated in a location removed from the school, with a potential drop in supervision and their safety, and with an increased need to travel to reach lessons
    - Potential negative impact on the amenity of surrounding residents, for example, if the new accommodation is a conversion of a property not designed for the purpose

Policy Implementation:

- The policy is aimed to minimise the conflicts and potential negative impacts and ensuring a good living environment for the children
- Proposals will only be accepted on campus or adjacent, to avoid competing with residential sites that help meet the wider housing need

POLICY H14: BOARDING SCHOOL ACCOMMODATION

Proposals for new or extended boarding school accommodation for children ages 18 and under will only be accepted where it is on or immediately adjacent to a main teaching campus of the school the children will attend, and it is in accordance with the other policies of the Development Plan.

CHAPTER THREE

A FAIR AND PROSPEROUS CITY WITH A GLOBALLY IMPORTANT ROLE IN LEARNING, KNOWLEDGE AND INNOVATION

INTRODUCTION

Oxford is a city with a global reputation and. has many major economic assets. These include two leading universities, and cutting-edge research in key areas including biotech, data science, quantum technology and robotics. The city is home to an increasingly diverse array of enterprises that are driving economic growth and prosperity for all. The city also has an impressive tourism economy.

Oxford's economy is shaped by the presence of its two successful universities. The city is a major centre for teaching hospitals and is home to several acute and specialist medical research organisations. Oxford is an attractive location for a range of companies and can foster home-grown spin out businesses because of the existing research capabilities, the ready supply of graduates and the clustering effect of organisations with close ties in a number of related areas. Work that is happening in Oxford is helping to find solutions to global problems such as health and climate change. Oxford's economy makes a vital contribution to the regional and national economy.

Oxford is the most sustainable location for employment in the county. It is often easier to strengthen and develop the public and active transport systems to take people to jobs in the city rather than scatter employment to less sustainable locations.

This chapter sets out the following topics:

- Employment strategy
- Community employment and procurement plans
- Affordable workspace
- Hotel and short stay accommodation

EMPLOYMENT STRATEGY

Policy context

- Oxford's overall employment floorspace need for the plan period is 412,460sqm.
- This is distributed between each of the employment generating uses as follows:
    - Office – 21,370sqm
    - R&D – 345,004sqm
    - Industrial – 0sqm
    - Storage/ Distribution – 46,086sqm

- Oxford has seen strong demand for employment floorspace in key sectors including Research and Development (R&D). There is a strong development pipeline of R&D floorspace being delivered at locations across the city (including Oxford North, Oxford Science Park, ARC Oxford, within the West End of the city centre and at Botley Road).
- The delivery of the employment strategy creates the conditions:
    - For Oxford to meet all identified employment needs arising within the city to 2045;
    - To facilitate the delivery of much needed homes for people on a range of different incomes by:
        - supporting the complete loss of poorly performing employment sites to housing; and
        - allowing an element of housing to come forward on Key Employment Sites, subject to certain criteria being met;
    - To support improvements to the accessibility of services and facilities; and
    - To enable the delivery of infrastructure improvements.

Policy implementation

- The city's employment strategy:
    - Seeks to modernise and intensify existing employment sites so that the identified employment floorspace need can be met without using additional sites;
    - Enables appropriate redevelopment opportunities to be delivered within the city and district centres;

- While the employment strategy does not require additional sites to meet employment land needs, the intensification of Oxford's existing employment sites is still likely to

draw additional workers into the city. However, by focusing and concentrating new employment floorspace towards known employment sites, this can support the delivery of identified infrastructure schemes contained within the Infrastructure Delivery Plan, including public transport and active travel schemes.

- Oxford's employment sites fall into two categories:
    - Key Employment Sites; and
    - Existing employment sites not designated as Key Employment Sites.

    - *Key Employment sites:*
        - Include nationally and regionally important employment sites that make a significant contribution to the knowledge economy, are significant employers or provide important local services;
        - Have been identified as performing well and having long-term potential for continued employment uses, when assessed against a set of identified criteria and;

        - When located outside the city and district centres are at least 0.25ha;
        - When located within the city and district centres are very large sites (2ha or more).

    - *Existing employment sites not designated as Key Employment Sites:*
        - Are often smaller sites;
        - Can be less-well located;
        - Do not perform such an important economic function or are unlikely to be able to in the future.

POLICY E1: EMPLOYMENT STRATEGY

All new development on employment sites needs to show that it is making the best and most efficient use of land and premises, positively promotes sustainable development and does not cause unacceptable environmental impacts.

New employment generating uses:
Planning permission will be granted for the intensification and modernisation of any Key Employment Site or any employment site in the city centre or district centre.

Outside of these locations:

a) Existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class), can only be regenerated with employment generating uses if better and more intensive use is made of the site through the redevelopment, up-grading or re-use of existing under-used buildings, and
b) Proposals for additional floorspace for employment generating uses on existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class), outside the city and district centres must follow the sequential approach for new town centre uses as set out in Policy C1.

Planning permission will not be granted for proposals for employment generating uses outside the following locations:

c) Key Employment Sites;
d) the city and district centres;
e) existing employment sites not designated as Key Employment Sites (or those in lawful use for the proposed employment use class).

Key Employment Sites are listed in Appendix 3.1 and are shown on the policies map. All other employment sites are existing employment sites not designated as Key Employment Sites.

Loss of employment floorspace and the use of employment sites to support housing delivery

Planning permission will not be granted for development that results in a net loss of employment floorspace on Key Employment Sites unless it can be fully justified where:

f) The employment use can be maintained; and
g) The number of jobs in employment generating uses is retained.

Planning permission will be granted for the loss of any existing employment sites not designated as Key Employment Sites to other uses, including proposals for housing which, will be supported (subject to a satisfactory assessment of objectives c) to f)).

Proposals involving housing at Key Employment Sites and on existing employment sites not designated as Key Employment Sites will be assessed by a balanced judgement which will take into account the following objectives:

h) Meet as much housing need as possible in sustainable locations;
i) Avoid the loss of, or significant harm to, the continued operation or integrity of successful and/ or locally useful, business and employment sites;
j) Create a pleasant residential environment that provides an acceptable level of amenity for future occupiers;
k) Create a sense of place that is well-connected by safe walking and cycling routes to shops, schools, open spaces, and community facilities and that is well-served by public transport;
l) Secure environmental improvements
m) Avoid locating residential uses in close proximity to existing businesses that may create noise, smells or other potential disturbances as part of the day-to-day operations.

WAREHOUSING STORAGE AND DISTRIBUTION USES

Policy context

- New large scale B8 uses are usually low-density and do not generally make for an intensive land-use. In Oxford's context with numerous competing pressures for land, these uses are not likely to make the most efficient use of any land.
- A range of factors dissuade large-scale B8 uses from locating in Oxford including: a lack of proximity to key junctions on the strategic road network; lack of available sites; and competition from higher rental markets such as R&D.
- However, small-scale warehousing, storage and distribution uses can be useful in supporting local employers in sectors such as manufacturing; and are often essential in supporting other key employers within the city to maintain their supply chain.

Policy implementation

- New B8 Uses can only come forward on Key Employment sites in support of the main employment use or as part of a wider agreed masterplan on sites specifically allocated for that purpose.

- Development proposals involving the loss of B8 uses at Key Employment Sites will need to demonstrate that the B8 use is not needed to support existing businesses/ employment generating uses operating at that site.
- Proposals involving the loss of B8 floorspace at existing employment sites not designated as Key Employment sites should be assessed in accordance with Policy E1.
- Freight consolidation centres are a specific type of B8 development where goods are grouped together for distribution so that fewer delivery journeys are required by road. This can have a beneficial impact on air pollution, congestion and noise across Oxford. The Council will work with partners to promote the use of freight consolidation centres where possible.

POLICY E2: WAREHOUSING, STORAGE AND DISTRIBUTION USES

Planning permission will only be granted for new or expanded warehousing, storage and distribution uses if it is within an existing Key Employment Site. Development proposals for B8 uses at Key Employment Sites should demonstrate how they will:

a) Enable the continued operation of employment generating uses at that site; and/ or
b) Be brought forward as part of a wider agreed masterplan on sites specifically allocated for B8; and
c) Be delivered in a way that does not result in an adverse impact on residential amenity resulting from an increase in vehicle movements, noise, or dust or smells etc.

Development proposals involving the loss of B8 floorspace (on any Key Employment Site) will need to demonstrate how they comply the loss of floorspace criteria set out in Policy E1.

In addition, planning permission will be granted for the loss of B8 uses (on any Key Employment Site) where it can be demonstrated that:

d) The B8 use is not required to support the continued operation of any Key Employment Site.

COMMUNITY EMPLOYMENT AND PROCUREMENT PLANS

Policy context

- Oxford has a tight labour market with different sectors competing for jobs. Many people in Oxford are highly qualified, as reflected in the number of science and knowledge-based jobs in the city.
- This positive situation masks some of the challenges faced in Oxford; parts of the city contain large numbers of people with few to no qualifications, or who are working but on low earnings. There is an opportunity to support local people to access training, education and apprenticeships.
- Providing training opportunities locally can help support the local workforce to acquire appropriate skills and deliver access to a greater range of job opportunities for local people.
- Skills and training for the local workforce is important to support businesses to drive economic growth, productivity and services and deliver wider economic benefits, social value and well-being for all its citizens.

Policy implementation

- Community Employment and Procurement Plans have an important role to play in securing opportunities that arise from new development, both in the construction and operational phases of development.
- A Technical Advice Note (TAN) that expands on various aspects of the policy (including advice on how to prepare a CEPP, successful implementation and monitoring) will be produced to support delivery of the policy.
- The City Council is committed to working in partnership with businesses and key partners, such as Enterprise Oxfordshire, Oxford Strategic Partnership, to promote an 'inclusive economy'.

POLICY E3: COMMUNITY EMPLOYMENT AND PROCUREMENT PLANS
Planning permission will only be granted for proposals of 50 or more dwellings (or the number of rooms in student/ communal accommodation that equate to this when the relevant ratio is applied) or 5,000sqm (GIA) or more non-residential floorspace where they are supported by a Community Employment and Procurement Plan (CEPP). The CEPP must identify the opportunities that will be provided by the development to

support the inclusive economy, demonstrate the social value of the proposals and set out how they will be promoted and delivered. CEPPs will be expected to demonstrate consideration of all the following measures:

a) Securing construction jobs for local residents;
b) Providing construction apprenticeships and/or training opportunities for local residents;
c) Linking with local schools and colleges;
d) Securing jobs in the operational/ end-user phase for local residents;
e) Procuring a proportion of on-going supply chain needs locally;
f) Paying all employees (other than apprentices, although this is encouraged where possible) the Oxford Living Wage;
g) Only using contractors who commit to paying the Oxford Living Wage
h) Procuring a proportion of construction materials locally; and
i) Delivery of affordable workspaces.

The City Council will usually use a legal agreement to secure these commitments in accordance with a site-specific CEPP.

Smaller developments (proposals for major development below the threshold for a CEPP) will be expected to provide a written statement in support of their planning application to show what job opportunities, and/or skills and training prospects can be delivered during the construction and or end-user phase of the development.

AFFORDABLE WORKSPACES

Policy context

- Due to the recent strength of the R&D market and associated rents, many SMEs and Social Enterprises are being priced out of the city or have experienced difficulties finding suitable affordable workspace.
- This has a detrimental impact on economic diversity, innovation opportunities and productivity the foundation of a robust economy.

- Providing affordable workspace would:
    - Enable a broader range of 'foundational' businesses to remain in, or locate to the city;
    - Bring more diversity to the city's employment offer; and

- Support employment opportunities that would be otherwise unavailable;
- Help local people start-up new businesses;
- Support social and cultural enterprises; and
- Promote social value

- Supporting the delivery of affordable workspaces at key locations across the city aligns with the vision for an 'inclusive economy', set out in the Oxford Economic Strategy, and the aims and objectives of the Oxfordshire Strategic Economic Plan, that relate to 'productivity and the foundational economy'.

Policy implementation

- The policy:
  - identifies specific sites where the delivery of affordable workspace is anticipated; and
  - requires qualifying development proposals to produce an affordable workspace strategy

- Affordable workspaces should be delivered on-site and should be designed and fitted out to meet the needs of the sector for the future SME or Social Enterprise occupier (See glossary definition for more details).
- A Technical Advice Note (TAN) that expands on various aspects of the policy will be produced (including advice on how to prepare an affordable workspace strategy, implementation of the policy and monitoring) to support the delivery of the policy.

POLICY E4: AFFORDABLE WORKSPACES

Development proposals delivering a net gain of 5,000 sqm GIA or more employment generating uses (or flexible E-Class uses which could be used for employment generating uses) on the following sites are expected to produce an affordable workspace strategy:

a) ARC Oxford
b) Oxford Science Park
c) Oxpens
d) Osney Mead
e) Nuffield Sites
f) Kassam Stadium and Ozone Leisure Park
g) Unipart
h) Oxford North

i) Red Barn Farm
j) Botley Road Retail Park

Details of the size, marketing, servicing, management and how the space provided will meet end-user requirements, should be set out in an Affordable Workspace Strategy (AWS). The AWS should explain how the proposed provision helps to overcome market failures that would otherwise prevent beneficial workspace typologies (as identified in the glossary definition) from coming forward.

The City Council will usually use a legal agreement to secure these commitments in accordance with a site-specific AWS.

Affordable workspace that is brought forward in accordance with an agreed site-wide masterplan is encouraged.

HOTELS AND SHORT STAY ACCOMMODATION

Policy context

- According to Experience Oxfordshire's Economic Impact Report 2024 there were more than 6.4million visitors to Oxford, which generated a total spend of more than £715mn. Tourism is a significant sector of Oxford's economy accounting for 13% of jobs in the city.
- Tourists and visitors to the city help support a wide range of facilities and attractions, such as theatres, cinemas and museums. However, more than 84% of visitors to Oxford spend less than 24 hours in the city, and these account for only 44% of the total visitor spend.
- Visitors to Oxford who stay overnight contribute significantly more to the visitor economy than those visiting for the day. The City Council therefore seeks to support the visitor economy by encouraging longer stays and higher spend in the city.
- Oxford has a good range of short stay accommodation.
- Accommodating significant numbers of day visits to Oxford can be challenging, particularly in the historic city core, where a dense network of streets and alleys exists dating back to Saxon and medieval times.

Policy implementation

- 'Tourism and hotel development' are 'main town centre uses' (Glossary, NPPF, Dec 2024) and as such, their future growth is subject to a 'sequential approach' that directs new development towards the city and district centres.
- One of the key priorities for the City Council is delivering new homes. As such, proposals for new (including changes of use), expanded and/ or refurbished existing hotel and short stay accommodation should not result in the loss of residential dwellings.
- The Hotel and Short Stay Accommodation Study (2023) recognises that smaller existing tourism and short stay accommodation can be more prone to financial difficulties. As such, it includes a recommendation that smaller hotel and short stay accommodation (less than 10 bedrooms) should be allowed to change use to residential without the need to produce evidence to demonstrate non-viability.

POLICY E5: HOTEL AND SHORT STAY ACCOMMODATION

Planning permission will only be granted for new hotel and short stay accommodation (including changes of use) in the following locations:

a) In the city centre;
b) In district centres;
c) On sites allocated for that purpose; and
d) On Oxford's main arterial roads where there is frequent and direct public transport to the city centre.

Planning permission will only be granted for new hotel and short stay accommodation (including changes of use) or for the expansion and/ or refurbishment of existing accommodation where it meets the following criteria:

e) It is acceptable in terms of access, parking, highway safety, traffic generation, pedestrian and cycle movements; and
f) It does not result in the net loss of a residential dwelling(s) as set out in Policy H6; and
g) It will not result in an unacceptable level of noise and/or disturbance to nearby residents.

Planning permission will only be granted for the change of use from hotel and short stay accommodation when any of the following criteria are met:

h) The existing property has less than 10 bedrooms and is proposed to be changed to residential use.

i) Where an existing property has 10 or more bedrooms, and is located within the city centre, a district centre, or on a main arterial road, and it has been demonstrated through the submission of robust evidence that it is no longer viable in that use;

j) A property is unsuitable for the use, as demonstrated by being contrary to the location requirements or any of criteria a-c above.

CHAPTER FOUR

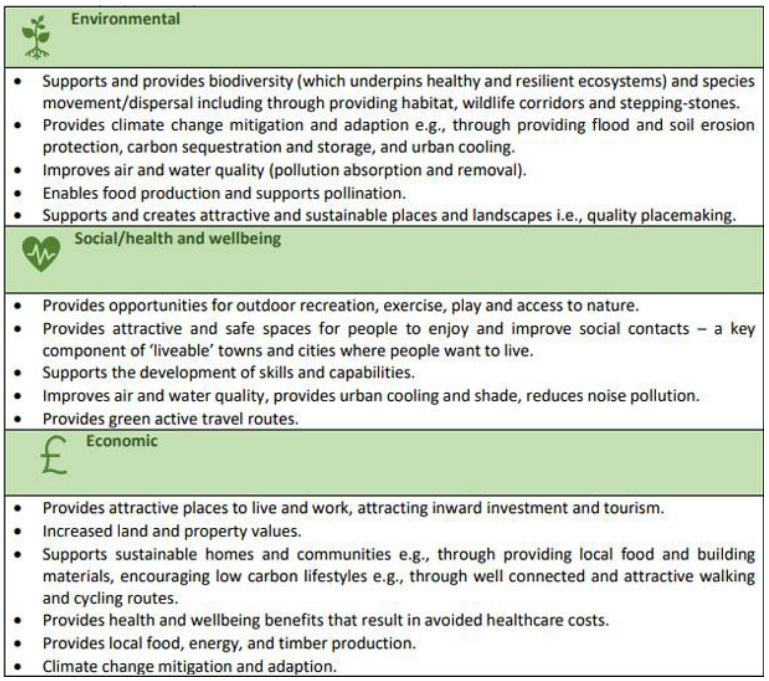
A GREEN BIODIVERSE CITY THAT IS RESILIENT TO CLIMATE CHANGE

INTRODUCTION

This chapter seeks to ensure that new development is adapted to climate change and does not impede Oxford's future resilience to climate change threats. The first part of the chapter sets out policies for protecting and enhancing a network of green and blue spaces across our city for the multitude of benefits they provide. The second part provides for biodiversity, protected species and habitats. The third part includes policies addressing flood risk and managing drainage, as well as mitigating various risks from the changing climate through climate-resilient design, such as that of overheating.

GREEN AND BLUE INFRASTRUCTURE NETWORK

A key feature that contributes to the special character of Oxford is its close relationship with the natural environment that encircles and permeates the city. These include: green spaces (from parks to flood plains and sites of nature conservation), some 248,000 trees and blue infrastructure (the rivers Thames and Cherwell, the Oxford Canal and smaller waterways between them). Collectively these green and blue features are referred to as the green infrastructure network. This green infrastructure network performs a vital role in supporting the health and wellbeing of our residents and the wider environment. They are particularly important for the ‘multi-functional’ role many of them provide (Table 4.1).



Environmental

- Supports and provides biodiversity (which underpins healthy and resilient ecosystems) and species movement/dispersal including through providing habitat, wildlife corridors and stepping-stones.
- Provides climate change mitigation and adaption e.g., through providing flood and soil erosion protection, carbon sequestration and storage, and urban cooling.
- Improves air and water quality (pollution absorption and removal).
- Enables food production and supports pollination.
- Supports and creates attractive and sustainable places and landscapes i.e., quality placemaking.

Social/health and wellbeing

- Provides opportunities for outdoor recreation, exercise, play and access to nature.
- Provides attractive and safe spaces for people to enjoy and improve social contacts – a key component of 'liveable' towns and cities where people want to live.
- Supports the development of skills and capabilities.
- Improves air and water quality, provides urban cooling and shade, reduces noise pollution.
- Provides green active travel routes.

Economic

- Provides attractive places to live and work, attracting inward investment and tourism.
- Increased land and property values.
- Supports sustainable homes and communities e.g., through providing local food and building materials, encouraging low carbon lifestyles e.g., through well connected and attractive walking and cycling routes.
- Provides health and wellbeing benefits that result in avoided healthcare costs.
- Provides local food, energy, and timber production.
- Climate change mitigation and adaption.

Table 4.1: The various benefits that green infrastructure can provide to an area

PROTECTION OF THE GREEN INFRASTRUCTURE NETWORK

Policy context

- Oxford's constrained nature means there are competing pressures for land which can put open spaces and other green features under threat. Oxford currently has not got a surplus of sports pitches or allotments. Losses of green space can fragment the network and harm the wider functioning it provides, for example to climate change mitigation, biodiversity, and wellbeing. For all these reasons, no green space identified as part of the Green Infrastructure Network is considered surplus, and their loss without reprovision is not permitted.
- Whilst some of the benefits or functions spaces in the network provide can, if needed, be replaced and/or reprovided to other areas, some are intrinsic to the location and are important to retain in situ, such as providing flood storage; supporting rare habitat and species; or retaining important heritage and history.
- The connections between the features in the network is also of great importance, acting as movement corridors for both people and nature. Blue infrastructure like the rivers and their embankments being particularly valuable in this role.
- Many private spaces also play an important role in the GI network e.g. sports pitches, private gardens and non-domestic spaces. These can provide valuable opportunities for recreation, private amenity and socialising, host a range of green and blue features, as well as making an important contribution to the fabric of the urban realm.

- The city centre has a deficit of high-quality, accessible playgrounds and the City Council will welcome applications that seek to resolve or contribute to the resolving of this deficit.
- The network is also enhanced by a number of individual features that support the GI network and provide localised benefits to amenity and biodiversity, such as trees and hedgerows, ponds, smaller streams, green roofs and walls, wild patches of vegetation, private gardens and other spaces.
- Of particular value are ancient woodland, ancient/veteran trees and important hedgerows (as defined by the Hedgerow Regulations 1997), which are assigned a high level of protection through national policy. A small proportion of trees benefit from Tree Preservation Orders (TPOs), or protection through conservation areas, but this is not the only determiner of quality/importance and others may be of a similar or higher quality with varied contributions to the area (e.g. supporting amenity, biodiversity, or as setting of heritage assets).

Policy implementation

- The following hierarchy of green spaces is used in the policy:
    - Core spaces – designated at highest level in hierarchy due to their fundamental role in supporting the city-wide network for reasons such as providing wildlife habitat and corridor functions, flood storage, intensity of use and strength of heritage or other local value. These benefits are typically intrinsic to their location, which means they are not easily reprovided elsewhere without compromising their character and/or function.
    - Supporting spaces – designated for their important role in enhancing the network and its overall function. Their loss will be resisted; however, there is more opportunity for reprovision. It is unlikely that any of these spaces could be found to be surplus, although it is accepted that there could be changes over time.
    - All other green spaces – these spaces also support the overall network, and often help to enhance the more urban areas of the city by breaking up the built environment with pockets of natural amenity, but are typically smaller and more fragmented, playing a reduced multi-functional role as a result.
- It should be noted that some types of spaces benefit from additional protections such as the designations for ecological sites (**Policy G6**) and Registered Parks and Gardens (**Policy HD3**). Applications proposed within Green Belt would be determined in accordance with national policy.
- Reprovision of green infrastructure that is harmed or lost to development is an important element of the policy, and the City Council will seek for this to be to

the same standard or higher, ideally onsite. This reprovision can be delivered quantitatively (like-for-like replacement) or qualitatively (enhancements that improve the functionality and quality of other areas - demonstrated via the Urban Greening Factor or similar methodology (**Policy G3**). Any features delivered as part of reprovision or as mitigation for losses should also be designed in accordance with the principles set out in **Policy G2.**

- There may also be additional considerations that would apply to applications that affect certain types of spaces in the supporting GI network, including how these might need to be 'reprovided'. These relate to the particular primary function a space is providing and will be of relevance when determining whether a site is 'surplus to requirements', but also in identifying the qualities and sensitivities essential to the function that would need to be addressed.
- Any strategy for a site where trees are present should consider their value in regard to the wide variety of benefits they can bring, making use of best practice criteria such as the BS.5837:2012 standards or future equivalent. Where losses are proposed, these will need to be justified, including demonstrating that options for retention have been explored, before resorting to mitigation.

POLICY G1: PROTECTION OF GREEN INFRASTRUCTURE

Green Infrastructure (GI) Network

The City Council will seek to protect the GI network for the many and varied benefits it offers. The GI network is made up of a number of green spaces. The hierarchy of GI spaces and the policy approach for each level of the hierarchy is as follows:

G1A: Core spaces

Planning permission will not be granted for development that would result in loss of, or harm to, the protected spaces identified as part of the Core GI Network. *These spaces are designated G1A on the policies map*.

G1B: Supporting spaces

Planning permission will only be granted for proposals which affect spaces identified a part of the Supporting GI Network where any harm/loss is mitigated by ensuring sufficient reprovision, ideally onsite, and to the same standard or higher. *These spaces are designated G1B on the policies map.*

G1C: All other green spaces

Planning permission will only be granted for proposals which affect all other green spaces where any impacts are mitigated by ensuring sufficient reprovision, ideally onsite, and to the same standard or higher, or if it can be demonstrated in the application that current provision is surplus to requirements.

Additional details to be submitted with proposals affecting G1B Supporting spaces

Proposals impacting the following types of open space will need to be accompanied by additional evidence that demonstrates consideration of the following:

a) Outdoor sports including pitches:
    i. The types of sports that the space provides for currently, whether this can be accommodated elsewhere without creating deficits in provision against demand, or whether alternative sports might better suit the local community; and
    ii. With reference, where relevant, to the City Council's latest Playing Pitch Strategy, as well as engagement with Sports England and the City Council's Active Communities team.
b) Parks, accessible greenspace and amenity greenspaces:
    i. The role of the space in supporting people to socialize, take part in informal recreation (particularly where facilities like children/youth play and outdoor gym equipment are present), or as an escape from the urban environment; and
    ii. With reference, where relevant, to an up-to-date green infrastructure/open space study, with particular attention to local need arising from existing deficits of these types of spaces or deprivation in the area.

Residential Garden Land

Planning permission will be granted for new dwellings on residential garden land provided that:

c) The proposal responds to the character and appearance of the area, taking into account the views from streets, footpaths and the wider residential and public environment; and
d) The plot to be developed is of an appropriate size and shape to accommodate the proposal, taking into account the scale, layout and spacing of existing and surrounding buildings, and the minimum requirements for living conditions set out in Policies HD11, HD12 and HD13; and
e) Requirements are met for biodiversity as set out in Policy G4, greening factor as set out in Policy G3 as well as requirements for protection of existing green infrastructure features, as set out below.

Existing green infrastructure features

Planning permission will not be granted for development resulting in the loss or

deterioration of ancient woodland or ancient or veteran trees and important hedgerows except in wholly exceptional circumstances or there is a suitable compensation strategy in place.

f) Planning permission will not be granted for development resulting in the loss or deterioration of other trees, unless it can be demonstrated that preservation of the trees is not feasible, by provision of evidence:
    i. Of testing of practical alternative site layouts that might preserve the tree(s) where possible; and
    ii. That loss or other impacts to any tree(s) on the site has been minimised where possible, and guided by BS.5837:2012 recommendations or its future equivalent;
g) Where tree retention is not feasible, any loss of tree canopy cover should be compensated by the planting of new trees to provide additional tree cover (with consideration to the predicted future tree canopy on the site at 30 years following development) to achieve a minimum of no net-loss of tree canopy cover; and
h) Where loss of trees cannot be compensated by tree planting, then alternative forms of green infrastructure should be incorporated that will mitigate the loss of trees, using the Urban Greening Factor (Policy G3) to demonstrate no reduction in GI score as a minimum.

Planning permission will not be granted for development that results in the loss of other green infrastructure features such as hedges or ponds where this would have a significant adverse impact upon public amenity or ecological interest. If it is demonstrated that their retention is not feasible, then their loss must be mitigated in accordance with other relevant policies, in particular Policy G3.

ENHANCEMENT AND PROVISION OF NEW GREEN AND BLUE FEATURES

Policy context

- Providing for high-quality green and blue infrastructure features on new development should be fundamental to the design process. New development can provide greening both through enhancing existing green/blue features on a site, as well as providing entirely new features and spaces and it is important to explore both avenues to maximise opportunities onsite. On more constrained

sites with limited opportunities for extensive new greening it is important that green infrastructure is planned carefully to deliver maximum benefit.

- It is important that public open space is of an adequate size to be usable in a variety of ways, so it is maintainable and does not seem like left over space. Therefore, only larger sites are required to provide new public open space as part of the development.
- Developing sensitively in proximity to the blue corridors can improve our connections with these areas and promote enhanced benefits for wildlife. Inappropriate development can have negative impacts like polluting the water environment and destroying freshwater habitats, as well as exacerbating flood risk.

Policy implementation

- New and enhanced green infrastructure needs to be thought about as early as possible in the conceptual and design stages alongside other elements of the development. It is important that design choices are guided by an understanding of local context and opportunities on the site as well as in the surrounding area (see Box4.1).
- The policy sets out requirements for incorporating ecological buffer zones along watercourses and seeks to facilitate opportunities to re-naturalise spaces near watercourses. This could mean thinking about ways to reinstate embankments by removing artificial materials and 'rewilding them' which can create new spaces for nature and for people as well as other benefits like helping to mitigate flood risk.
- Larger developments are expected to include a proportion of the site as public open space with a mix of uses tailored to the needs of occupants and the local area, for example, a nature area, seating, a playground and kick-about area, or areas left aside for community food growing.
- It is important that the ongoing maintenance and management of green features is considered when they are designed into a scheme, for example, appropriate watering and pruning regimes. Suitable arrangements will depend on the types of features proposed and the particular context of the application, and there may also be ways to encourage community stewardship as part of this.
- Whilst this policy sets out general requirements for new green infrastructure, applicants may have to consider other more site-specific requirements for greening that may be outlined in specific site allocations, as well as what is needed to meet the Urban Greening Factor targets (**Policy G3**).

Box 4.1: Using local context to help inform design of green infrastructure onsite.

Wider considerations informed by local context and the opportunities onsite and in the surrounding area should inform choices about new greening as part of a development. In practice these considerations could include:

Tailoring types of open space to meet identified needs or deficiencies – by providing space for food growing where residents might not have access to private gardens of allotments in the local area, or incorporating play features for younger people including children and teenagers to help enhance the number of facilities that can be reached in walking distance.

Strengthening linkages between areas to enhance network connectivity – by incorporating linear features like lines of trees/hedges, creating new pockets of green space that can form 'stepping stones' between larger spaces, or taking opportunities to open up and enhance access to rivers and streams including their banks. Improving linkages across the network can be particularly beneficial for supporting biodiversity helping species to move across the city (particularly where these improve connectivity between ecological sites), but also in supporting active and sustainable transport for people.

Buffering sites from potential sources of disturbance – where the site is in proximity to busy roads that could cause noise or air pollution issues, green infrastructure such as trees and wild meadows has been used as a buffering feature to improve amenity for residents and reduce their exposure to ill effects. Green features can also help buffer sensitive habitat such as ecological sites or watercourses from disturbance that could be caused by the development itself.

Improving climate resilience and 'greening the grey' – taking opportunities on particularly urbanised sites, lacking green features and with an abundance of artificial surface cover to unseal surfaces and expose soils/natural vegetation where possible, as well as increasing canopy cover and incorporating features like green walls/roofs on buildings. These measures can help to slow and store surface water run off during heavy rainfall, as well as help cool urban realm and generally promote more climate resilient open spaces.

POLICY G2: ENHANCEMENT AND PROVISION OF NEW GREEN AND BLUE FEATURES

Planning permission will be granted for proposals that include a variety of green infrastructure features as a fundamental component in the design of new development. Where the site includes existing green and blue features, proposals should seek to enhance these, prioritising opportunities to improve linkages between features in order to strengthen connections with the wider green infrastructure network including beyond the boundaries of the site. Features should be highlighted clearly within the Design and Access Statement where required and/or on landscape/elevation plans, which should also include details of how the following requirements have been met where relevant.

In demonstrating that green infrastructure considerations have played a fundamental part of the design process, the selection of green and blue features, or enhancement of any existing features, should be tailored to the specific context of the site and surrounding area. The proposal should set out clearly how these features have been designed to secure multi-functional benefits which contribute to the following, where relevant:

a) Public access;

b) Health and wellbeing, including facilitating recreation and play for people of all age groups and abilities, particularly children and

teenagers;

c) Making space for nature and enhancing biodiversity;
d) Where there is an opportunity to strengthen links between green spaces, particularly ecological sites, creating linkages with surrounding green infrastructure (e.g. by including lines of trees/hedges to support linkages);
e) Addressing climate change (including carbon sequestration; reducing flood risk; providing sustainable drainage; reducing overheating and promoting urban cooling);
f) Enhancing appearance and character/sense of place;
g) Conserving and, where possible, enhancing the historic environment;
h) Connectivity of walking and cycling routes, including potentially new public rights of way;
i) Opportunities for edible planting or community food growing;
j) Providing natural buffer features to mitigate impacts of air pollution or noise.

Opportunities to enhance blue corridors

For proposals on sites incorporating or located adjacent to watercourses, opportunities should be sought through careful design and landscaping to re-naturalise the water courses where possible, including restoration of the bankside and instream habitats. An ecological buffer zone of at least 10 metres with should be retained, or if it is not already in place it should be reinstated where possible.

New public open space

In situations where the proposal relates to replacement provision that is mitigating losses elsewhere, this will need to be demonstrated to be equally or more accessible for people of all ages and abilities by walking, cycling and public transport to local users of the existing site where relevant.

For residential sites of 1.5 hectares and above, new public open space should be provided that is equivalent to 10% of the overall site area. For mixed-use sites, the area of residential use should be used for that calculation.

Where new open space is provided, the type of provision should be tailored to address existing needs or deficiencies in access locally. For example, by providing space for food growing where residents might not have access to allotments in the local area or incorporating play features for younger people.

Maintenance/management arrangements
Appropriate maintenance/management plans should be organised as part of the design/construction process. Applicants will be required to replace any failed features for the first five years post-completion, unless agreed otherwise with the City Council, and this will be secured through planning condition. Where appropriate, applicants will be expected to enter into a legal agreement to ensure that any new public space is properly maintained, by means of a financial contribution to the City Council.

PROVISION OF NEW GREEN AND BLUE FEATURES – URBAN GREENING FACTOR

Policy context

- Overuse of artificial, impermeable surfacing materials like concrete, artificial lawns and tarmac can have a range of negative impacts for the environment and the people that go on to use these spaces. It seals away soils, leaves limited space for wildlife, increases surface run off (which can lead to flooding and pollution of watercourses), and exacerbates the ill effects of hot weather.
- Incorporating natural, green surface cover and other features on sites can secure multiple benefits for the development and the wider area (see Table 4.1), as well as helping to tackle many of the issues outlined above. It's therefore important that every new development in the city seeks to make use of natural surface cover wherever possible.
- The Urban Greening Factor (UGF) assessment helps quantify and deliver onsite greening as part of new development through use of weighted scores for different types of surface cover alongside set targets, with a particular focus on the naturalness of surface cover.

Policy implementation

- The policy sets out the minimum conditions for urban greening that major development will need to meet. This may involve raising the standard of green surface cover to meet the minimum targets set out, or ensuring no net loss in score (where the site is above the target already). Proposals for development on wholly greenfield sites are subject to higher requirements reflecting their greener starting point.
- Where no net loss in baseline score is technically infeasible for wholly greenfield sites, applicants will need to justify this, such as through evidencing testing of

different site layouts and will be expected to show how they have sought to minimise any reduction in baseline score. The highest quality features onsite should be retained in line with the requirements of **Policy G1.**

- The assessment process requires applicants to assess and quantify green infrastructure on their site prior to developing the area to establish a baseline for the site. This process is then repeated to assess the green infrastructure coverage which is proposed in the design of the new development to be provided post-development.
- Applicants have flexibility in how they meet the minimum conditions in the policy and these could be achieved through a mix of retaining or enhancing existing features, as well as providing new features.
- The UGF assigns weighted scores to different types of surface cover based upon the variety of environmental benefits that they offer (Figure 4.1). Higher quality types of provision benefit from a higher score. This means that understanding where these higher quality features are on the site and seeking to retain these, or providing more of them, will make achieving the minimum conditions easier.
- There is a shared objective with **Policy G4** on biodiversity net gain; however, the UGF assesses green surface cover more broadly and sets targets in order to secure a wider variety of benefits. Onsite habitat creation supporting BNG delivery will help to meet the UGF greening standards, and certain types of greening to meet the UGF requirements may also be able to support BNG requirements.
- The full UGF scoring matrix is set out in Appendix 4.1. Additional guidance on utilising the UGF is set out in the Technical Advice Note for Green Infrastructure and Biodiversity which should be referred to where appropriate.

POLICY G3: PROVISION OF NEW GREEN AND BLUE FEATURES – URBAN GREENING FACTOR

An appropriate proportion of natural green surface cover – which may be comprised of both existing and newly installed features – will need to be demonstrated on certain proposals (as set out below) and evidenced via submission of a completed Urban Greening Factor (UGF) assessment.

Applicants are expected to assess and submit the baseline score for the site pre-development, prior to any site clearance, as well as the proposal as-built/post-development. The as-built/post-development score required for development proposals will need to meet the following policy criteria:

Major development: proposals should demonstrate that there would be no

reduction in baseline score and achieve a minimum score of:

a) 0.3 for residential or predominantly residential schemes
b) 0.2 for predominantly non-residential schemes

Major development on wholly greenfield sites: proposals should demonstrate that there would be no reduction in baseline score, unless this can be demonstrated to be technically infeasible, and achieve a minimum score of:

c) 0.4 for residential or predominantly residential schemes
d) 0.3 for predominantly non-residential schemes

All other forms of development (such as minor development) are encouraged to demonstrate how they have undertaken greening of their site through use of the UGF assessment, though this is not mandatory.

Along with the submitted UGF assessment, all greening features proposed for the development and used in the calculation of the UGF score should be clearly demonstrated on associated landscaping/elevation plans in the application.

The adopted calculation formulae and the factors for various surface cover types are outlined in Appendix 4.1.

BIODIVERSITY AND THE ECOLOGICAL NETWORK

Oxford benefits from a concentration of rare and valuable habitats that are important refuges for a variety of flora and fauna, such as lowland hay meadows, calcareous grassland, alkaline spring fen (among other types of wetland) as well as pockets of woodland. Their ongoing protection is particularly important because many species and habitats across the country continue to experience significant losses due to a range of pressures including from changing land use, pollution and climate change. The city is also home to a variety of wildlife, including various protected species like hedgehogs, water voles, slow worms and swifts. The policies in this section have a more specific focus on supporting biodiversity whilst mitigating our impacts on existing species and habitats.

DELIVERING MANDATORY NET GAINS IN BIODIVERSITY

Policy context

- Under the Environment Act 2021, all new planning applications must deliver Biodiversity Net Gain (BNG) of 10% through strategic habitat retention, creation and enhancement as calculated using the DEFRA Statutory Biodiversity Metric. There are a few exemptions to this requirement, including householder applications and the de minimis rule.
- Where proposals have demonstrated that the full 10% BNG cannot be delivered onsite, the Statutory Biodiversity Metric allows for the remaining BNG requirements to be delivered offsite, or as a last resort, by purchasing statutory biodiversity credits. Where offsite solutions are pursued, and the further away these are delivered, the local benefits for nature recovery and people's experience of nature are generally reduced.
- The Oxfordshire Local Nature Recovery Strategy (LNRS) identifies strategic opportunities for nature recovery across the county, including areas that, with specific habitat delivery and enhancement, are expected to deliver the greatest benefits for biodiversity.

Policy implementation

- The 10% BNG target should be considered as the minimum, but the policy strongly encourages applicants to explore options for delivery of net gain that exceeds this wherever possible.
- The policy sets out that in the first instance biodiversity net gain should be delivered onsite. Where that is not feasible, it is important that offsite delivery is as close to the impacted site as possible and the policy sets out a hierarchy to guide offsite delivery.
- Where the LNRS identifies opportunities for specific habitat interventions on a development site, aligning habitat delivery and management with these will make it easier for proposals to meet, and even exceed, the required BNG target. This is due to the boost in biodiversity value applied within the Statutory Biodiversity Metric calculations for proposed habitat delivery which matches the LNRS. In practice, this means:
    - Locating habitat delivery (creation and enhancement) within the areas identified by the LNRS Map; and
    - Proposing habitat interventions which align with the LNRS specifications.
- There are strict requirements in the Statutory Biodiversity Gain guidance and metric governing the ways that losses of habitat can be mitigated which need to be considered. For example, requirements that habitats of certain distinctiveness or condition cannot be replaced with those of lower distinctiveness or condition.

POLICY G4: DELIVERING MANDATORY NET GAINS IN BIODIVERSITY

Planning permission will only be granted for development where it delivers a minimum of 10% biodiversity net gain, as measured by the latest version of the Statutory Biodiversity Metric, unless exempted by national legislation or guidance. This must be achieved in all modules of the Biodiversity Metric relevant to that development (e.g. habitat, hedgerow, and river units). Delivery that exceeds 10% net gain is strongly encouraged wherever possible.

A completed Statutory Biodiversity Metric spreadsheet must be submitted in support of planning applications. All metrics must be completed in line with the requirements set out in the relevant Statutory User Guide, Technical Supplement, Legislation, and best practice principles.

Applications are expected to prioritise the delivery of net gain onsite.

Where this is not feasible, delivery of off-site biodiversity enhancements will be expected to demonstrate accordance with the following hierarchy of preference:

a) Land that is adjacent to the development site;
b) Land in Oxford identified for its ecological potential within the Local Nature Recovery Strategy;
c) Elsewhere within the Oxford boundary;
d) Elsewhere within the Local Nature Recovery Strategy areas in wider Oxfordshire.

Where offsite measures are proposed, these should focus on delivering high-quality priority habitats. Any offsetting proposed in alternative locations will be considered on a case-by-case basis.

Where it is robustly justified that the above cannot be achieved, purchase of biodiversity units from habitat banks elsewhere or statutory credits may be accepted as a last resort.

Opportunities to deliver measures which align with those identified in the LNRS as part of any net gain provision should be prioritised, particularly where a proposal is located in an area identified in the LNRS, unless site constraints would make this unfeasible.

All onsite and offsite measures must be delivered through a biodiversity management and monitoring plan which must cover a period of at least 30 years in line with the national legislation requirements.

DELIVERING ONSITE ECOLOGICAL ENHANCEMENTS

Policy context

- The Biodiversity Net Gain requirements of the Environment Act focus specifically on habitat delivery, which is one important way of supporting biodiversity, but it does not address all the needs of the various species local to the city. It is equally important that we design measures into new development that go beyond pure habitat delivery in order to support flora and fauna through a range of other design measures.
- New development can also incorporate features which support different species in the city, such as by providing resources like food and shelter within the urban environment. Indeed, some species like swifts and bats rely on the urban environment as part of their lifecycle.
- Incorporating these ecological enhancements will be particularly important on sites where the development is exempt from mandatory biodiversity net gain, or where meeting biodiversity net gain requirements are not feasible onsite and these need to be provided offsite, to ensure that spaces are still created for nature on sites across the city.

Policy implementation

- The policy requires a certain number of ecological enhancements which scale up with the size of application. The enhancements which can be chosen from have been identified because they would be particularly well-suited to the local context of the city and the types of species prevalent in the area.
- The number of enhancements should be selected from each of three ‘pots’, as set out in Figure 4.2.

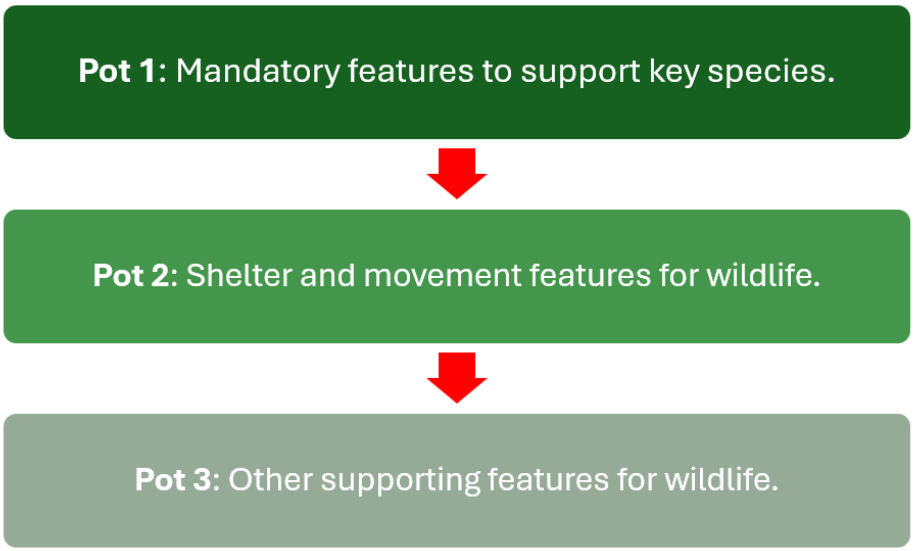


Figure 4.2: The three pots of ecological enhancements that should be selected from.

- The list of enhancements that can be selected from is set out in Appendix 4.2, any subsequent versions will be published within the Green Infrastructure and Biodiversity Technical Advice Note.

POLICY G5: DELIVERING ONSITE ECOLOGICAL ENHANCEMENTS

Development proposals should seek to incorporate ecological enhancements into landscaping or building facades/roof spaces which are tailored to the priority habitats and protected species present within the site and surrounding area. Opportunities to create, expand, enhance or link ecological networks are particularly encouraged.

All new development must deliver a minimum number of ecological enhancements selected from the City Council's Ecological Points List to achieve the required point total. The number of points required is as follows:

a) **Householder application** – all mandatory features from pot 1 (where applicable);
b) **Minor development application** – all mandatory features from pot 1 (where applicable); PLUS 1 feature from pot 2; PLUS 1 feature from pot 3;
c) **Major development application** – all mandatory features from pot 1 (where applicable); PLUS 2 features from pot 2; PLUS 2 features from pot 3.

Seeking advice from a suitably qualified ecologist on the ecological enhancements selected is encouraged. The chosen measure(s) will need to be

clearly highlighted on landscape and elevation plans and/or within the design and accessstatement.

In addition, all new tree and soft landscaping must incorporate an element of native planting, and where non-native planting is proposed this should comprise species beneficial to UK pollinators and/or chosen to be well-adapted to future changes in climate. Proposals incorporating invasive plant species will be refused.

All maintenance and management requirements of the proposed enhancements must be specified within planning applications and secured via planning conditions.

PROTECTING OXFORD'S BIODIVERSITY INCLUDING THE ECOLOGICAL NETWORK

Policy context

- Oxford has a range of habitats and ecological sites, many benefit from levels of designation including:
    - International designations – the Oxford Meadows Special Area of Conservation (SAC), part of which is within Oxford's boundary and that contains certain habitats and species recognised for their importance across Europe,
    - National designations – these include the 12 Sites of Special Scientific Interest (SSSIs), eight of which were notified for their nature conservation interest and the others primarily for geological interest.
    - Local designations – including Local Wildlife Sites (LWS); Local Nature Reserves (LNR) and Oxford City Wildlife Sites (OCWS) which have been designated for their county or city-wide importance.
- Outside of the designated sites there are also many areas that support habitats and species of principal importance (this is a wider selection of priority habitats and species listed under S41 of the Natural Environmental and Rural Communities Act, 2006, some of which are protected under other legislation and some not).
- A number of sites in the city are particularly reliant upon specific hydrological conditions, which means that they are potentially vulnerable to changes in hydrology that could arise from development. For example:

    - Oxford Meadows SAC is potentially sensitive to changes in recharge, flows and quality of groundwater stemming from development on the North Oxford gravel terrace.
    - New Marston Meadows, Iffley Meadows, and Lye Valley SSSIs are sensitive to changes in flows and quantities and quality of surface and/or groundwater within their catchment areas.
- A Habitat Regulations Assessment (HRA) has been produced to support the Local Plan 2045. This assesses the level of development proposed through the plan both 'alone' and 'in-combination' with other relevant plans and projects against the relevant conservation objectives for the Oxford Meadows SAC. The HRA includes a Stage 1 Screening, and a Stage 2 Appropriate Assessment which proposes mitigation measures to ensure there are no likely significant effects, either alone or in-combination, on the integrity of Oxford Meadows SAC.

Policy implementation

- It is vital that existing biodiversity and features of ecological interest which could be impacted by a development are well understood and that impacts are avoided and/or mitigated. This includes features being directly impacted on a site as well as those which could be adversely affected by adjacent development. Where there is a reasonable likelihood of harm or loss to protected species or natural/semi-natural habitats, targeted ecological surveys must be undertaken prior to the determination of any planning application. The extent and scale of survey effort must be informed by the context of the site and appropriate ecological expertise.
- The mitigation hierarchy needs to be followed. This requires applicants to seek to avoid any potential impacts in the first instance through careful design/ construction choice before tailoring the proposal to mitigate impacts. Only once the first two steps in the hierarchy have been exhausted should compensation measures be considered.
- This policy supplements the protections assigned to the designated ecological sites through their 'core' designation under **Policy G1** by setting out additional considerations tailored to the particular ecological importance for which they have been designated. These considerations will often apply to a wider area, taking into account impacts from development such as pollution or changes to the environment which could ultimately bring about adverse effects to the designated sites themselves. Applicants are strongly encouraged to work with ecology experts to determine relevant considerations.
- New development immediately adjacent to Oxford's SSSIs, will be expected to incorporate appropriate buffers that protect these sensitive areas during the construction and operational phases and ultimately deliver additional

supporting habitat. The design of these buffers will need to be guided by the ecological context of the sites.

- The policy outlines particular considerations around impacts on surface and/or groundwater in relation to Oxford Meadows SAC, the Lye Valley and New Marston Meadows SSSI's. Proposals may need to consider impacts on water quality, as well as disruptions to the flows and quantities of water to these sites. The City Council has published additional guidance in relation to the Lye Valley that applicants should refer to where applicable.
- More advice is set out in the Green Infrastructure and Biodiversity Technical Advice Note, whilst Oxfordshire County Council has also provided biodiversity guidance to assist applicants.

POLICY G6: PROTECTING OXFORD'S BIODIVERSITY INCLUDING THE ECOLOGICAL NETWORK

Development proposals should seek to conserve and enhance biodiversity including safeguarding the key sites of Oxford's ecological network.

Proposals with a reasonable likelihood of adversely impacting natural and/or semi-natural habitats, or protected species, on or immediately adjacent to the site, will only be permitted where they have been informed by targeted ecological surveys, completed prior to determination of the planning application, unless explicitly agreed with the City Council, and any impacts identified have been satisfactorily addressed in the design of the development in accordance with the mitigation hierarchy.

Internationally and nationally designated sites and irreplaceable habitats

When determining planning applications potentially causing significant harm to biodiversity, then the approach set out in Paragraphs 193-195 of the NPPF (or the equivalent in any update) will be applied.

To ensure no likely significant effects on the Oxford Meadows SAC, proposals identified in an area identified as having potential hydrological connectivity with the Oxford Meadows SAC that:

a) May negatively affect groundwater recharge and/or water quality must demonstrate that likely significant effects have been avoided, or mitigated where relevant through use of appropriate measures including incorporation of SuDS.
b) May negatively affect groundwater flow (subterranean development) must include a hydrogeological investigation, which must demonstrate that likely significant effects have been avoided, or mitigated where relevant.

Within the ground and/or surface water catchment areas for the Lye Valley, Iffley Meadows and New Marston Meadows SSSI's, development which could have negative hydrological impacts in relation to surface and/or groundwater will need to demonstrate that these have been avoided, or mitigated where relevant, through use of appropriate measures such as infiltration methods (where geological conditions allow) and careful design of below ground works.

Development proposed on land immediately adjacent to any SSSI must be designed with a buffer to that site that both helps to prevent adverse effects during the construction and operational phases of the development and delivers habitat supporting the interest features of that site.

Locally designated sites

Development that would have an adverse effect on a Local Nature Reserve (LNR), Local Wildlife Site (LWS) or Oxford City Wildlife Site (OCWS) will only be permitted where:

c) There is an exceptional need for the new development that outweighs any adverse effect from loss of habitat or harm to any feature of interest for which the site was selected, and this need cannot be met by development on an alternative site with less biodiversity interest; and
d) Satisfactory mitigation and compensation onsite or sufficiently local to preserve the feature of interest can be delivered and has been agreed with the City Council.

The same level of protection will be afforded to proposed LWS and proposed OCWS as to designated ones (prior to the conclusion of the selection process).

Where proposals result in habitat loss within a LNR or LWS, they must retain and enhance the interest features for which the site was selected.

Other features of interest

Development should seek to retain and enhance habitats and species of principal importance for biodiversity wherever possible.

Determining adverse effects

In determining the potential for adverse effects on ecology from a development, including where this relates to designated sites, applicants will need to demonstrate that they have considered information from various sources where relevant, including the site context and surrounding area; expert ecological advice, applicable City Council Technical Advice Notes, as well as a review of relevant

existing information where available, such as Natural England's Impact Risk Zones (IRZs). A range of potential impacts will need to be considered and will depend on the context of the application and proximity to any protected site(s), particularly, but not limited to:

- Loss of protected land;
- Recreational impacts;
- Impacts on air quality;
- Impacts on water quality;
- Impacts from artificial lighting;
- Changes to the hydrological regime (particularly surface and/or groundwater).

CLIMATE RESILIENT DESIGN

Oxford is already at risk from climate change and this will increase in future. In particular:

- A significant amount of the city lies within areas of higher flood risk from various sources. Climate change is likely to bring wetter winters, and more intense rainfall events that could exacerbate flood risk from various sources like rivers, surface water and the sewers with impacts for people's health as well as economic costs through damage to properties and businesses.
- People and the wider environment are also at risk from overheating and heat stress, particularly for those living in poorer quality accommodation or located in areas that are heavily urbanised due to artificial surface cover locking in heat and exacerbating the urban heat island effect. Climate change is expected to bring about hotter, drier summers and more heat wave events which will increase these risks but also have impacts for the water resources we rely on and that support many habitats and species.
- The risks from climate change are not equal for everyone. The impacts are often exacerbated for those communities who are more economically deprived, or vulnerable due to other characteristics such as age, living with health issues or living in poorer quality accommodation.

The way we design and construct the built environment has a key role to play in reducing the risks of climate change for people and the environment, enabling us to better withstand the impacts when hazards arise and to recover more quickly. Many resilience building measures, also referred to as climate change adaptations, have additional benefits for health and wellbeing and should be considered simply as good design.

FLOOD RISK AND FLOOD RISK ASSESSMENTS (FRAS)

Policy context

- National policy on planning for and mitigating flood risk is already very strong, but there is a need to consider this in the local context of Oxford. Much of the new development comes forward on previously developed land and a significant amount of the city lies within areas of higher flood risk according to EA mapping (updated March 2025) and the City Council's latest Strategic Flood Risk Assessment (November 2025). In this context a bespoke approach to Flood Zone 3b is included in the policy, whilst ensuring that the flood risk vulnerability classification will not be increased on any site.
- The sequential approach means development should first be on areas of lowest flood risk from all sources and only located in areas of higher risk if it can be shown, through the sequential test, that sites are not available in areas of lower flood risk. In those circumstances, the exceptions test applies, proposals must be able to demonstrate that wider sustainability benefits to the community that outweigh the flood risk would result, and they should be safe for its lifetime, without increasing flood risk elsewhere (and reducing it where possible).
- Where development is in an area of flood risk it is important it is safe. To help achieve this, finished floor level should be above the 'design floor level' which is the maximum estimated water level during a flood event, including with a climate change allowance.
- Work to deliver the Oxford Flood Alleviation Scheme, led by the Environment Agency, is likely to commence within the plan period. This will reduce flood risk from the River Thames to existing businesses, residential properties, major roads and the railway in the Botley Road and Abingdon Road areas, however, it will not remove risk entirely.
- Open watercourses provide a multitude of benefits and culverting them would reduce their biodiversity value as well as lead to a loss of natural flood management features.

Policy implementation

- A first step in a methodical approach to addressing flood risk is to assess the potential for flood hazards from all relevant sources , as well as any impacts the development could have on flood risk offsite.
- The second step is to design development in a way which seeks to avoid highest risks, e.g. locating the most vulnerable uses in areas of lowest risk.

- Thirdly, once avoidance has been fully explored, mitigation measures will be required, these could include:
    - flood resistance measures (dry-proofing) e.g. barriers or raised floor levels to keep water out at times of flood;
    - flood resilience measures (wet-proofing) - using materials that can quickly dry out, helping buildings to be habitable again quickly;
    - Sustainable Drainage Systems (SuDS) to reduce surface water run off by slowing and storing water (see **Policy G8**); and
    - flood compensation measures e.g. creating new flood storage to mitigate any loss of storage through development.
- Finally, there is likely to be an element of residual risk e.g. flood defences can fail or be overrun by exceptional flood events. Managing this remaining risk could involve providing the emergency services with appropriate access/egress routes during flooding as set out in the Environment Agency's best practice guidance (https://www.gov.uk/guidance/flood-risk-assessment-standing-advice), providing occupants access to early warning systems and safe evacuation plans.
- Extensions are a common form of development, and whilst these may have limited flood risk implications in isolation, their frequency of occurrence does have potential for cumulative impacts resulting in increased flood risk as flood storage areas are lost to development. However, it is acknowledged that the limited scope of some extensions can make achieving the full requirements challenging – thus the policy sets out a pragmatic approach to the requirements supporting such applications.

POLICY G7: FLOOD RISK AND FLOOD RISK ASSESSMENTS (FRAS)

Planning permission will only be granted where proposals have considered the potential for flooding from all sources including the impacts of climate change for the expected lifetime of the development, as well as the potential for them increasing flood risk elsewhere, the safety of users of the development, and where they have appropriately addressed any flood risks identified.

Planning applications for development (including minor householder extensions and changes of use to houses in multiple occupation (HMO)) must be accompanied by a Site-Specific Flood Risk Assessment (FRA) when proposed in the following locations:

a) Within Flood Zones 2 or 3;
b) Within Flood Zone 1 with a site area of 1 hectare or more;
c) Within 'Flood Zones plus Climate Change';
d) Within Flood Zone 1 and the most recent flood map for planning shows it

is at risk of flooding from surface water;

e) Within Flood Zone 1 where the LPA's strategic flood risk assessment (SFRA) shows it will be at increased risk of flooding during its lifetime;
f) On sites that increases the vulnerability classification and may be subject to sources of flooding other than rivers or sea.

The FRA must be undertaken in accordance with up-to-date flood data, national and local guidance on flooding and must assess and mitigate flooding from all sources including the impacts of climate change now and in the future.

Planning permission will only be granted in areas of higher flood risk (depending on the vulnerability of the development and as set out in the NPPF) where a sequential approach has been taken to locating the development and where the Sequential Test and the Exception Test (where necessary according to national policy and supporting guidance) have been passed, and the FRA demonstrates that for the lifetime of the development and including the impacts of climate change:

g) The proposed development will not increase flood risk offsite; and
h) Future occupants will be safe during times of flood; and
i) Safe access and egress in the event of a flood can be provided; and
j) Details of the necessary mitigation measures to be implemented have been provided; and
k) The proposed development will not impact on delivery of future flood relief measures, and where possible will reduce flood risk.

For minor extensions (including householder development) proposed within Flood Zone 2 and 3a, or at risk from other sources of flooding, it is acknowledged it may be challenging to meet all the requirements above.

Proposals will be expected to minimise risk to occupants and the surrounding area by following the below hierarchy of principles in order of preference, demonstrating robust justification where the top levels in the hierarchy cannot be met:

l) Full requirements of an FRA (as above) ;
m) Finished floor levels above design flood level with compensation;
n) Finished floor levels above design flood level ;
o) Finished floor levels at existing level, with water exclusion up to at least 300mm above the design flood level;
p) Finished floor levels at existing level with a water resilient strategy up to at least 300mm above the design flood level (unless the development

cannot be made safe).

Planning permission will not be granted for development in Flood zone 3b (including minor household development) except where it is for water-compatible uses or essential infrastructure; or where it is on previously developed land and includes a high standard of mitigation designed to demonstrably decrease flood risk on and off-site compared with the current situation. All the following criteria must also be met:

q) It will not lead to a net increase in the built footprint of the existing building within Flood Zone 3b and where possible will lead to a decrease; and
r) It will utilise a sequential approach to move development to lower risk areas within the site; and
s) It will not lead to a reduction in flood storage (using flood compensation measures) and where possible will increase flood storage; and
t) It will not lead to an increased risk of flooding elsewhere; and
u) It will not put the development or any future occupants at risk, including in relation to ensuring safe access/egress to an area wholly outside the flood event; and
v) It will not result in an increase in flood risk vulnerability classification or an increase in the number of dwellings.

Proposals for basement accommodation within flood zone 2 or 3 will not be permitted due to the unacceptable additional risks associated with this type of accommodation. Where proposals for construction of new basements are at risk of other sources of flooding (i.e. groundwater, surface water, or sewer flooding), it must be demonstrated that flood risk can be managed safely.

For any proposal including subterranean (such as basements or piling), it must be demonstrated through a hydrogeological assessment that the development will not cause adverse effects on groundwater (i.e. by not blocking groundwater flow).

Applications that propose culverting of open watercourses will not be permitted. De-culverting of existing culverts is encouraged wherever possible.

SUSTAINABLE DRAINAGE SYSTEMS (SUDS)

Policy context

- Sustainable Drainage Systems (SuDS) use techniques and features which are designed to manage the flow of rainwater in a way that mimics the natural landscape. They are increasingly important in the context of climate change, building the resilience of our urban areas to flooding during times of intense and heavy rainfall events.
- SuDs can also provide a multitude of additional benefits, including providing open space for recreation, habitats to support wildlife and adaptation to other climate hazards such as overheating.

Policy implementation

- SuDS need to be considered as early as possible in the conceptual and design stages and may include water conservation (e.g. rainwater collection and storage) as well as surface water drainage (e.g. soakaways, porous surfaces, swales, streams and balancing ponds).
- SuDS should be designed in a way that incorporates reuse, infiltration, retention or conveyance methods which utilise natural, green and blue infrastructure including soft landscaping, green roofs and ponds.
- Unnatural, artificial components such as piped systems or underground attenuation tanks will rarely be considered an acceptable approach.
- The context of the site and any previous site uses should inform choice of SuDS, for example infiltration will be discouraged where there is site contamination.
- In order to ensure that the drainage scheme functions effectively as designed in perpetuity, a SuDS maintenance plan will be required to be submitted alongside any planning application including SuDS. This should demonstrate how the SuDS will be managed and remain effective for the lifetime of the development.

POLICY G8: SUSTAINABLE DRAINAGE SYSTEMS (SUDS)

All development proposals will be required where feasible to manage surface water through Sustainable Drainage Systems (SuDS). Details of the SuDS must be submitted as part of a drainage strategy or FRA where required as part of a planning application submission, and must be submitted prior to determination unless agreed otherwise by the LPA.

SuDS should be designed in a way that incorporates reuse, infiltration, retention or conveyance methods which utilise natural, green and blue infrastructure rather than unnatural, artificial components. Below ground features such as pipe systems or underground attenuation tanks will not be permitted, unless exceptional site conditions justify an alternative approach which has been agreed with the City Council. Multi-functionality of SuDS should be maximised in

their design, such as where they are incorporated into public open space.

Where a site has potential for contamination, SuDS that rely on infiltration will be discouraged and other suitable methods should be adopted to protect the water environment unless it can be demonstrated that there will be no pathway of contamination. Infiltration SuDS measures would not be encouraged in areas that have shallow groundwater as these measures would not be suitable.

Surface water runoff should be managed to greenfield run-off rates as close to its source as possible, in line with the following drainage hierarchy:

a) Store rainwater for later use; then:
b) Discharge into the ground (infiltration); then:
c) Discharge to a surface water body; then:
d) Discharge to a surface water sewer, highway drain or other drainage system; and finally:
e) Discharge to a combined sewer (only in exceptional circumstances).

For minor developments, SuDS should be designed in accordance with the City Council's latest SuDS design standards, or any equivalent replacement document. For major developments, SuDS should be designed in accordance with the national standards for sustainable drainage systems (or any national or county-level standards that supersede them). Details of the SuDS must be submitted as part of a drainage strategy or FRA where required as part of a planning application submission, and must be submitted prior to determination unless agreed otherwise by the LPA.

A SuDS maintenance plan should be submitted alongside any planning application for minor or major development, demonstrating how SuDS will be managed and remain effective for the lifetime of the development. The plan must clearly explain what maintenance measures will take place, maintenance responsibilities for all relevant parties, how frequently they will occur and for how long and will be secured by condition.

RESILIENT DESIGN AND CONSTRUCTION

Policy context

- New development must be designed for the expected future climate as well as today's. Planning for the future climate will help avoid 'maladaptation', whereby inefficient design results in inappropriate development for future climate and the increased risks for occupants.

- Resilience measures can be designed into a development from the start—helping to reduce the impacts of hazards like heat waves and flooding when they occur, but also supporting swifter recovery afterwards. They can be varied, involving simple design solutions like raising plug sockets so that they are less likely to get inundated during a flood, or incorporating overhangs on windows to reduce solar gain during the height of summer whilst allowing light in fully during winter.
- Green infrastructure can help slow down and store surface water during heavy rainfall, reducing risks of surface water flooding. Vegetation can also have a cooling effect by introducing shade to buildings and people and reducing solar gain, as well as through processes like evapotranspiration.
- The requirements in this policy can also support applicants in ensuring that their development aligns with some of the separate requirements of Building Regulations. For example, Part O, which addresses overheating, requires more stringent consideration of factors that influence a building's thermal performance such as the design/ layout of windows. Considering these issues at the design stage and as part of the planning process can help reduce the potential for conflicts with the standards required by Building Control.

Policy implementation

- The design and access statement should clearly set out how the requirements within the policy's checklist have been addressed (or identify where these are not relevant). Where a design and access statement is not required, the proposal should clearly set out in one place how the requirements have been met in another part of the application (e.g. in the planning statement).
- Applicants are encouraged to incorporate design measures that have multi-functional benefits and can refer to the same design features where they meet the requirements of multiple parts of the checklist.
- In providing evidence of compliance with this policy, reference can be made to supporting documentation for other policies where relevant (e.g. FRAs for Policy G7, urban greening factor for Policy G3), rather than duplicating it. However, the proposal will need to explicitly identify how a proposed measure put forward in response to the checklist adapts or builds resilience to the existing and future climate change risks.

POLICY G9: RESILIENT DESIGN AND CONSTRUCTION

Planning permission will be granted where proposals have been designed with regard to most up-to-date climate change projections, suitably addressing the key risks from changing climate on occupants; the development; and any

supporting infrastructure for its lifetime.

All proposals, excluding householder applications, unless this is required as part of other policies in the Local Plan, will be expected to demonstrate (which could be as part of the Design and Access Statement) that the following resilience requirements are incorporated into the design:

a) Relevant future climate scenarios have informed approaches to mitigating the risk of overheating, flooding (from all relevant sources), and storm extremes for the lifetime of the proposed development.;
b) A cooling strategy to address risks of overheating This should consider both internal and external environments, with temperature management and shading of outdoor spaces, and which and promotes passive cooling and energy efficient measures of buildings in the first instance (in line with requirements of Policy R1);
c) Measures to manage water run-off and, where the site is at risk of flooding now or in future, measures to reduce flood risk, such as flood resistance measures (e.g. dry-proofing to keep water out) and resilience measures (e.g. wet-proofing to allow continued function during, or quick recovery after flooding);
d) Measures to ensure water is used prudently and that water is conserved, including that dwellings meet the water consumption limits (in line with requirements of Policy R5);
e) Supporting infrastructure which is designed to function in extreme weather conditions.

CHAPTER FIVE

A CITY THAT UTILISES ITS RESOURCES WITH CARE, PROTECTS THE AIR, WATER AND SOIL AND AIMS FOR NET ZERO CARBON

INTRODUCTION

This chapter addresses additional elements of environmental protection. The first part of the chapter sets out policies which seek to ensure new development does not further exacerbate climate change through additional carbon dioxide emissions – sometimes referred to as climate change mitigation. The second part then deals with protection of various natural resources and ensuring that the development process mitigates its impact on the wider environment.

AIMING FOR NET ZERO CARBON EMISSIONS

The first three policies of this chapter address different dimensions of carbon reduction in the design process, which are important for mitigating our impacts on climate change. The Climate Change Act requires that the UK achieves net zero carbon emissions by the year 2050 and Oxford has set itself a local target of being a net zero carbon by 2040. Oxford's 2040 Net Zero Action Plan identifies that the built environment is the main source of emissions in the city (primarily the reliance on fossil fuels for heating of buildings), followed by transport.

NET ZERO CARBON BUILDINGS IN OPERATION

Policy context

- The principles of the energy hierarchy will help with ensuring that buildings are net zero carbon in operation and as energy efficient as possible. The hierarchy, as set out in Figure 5.1, prioritises energy saving measures in the first instance, then ensuring that any energy demanding systems utilised in the building are as efficient as possible, and

finally, meeting energy needs through renewable sources (a key element of being net zero carbon in operation).

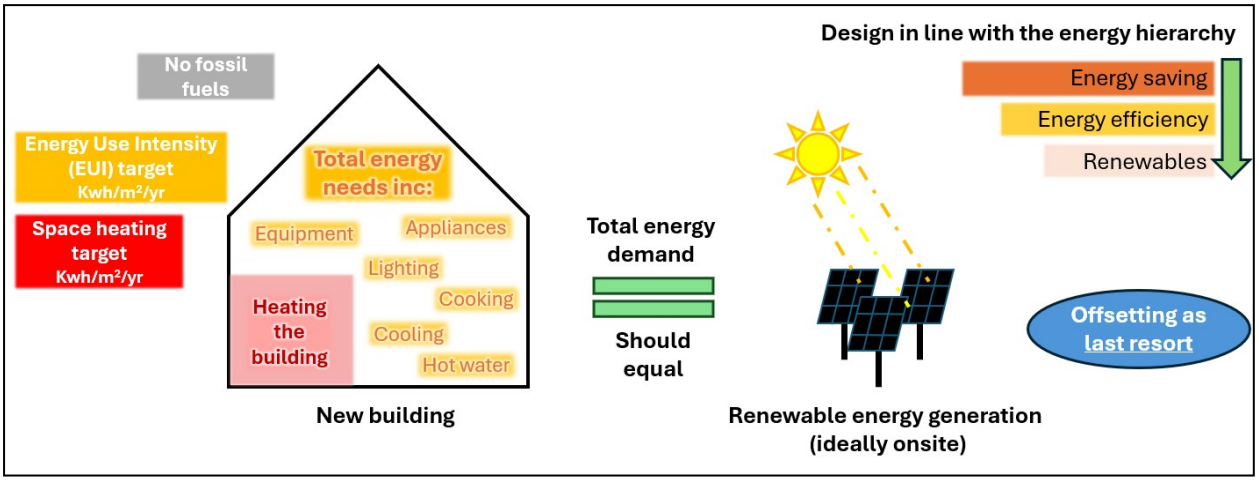

Figure 5.1: A net zero carbon building in operation will match energy needs through sufficient renewable energy generation.

- The energy saving step in the hierarchy favours a fabric-first approach, i.e. maximising the performance of the physical components that make up the 'fabric' of a building (e.g. by being well insulated). This has additional benefits further down the hierarchy, such as by reducing energy demand for heating/cooling and, in turn, the renewable energy generation needed to support the building's operation.
- The development of local renewable energy projects will be especially welcomed where they are community owned or owned by non-profit making organisations.
- Net zero carbon and energy efficient buildings have additional benefits for the city and its residents, including reducing energy bills costs (helping with resilience to fuel poverty), supporting health and wellbeing of occupants, and reducing strains on the energy grid which is under increasing pressure as we transition away from fossil fuels.

Policy implementation

- Each building is likely to require a different mix of design solutions for energy efficiency. Some land uses and development typologies will inevitably struggle to achieve net zero carbon in operation through onsite solutions alone.
- The policy sets out performance standards for space heating, and overall energy use, which should not be exceeded. The targets are expressed as an Energy Use Intensity (EUI) figure, which is calculated by combining energy demands from all sources, then dividing by the gross internal floor area (m2). Total energy demand should be matched

through new renewable energy generation, ideally onsite, although these could be installed elsewhere in the city where sites are available.

- All energy calculations will need to be undertaken using an approved methodology. At the current time, the most appropriate methodology is considered to be the CIBSE TM54 methodology and the Energy and Carbon Technical Advice Note (TAN) expands on this with additional guidance. Use of an alternative methodology should be agreed with the City Council in advance.
- Certain non-residential uses with exceptionally high operational energy demands, including R&D/labs/hospitals can seek a higher Energy Use Intensity performance target. This will need to be justified through the Energy and Carbon Statement, including by setting out the measures that have been taken to reduce energy demand as much as possible, and the application will need to ensure compliance with all other elements of the policy.
- The policy is not prescriptive in terms of technology choices. For renewable energy generation, Oxford's constrained setting means that often solar mounted PV arrays will be particularly well suited. For heating, air source heat pumps can be effective, equally connecting into communal or district heating systems can also provide sustainable solutions, particularly where this harnesses waste heat. Combining renewables technologies with battery storage systems can further support efficiency.
- There may be circumstances where certain requirements may not be technically feasible onsite. As a last resort, an element of offsetting can help deliver on the aims of the policy. Before offsetting will be accepted, the applicant must robustly justify that the earlier steps in the energy hierarchy have been exhausted and onsite/offsite energy generation is not possible to meet the development's EUI figure. Only then, will payment be accepted into the City Council's offsetting fund to mitigate remaining energy use via retrofitting of buildings elsewhere in the city.
- Specific provisions are made in the policy for householder and change of use applications.
- A worked example of the key requirements for Policy R1 is set out in Appendix 5.1 and useful resources to refer to are set out in Appendix 5.2.

POLICY R1: NET ZERO BUILDINGS IN OPERATION

All new buildings should be net zero carbon in operation. This must be demonstrated through submission of an Energy and Carbon Statement that details how all the criteria below have been met:

a) Developments have been designed in accordance with the energy hierarchy. Applications should demonstrate how design has methodically followed the

steps in the hierarchy, firstly through reducing energy use; using energy efficiently; and then, meeting all energy needs through renewables sources, ideally generated onsite, or else offsetting as a last resort.

b) A total Energy Use Intensity (EUI) figure for the development has been provided, calculated using an approved methodology as set out in supporting text. Developments will not be permitted where they exceed the following Energy Use Intensity targets (unless demonstrated to be technically unfeasible):
   i. Residential: 45 kwh/m^2/yr
   ii. Non-residential: 70 kwh/m^2/yr
   iii. For non-residential uses with exceptionally high energy demands, including R&D/labs/hospitals, a higher EUI target will be accepted where it can be robustly justified, including the measures taken to limit this.

c) Space heating demand is no more than 20 kwh/m^2/yr. Emerging best practice suggests 15kwh/m^2/yr will be achievable in many instances and achieving this tighter limit is encouraged.

d) No fossil fuels are being directly utilised in the operation of the development (i.e. no gas used for heating and cooking).

e) All energy needs (matching the development's total EUI figure) will be met through onsite renewable energy generating technologies in the first instance, accompanied by energy storage where possible. Where the total energy need cannot be met through onsite renewables, applicants should seek to maximise available capacity onsite, before seeking to meet the remaining energy balance through installation of sufficient additional renewable generation at a location offsite. In these circumstances, it will need to be demonstrated in the Energy and Carbon Statement that offsite provision has been fully secured and will be in operation upon completion of the development.
   As a last resort, where the above steps have been fully explored and net zero carbon still cannot be fully delivered, offsetting may be accepted to mitigate any remaining energy demand that cannot be sourced renewably either onsite or through an identified offsite location. The City Council will accept payment into its offsetting fund to fully offset this remaining energy demand, and this will be secured through an appropriate legal agreement/S106.

f) All new development must include information that specifies the approach to metering that will be adopted as well as proposed monitoring of the performance of the development to be undertaken post-completion (to ensure performance is in line with design specifications).

Householder applications are only expected to demonstrate accordance with criteria a). Proposals for conversions, and change of use (where they include works to the fabric of the building to facilitate this) that would require planning permission are only expected to demonstrate accordance with criteria a) and d), unless they would result in the creation of a self-contained dwelling or non-residential unit, in which case all criteria apply. Extensions are expected to comply with criteria a), b) and c) unless they would result in the creation of a self-contained dwelling or non-residential unit, in which case all criteria apply.

The development of low carbon energy centres and heat networks of varying scales will be supported where these can offer more sustainable heating choices and are in keeping with other policies in the Local Plan. Where development comes forward in areas with access to a heat network, now or in the future, connection into the network should be considered as part of the design process, particularly if this offers more sustainable means of heating/powering the building.

The City Council will expect that, having worked through requirements a) to f), Energy and Carbon Statements demonstrate compliance with the above criteria; however, a case for anything short of full compliance will be expected to be clearly justified as follows:

g) Full details of where a criterion cannot be met will be provided and justified within the Energy and Carbon Statement with explanation of the reasonable attempts to meet it provided; and
h) Clarification that all other criteria are met or exceeded; and
i) The proposal is overall net zero carbon in operation (meaning no reliance on fossil fuels and including use of offsetting only as a last resort).

EMBODIED CARBON IN CONSTRUCTION

Policy context

- Embodied carbon includes both the upfront carbon dioxide emitted during the construction process, as well as carbon dioxide emitted throughout the various life stages of a building (Figure 5.2).
- Carbon dioxide can be emitted as a consequence of various design choices and construction practices, but it can also be locked away at greater levels than the amounts released during the manufacturing process for certain materials. Exemplary

design may actually be able to demonstrate a negative carbon balance (i.e. offsetting more carbon dioxide than the development is producing).

- Following the principles of this policy will also be beneficial in aligning with the concept of the circular economy, such as reducing waste and promoting re-use of materials wherever possible, helping conserve and use resources prudently.

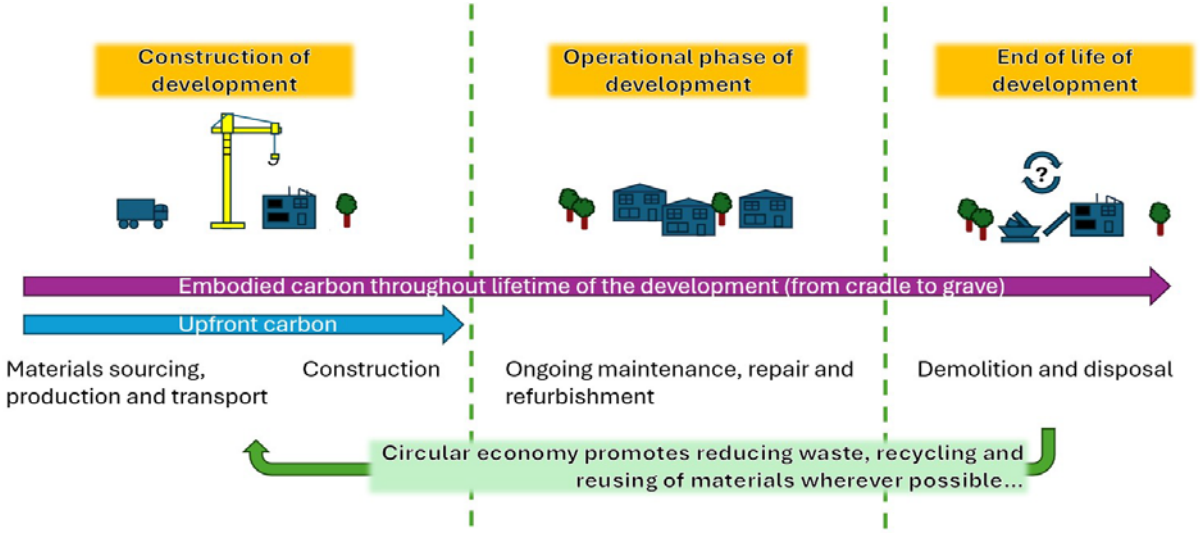

Figure 5.2: Embodied carbon at each phase of a development's lifecycle.

Policy implementation

- The focus of this policy is predominantly on the 'upfront' carbon emissions associated with construction.
- All applications will need to demonstrate how the proposed design and construction has responded to the principles in criteria a-e. This should include a sufficient level of detail that is proportionate to the size and scale of the development, including a rationale for where design choices divert from any of the principles.
- Whilst the policy does not mandate retention of existing buildings, criterion a seeks to ensure that applicants demonstrate that they have considered whether it is feasible for retention and re-use of buildings on a site, before resorting to demolition. Replacing buildings may be justified where for example:
    - a building is no longer fit for its intended purpose or the needs of users;
    - age/construction of the building means it is inefficient in terms of energy use;
    - a new building will be of more benefit to achieving wider place-making.
- Larger developments will need to be accompanied by Whole Life Cycle Carbon Assessment (WLCCA). Other types of application that fall below the policy threshold for WLCCA can submit an assessment where this would support their approaches in responding to criteria a-e of the policy, although this is not mandatory. Applicants

should pay particular attention to upfront carbon values associated with the construction phase. It is acknowledged carbon associated with latter stages of the building's life will be subject to increasing uncertainty.

- Where reductions in embodied carbon achieved through the design process need to be demonstrated, these could be framed around the high-level principles in criteria a-e.
- The Energy and Carbon Technical Advice Note will set out best practice embodied carbon targets that should be strived for, as well as more general advice on interpreting each of the principles set out in the policy, and undertaking the WLCCA process where relevant.

POLICY R2: EMBODIED CARBON IN CONSTRUCTION

All developments are expected to demonstrate consideration of embodied carbon for the lifetime of the development, particularly the upfront carbon in the construction process, and take actions to limit this as much as possible through careful design choices. Planning permission will be granted for proposals that demonstrate through their Energy and Carbon Statement that the following principles are embedded proportionately in design choices:

a) Re-use of any existing buildings on a site has been explored and robustly demonstrated to be unfeasible before resorting to demolition.
b) Waste generation has been minimised and re-use and recycling of materials has been maximised in the construction process, including using any demolition materials.
c) The selection of construction materials has been informed by the carbon footprint associated with their sourcing and production (carbon footprint sought to be reduced wherever possible); use of materials that sequester more carbon than is produced in making them is prioritised where opportunities arise.
d) The ways that materials are transported to site and processed during construction have been chosen to minimise the associated carbon emissions wherever possible.
e) Design choices would allow buildings to be easily maintained, adapted and repurposed at the end of use/life.

Proposals for large scale new-build development (developments of 100 or more dwellings, or 10,000m^2 or more non-residential floorspace) will also need to be accompanied by details within their Energy and Carbon Statement that provide the following:

f) A measurement of total embodied carbon associated with the development (including upfront carbon associated with selection of materials). A recognised methodology should be followed to determine these quantities including submission of Whole Life Cycle Carbon Assessment. The City Council's recognised methodologies are set out in the Energy and Carbon Technical Advice Note.
g) Details of actions taken to reduce this embodied carbon as much as possible, particularly the upfront carbon associated with the construction stages, and the specific quantitative reductions that have been secured through design process.

Where any future updates to Building Regulations (or other national policy) make embodied carbon requirements at a national level, the Energy and Carbon Statement should instead demonstrate how embodied carbon is being addressed in the context of that national legislation.

RETRO-FITTING EXISTING BUILDINGS, INCLUDING HERITAGE ASSETS

Policy context

- There is a significant retro-fit challenge facing the city if we are to reach net zero targets, reduce exposure to fuel poverty, and improve energy security. Various interventions will be needed including installation of technologies such as heat pumps, electric vehicle charging and micro-renewables.
- Retrofitting traditional and historic buildings can be carried out sensitively and successfully, whilst preserving historic character, and the City Council will support this wherever possible where interventions have clearly been designed with appropriate consideration of these additional factors:
    - Such buildings were typically constructed to rely upon natural processes such as passive ventilation and free movement of moisture to help to keep internal temperatures stable and avoid build up of damp and mould. Retro-fit interventions that might be suitable for modern buildings can be inappropriate or 'maladaptive' for these assets resulting in harm not only for the structure but also for the health of occupants inside.
    - Designated heritage assets are afforded statutory protection through the Listed Building and Conservation Area Act and also have great weight automatically assigned through the National Planning Policy Framework to preserving their significance.

Policy implementation

- On most buildings within the city, applications which propose retrofitting measures designed to secure demonstrable energy efficiency and/or climate adaptation improvements will be approved, unless other policy/material considerations would make them unacceptable.
- For traditional buildings, including heritage assets however, this presumption in favour does not automatically apply, although the City Council also supports retro-fit projects that deliver these demonstrable benefits. Instead, additional considerations need to be factored into the design process and demonstrated through the application.

- The Council will seek to ensure that applications have been informed by a whole building approach. This means that any special qualities or characteristics for which a heritage asset might have been designated must be taken into account. The way the building has been constructed and how it currently performs also need to be fully understood, in liaison with relevant professionals where necessary.
- Measures that seek to deliver carbon reduction through energy efficiency or provide adaptation to changing climate will be considered as a public benefit, however, this will not automatically override any harm to a designated asset. The City Council will need to consider the level of harm to the significance of the asset and make a determination as to whether or not this is outweighed by that public benefit where harm does occur, in line with national policy and other relevant policies of the Local Plan.

POLICY R3: RETRO-FITTING EXISTING BUILDINGS

The City Council will support retrofit measures to existing buildings where they secure energy efficiency improvements or adaptation to changing climate. The expectation is that the interventions are selected in accordance with the steps of the energy hierarchy (reduce energy use, use energy efficiently, source energy renewably) as set out in Policy R1.

A whole building approach should be taken to the retrofitting of traditional buildings, including heritage assets, whereby applications will need to demonstrate how the following principles have been embedded in the design rationale:

a) Choices on interventions have been informed by a whole building approach which includes methodical assessment of the building's heritage significance, its current performance in terms of energy efficiency and climate risk, its use (now and in future), its context, and the selection of suitable materials;
b) Any harm to the heritage significance of the asset has been minimised and mitigated as much as possible through careful design choices and in line with requirements of policies HD1-HD6;
c) Professional advice has been sought from historic environment and energy/climate experts to inform proposals where necessary/appropriate;
d) All required consents have been secured, or are in the process of being secured, such as Listed Building Consent or consent for works affecting TPOs.

Measures that seek to deliver carbon reduction through energy efficiency or provide adaptation to changing climate will be considered as a public benefit in the balance against harm, although this will not automatically override any harm to an asset.

NATURAL RESOURCES

There are a wide range of natural resources which need to be considered in the development process. Natural resources such as the soil, air, and water are all

important to health and wellbeing but also to the sustainable functioning of the wider natural environment that makes Oxford so special.

AIR QUALITY ASSESSMENTS AND STANDARDS

Policy context

- Air pollution is an ongoing health challenge which arises from a variety of sources. No amount of air pollution is safe, with pollutants such as Nitrogen Dioxide (NO_2) and particulate matter (PM2.5 and PM10) contributing to a wide variety of health impacts including respiratory and cardiovascular disease. Whilst the impacts of air pollution can affect anyone, they are particularly harmful for some more sensitive groups including children, the elderly, and those with pre-existing health conditions.
- The whole of the city has been declared an Air Quality Management Area (AQMA) for NO2 and the City Council has an Air Quality Action Plan (AQAP) which sets out a range of measures that will be required to improve air quality across Oxford including a more rigorous standard for Nitrogen Dioxide (NO2) compared with national legal limits.
- The role of this policy is to ensure that any negative impacts on air quality from new development (either during construction or once in operation) are mitigated. It also seeks to ensure that exposure to poor air quality is minimised or reduced through careful design.

Policy implementation

- All proposals need to consider their potential impacts upon air quality, as well as the impacts from existing air quality on the users of the development from the outset to avoid the need for future site mitigation. This should consider all potential air pollutants including Nitrogen Dioxide (NO_2) and particulate matter, and may necessitate various design choices to respond to and mitigate potential air quality impacts in the locally.
- Site layout should be designed in such a way as to protect human exposure to high pollution, which could involve setting the development back from key sources of pollutants; placing habitable rooms away from, and avoiding installation of balconies near to, highest pollution areas; as well as use of buffering measures like planting.
- Particular care and attention should be paid to more sensitive uses where these are present or proposed, meaning those expected to host more sensitive receptors such as schools, nurseries, care homes and healthcare settings, which need to be located away from areas of poor air quality.
- The conclusions of any Air Quality Assessment (AQA) - which should accompany all major applications - must demonstrate that the proposed development does not

conflict with or undermine any of the objectives of any of the city's current or future Air Quality Action Plans or Air Quality Strategies.

- Further guidance on meeting the requirements of the policy is set out in the City Council's Air Quality Planning Application Guidance Note, as well as the air quality webpage and the most up to date Institute of Air Quality Management (IAQM) guidelines which applicants are expected to follow.

POLICY R4: AIR QUALITY ASSESSMENTS AND STANDARDS

Planning permission will only be granted where the impact of new development on air quality is mitigated, and where exposure to air pollution is minimised or reduced, as far as is reasonably practicable as per the criteria set out in this policy.

The design and layout of new development (during construction and in operation) needs to consider the potential impacts upon air quality for current and new occupants. Sensitive uses such as schools, nurseries, care homes and healthcare settings, should be located away from areas of poor air quality as far as reasonably practical through careful site layout designed to protect human exposure to high pollution levels.

Air Quality Assessments (AQA) will be required for all major developments. Planning permission will only be granted for major developments where the AQA meets the following criteria:

a) It provides an assessment of the impacts of all the sources of air pollution generated during the development's operational and construction phases, including but not limited to transport, heating, dust generated from demolition/construction/earthworks activities; and
b) It has considered the cumulative impacts from other sources of air pollution in the local area where relevant; and
c) It clearly identifies any potential negative air quality impacts, including where these would compromise achievement of the local annual mean air quality target for Nitrogen Dioxide (NO_2), as set out in the city's Air Quality Action Plan (AQAP); and
d) It sets out appropriate site-specific mitigation measures to address negative impacts identified, following the principle of redesign – mitigate – offset.

Planning applications that involve significant demolition, construction or earthworks will also be required to submit a dust assessment as part of the AQA, to assess the potential impacts and health risks of dust emissions from those activities. Any appropriate site-specific dust mitigation measures will be secured as part of the Construction Management Plan (CMP) as required by Policy C6.

All applications are expected to follow the guidance set out in the latest City Council Air Quality Planning Application Guidance Note.

WATER RESOURCES AND QUALITY

Policy context

- The Thames River Basin Management Plan describes the current state and pressures affecting the waterbodies in the city, as well as the measures needed to achieve the requirements of the Water Framework Directive (transposed into the Water Environment Regulations). The City Council is committed to ensuring that new development will not lead to the deterioration of our water environment or impact on the ability to meet the objectives set out for our waterbodies.
- The Environment Agency has identified Oxford to be in a "serious water stressed" area, meaning that household demand for water is a high proportion of the effective rainfall which is available to meet that demand either now or in the future. There are ongoing pressures from climate change, bringing about more periods of hot weather and droughts, and rising demand from a growing population.
- Water quality issues are ongoing in the city, with the majority of watercourses either classified as moderate or poor in ecological status and ongoing quality concerns particularly for Northfield Brook and the River Thames. These issues arise for various reasons including pollution from a range of sources like agriculture, sewage discharge and surface run-off.
- Wastewater infrastructure in the city faces ongoing challenges as the city develops. Upgrades to the Wastewater Treatment Works which services Oxford are underway to address current capacity problems and meet future treatment needs, and the City Council is committed to continuing to engage with the EA and Thames Water to ensure future growth is appropriately planned for and delivered.

Policy implementation

- Applications must be accompanied by sufficient information to demonstrate that the potential for impacts on the water environment (both on water resources and water quality), have been considered and addressed.
- The policy requires that applicants set out how they will limit water use as much as possible and that new residential development as a minimum aligns with the tighter Building Regulations target for water consumption. The requirement will be subject to a planning condition to ensure that the water efficiency standards are met. Applications should also explore other ways to support water conservation, including:
    - grey water recycling (reuse of wastewater from showers, baths and washbasins);
    - rainwater harvesting (collection and storage of rainfall for reuse);
    - landscaping features which are drought tolerant and do not require regular watering during dry periods.

    - smart metering and intelligent building systems to help occupants monitor and manage water use.
- Proposals should also demonstrate consideration and mitigation of impacts on water quality such as accidental release of sediment/pollutants into waterways or drainage networks, infiltration of pollutants into groundwater. See also **Policy R8**.
- The risk of water quality impacts will be particularly relevant where proposals are located in close proximity to waterbodies, or close to ecological sites which are particularly sensitive to surface water and groundwater changes. See also **Policy G6.**
- New development may necessitate local network upgrades to facilitate water supply or wastewater infrastructure and the delivery of upgrades can take time. Developers are encouraged to engage with the Statutory Water Undertaker (Thames Water) at the earliest opportunity to establish the requirements for water supply and sewage/wastewater treatment network infrastructure both on and off site and ensure that these are planned for in due course. See also **Policy S3**.

POLICY R5: WATER RESOURCES AND QUALITY

Planning permission will only be granted for new development that utilises water supplies prudently and protects water quality. Proposals for new development, excluding householder applications, extensions, conversions and change of use (unless these would result in creation of a new dwelling) should include a water awareness statement to demonstrate how the following policy requirements have been met.

A) Water Supply/Efficiency

All new dwellings (including conversions, reversions, and change of use) should achieve an estimated water consumption of no more than 110 litres per person per day using the 'Fittings Approach' as set out in Building Regulations part G2 (proposals are encouraged to go further than this).

All non-residential development should demonstrate what measures have been incorporated to reduce water use.

All applications should demonstrate what other measures have been incorporated into the design to conserve water use including rain/grey water harvesting/reuse.

B) Water Quality and Wastewater

Proposals should demonstrate that development will not have an adverse impact on the quality of controlled water bodies and groundwater, such as by:

- managing run-off and infiltration through utilising SUDs (in line with the requirements of Policy G8);
- putting measures in place to manage and contain sediment/pollutants particularly where in proximity to open watercourses and designated bathing waters.

C) Foul and surface water drainage

Developers should separate foul and surface water sewers on all new development. Where opportunities are present during works on existing development, applicants are encouraged to separate existing combined foul and surface water sewer arrangements.

No surface water from new development will be discharged to the public foul or combined sewer system: a Foul and Surface Water Drainage Strategy must be provided for all new build residential development of 100 dwellings or more; non-residential development of 7,200m2 or more; or student accommodation of 250 study bedrooms or more, to demonstrate how foul water and surface water drainage will be managed to reduce run off and improve water quality in line with national policy.

SOIL QUALITY

Policy context

- There are multifunctional benefits of soils for the wider environment, they can store surface water, preserve water quality, support biodiversity and food production and store carbon. The natural accumulation of soil can be a slow process so soils should be considered to be a finite, non-renewable resource which needs to be protected and managed sustainably.
- Some types of soil, such as peat, have particularly valuable benefits, they are even better at locking up carbon and can act as archaeological reserves. They also take much longer to accumulate and as such are much more difficult to replace.
- Peat deposits have previously been identified at Dunstan Park, around the Churchill Hospital and Lye Valley, as well as along Littlemore Brook in the south of the city, although there could be additional deposits nearby.
- The development process can impact upon and deteriorate the quality of soils in various ways, such as through removal, compaction, sealing over with artificial surfaces and pollution.

Policy implementation

- The policy will apply to a variety of proposals where impacts on soils could arise, particularly those that involve undeveloped areas of land and greenfield sites.
- Measures to consider will vary based on the context of the site and proposal, but could include:
    - tailoring construction processes to avoid loss, erosion, or compacting of soils;
    - ensuring beneficial soil reuse and sustainable soil management;
    - minimising risks from release of contaminants (see also **Policy R8**);

    - locating development away from the highest quality soils;
    - minimising artificial surface cover that would lock away the soils.
- To allow the City Council to make an informed decision as to the impact of the development, proposals for major development on undeveloped land upon, or within 200m of, an identified peat reserve in the city will need to submit an assessment that details soil conditions and any existing peat reserve affected by the scheme alongside the application.
- Where there is potential for harm or loss of peat, proposals could seek to avoid impacts through careful design choices informed by the assessment, such as through development being located away from peat reserves where the site allows. Reliance on mitigation through offsetting the impact of lost peat alone, such as by providing carbon storage elsewhere, is unlikely to make a development acceptable as it is very difficult to achieve the same benefit for many years.

POLICY R6: SOIL QUALITY

Planning applications will be expected to demonstrate how the impact of development on soils has been mitigated and opportunities for conserving and enhancing the capacity/quality of soil maximised. The Design and Access Statement and associated landscape plans should include details identifying where relevant:

a) How impact on soils during the construction process has been minimised through avoiding: soil loss, compaction, pollution and reduction in the quality of soil; and
b) How development has been located in a way that avoids highest quality soils on sites where possible; and
c) How beneficial soil reuse and sustainable soil management has been implemented where possible; and
d) How artificial surface cover that seals off soils has been minimised.

Planning permission will not be granted for proposals that would remove or dewater 10m³ or more of peat.

Proposals for new major developments on undeveloped land upon, or within 200m of, known peat reserves should submit an assessment, informed by borehole sampling, to allow the City Council to determine any potential impacts on reserves. The assessment should include details of the following:

I) The estimated carbon footprint of the peat impacted by development;
II) Its palaeo-archaeological interest;
III) Its function in the surrounding habitats;
IV) Its hydrological condition and stability.

LAND CONTAMINATION

Policy context

- Oxford's extensive history of development means that there are areas of the city which are likely to be affected by poor soil quality and the presence of contaminants that could be harmful for human health, for example closed landfill sites and former industrial sites.
- However, the development process can be an important mechanism for bringing land back into beneficial use through sustainable remediation processes maximising efficient use of land.
- The NPPF sets out that after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990.

Policy implementation

- In instances where land contamination could be an issue of relevance, a report documenting the investigations that have been carried out into the nature, extent and possible impacts arising from the contamination will need to be provided. It should detail any mitigation measures necessary to respond to what has been found.
- In assessing whether land contamination is an issue that needs to be taken into account, the City Council will have regard to a range of information sources including its database of potentially contaminated sites, information provided by developers and third parties, and the advice from the City Council's Land Quality officer.
- Ultimately, where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner. Where applicable, site investigations should be carried out in line with Land Contamination Risk Management (LCRM) guidance, taking a staged risk-based approach.

POLICY R7: LAND CONTAMINATION

Planning applications where proposals could be affected by contamination or where contamination may present a risk to the surrounding environment, must be accompanied by a report which:

a) Details the Desktop Study and Preliminary Risk Assessment (PRA); and
b) Details the investigations (including, where relevant, site investigation data and results, conceptual site model, risk assessment, and remedial options) that have been carried out to assess the nature and extent of contamination and the possible impacts it may have on the development and its future users, biodiversity, the built environment, land and controlled waters; and
c) Sets out detailed remediation measures to allow the development to go ahead safely and without adverse effect, including, as appropriate:
    I) removing the contamination;
    II) treating the contamination;

III) protecting and/or separating the development from the effects of the contamination;
IV) validation of any mitigation and remedial measures.

Where site investigation and remediation measures are needed, these will be required as a condition of any planning permission.

AMENITY IMPACTS OF DEVELOPMENT

Policy context

- New development can create environmental impacts, particularly during the construction phase, as well as once in operation. Potential amenity and environmental health impacts need to be fully assessed during the planning application process to ensure that any potential nuisance resulting from the development can be properly mitigated to protect the amenity of residents, employees and the wider environment.
- The amenity of occupiers of new developments can also be impacted by the operation of existing uses nearby including uses like social venues, industrial processes, roads and rail where not appropriately considered in the design process. The applicant seeking to introduce a new land use is responsible for managing the impact of that change (the Agent of Change Principle).
- There may be other amenity impacts arising from existing uses nearby, such as sources of odour (e.g. in proximity to wastewater treatment works) or artificial lighting, which may need to be assessed to inform the design of new development to preserve the amenity of new occupiers without imposing restrictions on existing uses.

Policy implementation

- The policy sets out a number of factors which should be considered where they could have a direct impact on amenity and health, though as every development is different, some will be of more relevance and others may not be applicable.
- The management of noise (either arising from the new development or from existing uses nearby) should be an integral part of development proposals. In cases where noise sensitive development is proposed near to an existing noise generating use (e.g. a music venue or pub) the City Council will consider whether the introduction of the sensitive use might threaten the continued operation of the existing premises, which might mean the development is inappropriate in that location.
- Odour impacts on future occupiers of a development will be a particular consideration for applications that propose development in proximity to the Sewage Treatment Works. The policy sets out requirements for consultation with the Statutory Undertaker

(Thames Water) and technical assessment of odour impacts which will need to show that these can be avoided or mitigated.

- There are links with other policies in the Local Plan including transport impacts (**Policy C6**); air quality (**Policy R4**) and land quality (**Policy R7**).
- Measures to mitigate the impacts of noise and vibration associated with demolition and construction will be secured by legal agreement or condition through construction management plans which form part of the transport assessment.

POLICY R8: AMENITY IMPACTS OF DEVELOPMENT

Planning permission will only be granted for development that:

a) Ensures that the amenity of communities, occupiers, neighbours and the natural environment is protected; and
b) Does not have unacceptable transport impacts affecting communities, occupiers, neighbours and the existing transport network; and
c) Provides mitigation measures where necessary.

The factors the City Council will consider in determining compliance with the above elements of this policy will also include where relevant:

d) Visual privacy, outlook;
e) Sunlight, daylight, overshadowing and mitigating glare from solar panels and windows where applicable;
f) Artificial lighting levels;
g) Transport impacts;
h) Impacts of the construction phase including the assessment of these impacts within the Construction Management Plan (CMP) (refer to Policy C6);
i) Odour, fumes and dust;
j) Microclimate e.g. wind, overheating
k) Contaminated land;
l) Impact upon waste and wastewater infrastructure;
m) Noise and vibration; and
n) Preserving surrounding water quality.

Planning permission will not be granted for development sensitive to noise in locations which experience high levels of noise, unless it can be demonstrated through a noise assessment, that appropriate attenuation measures will be provided to ensure an acceptable level of amenity for end users and to prevent harm to the continued operation of existing uses.

Proposals within 800m of a sewage treatment works or 20m of a sewage pumping station should be informed by liaison with the Statutory Undertaker (Thames Water). Planning permission will not be granted for sensitive development close to the Sewage Treatment Works, unless it is accompanied by a technical assessment, prepared in consultation with Thames Water, that shows there will be no adverse amenity impact on future occupiers of the proposed development or that sufficient mitigations can be incorporated to ensure that any potential for adverse impact will be avoided.

CHAPTER SIX

A CITY THAT RESPECTS ITS HERITAGE & FOSTERS DESIGN OF THE HIGHEST QUALITY

INTRODUCTION

Oxford is a world-renowned historic city, highly recognisable by its iconic skyline and its architecture, with a rich and diverse built heritage comprised from layers of history both visible and buried that are a product of more than a thousand years of settlement. Oxford is also a dynamic city that must adapt and change, and high-quality design is key to managing this change positively, for the continued success of the city. The policies in this chapter address the city's heritage assets and historic environment as well as the need for high-quality design in new development. There are, of course, many overlaps between these topics and successful new design and the conservation and enhancement of the heritage of Oxford cannot easily be separated.

This chapter sets out the following topics:

- High quality design
- Efficient use of land
- Heritage assets
- Amenity
- Space standards

HIGH QUALITY DESIGN

The value and benefits of good design and improvements it offers to quality of life are so significant that it is not a nice extra, it is essential. A successfully designed scheme will be a positive addition to its surroundings. It should be informed and inspired by the unique characteristics of the site and its setting, and these considerations should go beyond the red line of the application site to adopt a true placemaking approach. It may blend in or stand out, but it should not detract from existing significant positive characteristics in the area, and it may add interest and variety.

A well-designed scheme will meet the needs of all users and will stand the test of time. It gives flexibility to meet the needs of a wide range of people and takes account of how needs may change over time. It is important that new buildings create places that are of an adequate size and layout, with sunlight and daylight so that they provide a high quality, well-functioning

environment for occupiers. The impact on the amenity of occupiers of existing buildings must also be considered.

PRINCIPLES OF HIGH-QUALITY DESIGN

Policy context

- Oxford has a rich legacy of buildings, from iconic architectural set pieces in the historic core to smaller domestic, locally distinctive buildings within the many villages that now form part of the city and areas of planned city expansion.
- Contemporary and modern architectural styles have been added to the city over many years, adding to this richness and quality.
- There is therefore a wealth of inspiration in terms of building form and character and great opportunity for creative, high quality, complementary character to enhance the existing built form.
- Design should have a clear rationale, informed and inspired by the unique characteristics of the site and its wider setting, including an understanding of character.

Policy implementation

- The policy will require that new development proposals in Oxford have been developed through a rigorous design process that will ensure the highest possible level of quality
- The Appendix 1.1 sets out the principles against which schemes will be assessed. The emphasis of the assessment will be on a design process that is clearly explained and justified, and a demonstration that the proposed development is one that works well for its intended uses and is responsive to the immediate and wider context.
- Early discussion between applicants, the local planning authority and local community about the design of emerging schemes is encouraged as it will help clarify expectations and allow the opportunity for creative ideas and problem solving to add value.
- The Council has a Design Review Panel that can give advice so that designs can be reviewed and improved at the informative stage. It is encouraged that all major development proposals are assessed by the Panel as part of the pre-application and then application process. In assessing applications, the Council will have regard to the outcome from these processes, including any recommendations made by Design Review Panel.
- In combination with the policy requirements, applicants are encouraged to refer to other resources to inform their design approaches. These can include the following:
    - The *National Model Design Guide* sets out and illustrates the government's priorities for well-designed places.
    - Building for a Healthy Life (BHL) is the latest edition of one of the most widely used design guides in England relating to healthy placemaking.

POLICY HD1: PRINCIPLES OF HIGH-QUALITY DESIGN

Planning permission will only be granted for development of high-quality design that is responsive to its context, creates or enhances local distinctiveness, and ensures that the amenity of the natural environment is protected. Planning permission will only be granted where proposals are designed to meet the key design objectives and principles for delivering high quality development as set out in Appendix 1.1.

All developments - other than changes of use without external alterations or householder applications - will be expected to be supported by a constraints and opportunities plan with supporting text and/or visuals to explain their design rationale in a design statement proportionate to the proposal (which could be part of a Design and Access Statement, Planning Statement or other demonstration of compliance with other plan policies that may be relevant), which should address the relevant checklist points set out in Appendix 1.1.

MAKING EFFICIENT USE OF LAND

Policy context

- Oxford is a compact city with a growing population and strong economic growth.
- It has tightly drawn boundaries and within those boundaries are flood plains, areas important for nature conservation and a sensitive historic environment, meaning that growth opportunities are constrained.
- The competing needs and pressure for land in Oxford and the limited availability of land means that it is vital that efficient use is made of land that does come forward for development.
- There are already densely developed urban areas, but there is also potential to substantially increase this density.

Policy implementation

- The policy requires all development makes efficient use of land.
- Transport hubs in the city and district centres, where development is infill and more likely to be flats and have very little need for parking should achieve very high densities.
- Careful design that responds to context is important at high densities to preserve and enhance valued features. Whilst the context of each site will be different, such features could include:
    - The potential for valuable archaeological remains to be present on the site which should be safeguarded through careful positioning of foundations
    - Whether there are sensitive views through the site which building heights should be tailored to avoid interrupting;
    - Whether there are deficiencies in particular types of green space which the proposal could help to address through provision on site
    - Whether there are opportunities to orient layout/rooftops to maximise solar gain on photovoltaics solar panels for renewable energy generation
- The city and district centres are defined on the Policies Map. Gateway locations are outside of these areas, but will be busy locations on significant roads and at the edges of suburban areas, rather than in the middle of them. All other areas are suburban, but some suburban areas are conservation areas that represent medieval villages now integrated in the city but still with a rural character, and that may sometimes need reflecting in lower density development.

POLICY HD2: MAKING EFFICIENT USE OF LAND

Planning permission will only be granted where development proposals make efficient use of land and maximise capacity. It is expected that sites across the city will generally be capable of accommodating development at an increased scale and density to their surroundings.

Proposals should demonstrate that the built form:

a) Maximises density; and
b) Is appropriate for the use proposed; and
c) Is informed by an understanding of the impacts on the significance of designated and non-designated heritage assets, including their setting and the potential for archaeological remains; and
d) Protects and enhances green infrastructure features in accordance with Policies G; and
e) Considers the opportunities for net zero carbon design, including energy efficiency measures, maximising renewable energy generation, reducing carbon dioxide emitted through construction process, and preserving carbon sinks; and
f) Considers presence of flood risk and, where relevant, locating more vulnerable uses in locations with reduced flood risk, less vulnerable uses in areas of higher risk.

It is expected that very high-density development (for residential development this will indicatively be taken as over 100dph) can be achieved in the highly accessible locations of the district centres, and in the city centre, where feasible in the context of the impacts on heritage. High density development (indicatively to be taken as over 80dph) will be expected at gateway sites (in mixed use areas on the edges of city on the main road network), and high suburban densities (indicatively to be taken as over 60dph) will be expected in most other locations.

HERITAGE ASSETS

Oxford's long history of settlement has resulted in a great density of heritage assets which, together and individually, contribute to the city's special character and unique sense of place. The city has many nationally designated assets (Conservation Areas, Listed Buildings, Registered Parks and Gardens and Scheduled Monuments) but also non-designated assets of local importance, including a wealth of archaeological remains. Managing change in a way that respects and draws from Oxford's heritage and landscape is vital for the city's continued success, and new development needs to respect and respond to this context, whilst taking opportunities to celebrate this history.

Successful design in Oxford means understanding this heritage and managing change that meets future needs (such as providing new homes, greening our streets and reaching net zero carbon) whilst seeking to prevent harm to the special significance of these heritage assets so that they can continue to be understood, valued and enjoyed for years to come. In all cases, significance must be understood, and the level of any harm on this significance must be weighed against public benefits, which could be wide ranging and will vary in magnitude but include delivery of needed homes and facilities and environmental improvements such as energy efficiency.

Conservation areas

Oxford has eighteen conservation areas which are listed in Appendix 6.1 and defined on the Policies Map. These areas are designated heritage assets which are 'areas of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance' according to the Planning (Listed Buildings and Conservation Areas) Act 1990. Conservation areas include a diverse range of qualities reflecting the story of Oxford, from the medieval walled city to surrounding agricultural settlements, the open green space found in the Headington Hill Conservation Area to the meadows of the river valleys such as Wolvercote and Godstow. However, they all have the common element of containing features that link us to our past.

Listed buildings

Oxford has a very high concentration of historic buildings, including those of great rarity, group value and high aesthetic value, and with associations to people and events of history that allows a visible understanding of the past and contributes to the city's unique character and distinctiveness. Many of these buildings are nationally designated, or 'listed', and are graded I, II* and II, (though there is no legal difference in their protection):

- Grade I buildings are those of exceptional interest
- Grade II* are particularly important buildings of more than special interest
- Grade II are of special interest, warranting every effort to preserve them

Registered parks and gardens

As well as forming an important part of the green infrastructure network, many parks and gardens in Oxford are an important part of appreciating and understanding the city's heritage. Fifteen parks and gardens in the city are nationally designated heritage assets known as registered parks and gardens and these include: five registered as Grade I, one registered as Grade II*, and nine registered as Grade II. They represent a dense network of assets, that covers a significant proportion of the city, many helping to frame the Oxford's relationship with the River Cherwell. The majority of the Registered Parks and Gardens are related to colleges, conveying in rich detail the integrated way in which the colleges have been designed and developed. They have a pivotal role in shaping how the city's institutions and the boundaries between the public and private realms are experienced. Some (such as Oxford Botanic Garden) have a particularly important educational role linked with botany, genetics and related research. In addition to the colleges, Oxford's Registered Parks and Gardens include High Wall in Pullens Lane, Park Town and St Sepulchre's Cemetery.

Scheduled Monuments

Scheduled Monuments are another type of nationally designated asset. A heritage asset is only made a Scheduled Monument if it is of national importance and also if that is the best means of its protection. They may nor may not be visible above ground. There are 9 Scheduled

Monuments in Oxford, which are varied in age and type. They are the remains of Osney Abbey and Rewley Abbey, Oxford Castle and the City Walls, Seacourt Medieval Settlement, Old Abingdon Road Culverts, Grandpont Causeway, Port Meadow, and the Swing Bridge near Oxford Station.

DESIGNATED HERITAGE ASSETS

Policy context

- Heritage assets are not locked in time and changes can be carried out as long as this is thoughtfully done and in a manner that preserves the notable features of the heritage asset that contribute to its significance and the reason it is protected. For example, historic buildings need to be repaired and adapted to meet the changing needs of occupants, or to respond to the climate emergency.
- The setting of a heritage asset can be integral to understanding and appreciating heritage significance, and understanding the setting is also essential in determining potential harm and how to minimise it.
- Conservation area appraisals describe the distinctive character, appearance, and historic interest of conservation areas, whilst associated management plans help to articulate appropriate responses to local issues and pressures. These are published on the City Council's website.
- When a building is listed, all of the building itself, anything fixed to it, and also most buildings and structures in its grounds (the curtilage) are part of the listing. The inside as well as the outside of a building is listed, though not all features necessarily contribute to its significance.

Policy implementation

- Proposals will need to consider the potential for direct impact upon the significance of a heritage asset, and/or its setting and where there is potential for impact on a designated heritage asset the application should be accompanied by a heritage statement. The policy sets out expectations for what this should cover, and Historic England have produced guidance on what should be included in a heritage statement and how they should be structured (Statements of Heritage Significance: Analysing Significance in Heritage Assets).
- Where proposals seek energy efficiency upgrades to a listed building to mitigate the impacts of climate change, Policy R3 should be read in conjunction with this policy to help ensure that such projects do not result in maladaptations that can impair the buiding's performance and lead to unnecessary capital and carbon costs.
- The registered parks and gardens all have associated listed buildings and form a significant part of the setting of those listed buildings, so the impact of any proposals on associated heritage assets will also be a key consideration, as will the potential for impacts on archaeological remains if below-ground works are proposed (see policy HD6). Due to their contribution in the wider setting of these assets, the criteria in paragraph 214 of the NPPF

referred to in Policy HD3, about viable uses, grant-funding and bringing the site back into use, are unlikely to apply.

- The registered parks and gardens designation requires local authorities to consult Historic England on development affecting Grade I and II* Registered Parks. It also requires local authorities to consult the Garden History Society on works to all grades of parks and gardens.
- Pre-application engagement with Historic England is strongly encouraged for all proposals that are likely to affect the significance of a Scheduled Monument. Historic England can advise on the need for Scheduled Monument Consent (SMC) in addition to planning permission.
- Any work, internal or external, that will affect the special interest of a listed building is likely to require Listed Building Consent, an additional consent to planning permission.

POLICY HD3: DESIGNATED HERITAGE ASSETS

Planning permission will be granted for development that respects and draws inspiration from Oxford's designated heritage assets, responding positively to their significance, character and distinctiveness and enhancing it where possible.

Applications affecting a designated heritage asset directly or by affecting its setting will be considered in line with the approach set out in the NPPF (*National Planning Policy Framework*) paragraphs 207-221 (or updated equivalent), whereby the level of harm will be assessed and weighed against the public benefits of the proposal, and the relevant tests in the NPPF applied in that context.

The understanding of harm will be based on an understanding of context, including a description of the designated heritage asset and its significance, and an assessment of the impact of the proposed development on its significance. In cases where a proposal could result in less than substantial harm, this will need to be clearly and convincingly justified within the heritage statement. Substantial harm to or loss of significance of a designated heritage asset should be exceptional in the case of Grade II assets and wholly exceptional in all other cases, and planning permission or listed building consent will only be granted if the requirements of paragraph 214 (or the equivalent in any update) of the NPPF can be demonstrated as set out in a heritage statement.

A heritage statement must include information sufficient to demonstrate:

a) An understanding of the significance of the heritage asset, including recognition of its contribution to the quality of life of current and future generations and the wider social, cultural, economic, and environmental benefits they may bring; and
b) That the development of the proposal and its design process have been informed by an understanding of the significance of the heritage asset including its setting and that harm to its significance has been avoided or where it's not possible, any harm has been minimised through thoughtful design; and
c) That, in cases where development would result in harm to the significance of a heritage asset, the level of harm has been properly and accurately assessed, that alternative designs to respond to heritage constraints and/or opportunities have been explored, and that measures are incorporated into the proposal that mitigate or reduce the harm where appropriate.

Specific considerations for listed buildings

Proposals relating to a listed building should take into account its rarity, group value and how it illustrates the past and helps our understanding of it, including how it reveals its historic, architectural, archaeological and/or artistic interest.

Specific considerations for registered parks and gardens

Proposals for change within a Registered Park and Garden should take into account:

d) The scope for a landscape-led approach;
e) Opportunities to reveal significance and/or enhance its appreciation;
f) The relationship between the development site and the River Cherwell and/or other water features, as appropriate;
g) Impacts on any key views, having agreed those key views with the City Council;
h) How the treatment of boundaries may impact on significance;
i) Archaeological impacts if below-ground works are proposed.

Specific considerations for conservation areas

Certain features may be characteristic and add to the significance of a particular conservation area, and planning applications should set out how these have been responded to sensitively to create contextually responsive proposals. These features will be set out in conservation area appraisals and management plans, and may include, but are not limited to:

j) The urban grain such as specific settlement patterns, plot types and groupings of buildings and their relationship to each other and the wider area;
k) Proportions, such as height and massing, may be characteristic and may be harmed by developments that do not relate well to these;
l) Views, including focal points at the end of a view, glimpsed views of spaces beyond and between;
m) Trees and other landscape features, including backdrops to views;
n) Boundary treatments, which may include railings, walls and hedges; and/or
o) Architectural details such as the palette of materials, windows and doors, proportions, and rhythms.

Conservation areas are listed in Appendix 6.1 and defined on the Policies Map.

NON-DESIGNATED HERITAGE ASSETS

Policy context

- The term ‘heritage asset’ describes valued components of the historic environment such as buildings, monuments, sites, places, areas or landscapes that have been positively identified as having a degree of significance meriting consideration in planning decisions.
- Some heritage assets are not nationally designated in the same way that the assets are as discussed in HD3). Policy HD4 addresses the various other assets that have a local relevance that do not merit a national-level designation, but which are still important to consider in determining planning applications (and in developing proposals).

- There are many non-designated assets identified in the Oxford Heritage Asset Register, though the register is not an exhaustive list. Non-designated heritage assets may also be identified through the conservation area appraisal, neighbourhood planning, or the planning application process.

Policy implementation

- Once identified, however it is identified, it is important that a non-designated heritage asset is carefully considered in proposals, including how its significance may inform and be incorporated into proposals.
- If the loss of significance of any asset is justified by the public benefits outweighing the level of harm or the loss, the significance must still be recorded.

POLICY HD4: NON-DESIGNATED HERITAGE ASSETS

A non-designated building or group of buildings, monument or site, place or landscape will be considered a local heritage asset if it has local interest, value, and significance. These assets may be identified in a number of ways such as through the Oxford Heritage Assets Register, conservation area appraisals, or the planning application process.

Planning permission will only be granted for development affecting a local heritage asset or its setting if it is demonstrated that due regard has been given to the impact on the asset's significance (including its setting) and that it is demonstrated that the significance of the asset and its conservation has informed the design of the proposed development.

In determining whether planning permission should be granted for a development proposal that affects a local heritage asset, consideration will be given to the significance of the asset, the extent of impact on its significance, as well as the scale of any harm or loss to the asset.

Recording should take place to advance understanding of the significance of any assets to be lost (wholly or in part) in a manner proportionate to their importance and the impact, and that is publicly accessible. The ability to provide publicly accessible recording will not be a factor in deciding whether such loss should be permitted.

Non-designated heritage assets of archaeological interest, which are demonstrably of equivalent significance to scheduled monuments, should be considered subject to the requirements of Policy HD4.

ARCHAEOLOGY

Policy context

- Oxford has a rich archaeological heritage, from prehistoric times to the modern day, and encompasses a wide variety of asset types. Some of these are formally designated heritage assets such as Scheduled Monuments, however many assets of comparable

significance are not currently designated and warrant appropriate protection through the planning system. Notable assets include:

  - prehistoric domestic, ritual, and funerary sites located across north Oxford and the remains of an important Roman pottery manufacturing industry to the south and east of city.
  - middle-late Saxon urban remains, arising from Oxford's emergence as a major cloth trading town in the Norman period.
  - Numerous assets associated with Oxford's development as an international centre for academic study including the remains of multiple religious institutions, academic halls and endowed colleges.
  - Other assets of note include the town defences, the distinctive remains associated with the medieval Jewish Community and the Royalist Civil War defences.

- It is important that archaeological remains are preserved in situ wherever possible and, because these assets can't be renewed, it is essential they are managed carefully and treated with respect.
- New development has the potential to harm or destroy these assets where their presence is not appropriately investigated, and impacts are not carefully mitigated. The potential impacts of cumulative harm or loss are significant and should also be considered.
- Owing to the richness of archaeological remains in Oxford, especially in the historic core, there is a danger that allowing the recording of deposits rather than preservation in situ for several individual developments will lead to significant degradation of the archaeological record. In those cases, further work to ensure adequate contextual assessment and mitigation may be required, that takes into account cumulative impacts.

Policy implementation

- The medieval core of the city (the City Centre Archaeological Area defined on the Policies Map) has an exceptionally high concentration of archaeological remains, as do some allocated sites and other known locations, so the policy requires that any significant breaking of the ground in these locations will require an archaeological assessment within the heritage statement.
- Development within the City Centre Archaeological Area has a high potential to harm the heritage value of the sites, if not carried out sensitively. There are many things to consider as part of the design of developments at these sites, so a comprehensive approach is essential that ensures archaeology, and cumulative impacts on archaeological remains, is an integral part of considerations of how to develop a site.
- An archaeological assessment may also be required outside of these areas where it is suspected there are archaeological remains.
- There are known concentrations of past human activity in many parts of Oxford, and early discussion with the City Council to ascertain whether an archaeological assessment is required is strongly advised.

POLICY HD5: ARCHAEOLOGY

Within the City Centre Archaeological Area, on allocated sites where identified, or elsewhere where archaeological deposits and features are suspected to be present (including upstanding remains), applications should be accompanied by a heritage statement. A heritage statement should include and be informed by a description of impacted archaeological deposits or features (including where relevant their setting) that should as a minimum be informed by relevant information from the Oxford Historic Environment Record.

The heritage statement or, if appropriate, archaeological desk-based assessment should contain:

a) An explanation of how early assessment has informed the design of the proposal, and how this seeks to preserve deposits and features in situ, avoiding adverse effects from poor siting of foundations, drainage features and hard landscaping; and
b) An assessment of the impact of the proposed development on the significance of the deposits or features, using a proportionate level of detail that is sufficient to understand the potential impact of the proposal on that significance.

If appropriate, a full archaeological desk-based assessment may be required and potentially field evaluation. This should be undertaken by an appropriately qualified contractor. Pre- application discussion is encouraged to establish requirements.

In the City Centre Archaeological Area, where significant archaeological asset types can be shown to be subject to cumulative impact from development, the desk-based assessment should contain appropriate contextual assessment of this impact.

For larger developments in the City Centre Archaeological area, the desk-based assessment should also include a whole site plan (which may be beyond the red line to include a whole campus site, for example) that shows current understanding of any basement and underground servicing, likely locations of hidden archaeological remains, other related heritage assets (including settings) to be considered and explain how this whole-site understanding has helped inform decisions about the layout and location of the development.

Development proposals that affect archaeological deposits and features will be supported where they are designed to enhance or to better reveal the significance of the asset and will help secure a sustainable future for it.

Proposals which would or may affect archaeological deposits or features that are designated heritage assets will be considered against the relevant policy approach (Draft Policy HD2 Listed Buildings, Draft Policy HD4 Scheduled Monuments).

Subject to the above, proposals that will lead to harm to the significance of non-designated archaeological deposits or features will be resisted unless a clear and convincing justification through public benefit can be demonstrated to outweigh that harm, having regard to the significance of the deposits or features and the extent of harm. Where harm to an archaeological or paleoenvironmental asset has been convincingly justified and is unavoidable, mitigation should be agreed with Oxford City Council and should be proportionate to the significance of the asset and impact. The aim of mitigation should be to minimise harm, to promote public enjoyment of heritage and to record and advance

knowledge. Appropriate provision should be made for investigation, recording, analysis, conservation of remains, publication, archive deposition and community involvement.

VIEWS AND BUILDING HEIGHTS

Policy context

- Taller buildings, designed with care and attention, can help to ensure efficient use of land and can make a positive design contribution.
- Tools such as VuCity are available to assist with assessing proposals for taller buildings.
- Particular care needs to be taken over the design and placement of taller buildings in Oxford because development might be in the setting of the buildings which form the iconic 'dreaming spires'. These buildings are a collection of nationally and internationally important buildings of historic and architectural significance. They sit in a compact area in the core of Oxford, which is raised slightly on a gravel terrace, giving more prominence to these historic buildings, and meaning that Oxford's unique skyline can be viewed as a single entity whose composition varies according to the direction of viewing. Taller buildings should not negatively impact on views of the iconic skyline.
- If it is established that a taller building is appropriate in a particular location (e.g. in district centres and on arterial roads), it is important it is designed to ensure it contributes positively to the character of the area, that it does not detract from the amenity of its surroundings, that it is sustainable and creates a good internal environment.

Policy implementation

- The High Buildings Study Technical Advice Note (TAN) should be referred to (Technical Advice Notes). The TAN document supports and provides further information and guidance in relation to high buildings, including how to assess whether a building is a 'high building', what the impact of that height might be and the areas of Oxford where proposals for new high buildings are more likely to be appropriate.
- The area within a 1,200 metre radius of Carfax tower (defined on the Policies Map as the Historic Core Area) contains all the buildings that comprise the historic skyline and where new buildings have high potential to impact on the character of the skyline.
- The View Cones Assessment (2015) (Oxford View Cones) should also be referred to. It sets out a methodology for heritage impact assessment of proposals that could affect the significance of one or more heritage assets and applies this to each of the 10 view cones which are shown drawn as triangles from important viewing points on the Policies Map. Within view cones, proposed new buildings must not detract from the skyline and composition, and even where they will not intrude directly on to it their effect as a frame to it must be considered. Tall buildings that are proposed outside of the view cones might still have an impact on the historic skyline and the View Cones Assessment has guidance that will support assessing impacts of these too.

- To create more visual diversity which enhances the experience of the skyline, the articulation of roofscape, and relatively short units of building are encouraged, with features to create a break in the line incorporated. A maximum ridge or parapet length of 25 metres without either a substantial vertical or horizontal break or interrupting features is a rule-of-thumb guideline that will be followed for Oxford's skyline.
- The City Council will resist the loss of any features, such as chimneys, if the loss would result in a simplification of the skyline.

DRAFT POLICY HD6: VIEWS AND BUILDING HEIGHTS

Planning permission will only be granted for development that will retain or enhance the special significance of views of the historic skyline of the Historic Core Area.

Planning permission will be granted for developments of appropriate height or massing. If the proposal is for development above the prevailing heights of the area and could impact on character or views, the application must demonstrate how all of the following criteria have been met:

a) Design choices regarding height and massing have a clear design rationale; and
b) The guidance on design of higher buildings set out in the High Buildings Study TAN has been applied. In particular, the impacts in terms of the four visual tests of obstruction, impact on the skyline, competition and change of character should be explained; and
c) Proposals have been designed to have a positive impact on important views including both into the historic skyline and out towards Oxford's green setting, through their massing, orientation, the relation of the building to the street, and detailed design features including roofline and materials (including colour); and
d) Taller buildings have been designed and orientated to avoid potential negative impacts, including on neighbouring amenity, such as overshadowing, overbearing and overlooking, reduced internal daylight and sunlight and wind-tunnel effects.

The area within a 1,200 metre radius of Carfax tower (the Historic Core Area) contains all the buildings that comprise the historic skyline, so new developments that exceed 18.2m (60ft) in height or ordnance datum (height above sea level) 79.3m (260ft) (whichever is the lower) are likely to intrude into the skyline. Development above this height must be limited in bulk and must be of the highest design quality.

Applications for any building that exceeds 15 metres (or the height that the High Buildings TAN says may be impactful in that area if that is higher) will be required to provide extensive information so that the full impacts of any proposals can be understood and assessed, including:

e) A Visual Impact Assessment, which includes the use of photos and verified views produced and used in a technically appropriate way, which are appropriate in size and resolution to match the perspective and detail as far as possible to that seen in the field, representing the landscape and proposed development as accurately as possible (produced in accordance with the Landscape Institute's GLVIA 3d Edition and Technical Guidance note TGN 06 19 or updated equivalents); and
f) Use of VuCity 3D modelling (or equivalent if updated by the City Council in future), shared with the City Council so that the impact of the development can be

understood from different locations, including any view cone views that are affected; and

g) A heritage impact assessment if the proposal would harm the significance of a designated heritage asset including through development in its setting (or a group of assets and their settings) informed by the methodology outlined in the Assessment of the Oxford View Cones report, a full explanation of other options that have been considered that may be less harmful, how that harm has been avoided or minimised, a justification that the benefits outweigh the harm and open book viability assessment if relied upon in the explanation.

Any proposals within the Historic Core Area or the View Cones that may impact on the foreground of views and roofscape (including proposals where they are below the Carfax datum point, for example plant) should be designed carefully, and should meet the following criteria:

h) They are based on a clear understanding of characteristic positive aspects of roofscape in the area; and

i) They contribute positively to the roofscape, to enhance any significant long views the development may be part of and also the experience at street level.

Planning permission will not be granted for development proposed within a View Cone or the setting of a View Cone if it would harm the special significance of the view. The View Cones and the Historic Core Area (1,200m radius of Carfax tower) are defined on the Policies Map.

HEALTH IMPACT ASSESSMENT

Policy context

- The built and natural environment is a key determinant of our health and wellbeing, and therefore it is crucial that through the planning system we plan for and design healthier built environments. This will encourage and support good physical and mental health and also help to reduce health inequalities.
- Health Impact Assessments (HIAs) help ensure that development proposed in Oxford promotes and contributes to healthy place shaping.
- Proposals should consider health outcomes from the outset.

Policy implementation

- Those proposing major development are expected to undertake and submit a HIA in support of their application. The scope of assessment for the HIA, including the issues it needs to cover, will vary with the nature of the development; however the structure of the assessment will need to follow a logical format that addresses the key steps outlined in the policy. These steps are important in enabling the HIA to be as targeted as possible and appropriately

scoped to provide the most benefit in terms of the key issues of relevance to the development.

- The analysis presented within the HIA should be of a sufficient level of detail to allow the Council to make a clear determination as to impacts the development will have on the health environment of the city. The analysis should be evidence based and set out how design of the development has taken into consideration the relevant health concerns and how it addresses these including where opportunities have been taken to achieve positive impacts and to avoid or mitigate negative impacts that could exacerbate issues and inequalities.
- Supporting information for how to undertake a HIA including helpful resources can be found in Appendix 6.2 and within the Council's Health Impact Assessment Technical Advice Note.

DRAFT POLICY HD7: HEALTH IMPACT ASSESSMENT

A Health Impact Assessment (HIA) is required to be submitted as part of the planning application for major development proposals.

The analysis within the submitted HIA should be of a sufficient level of detail to allow the Council to assess the potential impacts of the development on the health environment of the city and its residents. As a minimum, the assessment should include the following:

a) A description of the physical characteristics of the proposed development site and surrounding area, including the current use; and
b) Identification of relevant population groups that could be affected by the development and associated health issues, inequalities and priorities in the area, which should be supported with appropriate evidence/data; and
c) An assessment of the impacts of the proposal on the identified population groups and local health issues, inequalities and priorities, including any potential positive and negative impacts, along with any mitigation measures incorporated into the design to reduce identified negative outcomes; and
d) Details of monitoring which will be undertaken in relation to the proposed mitigation to be implemented.

The level of detail should be proportionate to the development and agreed with the relevant case officer. Applicants should refer to the additional information and guidance contained in Appendix 6.2 and the Council's Technical Advice Note.

PRIVACY, DAYLIGHT AND SUNLIGHT

Policy context

- Ensuring all homes are built with adequate privacy, daylight and sunlight (internal and external) helps to ensure the wellbeing of residents.
- It is also important to consider the impacts on neighbouring residential properties to ensure they do not lose their sense of privacy.

- Homes that do not provide a good quality living environment will not be long-lasting, which is not a sustainable approach.
- This policy is particularly important in the context of Oxford, where high density development is expected in some areas of the city to make efficient use of land.

Policy implementation

- The policy approach will ensure that new development provides adequate daylight and privacy for existing and new residents
- Potential for unacceptable overlooking will depend on the proximity of windows to neighbours' habitable rooms and gardens and the angles of views and gardens.
- New homes' access to daylight and sunlight will depend on both the way new and existing buildings relate to one another, and the orientation of windows in relation to the path of the sun.
- Windows that are overshadowed by buildings, walls, trees, or hedges, or that are north facing, will receive less light.

POLICY HD8: PRIVACY, DAYLIGHT AND SUNLIGHT

Planning permission will only be granted for new development that provides reasonable privacy, daylight and sunlight for occupants of both existing and new homes and sensitive workplaces such as schools. Proposals should demonstrate consideration of all of the following criteria:

a) Whether the degree of overlooking to and from neighbouring properties or gardens resulting from a proposed development significantly compromises the privacy of either existing or new homes (or existing other uses where there might be a safeguarding concern, particularly schools); and
b) The size and orientation of windows in both existing and new developments in respect of access to daylight, sunlight, and solar gain (i.e. natural heating from direct sunlight); and
c) Room depths in relation to maximising natural light; and
d) Existing and proposed walls, hedge, trees, and fences, in respects of protecting or creating privacy and also in respect of their impact on overshadowing of both existing and new development.

To assess access to privacy, sunlight, and daylight in residential developments, the 25 degree and 45-degree guidelines will be used as illustrated in Appendix 6.3, alongside other material factors. On constrained sites with proposals for specialist accommodation, developers may use other methods to demonstrate that dwellings will receive adequate daylight.

Planning permission will not be granted for any development that has an overbearing effect on existing homes.

INTERNAL SPACE STANDARDS FOR RESIDENTIAL DEVELOPMENT

Policy context

- It is important to ensure that all new homes are of an adequate size and layout to provide high quality, functional homes that meet the needs of a wide range of people and can adapt to how those needs may change over time.
- Requiring space standards is particularly important in Oxford because the pressure to deliver more homes can lead to increased pressure to deliver smaller homes, which do not offer occupiers acceptable living standards or meet the national aim that everyone should have access to a decent home.
- Government policy is clear that either the national space standards can be applied, if justified, or no standards can be applied.
- The City Council has carefully considered the local need for space standards and the viability impact of taking such an approach and has decided to adopt the nationally described standards.

Policy implementation

- All new dwellings (C3) should be built to meet the nationally described space standards.
- Designs should maximise the useable space within housing through functional layout and provide scope to adapt and modify housing to meet future requirements.
- In addition, minimum bedroom sizes for HMO are governed by the Licensing of Houses in Multiple Occupation (mandatory Conditions of Licences) (England) Regulations 2018.

POLICY HD9: INTERNAL SPACE STANDARDS FOR RESIDENTIAL DEVELOPMENT

Planning permission will only be granted for new dwellings that provide good quality living accommodation for the intended use. All proposals for new build market and affordable homes (across all tenures) must comply with the Nationally Described Space Standards.

In flatted schemes, communal areas must be designed to enable neighbours to meet and interact, for example some fixed seating, and wider areas of corridor or lobby space.

OUTDOOR AMENITY SPACE

Policy context

- The adequate provision of outdoor amenity space is a key factor in supporting the physical and mental health and wellbeing of residents. It provides a space to dry clothes, play, grow

plants and vegetables, and can provide shade and limit urban heat-island effects. In addition, if the space is designed with permeable surfaces it can contribute towards flood risk management.

- Where high density development and subdivision of properties are expected, and where many sites are infill development, high standards for the delivery of good quality outdoor amenity space becomes increasingly important to ensure the health and wellbeing of residents.

Policy implementation

- The policy is flexible in how outdoor amenity space is to be delivered, allowing communal/shared outdoor amenity spaces.
- In all cases, including where there is shared/communal outdoor space, the outdoor amenity space must not be public open space.
- Flats of 3 or more bedrooms and all houses must have an element of private (to that property) outdoor amenity space, which is 1.5m deep by 3m long and which allows for outdoor dining and clothes drying.
- A garden of adequate size and proportions for a house will have space for children to play in, and for family activities. It is important that both public and private amenity and garden spaces are well designed, to ensure that it is clear how each of the spaces are used without the need for extensive signage, avoiding narrow pathways to link spaces, optimising sunlight, and ensuring principles of good landscape design are incorporated.

POLICY HD10: OUTDOOR AMENITY SPACE

Planning permission will only be granted for dwellings (HMO and Use Class C3 except self-contained student accommodation) and the subdivision of dwellings, that have direct, well-related and convenient access to an area of private or communal (but not public) outdoor amenity space (in addition to bin or bike storage space), to meet the following specifications:

a) 1- or 2-bedroom flats and maisonettes should provide either a private balcony or terrace of usable, level space, or have direct and convenient access to a private or shared outdoor space.
b) Flats and maisonettes of 3 or more bedrooms must provide private outdoor areas with space for outside dining and/or clothes drying, with a minimum dimension of 1.5 metres depth by 3 metres length. This may be either a private balcony or terrace of useable level space, or direct and convenient access to a private garden or shared garden with some private space (which should not feel isolated).
c) All houses should provide a private garden, of adequate size and proportions for the size of house proposed, which will be at least equivalent in size to the footprint of the dwelling as built originally. For developments including more than one house, where a directly accessible private outside area is provided, the remaining requirement for outdoor amenity space could be met by provision of shared outdoor space that can be directly and conveniently accessed. The private outdoor areas should allow space for outside dining and/or clothes drying, with reasonable circulation, which will require a minimum dimension of 1.5 metres deep by 3 metres long.

It should also be shown how the following factors have been considered in order to ensure an outdoor space that is adequate and attractive to use:

d) The location and context of the development, in relation to the layout of existing residential plots, and proximity to public open space; and
e) The orientation of the outdoor area in relation to buildings and the path of the sun so that the whole outdoor space will not be continuously in shade or over-exposed; and
f) The degree to which enclosure and overlooking impact on the proposed new dwellings and any neighbouring dwellings; and
g) The overall shape, access to and usability of the whole space to be provided; and
h) Clear delineation between public and private space; and
i) For communal spaces that there is a variety of space, including provision of space to sit and to play, and that space is adaptable to the changing needs of residents, being easy to maintain with resilient materials, but with opportunities for communal gardening or food growing.

ACCESSIBLE AND ADAPTABLE HOMES

Policy context

- Housing provision across the city should meet the needs of everyone, which means provision must be made for those with disabilities by considering the requirements people will have from their homes and how this may change over time.
- Adaptability is important to respond to changes to the size and compositions of households, and an ageing population. Adaptable homes can help older people and those with chronic health conditions and other specialist housing needs remain in their homes, maintaining their independence and helping to alleviate pressure on health and social care.
- The Census 2021 showed 5.3% of the population of Oxford are 75 or over. This is lower than the national average and the trend of Oxford having a markedly young population compared to the national average is expected to continue, but the older population will also continue to grow as people are living longer.
- The Census 2021 also shows that 29% of households in Oxford have one or more people with a disability. The Government has found that 34% of disabled people have had to make adaptations to their homes https://www.gov.uk/government/publications/uk-disability-survey-research-report-june-2021/uk-disability-survey-research-report-june-2021;
- Local authorities can adopt a policy to provide enhanced accessibility or adaptability through requirement M4(2). Accessible and adaptable dwellings and/or M4(3) Wheelchair user dwellings in ‘Approved Document M: access to and use of buildings)

Policy implementation

- Considering that the number of people with a disability is likely to grow, especially with an aging population, the policy requires at least 15% of general market homes to be adaptable according to current needs.

- To ensure available provision for the full range of households on the housing register, and to avoid exclusion, for affordable homes all new homes should at least meet the M4(2) requirement to be accessible and adaptable.

POLICY HD11: ACCESSIBLE AND ADAPTABLE HOMES

Proposals for residential development should ensure that all affordable dwellings and 15% of general market dwellings on sites of 10 or more dwellings are constructed to the Category 2 standard as set out in the Building Regulations Approved Document M4.

5% of all dwellings for which the City Council is responsible for allocations or nominations, on sites of more than 20 dwellings, should be provided to Category 3 (wheelchair user) standards as set out in the Building Regulations Approved Document M4. These M4(3) dwellings should be able to be adapted to the needs of the household who will be occupying them, ahead of their occupation.

An exception will be made for flatted schemes that are of three storeys or fewer and/or that are smaller than 50 units, whereby planning permission will be granted when no dwellings meet the requirements of Building Regulations Approved Document M4, if the following conditions are met:

a) It can be demonstrated that there are strong design reasons for providing blocks of flats with a small number of storeys, and it is not purely to circumvent the requirement; and
b) It can be demonstrated that options to provide affordable units in an alternative way that enables level access have been explored, including where possible providing the dwellings required to meet M4 standards on the ground floor.

BIN AND BIKE STORES AND EXTERNAL SERVICING FEATURES

Policy context

- Cycling is popular with Oxford residents and should be encouraged on new developments by incorporating well-designed, secure and easy to use bike storage facilities as part of the move away from cars.

- It is essential that new development optimises the opportunities for residents to recycle as much waste as possible by providing adequate, well-sited bin storage. Bin stores need to be accessible for collection and designed so as not to detract from the appearance and amenity of the area. Servicing features such as meter cupboards, pipes and gutters, flues, vents, and aerials can create a cluttered appearance and detract from the design of the development. This impact can be lessened when they are designed as an integrated element of architecture. They can be used to add detail and rhythm to a facade.

- As the city moves towards becoming net zero there will need to be infrastructure to support this including EV (Electric Vehicle) chargers, air source heat pumps, solar panels etc. These need to be carefully sited and designed within new developments.

Policy implementation

- Attention must be given to the incorporation of these storage and servicing features at the initial stages of the design process to ensure they are well sited and designed.
- Bicycle parking Standards are included in Appendix 7.4 and further advice and guidance is available in Technical Advice Note 12 – Car and Bicycle Parking.
- Guidance on the numbers and sizes of bins that are required for different types of development and design and placement of stores is set out in the Technical Advice Note 3 on Waste Storage.

POLICY HD12: BIN AND BIKE STORES AND EXTERNAL SERVICING FEATURES

Bin and bike stores should be provided in new development and these and external servicing features should be considered from the start of the design process. For new schemes, planning permission will be granted where it can be demonstrated that:

a) Bin and bike storage is provided in a way that does not detract from the overall design of the scheme or the surrounding area, whilst meeting practical needs including the provision of electric charging points for e-bikes where applicable; and
b) External servicing features have been designed as an integrated part of the overall design, or are positioned to minimise their visual impact; and
c) Materials used for detailed elements such as for stores or rainwater goods are of high quality so they enhance the overall design and will not degrade in a way that detracts from the overall design.

Planning permission will be granted for new external features such as bin and bike stores relating to existing developments unless they would cause significant harm to amenity through poor design and siting.

CHAPTER SEVEN

A LIVEABLE CITY WITH STRONG COMMUNITIES AND OPPORTUNITIES FOR ALL

Oxford is a very liveable and accessible city, with most people having easy access to a range of services to meet their daily needs. Most of the city has local services and facilities within a 15-20 minute walk, with other services and facilities accessible by the excellent public transport network. Maintaining and aiming to improve this is vital.

Policies can be used to help achieve, support and sustain liveable cities, including by protecting certain facilities, maintaining the vibrancy of our centres, managing parking and requiring transport assessments and travel plans when new developments are proposed and implemented. This ensures traffic is managed well and that walking, wheeling, cycling and public transport are prioritised, consistent with Oxfordshire County Council's adopted Central Oxfordshire Travel Plan and the transport user hierarchy policy it promotes.

TOWN CENTRES AND TOWN CENTRE USES

Uses that attract lots of people and need to be located in accessible locations are defined as town centre uses in the NPPF. Their co-location within town centres (the city centre, district centres and Local Centres as defined in Policy C1) helps reduce people's need to travel and helps ensure attractive and vibrant centres.

CITY, DISTRICT AND LOCAL CENTRES

Policy Context

- ☐ The city and district centres are highly accessible mobility hubs that include a broad range of facilities including shops, hospitality, community and leisure facilities.
- ☐ Local centres are smaller-scale, but still have an importance beyond the immediate neighbourhood, are well connected and suitable for a range of uses.
- ☐ Small parades of shops with a purely local function do not meet the definition of local centres set out in the NPPF, so are not defined in this category, even though they are very important for local communities.

- ☐ The NPPF says that an impact assessment should be required for retail and leisure developments outside of town centres and the threshold may be set locally.
- ☐ Establishments that promote community cohesion, health and wellbeing are particularly welcomed in the city centre, local and district centres.
- ☐ The availability of hot-food takeaways can encourage unhealthy eating habits that are harmful to health, so limiting new hot-food takeaways can be beneficial, although these uses can also be popular and help to support local centres.

Policy Implementation

- ☐ Policy C1 sets out the hierarchy of centres.
- ☐ Town centre uses should be directed to the city centre, district centres and local centres, then edge of centre locations, and only outside of these where no alternatives are available and the site is suitable. The need to use an out-of-centre location must be justified, and the criteria of the policy worked through to demonstrate the proposed location is suitable.
- ☐ All defined centres (the city centre, district centres and the local centres) are Town Centres according to the NPPF, and town centre uses are therefore suitable in all these defined centres. Town centre uses are defined in the Glossary (and in the NPPF) and they are not restricted to any particular Use Class.

POLICY C1: CITY, DISTRICT AND LOCAL CENTRES

The city centre and district centres defined on the Policies Map are:

- City centre;
- Cowley centre;
- Cowley Road;
- Summertown; and
- Headington.

Local Centres defined on the Policies Map are:

- St Clement's;
- Walton Street and Little Clarendon Street;
- High Street east;
- Rose Hill;
- North Parade Avenue;
- Magdalen Road
- New Marston;
- Underhill Circus;
- Blackbird Leys; and
- Greater Leys.

In the city, district centres and local centres, new Use Class E and other main town centre uses will be permitted where compatible with other policies in the plan, which include:

- ☐ Retail, cafes and restaurants;
- ☐ Leisure and entertainment and indoor sports uses (e.g. gyms, leisure centres);
- ☐ Health centres, GPs and clinics;
- ☐ Offices, research and development and light industrial;
- ☐ Community facilities;
- ☐ Residential (where compliant with the active frontages policy, including student accommodation in the city centre and district centres, but not in the local centres);
- ☐ Visitor attractions (Sui Generis uses including pubs, cinemas, live music venues, concert halls, dance halls);
- ☐ Short stay accommodation (in accordance with Policy E5 and where compliant with the active frontages policy C2).

Proposals for new hot food take-aways (Sui Generis Use Class) will not be permitted outside of the city, district or local centres.

A sequential approach should be taken for locating new town centre uses. Applicants must demonstrate how the sequential approach has been applied if town centre uses are proposed outside the city centre, district and local centres, looking at edge of centre areas first then accessible locations well connected to the town centre.

Where the applicant demonstrates an out-of-centre location is justified as no alternative sites are available and where this is not contrary to other policies of the Plan, planning permission will only be granted where all the following criteria are met:

a) It has good accessibility by walking, cycling and public transport; and
b) Impacts on the road network can be mitigated (which is likely to include by minimal parking); and
c) That no unacceptable harm or loss of amenity will be caused to adjoining land uses.

Planning permission for retail and leisure proposals of greater than 350m^2 floorspace and outside of a defined centre will only be granted if a retail impact assessment is submitted with proportionate evidence to demonstrate there is no negative impact on the vitality and viability of existing centres, by assessing:

d) The impact of the proposal on existing, committed and planned public and private investment in a centre or centres in the catchment area of the proposals;
e) The impact of the proposal on town centre vitality and viability, including local consumer choice and trade in the town centre and the wider retail catchment.

MAINTAINING VIBRANT CENTRES

Policy context

- ☐ Development should respond to and enhance the individual character of the centres to help maintain their attractiveness and therefore their robustness by encouraging people to want to visit and linger.
- ☐ Ensuring active frontages in a centre is a key tool to achieving vibrancy.

Policy implementation

- ☐ Policy C2 provides design principles for each centre to guide future developments and ensure opportunities are taken to enhance and strengthen them.
- ☐ Sections of streets where an active frontage is to be retained at ground floor level are defined on the Policies Map. Within those frontages a minimum threshold is set for the proportion of Class E (commercial, business and service uses) at ground floor level.
- ☐ All thresholds are set above current levels of Use Class E, so the focus of the policy is retention.
- ☐ Any proposed new use within an active frontage, even when the overall proportion of Use Class E would remain above the threshold, will be expected to show how activity will be maintained.

POLICY C2: MAINTAINING VIBRANT CENTRES

The densification and growth of district centres and the city centre is encouraged. High density development is generally expected in the city centre and district centres as set out in Policy HD8, and this should be low car.

Planning permission will be granted for new development within the district centres and city centre where it takes opportunities to deliver the following, where relevant:

a) Improved permeability and connectivity to existing development and wider transport links;
b) Intensification of development to create a high-density centre, including by more efficient use of land, by consolidating uses and through infill;
c) More residential development, including on the upper floors of existing commercial premises;
d) Enhancement of existing buildings and improvement in their relationship to the street by creating active frontages;
e) Rationalisation of public car parking so it is well-located, limits surface-level parking and is reduced where possible, and makes better use of workplace surface-level car parking;
f) Public realm improvements for cyclists and pedestrians and public transport users and rebalancing of the space within streets from vehicles to pedestrians;
g) Improved pedestrian connections across the main roads through the centres;
h) Enhancement and new opportunities for public realm and landscaping such as tree planting, including incorporation of small green spaces where people can stop, dwell, socialise and play;
i) Better integration of the landscape setting and surrounding green spaces;
j) Enabling of the continued successful operation of any street markets;
k) Improvements to shopfronts and signage;
l) Enhance and better reveal heritage assets and their settings.

Active frontages

Planning permission will be granted at ground floor level of the defined Active Frontages (as set out on the Policies Map) for town centre uses that promote the vitality of the centre, and where the proportion of units at ground floor level does not fall below the threshold percentages of Use Class E set out below. Proposals for any new use within the defined active frontages of the city, district and local centres, even when the overall frontage would remain above the threshold, will be expected to

promote the vitality of the centre. Planning permission will be granted if it can be demonstrated how activity will be maintained by:

m) Attracting footfall; and
n) Creating and retaining an active window display; and
0) Not adversely affecting the amenity, availability of services or appearance of the frontage.

Centre name	Threshold % of Use Class E
Headington District Centre	80%
Summertown District Centre	80%
Cowley Road District Centre	75%
Cowley Centre District Centre	80%
City Centre primary frontage	90%
City Centre secondary frontage	70%

Planning permission will be granted for development of upper storeys of the Active Frontages for housing, student accommodation and other uses appropriate to a town centre, as long as the functioning of the ground floor unit(s) in the active frontage is not undermined.

Local Centres

Planning permission will only be granted at ground floor level within the Local Centre Active Frontages for main town centre uses that promote the vitality of the centre and where the proportion of units in the Local Centre at ground floor level in Use Class E does not fall below 50% of the total number of units.

Planning permission will be granted for development of upper storeys of units in the Local Centres for housing and other uses appropriate to the location, as long as the functioning of the ground floor unit(s) in the active frontage is not undermined.

The City Centre, District Centres, Local centres and Primary and Secondary Active Frontages and Local Centre Active Frontages are all defined on the Policies Map.

COMMUNITY, INSTITUTIONAL, SOCIAL AND CULTURAL FACILITIES AND ATTRACTIONS

It is important that our communities are supported by provision of health and community facilities, meeting places, nightlife, cultural and education venues. Access to such facilities greatly improves the quality of life for residents, builds strong communities and helps to address inequalities.

In seeking social inclusion and a high quality of life, a diverse range of facilities should be accessible that meet social, economic, health, leisure, cultural and religious needs of Oxford's diverse communities. Facilities important to local communities may include community centres, schools, children's centres, meeting venues for the public or voluntary organisations, public halls, places of worship, leisure and indoor sports centres, pavilions, stadiums, public houses, club premises or arts buildings.

Sometimes co-locating multiple facilities on a single site can be an efficient way to improve accessibility and support the principles of a liveable city.

PROTECTION, ALTERATION AND PROVISION OF NEW LOCAL COMMUNITY FACILITIES

Policy Context

- ☐ Sometimes existing facilities may not be fit-for-purpose, or they may provide poor accessibility, in which case improvements on site or nearby may be more sustainable.
- ☐ Some local community facilities may have scope to provide some affordable workspace in accordance with Policy E3 to support small startup businesses whose location complements these local community uses.

Policy Implementation

- ☐ Local community facilities fall into Use Class F.2 of the Use Classes Order. This includes a hall or meeting place mainly for the local community, indoor and outdoor pools and skating rinks, and the policy applies to these.
- ☐ Policy C3 does not apply to places for outdoor sport and recreation (which are within the Use Class F.2), because these are dealt with in Policy G1.
- ☐ Shops of no more than 280m2 in size and 1km from a similar facility are classed as having a local community use within Use Class F.2. All other shops are use Class E and can change freely to any commercial use. To protect these local community shops their expansion to a size where they would fall out of use Class F.2 is not permitted.

POLICY C3: PROTECTION, ALTERATION AND PROVISION OF LOCAL COMMUNITY FACILITIES

Planning permission will be granted for new local community facilities and the improvement and expansion of existing facilities where the City Council is satisfied that the following criteria are met:

a) The location is easily accessible by walking, cycling and public transport; and
b) The proposal will not result in an unacceptable environmental impact or loss of amenity.

Opportunities will be taken to secure community use and joint user agreements.

Planning permission will not be granted for development that results in the loss of such facilities unless:

c) Suitable replacement can be provided on-site, or at a location equally or more accessible by walking, cycling and public transport; or
d) There are facilities nearby and within the neighbourhood that can be enhanced to ensure none of the local community function and accessibility is lost; or
e) The proposal is for an alternative community facility for which there is greater need or demand.

Planning permission will not be granted for the expansion of shops that meet the definition of a local shop within Use Class F.2 (not more than 280m2 and where there is no other such facility within 1,000m2) if they would become large enough to be classed as Use Class E rather than F.2.

PROTECTION ALTERATION AND PROVISION OF LEARNING AND NON-RESIDENTIAL INSTITUTIONS (INCLUDING SCHOOLS, LIBRARIES AND PLACES OF WORSHIP)

Policy Context

- Schools, libraries and places of worship all play an important role in servicing the needs of Oxford's communities. The City Council has worked closely with partners including the County Council as the Local Education Authority to plan the educational needs of the city and it will continue to work in partnership to ensure that new development is provided with access to school places, and that existing access is enhanced and improved when opportunities arise.

☐ Learning and non-residential institutions (schools, libraries and places of worship) all fall under Use Class F.1: learning and non-residential institutions.

☐ These facilities can attract large number of people, sometimes from quite a wide area, so it is important that new facilities are in accessible locations that minimise any potential traffic impacts and that there is no loss of amenity to existing surrounding uses.

Policy Implementation

☐ These facilities are protected, unless the criteria in the policy are met.

☐ Criteria are included for consideration of proposed new uses to ensure they are suitably located and potential harmful impacts are mitigated.

☐ The policy does not apply to proposals for educational establishments for students exclusively of 18 years and over, such as the universities (although joint user agreements will still be sought where possible).

☐ Where possible joint user/shared user agreements are expected.

POLICY C4: PROTECTION, ALTERATION AND PROVISION OF LEARNING AND NON-RESIDENTIAL INSTITUTIONS*

Planning permission will be granted for new learning and non-residential institutions (use Class F.1) where the following criteria are met:

a) The development will be accessible to those who will use it by walking, cycling and public transport and will not create unacceptable traffic impacts; and

b) The proposal will meet local needs or an existing deficiency in provision or access, or the proposal will support regeneration or new development; and
c) The proposal will not result in an unacceptable environmental or local amenity impact; and
d) Where possible, joint user and shared user agreements are made.

Planning permission will be granted for the redevelopment of learning and non-residential institutions (Use Class F.1) where it can be demonstrated that:

e) If there are any new uses to be introduced, these will not conflict with the existing use and any loss of floorspace of the existing use will not result in it not being able to function and meet needs; and
f) The development will be accessible to those who will use it by walking, cycling and public transport and will not create unacceptable traffic impacts; and
g) The proposal will not result in an unacceptable environmental or local amenity impact; and
h) Where possible, joint user and shared user agreements are made.

Planning permission will not be granted for development that results in the loss of learning and non-residential institutions (Use Class F.1) from a site unless it can be demonstrated that:

i) There is no longer a need or foreseeable need, or there is overriding demand for an alternative use on the site that is of benefit to the local community; or
j) Suitable replacement provision can be provided on-site, or within an alternative suitable location that would continue to be easily accessible to its users by walking, cycling or public transport; or
k) It can be demonstrated that the use can no longer feasibly be provided in its location.

* This does not apply to academic institutions exclusively for 18+ students such as the University of Oxford and Oxford Brookes University.

PROTECTION, ALTERATION AND PROVISION OF SOCIAL AND CULTURAL VENUES, PUBS AND VISITOR ATTRACTIONS

Policy Context

- Social, cultural and visitor attractions often add a unique vibrancy to the city and can be important to local communities in a number of ways, for example they may contribute to the evening economy, bring social and leisure benefits, provide a meeting place and provide locations for events and for showcasing the work of different artists.
- Although these venues attract visitors from beyond the city, including tourists, events and activities held at these places are also the cultural lifeblood of the city for many people and as such should be celebrated and protected.
- These venues include theatres, cinemas, pubs, museums and music venues.

Policy Implementation

- Most of these venues such as theatres, nightclubs, pubs, casinos and concert halls, which are Sui Generis uses, which means they are not within a use class so their use cannot switch to or from them without planning permission and proposals can all be considered on their own merits.
- The policy allows for changes to alternative types of venue or attraction in cases where similar needs are provided for.
- The criteria in the policy provide a framework to determine applications against.

POLICY C5: PROTECTION, ALTERATION AND PROVISION OF CULTURAL AND SOCIAL VENUES, PUBS AND VISITOR ATTRACTIONS

Planning permission will be granted for new cultural and social venues, pubs and visitor attractions that add to the cultural and social scene of the city, provided that:

a) The use is located in compliance with the sequential test in Policy C1 and is appropriate to the scale and function of the centre; and

b) They are realistically and easily accessible by walking, cycling or public transport for most people travelling to the site; and

c) They will not cause unacceptable traffic harm or adversely affect residential amenity; and

d) There is no negative cumulative impact resulting from the proposed use in relation to the number, capacity and location of other similar uses (existing or committed) in the area; and

e) They are well related to any existing or proposed tourist and leisure related areas.

Applications to increase capacity, improve access and make more intensive cultural/community use of existing sites will be supported. This may include diversification of pubs or similar through the provision of short stay accommodation (which must be in accordance with draft Policy E5) on upper floors where it does not detract from the operating capabilities of the business and where it does not conflict with other policies of the Plan.

The City Council will seek to protect and retain existing cultural and social venues, pubs and visitor attractions. Planning permission will not be granted for the loss of existing cultural and social venues, pubs and visitor attractions, except in the following circumstances:

f) A suitable new or improved cultural venue or visitor attraction (not necessarily of the same type, but meeting similar needs) will be provided on the site or at a location equally or more accessible by walking, cycling and public transport; or:

g) Evidence is provided to support the application which demonstrates all the following criteria have been met:

   i) There has not been wilful neglect that has resulted in the venue being unattractive to market; and

   ii) All reasonable efforts have been made to market the premises for its existing use, or an alternative cultural or visitor attraction use that meets similar needs (according to Appendix 7.1); and

   iii) It is demonstrated that suitable alternative facilities exist to meet the needs of the local community that may be met by the existing facility.

TRANSPORT AND MOVEMENT IN OXFORD TO HELP CREATE A LIVEABLE CITY

A shift towards sustainable travel is promoted by this plan and by Oxfordshire County Council as transport authority. The many advantages of this include improved air quality, reduced congestion and enhanced public realm. Road space within the city is limited, so to achieve this ambition there is a need to prioritise road space and promote sustainable modes of travel. The County Council has introduced various transport measures to support this shift and has intentions to introduce more during the plan period. Measures to manage traffic include traffic filters, temporary congestion charging, expanded zero emission zone and workplace parking levy. Another ongoing challenge is the prevalence of death and serious injury on our roads. An integrated approach is required to reduce death and injury in alignment with Vision Zero, as set out in the Oxfordshire Local Transport and Connectivity Plan 2022-2050.

TRANSPORT ASSESSMENTS, TRAVEL PLANS AND SERVICING AND DELIVERY PLANS

Policy Context

- Alongside the range of measures to reduce the need to travel and to encourage active travel modes, the policies in the Plan also seek to reduce the opportunities for parking across the city. Over time this will help to reduce car use leading to improvements in congestion, air quality and the environment for walking and cycling. In addition, with fewer private car trips on Oxford's roads, public transport services can flow more freely, further enhancing the attractiveness as an alternative to using a private car for journeys in and around the city.
- The movement of goods and materials by road can have a significant impact on the quality of the environment and the health and wellbeing of residents, in terms of noise, congestion and air pollution. These impacts are severe in Oxford and the city centre in particular. However, commercial deliveries will always need to be made to Oxford and this should be done in the most sustainable way to reduce negative impacts.

Policy Implementation

- A Transport Assessment is a comprehensive and systematic process to ensure that transport impacts of all major applications are properly considered, and where appropriate includes measures to help mitigate development impacts. A Transport Statement is a simplified version of a Transport Assessment and is

often used for smaller developments where the traffic impact is limited in both volume and area impact.

- A Travel Plan is a package of measures tailored to the needs of an individual site and focused on reducing dependence upon the private car. TPs should demonstrate how the occupants of the building are actively encouraged to establish use of sustainable modes of transport. TPs, to be effective, need monitoring, managing and where necessary enforcing.
- Specific Delivery and Servicing Management Plans (DSPs) are required to be submitted for proposals that will affect the city centre or district centres and for sites near residential areas.

POLICY C6: TRANSPORT ASSESSMENTS, TRAVEL PLANS AND SERVICE AND DELIVERY PLANS

Planning permission will only be granted for development proposals if the City Council is satisfied that necessary transport-related measures will be put in place.

A Transport Assessment (TA) or Transport Statement (TS) must be submitted so the likely impacts of the development proposal can be assessed, in accordance with the thresholds set out in Appendix 7.2.

Transport Assessments must assess the multi-modal impacts of development proposals and demonstrate the transport measures which would be used to mitigate the development's impact to ensure:

a) There is no unacceptable impact on highway safety;
b) There is no severe residual cumulative impact on the road network;
c) pedestrian and cycle movements are prioritised, both within the scheme and within neighbouring areas;
d) Access to high quality public transport is facilitated, with layouts that maximise the catchment area for bus or other public transport services, and appropriate facilities that encourage public transport use;
e) The needs of people with disabilities and reduced mobility in relation to all modes of transport are addressed;
f) The development helps to create places that are safe, secure and attractive – which minimise the scope for conflicts between pedestrians, cyclists and vehicles, avoid unnecessary street clutter, and respond to local character and design standards as set out in the Oxfordshire County Council Street Design Guide[11];
g) The efficient delivery of goods, and access by service and emergency vehicles is allowed for; and
h) Charging of plug-in and other ultra-low emission vehicles is enabled in safe, accessible and convenient locations with designated bays and priority for car clubs

A Travel Plan, which has clear objectives, targets and a monitoring and review procedure, must be submitted for development that is likely to generate significant amounts of movement in accordance with the thresholds set out in Appendix 7.3. Travel Plans must support outcomes (a) to (h) set out above.

Where a Travel Plan is required under this policy and a substantial amount of the movement is likely to be in the form of delivery, service and dispatch vehicles, a Delivery and Service Management Plan will be required.

Where a Delivery and Service Management Plan is provided this should set out how deliveries will be managed and demonstrate how impacts will be minimised including congestion, safety, noise and how zero or ultra-low emission and last mile opportunities will be considered.

A Construction Management Plan (CMP) must be submitted for development that is likely to generate significant amounts of movement during construction. This CMP must incorporate the CLOCS (Construction, Logistics and Community Safety) standards where applicable.

CYCLE AND POWERED TWO WHEELERS PARKING

Policy Context

- Increasing the uptake of cycling further will be an important tool in helping Oxford to achieve its ambitions of improving air quality, reducing congestion, enhancing the public realm and encouraging healthy lifestyles.
- Oxfordshire County Council's Parking Standards for New Developments sets out the parking standards for bicycles and powered two wheelers; these parking standards reflect the need for bicycle storage as shown by research evidence.
- As well as parking facilities, changing rooms, showers and locker facilities in places of work can be important in enabling people to cycle.

Policy Implementation

- The policy links to Oxfordshire County Council's Parking Standards for New Developments
- The criteria in the policy set out where a lower level of parking for student accommodation may be acceptable
- Considerations for the provision of cycle parking are included in the policy to ensure it is well located and designed to encourage cycling

POLICY C7: CYCLE AND POWERED TWO WHEELERS PARKING DESIGN STANDARDS

Planning permission will only be granted for residential developments* that comply with or exceed the minimum cycle and powered two-wheeler parking requirements as set out in Appendix 7.4.

Planning permission will only be granted for non-residential developments that comply with or exceed the minimum cycle and powered two-wheeler parking requirements as set out in

Oxfordshire County Council's Parking Standards for New Developments (as shown in Appendix 7.4).

Provision of cycle parking lower than the minimum standards may be acceptable for new student accommodation if it is:
a) Located close to the institution where most of its occupants will be studying; and/or
b) Where it is adequately demonstrated through a transport assessment that there is existing unused bicycle parking capacity available, in appropriate locations and of an appropriate design standard on site, to accommodate the increased number of bedrooms.

Cycle parking should be well designed and well-located, convenient, secure, covered (where possible enclosed) and provide level, unobstructed external access to the street. Cycle parking design should comply with LTN 1/20 'Cycle Infrastructure Design' section 11.4 'Cycle parking types and dimensions.'

Cycle parking should be designed to accommodate an appropriate amount of parking for the needs of disabled people, children's bicycles, bicycle trailers and cargo bicycles, as well as facilities for electric charging infrastructure to charge batteries for E bikes.

Changing room, showers and lockers should be provided at commercial/non-residential new development in accordance with the standards set out in Appendix 7.5.

* For the purposes of this policy, residential development includes C3 dwellings, C4 and Sui Generis, HMO, and all C2 development (residential institutions).

MOTOR VEHICLE PARKING DESIGN STANDARDS

Policy Context

- Parking is one of the key means the Local Plan has of helping to promote the shift towards sustainable travel, and to minimise the impacts of car travel. Minimising opportunities for parking will over time help to reduce car use, leading to improvements in congestion, air quality and the environment for walking and cycling.
- Oxfordshire County Council's Parking Standards for New Developments considers parking levels in new developments, and this aligns with the Local Plan.
- Much of Oxford is covered by Controlled Parking Zones (CPZs) and the aspiration of both the city and the county councils is that the whole of Oxford is covered by a CPZ by the end of the Plan period.
- Low-car developments are generally highly feasible in Oxford due to its compact size, availability of facilities and excellent public transport, and the existence of CPZs.

- Infrastructure for the charging of electric vehicles is addressed by Part S of the Building Regulations. This covers both residential and non-residential developments with specific levels of requirements set out for each use.
- The Oxfordshire Electric Vehicle Infrastructure Strategy sets out the policies and plans to realise the County, City and District Councils vision for EV charging in Oxfordshire.

Policy Implementation

- For residential development, parking should either be low car, which is pooled (not allocated bays) parking only for disabled, servicing vehicles and pooled cars and working drivers, or it should not exceed the still low maximum parking standards.
- The criteria in the policy set out when low car residential development is expected.
- For all non-residential development, the starting point is to have no additional parking. Additional parking will only be accepted if it can be demonstrated through the transport assessment that the level of provision is necessary to support the development, and if the travel plan demonstrates how the objectives of this plan to promote a shift to sustainable transport are met.
- The design and location of any EV charging infrastructure should consider and avoid negatively impacting on street scene in line with the principles of high quality design and the supporting design checklist.
- The policy links with Policy HD15 Bin and Bike Stores and External Services Features and also with the design checklist (Appendix 1.1)

POLICY C8: MOTOR VEHICLE PARKING DESIGN STANDARDS

Residential developments
Where the following circumstances apply, planning permission will only be granted for residential developments* that are low car:

a) In Controlled Parking Zones (CPZs) (or on greenfield sites immediately adjacent to them); and
b) Where the site is located within a 400m walk to frequent (at least 2 an hour) public transport services; and
c) Within 800m walk to a local supermarket or equivalent facility with a minimum floor area of 130m^2 of retail space which sells essential items such as milk, bread, pasta and fruit and vegetables

(measurements taken from the midpoint of the proposed development)

In these low car residential developments, no car parking spaces allocated to a particular housing unit are to be provided, but only a shared spaces for blue badge holders, for pooled

cars/car club cars, for servicing and delivery vehicles and for working drivers, for example NHS community staff. The numbers of blue badge holder spaces and servicing spaces, pooled car/car club spaces required in all residential developments is set out in Appendix 7.6

In all other locations, planning permission will only be granted where the relevant maximum standards as set out in Appendix 7.6 are not exceeded.

On large residential schemes of 100+ units, car club or pooled cars should be made available according to the standards set out in Appendix 7.6.

Parking spaces should be located to minimise the circulation of vehicles around the site and so that they are well integrated into the landscaping scheme.

Non-residential developments
In the case of all non-residential developments, the starting point is for no additional parking except for blue badge and servicing only. The Council will seek a reduction for highly accessible sites.

Any additional parking provision above existing levels should be kept to the minimum necessary to ensure the successful functioning of the development, with the need being demonstrated through the submitted Transport Assessment (TA), which should justify proposed parking levels based on the development in the context of the whole site. In addition, a Transport Plan (TP) must take into account the objectives of this Plan to promote and achieve a shift towards sustainable modes of travel, and should set out measures introduced to maximise use of sustainable transport modes, and should demonstrate that there will not be unacceptable impacts on the transport network. The TP will be required to be reviewed to ensure that future opportunities to encourage a shift towards public transport and active travel are taken. The requirements for a TP are set out in Appendix 7.3 of the Plan.

Parking spaces should be located to minimise the circulation of vehicles around the site and so that they are well integrated into the landscaping scheme.

*For the purposes of this policy, residential development includes C3 dwellings, C4 and Sui Generis, HMO, and all C2 development (residential institutions).

Electric Vehicle Charging (residential and non-residential)

EV charging infrastructure should be provided in accordance with Part S of the Building Regulations 2010 or any subsequent update to this.

All new blue badge parking bays and all car club parking bays must provide access to live electric vehicle charging infrastructure that is ready for use.

The location of charging points in development proposals should allow for easy and convenient access to the charge point from the relevant parking space and avoid negative impacts.

Both the charging point and electric infrastructure and cabling should be designed and located so that it can be maintained as required. It should be live and ready for use.

When off plot parking is proposed within a new residential development it should incorporate electric vehicle charging infrastructure to enable the charging of electric vehicles on the street in

accordance with the Oxfordshire County Council Street Design Guide, or any subsequent update to this.

CHAPTER EIGHT INFRASTRUCTURE AND NEW DEVELOPMENT

INTRODUCTION

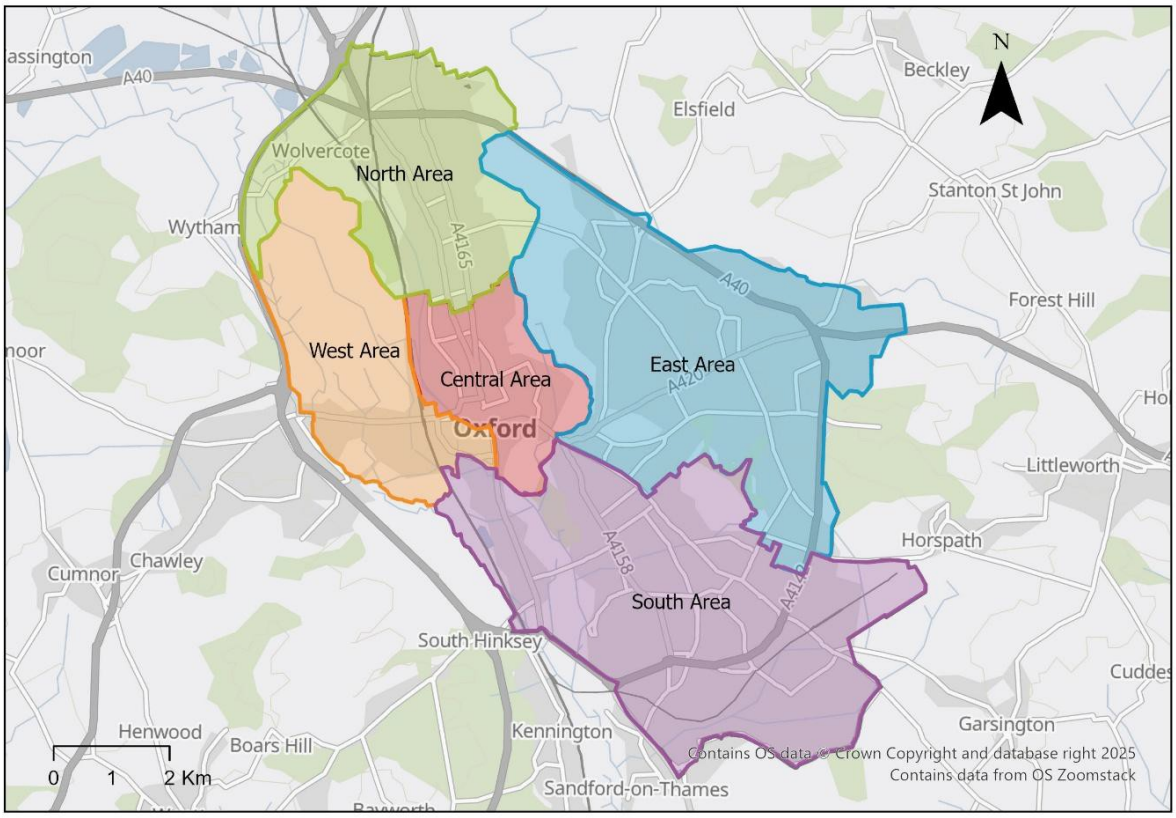
A development site allocation is a planning policy that describes what type of land use, or mix of uses, would be acceptable on a specific site, or whether the site is protected for certain types of development. These policies give guidance and certainty to developers and landowners and help local people understand what may happen in their neighbourhood in the future.

The development site allocation policies have been informed by a thorough process, building upon site appraisals. These thorough site appraisals and capacity assessments have informed minimum housing requirements for relevant sites. Other policies of the plan relevant to specific sites were also considered. The detail contained within the policies in this chapter is intended to give detailed guidance to apply the policies of the plan to the site allocations. The policies cross-referred to within the site allocation policies do not represent an exhaustive list. The site allocations do not supersede the other policies of the Plan, and all other policies remain relevant.

Housing numbers are expressed as a minimum net-gain. This means that sites with existing housing will be expected to re-provide the equivalent numbers, and also the minimum stated in the policy as a net-gain. The minimum number shall be exceeded where it is possible to do so consistent with the other policies in the Plan. The homes should be delivered as general market and affordable housing in accordance with Policy H2 unless the policies of the Plan allow for student accommodation or employer-linked affordable housing. Other specialist forms of housing will be considered on their merits. If communal accommodation is to be provided, the minimum quantum shall be calculated on the basis of the national policy ratio (or any amendment or replacement thereof). On mixed-use sites or phased sites, if only part of the site is being brought forward and the proposal does not include residential development, the potential to achieve the minimum housing capacity on remaining parts of the site when they come forward for development will be considered.

This chapter also outlines five ‘areas of focus’ across the city. These are areas where changes are anticipated over the plan period resulting from new development- including development outside the city adjacent to the city boundaries- and where a wider area consideration will be needed to ensure success.

New development across the city results in additional social, community and transport infrastructure needs. It is important that there are sufficient facilities to meet the needs of existing and future residents. The Infrastructure Delivery Plan (IDP) provides a summary of infrastructure needs across Oxford and sets out infrastructure schemes to meet the needs, taking into account the level of housing and employment growth over the Plan period. The IDP has divided the city into four quadrants



DIGITAL INFRASTRUCTURE TO SUPPORT NEW DEVELOPMENT

Policy Context

- Digital infrastructure is playing an increasingly important role in our day-to-day lives, supporting people to meet various needs, as well as the wider economy and the services businesses provide.
- In national policy significant weight is placed on supporting economic growth and productivity, and there is a requirement for planning policies to set out how digital infrastructure is delivered, made accessible and upgraded over time.
- Oxford at present is broadly covered by mobile networks, but access to the newer 5G network, which can offer more reliable connections in busier places and for higher intensity data transfer, is still limited.

Policy Implementation

- The policy requires new development is serviced by appropriate digital infrastructure, for both residential and commercial development. It is important that this type of infrastructure is factored into the design of new development as with any other type of infrastructure, at the earliest possible stage during the design process.
- Developers are encouraged to engage early with a range of network operators, to ensure that development proposals are designed to be capable of providing this level of connectivity to all end users.
- The policy also supports data centres in appropriate locations, in recognition of their growing importance within the national critical infrastructure. By their nature, data centres often require sizable parcels of land and, depending on their scale, can be

resource intensive. However, due to Oxford's spatial and environmental constraints it is unlikely that many will come forward within the city's boundaries.

- Where data centres are proposed, proposals will be expected to demonstrate how they will mitigate impacts on the wider environment such as in relation to energy and water use (see **Policy R1** and **Policy R5**). Where these uses have the potential to generate waste heat, opportunities should be sought to repurpose this heat, so that it can service other users of heat in the city.

POLICY I1 DIGITAL INFRASTRUCTURE TO SUPPORT NEW DEVELOPMENT

Development proposals should support the delivery of full-fibre or equivalent digital infrastructure, with particular focus on areas with gaps in connectivity and barriers to digital access.

Development proposals should:

a) ensure that sufficient ducting space for full fibre connectivity infrastructure is provided to all end users within new developments, unless an affordable alternative 1GB/s-capable connection is made available to all end users;
b) meet expected demand for mobile connectivity generated by the development;
c) take appropriate measures to avoid reducing mobile connectivity in surrounding areas, and providing mitigation if that is unavoidable;
d) where required support the effective use of buildings, outdoor spaces and the public realm to accommodate well-designed and suitably located mobile digital infrastructure;
e) minimise impacts of digital infrastructure. on the visual amenity, appearance and character of buildings and surrounding areas, and minimise impacts on the amenity of occupiers and neighbours of development.

Data centres play an important role in supporting a modern economy. New, expanded or upgraded data centres will be supported on suitable sites in appropriate locations in accordance with other policies of the development plan.

LAND SAFEGUARDED FOR INFRASTRUCTURE

Policy Context

- There are a number of specific strategic infrastructure schemes (included in the Infrastructure Delivery Plan) that involve land both within and outside the city boundary.
- Ensuring that the necessary land is available to deliver these specific infrastructure schemes is of vital importance to their success.
- These strategic infrastructure schemes are also governed by distinct consenting regimes that operate outside of the Oxford Local Plan 2045 process.
- As such, this policy seeks to safeguard land within Oxford administrative boundary, to support their delivery.

Policy implementation

- The necessary land required to deliver the following infrastructure schemes is safeguarded within the city:
    - Oxford Flood Alleviation Scheme; and
    - East West Rail (Oxford).

- Each infrastructure scheme has a distinct safeguarding mechanism.

Oxford Flood Alleviation Scheme

- This is a critical priority infrastructure scheme being delivered primarily to reduce flood risk in Oxford.
- The land safeguarded for the Oxford Flood Alleviation Scheme is shown on the Policies Map.

East West Rail (Oxford)

- The land safeguarded for the East West Rail (Oxford) is shown on the Policies Map.
- The East West Rail Safeguarding Directions (November 2025) confers specific requirements in relation to development proposals involving the land safeguarded for East West Rail (Oxford).

- The following site allocations have the potential to be impacted by the land safeguarded for East West Rail (Oxford):
    - SPN5 – Pear Tree Farm
    - SPCW9 – Oxford Railway Station and Becket St Car Park
    - SPCW10 – Oxpens

POLICY I2 SAFEGUARDING LAND FOR INFRASTRUCTURE

All safeguarded land is shown on the Policies Map.

Oxford Flood Alleviation Scheme

a) Development proposals involving land safeguarded for the Oxford Flood Alleviation Scheme should:
    i. Demonstrate that the land safeguarded for the Oxford Flood Alleviation Scheme has been taken account of in their design; and
    ii. Ensure that consultation with relevant bodies has been undertaken.

East West Rail (Oxford)

b) Planning permission involving land safeguarded for East West Rail (Oxford) will not be granted until the East West Rail Company has been consulted and the procedure set out in the East West Rail Safeguarding Directions (or the requirements of any future equivalent or consenting legislation) has been followed.

NORTH INFRASTRUCTURE AREA

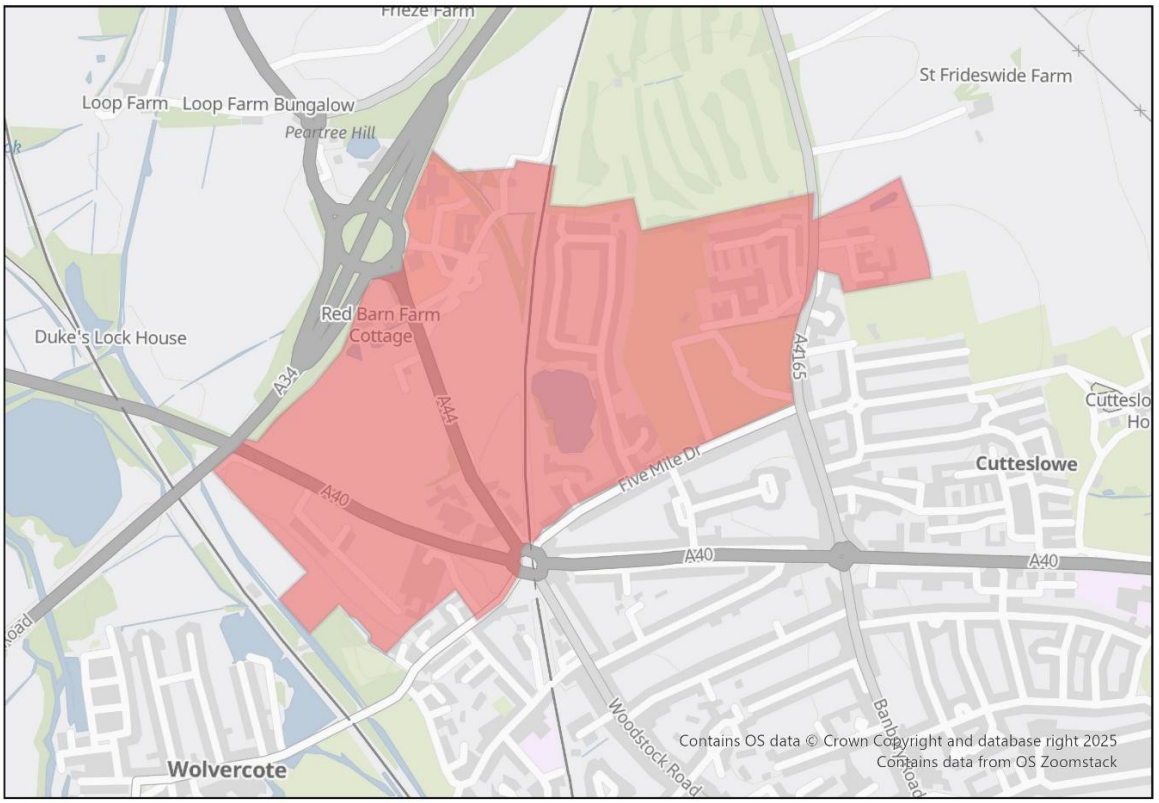
The North Infrastructure Area includes development sites such as Oxford North, which are adjacent to the Cherwell District Council (CDC) development sites, PR6a – Land East of

Oxford Road, PR6b – Land West of Oxford Road and PR6c Land at Frieze Farm, which is the reserved site for the replacement Golf Course extension areas within CDC. Good transport connectivity via public transport, walking, cycling and wheeling is a key need for this area if people are to be able to move easily between these residential areas and the city. As the northern entrance to the city, it is also important to have high quality urban design and good place making and to ensure views into and out of the city are respected.

Key considerations for infrastructure and design common across the area are:

- Improvements to walking, cycling and wheeling routes, and public transport accessibility, including:
  - Safe crossing options at desire lines across the major roads in the area
  - Connectivity by foot and cycle to sites adjoining the city
  - Connectivity of local facilities and services (which may also be also accessible within Cherwell) and communities
  - Connectivity to Oxford Parkway Railway Station allowing sustainable onward travel options
- Increase public access to green spaces
- Reduce air pollution to protect the Sites of Special Scientific Interest/Special Area of Conservation at Port Meadow
- Retain the integrity of the Green Belt by careful design at its edges
- The policies of the Wolvercote Neighbourhood Plan and Summertown and St Margaret's Neighbourhood Plan.

Northern Edge of Oxford Area of Focus



Northern Edge of Oxford Area of Focus

This Area of Focus is located at the northern edge of the city boundary and is the northern entrance to the city. With major transport connections from the A34, A40 and A44, as well as Pear Tree Park & Ride and proximity to Oxford Parkway rail station, it is a gateway location.

The area is currently undergoing significant development with the recent construction of the initial phases of the Oxford North site for large-scale residential and knowledge-economy based economic growth. There are further phases remaining on this site and other sites identified previously in the Northern Gateway Area Action Plan which have yet to come forward. As such this Area of Focus cumulatively represents one of the largest areas for residential and specialised employment growth in the city. As a gateway location there is scope for higher density and high quality urban design including exemplary buildings, which celebrate this area as a gateway and area of innovation whilst also respecting and protecting views into and out of the city.

The Area hosts some of the least deprived wards in Oxford, but is not without its challenges. There are congestion issues on nearby roads and roundabouts/junctions, which have seen some improvements and investment through the earlier phases at Oxford North and Growth Deal/Growth Fund funding, but further work is needed if the area is to realise its potential. Walking, cycling and wheeling connections also still need improvements to ensure safe crossings of some fairly large and busy roads, and connectivity by foot and cycle both across the area and for onwards journeys into the city as well as out to Oxford Parkway to maximise the potential of that connection too.

The area is also close to the Oxford Meadows Special Area of Conservation (SAC), which contains certain habitats and species recognised for their importance across Europe. There are also several Sites of Special Scientific Interest (SSSI) in the vicinity. The area also falls within the Wolvercote Neighbourhood Plan area so proposals should take into account the community aspirations set out in the plan.

The area adjoins several large housing allocation sites, which fall within Cherwell District (PR6a Land East of Oxford Road, and PR6b Land West of Oxford Road and PR6c Land at Frieze Farm,) but nonetheless adjoin existing communities in Oxford. Therefore, it is also crucial to ensure good links and accessibility for people to move easily between these residential areas and the city, particularly as the homes will be helping to meet unmet housing needs from Oxford. Walking, cycling and wheeling improvements are essential to the success of the area to improve connectivity and permeability, to other parts of the city and/or to destinations in neighbouring districts of Cherwell and West Oxfordshire.

Policy NEOAOF: Northern Edge of Oxford Area of Focus

Planning permission will be granted for new development within this Area of Focus (AoF) where it would ensure that opportunities are taken to deliver the following (where applicable):

Supporting active travel

a) Walking, cycling and wheeling infrastructure improvements should be delivered in accordance with the requirements of the Oxford Local Cycling and Walking Infrastructure Plan;
b) Increased connectivity and permeability through developments so people can walk, cycle or wheel across the area and to other parts of the city including from the site

allocations adjacent to the city which are in Cherwell District (PR6a Land East of Oxford Road, and PR6b Land West of Oxford Road and PR6c Land at Frieze Farm,) and West Oxfordshire;

c) Public transport provision enhancements, particularly those identified in the IDP relating to this area;

d) A reduction in car parking in line with Policy C8;

High quality design which capitalises opportunities for growth

e) Good urban design and place making across the AoF, including the introduction of new public open space;

f) Successful integration of new development into the existing built environment and enhanced facilities for both new and existing communities.

g) Careful consideration given to the design and height of new buildings to ensure that their impact does not have a detrimental upon views into or out of the city, including views from Port Meadow. Development proposals should be developed in accordance with Policy HD9 and where applicable with the site-specific allocation. Development proposals should respond positively to the surrounding area and should be informed by the High Buildings TAN.

Environmental improvements to benefit biodiversity and the community and future occupiers

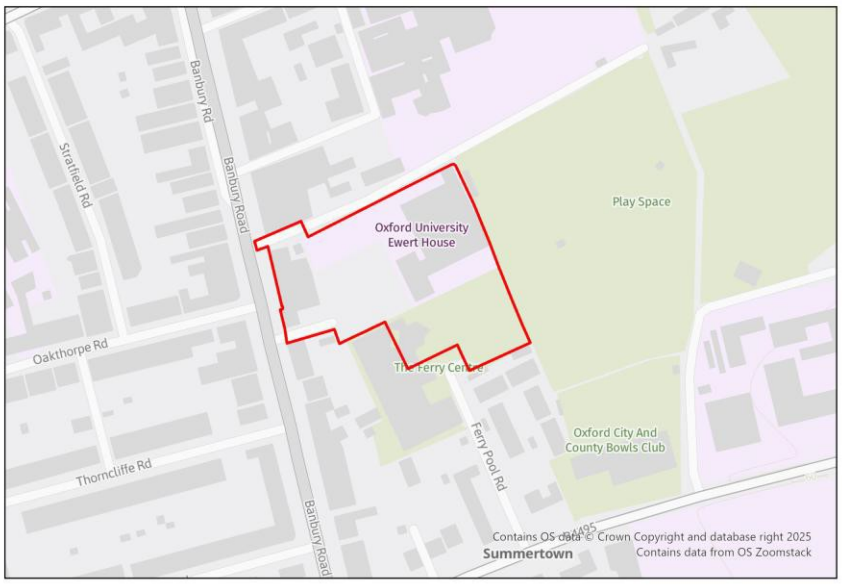
h) Enhancements to the existing Green Infrastructure network which could include landscaping planting; increasing tree cover; enhancing biodiversity green corridors and; incorporating the use of SuDs;

i) Enhancements to existing public open space and creating new public open space, where possible, or where required by specific allocation policies.

Infrastructure

j) Contributions towards expansion of Wolvercote Primary School (1.5-2 FE) to cater for growth in this area of north Oxford

Diamond Place and Ewert House



Site area	1.85ha
Ward	Summertown
Landowner	Oxford City Council and University of Oxford
Current Use(s)	Public car parks, academic offices, community centre
Flood zone	Flood Zone 1
Notable heritage assets	North Oxford Victorian Suburb Conservation Area to the south of the site, somewhat removed, but with potential for views. Grade II listed Diamond Cottages nearby to site. Potential presence of Prehistoric or Roman archaeological remains as adjacent to an area of known cropmarks of this origin.
Notable ecological features	Any potential for protected species on the site is likely to be limited to roosting bats in existing buildings. Falls within the impact risk zones for New Marston Meadows SSSI and Hook Meadow and the Trap Grounds SSSI. The site is within an area identified as having potential hydrological connectivity with the Oxford Meadows SAC.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPN1: Diamond Place and Ewert House

Planning permission will be granted for a mixed-use development including residential use. The minimum number of dwellings to be delivered is 135 (or if delivered as non-self-contained student accommodation, the equivalent number of rooms when the ratio is applied). If development is phased, it must be demonstrated that the remaining part of the site can deliver the remaining minimum number of dwellings.

A range of other uses would also be suitable, including the following:

- A community centre. Replacement of facilities will be required if the existing community centre is demolished **(Policy C3)**;
- Healthcare facilities;
- Town centre supporting uses including additional shops/cafes/services/ Class E uses.
- Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the New Marston Meadows SSSI and Hook Meadow and the Trap Grounds SSSI, new development could have impacts on the functioning of these sensitive ecological sites. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the SSSIs. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).
b) Development proposals must demonstrate that likely significant effects on groundwater recharge and water quality have been avoided, or mitigated where relevant, through the use of appropriate measures including SuDS **(Policy G6)**.
c) Development proposals involving subterranean development must include a hydrogeological investigation which must demonstrate that likely significant effects on groundwater flow have been avoided, or mitigated where relevant **(Policy G6)**.
d) Opportunities should be taken to enhance the ecological value of the site and to bring in greening features with considered landscaping.
e) Greater visual and wildlife links with the green spaces to the east should be achieved by providing green fingers into the site, the current location of the shrubs south of Ewert House providing a particularly strong opportunity to achieve this.
f) The open space requirement should be delivered in a way that is appropriate to the location of the site within a district centre but also where there are few green spaces and few attractive public outdoor areas to either meet or enjoy time sitting outside.

Urban design & heritage

g) Development proposals should be designed with consideration of their impacts on the setting of the nearby conservation area and listed buildings **(Policy HD3)**.
h) Development should take into consideration the potential presence of Prehistoric or Roman archaeological remains **(Policy HD5)**.
i) Clear visual links through the site will be important to maintain legibility
j) The site should provide high quality public open space that appeals to all senses and creates an area to meet and obtain respite in the centre of the busy district centre.
k) New development should be designed to conceal unattractive views of the backs of Banbury Road shops and Ferry Leisure Centre roofline.
l) Care needs to be taken to avoid overlooking of Summer Fields School, especially the boarding accommodation immediately to the north of the site.
m) Public toilet facilities are currently located on the site. Development proposals should demonstrate how these facilities will be re-provided or justify an alternative approach.

Movement & access

n) Residential development should be low car.
o) The City Council will seek to minimise public car parking on the site to a level that is reasonable to serve the area, bearing in mind the public transport connections and its location with a district centre.
p) The principal vehicular access, particularly to the replacement public car parking, should be from Banbury Road.
q) Walking, cycling, and wheeling access should be provided through the site from the north to the southeast, connecting to Cherwell School and to Ferry Pool Road, together with walking, cycling and wheeling access safeguarded for any future development of the adjacent Summer Fields School ground. It should be explored

whether there is potential for improvements to the restricted width of the existing footpath/cycle way adjacent to the Bowls Club, which links to Cherwell School.

Elsfield Hall, Elsfield Way

Site area	0.39ha
Ward	Cutteslowe
Landowner	Oxford City Council
Current Use(s)	Use Class E, vacant offices. A gym occupies the site on a license on a short-term basis.
Flood zone	Flood Zone 1
Notable heritage assets	N/A
Notable ecological features	Kendall Crescent Amenity Green Space is close to the site and there is potential to improve wildlife linkages or habitat continuity. Hedgerow and tree habitats can be found along the boundaries with the potential for bats and nesting birds. Part of the site is within an area identified as having potential hydrological connectivity with the Oxford Meadows SAC.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPN2: Elsfield Hall, Elsfield Way

Planning permission will be granted for residential development, with the minimum number of 27 dwellings delivered. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals must demonstrate that likely significant effects on groundwater recharge and water quality have been avoided, or mitigated where relevant, through the use of appropriate measures including SuDS **(Policy G6)**.

b) Development proposals involving subterranean development must include a hydrogeological investigation which must demonstrate that likely significant effects on groundwater flow have been avoided, or mitigated where relevant **(Policy G6)**.
c) Currently the whole site is hard-surfaced with concrete so there is opportunity to improve permeable surfaces by introducing SUDs and permeable garden areas, and to provide biodiversity enhancements.
d) Preliminary analysis suggests that the limited presence of green infrastructure features on the site currently means it is likely to score below the minimum thresholds for green surface cover as required by (**Policy G3)**. As such, proposals will need to ensure that an appropriate proportion of green features are incorporated into the design of development to meet the minimum targets set out in the policy, demonstrated through submission of the Urban Greening Factor assessment.
e) Vegetation, including hedgerows and trees on the boundaries should be retained and enhanced Opportunities for enhancements to the landscaping along the southern boundary with Elsfield Way/ A40 should be demonstrated in future development proposals.

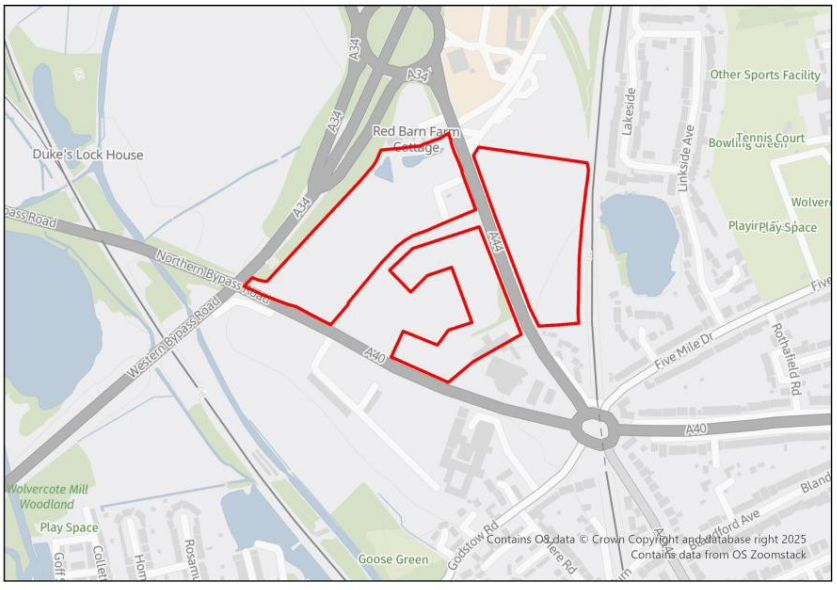
Urban design & heritage

f) Opportunities should be taken to address and improve the staggered building line to the south of the site and improve the relationship with the Elsfield Way frontage.
g) Development proposals should incorporate high-quality design and materials appropriate to the suburban setting (**Policy HD1**).

Movement & access

h) Opportunities should be taken to develop and link into existing walking, cycling and wheeling routes.
i) Development proposals should increase the permeability of the site for residents as well as the access to the adjoining recreation ground and footpaths across it.
j) Proposals should be low car and support opportunities for walking, wheeling, and cycling.

Oxford North Remaining Phases



Site area	13.28 ha
Ward	Wolvercote
Landowner	Thomas White Oxford
Current Use(s)	Site is partially cleared and partially undeveloped greenfield
Flood zone	Flood Zone 1
Notable heritage assets	Close to Wolvercote Conservation Area designation so potential impacts on setting.
Notable ecological features	Within the impact risk zone of Wolvercote Meadows SSSI and Pixey and Yarnton Meads SSSI Part of the site is identified within the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPN3: Oxford North Remaining Phases

Planning permission will be granted for mixed-use development including residential and knowledge-economy employment. The minimum number of dwellings to be delivered is 161 dwellings as part of mixed-use development. Other complementary uses will be considered on their merits.

The priority use for this site is to deliver the remaining residential commitment from the hybrid Oxford North permission.

The site is within a protected Key Employment Site with outline permission for employment development that directly supports the knowledge economy of Oxford. Permission will only be granted for further employment development at this site where the intended uses directly relate to the knowledge economy of Oxford: science and technology, research, bio-technology, spin-off companies from the universities and hospitals, or other intended uses that make a measurable contribution to those sectors. Applicants will be required to demonstrate how their proposals contribute to the knowledge economy of Oxford. The City Council will ensure that these uses are maintained into the future, using legal agreements/conditions

Open space, nature, flood risk

a) The site is within the impact risk zones for the Wolvercote Meadows SSSI and the Pixey and Yarnton Meads SSSI. Development proposals should be accompanied by an assessment of ground water and surface water flows. If employment is proposed as part of development, an assessment of the employment use on air quality to demonstrate no impact on SSSI is required. All proposals should minimise impacts on air quality during construction phase (**Policy G6**).
b) Planning permission will only be granted for developments that provide usable, well designed and good-quality publicly accessible green open space. At least 15% of the total site area must be provided as green public open space; this must be distributed so that at least 15% of any parcel proposed for residential development is green public open space.
c) Small corner on western edge of the parcel on west of A44, and strip running down eastern boundary of the parcel to east of A44 is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for

further details.

d) A 10m buffer to the balancing ponds must be incorporated into proposals (**Policy G2**).

Urban design & heritage

e) The design of new development in this area must be accessible, permeable and legible to ensure easy access to and through the site for all users with priority for walkers, cyclists and wheelers.

f) Design of new development must create a sense of place which has its own identity and with continuous and well-connected streets with well-defined building frontages.

g) Development must ensure that there is a clear distinction between the public and private realms to ensure both private and public spaces are well designed and defined. Careful consideration must be given to the positioning of windows and lighting in this development to ensure there is good surveillance of the public realm, and to mitigate the impacts of the adjoining railway line and busy roads.

h) A high density and landmark buildings style of development is appropriate in this location, whilst taking into account potential impacts on setting of Wolvercote Conservation Area **(Policies HD1)**.

Movement & access

i) Coordinated infrastructure delivery and protection of environmental assets are key to the success of the site, and prioritising good connectivity for walking, cycling, and wheeling and access to public transport from this area to the new residential developments on the unmet need housing sites in the adjoining Cherwell district.

Oxford University Press Sports Ground, Jordan Hill

Site area	3.65 ha
Ward	Wolvercote
Landowner	Oxford University Press
Current Use(s)	Private Sports Ground
Flood zone	Flood Zone 1

Notable heritage assets	The adjacent Wolvercote Cemetery and chapel has heritage interest and areas for various denominations and religions and includes graves of notable people including JRR Tolkien. General potential for Roman and prehistoric activity and specific interest for proximity to Lower Palaeolithic Wolvercote Channel (poorly understood and rare paleochannel with early hominin remains recorded in brick bit to the South East).
Notable ecological features	Local sites (Local Wildlife Sites, Oxford City Wildlife Sites, Local Nature Reserves)
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPN4: Oxford University Press Sports Ground, Jordan Hill

Planning permission will be granted for residential development, playing pitches and public open space at Oxford University Press Sports Ground. The minimum number of homes to be delivered is 90 if the cricket pitch is retained on the site, or more if it is not. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) The capacity of the sports provision must be retained unless it can be demonstrated that it is surplus (which is not the case at the current time) or the loss of the sports provision can be otherwise compensated for **(Policy G1)**.
b) Any alternative provision must be delivered and operational prior to the occupation of residential development on the site.
c) Public open space will be required onsite **(Policy G2)**.
d) Opportunities should be taken to create wildlife corridors through the site by enhancing the biodiversity of the hedgerow to the west of the site and connecting it to mature trees in the corner of the Wolvercote Cemetery. Likewise, opportunities should be taken to enhance the existing connection between the semi-natural habitats incorporating the golf course to the north, and the lake and cemetery to the south.
e) Reprovision of pitches and of public open space along the southern boundary would help provide a buffer to the cemetery and provide a green link to the recreation ground.
f) High quality green features within the site will be required, and this could be by gardens and landscaping along streets such as verges, planting and swales, which would help achieve the urban greening factor and contribute to biodiversity net gain.
g) Development should be designed to ensure that there is no adverse impact on the Port Meadow SSSI and will be subject to appropriate traffic mitigation measures.
h) Biodiversity surveys may need to assess the potential for species using the site or parts of the site as a wildlife corridor (nesting birds, foraging and commuting bats, badgers, reptiles and amphibians).

Urban design & heritage

i) There is potential for higher density and heights than the surroundings, particularly in the centre and east of the site.
j) Care will be required to avoid harm to the amenity of existing residential dwellings to the west.
k) A clear street grid pattern will be appropriate.
l) Development should take into consideration the potential presence of Prehistoric or Roman archaeological remains **(Policy HD5)**.

Movement & access

m) Vehicular access to the site should be from Jordan Hill. This is likely to be the only exit and entrance so the road layout will need to allow easy circulation around the site.
n) The design should ensure walking, cycling, and wheeling access through to the adjacent proposed residential site in Cherwell District Council.
o) Traffic generation should be limited, with low parking. Appropriate mitigation measures will be required to avoid any significant increase in traffic to the nearby Wolvercote and Cutteslowe roundabouts.

Pear Tree Farm

Site area	2.54 ha
Ward	Wolvercote
Landowner	Merton College
Current Use(s)	Farmland/greenfield plus farm buildings
Flood zone	Flood Zone 1
Notable heritage assets	This area is of archaeological interest for potential prehistoric and Roman remains, which will require further investigation as part of any sizable redevelopment.
Notable ecological features	Part of the site is identified within the Local Nature Recovery Strategy (LNRS). Substantial tree coverage on site.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.
Safeguarded Land	Part of this site allocation has been identified as having the potential to be within the Safeguarded Land for EWR (Oxford).

Policy SPN5: Pear Tree Farm

Planning permission will be granted for residential-led development at Pear Tree Farm. The minimum number of dwellings to be delivered is 111 dwellings. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) The site is contained by the railway line and by a belt of trees, and there is substantial existing tree coverage of the site, so design will need to consider the potential impacts on biodiversity. Due to the relatively vegetated nature of the site, it is likely to already score above the policy target for the Urban Greening Factor and proposals will need to ensure this score is not reduced. In order to maintain the score, proposals could seek to retain existing features wherever possible, particularly higher quality ones, including mature trees and green boundary features that would also help as buffers.

b) The quality of all existing trees should be assessed against the criteria in table 1 of BS5837:2012 (or its latest iteration). High quality trees must be retained unless there is a robust over-riding policy-based justification. Moderate and low-quality trees should be retained where it is feasible to do so.

c) Existing trees around the site should be retained to buffer the noise from the railway and separate the development from the more transient uses to the south (Park and Ride, hotels and petrol station).

d) Public open space will be required onsite (**Policy G2**). The type and layout of this could take the form of wilder, natural areas that are more informal in design and can play a dual role in allowing people to get closer to nature, whilst also supporting existing species. Onsite open space could also help with maintaining the Urban Greening Factor score and for supporting biodiversity.

e) Due to the potential for various types of species to be present onsite, a biodiversity survey will be required to assess the ecological value of the site. Development proposals are expected to demonstrate how any harm to biodiversity on the site will be avoided, mitigated or compensated.

f) Majority of the site, apart from the long strip running southwest, is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

g) A site-specific Flood Risk Assessment (FRA) is required due to a substantial area of the site being at high risk from surface water flooding. The FRA should consider in detail the nature of the surface water flood risk to determine how quickly it occurs and the degree of hazard on site. The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased (**Policy G7** and **Policy G8**).

Urban design & heritage

h) The site is part of a larger field which is severed by the administrative boundary with Cherwell district, and while the adjoining parcel has been released from the Green Belt for future development is not currently identified for development in the adopted Cherwell Local Plan. The geometry of the part within Oxford means the design and layout of the site could benefit from being developed holistically with the rest of the field which lies within Cherwell (and all under the same landowner).

i) Due to potential impacts of noise from the A34 and adjacent railway line and service station area, development proposals will need to demonstrate how layout of buildings and public spaces has been approached so as to minimise amenity impacts for users, and should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors (**Policy R8**).

j) Block structure should help shield the development from the noise of the railway.

k) A mixture of houses and small flatted blocks would give sufficient flexibility to negotiate the triangular site geometry and change in scale between the hotels on the adjoining services area and the adjoining housing on the east of the site.

l) High quality natural materials such as brick and stone would raise the quality of the area.

m) There is an opportunity to develop a roofscape which is richer and more diverse than its neighbours and the potential to reference agricultural building typologies or materials. Pitched roofscape that celebrates its rural, edge setting.

n) This area is of archaeological interest for potential prehistoric and Roman remains, which will require further investigation as part of any sizable redevelopment **(Policy HD5).**

o) There is an opportunity to include well surveyed open space as part of the development, incorporating SuDs, play spaces and landscaping. Well surveyed public open space within the development to facilitate safe play spaces and sport. There should be a clear delineation between communal open space and private space associated with individual plots.

Movement & access

p) Vehicle access to the site is a constraint as the current single-lane track would not be suitable for this development in its current form and would either need to be upgraded or an alternative access would be required to be appropriate for residential development.

   i. If the existing farm track is upgraded, a new junction onto A44 would need to be agreed by the Highways Authority. The track would also need work to segregate walk, cycle, wheel and vehicle use to avoid conflicts. In addition, access for farm vehicles will need to be maintained should the remainder of the farmland (outside the city boundary) continue in operation. Appropriate lighting should balance the need for safe access with local ecology.
   ii. There is also potential opportunity to create an alternative access through the Pear Tree service area.

q) The layout and design of this area must also facilitate and not compromise the delivery of walking, cycling, and wheeling access through the site, over the footbridge across the railway line to Oxford Parkway station.

r) May be opportunities to connect with residential development to the south, on a reconfigured park & ride, and the remainder of the Oxford North site (mixed use) (**Policy SPN3: Oxford North Remaining Phases**).

s) Parking should be incorporated in the public realm where possible in well surveyed locations. Rear parking courts should be avoided.

t) The land to the north of Northern Gateway lies in Cherwell, part of which is allocated in the Cherwell Local Plan partial review (site allocations PR6a&b). Development should make provision for future connectivity with any development of the sites in Cherwell, which should give potential for vehicular, walking, cycling and wheeling links. It is important that the unmet need sites are well-connected to Oxford, and development at Northern Gateway must facilitate access and

integration for those communities with existing north Oxford communities.

Additional Requirements

u) Planning permission involving land safeguarded for East West Rail (Oxford) will not be granted until the East West Rail Company has been consulted and the procedure set out in the East West Rail Safeguarding Directions has been followed (**Policy I2**).

Red Barn Farm

Site area	0.96 ha
Ward	Wolvercote
Landowner	Merton College
Current Use(s)	Classroom/workshop/office buildings and a motorcross track.
Flood zone	Flood Zone 1
Notable heritage assets	Roman remains recorded in the area.
Notable ecological features	Onsite tree coverage around perimeter.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPN6: Red Barn Farm

Planning permission will be granted for employment development and ancillary uses to support the employment at Red Barn Farm. Other complementary uses will be considered

on their merits.

Permission will only be granted for employment development where the intended uses relate to the knowledge economy of Oxford: science and technology, research, bio-technology, spin-off companies from the universities and hospitals, or other intended uses that make a measurable contribution to those sectors. Applicants will be required to demonstrate how their proposals contribute to the knowledge economy of Oxford.

The site currently provides an important community function by providing education and training to disadvantaged and vulnerable young people, so any proposal will need to demonstrate that the facilities can be re-provided (**Policy C3**)**,** which may be outside of the city.

Open space, nature, flood risk

a) Block arrangements and design of outdoor spaces should seek to incorporate a variety of green infrastructure features, which may include trees and hedges, green roofs or linear features that can facilitate movement through the site and integrate with surrounding areas.
b) Trees should be retained especially along perimeter with A34 to help buffer noise.

Urban design & heritage

c) Red Barn Farm parcel is at a prominent location adjacent to the North Oxford development, and at a key entrance to the city. Given this gateway location, design should be high quality.
d) There is opportunity to orientate employment blocks towards the adjoining balancing ponds for more pleasant views for occupiers and to benefit from passive solar gain, and the existing tree/hedgerow coverage along the edge of the A34.
e) Due to potential impacts of noise and other pollutants from the adjoining A34 and A44, development proposals will need to demonstrate how layout of buildings and public spaces has been approached to minimise amenity impacts for users, including locating these away from these key pollution sources. This should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors (**Policy R4 and R8**).
f) Proposals should undertake more in-depth evaluation of potential Roman remains **(Policy HD5**)**.**

Movement & access

g) Current vehicle access onto the A44 is unlikely to be suitable for any significant increase in traffic without upgrading. Any plans for a left-in left-out junction would need to be agreed with the Highways Authority. Alternatively, low-car development could be an option given the proximity of the park & ride.
h) Opportunities should be taken to design the development to ensure it shall not compromise the delivery of the walking, cycling and wheeling improvements or the potential future direct cycle link to Oxford Parkway.

SOUTH INFRASTRUCTURE AREA

The South Infrastructure Area includes development sites such as Kassam Stadium, which are adjacent to the South Oxfordshire strategic development sites which will need to be closely integrated with the city, Land South of Grenoble Road (Policy STRAT 11) and Land at Northfield (Policy STRAT 12). The area also includes large employment sites such as ARC Oxford and the Oxford Science Park. Enhanced public transport to these sites will be

important as they grow, to provide a realistic alternative to car use for people travelling to the sites.

The opening up of passenger services along the Cowley Branch Line would provide a welcome public transport alternative for this area of the city. The branch line currently extends over three miles eastwards from Kennington Junction. The potential area of influence of the Cowley Branch Line (CBL), including where its passengers may come from, extends across this area. Two stations are proposed along the line at Littlemore/Oxford Science Park and in the vicinity of ARC Oxford/Oxford Retail Park and Blackbird Leys and Cowley. Major new developments coming forward in this area will be expected to make financial contributions towards the delivery of the Cowley Branch Line to mitigate the impact of their development.

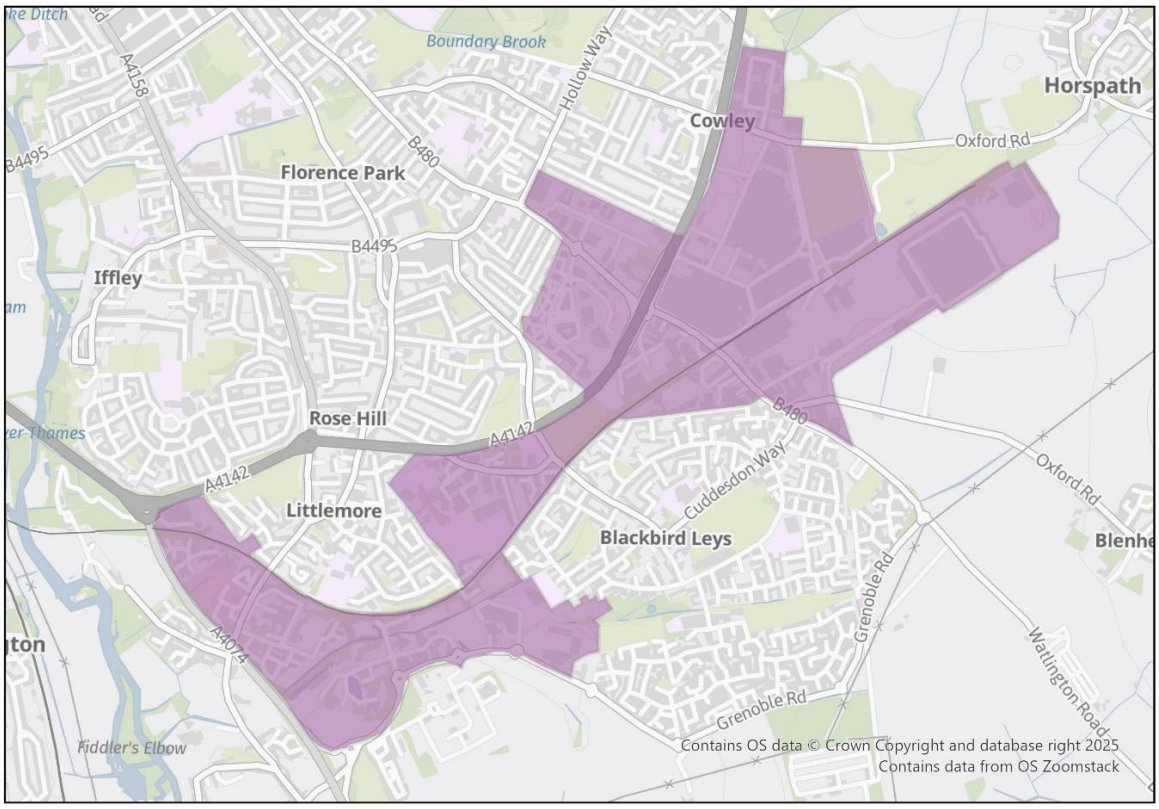
Good transport connectivity via public transport, walking, cycling and wheeling is a key need for this area if people are to be able to move easily between bus stops, potential stations, residential and employment areas and other facilities. This area includes the significant centres of Cowley and Blackbird Leys, which have many facilities essential to their local communities. The vibrancy of these centres needs to be maintained so they can continue to be gathering places offering a range of facilities and services.

Oxfordshire County Council's proposals to introduce an enhanced public transport service as part of the measures made possible through the proposed traffic filters will play an important contribution to this area.

Key considerations for infrastructure and design across the area are:

- Ensure good connectivity by foot and cycle and public transport across the area, including to the proposed locations of Cowley Branch Line stations
- Consider the connectivity of the area to the rest of the city and beyond into South Oxfordshire and the Vale of White Horse District Councils.
- Enhance public transport connectivity to help enable a reduction in car parking across the area
- Ensureland is safeguarded for stations and access for the proposed Cowley Branch Line.
- Increase public access to green spaces
- Ensure good urban design and place making opportunities are taken for the new residential areas to be brought forward
- Support the vibrancy of district and local centres in the area to ensure the facilities and services they include continue to be available
- Increase opportunities to enhance existing tree cover which is the lowest canopy cover across the city.

Cowley Branch Line Area of Focus



This Area of Focus (AoF) includes the area around the Kassam Stadium and the proposed Cowley Branch Line (CBL) where several of the city's key employment sites lie, including MINI Plant Oxford, Oxford Science Park and ARC Oxford, which all employ large numbers of people. Key objectives for this area include:

- Improving and enhancing connectivity to this part of the city by modes other than by private car.
- Creating connections to and between the CBL stations and the surrounding employment sites.
- Strengthening placemaking in this area by successfully integrating new development into the existing built environment and enhancing the existing neighbourhood.

There is a commitment to the re-instatement of passenger trains along the CBL within the Plan period. The opening up of passenger services along the CBL would provide an additional public transport alternative for this area of the city. The branch line currently extends over three miles eastwards from Kennington Junction. Two stations are proposed along the line at Oxford Science Park and in the vicinity of ARC Oxford on the site of the Sandy Lane Recreation Ground to the rear of the Tesco Superstore. The CBL would enable a wider catchment area of workers to be able to access important employment sites such as ARC Oxford and the Science Park by rail, which will help support the local, regional and national economy. There are secondary benefits of rail travel, such as the potential for reduced reliance on the private car, which brings with it the potential for improvements in air quality and reduced traffic congestion on the local highway network. In order for these new stations to be delivered it may be necessary for the closure and/or upgrade of existing level crossings as part of the Public Rights of Way Network. Level crossings in this area include Mallams footpath level crossing and Spring Lane level crossing.

As well as delivering benefits for some of Oxford's key employers, the delivery of the CBL has the potential to enrich the lives of residents by providing an accessible rail route into and

out of the area. Any infrastructure delivery associated with the CBL must therefore be accessible for residents as well as workers who may be commuting into the city from across the county and region. This transformational infrastructure will require significant investment from a number of sources including developer contributions. Development sites within this AoF will be expected to make financial contributions towards public transport, the delivery of the CBL including upgrading walking, cycling and wheeling access to the proposed stations to mitigate the impact of the developments. Walking, cycling and wheeling improvements are essential to the success of the area to improve connectivity and permeability, to other parts of the city and/or to destinations in the neighbouring districts.

In addition to changes resulting from the delivery of the CBL, the area will experience considerable transformation over the plan period as developments on the edge of the city in adjoining South Oxfordshire are built out as allocated strategic sites, particularly the Land South of Grenoble Road (Policy STRAT 11) and Land at Northfield (Policy STRAT 12). It is important that all opportunities are taken to ensure that these strategic developments on the city's boundaries are well connected for walkers, cyclists and wheelers.

These new developments must support existing public transport routes and the expansion of these routes where required to ensure people have the option to use public transport to move around the whole city not just routes that go to the city centre. This AoF also falls within the Littlemore Neighbourhood Plan area so proposals should take into account the community aspirations set out in the plan.

Oxford Stadium Conservation Area lies within this AoF, and Littlemore Conservation Area is within close proximity, both of which should be properly considered in any development proposals that come forward. The AoF also includes the Grade II* Listed Minchery Farmhouse which has been identified as being 'at risk' by Historic England. There are opportunities to preserve and enhance this heritage asset and its setting. The height, scale and massing of new development in this AoF should respond positively to the area and should be informed by the High Buildings TAN and, more specifically, the CBL Densification Study (2025). The CBL Densification Study (2025) supplements the High Buildings TAN by providing technical advice for this area of the city including heatmaps and identifications of important views out of the city towards the surrounding hills. Development proposals should demonstrate how they have been informed by this study.

The CBL AoF includes a variety of publicly accessible greenspace, both within and nearby. Given the predominantly employment-led nature of sites within this AoF, some sites have considerable hardstanding and limited green infrastructure to support habitat linkages. Several watercourses run through the site including the Northfield Brook and the Littlemore Brook. Fluvial flood risk within the AoF is broadly aligned with these watercourses. Surface water flood risk is also present within the AoF however, surface water flood risk occurs within the larger employment areas near to the Garsington Road interchange on the A4142 (eastern bypass).

Development within the AoF creates opportunities to deliver public open space enhancements, both within and near the AoF. It also presents opportunities to deliver habitat linkages within development sites through appropriate landscaping and planting, and through the creation of green roofs and walls as part of redevelopment proposals. Green roofs and walls can also form part of wider SuDS schemes, which can help manage flood risk (including surface water flood risk).

POLICY CBLAOF: COWLEY BRANCH LINE AREA OF FOCUS

Planning permission will be granted for new development within this Area of Focus (AoF) where it would ensure that opportunities are taken to deliver the following (where applicable):

Supporting active travel and infrastructure delivery

a) The new Cowley branch Line (CBL) stations and walking, cycling and wheeling connections to and from these, including bridge access.
b) Walking, cycling and wheeling infrastructure improvements in accordance with the requirements of the Oxfordshire Local Cycling and Walking Infrastructure Plan. Development proposals must take the opportunity to increase connectivity and permeability through developments so people can walk, cycle or wheel across the area and to other parts of the city including from the site allocations adjacent to the city which are in South Oxfordshire Local Plan 2035 (Strat 11 Land South of Grenoble Road and Strat 12 Northfield). Minchery Lane is a key connection between sites within and outside of the city boundary and should be enhanced.
c) A reduction car parking in line with Policy C8;
d) The safeguarding of land for walking, cycling and wheeling access to the proposed CBL railway stations, as referenced in Policies SPS12 Oxford Science Park and SPS15 Sandy Lane Recreation Ground, and connections to bus stops;
e) Enhancements to public transport both improving existing bus services and towards the proposed CBL. Improved accessibility in the southeast of the city is needed to support the anticipated intensification of existing employment use and to improve accessibility to new residential development. The CBL would enable a reduction in car use in this area, supporting this employment use.

High quality design that responds to heritage assets while capitalising on opportunities for growth

f) Good urban design and place making opportunities including delivery of new residential development on redundant retail parks;
g) Strengthened placemaking in this area by successful integration of new development into the existing built environment and enhancement of facilities for both new, and existing, communities.
h) Careful consideration given to the design and height of new buildings to ensure that their impact does not have a detrimental impact upon views from the historic core, or on surrounding low-rise residential areas. Development proposals should be developed in accordance with Policy HD9 and the site-specific allocation, where applicable. Development proposals should respond positively to the surrounding area and should be informed by the High Buildings TAN and, more specifically, the CBL Densification Study (2025).

Environmental improvements to benefit biodiversity and the community and future occupiers

i) Enhancements to the existing Green Infrastructure network which could include landscaping, planting; increasing tree cover; enhancement of biodiversity green corridors and; incorporation of the use of SuDs;
j) Enhancement of the existing Blue Infrastructure network which includes Littlemore Brook, Boundary Brook and Pottery Stream.
k) Enhancement of existing public open space and create new public open space, where possible, or where required by specific allocation policies.
l) Mitigation of potential negative air quality impacts that arise during the construction and operational phases;
m) No adverse impact on the Minchery Farm, Littlemore and Northfield Brook and Spindleberry Park Oxford City Wildlife Sites (OCWS) without justification and/or mitigation in accordance with Policy G6.
n) No adverse impact on the nearby Littlemore Railway Cutting and Brasenose Wood and Shotover Hill Sites of Special Scientific Interest (SSSI) without justification and/or

mitigation in accordance with Policy G6.

Infrastructure

o) Financial contributions from trip-generating uses within a 1,500m buffer zone of the proposed CBL stations (where it falls within the city's boundaries) towards achieving public transport enhancements in this area, including, among other sustainable transport measures, the delivery of the CBL. Figures 8.5 and 8.6 show the extent of this buffer zone around both proposed railway stations and the site allocations that lie within it. Outside the 1,500m buffer area, financial contributions from new trip-generating development would be sought on a case-by-case basis. These will be tested in accordance with Paragraph 58 of the NPPF.;

474 Cowley Road

Site area	0.34ha
Ward	Donnington
Landowner	St John Care Trust
Current Use(s)	Former use as a commercial timber yard, now vacant.
Flood zone	Flood Zone 3a
Notable heritage assets	N/A
Notable ecological features	Potential interest from perimeter trees and overgrowth. Adjacent to Elder Stubbs Allotments.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS1: 474 Cowley Road
Planning permission will be granted for residential development (or replacement facilities in the lawful use). The minimum number of dwellings to be delivered is 14. Other complimentary uses will be considered on their merits. **Open space, nature, flood risk** a) Development proposals should retain and integrate existing trees and hedgerows

into the design wherever possible. Trees around the perimeter are particularly important to retain where possible, including as a buffer to the allotments.

b) Replacement planting will be required where loss occurs to ensure no net loss of canopy cover.
c) There is potential for the incorporation of green roofs, SuDS, and measures to enhance biodiversity and ecological connectivity on the site.
d) Part of the site is located within Flood Zone 3 and Flood Zone 2, and a sequential approach should be taken to locating development on the site, with development prioritised first within Flood Zone 1 prior to consideration of any siting within Flood Zone 2 or 3a. A site-specific Flood Risk Assessment (FRA) will be required and should consider onsite routes and any infrastructure required to reach the access route. Areas of flood risk are present along the main access route to the site. Given there is no advance flood warning provision for the site, the potential for evacuation before a more extreme fluvial or pluvial flood, considering the effects of climate change for the lifetime of the development, needs to be considered by the FRA, with advice to sought from the emergency services and the local authority's emergency planner (**Policy G7**). A site-specific FRA should also consider in more detail the nature of the surface water flood risk to determine how quickly it occurs and the degree of hazard on site.
e) The drainage strategy for the proposed development should be suitably designed to manage additional runoff arising from the development and ensure that surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited (**Policy G8**).

Urban design & heritage

f) The site is backland, so development should be of a scale that does not dominate the surrounding residential area, reflecting surrounding residential form and density
g) The use of high quality materials (brick, render, detailing) inspired by the local character would be appropriate (**Policy HD1**)

Movement & access

h) Vehicular access for the site will continue from Cowley Road, ensuring there is provision for emergency/service vehicles to access the development
i) Prioritisation of active travel will be sought, enhancing walking, cycling, and wheeling connections to Cowley Road and wider networks
j) Opportunities for new and improved walking, cycling, and wheeling links to nearby recreation spaces should be taken to improve permeability through the site.

ARC Oxford

Site area	35.4ha
Ward	Temple Cowley
Landowner	ARC Oxford (majority)
Current Use(s)	Employment uses including office and lab space
Flood zone	Flood Zone 1
Notable heritage assets	Temple Cowley Conservation Area is immediately adjacent to and runs parallel with the north-western site boundary along Hollow Way (B4495). Grade II Listed *Nuffield Press East Wing and Attached Former School House* is opposite to the western boundary of the site (Hollow Way). Site lies within a wider area of potential for Roman and pre-historic archaeology; it is heavily disturbed and close to a Roman pottery manufacturing zone. Individual plots should be considered on a case-by-case basis, based on the level of disturbance from the demolition of the Cowley car plant.
Notable ecological features	Part of the site is identified within the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS2: ARC Oxford

Planning permission will only be granted for new development or redevelopment that modernises and intensifies the following uses:

- Research and development (R&D), laboratories and office accommodation (Use Class E)
- Light (Use Class E) and general (Use Class B2) industrial uses.
- An element of residential development will be supported at the site in accordance with **Policy E1**. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals should:

i. Deliver new and/ or enhance existing on-site open space. Any new open space provided should be designed to be accessible for all site users and visitors. Wider public access to on-site open space is encouraged.
ii. Provide landscaping that supports and sustains the delivery of a network of green corridors throughout the wider site.
iii. Demonstrate how improvements to existing on-site biodiversity (including at vacant plots), will be delivered. Development proposals involving vacant plots are expected to be supported by a biodiversity survey to assess the biodiversity value of the site. The survey should demonstrate how any harm will be avoided, mitigated, or compensated for.
iv. Seek to enhance existing ponds by undertaking sensitive management and restoration of ponds and pond complexes to improve biodiversity and water quality.
v. Ensure that surface water is appropriately managed on site using SuDS. Green walls and roofs are encouraged as they can help to manage surface water while delivering habitat connectivity and supporting the wider ecological network.

b) A site-wide landscaping and public realm strategy for the site is encouraged and proposals for individual plots should then identify how they will align with/ comply with the overall strategy. Site-specific landscaping schemes should be prepared in accordance with **Policies G2, G3, G4 and G5**.
c) Part of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

d) There are opportunities for intensification of uses on this site which may be possible through increased building heights. Heights should vary across the site and should be informed by design guidance in the High Buildings TAN and the CBL Densification Study. Higher buildings will be most appropriate within the core of ARC Oxford and along the Garsington Road / Eastern Bypass frontage, where development can be grouped together and will help to better define key gateways / routes. Given the prominence of ARC Oxford in the townscape - and potential impacts associated with higher buildings - there should be variations in scale and massing to limit the overall bulk of development; provide variation in roofscape; and allow views through the site to landscape beyond. Lower buildings will be most appropriate within the fringes of ARC Oxford to provide a suitable interface with surrounding residential areas. Proposals should demonstrate how they have been informed by the guidance set out in the High Buildings TAN and the CBL Densification Study (2025).
e) Development proposals should be designed to deliver high quality public realm and buildings that establish a clear character for the site.
f) Development proposals should seek to enhance and improve the amount and quality of public space and community buildings at the site.
g) The site is of archaeological interest for potential Roman remains (although with some previous disturbance). This will require further investigation as part of any redevelopment (**Policy HD5**).

Movement & access

h) Development proposals should:
i. Contribute to, promote and support improved sustainable transport links

including links to the proposed Cowley Branch Line station

ii. Deliver improvements to the public realm that deliver high-quality well-designed spaces prioritising walking, cycling and wheeling.

iii. Ensure that all site access points provide safe, suitable and appropriate access for all site users (i.e., people walking, cycling and wheeling). Fully contribute towards and/ or deliver a high-quality gateway to the site that provides safe, secure access under the A4142 (Eastern Bypass).

iv. Contribute financially towards the provision of new walking, cycling and wheeling bridge over the railway that provides access to and from the new CBL station located near ARC Oxford.

v. Seek to reduce the amount of surface level car-parking across the site.

vi. Not propose new additional motor vehicle parking and should seek an overall reduction of parking in line with (**Policy C8)**.

vii. Only provide new additional parking provision for blue badge and servicing (**Policy C8**).

i) Proposals assessed prior to the delivery of the CBL will be expected to show how car parking will be reduced once CBL becomes fully operational (i.e., two trains per hour).

Additional Requirements

j) Due to the historic and current land uses proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Bertie Place Recreation Ground

Site area	0.67 ha
Ward	Hinksey Park
Landowner	Oxford City Council
Current Use(s)	Public playground and MUGA
Flood zone	Flood Zone 3b

Notable heritage assets	N/A
Notable ecological features	All of site is in Local Nature Recovery Strategy (LNRS). Site within the impact risk zone of the Iffley Meadows SSSI. Slow worm habitats, a protected species, may be found on site.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS3: Bertie Place Recreation Ground

Planning permission will be granted for residential development with a public playground and MUGA re-provided on site at Bertie Place. The minimum number of dwellings to be delivered is 25. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the Iffley Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the Iffley Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) A site-specific Flood Risk Assessment (FRA) should consider onsite routes and any infrastructure required to reach the access route. Access/egress from the site is over land in moderate flood risk. The FRA should consider the evacuation requirements before the design event and a more extreme fluvial event. Early flood warning will be vital to ensure the access route can be utilised before floodwater inundates the junction of Old Abingdon Road and the A4144. The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited (**Policy G7** and **Policy G8**).

c) There must be adequate re-provision of the current recreation facilities to meet the needs of those who currently use the facilities (and the new residents). The playground should be re-provided within the site. Replacement of the Multi Use Games Area could be with an alternative type of facility or by improvements to the capacity of an existing one, provided the re-provision is in the neighbourhood and meets the recreation needs of teenagers.
    - Open space/public realm landscaping can also incorporate SUDS as part of mitigations against surface water flood risk.

d) All of the site is identified within the Local Nature Recovery as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

e) A buffer should be retained along the river and railway wildlife corridors.

Urban design & heritage

f) There is an opportunity for an increased level of density compared to the immediate surroundings to be delivered on the developable area of this site, subject to constraints arising from areas of flood risk. Increased density can be achieved by thoughtful consideration of layout and block typologies e.g. terraces as opposed to semidetached dwellings, rather than height due to amenity concerns of neighbouring dwellings (overlooking, overshadowing) and respecting

character of surrounding context.

g) To further protect the amenity of adjoining neighbours, careful consideration should also be given to the back-to-back relationships to the existing neighbouring gardens, with setbacks, appropriate massing of buildings and suitable boundary treatments applied as needed.

Movement & access

h) Care should be taken to ensure good circulation around the site for vehicles to avoid potential problems with a single in and out access.

i) Development proposals should not unduly impede existing walking, cycling and wheeling routes through the site.

Additional Requirements

j) Some areas of potential contamination are present on the site so proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Cowley Marsh Depot

Site area	1.71 ha
Ward	Temple Cowley
Landowner	Oxford City Council
Current Use(s)	City Council depot, storage for refuse vehicles
Flood zone	Flood Zone 3b
Notable heritage assets	The only heritage asset is a very small part of site in the northern corner which is within Crescent Road View Cone.
Notable ecological features	Part of the site is identified within the Local Nature Recovery Strategy (LNRS). Boundary Brook adjoins the eastern boundary of the site.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS4: Cowley Marsh Depot

Planning permission will be granted for residential development and public open space at Cowley Marsh Depot. The minimum number of dwellings to be delivered is 83 homes net gain. Other complementary uses will be considered on their merits.

Prior to the development of the site the City Council depot use must be relocated. The City Council also owns the two residential properties within the site, which could potentially be incorporated into a comprehensive redevelopment of the site. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Preliminary analysis suggests that the limited presence of green infrastructure features on the site currently means it is likely to score below the minimum thresholds for green surface cover as required by **Policy G3**. As such, proposals will need to ensure that an appropriate proportion of green features are incorporated into the design of development to meet the minimum targets set out in the policy, demonstrated through submission of the Urban Greening Factor assessment. These could include introducing green roofs.

b) Public open space will be required onsite (**Policy G2**). The location of the public open space should take into account opportunities to provide connections and enhancements to the adjoining Cowley Marsh Recreation Ground.

c) An area of land along the southern boundary is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

d) Proposals should retain and enhance existing hedgerows around the site boundary and trees around and within the site. Opportunities to support and enhance biodiversity should also include creating connections into wildlife corridors in the adjoining playing fields and Cowley Marsh Nature Reserve/Boundary Brook/Barracks Lane.

e) Currently the whole site is hard-surfaced with concrete, therefore proposals should seek to improve permeable surfaces by introducing SUDs (**Policy G8**) which could include permeable garden areas. Opportunities should be taken to protect and enhance the watercourse adjoining the site and a 10m buffer should be retained between the edge of the watercourse and the built development **(Policy G2).**

f) A sequential approach must be taken to locating development on the site. A site-specific Flood Risk Assessment (FRA) will be required which should also investigate the flood risk the presence of the nearby culvert presents and identify the residual risks relating to the lack of maintenance or blockages of this watercourse. The findings of this investigation should inform the sequential test in order to avoid any areas of potential risks. The FRA should also consider onsite routes across the site and any infrastructure required to reach the proposed access route. Areas of significant flood risk are present along the main access route to the site, and the FRA should consider the evacuation requirements before the design event and a more extreme fluvial event, with advice to be sought from the emergency services, including the local authority's emergency planner. The drainage strategy should be designed to manage runoff arising from the development and ensure that surface water flood risk on and off the site is not increased (**Policy G7** and **Policy G8**).

g) Because of the current use as a depot with a fuel station, some areas of potential contamination are present on the site so proposals will be required to include an

appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Urban design & heritage

h) The Crescent Road View Cone crosses the northern corner of the site; proposals should be designed in a way that responds to this protected view (**Policy HD6**). Heights of buildings should also be compatible with surrounding residential streets.

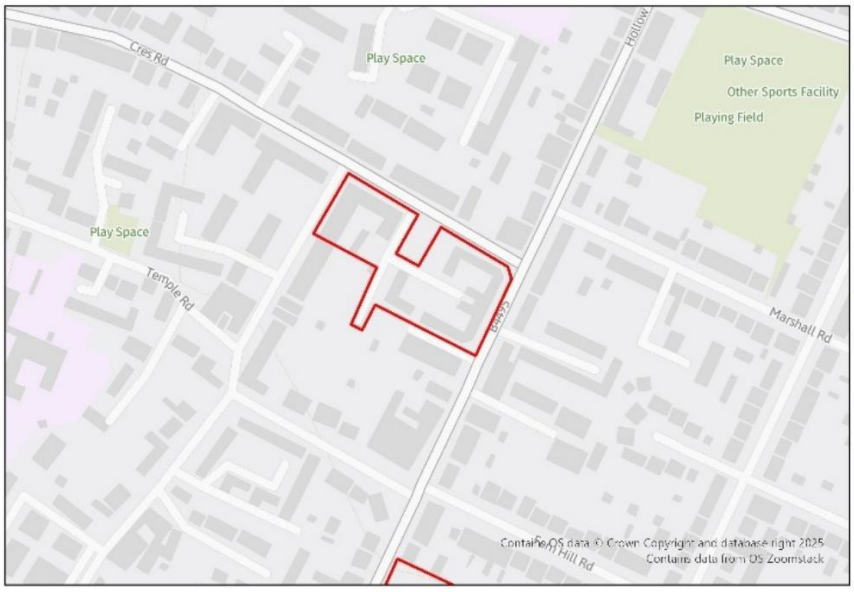
i) Opportunities should be taken to increase permeability of the site including improving and/or creating access to the adjoining recreation ground and the footpaths across it, and the nearby Sustrans route along Boundary Brook.

j) Proposed developments should demonstrate activation of the boundary with the adjoining Cowley Marsh Recreation Ground and improve active frontages along Marsh Road.

Movement & access

k) Opportunities should be taken to develop and link into existing walking, cycling and wheeling routes including the nearby Sustrans route along Boundary Brook.

Crescent Hall



Site area	0.9 ha
Ward	Temple Cowley
Landowner	Oxford Brookes University
Current Use(s)	Student accommodation
Flood zone	Flood Zone 1
Notable heritage assets	Located immediately adjacent to the Temple Cowley Conservation Area
Notable ecological features	Mature trees within/ along the perimeter of the site fronting Crescent Road, Junction Road and Hollow Way which are protected by the Oxford City Council Crescent Road (No.1) Tree Preservation Order 1998.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS5: Crescent Hall

Planning permission will be granted for residential development and/or student accommodation on the site. The minimum number of dwellings to be delivered on the site is 75 net gain (or, if delivered as student rooms, the number of rooms that equate to this when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Proposals should seek to retain existing features where possible, particularly higher quality elements like large mature trees, many of which are protected under a TPO as well as boundary features that help preserve amenity.
b) Green infrastructure should be enhanced in lower quality areas with a greater variation in planting and new habitat around the new buildings.
c) The potential presence of priority species/habitats on the site (roosting bats and nesting birds) should be investigated through appropriate biodiversity surveys and any impacts on these addressed accordingly.

Urban design & heritage

d) In the case of infill development, proposals should complement the materials of the existing development (**Policy HD1**).
e) Proposals should be designed in a way that is sensitive to the Temple Cowley Conservation Area of which it lies adjacent to, particularly regarding heights, massing, roofscape and impacts on local character and street scene (**Policy HD3**).
f) Opportunities should be taken to improve the interface with the surrounding streets, particularly along Crescent Road and Hollow Way.

Movement & access

g) Opportunities should be taken to consolidate car parking and reduce the car-dominated feeling of the buildings within the site.
h) Circulation within the site should prioritise walking, cycling and wheeling.
i) New residential development should be low car.
j) Unless a safe alternative can be demonstrated, the principal access should remain in the same location, although opportunities to increase permeability for walkers, cyclists and wheelers should be considered.

Former Iffley Mead Playing Field

Site area	2.04ha
Ward	Rose Hill and Iffley
Landowner	Oxfordshire County Council
Current Use(s)	Vacant Greenfield
Flood zone	Flood Zone 1
Notable heritage assets	Iffley Conservation Area is adjacent to the site. The site is not within a view cone but there is potential for it to impact views from the Rose Hill View Cone. The site has general archaeological potential, as it is located 70m from a Neolithic pit circle and there is potential for further remains. It also has potential for Early Saxon settlement as the Archeox excavation to the north recovered a significant amount of Saxon pottery.
Notable ecological features	It has been vacant for some time and so there is potential for biodiversity value. Site is within the impact risk zone for Iffley Meadows SSSI.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS6: Former Iffley Mead Playing Field

Planning permission will be granted for residential development and public open space at the former Iffley Mead Playing Field site. The minimum number of dwellings to be delivered is 84. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Public open space will be required onsite (**Policy G2**). This open space must be accessible to existing residents and could incorporate a well-designed secure children's play area alongside some Sustainable Urban Drainage Systems (SUDS).

b) The ecological value of the site must be assessed as part of a planning application and existing green features such as mature trees and hedgerows should be retained or enhanced. A biodiversity survey should be submitted in support of any development proposals to demonstrate any harm is avoided, mitigated or compensated for.

c) As the site falls within the identified impact risk zone for the Iffley Meadows SSSI,

new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the Iffley Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

Urban design & heritage

d) Proposals should ensure that the design has taken into consideration the impact on the setting of the Iffley Conservation Area (**Policy HD3**) and on views, particularly from the Rose Hill view cone (**Policy HD6**).

e) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**). Any sizable development will require pre-determination evaluation (geophysical survey and trenching).

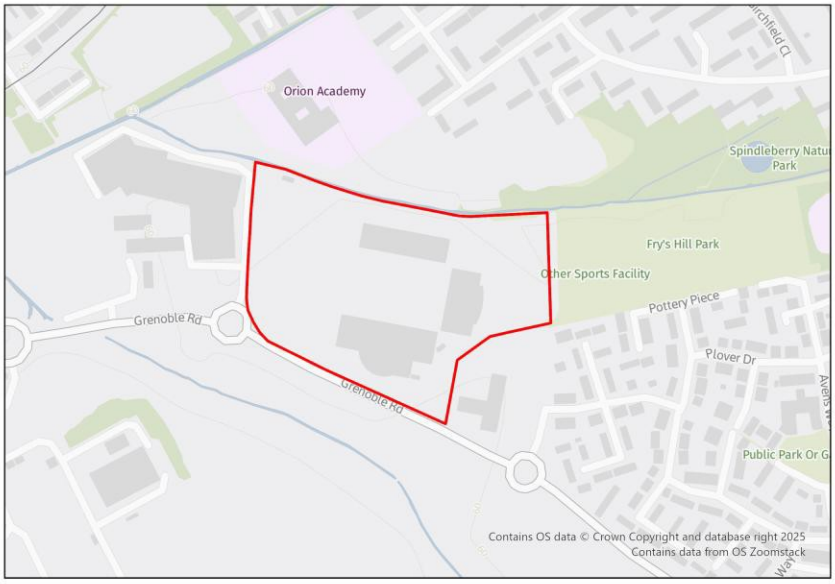
Movement & access

f) Augustine Way offers the greatest potential for vehicular access, but this would be shared with access to the adjacent Iffley Academy school. Therefore, proposals should ensure that access to the site can be achieved without being detrimental to the school.

g) Limited vehicle movements would be beneficial and as the site is located in a CPZ, low car development would be supported.

h) Opportunities to access the site for walkers, cyclists and wheelers from Cavill Road and through the adjacent recreation ground to the north should be explored.

Kassam Stadium



Site area	6.52ha
Ward	Littlemore and Northfield Brook
Landowner	Firoka
Current Use(s)	Football stadium with associated conference facilities, parking

Flood zone	Flood Zone 3b
Notable heritage assets	Within setting of Minchery Farmhouse Grade II* listed building.
Notable ecological features	Close to Spindleberry Park Oxford City Wildlife Site, Littlemore and Northfield Brook OCWS along northern edge, close to Minchery Farmhouse OCWS. Nearby peat deposits to the west, alongside the brook. Part of the site is identified in the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS7: Kassam Stadium

Planning permission will be granted for residential-led development and public open space on the Kassam Stadium site. The existing stadium provides a number of functions currently, and replacement of the local, community role of these facilities will be expected. There is also a precedent for employment-related uses, so these will be acceptable as a secondary use on the site. The minimum number of new homes to be delivered is 290. Other complementary uses will be considered on their merits. This site is linked to **SPS11** and **SPS13**, and a flexible approach will be taken to how the required uses are spread across the sites, but this must be led by a masterplan that shows how minimum housing numbers will be achieved overall.

Open space, nature, flood risk

a) Development should not have an adverse impact on the Oxford City Wildlife Site.
b) A 10m buffer to the brook should be retained and used to create an enhanced wildlife corridor. Tree edges that screen the surrounding residential districts should also be retained.
c) At least 10% of the sites should be used for public open space (**Policy G2**). The opportunity should be taken to weave this through the site as green space with pocket parks, creating a green corridor that links Fry's Hill Park and Spindleberry Nature Reserve to the surrounding landscape. This also ensures the links to the rural landscape beyond, with characteristic fragments remaining, is retained.
d) A sequential approach must be taken to locating development on the site. Development should avoid the areas of Flood Zone 3 along the brook (**Policy G7**).
e) A site-specific Flood Risk Assessment (FRA) will be required with a drainage strategy to manage runoff and ensure surface water flood risk at the site and around is not increased. Infiltration SuDS solutions may be possible because of the geology, so a geotechnical investigation may be needed (**Policy G7** and **Policy G8**).
f) An area of land along the northern boundary of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

g) Design should inject character and a sense of place into this area (**Policy HD1**).
h) The interface between the edges of the sites and the surroundings is particularly important. The likely change in character along Grenoble Road as development takes place to the south should be reflected in the style of development along the

southern edge. The northern edge is bounded by the brook and green infrastructure should be retained and enhanced.

i) Development should ensure an enhancement to the setting of the Minchery Farmhouse (**Policy HD3**).

j) The potential for prehistoric, Roman and medieval archaeology will need to be explored as part of any redevelopment **(Policy HD5)**.

Movement & access

k) Development should contribute to improvements to the walking, cycling and wheeling route from Priory Road, which will be an important route to the new branch line station. Development proposals should be designed to be permeable and readable, with obvious routes through to Grenoble Road, the east of the site and across to site **SPS11** and Priory Road.

l) Vehicular access should continue to be from Grenoble Road and design should ensure there is easy circulation for vehicles to and from site **SPS11**.

Additional requirements

m) Because the site includes areas of filled ground, some areas of potential contamination are present on the site, so investigation will be required, and remedial works may be required (**Policy R5**)

Land at Meadow Lane

Site area	0.99 ha
Ward	Rose Hill and Iffley
Landowner	Oxford City Housing Ltd
Current Use(s)	Private green space, in the past rented out for horse grazing
Flood zone	Flood Zone 3b
Notable heritage assets	Within the Iffley Conservation Area; Grade II listed Townsend Close and Tudor Cottage buildings nearby on Church Way Within Rose Hill View Cone

	Potential presence of Iron Age and Roman archaeological remains.
Notable ecological features	Site is within the impact need zone for Iffley Meadows SSSI Site identified in Local Nature Recovery Strategy (LNRS) Adjacent to watercourse
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS8: Land at Meadow Lane

Planning permission will be granted for residential development at Land at Meadow Lane. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the Iffley Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the Iffley Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) The site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

c) A detailed assessment of the site's value for invertebrates and the impacts of the proposed development will be required, with mitigation and compensation measures delivered that fully offset these impacts and functionally support notable species.

d) Any proposed development on the site will require a detailed assessment of protected species, which should inform a package of mitigation and compensation measures that ensure there are no residual impacts on the protected species.

e) The strong belt of vegetation on the southern boundary should be retained and other existing vegetation on the site should be retained and enhanced where possible and when needed as enhanced habitat for invertebrates, following the mitigation hierarchy.

f) Part of the site is located within Flood Zone 3 and Flood Zone 2, and a sequential approach should be taken to locating development on the site, with development prioritised first within Flood Zone 1 prior to consideration of any siting within Flood Zone 2 or 3a. A site-specific Flood Risk Assessment (FRA) will be required and should consider onsite routes and any infrastructure required to reach the access route (**Policy G7**).

g) A buffer should be retained alongside the watercourse.

Urban design & heritage

h) Development proposals should be designed with consideration of the impact on the Conservation Area and heritage assets adjacent to the site **(Policy HD3)**.

i) Development should be of relatively low density and height to allow for suitable plot size and spacing between buildings and integration of green infrastructure as appropriate to the semi-rural character of the Iffley Conservation Area.

j) Proposals should ensure that the archaeological assets are appropriately

investigated and responded to **(Policy HD5)**.

Movement & access

k) Opportunities to improve walking, cycling and wheeling links should be taken to link into existing networks.

l) The semi-rural character of surrounding streets should be maintained and the perception of these as safe for walking, cycling and wheeling not compromised. To achieve this the site should generate minimal traffic, with low parking levels.

m) The vehicle access point should be chosen to minimise transport impacts and to minimise impacts on the character of the conservation area.

Additional Requirements

n) Some areas of potential contamination are present on the site so proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Littlemore Mental Health Centre, Sandford Road

Site area	6.6ha
Ward	Littlemore
Landowner	Oxford Health NHS Foundation Trust
Current Use(s)	Hospital and Staff/Student Accommodation
Flood zone	Flood Zone 1
Notable heritage assets	The site has archaeological potential and is located close to the Littlemore Conservation Area which contains a number of heritage assets.
Notable ecological features	Site is within 200m of a SSSI (Littlemore Railway Cutting) and has established vegetation, trees and hedgerows within the site/on the site boundary.

Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS9: Littlemore Mental Health Centre

Planning permission will be granted for hospital use, and associated residential development which may include employer-linked housing or student accommodation. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals must ensure that existing green infrastructure features on the site are protected and that opportunities are sought to enhance these. An Urban Greening Factor assessment will need to be produced and submitted. Planning permission will only be granted if an appropriate proportion of green features are incorporated into the design of development to meet the minimum targets (**Policies G1, G2 and G3**).

b) Existing onsite biodiversity should be retained, enhanced and integrated into development proposals (**Policies G2 and G4**).

c) Existing drainage features such as the pond and brook should be maintained, enhanced and integrated into the landscape scheme, potentially creating wildlife corridors through the site (**Policy G8**).

d) The potential presence of priority species/habitats on the site should be investigated through appropriate biodiversity surveys and any impacts on these addressed accordingly. Proposals should also consider impacts on the surrounding areas, particularly, the nearby Littlemore Railway Cutting SSSI (**Policy G6**).

e) Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G7**).

Urban design & heritage

f) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

g) Development proposals should be designed with consideration of their impact on the nearby Littlemore Conservation Area and nearby heritage assets **(Policies HD1 and HD3**).

h) Due to potential impacts of noise and other pollutants from traffic on the A4074, development proposals will need to demonstrate how layout of buildings and public spaces has been approached so as to minimise amenity impacts for users, including locating these away from these key pollution sources. This should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors (**Policies R4 and R8**)

Movement & access

i) Development proposals should demonstrate better management of the existing parking on the site to ensure the most efficient use of land is made.

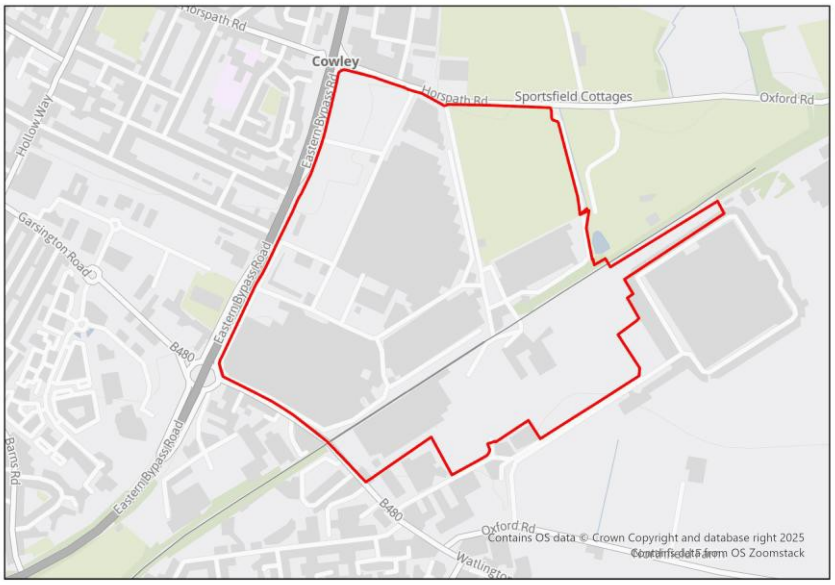
j) Proposals should also improve accessibility through the site, additional routes that effectively separate walking, cycling and wheeling from visitor or servicing traffic, will be encouraged. These measures should be set out within a transport assessment and travel plan and reflected in an agreed masterplan (**Policy C6**).

Additional requirements

k) As the site has a long standing healthcare use, proposals will be required to include an appropriate site contamination investigation and demonstrate how

contamination issues will be resolved where relevant (**Policy R7**).

MINI Plant Oxford



Site area	69.9ha
Ward	Blackbird Leys
Landowner	BMW (UK) Manufacturing Ltd
Current Use(s)	Car manufacturing plant
Flood zone	Flood Zone 1
Notable heritage assets	Site is of archaeological interest as the Dorchester-Alchester Roman road runs through the site and there is potential for roadside settlement. Archaeological remains from the Bronze Age and Roman remains have also previously been recorded.
Notable ecological features	Part of site identified in Local Nature Recovery Strategy (LNRS). Site is located within the impact risk zone of the Brasenose Wood and Shotover Hill SSSI, but this SSSI is sensitive to recreational pressure, which is unlikely to be generated by development of this site.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS10: MINI Plant Oxford

Planning permission will be granted for the intensification and modernisation of the MINI Plant Oxford site to make the most efficient and effective use of the land in accordance with **Policy E1** and in recognition of its importance as a key employment site.

Development and/or changes of use of buildings to Class B2 (general industrial), Class E (offices and light industrial) together with Class B8 warehousing uses or other complementary uses will be supported in principle, even though they may result in a loss of jobs, where these uses are shown to be important to the successful operation of the MINI Plant Oxford.

Open space, nature, flood risk

a) Proposals should include additional greening onsite to help meet the Urban Greening Factor target and maximise the other functional benefits this can provide (e.g. for climate resilience including reducing surface water flood risk, and general amenity). This could be achieved in various ways, including introducing new green features or enhancing existing features on the site.

b) Parts of the site, including areas along the north and eastern boundaries, the railway line and a north-south strip to the south of the railway line, are identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

c) The MINI Plant Oxford site sits in a 'gateway' location and therefore new development should positively respond to its setting and its relationship to key frontages adjacent to the Eastern By-Pass, Garsington Road and Horspath Road. Opportunities to enhance public realm and improve the experience of the site boundaries when viewed from beyond the site should be maximised wherever redevelopment and operational requirements allow.

d) Building design and arrangement will need to be guided by the operational needs of the site, however, proposals should seek to bring forward development that responds sympathetically and contributes positively to the surrounding area including blending into surrounding views, particularly where these front onto the boundaries of the site.

e) Whilst there are limited constraints on the site, considerations around heights, scale and massing should factor in how the developments will be viewed from afar and on the approach, so as to reduce feelings of overbearing and dominating of the adjacent streetscape. Variations in materials, including selection of materials and how they are placed, could help to add visual interest to frontages and reduce homogeneity particularly when experienced from outside the site.

f) There is potential for archaeological remains onsite such as Bronze Age and Roman remains, and those related to the Dorchester- Alchester Roman Road. Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

g) There are various access points into the site of varying quality and proposals should explore opportunities to improve these wherever possible and where operational requirements allow.

h) Whilst the site is fairly accessible, proposals should explore ways to provide for improved walking, cycling and wheeling routes, including making enhancements to the existing network and key junctions, as well as providing better connections to existing and planned major developments in the area.

i) Opportunities should be taken through the development of this site to support sustainable travel by providing greater public transport links and services, including supporting linkages for passengers utilising the future Cowley Branch Line, as appropriate.

Additional requirements

j) Impacts of traffic noise and potential air pollution should be considered as part of the design process and responded to where necessary through appropriate design measures, particularly on the boundaries of the site adjacent to the By-Pass and Horspath Road **(Policy R4 and R8).**

k) There is the potential for land contamination on the site due to current or previous uses. Proposals may be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Overflow Car Park at Kassam Stadium

Site area	2.29ha
Ward	Northfield Brook
Landowner	Firoka
Current Use(s)	Overflow parking for the nearby football stadium
Flood zone	Flood Zone 3b
Notable heritage assets	Close to Minchery Farmhouse Grade II* listed building and close to Littlemore Conservation Area. Potential for prehistoric, Roman and Medieval archaeology. The archaeology is dispersed and mostly focused around the fringes
Notable ecological features	Close to Spindleberry Park Oxford City Wildlife Site and close to Minchery Farmhouse OCWS. Littlemore and Northfield Brook OCWS along northern edge of the site. Nearby peat deposits to the southwest alongside brook. Part of the site is identified in the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS11: Overflow Car Park at Kassam Stadium

Planning permission will be granted for residential-led development and public open space on the Overflow Car Park at Kassam Stadium site. The minimum number of new homes to be delivered is 100. Other complementary uses will be considered on

their merits. This site is linked to **SPS7** and **SPS13**, and a flexible approach will be taken to how the required uses are spread across the sites, but this must be led by a masterplan that shows how minimum housing numbers will be achieved overall.

Open space, nature, flood risk

a) A buffer should be retained along the railway corridor to allow for the movement of protected species such as slow worms. A 10m buffer to the brook should be retained and used to create an enhanced wildlife corridor. Tree edges that screen the surrounding residential districts should also be retained.
b) At least 10% of the sites should be used for public open space (**Policy G2**). The opportunity should be taken to weave this through the site as green space with pocket parks, creating a green corridor that links Fry's Hill Park and Spindleberry Nature Reserve to the surrounding landscape. This also ensures the links to the rural landscape beyond, with characteristic fragments remaining, is retained.
c) Development should not have an adverse impact on the Oxford City Wildlife Site.
d) A sequential approach must be taken to locating development on the site. Development should avoid the areas of Flood Zone 3 along the brook and across the whole southwest corner, and these areas should be integrated into the buffer. This corner would be suitable for either pooled parking or the largest area of open space, as long as access routes to the south and west are easily identified. **(Policy G7**).
e) Areas of surface water flood risk are present along the access routes. A site-specific Flood Risk Assessment (FRA) will be required with a drainage strategy to manage runoff and ensure surface water flood risk at the site and around is not increased. Infiltration SuDS solutions may be possible because of the geology so a geotechnical investigation may be needed (**Policy G7** and **Policy G8**).
f) Land around the outer edges of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

g) Design should inject character and a sense of place into this area (**Policy HD1**).
h) There is greatest potential for higher and larger plot buildings in front of the railway embankment and in the centre of the site, building in height from the outer edges towards the centre and north of the site.
i) Archaeological investigation may be required as part of any proposed development **(Policy HD5).**

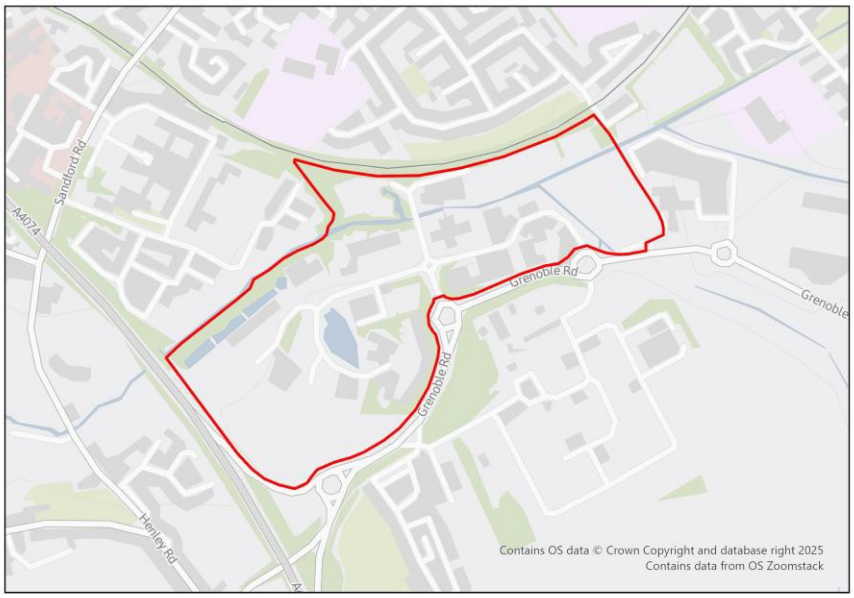
Movement & access

j) Walking, cycling and wheeling routes to access the frequent bus services from Pegasus Road need to be enhanced, including the informal walking access from Falcon Close.
k) Walking, cycling and wheeling access towards Littlemore via Priory Road, which will also be a vital link to the Cowley Branch Line station in the future, must be retained and enhanced in the southwestern corner of the site. The potential for a restricted access for vehicles from this location for servicing and emergency vehicles only should be investigated.
l) The main vehicular access is expected to remain as the bridge over the Littlemore Brook from the Ozone complex and Grenoble Road beyond.
m) To eliminate any risk to railway operations and to ensure the safe operation of the railway, applicants must demonstrate that the design of development considers guidance provided by Network Rail.

Additional requirements

n) Because of the use as a car park, some areas of potential contamination are present on the site, so investigation will be required, and remedial works are likely to be required (**Policy R7**)

Oxford Science Park



Site area	27.33ha
Ward	Littlemore
Landowner	Magdalen College and Ellison Institute of Technology
Current Use(s)	Mix of employment uses (mainly office and labs) as well as ancillary uses including decked car parking and a children's nursery.
Flood zone	Flood Zone 3b
Notable heritage assets	Known archaeological potential for Saxon and Roman remains. Minchery Farmhouse (Grade II*) is adjacent to the site.
Notable ecological features	Littlemore Brook (Oxford City Wildlife Site) runs through and adjoining the site. Site also contains Section 41 (Priority/Principal) habitats that fall within the Biodiversity Duty (Deciduous Woodland). Site contains significant trees, hedgerows, and woodland which form the structural landscaping of the Science Park which are important to public amenity and provide valuable ecosystem services. Northern boundary and area on the east (generally following the watercourse) identified in Local Nature Recovery Strategy as areas that have the potential to become important for biodiversity.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS12: Oxford Science Park

Planning permission will be granted at Oxford Science Park for development of research and development and office employment uses (Class E) that directly relate to Oxford's key

sectors of research-led employment. Other complementary uses will be considered on their merits.

An element of residential development within the defined threshold (**Policy E1)** will be supported.

Open space, nature, flood risk

a) The site contains significant existing trees, hedgerows and woodland which provide landscaping value and are important to public amenity as well as biodiversity value.
b) Some open space onsite (Land Adjacent to Eastern Bypass, and Land Adjacent to Minchery Farm), is identified as supporting green infrastructure (**Policy G1**) so enhancement of remaining GI will be required to mitigate loss. This enhancement could be addressed in different ways, such as through qualitative improvements to remaining areas of open space by improving the functionality of these spaces in terms of wider benefits they provide people and species, or by quantitative reprovision by creating new open space elsewhere on the site. These actions would also contribute to maintaining Urban Greening Factor score.
c) There should be no loss of Core GI (part of the Minchery Farm parcel). Opportunities could include retaining trees and planting new trees to benefit public amenity in the area as part of a landscaping scheme (**Policy G6**).
d) A 10-metre buffer to the Brook should be maintained, and opportunities to improve biodiversity and links through the site should be retained, including a buffer along the railway corridor to allow for the movement of the protected species, and developing opportunities for biodiversity connectivity across the Science Park and beyond e.g. to connect through to Spindleberry Nature Park in Blackbird Leys (**Policy G2**).
e) Parts of the site are Flood Zone 3b, mainly along the Brook, and a sequential approach should be taken to locating development on the site, with more vulnerable uses away from the highest flood risk. A site-specific Flood Risk Assessment (FRA) will be required and should consider onsite routes and any infrastructure required to reach the access route. Access/egress from the site is over land that runs through the flood extents of the Littlemore Brook Tributary, therefore flood warning will be important and should be considered when assessing the need for evacuation from the site. Areas of surface water flood risk are also present within the site and along the access routes, therefore the FRA should consider in more detail the nature of the surface water flood risk to determine how quickly it occurs and the degree of hazard on site. The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited (**Policy G7** and **Policy G8**).

Urban design & heritage

f) New development proposals should seek to improve the place-making on this site and the permeability into and through the site, particularly in terms of routes to and from the Cowley Branch Line stations. Proposals for individual plots should demonstrate how they address and enhance their relationship with the wider Science Park, this could be through a masterplan.
g) Proposals should enhance and increase the public realm and landscaping of the Science Park, including, where possible, the creation of new public open spaces. Any new open space provided should be designed to be accessible for all site users and visitors. Wider public access to on-site open space is encouraged.
h) There are opportunities for intensification of uses on this site which may be possible through increased building heights. Heights should vary across the site

and should be informed by design guidance in the High Buildings TAN and the CBL Densification Study. Higher buildings will be most appropriate to the central and eastern part of site, closest to the Kassam Stadium and Leisure Complex although heights will require modulation and should respond to the setting of the Grade II* listed Minchery Farmhouse. Lower buildings will be most appropriate within the western part of the site, providing a transition to the countryside edge of Oxford / towards the western hills and river corridor. Proposals should demonstrate how they have been informed by the guidance set out in the High Buildings TAN and the CBL Densification Study (2025).

i) The land to the south of Grenoble Road (within South Oxfordshire district) is a strategic site allocation in the SODC Local Plan as an extension to the Science Park and for housing (unmet housing need from Oxford). This will significantly change the character of the area. Proposals should respond to this changing context both in the design of the new development at the Science Park, its connectivity and permeability and the links to future transport infrastructure provision.
j) Development proposals must be designed to preserve the setting of the adjoining Grade II* listed Minchery Farmhouse, particularly plots in the east of the site (**Policy HD3**).
k) Development proposals must take into consideration the potential presence of Medieval and Roman archaeological remains and remains of Littlemore Priory. Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).
l) Due to the recorded peat reserves along Littlemore Brook and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of peat deposits (**Policy R6)**. Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.

Movement & access

m) This site has a key role in facilitating public transport improvements in the area. Opportunities should be taken to support sustainable travel by contributing to improved public transport links and services, including the proposed re-opening of the Cowley Branch Line to passengers.
n) Improved pedestrian and cycle links, and enhancements to the existing footpath and cycle networks are required, together with better connections to both existing and planned major developments in the area including to existing communities in Littlemore and Blackbird Leys, and the communities of the proposed urban extension south of Grenoble Road in South Oxfordshire.
o) Developments should also support active travel access to the new Cowley Branch Line station Oxford Littlemore, which is proposed to be located adjoining the site to the east.
p) Proposals should seek to reduce surface level car parking provision across the site. Proposals should not increase the amount of motor vehicle parking, and measures to reduce car parking will be supported, to encourage modal shift and more efficient use of land (**Policy C8**). Proposals assessed prior to the delivery of the CBL will be expected to show how car parking will be reduced once CBL becomes fully operational (i.e. two trains per hour).

Ozone Leisure Park and Minchery Farmhouse

Site area	3.0ha
Ward	Littlemore
Landowner	Firoka
Current Use(s)	Leisure park including ten pin bowling and cinema
Flood zone	Flood Zone 3b
Notable heritage assets	Contains Minchery Farmhouse Grade II* listed building.Potential for prehistoric, Roman and medieval archaeology.
Notable ecological features	Littlemore and Northfield Brook OCWS along northern edge, close to Minchery Farmhouse OCWS, peat deposits alongside brook. Part of the site is identified within the Local Nature Recovery Strategy (LNRS)
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS13: Ozone Leisure Park and Minchery Farmhouse

Planning permission will be granted for mixed-use development within existing lawful Use Class E and with replacement community leisure/sui generis uses. Acceptable uses on the site include:

- Research and development
- Other Use Class E employment uses
- Commercial leisure
- Community and cultural facilities
- Replacement hotel

In accordance with **Policy C5** community commercial leisure uses should be re-provided Other complementary uses will be considered on their merits.
This site is linked to **SPS7** and **SPS11**, and a flexible approach will be taken to how the required uses are spread across the sites, but this must be led by a masterplan that shows how minimum housing numbers will be achieved overall.

Open space, nature, flood risk

a) A 10m buffer to the brook should be incorporated and used to create an enhanced wildlife corridor.
b) Development should not have an adverse impact on the Oxford City Wildlife Sites.
c) Due to the site's proximity to recorded peat reserves, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of these deposits (**Policy R6**). Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.
d) A sequential approach should be taken to locating development on the site. Development should avoid the areas of Flood Zone 3 along the brook (**Policy G7**).
e) Areas of surface water flood risk are present. A site-specific Flood Risk Assessment (FRA) will be required with a drainage strategy to manage runoff and ensure surface water flood risk on and off site is not increased. Infiltration SuDS solutions may be possible because of the geology so a geotechnical investigation may be needed (**Policy G7** and **Policy G8**).
f) Land along the northern boundary of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

g) The design should be structured around attempting to reflect and maintain the remnants of the semi-rural landscape.
h) Development of the site presents an opportunity to inject character (**Policy HD1**). There is scope for a variety of high-quality materials and design styles and also for some height. High density and larger-plot development is likely to be suitable on this site.
i) Minchery Farmhouse is key to successful design, which should be respectful of and enhance its setting (**Policy HD3**).
j) Archaeological potential will need to be explored as part of any proposed redevelopment **(Policy HD5).**
k) Minchery Farmhouse should be repaired and brought back into a sustainable use.

Movement & access

l) Links through the site for pedestrians, cyclists and wheelers should improved, allowing better permeability through the site.
m) Development on the site currently turns its back on its surroundings and has poor interfacing at the edges. This should be enhanced by the layout.
n) The route along the path to the west of the site is key to future successful connectivity across this area, and it will connect to the proposed Cowley Branch Line station, so enhancement of this route is essential.
o) Circulation into, around and through the site should be enhanced. In particular, every opportunity must be taken to enhance the setting of the Minchery Farmhouse by consolidating parking and servicing and moving it to a less sensitive part of the site.
p) Given the significant amount of parking to the west of the site, the need for parking within this site is limited.

Additional requirements

q) Some areas of potential contamination are present on the site, so investigation will be required, and remedial works may be required (**Policy R7**)

Redbridge Paddock

Site area	3.64 ha
Ward	Hinksey Park
Landowner	Oxford City Council
Current Use(s)	Rough grazing land
Flood zone	Flood Zone 3a
Notable heritage assets	Visible from Iffley Conservation Area, with potential for Norman/medieval archaeological remains
Notable ecological features	Site is within the impact risk zone for Iffley Meadows SSSI. Part of the site is identified within the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS14: Redbridge Paddock

Planning permission will be granted for residential development and public open space at Redbridge Paddock. Proposals should include residential moorings and associated servicing facilities. The minimum number of dwellings to be delivered is 200. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the Iffley Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the Iffley Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).
b) The site is identified as supporting green infrastructure (**Policy G1**) so enhancement of remaining GI will be required to mitigate loss.
c) Part of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.
d) A 10m green buffer from the edge of the riverbank should be retained, including the mature trees within it that have potential to enhance the design of the proposal.
e) Public open space will be required onsite (**Policy G2**) and the type and layout of this could be linked to the retention and enhancement of natural features across the site.
f) Compensatory improvements should be made to the surrounding areas of remaining Green Belt in accordance with the identification of Opportunities to Enhance the Beneficial Use of Green Belt Land Report (LUC 2018).
g) A flood risk assessment will be required as a very small part of the site is in Flood Zone 3b, which must demonstrate how a sequential approach has been taken to locating development across the site, which is expected to be achieved by ensuring the area of highest flood risk is incorporated as part of the green infrastructure enhancement on the site.

Urban design & heritage

h) Proposals should respond to the natural setting of the river and pastoral floodplain between the site and Iffley.
i) It is important that this gateway site into the city centre is designed to give a clear identity (**Policy HD1**).
j) The design must be sensitive to impacts on the broader landscape setting and the views from and into the Iffley Village Conservation area, for example by reducing heights and density towards the river channel and leaving strategically placed gaps between blocks to retain west - east views (**Policy HD3**).
k) There is potential for Norman/medieval archaeological remains on the site which should be investigated and responded to (**Policy HD5**).

Movement & access

l) Opportunities should be taken to enhance existing good pedestrian and cycle links to the city centre and locations in the south and east of the city.
m) Vehicular access must be from the Abingdon Road, with care to ensure minimum interactions with accesses to Redbridge Park and Ride. Two access points for vehicles would be optimal and essential for pedestrians and cyclists.

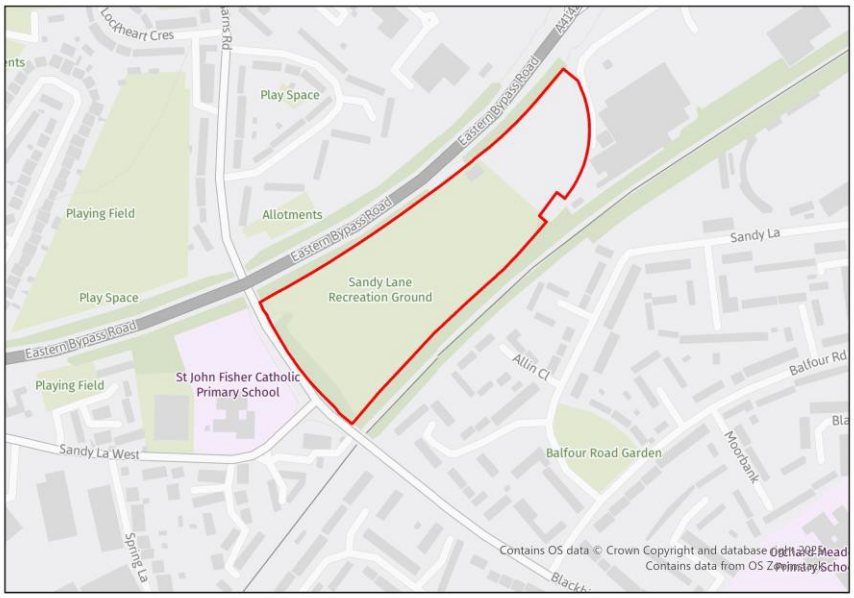
Additional requirements

n) The River Thames is likely to be an important foraging and commuting resource for bats so artificial lighting alongside this corridor should be avoided and a lighting strategy should be submitted in support of any planning application setting out the internal and external lighting associated with the proposed development.

o) The site is adjacent to a main arterial route into Abingdon and the ring road, and therefore air quality needs to be considered and an acoustic design statement is required (**Policy R7**).

p) Proposal will need to demonstrate how contamination issues arising from this former landfill site will be resolved.

Sandy Lane Recreation Ground



Site area	5.15ha
Ward	Blackbird Leys
Landowner	Oxford City Council
Current Use(s)	Playing pitches and associated facilities including small car park and pavilion; vacant car parking off Ambassador Avenue currently used by a motorcycle training company
Flood zone	Flood Zone 1
Notable heritage	Nothing notable above ground, some potential for archaeological

assets	remains onsite based upon previous Roman and medieval finds in close proximity to the site.
Notable ecological features	Part of the site is identified in the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPS15: Sandy Lane Recreation Ground

Planning permission will be granted for residential development at the Sandy Lane Recreation Ground site. The minimum number of dwellings to be delivered is 300 dwellings. However, should an element of outdoor sports provision need to be retained onsite, then a reduced number would be accepted. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) The pitches onsite are identified as supporting green infrastructure (**Policy G1**), so enhancement of remaining GI will be required to mitigate loss, including specifically reprovision of pitch capacity on or offsite.
b) If an element of pitch provision is to be retained onsite, there are opportunities to consolidate pitches and improve their quality to accommodate increased use.
c) The City Council's Active Communities Team must be consulted and agree with any relocation of sports facilities.
d) Proposals should preserve existing green features wherever possible, including boundary planting which also serves as important amenity buffers to the railway line and Eastern by-pass, as well as the line of larger trees along the boundary with Blackbird Leys Road.
e) In order to maintain Urban Greening Factor score and mitigate losses of green features, proposals should seek to enhance remaining green space and/or provide new green features onsite. This could include additional planting of retained green areas that delivers additional benefits for people and wildlife; bolstering boundary planting to improve buffering benefits; as well as introducing new linear features that can help break up the development and serve as movement corridors for species across the site.
f) Public open space will be required onsite (**Policy G2**). The type and the layout could be split into smaller spaces throughout the site that provide different functions for residents and visitors or provided through one larger area of open space.
g) The strip of land on the boundary running adjacent to railway line is identified within the Local Nature Recovery Strategy is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.
h) Existing and future surface water flood risk will need to be considered as it is prevalent across significant parts of the site, and this will need to be investigated and mitigated through a robust drainage strategy.

Urban design & heritage

i) Whilst the site is in an area of the city with fewer constraints or less sensitivity in

terms of views, development proposals will need to consider and mitigate impacts on the sensitive skyline and surrounding area, particularly when viewed in combination with existing and planned development on adjacent sites. This could be achieved in various ways, such as by avoiding built forms with excessively overbearing scale or massing and avoiding roofscapes that are excessively uniform.

j) The site straddles two quite different areas of the city in terms of landscape character, between the business and retail parks to the east and predominantly suburban, residential areas to the west. Proposals should therefore explore how densities can transition across the site to help ensure the development responds positively to the surrounding area, exploring more density (and potentially more height), to the northeast, transitioning to lower levels towards the southwest.

k) Proposals should explore ways that character can be injected into the area through the new development being brought forward on the site such as via use of high-quality materials and innovative design choices (**Policy HD1**).

l) There is also the potential presence of archaeological assets on the site based upon finds nearby including Roman and medieval remains. Proposals should ensure that these are appropriately investigated and responded to (**Policy HD5**).

Movement, access and layout

m) Design and layout of the site should respond to the location of the new Cowley Branch Line station and the site's potential as a 'gateway' accommodating increased footfall to this part of the city. This should include new public space providing the setting for the station as well as linkages across the site to neighbouring areas such as the ARC Oxford business park.

n) Proposals should seek to ensure that good permeability through the site is secured for all, both residents and users of the proposed Cowley Branch Line station with active travel options like walking, cycling and wheeling being integral to layout of the site. This should also include considerations of access to the station.

o) The level change from the adjacent Blackbird Leys Road, and the line of mature trees on the boundary of the site, is likely to have amenity impacts for development located to close to the western edge of the site. Proposals should demonstrate how they have responded to this in the approach to layout of that part of the site. This could include design solutions such as setting back any development from that edge, potentially in combination with incorporating an element of open space provision along this edge.

Additional requirements

p) Due to potential impacts of noise and other pollutants from the adjacent railway line and traffic on the Eastern bypass, development proposals will need to demonstrate how layout of buildings and public spaces has been approached to minimise amenity impacts for users, including locating these away from these key pollution sources. This should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors (**Policies R4 and R8**).

q) As the site is located on previously made ground, including potential landfill, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Templars Square

Site area	3.88ha
Ward	Cowley
Landowner	Oxford Re Value Investments Ltd
Current Use(s)	Mixed use including retail, parking, residential
Flood zone	Flood Zone 1
Notable heritage assets	Beauchamp Lane Conservation Area is adjacent to the site to the west. The Grade II* listed Church of St James and Grade II listed cottage at 1 Beauchamp Lane are located just outside the site boundaries. There is potential for archaeological interest as the site is on the edge of an important Roman pottery manufacturing area and partly located over the area of a medieval settlement.
Notable ecological features	N/A
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS16: Templars Square

Planning permission will be granted for a mixed-use development at Templars Square that supports its ongoing role as a key part of the Cowley District Centre, as well as delivering a significant amount of new residential development.

Development should include residential development and town centre uses that provide active frontages at ground floor level. The range of town centre uses could include the following:

- Retail;
- Commercial leisure;
- Financial and professional services;
- Learning and educational uses;
- Evening economy uses such as cafes, restaurants and pubs;
- Community facilities;

- Medical and healthcare facilities such as a health centre;
- Other employment such as offices and small workshops.

The minimum number of dwellings to be delivered is 500 (net gain).

To ensure the site continues to play its vital role as a district centre hub, active frontages will be required along identified principal routes. This may be along the outside edges of the development, facing the main roads, and also should cut through the middle of the development, in locations that ensure permeability and that draw people into and through the centre.

A mix of town centre and community uses are encouraged on this site to retain a vibrant town centre with a mix of uses for local communities, especially those in the east of the city. The City Council will encourage schemes that strengthen and diversify the range of services and facilities on offer to the local community and wider catchment area, alongside the provision of a significant number of new homes. Other complementary uses will be considered on their merits.

Open space, nature and flood risk

a) Greening features will be necessary to achieve the required urban greening factor score. Most appropriate to the urban context of this site will be high quality planting and landscaping along any public realm and integrating green features into the built form. Opportunities should be taken include more street trees and soft landscaping, which are currently lacking around the site.
b) Innovative approaches such as green walls could be used to introduce biodiversity, and greening along new streets and to soften the edges of the development, these will help to achieve the Urban Greening Factor score.
c) Amenity open space for residential development could include greening features, such as rooftop gardens, inset green space and vertical gardens.

Urban Design and heritage

d) A masterplan should be produced to help organise services, access, movement routes, landscape, public realm and heights across the site. It is important that any piecemeal development does not prejudice the overall aim of a comprehensive regeneration across the site.
e) The site plays an important role in the local community, providing a range of services and facilities for a wide area of East Oxford as an alternative to travelling to the city centre. Any redevelopment must maintain this role and continue to be accessible to the public.
f) Development proposals should be designed with consideration of their impact on the setting of the adjoining Beauchamp Conservation Area and the setting of the Grade II* listed Church of St James and Grade II listed cottage at 1 Beauchamp Lane (**Policy HD3**).
g) Because of the position of the site on a ridge in an elevated position relative to the city core, there is potential for development to alter views from and to the Historic Core Area (both in the foreground and background of views). Therefore, the townscape and visual impact of any development on views to, across and from the Historic Core Area must be understood, described and explained thoroughly, including with a Visual Impact Assessment, in compliance with **Policy HD6**.
h) Archaeological work may be required, but because the site is already heavily developed that will depend on the nature of the scheme (**Policy HD5**).

Movement and access

i) Development should provide enhanced public realm through and around the edge of the site that better provides for pedestrians, cyclists and wheelers.

j) Improved pedestrian and wheeler connectivity should be provided across Between Towns Road.

k) The public transport interchange hub at Between Towns Road and Barns Road should be supported, with opportunities taken to improve bus stopping areas, signage and facilities, and the taxi ranks.

l) Opportunities should be taken to consolidate public parking, with enough re-provided to support the needs of the centre. Residential development should be low car.

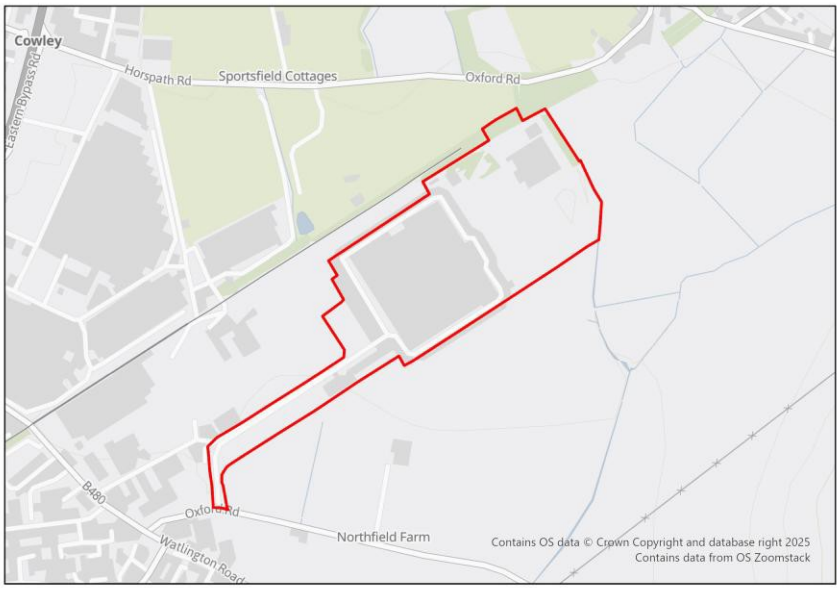
m) Principal routes should be identified around and through the site, which should give permeability for pedestrians and wheelers.

Additional requirements

n) Proposals will be required to include an appropriate site contamination investigation and applications will be required to demonstrate how any contamination issues will be resolved (**Policy R7**).

o) Development proposals should include an acoustic design statement as this site is part of an area which is subject to environmental noise from surrounding roads.

Unipart Site



Site area	30.63ha
Ward	Blackbird Leys
Landowner	Logicor Cowley Investment Ltd
Current Use(s)	Warehousing, industrial uses, offices
Flood zone	Flood Zone 1
Notable heritage assets	Site has potential archaeological interest as part of the access road is on the line of the Dorchester-Alchester Roman road and there is high potential for roadside settlement. There is also high potential for other prehistoric and Roman remains (sites are recorded to the north &

	south of the plot).
Notable ecological features	Parts of the site is in the Local Nature Recover Scheme (LNRS).
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPS17: Unipart Site

Planning permission will be granted for new development, modernisation and intensification of logistics/industrial uses including Industrial (class B2), and storage or distribution (class B8) with ancillary offices, research and industrial processes (class E) uses. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Proposals should take opportunities to integrate a network of green spaces and other features across the site that can have benefits for occupants of the site as well as wildlife which will help to achieve the Urban Greening Factor policy target. Block arrangements and design of outdoor spaces could seek to incorporate a variety of features including functional open spaces; trees and hedges as well as linear features that can facilitate movement through the site and integrate with surrounding areas, utilising the potential to enhance the wildlife corridor function of the railway line in this location, for example.
b) Proposals should explore ways to incorporate planting of native trees and hedgerows to screen buildings, soften industrial activity, and that respond to the sensitivity of the site's borders.
c) Proposals should seek to reduce levels of hard landscaping and integrate more natural surface cover across the site including through integration of Sustainable Drainage Systems which can also secure betterment in surface water flood risk.
d) An undeveloped buffer zone of at least 10m width should be left alongside the watercourse (**Policy G2**). Opportunities to open up access and enhance connections from the watercourse into and across the site could improve amenity and movement for occupants of the site as well as wildlife.
e) Surveys may be required to determine any species or habitats of value, particularly around the edges of the site and within the area of scrub to the north-east in advance of any redevelopment.
f) Some pockets of land along railway line and also in a strip running north to south across part of site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity.
Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

g) The site would benefit from a comprehensive masterplan to co-ordinate its development and provide a framework for the future modernisation and intensification and to positively promote sustainable development.
h) The site is located between the predominantly industrial character of areas to the west and the more open nature of the areas to the east, this should be a key consideration informing choices about densities, scale and massing of development proposed. Opportunities to sensitively balance and transition between the differing characters of the surrounding areas whilst avoiding the creation of hard edges to the landscape should be explored.
i) Taking into account the current built form on the site, densities and footprints of

buildings should vary across the site. This might include arranging higher densities of development towards the north and west, whilst seeking to achieve a looser and more fine-grained arrangement towards the south and east to ensure that a continuous hard edge to the southern and eastern boundaries isn't created.

j) Variations in high quality materials, including selection of materials and how they are placed, could help to add visual interest to frontages and reduce homogeneity particularly when experienced from outside the site.

k) Design of new development should respond to the allocation of the land at Northfield on the southern edge of the site (within South Oxfordshire) and any proposals arising there in due course, in particular, considering walk, cycle and wheel links to future transport infrastructure provision.

l) The site has potential for sensitive archaeology in the form of prehistoric and/or Roman remains. Proposals should ensure that these archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

m) Block arrangements and layout of new development should be designed in a way that secures improved movement and circulation through the site, particularly via active transport modes like walking, cycling and wheeling.

n) Applicants should seek opportunities to improve access into the site, e.g. by exploring potential for new access points along southern boundaries or in the northeast towards Oxford Road, as well as opportunities to support sustainable travel by providing new or improved walk, cycle and wheel links to existing and planned developments in the area, including that adjoining in South Oxfordshire district.

o) Proposals should also explore ways to improve public transport links and services, including opportunities to integrate connectivity of the site with new stations associated with the re-opening of the Cowley Branch Line to passengers.

Additional requirements

p) Because of the existing and previous uses of the site, some areas of potential contamination are likely present on the site. Proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

EAST INFRASTRUCTURE AREA

This area includes a number of sites with a range of uses including education, residential, research and the medical hospitals. As a result of people needing access those sites, particularly the hospitals, there is significant traffic congestion in the area. Improving accessibility, especially to the hospitals, by means other than the car is a key aim for this area.

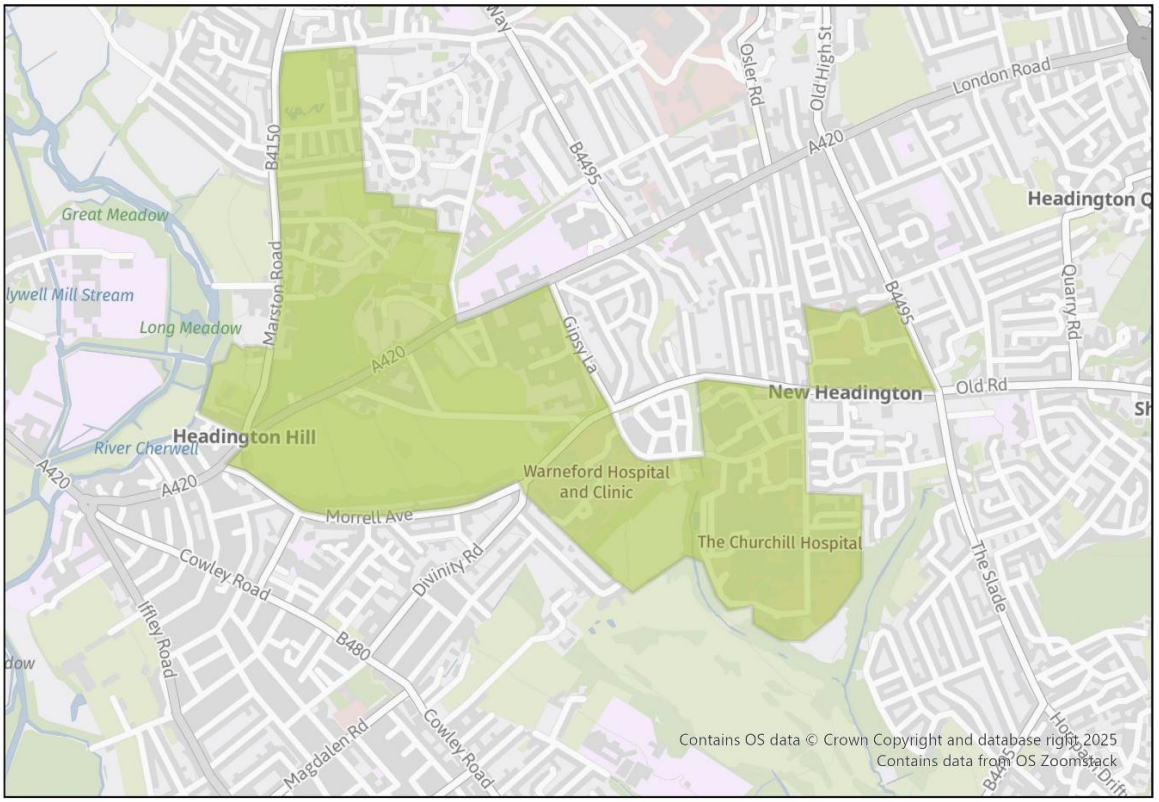
The area includes many significant green spaces, including the Lye Valley SSSI, South Park and Bury Knowle Park.

Key considerations for infrastructure and design across the area are:

- Ensure good connectivity by foot and cycle and public transport across the area, e.g. with safe, attractive routes
- Seek to manage/reduce the levels of car parking on the hospital sites
- Ensure protection of New Marston SSSI and Lye Valley SSSI
- See opportunities to increase active frontages along the southern end of the Marston Road

- Maintain the rural character of Cuckoo Lane whilst taking opportunities to enhance its function as a walking, cycling and wheeling route.

MARSTON ROAD AND OLD ROAD AREA OF FOCUS



This Area of Focus (AoF) supports a mixture of institutional uses. The Marston Road area to the west hosts a range of academic uses including the Oxford Brookes University (Gypsy Lane and Headington Hill sites) and Cheney School. Meanwhile, the Old Road area to the east includes several hospitals (Churchill, Warneford, Nuffield Orthopaedic Centre) as well as the University of Oxford Old Road campus and is increasingly the focus of cutting-edge medical research. New development in the area offers opportunities to support and enhance its role as a setting for academia and as well as medical research linked to clinical practice at the hospitals.

The existing institutional uses are spread over a number of large, distinct sites. Typically, these plots are quite open, with low density development set amongst large areas of greenspace with varying degrees of public access, but also significant areas of car parking and hardstanding. There are various underused plots and opportunities for more intensive use of sites to make more efficient use of land, including rationalising areas of more expansive surface-level car parking and renaturalising surface cover.

The area is set within residential neighbourhoods, and served by several key and busy transport corridors forming connections to the city centre in the east and towards the city boundaries and the ring road in the north and west. There are opportunities to create a more active street frontage along parts of Marston Road, and to improve active travel routes as

well as surveillance and feelings of safety along some of the key movement corridors that provide linkages across the AoF and to surrounding areas.

The AoF is characterised by strong linkages to Oxford's history, with the presence of listed buildings, conservation areas and some significant archaeological interest including in relation to Civil War defences and the Fairfax siege line. The historic Cuckoo Lane also runs east-west through part of the AoF, acting as a valuable walking and cycling route. Equally, there is an abundance of green features providing recreational and ecological value, including larger, more formal open spaces like the parks, smaller areas of green space within the grounds of many sites, as well as various tree-lined streets and rural lanes. This green setting gives parts of the AoF a semi-rural feel and makes an important contribution to views from the historic core of the city and across the Cherwell Meadow, as well as to the setting of various heritage assets.

The strong concentration of historical and ecological interest makes the area sensitive to change. This sensitivity is further heightened by its proximity to watercourses like the River Cherwell to the west and Boundary Brook to the east, also to various important ecological designations in its surroundings. Notably, the nearby New Marston Meadows SSSI and Lye Valley SSSI rely on particular hydrological conditions relating to groundwater and/or surface water which can be harmed by impacts arising across wide catchments that go beyond their boundaries and overlap with parts of this AoF. Beyond simply mitigating harm from new development, schemes may also be able to bring about wider betterment to the hydrological conditions within the catchments of the nearby SSSIs through improvements in the urban environment.

It will be important to ensure that the distinctive and positive character of parts of the AoF, such as the green setting and its historic and biodiversity value, are maintained, this includes the area's relationship to wider views across the city, which could be harmed by introducing significant visual competition or change of character. There are also opportunities for creating a better relationship between development and the natural and historic environment. This includes designing in ways that can enhance the setting of these features, but also by taking inspiration from them to inform the design process, such as by extending the greenery of nearby sites through development sites or incorporating similar materials and styles into new built form. The area also falls within the Headington Neighbourhood Plan area so proposals should take into account the community aspirations set out in the plan.

Policy MRORAOF: Marston Road and Old Road Area of Focus

Planning permission will be granted for new development within this Area of Focus where it would ensure that opportunities are taken to deliver the following (where applicable):

Responding to the green setting and sensitive ecological interest in the area

a) Design that positively responds to any nearby open spaces, preserving and, where possible, enhancing the setting of these assets;
b) Enhancement of the connectivity between open spaces and habitats across the area, such as through use of linear features and green corridors that can support movement of wildlife as well as people;
c) Protection of New Marston SSSI and Lye Valley SSSI, and other sites of

ecological and biodiversity importance, whilst also exploring ways to go further to secure betterment in the particular hydrological conditions that support the habitats and species of these sites.

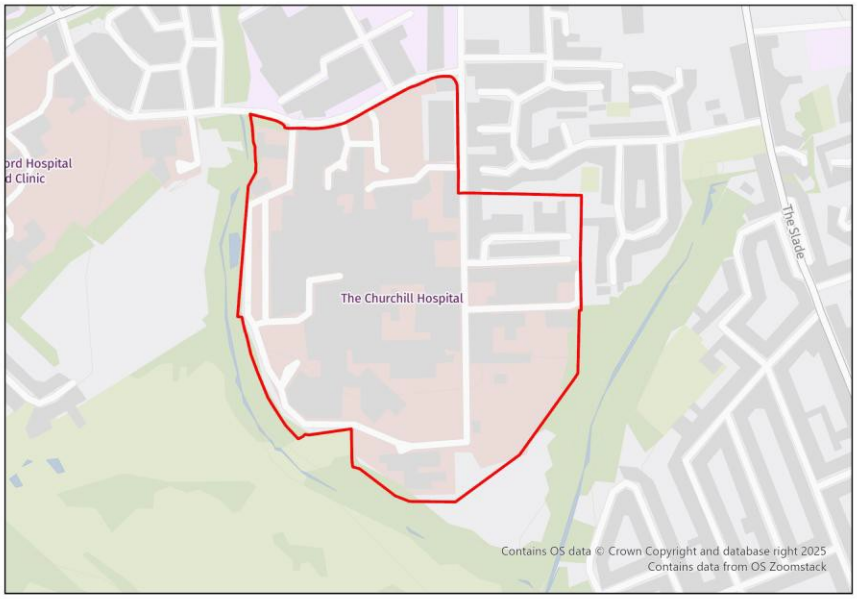
Responding to the historic setting whilst making efficient use of land

d) A positive contribution to and enhancement of the character and setting of conservation areas and other heritage assets;
e) Appropriate building heights for their setting which do not negatively impact on key views or historic skylines;
f) Consolidation and reduction of car parking across the hospital sites;
g) Maintenance of the verdant and rural character of the areas around Cuckoo Lane.

Supporting active travel and sense of security when moving through the area.

h) Increased active frontages and natural surveillance along key transport corridors and walking, cycling and wheeling routes;
i) Improvements to walking, cycling and wheeling infrastructure in accordance with the requirements of the Oxfordshire Local Cycling and Walking Infrastructure Plan.

Churchill Hospital



Site area	3.89 ha
Ward	Churchill and Temple Cowley
Landowner	Oxford University Health NHS Foundation Trust
Current Use(s)	Hospital
Flood zone	Flood Zone 1
Notable heritage assets	Original WWII hospital buildings are non-designated heritage assets. Archaeological potential including Roman pottery manufacturing and

	further Roman archaeological remains.
Notable ecological features	The site lies within impact risk zones for the Lye Valley SSSI which is adjacent to the site, and there are significant existing trees within the site and near to the western boundary growing along Boundary Brook. Mileway Gardens Oxford City Wildlife Site is located to the west of the site. Potential species include reptiles, bats and nesting birds. Part of the site is identified within the Local Nature Recovery Strategy (LNRS). Peat reserves are likely located in the north-west corner of the site and to the south and south-east of the site.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE1: Churchill Hospital

Planning permission will be granted for:

a) further hospital related uses, including the redevelopment of existing buildings to provide improved facilities on the Churchill Hospital Site

b) other suitable uses which must have an operational and/or research link to the hospital could include:

- employment;
- patient hotel;
- primary healthcare;
- education;
- academic institutional and research;
- extra care accommodation, including elderly persons accommodation;
- small scale retail units, provided that they are ancillary to the hospital;
- employer-linked affordable housing;
- Student accommodation.

Other complementary uses will be considered on their merits.

Development of the site should be undertaken as part of a masterplan to ensure all land use issues including parking are considered in a comprehensive way to make the most efficient use of land.

Open space, nature, flood risk

a) While there are no designated ecological features on the site itself, the site directly adjoins a number of designated ecological sites and parts of the GI network. There are also significant existing trees scattered within the site and near to the western boundary growing along Boundary Brook which are important to public amenity in the area and will provide valuable ecosystem services. Therefore, retention and enhancement of the supporting green infrastructure will be required (**Policies G1, G2, G3**). This enhancement could be achieved by increasing both the amount, and diversity of, landscaping and ensuring that development considers how different parts of the site may hold opportunities for ecological connectivity in the wider landscape. Opportunities should be sought to repurpose the existing hard surfaces for other uses including GI and amenity uses, or to

create connections between the site and landscape beyond, or green corridors/routes through the site.

b) Small strips along southeast/southwest boundaries of the site are identified within the Local Nature Recovery Strategy is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

c) As the site is located within identified impact risk zones for the Lye Valley SSSI, new development could have impacts on the functioning of this sensitive ecological site, particularly where it causes changes in surface water or groundwater conditions. Planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon the Lye Valley SSSI (**Policy G6**), including through impacts on surface or groundwater flows and quality, as well as groundwater recharge. Proposals should be designed to satisfy the applicable tests identified for the relevant impact risk zones set out in the Lye Valley Hydrogeological Impact Assessment report and accompanying Technical Advice Note, this may require additional supporting evidence in the form of a drainage strategy and/or hydrogeological impact assessment.

d) A buffer zone should be provided during the construction period to avoid disturbance to the adjacent SSSI and additional protective and enhancement measures for river and wetland restoration as required around the watercourse and ecological buffers zones (minimum 10metres from bank top) should form part of development proposals.

e) Any planning applications near the Boundary Brook or Lye Valley will also need to assess the potential for additional indirect impacts on the flora and fauna of those areas, including (but not limited to) potential impacts from lighting, noise, and dust, and provide adequate buffers and deliver ecological enhancements as required.

f) Due to the site's proximity to recorded peat reserves associated with the Lye Valley, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of these deposits (**Policy R6**). Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.

Urban design & heritage

g) The central part of the site comprises the historical temporary hospital buildings used during the Second World War, which are non-designated heritage assets. Proposals should seek to deliver enhancement of these assets and their settings. This should be achieved by ensuring architectural design takes inspiration from, and respects the context of, the existing non-designated heritage assets (**Policy HD4**).

h) A masterplan-led approach should be used to ensure that buildings and parking are rationalised with consideration given to the location of various uses to improve legibility of the site. Proposals should be designed to create active frontages and greater permeability through and into/ out of the site.

i) Materials and design quality should be improved as poor-quality buildings are replaced. This could be achieved by drawing inspiration from the non- designated heritage assets to inspire and enrich the identity, character and quality of new development on the site.

j) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

k) The site is car dominated with large areas utilised for surface level car parking. Development proposals should demonstrate rationalisation of the existing parking on the site to ensure the most efficient use of land is made.

l) Mitigation measures will be required to ensure that proposals do not lead to increased parking pressure on nearby residential streets.

m) Improvements to public transport, walking, cycling and wheeling access through the site will be required. These measures should be set out within a transport assessment and travel plan and reflected in an agreed masterplan.

n) Development proposals shall not prejudice bus access through the site, and new routes that effectively separate walking, cycling and wheeling from visitor or servicing traffic, will be encouraged. Additional access points to non-vehicular traffic onto the site will also be beneficial.

Additional Requirements

o) As the site has a long-standing hospital use, with potential for some areas of land contamination from historic use, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

East Oxford Bowls Club

Site area	0.3ha
Ward	St Clement's
Landowner	Oriel College, University of Oxford
Current Use(s)	Recreation (disused).
Flood zone	Flood Zone 1
Notable heritage assets	Located entirely within Bartlemas Conservation Area and forms the setting of multiple listed buildings including: Grade 2* Bartlemas Farm House and Bartlemas House and Grade 1 listed St Bartholomew Chapel. Within Crescent Road View Cone.
Notable ecological	Potential for nature conservation interest. The area is characterised by hedged boundaries on all sides and is adjacent to parts of the core

features	green infrastructure network.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE2: East Oxford Bowls Club

Planning permission will be granted for residential development, with the minimum number of 10 dwellings to be delivered. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development should result in enhancement of the hedgerow and existing trees which bound the site. Existing trees should be retained as much as possible. The opportunity to enhance existing wildlife corridors and ecological habitats with enhanced planting, screening and landscaping should be taken.
b) The site is adjacent to core green infrastructure (GI) so proposals should seek to support and enhance the surrounding GI. This enhancement could be addressed in different ways, such as through qualitative improvements to remaining on-site, and adjacent, areas of open space by improving the functionality of these spaces in terms of wider benefits they provide people and species. These actions would also contribute to maintaining the Urban Greening Factor score.

Urban design & heritage

c) Development proposals should be designed with consideration of their impacts on the setting of the Bartlemas Conservation Area, the setting of the nearby listed buildings and views (**Policy HD3**).
d) Landscape design should be a fundamental consideration at the earliest design stage, to enhance the contribution that existing trees and hedgerows make to the rural setting of the Bartlemas settlement, listed buildings, and the Bartlemas Conservation Area.
e) Proposals should be informed by the character and materiality of the Bartlemas Conservation Area. The size, alignment and design of any proposed development should take account of the importance of preserving the visual and physical connections between important, surviving, historic elements.
f) The Crescent Road View Cone crosses the site; proposals should be designed in a way that responds to this protected view (**Policy HD6**). This could be achieved by demonstrating appropriate massing and considering variations in roof forms. Gaps between buildings should be sufficient to retain the sense of openness and views of the green backdrop which enhance the setting of the conservation area.
g) Materials and construction details used for new development schemes should be of high quality, appropriate for the setting and sympathetic to the local context.

Movement & access

h) Development proposals should demonstrate appropriate vehicular access into the site, while preserving the secluded character of the conservation area. Bartlemas Close to the South East is most likely to be the location of the access. Access to the site will need to be considered to minimise the impact of vehicular traffic on the surrounding area.
i) Development proposals should demonstrate how the development enables access by alternative means of transport including improving connectivity to support walking, cycling and wheeling.

Government Buildings and Harcourt House

Site area	2.37ha
Ward	Headington Hill & Northway
Landowner	Oxford Centre for Islamic Studies
Current Use(s)	Car park, offices and cadet accommodation
Flood zone	Flood Zone 1
Notable heritage assets	Southern parcel is in Headington Hill Conservation Area whilst northern parcel is adjacent to it. The site is also opposite St Clements and Iffley Road Conservation Area. Grade II* Headington Hall is nearby (within the park), as is St. Clements Church. Cuckoo Lane intersects the two parcels of the site and is registered on the Oxford Heritage Asset Register (OHAR). Potential for archaeological remains onsite related to the Civil War Parliamentarian siege line previously identified in Headington Hill Park, particularly on the northern parcel of the site. The Headington Hill View Cone passes through the northern parcel of the site.
Notable ecological features	Site is within the impact risk zone of New Marston Meadows SSSI (to the northwest). Site is within 200m of the Long Meadow Local Wildlife Site (to the west), and is also approximately 250m from Headington Hill Viewpoint Oxfordshire County Wildlife Site (to the northeast). Part of the site is identified within the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE3: Government Buildings and Harcourt House

Planning permission will be granted for residential development, which may include student accommodation, as well as academic institutional uses (subject to **Policy H9**). The minimum number of dwellings to be delivered is 68 dwellings (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary commercial uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the New Marston Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the New Marston Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) Proposals should seek to retain existing features wherever possible, particularly higher quality ones, including: mature trees (especially those subject to TPOs or Conservation Area protection); green boundary features that help to preserve amenity and contribute to the leafy character of the area; as well as areas of priority habitat such as the woodland on the southern parcel of the site.

c) In order to retain the current Urban Greening Factor score, losses in green infrastructure should be compensated for, either through the enhancement of existing lower quality features, or through providing new features, which should seek to enhance connections through the site for wildlife and people through new linear features and wildlife corridors.

d) Public open space will be required onsite (**Policy G2**). Given the characteristics of the area and site, this is most likely to be suitable as natural areas that are more informal in design and can play a dual role in allowing people to get closer to nature, whilst also supporting existing species and achieving adequate greening to meet Urban Greening Factor requirements.

e) Due to the potential for various types of species to be present onsite, as well as indications of priority habitat being present, a biodiversity survey will be required to assess the ecological value of the site. Development proposals are expected to demonstrate how any harm to biodiversity on the site will be avoided, mitigated or compensated.

f) Small section of site (at eastern boundary of southern parcel) is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

g) Proposals must be designed to be sensitive to their impacts on the significance and setting of the nationally listed and locally listed heritage assets on site and adjacent to it, taking opportunities to enhance these wherever possible (**Policy HD3**).

h) Development proposals must also take into consideration the potential presence of archaeological remains related to the Civil War Parliamentarian Siege line and should ensure that these (and any other) archaeological assets are appropriately investigated and responded to (**Policy HD5**).

i) The Headington Hill view cone passes through the northern parcel of the site and there are other locally important views identified in the conservation area appraisal such as significant view lines from Headington Hill Hall towards the site and along the paths at the back of the southern parcel of the site. Proposals should be designed in a way that responds to the protected view (**Policy HD6**), and these other local views. This could be achieved by ensuring that building heights, scale and massing have been informed by an analysis and understanding of these views, with particular attention paid to design of new buildings within the view cone, as well as on the eastern side of the site which is more sensitive in terms of

impacts on the setting of the park.

j) Design choices (such as development blocks and selection of materials) should be sensitive to the special historic qualities and character of the area, including heritage assets and wider townscape, ideally seeking to enhance these. Design of new buildings could also take inspiration from other high-quality buildings in the area, such as the Centre for Islamic Studies which is very close by.

k) Boundary features could make use of green features as well as other materials that can help to maintain and enhance the parkland setting of the area and help the site blend into its surroundings. Aligning blocks parallel to the road would also help to create a consistent building line within the setting of the trees.

Movement & access

l) Access into the site at present is primarily focused on vehicles, so proposals should seek to improve upon accessibility for walking, cycling and wheeling. This should include new access into the southern parcel for these users, whilst consideration should also be given towards new crossings on Marston Road. There may also be opportunities to improve connectivity between the two parcels of the site via Cuckoo Lane.

m) New walking and wheeling access points into the park from the site's eastern boundaries should also be explored as this would facilitate access for residents and promote additional opportunities for making use of that open space, although the impacts on the setting of the park will also need to be considered and care should be taken to reduce impacts on the green character of the eastern boundary.

n) Vehicle access points into the site are likely to be most suitable in their current locations. This means single access in and out for each parcel, so circulation around that site needs to be considered carefully. Opportunities to consolidate the existing parking provision on the site should be explored and design of new parking should seek to avoid overuse of hard landscaping, incorporating green features that can help to blend this into the wider setting wherever possible.

Additional requirements

o) Consideration should be given to ensuring that design of new development mitigates amenity impacts on the setting of the adjacent park, which may include more sensitive design of lighting systems and care over noise created by uses on the eastern boundary of the site.

p) The green buffering along the western boundary of the site and fronting onto Marston Road should be retained or enhanced wherever possible in order to help mitigate impacts from traffic noise and air pollution on occupants of the development.

q) Whilst parts of the site have previously been subject to remediation proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Jesus College Sports Area

Site area	0.8ha (Area A) and 0.55ha (Area B)
Ward	Donnington
Landowner	Jesus College
Current Use(s)	Sports field
Flood zone	Flood Zone 1
Notable heritage assets	Within the Bartlemas historic hamlet, and adjacent to Bartlemas Conservation Area. Within the setting of: Grade 2* listed Bartlemas Farm House Grade 2* listed Bartlemas House Grade 1 listed St Bartholomew Chapel. The Crescent Road View Cone falls across the southern portion of Area B.
Notable ecological features	Established hedgerow and existing mature trees, particularly along the northern and eastern boundaries of Area A. The sites form part of the Green Infrastructure (GI) Network as supporting infrastructure.
Urban Greening Factor score	The sites are likely to score above the Urban Greening Factor target.

Policy SPE4: Jesus College Sports Area

Planning permission will be granted for residential development (including graduate accommodation) at Jesus College Sports Area sites which comprise Area A (Playing Field off Bartlemas Close) and Area B (Herbert Close tennis courts).

The minimum number of dwellings to be delivered is 40, which may come forward individually as a minimum of 24 dwellings on Area A and a minimum of 16 dwellings on Area B (or, if delivered as non-self-contained student accommodation, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) The entirety of both sites has been identified as supporting green infrastructure (**Policy G1**) so enhancement of remaining GI will be required to mitigate loss. This enhancement could be addressed in different ways, such as through qualitative improvements to remaining on-site, and adjacent, areas of open space by

improving the functionality of these spaces in terms of wider benefits they provide people and species. These actions would also contribute to maintaining the Urban Greening Factor score.

b) Development should result in enhancement of the hedgerow and existing trees which bound the sites. Existing trees should be retained as much as possible. The opportunity to enhance existing wildlife corridors and ecological habitats with enhanced planting, screening and landscaping should be taken. A green corridor should be retained along the north of the Area A to maintain the continuous green network alongside the Oxford Golf Course and towards the Oriel College Sports Ground.

c) There is potential to consolidate and share sports provision on Areas A and B and/or on the retained sports ground adjacent to Area A, as well as with the neighbouring Lincoln College Sports Ground site (**Policy SPE7**). If sports provision can be shared and still provide the same capacity to meet playing pitch needs, then a larger area of the site(s) could be developed. Contributions could be made to improving a local facility such that its capacity increase replaces what is lost on the site(s).

Urban design & heritage

d) Landscape design should be a fundamental consideration at the earliest design stage, to enhance the contribution that existing trees and hedgerows make to the rural setting of the Bartlemas settlement, listed buildings, and the Bartlemas Conservation Area (**Policy HD3**).

e) Proposals on both parts of the site should demonstrate a holistic approach to shared design, layout and materials to ensure that good placemaking is achieved. This should be informed by the character and materiality of the Conservation Area and the Edwardian and Victorian residential streets on the southern side of Barracks Lane should influence the design of new development (**Policy HD3**).

f) The Crescent Road View Cone crosses the south of Area B; proposals should be designed in a way that responds to this protected view (**Policy HD6**). This could be achieved by creating a graduation of height, lower on the southern edge and increasing in height towards the north, as well as appropriate massing and considering variations in roof forms. Gaps between buildings on Areas A and B should be sufficient to retain the sense of openness and views of the green backdrop which enhance the setting of the conservation area.

g) Proposals should take into consideration the potential for archaeological assets, ensuring they are appropriately investigated and responded to (**Policy HD5**).

h) The relationship between Areas A and B and the Lincoln College Sports Ground (**Policy SPE7**) and remaining sports uses on adjacent sites should be a consideration in future development proposals. Proposals should demonstrate that there would not be detrimental impacts arising from overshadowing/ overbearing/overlooking of the sports pitch(es). Additionally, noise impacts from the surrounding recreational uses upon future occupiers of the development site should be mitigated.

Movement & access

i) Walking, cycling, wheeling and vehicle access should be via the existing access off Herbert Close.

j) Proposals which demonstrate low or car free schemes are encouraged. If graduate accommodation comes forward, then vehicle parking should only be available for servicing vehicles and disabled access.

John Radcliffe Hospital

Site area	27.75ha
Ward	Headington Hill and Northway
Landowner	Oxford University Hospitals NHS Foundation Trust
Current Use(s)	Teaching Hospital
Flood zone	Flood Zone 1
Notable heritage assets	Part of the site (eastern and southern) falls within the Old Headington Conservation Area, with most of the site directly adjacent to it. Grade II listed Manor House, annex and boundary wall within site boundary - notable views across the parkland to the Manor House are identified in the Conservation Area Appraisal. Other buildings onsite such as William Osler House are noted as positive buildings in the Conservation Area appraisal. There are many listed buildings and locally listed buildings adjacent in the Old Headington Conservation Area. The eastern part of the site has significant archaeological potential because it incorporates parts of the medieval village of Headington. Significant new development in undisturbed areas may require evaluation. While not within view cones, the site is very prominent in views across Oxford.
Notable ecological features	Site contains many significant existing trees. Some of the trees are protected by their location within the Old Headington Conservation Area. The southern part of the site falls within an identified impact risk zone for the Lye Valley SSSI.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE5: John Radcliffe Hospital

Planning permission will be granted for:

a) further hospital related uses, including the redevelopment of existing buildings to provide improved facilities on the John Radcliffe Hospital Site; and/or:

b) Other suitable uses which must have an operational link to the hospital and are:
- Employment uses;
- Patient hotel;
- Extra care accommodation, including elderly persons accommodation;
- Primary health care;
- Education;
- Academic institutional;
- Small scale retail units ancillary to the hospital;
- Employer-linked affordable housing;
- Student accommodation.

Other complementary uses will be considered on their merits.

Development of the site should be undertaken as part of a masterplan to ensure all land use issues including parking are considered in a comprehensive way to make the most efficient use of land.

Open space, nature, flood risk

a) Development proposals must ensure that existing green infrastructure features on the site are protected and opportunities sought to enhance these. An Urban Greening Factor assessment will need to be produced and submitted. Planning permission will only be granted if an appropriate proportion of green features are incorporated into the design of development to meet the minimum targets (**Policies G1, G2 and G3**).

b) Existing onsite biodiversity should be retained, enhanced and integrated into development proposals (**Policies G2 and G4**).

c) Existing drainage features such as the brook separating northern car parks should be maintained, enhanced and integrated into the landscape scheme, potentially creating wildlife corridors through the site (**Policy G8**).

d) This site is within an area where development could exacerbate surface and/or foul water flooding. There is an opportunity to address excess of runoff at the John Radcliffe Hospital site by ensuring that any development at the site reduces rather than maintains existing levels. This could take the form of ponds, wetlands or an on-site attenuation feature. A drainage strategy will also need to be produced by the developer in liaison with the City Council, Thames Water and the Environment Agency, to establish the appropriate drainage mitigation measures for any development. Planning permission will only be granted if sufficient drainage mitigation measures are incorporated into the design of proposals (**Policy G7**).

e) As the southern part of the site is located within an identified impact risk zone for the Lye Valley SSSI, new development could have impacts on the functioning of this sensitive ecological site, particularly where it causes changes in surface water or groundwater conditions. Planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon the Lye Valley SSSI (**Policy G6**), including through impacts on surface or groundwater flows and quality, as well as groundwater recharge. Proposals should be designed to satisfy the applicable tests identified for the relevant impact risk zones set out in the Lye Valley Hydrogeological Impact Assessment report and accompanying Technical Advice Note, this may require additional supporting evidence in the form of a drainage strategy.

Urban design & heritage

f) Development proposals must be designed with consideration of their impact on the Old Headington Conservation Area and views, particularly from the Boars Hill and Elsfield view cones, as well as on the listed buildings (**Policies HD3 and HD6**).

g) For development of new hospital buildings, materials should be consistent with

townscape character and be modern in style and materials. Whilst a more contextual approach should be considered for development of residential, student residential or employer linked housing which would soften the impact of any new development and take inspiration from neighbouring areas. Material choice should not exacerbate the prominence of the hospital in views across the city or the view cones.

h) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

i) Development proposals should demonstrate rationalisation of the existing parking on the site to ensure the most efficient use of land is made.

j) Improvements to public transport, walking, cycling and wheeling access through the site will be required. These measures should be set out within a transport assessment and travel plan and reflected in an agreed masterplan. Development proposals must not prejudice bus access through the site, and new routes that effectively separate walking, cycling and wheeling from visitor or servicing traffic, will be encouraged. Additional access points to non-vehicular traffic onto the site will also be beneficial.

Additional Requirements

k) As the site has a long-standing hospital use, with potential for some areas of land contamination, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Land Surrounding St Clement's Church

Site area	2.31 ha
Ward	St Clement's
Landowner	Magdalen College
Current Use(s)	Greenfield with vacant ATC huts in south and bungalows and plant

	nursery in north.
Flood zone	Flood Zone 3a
Notable heritage assets	Site surrounds Grade II* listed St Clement's Church. Southern half of the site within South Park View Cone. Within St Clement's and Iffley Road Conservation Area and within setting of Headington Hill Conservation Area
Notable ecological features	The site is within the impact risk zone of New Marston Meadows SSSI. Part of the site is identified in the Local Nature Recovery Strategy (LNRS). Potential protected species including roosting bats, foraging and commuting bats, nesting birds, reptiles, water vole and otter
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE6: Land surrounding St Clement's Church

Planning permission will be granted for residential development and/ or student accommodation at the Land surrounding St Clement's Church site. The minimum number of dwellings to be delivered is 50 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Planning permission will also be granted for a children's nursery and a pavilion as complementary uses, and other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the New Marston Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the New Marston Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) Part of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

c) Due to the potential for various types of species to be present onsite, as well as indications of priority habitat being present, a biodiversity survey will be required to assess the ecological value of the site. Development proposals are expected to demonstrate how any harm to biodiversity on the site will be avoided, mitigated or compensated. The Cherwell is likely to be an important foraging and commuting resource for bats and should not be subject to any artificial illumination, and neither should the church or flightpaths if it supports roosting bats.

d) At least a 10 metre buffer should be left between built development and the River Cherwell that adjoins the site.

e) Public open space will be required onsite (**Policy G2**). On this site this is most likely to be suitable as a nature area of native and diverse planting in the south west corner where the site is narrow, there is some flood risk and where a buffer to the Cherwell is required.

f) Habitats should be preserved and enhanced, retaining existing hedgerows and mature trees where possible. Mature trees to the west and north of the church, the tree and hedge-lines south of the church and along the Marston Road and the

natural vegetation along the river should be maintained.

g) Gardens with rich planting along boundaries should allow more diverse routes through the site for wildlife, connecting the river with neighbouring sites.

h) Native hedgerow planting alongside the new homes should connect the river to west and the mature trees alongside the Marston Road to the east.

i) A site-specific Flood Risk Assessment (FRA) should be carried out. A sequential approach should be taken to locating development on the site. Development should avoid the area of flood risk in the southwest of the site. A drainage strategy should be carried out to manage run-off arising from the development and ensure that surface water flood risk on and off the site is not increased. Infiltration SuDS may be challenging because of the geology of the site, but a geotechnical investigation may confirm this is viable in some parts of the site. Attenuated discharge may need to be considered as part of the FRA. (**Policy G7** and **Policy G8**)**.**

Urban design & heritage

j) Development proposals should be designed with consideration of their impacts on the significance of the heritage assets ilisted above **(Policy HD3)**.

k) The built form should be highly sympathetic to the sensitive setting, which will mean buildings should reflect the semi-rural character of the site and be relatively limited in height and massing so as not to dominate the church and in response to the surrounding character. For example, terraced or semi-detached housing with pitched roofs would reflect the local vernacular in the character area and should provide a sympathetic setting for the church. There would be an opportunity for larger plots to bookend rows or at junctions, giving variety to the roofscape.

l) The narrow strip to the south of the church will need a bespoke design and there are a number of key considerations. Heights should drop towards the Cherwell, to be sympathetic to the relatively rural setting of the river. The green screening of the church should be retained. The impacts on the adjoining homes to the south will need to be considered carefully, avoiding direct over-looking into windows.

m) There is a clear visual relationship between the river and its meadows, the church and the green slope of Headington Hill, with views from the church across the Cherwell and towards Magdalen College, and these should be referenced in new development.

n) Buildings should be arranged in a way that maintains the openness of the riverside setting, that does not compete with the Grade II* listed St. Clement's Church, and that maintains the hedge and treeline on the Marston Road and the avenue of trees south of the church that screen it and contribute strongly to the character of its setting (**Policy HD3**).

Movement & access

o) One main entrance would allow a highways compliant design while minimising the loss of hedgerow on Marston Road. This being sited towards the north of the site avoids the more sensitive area around the church. The existing access to the bungalows could become the main access.

p) A separate vehicle entrance to the south, where there is existing access to the ATC huts, is likely to be needed to service any development in this southern part of the site, but the impact on the setting of the church must be considered. The shorter, further south and more rural in character the access is the less likely it is to detract from the setting.

q) There is a network of paths and bridges at the northwest corner of the site, in the private ownership of Magdalen College. Opportunities to open these up for public access should be considered. A potential additional walking and wheeling link across the river would help linkages.

r) Walking, cycling and wheeling connections within the site should link the southern

to the northern part of the site.

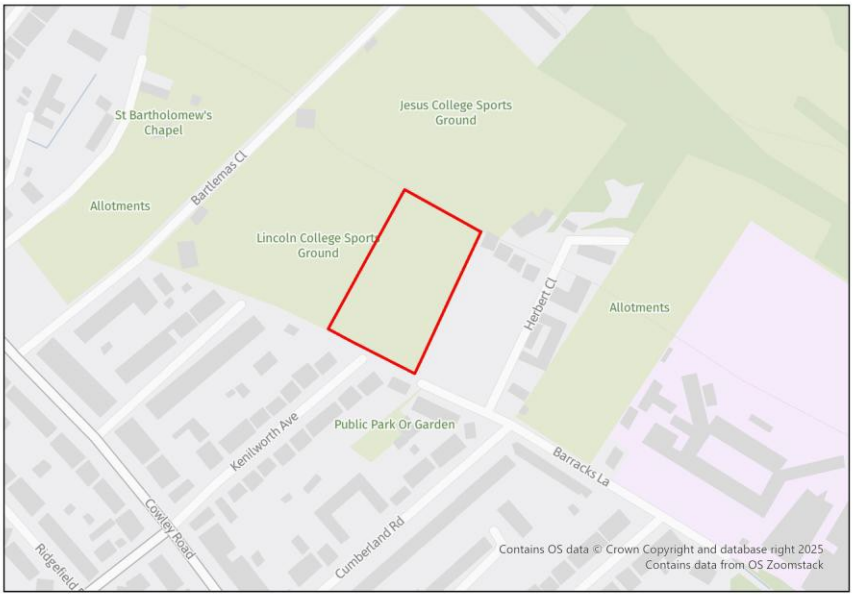
s) Parking should be kept in the public realm where possible and could be located close to the Marston Road, allowing the development to be more focused on walking, cycling and wheeling within the site.

Additional requirements

t) The River Cherwell is likely to be an important foraging and commuting resource for bats and should not be subject to any artificial illumination as a result of any proposed development. If St Clement's Church has the potential to support roosting bats, neither the church nor flightpaths to and from it should be subject to illumination either. A lighting strategy should be submitted in support of any planning application, setting out the lighting associated with the proposed development. This will need to account for both internal and external lighting.

u) Development proposals should include an acoustic design statement to be submitted in compliance with **Policy R8** as this site is part of an area which is subject to significant environmental noise from traffic on the surrounding roads.

Lincoln College Sports Ground



Site area	0.8ha
Ward	Donnington
Landowner	Lincoln College
Current Use(s)	Sports field
Flood zone	Flood Zone 1
Notable heritage assets	Within the Bartlemas historic hamlet. Adjacent to Bartlemas Conservation Area and within the setting of: Grade 2* listed Bartlemas Farm House, Grade 2* listed Bartlemas House, Grade 1 listed St Bartholomew Chapel. The Crescent Road View Cone falls across the southern portion of the site.
Notable	Forms part of the Green Infrastructure (GI) Network as supporting

ecological features	infrastructure.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE7: Lincoln College Sports Ground

Planning permission will be granted for residential development (including graduate accommodation) at Lincoln College Sports Ground.

The minimum number of dwellings to be delivered is 24 (or, if delivered as non-self-contained student accommodation, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) The entirety of the site has been identified as supporting green infrastructure (**Policy G1**) so enhancement of remaining GI will be required to mitigate loss. This enhancement could be addressed in different ways, such as through qualitative improvements to remaining on-site, and adjacent, areas of open space by improving the functionality of these spaces in terms of wider benefits they provide people and species. These actions would also contribute to retaining the current Urban Greening Factor score.

b) Development should result in enhancement of the hedgerow and existing trees which bound the site. Existing trees should be retained as much as possible. The opportunity to enhance existing wildlife corridors and ecological habitats with enhanced planting, screening and landscaping should be taken.

c) There is potential to consolidate and share sports provision with the neighbouring Jesus College Sports Area (**Policy SPE4**). If sports provision can be shared and still provide the same capacity to meet playing pitch needs, then a larger area of the site(s) could be developed. Contributions could be made to improving a local facility such that its capacity increase replaces what is lost on the site(s).

Urban design & heritage

d) Landscape design should be a fundamental consideration at the earliest design stage, to enhance the contribution that existing trees and hedgerows make to the rural setting of the Bartlemas settlement, listed buildings, and the Bartlemas Conservation Area. Proposals should be informed by the character and materiality of the Bartlemas Conservation Area and the Edwardian and Victorian residential streets on the southern side of Barracks Lane should influence the design of new development (**Policy HD3**).

e) The Crescent Road View Cone crosses the south of the site; proposals should be designed in a way that responds to this protected view (**Policy HD6**). This could be achieved by creating a graduation of height, lower on the southern edge and increasing in height towards the north, as well as appropriate massing and considering variations in roof forms. Gaps between buildings should be sufficient to retain the sense of openness and views of the green backdrop which enhance the setting of the Conservation Area (**Policy HD3**).

f) Proposals should take into consideration the potential for archaeological assets, ensuring they are appropriately investigated and responded to (**Policy HD5**).

g) The relationship between the site and sites A and B on the Jesus College Sports Area (**Policy SPE4**), and remaining sports uses on adjacent sites, should be a consideration in future development proposals. Proposals should demonstrate that there would not be detrimental impacts arising from overshadowing/ overbearing/overlooking of the sports pitch(s). Additionally, noise impacts from the surrounding recreational uses upon future occupiers of the development site

should be mitigated.

Movement & access

h) Walk, cycle, wheel and vehicle access should be via the existing access off Bartlemas Close unless it can be adequately demonstrated that suitable access would be possible via Herbert Close and/or Barracks Lane.

i) Proposals which demonstrate low or car free schemes are encouraged. If graduate accommodation comes forward, then vehicle parking should only be available for servicing vehicles and disabled access.

Manzil Way Resource Centre

Site area	0.75ha
Ward	St Clement's
Landowner	Oxford Health NHS Foundation Trust
Current Use(s)	Administrative, part of the site also subleased to Restore (garden and cafe).
Flood zone	Flood Zone 1
Notable heritage assets	Bartlemas Conservation Area is located to the east. Most of site within the Crescent Road View Cone. There is potential for Roman pottery as previously found near Cowley Road hospital.
Notable ecological features	Potential protected species constraints including bats, great crested newts and hedgehogs.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE8: Manzil Way Resource Centre
Planning permission will be granted for improved healthcare facilities and associated administration and/or residential development, including employer-linked affordable

housing and/or student accommodation at the Manzil Way Resource Centre site. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals should include urban greening on the site seeking opportunities to introduce more tree and shrub planting. Existing hedgerows and mature trees along the sites boundaries should be retained where possible (**Policy G1**).
b) Appropriate ecological surveys should be undertaken to ensure that development proposals do not have an adverse impact on protected species (e.g. bats/ breeding birds).

Urban design & heritage

c) Development proposals should respond to the opportunities of the adjoining Manzil Gardens public open space and also support enhancements to Manzil Way to become a high quality spine from which numerous community-focussed buildings are accessed (the health centre, Mosque and Asian Culture Centre, and the community garden cafe) (**Policy G1**).
d) The southern part of the site lies within the Crescent Road view cone. Proposals should be designed in a way that responds to this protected view (**Policy HD6**).
e) The impacts of any development proposals on the adjoining residential development to the east of the site will need to be considered.
f) Proposals should take into consideration the potential for archaeological assets, ensuring they are appropriately investigated and responded to (**Policy HD5**).

Movement & access

g) The existing accesses to the site should be retained with internal circulation designed to avoid conflict of movements between different modes (**Policy C6**).
h) Development proposals should demonstrate how the development enables access by active modes of travel such as walking, wheeling and cycling (**Policy C6**).
i) Given the location in the district centre and within a CPZ any additional residential development should be low car (**Policy C8**).
j) Non-residential development should attempt to reduce parking and should have no more parking than is necessary to serve the development.

Additional Requirements

k) As the site has a long-standing healthcare use, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Marston Paddock Extension

Site area	0.51
Ward	Marston
Landowner	Lucy Developments Ltd
Current Use(s)	Vacant farmhouse and curtilage including outbuildings
Flood zone	Flood Zone 1
Notable heritage assets	Within Old Marston Conservation Area
Notable ecological features	Trees around boundaries. Recently cleared area in the northeast part of the site means the biodiversity value would have been greater than currently and the baseline will need to reflect that prior to the intervention.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE9: Marston Paddock Extension

Planning permission will be granted for residential development at the Marston Paddock Extension site. The minimum number of homes to be delivered is 20. Other complementary uses will be considered on their merits.
(**Policy H2**) As this is a site released from Green Belt through the local plan process, it should deliver 50% affordable housing in accordance with Policy H2, and deliver improvements to accessible green space.

Open space, nature, flood risk

a) Green amenity space with rich planting should help maintain green links through the site.
b) The hedge/tree lines on the northern, southern and eastern boundaries should be retained and enhanced, for example with native tree planting.
c) Biodiversity surveys are likely to be required and mitigation may be needed for any protected species.
d) The biodiversity baseline will need to reflect the scrub/grassland in place prior to the land clearance that has recently occurred.

Urban design & heritage

e) Development proposals should be designed with consideration for their impacts on

the Old Marston Conservation Area (**Policy HD3**).

f) The development should respond carefully to surrounding residential development. Sufficient buffering and screening will be needed along the northern boundary, to avoid harm.

g) Development should be set back from Butts Lane, to help reduce impact on the character of the conservation area.

h) Public realm should retain a green and rural character with a feeling of openness.

i) A variety of styles and materials should be used, as uniformity would undermine the character of the area.

j) The nature of the conservation area means that only relatively low density and low height built form is likely to be appropriate

Movement & access

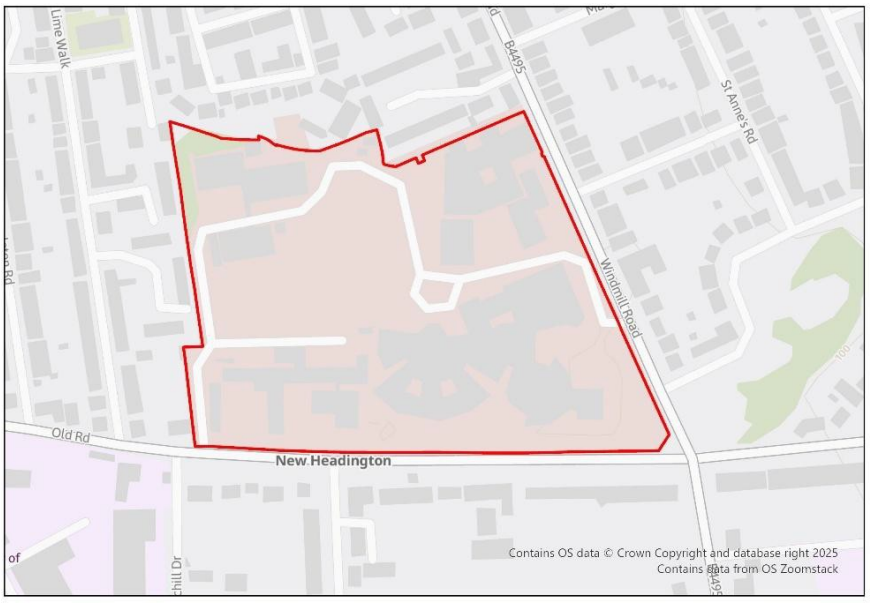
k) Access arrangements should be shown not to be detrimental to highway safety.

l) It should be demonstrated how access by public transport, walking, wheeling and cycling will be supported.

Additional requirements

m) Depending on the nature of proposals, a full contamination risk assessment may be required to quantify contamination risks and determine what remedial treatment actions are required.

Nuffield Orthopaedic Centre (NOC)



Site area	8.38ha
Ward	Headington
Landowner	Oxford University Hospital NHS Foundation Trust
Current Use(s)	Healthcare and Medical Research
Flood zone	Flood Zone 1
Notable heritage assets	All Saints Vicarage outside the site on the SW corner is on the Oxford Heritage Asset Register (OHAR). Site has potential for archaeological interest as Roman remains have been found in the area.

Notable ecological features	Rock Edge geological SSSI situated on Windmill Road adjacent to the site. The site lies within identified impact risk zones for the Lye Valley SSSI which is located within 350m of the site.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE10: Nuffield Orthopaedic Centre

Planning permission will be granted for further healthcare facilities and medical research including staff and patient facilities at the Nuffield Orthopaedic Centre. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Habitats should be preserved and enhanced, retaining existing hedgerows and mature trees where possible.

b) There are significant existing trees scattered within the site and along the boundaries of Old Road and Windmill Road which are important to public amenity in the area and will provide valuable ecosystem services. Therefore, retention and enhancement of the supporting green infrastructure will be required (**Policies G1, G2, G3**). This enhancement could be achieved by increasing both the amount, and diversity, of landscaping and ensuring that development considers how different parts of the site may hold opportunities for ecological connectivity in the wider landscape. Opportunities should be sought to repurpose the existing hard surfaces for other uses including GI and amenity uses, or to create connections between the site and landscape beyond, or green corridors/routes through the site.

c) As the site is located within identified impact risk zones for the Lye Valley SSSI, new development could have impacts on the functioning of this sensitive ecological site, particularly where it causes changes in surface water or groundwater conditions. Planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon the Lye Valley SSSI (**Policy G6**), including through impacts on surface or groundwater flows and quality, as well as groundwater recharge. Proposals should be designed to satisfy the applicable tests identified for the relevant impact risk zones set out in the Lye Valley Hydrogeological Impact Assessment report and accompanying Technical Advice Note, this may require additional supporting evidence in the form of a drainage strategy.

d) As the site is adjacent to the Rock Edge SSSI a buffer zone will be required during the construction phase to ensure SSSI land is not disturbed.

e) Due to the site's proximity to recorded peat reserves associated with the Lye Valley, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss to these deposits (**Policy R6**). Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.

Urban design & heritage

f) There may be potential for infill development of repurposed surface level parking areas and redevelopment of the existing low-density buildings in the South–Western part of the site.

g) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

h) Proposals should seek to consolidate car parking, where possible, to make the most efficient use of land and take opportunities to reduce the amount of hard surfacing in favour of increased landscaping or other forms of GI.

i) Development proposals should demonstrate how improvements to public transport, walking, cycling and wheeling access through the site, as well as additional access points to non-vehicular traffic have been incorporated. These measures should be set out within a transport assessment and travel plan and reflected in an agreed masterplan.

Additional Requirements

j) As the site has a long-standing hospital use, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Oxford Brookes Marston Road Campus

Site area	1.18 ha
Ward	Headington Hill & Northway
Landowner	Oxford Brookes University
Current Use(s)	Higher Education Facilities
Flood zone	Flood Zone 1
Notable heritage assets	The site sits just to the south of the Doris Field Memorial Park view cone which begins a short way to the north east and looks south west. Directly adjacent to Headington Hill Conservation Area. Former Milham Ford School Building has been included on the Oxford Heritage Asset Register (OHAR)
Notable ecological features	Milham Ford Nature Park, which lies directly adjacent and forms the eastern boundary of the site, and the internal quad formed within Milham Ford School grounds are both designated as Local Wildlife Sites. The site is within the impact risk zone of New Marston Meadows

	SSSI.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE11: Oxford Brookes Marston Road Campus

Planning permission will be granted for residential development, with the minimum number of 42 dwellings delivered (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the New Marston Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the New Marston Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) The main Milham Ford Nature Park should be excluded from any development area, and the designated internal quad should be retained (**Policy G6**).

c) Development proposals should seek to enhance and connect the existing green infrastructure, specifically between the Milham Ford Nature Park, inner quad and the surrounding GI network (**Policies G1 and G2**).

d) The tree lines on the perimeter are well-established. They provide amenity for the residential neighbours and for occupiers of the site and should be retained where possible.

e) Proposals for the site, regardless of the development options, should include more natural features and surface cover types to enhance the Urban Greening Factor score for the site (**Policy G3**), the policy requirements for which will require an uplift from existing levels regardless of the use.

Urban design & heritage

f) Proposals on this site should respond positively to the directly adjacent Headington Hill Conservation Area context (**Policy HD3**).

g) Design proposals should acknowledge the Milham Ford School buildings status as a local landmark in a historic, social and physical sense. The OHAR designation report highlights the elements that are distinctive to the building and its significance.

h) Reuse of the original building fabric is encouraged where this is feasible, not only to respect the local historic significance of the site but also for sustainability reasons. Because of the designation of the inner quad as a Local Wildlife Site, it should be retained as open natural space even if wholesale redevelopment of the site is the chosen option.

<u>Movement & access</u>

i) Proposals should explore opportunities to improve non-vehicular movement through the site, particularly from north to south. Car free and low car development proposals will be strongly supported.

Rectory Centre

Site area	0.21ha
Ward	St Clement's
Landowner	Oxford Health NHS Foundation Trust
Current Use(s)	Healthcare
Flood zone	Flood Zone 1
Notable heritage assets	Site is within Crescent Road View Cone.
Notable ecological features	There is limited natural vegetation on the site as it is mainly a developed area, though there is a single established tree within the site boundary, which is adjacent to a cluster of trees to the east.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE12: Rectory Centre

Planning permission will be granted for improved health-care facilities, associated administration and/or residential development, which may include student accommodation. For a residential scheme, the minimum number of homes to be delivered is 21 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Development of this site for residential use would lead to the loss of community facilities, so these should be re-provided elsewhere, in accordance with (**Policy C3)**, which may be through consolidation onto other healthcare sites.

Open space, nature, flood risk

a) Most of the site is made up of hard surfaces either from tarmac or building roofs with little vegetation or permeable surfaces present so there is an opportunity to increase the amount of green infrastructure on site. This could be achieved by implementing elements of smaller and individual green features as part of gardens, as well as around boundaries, which should be implemented to complement any residential development which will in turn create a more pleasant living environment for residents.
b) Preliminary analysis suggests that the limited presence of green infrastructure

features on the site currently means it is likely to score below the minimum thresholds for green surface cover as required by Policy G3. As such, proposals will need to ensure that an appropriate proportion of green features are incorporated into the design of development to meet the minimum targets set out in the policy, demonstrated through submission of the Urban Greening Factor assessment.

Urban design & heritage

c) The site lies within the Crescent Road View Cone; proposals should be designed in a way that responds to this protected view (**Policy HD6**).

d) Any development should respond to both the character of the Victorian suburb and the vibrant Cowley Road District Centre.

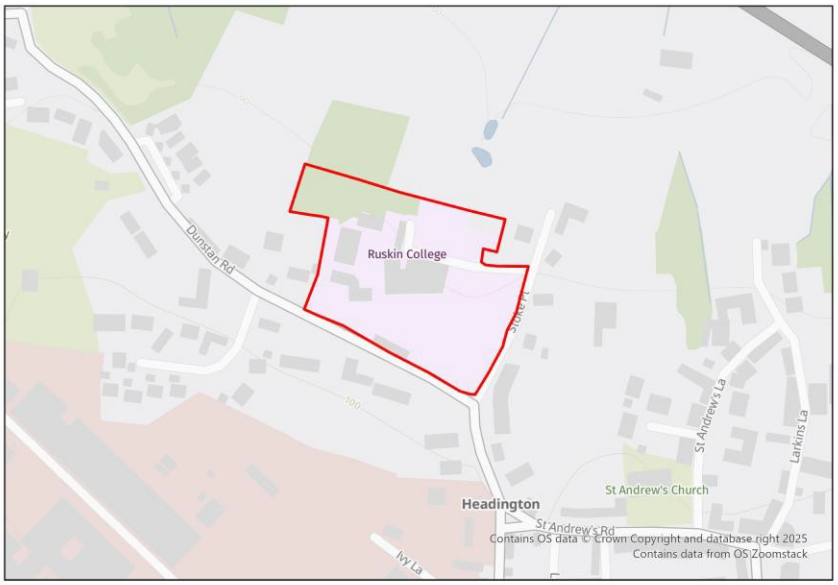
Movement & access

e) The constrained nature of the site means that the site is only accessible via Rectory Road from the west. The site should be easily navigable for residents, although applicants will be expected to demonstrate how the development improves connectivity to support walking, cycling and wheeling.

Additional Requirements

f) The site has potential contamination so a site investigation will be required, and remedial works are likely to be necessary to be undertaken (**Policy R7**).

Ruskin Campus



Site area	1.86ha
Ward	Headington
Landowner	University of West London (UWL)
Current Use(s)	University campus site
Flood zone	Flood Zone 1
Notable heritage assets	Site is entirely within the Old Headington Conservation Area. The Rookery (Grade II listed) is within the site and there is a Grade II

	listed wall on the edge of the site (Walls of Walled Garden at Ruskin College). The site is close to a number of other listed buildings: Stoke House, Grade II listed, 8 Dunstan Road, Grade II listed, The Manor Farmhouse and Garden Wall of Manor Farmhouse, both Grade II, Church of St Andrew, Grade II*. Evidence of Iron Age activity and Roman pottery production has been recorded.
Notable ecological features	Potential for protected species constraints within the site may include roosting bats, nesting birds, reptiles and amphibians.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE13: Ruskin Campus

Planning permission will be granted for academic institutional uses (subject to **Policy H9**), student accommodation and residential development, including student accommodation and employer-linked housing). The minimum number of dwellings (net gain) to be delivered is 30 (or, if delivered as self-contained student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Trees and hedges at the edges of the site provide a rural character and should be retained.
b) Trees of the greatest value and quality should be retained and other trees within the site should be protected where possible, and if their loss is justified it must be compensated for within the development, with new native hedge and tree planting to connect existing trees and hedgerows.
c) Detailed biodiversity surveys may be required, depending on the nature of the proposals, to ascertain what protected species are present and any mitigations that may be needed.
d) There should be no overall loss of sports provision as a result of any proposals.
e) Due to the site's proximity to recorded peat reserves associated with Dunstan Park, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of these deposits (**Policy R6**). Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.

Urban design & heritage

f) Development proposals must be designed with consideration for their impact on the Old Headington Conservation Area (**Policy HD3**).
g) Retention of the significant green features within the site is important to retain the semi-rural feel of the conservation area and links to green spaces beyond the site.
h) Development should be sensitive to the setting of the listed buildings within the site and nearby (**Policy HD3**).
i) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

j) Existing access to the site from Dunstan Road should remain as the access to the site.

k) Opportunities should be taken to enhance walk, cycle and wheel links into the site and circulation around the site.

Ruskin Field

Site area	3.51ha
Ward	Headington
Landowner	University of West London (UWL)
Current Use(s)	Greenfield vacant land with GI function
Flood zone	Flood Zone 1
Notable heritage assets	Site is entirely within the Old Headington Conservation Area and as a vestige of the rural landscape, the site makes an important contribution to the character, appearance and significance. There is a Grade II listed wall on the edge of the site. The site lies within the settings of a number of other listed buildings: The Rookery, Stoke House, 8 Dunstan Road, The Manor Farmhouse and Garden Wall of Manor Farmhouse, all Grade II listed and Church of St Andrew, Grade II* listed. The site is not within a view cone but there is potential for it to impact views from the Elsfield View Cone. Evidence of Iron Age activity and Roman pottery production has been recorded from the adjacent college campus site, so it has archaeological potential.
Notable ecological features	Potential for nature conservation interest. The site consists of a series of neutral grassland fields. They appear semi-improved ranging from species-poor to moderately species-rich (semi-improved – good). There is a pond in the southern part of the site. Some of the boundary hedges are wide and dense and likely to have value to birds. Potential protected species constraints include roosting bats, foraging and commuting bats, breeding birds, reptiles, amphibians and invertebrates.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE14: Ruskin Field

Planning permission will be granted for residential development, which may include employer-linked affordable housing or student accommodation. The minimum number of dwellings to be delivered is 28 (or, if delivered as self-contained student rooms, the equivalent number of rooms when the relevant ratio is applied. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) The green character of the site is important to the setting of the Old Headington Conservation Area. The hedgerows and treelines are likely to have ecological value. For this reason, trees and hedgerows at the boundaries of the site and running through the site should be retained as far as possible, and opportunities taken for enhancement.
b) New native hedge and tree planting should connect existing trees and hedgerows.
c) Gardens and amenity spaces will need to have rich planting along boundaries to allow more diverse networks through the site for wildlife.
d) The southern part of the site should be kept as open space, with opportunities taken for enhancement, particularly of any wetland features, and/or extension of the deciduous woodland priority habitat to the south.
e) Detailed biodiversity surveys will be required at the right times of year to ascertain which if any protected species are present and any mitigations that may be needed.
f) Due to the site's proximity to recorded peat reserves associated with Dunstan Park, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of these deposits (**Policy R6**). Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.

Urban design & heritage

g) Significant green features should be incorporated to retain the function of the site as one of the few vestiges of the rural character of the conservation area, important to its setting and understanding its history.
h) Buildings should be carefully placed to retain important views across the site and visual link with rural hills beyond, e.g. the important view from Stoke Place across the site to Elsfield (**Policy HD6**).
i) Built development should avoid the southern part of the site where there is a pond with potential for wetland species, and a greater potential for peat deposits. This area should be used for enhancements to biodiversity and green infrastructure.
j) Development should be kept low to reflect the rural character and role of the site in linking the conservation area to its more rural origins.
k) Development must be accompanied by a Landscape Visual Impact Assessment to demonstrate impacts.
l) Development should be sensitive to the setting of the listed buildings nearby **(Policy HD3).**
m) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

n) Foxwell Drive is likely to provide the only option for vehicular access.
o) Stoke Place is not suitable for providing vehicular access, but access to it for walkers, cyclists and wheelers should be considered in order to ensure

permeability.

Additional Requirements

p) Due to potential impacts of noise and other pollutants from traffic on the A40, development proposals will need to demonstrate how layout of buildings and public spaces has been approached so as to minimise amenity impacts for users, including locating these away from these key pollution sources. This should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors (**Policies R4 and R8**).

Slade House

Site area	1.21ha
Ward	Lye Valley
Landowner	Oxford Health NHS Foundation Trust
Current Use(s)	Children's Mental Health Services
Flood zone	Flood Zone 1
Notable heritage assets	Parliamentarian siege line may cross through this plot. May require evaluation depending on building footprint.
Notable ecological features	Site is located within the impact risk zone of the Brasenose Wood and Shotover Hill SSSI which is sensitive to recreational pressure. It is also partially within the impact risk zone of the Lye Valley SSSI, which lies to the west of the site.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE15: Slade House

Planning permission will be granted at the Slade House site for improved health-care facilities, associated administration, employment-generating use (of no bigger area than that present on the site at the time of adoption of the Plan), and/or residential development, including employer-linked affordable housing. Other

complementary uses will be considered on their merits, including academic institutional and education uses.

Open space, nature, flood risk

a) A Tree Protection Order applies across the whole site, meaning the design of any redevelopment should be led by the presence of the trees on the site and be prepared in a way that these would be retained (**Policy G1**).
b) Any new development to be arranged in a way that is sympathetic to the existing trees and green spaces and could utilise/or even enhance these to its benefit, maintaining a more natural and pleasant environment for potential residents.
c) The potential presence of priority species/habitats on the site should be investigated through appropriate biodiversity surveys and any impacts on these addressed accordingly.
d) Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G7**).
e) Planning permission will only be granted if it can be demonstrated that there would be no adverse impact on the integrity of the Brasenose and Shotover Park SSSI. Development proposals must be accompanied by an assessment of potential recreational pressure on the SSSI that may arise from increased numbers of visitors, along with plans to mitigate this impact as necessary (**Policy G6**).
f) As the site is located partially within an identified impact risk zone for the Lye Valley SSSI, new development could have impacts on the functioning of this sensitive ecological site, particularly where it causes changes in surface water or groundwater conditions. Planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon the Lye Valley SSSI (**Policy G6**), including through impacts on surface or groundwater flows and quality, as well as groundwater recharge. Where layout of new development is unable to avoid the risk zone to the west of the site, proposals should be designed to satisfy the applicable tests identified for the relevant impact risk zones set out in the Lye Valley Hydrogeological Impact Assessment report and accompanying Technical Advice Note. This may require additional supporting evidence in the form of a drainage strategy and/or hydrogeological impact assessment.

Urban design and heritage

g) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).
h) Opportunities for densification should be taken, for example by redeveloping areas of unused hard standing, and replacement of the lower-storey buildings.
i) The impact on surrounding residential areas should be considered, with greater potential for height to the west and south, with greater height adjacent to the road, transitioning down to a residential scale at the back.
j) Consideration should be given to arranging rooftops to have a pitch and style that mirrors the surrounding buildings as well as those on the site may help to fit in with the local vernacular.

Movement & access

k) Applicants will also be expected to demonstrate how the development mitigates against traffic impacts and maximises access by alternative means of transport, including access into and through the site for walkers, cyclists and wheelers **(Policy C6**).

Additional requirements

l) Due to potential impacts of noise and other pollutants from traffic on the Eastern bypass, development proposals will need to demonstrate how layout of buildings and public spaces has been approached so as to minimise amenity impacts for users, including locating these away from these key pollution sources. This should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors (**Policies R4 and R8**)

m) As the site has a long standing healthcare use, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Thornhill Park (phase 2)

Site area	3.39ha
Ward	Quarry and Risinghurst
Landowner	Shaviram Group
Current Use(s)	Residential, car parking and a sports ground.
Flood zone	Flood Zone 1
Notable heritage assets	N/A
Notable ecological features	Previous ecological assessments indicate the site is comprised of species-poor grassland, scattered trees, scrub, and developed land. It contains a medium population of great crested newt (GCN) and multiple bat roosts. Other potential protected species constraints include reptiles, nesting birds, and badgers. The site is not designated for its nature conservation value. However, it is located in close proximity to the CS Lewis Nature Reserve. The site contains significant existing trees around the boundaries and scattered within the site which are important to public amenity in the area and will provide valuable ecosystem services. All trees within the site are protected by the OCC - London Road (No.1) TPO, 1994. Existing trees will influence developable area of site and its capacity. Part of this site is in the Local Nature Recovery Strategy (LNRS).

Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE16: Thornhill Park (phase 2)

Planning permission will be granted for a residential-led mixed use redevelopment on the remainder of the Thornhill Park site, which should include some employment use (offices Class E). Other complementary uses will be considered on their merits and could include a café, restaurant, gym, hotel. The minimum number of new homes to be delivered is 170. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Proposals for development should be informed by an updated ecological assessment in relation to biodiversity and to consider potential for known species of interest (great crested newts and bats) as well as potential for other species including reptiles, nesting birds and badgers. Recreational impacts on the CS Lewis Nature Reserve should be assessed and mitigation measures included, if necessary **(Policy G6).**

b) Opportunities exist to reduce the overall amount of hard surfacing in favour of increased natural landscaping. Existing mature trees should be retained where possible as with other high-quality GI in order to preserve the Urban Greening Factor score. Layout should incorporate a network of amenity spaces such as pocket parks, or other forms of GI that provide linear connections across the site particularly where this can assist with movement of wildlife.

c) A minimum of 10% public open space will be required onsite (**Policy G2**).

d) The existing pavilion is 25 years old and at the end of its lifespan, unable to comfortably accommodate the needs. The loss is considered acceptable provided a contribution is made towards a replacement pavilion as set out in the previous planning permission.

e) Southeast section of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

f) Development proposals that exceed the height stated in the High Buildings TAN may have an impact on the Historic Core Area and so will be required to provide an LVIA so that the full impacts can be understood and assessed as listed in **Policy HD6**.

g) New development should respect design sensitivities particularly in the southern part of the site which is likely to have a visual impact on the countryside (**Policy HD1**).

Movement & access

h) Walking, cycling and wheeling should be promoted in this site and opportunities taken to improve connectivity from the site through to neighbouring areas.

i) The site is in an air quality hot spot area. Development proposals should demonstrate compliance with **Policy R4** by ensuring that all necessary mitigation measures against poor air quality have been incorporated during the construction and operational phases and ensuring that any potential negative air quality impacts are adequately mitigated on an ongoing basis, within and surrounding the site.

j) Extensive site investigation works have been completed over parts of the site already, however a contamination investigation would be required in other areas due to its previous use and potential contamination risks, and an application should demonstrate how contamination issues will be resolved (**Policy R5**).

k) Development proposals should include an acoustic design statement in compliance with **Policy R8** as this site is part of an area which is subject to significant environmental noise from the traffic on the A40.

Additional requirements

l) There is the potential for land contamination on the site due to previous uses, and as a result proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

m) Due to potential impacts of noise and other pollutants from the site's proximity to the A40, development proposals will need to demonstrate how layout of buildings and public spaces has been approached so as to minimise amenity impacts for users, including locating these away from these key pollution sources. This should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors (**Policy R4 and R8**).

Union Street Car Park

Site area	0.24 ha
Ward	St Clement's
Landowner	Oxford City Council
Current Use(s)	City council owned car park
Flood zone	Flood Zone 1
Notable heritage assets	No designated buildings, spaces or structures on site. Site is within the Crescent Hall View Cone.
Notable ecological features	Mature trees line Collins Street.

Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPE17: Union Street Car Park

Planning permission will be granted for student accommodation or residential led mixed use development on this site. The minimum number of dwellings to be delivered is 15 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Established natural features on the site and in its immediate vicinity including the mature trees lining Collins Street, should be retained and a setback maintained to allow for greatest access to their amenity. Integrating natural features including trees, along the frontages of Union and Chapel Streets should be explored. Alternative opportunities should be explored for integrating elements such as green roofs, green walls, roof gardens etc into any schemes (**Policy G3**).

Urban design & heritage

b) Setbacks and boundary treatments need to be carefully considered to creative an attractive frontage that is active, is suitably overlooked and which does not have an adverse impact on the amenity of occupiers of onsite development, neighbours and users of the paths (**Policy HD8**).

c) Block layouts and massing should be carefully considered to avoid being overbearing to sensitive adjoining uses, particularly the primary school opposite.

d) The height, massing and roofscape of proposals should be designed with consideration of their impacts of protected views (including the Cresent Hall View Cone) and the visual streetscape of the local area (**Policy HD6**).

Movement & access

e) Car parking spaces should be retained to a level at which the City Council considers is reasonable to serve and safeguard the vitality of the district centre. Supporting information justifying the proposed level of car parking spaces should accompany any application. The retained car parking could be in a different form such as beneath ground level (undercroft), decking or surface level with buildings above.

f) Because the site is in a highly sustainable location it is expected that any development will be low car i.e. no parking provision allocated onsite for occupiers of the development.

g) Permeability of the site to walkers and wheelers should be enhanced to improve access to amenities on Cowley Road (**Policy C6**).

Additional requirements

h) There is the potential for land contamination on the site due to previous uses, and as a result proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Warneford Hospital

Site area	8.67 ha
Ward	Churchill
Landowner	Oxford Health NHS Foundation Trust
Current Use(s)	Hospital, research, playing fields
Flood zone	Flood Zone 1
Notable heritage assets	Adjacent to the Headington Hill Conservation Area. Listed buildings onsite include the Warneford Hospital; Nurses Home; Chapel; Mortuary; lodge and front garden area wall and gate piers at entrance; stone in Warneford lane opposite entrance (all Grade II listed). The Grade II Barn at Cheney Farm is located just over the Warneford Road to the north west. Oxford Heritage Asset Register includes Warneford Meadow and Orchard OCWS, which is adjacent to site. Archaeological potential onsite includes Roman remains. A historic bund which runs along the boundary and into the site also has heritage value.
Notable ecological features	The site lies within an impact risk zone for the Lye Valley SSSI which lies to the east. Warneford Meadow and Orchard OCWS is directly adjacent to site on the southeast boundary, with Boundary Brook Corridor - Mileway Gardens OCWS also close by (to the east). The site contains large mature trees (some of which are protected with TPOs) and areas of priority habitat woodland. Part of this site is in Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPE18: Warneford Hospital

Planning permission will be granted for healthcare facilities and related uses at Warneford Hospital, including any of the following complementary uses:

- extra care accommodation;
- residential development, including employer-linked affordable housing and

student accommodation;

- employment and research that has a link to healthcare;
- additional academic institutional and education uses subject to compliance with relevant local plan policies.

- Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Proposals should seek to retain existing features where possible, particularly higher quality elements like large mature trees (some of which are protected with TPOs); boundary features that help preserve amenity; and areas of priority habitat woodland present on the site. The loss of the former sports facility is considered justified only due to the need for and benefits of new hospital development.

b) In order to retain the existing Urban Greening Factor score, any losses in green features should be compensated for. Losses of open space identified as supporting green infrastructure (**Policy G1**) will also need to be mitigated through enhancement of remaining GI. These requirements could be met in different ways, such as through enhancement of remaining areas of amenity grassland, additional planting such as new trees that can enhance canopy cover and the setting of the listed buildings, or improvements in linkages to nearby habitat, as well as new habitat creation.

c) The potential presence of priority species/habitats on the site should be investigated through appropriate biodiversity surveys and any impacts on these addressed accordingly. Proposals should also consider potential for impacts on the adjacent Oxford City Wildlife Site and be designed in a way that avoids negative impacts for the species and habitats, which could include setbacks or buffers, as well as careful design of new lighting.

d) As the site is located within an identified impact risk zone for the Lye Valley SSSI, new development could have impacts on the functioning of this sensitive ecological site, particularly where it causes changes in surface water or groundwater conditions. Planning permission will only be granted if it can be demonstrated that there would be no adverse impact upon the Lye Valley SSSI (**Policy G6**), including through impacts on surface or groundwater flows and quality, as well as groundwater recharge. Proposals should be designed to satisfy the applicable tests identified for the relevant impact risk zones set out in the Lye Valley Hydrogeological Impact Assessment report and accompanying Technical Advice Note, this may require additional supporting evidence in the form of a drainage strategy.

e) A narrow strip of land along southeast boundary, adjacent to Warneford Meadow and Orchard OCWS is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity.
Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

f) Due to the site's proximity to recorded peat reserves associated with the Lye Valley, and the potential for further deposits in the area, any development on currently undeveloped parts of the site will only be permitted where it can be demonstrated that there will be no harm or loss of these deposits (**Policy R6**)**.** Where there is the potential for harm to peat reserves, site layout should be designed accordingly to protect and mitigate any harm to identified peat deposits on the site.

Urban design & heritage

g) Redevelopment of the site offers a valuable opportunity to enhance mental healthcare provision and associated research, whilst addressing previous piecemeal development of parts of the hospital complex, bringing about improvements in site layout and the setting of listed buildings on the site. Developers are encouraged to follow a coordinated masterplan approach for the site to encourage holistic development and maximise on opportunities to improve efficient use of land; layout and connections through the site that prioritise walkers, cyclists and wheelers; and enhance the historic character and setting of the listed buildings.

h) The relatively elevated nature of the site means that it also has some sensitivity in terms of impact of new development on the surrounding area. New buildings should therefore be of an appropriate height, scale and massing that responds to this wider context, with plots being arranged in a way that seeks to avoid further loss of the open character of the site such as by incorporating green gaps between them.

i) As identified above, there are various designated heritage assets on the site or close by and proposals should be informed by an appropriate assessment and strategy that responds to these. In particular, proposals should be designed in a way that preserves and enhances the significance of the listed buildings (including their setting); as well as the broader landscape and adjoining Headington Hill Conservation Area. This could be done in various ways, such as by selecting materials that take inspiration from the adjacent Conservation Area or the existing Listed Buildings on the site; or by ensuring new buildings located close to designated assets are positioned sensitively (**Policy HD3**).

j) There is also the potential presence of archaeological assets on the site including Roman remains. Proposals should ensure that these are appropriately investigated and responded to (**Policy HD5**).

Movement & access

k) The potential for impacts on the sensitive heritage features along the boundary including the listed wall, gate piers and historic bund will need to be addressed if new access points are proposed into the site. Applicants will also be expected to demonstrate how the development mitigates against traffic impacts and maximises opportunities for access to the site by alternative means of transport, including access into and through the site for walkers, cyclists and wheelers.

l) Redevelopment of the site offers the opportunity to consolidate car parking and reduce the car-dominated feeling of the grounds and proposals that can shift priority of circulation towards other forms of travel, such as walking, cycling and wheeling, will be strongly supported. This could include incorporating additional linkages through the site for walkers and wheelers; providing space for cycle storage; and utilising elements of open space for additional public access or the benefit of occupants where appropriate to the wider operation of the site.

Additional requirements

m) Proposals should be designed in a way that seeks to preserve the amenity of neighbouring residents including mitigation of negative amenity impacts such as excessive lighting, noise, or air pollutants (**Policy R8)**.

n) The historic and ongoing uses of the site as a hospital may mean that some areas of potential contamination are present on the site. Proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

CENTRAL AND WEST INFRASTRUCTURE AREA

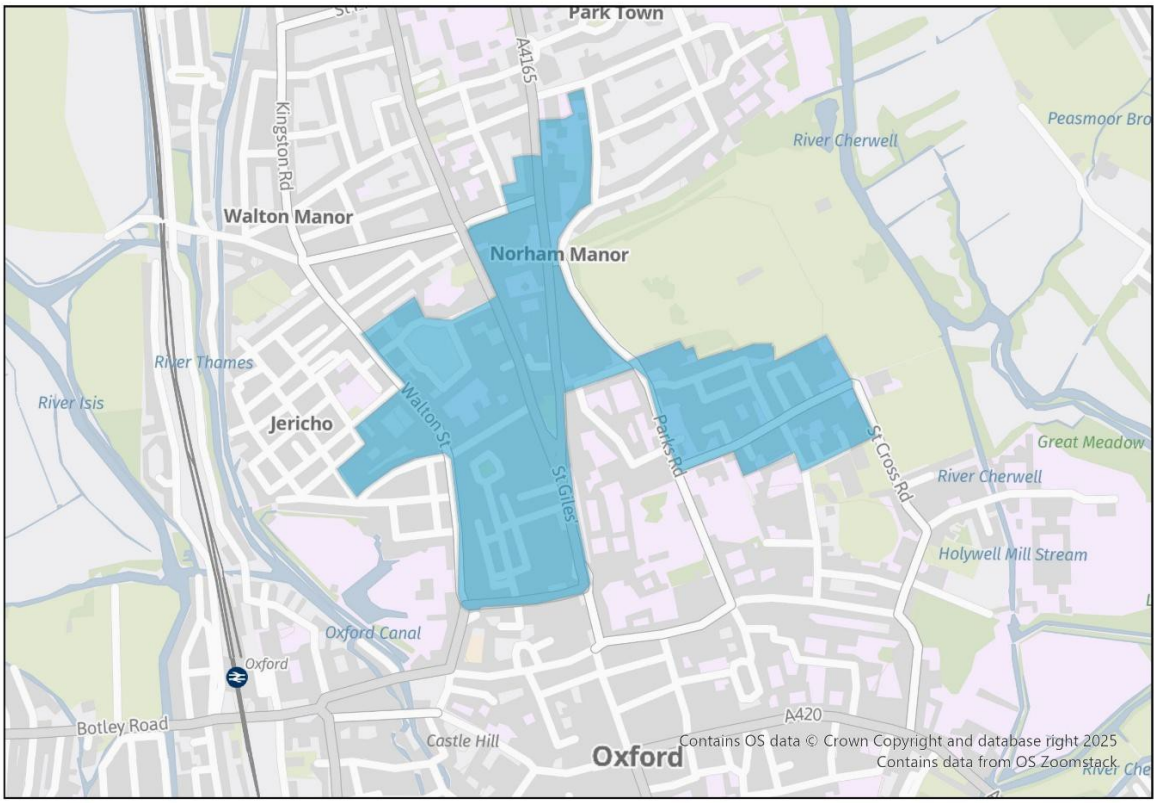
This area contains a wide variety of buildings and uses. It is a key area of public transport provision for rail and bus, and includes the Oxford railway station, Gloucester Green coach station and Seacourt Park & Ride. It contains most of the Oxford colleges and most of the faculties of the University of Oxford. In addition, it is the retail heart of the region and contains venues that attract people from a wide area, including cinemas, theatres, live music venues and the ice rink. The large numbers of people visiting together with those interchanging on public transport can create congestion and conflict in the public realm. High quality, thoughtfully designed public realm is key to the success of the area.

Some parts of the area are at high flood risk and so may be unsuitable for residential development. Flood mitigation measures, including new areas of flood storage and SuDS, integrated into green infrastructure enhancements, are likely to be necessary in the southern and western parts of the area.

Key considerations for infrastructure and design across the area are:

- Create high-density urban living with good provision and access to public open space
- Maintain a vibrant mix of uses
- Contribute to the knowledge economy
- Integrate flood risk mitigations into the public realm and green infrastructure
- Provide bridge suitable for walking, cycling and wheeling over the Thames to Oxpens
- Enhance accessibility and permeability of the area through good walking, cycling and wheeling links and enhanced public realm
- Support the redevelopment of Oxford railway station to create an easy and attractive transport interchange between rail, bus and active travel.

UNIVERSITY AREAS NORTH OF THE CITY CENTRE AREA OF FOCUS



University faculties and colleges dominate the area, with two large University of Oxford sites, the Radcliffe Observatory Quarter and the Science Area. These sites, and the area generally, is subject to continuous change. Many individual buildings are of high quality, as are the green spaces just outside the area (particularly University Parks) A particular challenge in this area is that large areas of university use can obscure routes for other users. They create spaces that do not appear public, even though they are, for example because of small areas of private parking and routes that can be dominated by servicing features at the back of buildings such as the large vents and tanks that serve lab spaces. Development in the area presents many opportunities to improve connectivity, landscaping and coherence between buildings and public space, making the area more welcoming.

Large buildings don't always interface well with the street or each other, but can appear as unrelated blocks. The ROQ site, having benefited from a masterplanned approach, represents an evolving modern institutional campus with a range of well-designed high-quality new buildings that relate well to each other and their surroundings. Whereas the land to the north of Keble Road is more of a patchwork of mid-to-late 20th century buildings from around the 1960s onwards, some of which lack the quality of their modern counterparts, located only a street or so away.

Busy roads running north-south sever the area, meaning that east west connections can be difficult. Redevelopments can offer opportunities to improve east-west connections for walkers, cyclists and wheelers. Walk, cycle and wheel improvements are essential to the success of the area to improve connectivity and permeability.

Apart from some tree-lined streets, there is a limited amount of green infrastructure. The area is framed by rivers, with the Thames to the west and Cherwell to the east, even so it is at very limited flood risk.

Heritage assets in the area include significant potential for archaeological interest, from late Neolithic-early Bronze Age onwards. The area around Beaumont Street and St John Street contains the site of a 12th Century Royal Palace and later Carmelite Friary, and the projected line of the Royalist Civil War defences also cross through this area. The area is located within three conservation areas- the Central (City and University) Conservation Area, Jericho Conservation Area and North Oxford Victorian Suburb Conservation Area. There are also many listed buildings within the area, notably the Ashmolean Museum and Taylor Institute (Grade I); Church of St Giles (Grade I); and the University Museum and Pitt Rivers Museum (Grade I).

POLICY NCCAOF: UNIVERSITY AREAS NORTH OF THE CITY CENTRE AREA OF FOCUS

Planning permission will be granted for new development within this Area of Focus where it would ensure that opportunities are taken to deliver the following (where applicable):

Greater public accessibility and perception of public accessibility through and within the area

a) community and public uses of institutional buildings where possible, especially at ground floor level e.g. cafes and exhibition spaces;
b) improved demarcation and legibility of public routes through the area, using urban design and wayfinding;
c) provision of new publicly accessible routes, particularly running east-west;
d) better integration of servicing infrastructure into the built form so that it does not dominate public spaces and routes or make them look like private servicing areas.

High quality design that responds to heritage assets as well as the area's vital academic role

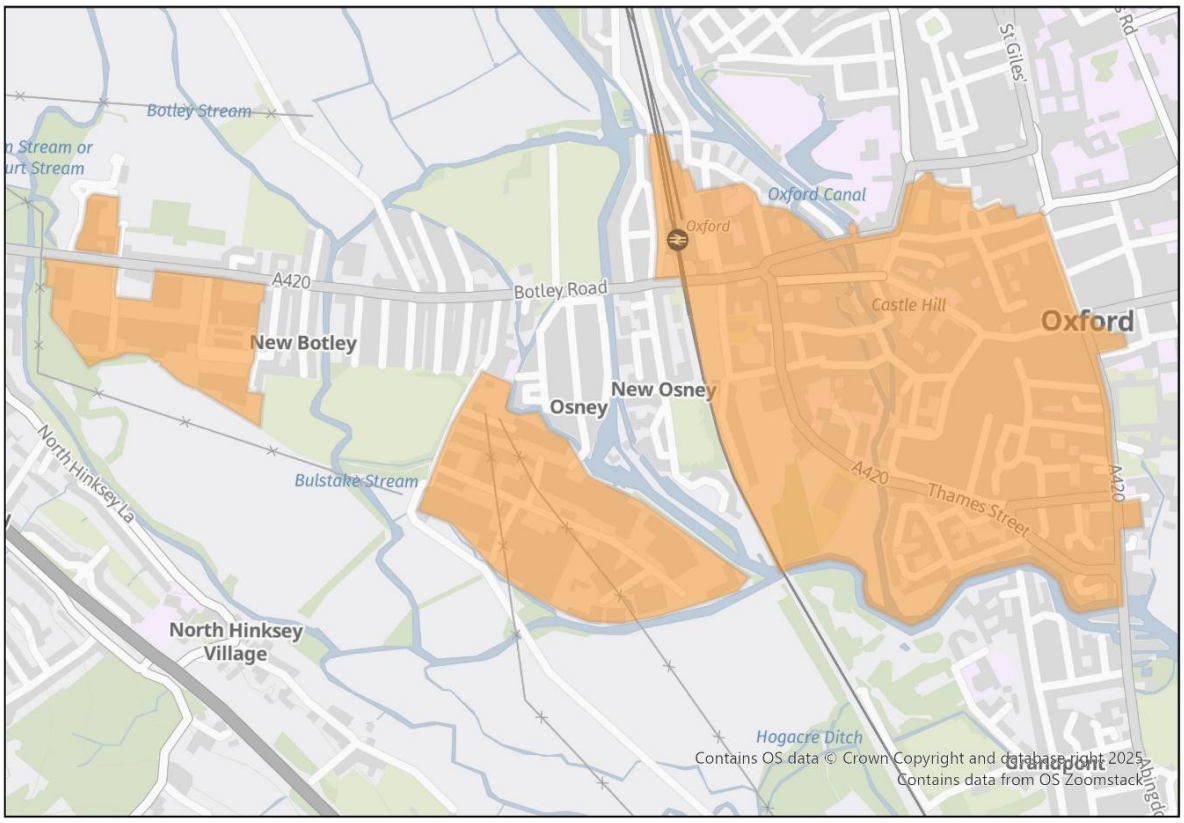
e) building heights and roofscapes that are appropriate for their setting and that do not negatively impact on historic skylines, roofscapes or key views, particularly from University Parks, to and from the Cherwell Valley and to and from the historic towers and spires of the city centre;
f) creation of a strong and well-defined building line along the streets;
g) a design that balances the existing historic buildings onsite coupled with the celebration of cutting-edge science and research.

Environmental improvements to benefit biodiversity and the community and future occupiers

h) enhanced landscaping, including tree planting and enhanced biodiversity and green corridors and SuDs;
i) mitigation of potential negative air quality impacts that arise during the construction and operational phases;
j) no adverse impact on the New Marston Meadows SSSI (part of the area is in proximity to the SSSI).

WEST END AND BOTLEY ROAD AREA OF FOCUS

The West End and Botley Road Area of Focus covers three distinct areas along the western corridor into the city centre: the West End, Osney Mead and Botley Retail Park.



Oxford's West End

Oxford's West End is located in the south-west corner of the city centre and includes Oxford Railway Station. The process of transforming this under-performing area has been ongoing for a number of years with large projects such as the Westgate Centre already delivered. There is further potential for the West End to become a vibrant city quarter through the successful development of a number of other key sites in the area.

Public/ civic spaces in the West End are in short supply. While existing spaces are well-used, the limited amount of them restricts the ability of residents and visitors to stay longer in the area. Opportunities therefore exist to create new publicly accessible spaces within the West End that incorporate appropriate green infrastructure.

The walking and wheeling experience of the West End is not always positive, with conflict between different roads users occurring in a range of ways. Some roads are dominated by vehicular movement with a lack of human scale and poor crossing opportunities for walkers and wheelers. There are also some links and footpaths that are narrow and poor-quality, for instance, parts of the towpath that will link Osney Mead and the West End (via the Oxpens River Bridge) are narrow, in poor condition and prone to flooding. Walk, cycle and wheel improvements are essential to the success of the area to improve connectivity and permeability, to other parts of the city and to destinations in neighbouring districts.

The West End has been developed and redeveloped numerous times through history and area as a whole has significant heritage value, being largely within the Historic Core Area, and parts being within the Central Conservation Area and the Osney Town Conservation Area. This provides an opportunity for well-designed high-quality buildings, public realm and streets that reflect and are well-related to, the historic core, the watercourses, and views into

and out from the area. Care therefore needs to be taken to ensure that the city's unique character and setting is not lost or harmed through redevelopment and regeneration of the area.

As such, the heights of new buildings will be an important consideration in this Area of Focus and there is likely to be a degree of tension in delivering development that protects and enhances Oxford's iconic dreaming spires and the ambitions of delivering certain development types. Wherever high buildings are proposed (over 15 metres), they should be accompanied by a visual impact assessment which clearly shows how the proposal relates to Oxford's historic skyline and will need to have regard to the High Buildings TAN.

Throughout the West End there are opportunities to enhance or improve the area where poorly integrated incremental development and large blocks with little relationship to the street detract from the heritage quality and experience of walkers and wheelers.

The transformation of Oxford Station is fundamental, not just to improve user experience, but to facilitate additional capacity to help deliver East West Rail and the re-opening of the Cowley Branch Line to passenger services. The delivery of these projects would connect people and businesses both locally and more widely across the Oxford-Cambridge Growth Corridor. Collectively, they would open up new journeys, reduce travel times, ease congestion on local roads and would bring more jobs within the reach of local people.

Osney Mead

Osney Mead sits outside the city's historic core, however given the close proximity to Oxford's dreaming spires, some similarities exist including the relationship between the historic views of the city's iconic skyline and the potential conflict with the scale of redevelopment ambitions in this area.

Osney Mead is a centrally located Key Employment Site. It is accessibly located close to the Oxford Railway Station, however there is a need for improvements to walking, cycling and wheeling connections into the wider area. It is important that this site maintains its role in creating a diverse employment base as it makes an important contribution to Oxford's employment land supply. However, changes to how space is used, the type of jobs provided and wider technologies mean that the employment function could be provided in a reduced area and an enhanced environment.

A transformation of Osney Mead has the potential to be delivered within the plan period. Planned infrastructure improvements including a bridge suitable for walkers, cyclists and wheelers ("the Oxpens River Bridge") to link Osney Mead directly to the West End via the Oxpens site are programmed to be delivered within the early part of the plan period which would provide better accessibility from Osney Mead and help create a natural extension of the city centre into this location.

West End and Osney Mead SPD

The West End and Osney Mead Supplementary Planning Document (SPD) is an area-based SPD, produced to support the delivery of sites in this part of the city centre. The SPD provides guidance about infrastructure interventions including green and blue infrastructure, public realm and walking, cycling and wheeling improvements that would enhance and improve the area. Infrastructure improvements should be made in line with the SPD.

Botley Road Retail Park

Botley Road Retail Park is a large 1980s-style retail park at the western edge of the city, featuring a variety of large single storey retail stores with associated surface-level car parking. The retail park is located adjacent to a residential area. The fields to the south form an important part of the historic landscape setting of the city, and the site is adjacent to the historic City and Liberty Boundary.

In recent years, the Botley Road Retail Park has been undergoing a transition towards a modern urban science district. Flexible lab-enabled, research and development (R&D) floorspace is being delivered to support growth in key sectors such as life sciences and the knowledge economy, including AI that support Oxford's key strengths.

Redevelopment at the Botley Road Retail Park has the potential to impact views into and out of the city. As such, the Botley Road Retail Park Design Brief TAN was produced and should be consulted in relation to design principles, building heights and the assessment of views alongside the High Buildings TAN.

Osney Mead and Botley Road Retail Park are both at risk from flooding.
Both these sites contain land within flood zones 3a and 3b and are surrounded by land in flood zone 3. This level of flood risk would have significant implications for the type and nature of development permissible at each site, and also where it can be located.

A comprehensive flood risk management strategy will need to be developed to ensure that uses here are delivered in a way which enables safe access and egress in times of flood. A Strategic Flood Risk Assessment Level 2 has been carried out.

POLICY WEBRAOF: WEST END AND BOTLEY ROAD AREA OF FOCUS

Planning permission will be granted for new development within this Area of Focus where it would ensure that opportunities are taken to deliver the following (where applicable):

Open space and nature

a) Enhanced landscaping, including tree planting, enhanced biodiversity, green corridors, including to connect to the green spaces beyond the area, and integration of flood risk management and green spaces, including through SuDS.
b) Enhanced provision of public spaces, including pocket parks and other civic spaces.
c) Enhanced public frontage alongside the river and canal.

Urban design and heritage

d) Positive contributions and enhancements to the character and setting of conservation areas and other heritage assets.
e) Good quality urban design and place making including appropriate building heights for their setting that do not negatively impact on key views or historic skylines.
f) Development opportunities at the Botley Road Retail Park in line with the guidance set out in the Botley Road Retail Park Development Brief TAN.
g) Integration of servicing and plant infrastructure into the built form.

Movement and access

h) Optimised connectivity and permeability for people wishing to walk, cycle or wheel in the area to other parts of the city. Walking, cycling and wheeling infrastructure improvements must be delivered in accordance with the requirements of the Oxford Local Cycling and Walking Infrastructure Plan.
i) A reduction in car parking across the area.
j) Improved demarcation and legibility of public routes through the area into the city centre, using urban design and wayfinding;

Infrastructure

k) The redevelopment of Oxford Station to deliver a strong sense of arrival to Oxford and an improved environment for passengers aligning with the principles and priorities outlined in OxRail 2040: Plan for Rail.
l) Enhancements to Frideswide Square to facilitate the creation of a western gateway;
m) Mitigation of potential negative air quality impacts that arise during the construction and operational phases
n) Public realm improvements undertaken in line with the infrastructure interventions set out in the West End and Osney Mead SPD.

Banbury Road University Sites – Parcel B

Site area	1.26 ha
Ward	Walton Manor
Landowner	University of Oxford and Hertford College
Current Use(s)	Academic and student accommodation
Flood zone	Flood Zone 1
Notable heritage assets	Within the North Oxford Victorian Suburb Conservation Area; Site includes Grade II listed 59 Banbury Road. . Many other Grade II listed

	buildings within the vicinity of the site, notably across Banbury Road including Wycliffe Hall, Wykeham House, 60 and 62 Banbury Road, and Gees' Restaurant located immediately adjacent to the north of the site on Banbury Road. Archaeological potential onsite includes prehistoric and Roman remains.
Notable ecological features	Surveys undertaken for recent planning application identified numerous bat roosts on part of the site bounded by Bevington Road. Proposed mitigation may need to ensure roosting opportunities remain post-development. Numerous mature trees, both within the site and alongside the perimeter fronting onto the three highways. One of these (in front of 10 Winchester Road) is protected by a Tree Preservation Order, whilst the others (of a certain size) benefit from conservation area protection. Within the impact risk zone of New Marston Meadows SSSI. The site is within an area identified as having potential hydrological connectivity with the Oxford Meadows SAC.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPCW1: Banbury Road University Sites – Parcel B

Planning permission will be granted for academic institutional uses, student accommodation, and/or residential development. The minimum number of dwellings is 54 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the New Marston Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the New Marston Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) Development proposals must demonstrate that likely significant effects on groundwater recharge and water quality have been avoided, or mitigated where relevant, through the use of appropriate measures including SuDS (**Policy G6**).

c) Development proposals involving subterranean development must include a hydrogeological investigation which must demonstrate that likely significant effects on groundwater flow have been avoided, or mitigated where relevant (**Policy G6**).

d) Proposals should seek to retain existing features where possible, particularly higher quality elements like large mature trees and boundary features that help preserve amenity.

e) In order to retain the existing Urban Greening Factor score, any losses in green features should be compensated for either through enhancement of lower quality areas with a greater variation in planting and new habitat, such as within and around the boundaries of new gardens, as well as additional planting such as new trees that can enhance canopy cover and the setting of the listed buildings and conservation area.

f) The potential presence of priority species/habitats on the site should be investigated through appropriate biodiversity surveys and any impacts on these addressed accordingly. Proposals should also consider impacts on the surrounding areas, particularly, the nearby designated sites such as New Marston SSSI (**Policy G6**).

Urban design & heritage

g) Proposals should be informed by an appropriate assessment and strategy that responds to the designated heritage assets on the site or close by. In particular, proposals should be designed in a way that preserves and enhances the significance of the listed buildings (including their setting); as well as the broader landscape including the North Oxford Victorian Suburb Conservation Area. This could be done in various ways, including selecting materials that take inspiration from within the conservation area or the existing listed buildings on and near to the site; ensuring new buildings located close to designated assets are positioned sensitively and buffered through use of green features (**Policy HD3**).

h) There is also the potential presence of archaeological assets on the site including prehistoric and Roman remains. Proposals should ensure that these are appropriately investigated and responded to (**Policy HD5**).

Movement & access

i) Opportunities should be taken to consolidate car parking and reduce the car-dominated character within the site. Proposals that can prioritise other forms of travel, such as walking, cycling and wheeling, will be strongly supported. This could include incorporating additional linkages through the site from north/south for walkers and wheelers.

Additional requirements

j) Design measures may be necessary to mitigate negative amenity impacts such as those arising from noise pollutants as this site is part of an area which is subject to significant environmental noise from the traffic on Banbury Road and Winchester Road.

k) Proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Botley Road Sites around Cripley Road including River Hotel and Westgate Hotel

Site area	Total of 0.84ha (all sites) Consists of the following three sites: - 3-15 Botley Road and The River Hotel – 0.34ha - Land to the South of Cripley Place – 0.31ha - Westgate Hotel, Botley Road and 3 - 7 Mill Street – 0.19h
Ward	Osney and St Thomas
Landowner	Christ Church
Current Use(s)	613 - Mixed uses including River Hotel with associated car park, residential dwellings (5-15 Botley Road) and retail - Use Class E (3 Botley Road). 614 – To the south of Cripley Place, currently in residential use. 615 – Westgate Hotel and 3-7 Mill Street, currently in use as a hotel and residential.
Flood zone	Flood Zone 3a
Notable heritage assets	All three sites are within the Historic Core Area and within view cone(s) (e.g., Boar's Hill). All three sites are located within the City Centre Archaeological Area. Part of the site lies adjacent tothe Osney Town Conservation Area. Part of the allocation is included on the Oxford Heritage Asset Register (OHAR) - River Hotel and Westgate Hotel. There are several OHAR assets in the immediate vicinity of the sites, including the River Thames and Towpath and No. 2 Botley Road. The three sites are located close to a section of the Botley causeway as such there is some archaeological potential for localised remains.
Notable ecological features	In close proximity to parts of the core green infrastructure network (Osney St Thomas Allotments). There are mature trees within the site, including two within parcel 614 which are the subject of Tree Protection Orders (TPOs). The entire site is within Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPCW2: Botley Road Sites around Cripley Road including

River Hotel and Westgate Hotel

Planning permission will be granted for a residential-led development. The minimum number of dwellings to be delivered across the three sites is 20.

Other suitable uses for the site could include:

- Hotel accommodation;
- Replacement retail (Use Class E)

Development proposals involving hotel accommodation should be in accordance with **Policy E5**.

Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) A sequential approach should be taken to locating development on the site, with more vulnerable uses away from the highest flood risk. A site-specific Flood Risk Assessment (FRA) is required and should consider onsite routes and any infrastructure required to reach the access route. Areas of flood risk surround the site to the east, with no completely flood free egress options and part of the access/egress route from the site over land with high flood risk. Given there is no advance flood warning provision for the site, the potential for evacuation before a more extreme fluvial or pluvial flood, considering the effects of climate change for the lifetime of the development, needs to be considered by an FRA, with advice sought from the emergency services and the local authority's emergency planner. Flood warnings will be essential for safe access and egress to the sites, ideally ensuring that the route identified can be utilised before the onset of flooding. Areas of high surface water flood risk are also present along both access routes, therefore the FRA should consider in more detail the nature of the flood risk to determine how quickly it occurs and the degree of hazard. The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited. A geotechnical investigation should be undertaken at this site to obtain further information relating to infiltration rates to confirm whether infiltration could be viable in some areas (**Policy G7** and **Policy G8**).

b) The whole site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity.
Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

c) Development proposals should seek to retain the mature trees adjacent to the river. A 10-metre watercourse buffer should be maintained or reinstated where possible.

d) Appropriate ecological surveys should be undertaken to ensure that development proposals do not have an adverse impact on protected species. A lighting strategy may also be required given the proximity to the River Thames which could provide a foraging habitat for bats.

Urban design & heritage

e) Development proposals should be designed with consideration of their impacts on the setting of the Osney Town Conservation Area **(Policy HD3)**.

f) The Boar's Hill view cone covers the entire site allocation. Proposals should be designed in a way that responds to this protected view (**Policy HD6**).

g) Development should be based upon a clear understanding of the significance of the site and its surrounding context. The size, alignment and design of any proposed development should take account of the importance of preserving the visual and physical connections between important, surviving, historic elements.

h) Development proposals that exceed the height stated in the High Buildings TAN may have an impact on the Historic Core Area and so will be required to provide an LVIA so that the full impacts can be understood and assessed as listed in **Policy HD6**.

i) Materials and construction details used for new development schemes should be of high quality, appropriate for the setting and sympathetic to the local context.

j) There is also some potential for archaeological remains on the site relating to the Botley Causeway. Proposals should ensure that these are appropriately investigated and responded to (**Policy HD5**).

Movement & access

k) The most appropriate vehicular access would be to continue use of Botley Road. Applicants will be expected to demonstrate how the development enables access by alternative means of transport including improving connectivity to support walking, cycling and wheeling.

Canalside Land, Jericho

Site area	0.49ha
Ward	Carfax and Jericho
Landowner	Cheer Team, Canal and River Trust, Oxford City Council, The Church of England
Current Use(s)	Boat hire facility, open space and derelict workshops

Flood zone	Flood Zone 3b
Notable heritage assets	Lies within the Jericho Conservation Area and is adjacent to both the Grade I listed St Barnabus Church and Registered Park and Garden (Worcester College, Grade II*)
Notable ecological features	The site is adjacent to the Oxford Canal, an Oxford City Wildlife Site. All of the site is within a Local Nature Recovery Site (LNRS) Within 600m of Port Meadows SSSI (part of the Oxford Meadows SAC)
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

POLICY SPCW3: Canalside Land, Jericho

Planning permission will be granted for a mixed-use development at the Canalside Land site that includes the following:

- Residential dwellings;
- A community centre to replace the existing Jericho Community Centre on Canal Street;
- Public open space;
- Replacement operating boatyard;
- Electric charging points for mooring boats;

Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Planting that enhances the waterside and promotes connections between it and the wider area is encouraged, as well as habitat features that can support the foraging and shelter of wildlife of the adjacent ecological designated sites.

b) The site contains significant existing trees including a false acacia and silver birch in the public open space north of the church and an ash tree in the church grounds next to Cardigan Street. There is also a row of important trees adjacent to the site along the western side of the canal towpath. These trees are collectively important to public amenity in the area and provide valuable ecosystem services, they should be retained where possible.

c) Development proposals should be accompanied by an assessment of potential recreational pressure on the immediate setting including the canal towpath and the Oxford Meadows SAC that may arise from increased numbers of visitors, along with plans to mitigate this impact, as necessary.

d) Development proposals should be accompanied by ecological and lighting assessments of the potential impact on ecology and protected species on site and adjacent canal and Castle Mill Stream, along with plans to mitigate this impact as necessary. This is because the canal is likely to be an important foraging and commuting resource for bats and should not be subject to any artificial illumination as a result of the proposed development.

e) All of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they've explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further detail.

f) Planning applications should be accompanied by a site specific Flood Risk Assessment (FRA) and development should incorporate any mitigation measures. The FRA should look at options for early warning. Areas of flood risk surround the site to the east so a site-specific FRA should consider the evacuation requirements

before the design event and a more extreme fluvial or pluvial event taking account of the site layout and advice to be sought from the emergency services, including the local authority's emergency planner.

g) The majority of the site is located within Flood Zone 2 with areas of Flood Zone 3 located along the boundary with the tow path and extending into the central parcel of the site adjacent to the church. A sequential approach should be taken to locating development on the site, with development prioritised first within Flood Zone 1 prior to consideration of any siting within Flood Zone 2 or 3a. Part of this site is also at significant risk from surface water flooding, therefore a site-specific FRA should also consider the nature of the surface water flood risk in more detail to determine how quickly it occurs and the degree of hazard on site. A drainage strategy will be required to manage run-off arising from the development and ensure that surface water flood risk on and off the site is not increased **(Policy G7).**

Urban design & heritage

h) The design should respect the waterfront heritage of the site, the conservation area and conserve or enhance the significance of the Grade I listed St Barnabas Church in compliance with (**Policy HD3)**.

i) An area of public open space should be created to support the community and boatyard uses and open up views of St Barnabas Church from the canal. If necessary, the wall separating the church and any proposed open space could be demolished, however, as the wall is curtilage listed and as it relates to an active place of worship, separate Faculty approval would be required from the Diocese. Listed building consent would not be required for such demolition.

j) The location, size and design of the public open space should consider the potential to facilitate community events (e.g. street markets), as well as, land a bridge crossing and endeavour to avoid fettering any future opportunities to provide a bridge crossing.

k) Proposals should consider the adjacent Registered Park and Garden (Worcester College, Grade II*) in compliance with (**Policy HD3)**.

Movement & access

l) Development proposals should deliver improvements to the connections into and around the site, specifically over the canal and towards Oxford City Centre along the towpath. This could also be secured via financial contribution(s) where viable.

m) Applicants will be expected to demonstrate how the development enables access by alternative means of transport including improving connectivity to support active travel such as walking, cycling and wheeling.

Additional requirements

n) As the site contains a historic boatyard, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

o) Due to potential impacts of noise and other pollutants from an on-site boatyard, development proposals will need to demonstrate how layout of buildings and public spaces has been approached so as to minimise amenity impacts for users, including locating these away from these key pollution sources. This should also be informed by an acoustic design assessment that addresses the potential for significant environmental noise from these transport corridors. The on-site boatyard may need some sealed storage areas if fuels, paints and chemicals are

being used (**Policy R4 and R8**).

p) The existing Jericho Community Centre on Canal Street has been identified as being in a state of poor repair and failing to achieve modern accessibility standards. Development proposals should include provision for a replacement community centre, the size and scale of which should be justified through the submission of a Community Needs Assessment and sustainable business plan to accompany future planning applications.

Faculty of Music

Site area	0.33 ha
Ward	Holywell
Landowner	Christ Church / University of Oxford
Current Use(s)	Academic institutional
Flood zone	Flood Zone 2
Notable heritage assets	Within the Central (University and City) Conservation Area; several Grade I and Grade II listed buildings in close vicinity, particularly towards the north of the site on St Aldate's. The Grade II listed Christ Church Footbridge and flanking walls in the Memorial Garden and Screen all lie immediately adjacent to the north of the site, with part of Christ Church Meadow; a Grade I Registered Park and Garden just beyond. Archaeological potential onsite includes Middle-Late Saxon Archaeology (adjacent to possible causeway).
Notable ecological features	N/A
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPCW4: Faculty of Music

Planning permission will be granted for academic uses, residential development (potentially including employer-linked housing if academic institutional uses remain on the site) and/or student accommodation on the site. The minimum number of dwellings to be delivered on the site is 23 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Proposals should seek to retain existing features where possible, such as the large mature trees fronting onto St Aldate's which contribute amenity benefits.

b) Opportunities should be taken to protect and enhance the watercourse adjoining the site and a 10m buffer should be retained between the edge of the watercourse and the built development (**Policy G2**).

c) In order to retain and where necessary increase the existing Urban Greening Factor score, any losses in green features within the site should be compensated through enhancement of lower quality areas with a greater variation in planting and new habitat within the site.

Urban design & heritage

d) Proposals should be informed by an appropriate assessment and strategy that responds to the designated heritage assets in close proximity to the site. In particular, proposals should be designed in a way that preserves and enhances the significance of the adjacently sited designated heritage assets (including their setting); as well as the broader landscape including the Central (University and City) Conservation Area. This could be done in various ways, including selecting materials that take inspiration from within the conservation area or the existing listed buildings near to the site; ensuring new development located close to designated assets are positioned sensitively and buffered through use of green features (**Policy HD3**).

e) Proposals should reflect the materials of the existing development. They should be designed in a way that is sensitive to the Central (University and City) Conservation Area of which it lies within, particularly regarding heights, massing, roofscape and local character and street scene (**Policy HD6**).

f) There is also the potential presence of archaeological assets on the site including middle-late Saxon archaeology remains. Proposals should ensure that these are appropriately investigated and responded to (**Policy HD5**).

Movement & access

g) Opportunities should be taken to reduce the level of car parking along Floyds Row.

h) Circulation within the site should continue to prioritise walking, cycling and wheeling.

i) New residential development should be car free.

j) The principal access should remain in the same location, although opportunities to increase permeability for walkers, cyclists and wheelers should be considered.

Jowett Walk (South)

Site area	0.21 ha
Ward	Holywell
Landowner	Merton College
Current Use(s)	Site currently a house, gardens and car park.
Flood zone	Flood Zone 1
Notable heritage assets	Within the Central (University and City) Conservation Area and within the Historic Core Area and the City Centre Archaeological Area. Opposite the Grade II listed School of Geography, and adjacent to buildings fronting Holywell Street, most of which are listed.
Notable ecological features	Green infrastructure on the site including mature trees. Within the impact risk zone of the New Marston Meadows SSSI.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPCW5: Jowett Walk

Planning permission will be granted for residential development or student accommodation on this site. The minimum number of dwellings to be delivered is 14 (net gain) (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the New Marston Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the New Marston Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) Development proposals should retain and enhance existing trees and vegetation on site, and take opportunities to strengthen biodiversity corridors and habitat linkages.

c) There is potential for swifts and bats on site; development proposals should take opportunities to improve wildlife linkages or habitat continuity across the site and with neighbouring areas.

Urban design & heritage

d) Development should be sensitively designed to respect the site's location within the Central Conservation Area, demonstrating high-quality architectural design that reinforces the historic and collegiate character of the surroundings, including listed buildings **(Policy HD3)**.

e) The site is within the City Centre Archaeology Aea and there is a high potential for medieval archaeology (as demonstrated by 1990s excavation directly to the east). Any proposals would be likely to require assessment and evaluation **(Policy HD5)**.

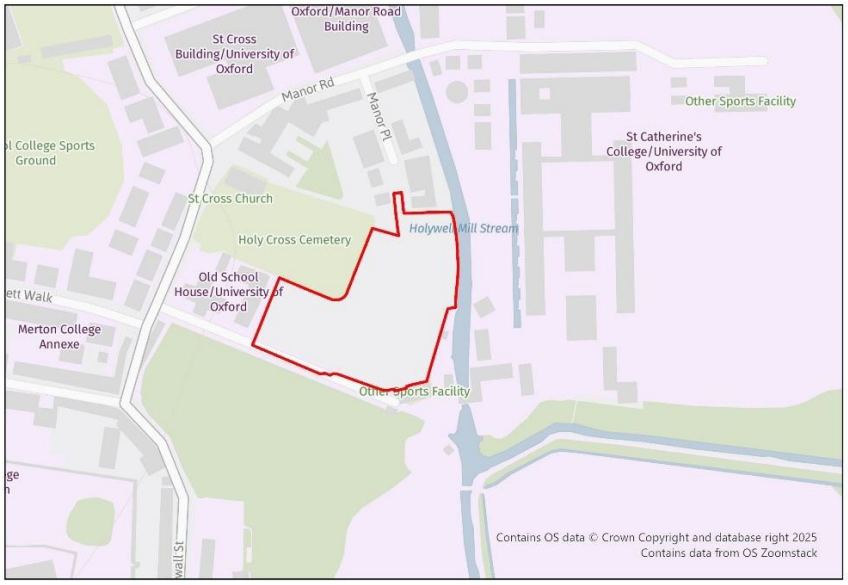
Movement & access

f) Opportunities should be taken to improve permeability for walkers, cyclists and wheelers, providing direct links to existing footpaths, cycle networks, and adjoining recreation ground.

g) Because the site is in a highly sustainable location it is expected that any development will be low car i.e. no parking provision allocated onsite for occupiers of the development.

h) Any re-development of this site would be likely to require a site investigation and contamination risk assessment.

Manor Place



Site area	1.24ha
Ward	Holywell
Landowner	Merton College
Current Use(s)	Former tennis courts/allotments/orchards
Flood zone	Flood Zone 3a
Notable heritage assets	Site is entirely within the Central (University & City) Conservation Area. It also lies within the Historic Core Area and City Centre Archaeological Area. It is adjacent to multiple Grade I, II, and II* listed

	buildings. The site lies within the setting of 15th c Magdalen Precinct wall, and GD I &II. St Catherine's College (and affiliated buildings) St Cross Building, 10 Cross Road. It is adjacent to Magdalen College Grade I Registered Park and Garden. The site is in line with the Elsfield, Doris Field and Headington Hill Allotments view cones but may also appear in others as it is located in the Historical Core Area. Archaeological information submitted with the latest planning application suggests the site contains the likely line of the Civil War outer Defences. The site contains the line of Royalist defences that should be preserved in situ.
Notable ecological features	Site is in within the impact risk zone of New Marston Meadows SSSI. Site is adjacent to Magdalen Grove geological SSSI. The area is characterised by hedged boundaries and several mature/semi mature trees established on the site, particularly at the northern and southern corners. The site itself contains various types of natural ground cover including grass, scrub and scattered trees. These contribute to the green, semi-rural character of the setting of the site which includes Holywell Cemetery, St Cross Annex and the Magdalen College Deer Park and likely have high biodiversity value. The site contains Section 41 (Priority/ Principal) habitats that fall within the LPA.
Urban Greening Factor score	The site is likely to score above the Urban Greening Factor target.

Policy SPCW6: Manor Place

Planning permission will be granted for student accommodation or car free residential development or a mix of both uses. The minimum number of dwellings to be delivered on the site is 43 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) As the site falls within the identified impact risk zone for the New Marston Meadows SSSI, new development could have impacts on the functioning of this sensitive ecological site. Planning permission will only be granted if it can be demonstrated that there would be no adverse impacts on the integrity of the New Marston Meadows SSSI. Development proposals should reduce surface water runoff in the area and should be accompanied by an assessment of groundwater and surface water. Development proposals must incorporate sustainable drainage with an acceptable management plan (**Policy G6**).

b) As the site is adjacent to Magdalen Grove SSSI a buffer zone will be required during construction phase to ensure the SSSI land is not disturbed.

c) Part of the site is located within Flood Zone 3a and Flood Zone 2, and a sequential approach should be taken to locating development on the site, with development prioritised first within Flood Zone 1 prior to consideration of any siting within Flood Zone 2 or 3a. A site-specific Flood Risk Assessment (FRA) will be required and should consider onsite routes and any infrastructure required to reach the access route. Access/egress from the site is over land in low flood risk, however the FRA should consider the evacuation requirements before the design event and a more extreme fluvial event. Early flood warning will be vital to ensure the access route can be utilised before floodwater inundates the northeastern part of the site, given the site's proximity to the River Cherwell (**Policy G7**).

d) The drainage strategy should be designed to manage runoff arising from the

development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited (**Policy G8**).

e) The hedged boundaries are an important characteristic of the area and should be retained, as should the mature trees and areas of trees in the northern and southern corners, helping retain the green, semi-rural character of the setting.

Urban design & heritage

f) Development should seek to preserve the special character of the conservation area within which it lies **(Policy HD3).** The size, alignment and design of any proposed development should take account of the importance of preserving the visual and physical connections between important, surviving, historic elements.

g) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**), preserving the Royalist Civil War rampart and ditch line in situ.

h) Materials and construction details used for new development schemes should be of high quality, appropriate for the setting and sympathetic to the local context.

Movement & access

i) The most appropriate vehicular access would be to widen and extend the existing walk, cycle and wheel access from Manor Place to the north of the site, incorporating land in Merton College's ownership.

j) Vehicular access should be minimised by low-car residential development or student accommodation.

k) Access via Holywell Mill Lane to the south is unlikely to be deliverable as it is not under the control of Merton College and the visibility at the junction with St Cross Road is substandard.

l) Applicants will be expected to demonstrate how the development enables access by alternative means of transport including improving connectivity to support walking, cycling and wheeling.

Nuffield sites (Island Site/ Worcester St Car Park and Pub/ Land South of Frideswide Square)

Site area	Total of 1.42ha (all sites) Consists of the following three sites: Island Site - 0.65ha Worcester St Car Park and Public House - 0.51ha Land South of Frideswide Square - 0.26ha
Ward	Osney & St Thomas and Carfax & Jericho
Landowner	Nuffield College
Current Use(s)	Mix of uses across the three sites including hotel, employment, ground floor retail, cafes, and surface level car park.
Flood zone	Island site: • Flood Zone 3b Worcester St Car Park and Public House: • Flood Zone 3a Land South of Frideswide Square: • Flood Zone 2
Notable heritage assets	Central (City and University) - Island site (070) adjacent to boundary. Worcester St Car Park (081) and Land South of Frideswide Square (624) are within the Central (City and University) Conservation Area. The Island site is adjacent to the boundary. All three sites are located within the Historic Core Area and within several view cones (e.g., Raleigh Park and Boar's Hill) Island site: • Close proximity to Grade II Listed Coopers Marmalade Factory • Close proximity to Scheduled Ancient Monument: Oxford Castle and earlier settlement remains (including Castle motte/ mound • Close proximity to Rewley Abbey Scheduled Ancient Monument – predominantly below ground. Upstanding remains exist along Beesley Lane. • Includes Local Heritage Assets on the OHAR: Former Hartwells Garage and Royal Oxford Hotel Worcester St Car Park, in close proximity to: • Grade I Well House, Oxford Castle • Grade II Listed Nuffield College • Grade II Listed Boundary Wall on Worcester College • Scheduled Ancient Monument: Oxford Castle and earlier settlement remains (including Castle motte/ mound) • Grade II* Worcester College Registered Park and Garden Land South of Frideswide Square: • Close proximity to Grade II Listed Coopers Marmalade Factory, (frontage)- also near Island Site (070) • Close proximity to Grade II Listed St Thomas Vicarage (to the rear) • Close proximity to Grade II Listed Church of St Thomas the

	Martyr (Becket St) • Contains Local Heritage Assets on the OHAR: former Castle Hotel, Park End St All three sites lie within the locally designated, City Centre Archaeological area. The sites are of archaeological interest with fragments of industrial archaeology having been excavated previously.
Notable ecological features	Parts of the site is identified in the Local Nature Recovery Strategy (LNRS). There are mature trees along the northern edge of the Castle Mill Stream (within the Worcester St Car Park site), and to the rear of the Land to the South of Fridiswide Square, which are protected (TPO) due to their location within the Central (City and University) Conservation Area.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPCW7 – Nuffield Sites

Planning permission will be granted for a mix of uses across the three sites that delivers residential and/or student accommodation, employment uses, and appropriate other uses including retail, cafés/restaurants and other uses that support the evening economy. A minimum number of 59 dwellings (net gain) (or if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied).

Development proposals across the three sites should be brought forward in accordance with a masterplan-led approach that sets out the anticipated development phases in which the sites will be brought forward. Where a phased delivery strategy is proposed, it should include the location and phase that will bring forward the residential development and ensure the minimum number of dwellings can be delivered in full.

Development proposals should have regard to the principles set out in the West End and Osney Mead SPD. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals should take opportunities to enhance biodiversity along the waterfront. Such measures could include bank restoration measures at the western bank of the Wareham Stream. Improvements to habitat connectivity across the three sites will be sought. Appropriate tree-planting should be provided and the incorporation of green roofs/ walls should be considered to support biodiversity.

b) Opportunities should be taken to improve access to Castle Mill Stream from the Worcester St Car Park site.

c) Parts of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

d) Appropriate ecological surveys should be undertaken to ensure that development proposals do not have an adverse impact on protected species (e.g. bats/ breeding birds). A lighting strategy may also be required given the proximity to the Wareham and Castle Mill Streams, both of which could provide a foraging habitat for bats.

e) A site-specific Flood Risk Assessment (FRA) will be required, and a sequential approach should be taken to locating development on the site. More vulnerable development will be expected to be located away from the areas at highest risk of flooding. A site-specific FRA should consider onsite routes and any infrastructure required to reach the access route. Access/egress from the site is over land in low flood risk, however the FRA should consider the evacuation requirements before the design event and a more extreme fluvial event, particularly given that there is no advance flood warning provision for the site. The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited (**Policy G7** and **Policy G8)**.

Urban design & heritage

f) Development proposals involving taller buildings that exceed the height stated in the High Buildings TAN should be designed with consideration of their impact on views. In particular, views out from the historic core, views into the site (e.g., from the Raleigh Park and Boar's Hill view cones), further views, and relevant local views into, out from and across the site should all be considered. Applications must be supported by a full assessment so that the full impacts can be understood and assessed.

g) Prior to undertaking any landscape or visual assessment work, the key views should be discussed and agreed in advance in writing with the City Council. Special attention will need to be paid to views from the Castle Motte to avoid harm to the setting of Oxford Castle.

h) Development proposals should show how the design of the scheme has been influenced by and has considered the city's heritage. Proposals should demonstrate how the existing designated and non-designated, heritage assets can be incorporated into plans to redevelop the site, or justify an alternative approach.

i) Ground floor uses that seek to activate building frontages will be sought throughout these sites.

j) Public spaces created within the development should seek to create their own identity, form and function. The creation of new public/ managed space at the Island site and/ or the Worcester St Car Park site should be complementary to existing and proposed public spaces within the wider West End area. If more than one public space is proposed within the Nuffield sites, these spaces should be designed to complement each other rather than directly competing with each other.

k) The inclusion of inspiring public art to support wayfinding is encouraged.

l) The creation of new routes through the sites should consider how to re-imagine, protect or enhance existing views of the city's heritage assets.

m) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

n) The development should contribute to the cost of public realm improvements to Hythe Bridge Street and Park End Street which could include new and improved crossings, and other environmental improvements to create a safe and legible environment for walkers, cyclists and wheelers.

o) New well-designed route/s through the development should be created, in particular where these can facilitate movement between Hythe Bridge St and Park End St. Improvements to the internal circulation for users within the sites should also be investigated. New walk, cycle and wheel routes created within the sites should be supported by appropriate wayfinding.

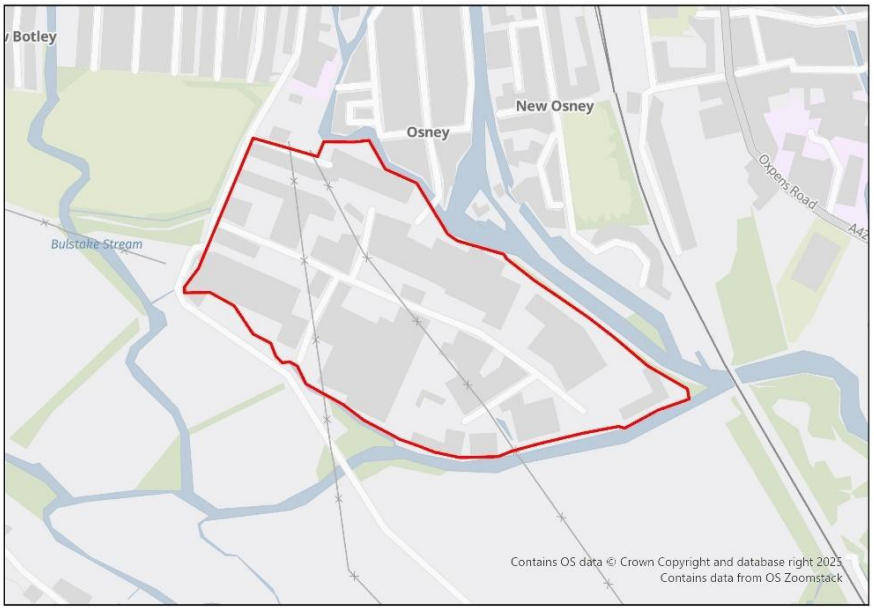
p) The frontage of the Island site onto Frideswide Square should deliver

improvements that establish this part of the site within its context as part of the western gateway to the city. Both the Island site and the Worcester St Car Park provide opportunities to use the city's heritage to support routes through the sites and to deliver clear access from the public realm. Walk/cycle/wheel routes through the Nuffield sites should demonstrate how they have been informed by the city's existing built heritage.

Additional requirements

q) Due to likely contamination risks related to previous uses on these sites, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

Osney Mead



Site area	17.8ha
Ward	Osney and St Thomas
Landowner	University of Oxford (majority) and others
Current Use(s)	Industrial estate with a mix of uses including office, industrial, wholesale and trade retail, academic institutional uses, vacant buildings and hardstanding including surface level car parking. Electricity substation and pylons present on site.
Flood zone	Flood Zone 3b
Notable heritage assets	Part of the site is located within the Historic Core Area and forms part of several view cones (in particular, the Raleigh Park and Boar's Hill view cones). Osney Town Conservation Area extends across the River Thames and includes the mature trees along the riverbank (the northern boundary of the site follows the Conservation Area boundary). The site of Osney Abbey is located near the site (north of

	the River Thames) - it is a Scheduled Ancient Monument, a Grade II Listed Building, and is included on the Oxford Heritage Asset Register (OHAR). The Grade II Listed "Memorial 300 Yards South of Osney Lock" is located close to the eastern-most corner of the site. The site also contains recorded Bronze Age site and high potential for Saxon to medieval trackways.
Notable ecological features	Parts of the site is identified in the Local Nature Recovery Strategy (LNRS). There are a number of mature trees along the riverbank (adjacent to the site) and the site itself also contains numerous mature trees. The watercourses are likely to act as wildlife corridors.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPCW8 – Osney Mead

Planning permission will be granted for a mix of uses including:

- Employment (office/ R&D/ light industrial);
- Employment (B2/ B8);
- Academic institutional uses including teaching and research;
- Residential (subject to outcome of further FRA work), including employer-linked affordable housing, and student accommodation.

The development is expected to deliver a minimum of 247 dwellings (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied), unless further flood risk work undertaken cannot find a solution to ensure the safety of residents.

The development of an innovation quarter is encouraged. Other complementary uses will be considered on their merits including uses which help activate appropriate ground floor street frontages. Such uses could include culture, arts and leisure uses.

To maximise the full potential of the site, a comprehensive approach to future planning and redevelopment should be undertaken. Development proposals should be delivered in accordance with a masterplan-led approach that sets out the anticipated development phases in which the site will be brought forward. This is to ensure that site constraints, new infrastructure provision and land-use considerations (in particular) are resolved on a site-wide basis. Any development proposals coming forward should not prejudice the comprehensive redevelopment of the site. Short-term incremental opportunities for development will be assessed on their merits and will need to have regard to the delivery of any agreed wider masterplanning ambitions for the site.

Development proposals across the site should have regard to the principles set out in the West End and Osney Mead SPD. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals should take opportunities to enhance biodiversity along the waterfront. Such measures could include bank restoration measures. A 10-metre watercourse buffer should be maintained or re-instated where possible (**Policy G2**).
b) Any new open space provided should be designed to be accessible for all site users and visitors. Wider public access to on-site open space is encouraged. Any opportunities to deliver new and/ or enhance existing on-site open space that makes a positive contribution to the green infrastructure network should be taken. Given the relationship with the surrounding fields to the south, development proposals

should investigate extending wildlife corridors through new green infrastructure provision on site.

c) A site-wide landscaping and public realm strategy should be prepared for the site. Proposals for individual plots should identify how they will align with/ comply with the overall strategy. Appropriately managed on-site landscaping that supports and sustains the delivery of a network of green corridors throughout the wider site should be delivered.

d) A site-specific Flood Risk Assessment (FRA) will be required, and a sequential approach should be taken to locating development on the site. More vulnerable development will be expected to be located away from the areas at highest risk of flooding, with car parks and other ancillary uses in higher risk areas where possible. The site-specific FRA should consider onsite routes and any infrastructure required to reach the access route. Areas of significant flood risk are present along the main access route to the site. Given there is no advance flood warning provision for the site, the potential for evacuation before a more extreme fluvial or pluvial flood, considering the effects of climate change for the lifetime of the development, needs to be considered by an FRA, with advice sought from the emergency services and the local authority's emergency planner. Early flood warning will be vital to ensure the access route can be utilised before it is inundated by floodwaters. (**Policy G7**).

e) The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited (**Policy G8**).

f) Part of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

g) Development layout should be designed to enhance the relationship and connection between the site and the river; and the physical and visual permeability of the site.

h) The redevelopment of the site creates opportunities to deliver public spaces that support the creation of lively, dynamic and safe environment. These should:
   i. create their own identity, form and function; and
   ii. be designed to complement each other rather than directly competing with each other; and
   iii. be complementary to existing and proposed public spaces within the wider West End area.

i) The creation of new routes through the sites should consider how to re-imagine, protect or enhance existing views of the city's heritage assets. The inclusion of inspiring public art to support wayfinding is encouraged.

j) Development proposals involving taller buildings that exceed the height stated in the High Buildings TAN should be designed with consideration of their impact on views and the Raleigh Park view cone (**Policy HD6**). Views from Raleigh Park and Boar's Hill to the historic core, views out of the historic core, and relevant local views into, out from and across the site should all be considered. Prior to undertaking any landscape or visual assessment work, the key views should be discussed and agreed in advance in writing with the City Council.

k) Applications must be supported by a full assessment of the heights and heritage assets (including the Osney Town Conservation Area so that the full impacts can be understood and assessed (**Policy HD3**).

l) The site contains a recorded Bronze Age site and has a high potential for Saxon to medieval trackways. Development proposals should ensure that the archaeological

assets are appropriately investigated and responded to (**Policy HD5**).

m) The masterplan-led approach should consider the form that the existing electricity infrastructure will take as the site is redeveloped; and investigate the development implications of retaining this infrastructure in its current position.

Movement & access

n) Development proposals should contribute to, promote and support improved sustainable transport links, securing well-designed new and improved routes through the development that prioritise walking, cycling and wheeling.

o) Any opportunities to open up existing site access points for wider public use should be taken, seeking to deliver high quality well-designed entrances to the site supported by high-quality public realm improvements and enhancements.

p) Improvements to the public realm that deliver high-quality well-designed civic spaces that prioritise walking, cycling and wheeling should be delivered, securing a well-designed internal site layout that promotes good internal site circulation and avoids large cul-de-sacs where possible.

q) Footpaths and cycleways to and through the site should be provided and existing routes enhanced to increase accessibility and promote permeability. Any new walk, cycle and wheel routes created within the site should be supported by appropriate wayfinding.

r) The masterplan-led approach should comprehensively address how new and enhanced walking, cycling and wheeling connections will be provided both within the site and into the wider area, including supporting connectivity across the river with the future bridge link from Grandpont to Oxpens.

Additional requirements

s) Due to likely contamination risks related to previous uses on the site, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

t) Due to the potential impacts of noise from a number of sources, development proposals should be informed by an acoustic design statement that addresses the potential for significant environmental noise. **(Policy R8)**

Oxford Railway Station and Becket St Car Park

Site area	2.56ha
Ward	Osney & St Thomas
Landowner	Network Rail
Current Use(s)	Railway Station and associated buildings and infrastructure including surface level car park for rail users.
Flood zone	Flood Zone 2
Notable heritage assets	The site is located within the Historic Core Area and within several view cones (in particular, Raleigh Park and Boar's Hill). The site contains the Scheduled Ancient Monuments of Rewley Abbey (predominantly below ground) and Swing Bridge at Sheepwash Channel. The southern end of this plot extends into the precinct of Osney Abbey.
Notable ecological features	There are mature trees with TPO protection at the main station site.
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.
Safeguarded Land	All of this site allocation has been identified as Safeguarded Land for EWR (Oxford).

Policy SPCW9 – Oxford Railway Station and Becket Street Car Park

Planning permission will be granted for a new station and associated public realm alongside a mix of uses including residential and/ or student accommodation, employment uses (Use Class E), and complementary town centre uses including retail, cafés and evening economy uses, which activate ground floor frontages and help to create a vibrant city quarter. The development is expected to deliver a minimum of 52 dwellings (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied).

The redevelopment of Oxford Railway Station is expected to enhance its function as a major transport hub; deliver a well-designed high quality, station building and associated enabling development; provide high quality public realm, supported by green infrastructure; and deliver safe routes through and to the site for walking, cycling and wheeling. Redevelopment of the Oxford Station should be delivered to align with the principles and priorities outlined in OxRail 2040: Plan for Rail.

Development proposals across the two sites should be brought forward in accordance with a masterplan-led approach that sets out the anticipated development phases in which the sites will be brought forward. Where a phased delivery strategy is proposed, this should ensure that all the residential development can be delivered across the whole development. Development should have regard to the principles set out in the West End and Osney Mead SPD. Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Proposed layouts should seek to improve and create green routes through the site to encourage and support biodiversity. The use of green walls, roofs, tree planting,

and the creation of green space within the development are all encouraged.

b) Where new green infrastructure is delivered on site, it is expected to be delivered in such a way that supports existing habitats by creating linkages between them.

c) A site-specific FRA should be undertaken as the whole site is more than 1ha and is currently located within Flood Zone 1.

d) The Becket St car park site is raised up above Becket St, which lies in Flood Zone 2. Where development proposals involving level changes to the Becket St car park are proposed, a site-specific Flood Risk Assessment (FRA) would be needed if the change in level results in changes to the flood risk zone.

Urban design & heritage

e) Development proposals concerned with the redevelopment and regeneration of this site allocation should be brought forward in accordance with a masterplan-led approach.

f) The redevelopment of this site provides an opportunity to deliver high-quality public realm improvements. Opportunities for new civic spaces exist at both the Becket St car park site and the main eastern station entrance site. The creation of a new civic space should be created within at least one of the development sites.

g) Public realm improvements should be delivered that create an enhanced sense of arrival.

h) Development proposals should not be of such scale, form and massing so as to obstruct or compete with views to, from and across the historic city core.

i) Development proposals involving taller buildings that exceed the height stated in the High Buildings TAN should be designed with consideration of their impact on views. In particular, views out from the historic core, views into the site (e.g., from the Raleigh Park and Boar's Hill view cones), further views, and relevant local views into, out from and across the site should all be considered. Prior to undertaking any landscape or visual assessment work (to support the masterplan-led approach, or development proposals), the key views should be discussed and agreed in advance in writing with the City Council. A full assessment should accompany proposals so that the full impacts can be understood and assessed.

j) The site is of archaeological interest. The southern end of the main station site extends into the precinct of Osney Abbey and any significant groundworks in this area would require evaluation. A recent watching brief has demonstrated that Victorian railway infrastructure is buried beneath the build-up of Becket Street Car Park, which may require mitigation recording. This will require further investigation as part of any redevelopment (**Policy HD5**).

Movement & access

k) Routes within the site should be designed to strengthen links to the wider area and should enable clear and direct access to the station both from the south, via Oxpens, and from the north, via Rewley Road.

l) Development proposals should deliver anew enhanced bridge across the Botley Road to enable safe, secure access for all station users. Improvements to Cemetery Bridge that enhance its appearance and support a wider range of users would are encouraged.

m) Development proposals should incorporate public realm improvements that deliver priority for walkers, cyclists, and wheelers. The use of public art to support wayfinding is encouraged.

n) The access to the main station site should be enhanced and any improvements should support the delivery of a multi-modal transport hub including secure cycle parking and a reduction in car parking spaces (subject to ORR confirmation and approval). Opportunities to improve priority for walkers, cyclists and wheelers at the main station entrance should be investigated and delivered as part of the masterplan-led approach for the site.

o) Any new walk/cycle/wheel routes through the Becket St car park site should be safe, secure and legible. Routes through the whole length of the Becket St site that run parallel to the western site boundary (i.e., the railway line) should be avoided.

p) The masterplan-led approach should identify how bus and taxi provision (including layover and feeder ranks) are to be provided. Where bus and taxi provision (and associated infrastructure i.e. bus stops or rail replacement bus facilities) are proposed outside the site allocation boundary, this should be agreed in writing with the City Council.

Additional Requirements

q) Development proposals involving operational land should demonstrate that any operational requirements have been satisfactorily addressed. Any proposed solutions involving land outside the redline boundary of the site allocation should be agreed in advance in writing with the City Council and the applicant should demonstrate that the relevant consent/s have been secured from the landowner.

r) Due to likely contamination risks associated with the railway use, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination issues will be resolved where relevant (**Policy R7**).

s) Planning permission involving land safeguarded for East West Rail (Oxford) will not be granted until the East West Rail Company has been consulted and the procedure set out in the East West Rail Safeguarding Directions has been followed (**Policy I2**).

Oxpens

Site area	6.3ha

Ward	Osney & St Thomas
Landowner	OxWED (majority landowner)
Current Use(s)	Mix of uses on site including Oxford Ice Rink, car park, former filling station, open space, sheltered housing and businesses
Flood zone	Flood Zone 3b
Notable heritage assets	The whole site is located within the Historic Core Area and is contained within several view cones (in particular, Raleigh Park and Boar's Hill view cones). Site lies within the City Centre Archaeological Area. Potential for Civil War defences, and 19th/early 20th Century remains. The site has recorded prehistoric, medieval and early modern remains of interest that would require mitigation. Oxford Heritage Asset Register (OHAR) assets nearby include Oxpens Meadow, and the Oxpens Road Bridge.
Notable ecological features	Part of the site is identified within the Local Nature Recovery Strategy (LNRS). Oxpens Meadow is to the east of the Oxford Ice Rink and there are mature trees within the site
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.
Safeguarded Land	Part of this site allocation has been identified as Safeguarded Land for EWR (Oxford).

Policy SPCW10: Oxpens

Planning permission will be granted for a mixed-use development that delivers: Residential and/ or student accommodation, Employment uses (Use Class E), and complementary town centre, leisure and community uses including retail, cafés and evening economy uses, which activate ground floor frontages and help create a vibrant city quarter.

The development is expected to deliver a minimum of 450 dwellings (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals should demonstrate how green and blue infrastructure will be integrated across the site in particular opportunities should be taken to create links between the river with the city centre.

b) An undeveloped buffer zone of at least 10m width should be left alongside the River Thames watercourse (**Policy G2**).

c) Planning permission will only be granted for development on Oxpens where it enhances Oxpens Meadow to create a high quality public open space. Oxpens Meadow should be expanded into the heart of the site and development proposals should respond appropriately to the riverside setting.

d) Part of the site is included within the Local Nature Recovery Strategy which highlights potential measures that could be implemented when delivering biodiversity improvements.

e) A site-specific Flood Risk Assessment (FRA) will be required, and a sequential approach should be taken to locating development on the site. More vulnerable development will be expected to be located away from the areas at highest risk of flooding, The FRA should consider onsite routes and any infrastructure required to reach the access route. Access/egress from the site is partly over land that has a high level of flood risk. The FRA should consider in more detail the nature of the flood risk to determine how quickly it occurs and the degree of hazard, as well as

the evacuation requirements before the design event and a more extreme fluvial event. Early flood warning will be vital to ensure the access route can be utilised before floodwater inundates Oxpens Road (**Policy G7**).

f) The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited (**Policy G8**).

g) Part of the site is identified within the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

Urban design & heritage

h) New high quality and well-located public space should be provided at the heart of the site.

i) Development should be designed to create an attractive public realm and the buildings to form active frontages, in particular along Oxpens Road.

j) The relationship and connection between the site and the river and the physical and visual permeability of the site should be enhanced by the development proposals.

k) Development proposals should have regard to the design principles set out in the West End and Osney Mead SPD.

l) Development proposals involving taller buildings that exceed the height stated in the High Buildings TAN should be designed with consideration of their impact on views. In particular, views out from the historic core, views into the site (e.g., from the Raleigh Park and Boar's Hill view cones), further views, and relevant local views into, out from and across the site should all be considered (**Policy HD6**). Prior to undertaking any landscape or visual assessment work (to support the masterplan-led approach, or development proposals), the key views should be discussed and agreed in advance in writing with the City Council. A full assessment should accompany proposals so that the full impacts can be understood and assessed.

m) Development proposals should not be of such scale, form and massing so as to obstruct or compete with views to, from and across the historic city core (**Policy HD3**).

n) Proposals should ensure that the archaeological assets are appropriately investigated and responded to (**Policy HD5**).

Movement & access

o) Development proposals should provide for the landing of the new Oxpens River Bridge across the Thames in order to facilitate walk, cycle and wheel access from south of the city, Grandpont and Osney Mead to the Station and city centre.

p) The development should contribute towards the cost of new infrastructure improvements to the public realm along Oxpens Road and seek to improve circulation through the site. New well-designed walk/cycle/wheel routes should be created that encourage users to enter and move around and through the site.

q) Routes within the site should be designed to strengthen the link to Castle Mill Stream and the Westgate and to enable clear and direct access towards the station.

Additional Requirements

r) Due to likely contamination risks, proposals will be required to include an appropriate site contamination investigation and demonstrate how contamination

issues will be resolved where relevant (**Policy R7**).

s) Planning permission involving land safeguarded for East West Rail (Oxford) will not be granted until the East West Rail Company has been consulted and the procedure set out in the East West Rail Safeguarding Directions has been followed (**Policy I2**).

St Thomas School and Osney Warehouse

Site area	0.41ha
Ward	Osney and St Thomas
Landowner	Christ Church
Current Use(s)	St Thomas site is a former school building now in use by various organisations including charities and social enterprises. Osney Warehouse site is in use as visual arts company including studio, exhibition, education spaces/community uses.
Flood zone	Flood Zone 2
Notable heritage assets	Site is within the Historic Core Area and City Centre Archaeological Area. Western half of the site is within Central (City and University) Conservation Area). Site within an area of archaeological potential that includes medieval settlement remains and Civil War defences.
Notable ecological features	The two parts of the site are separated by a line of mature trees adjacent to the conservation area boundary. Site potential to provide habitat for bats (roosting and foraging) and nesting birds. Parts of the site is identified in the Local Nature Recovery Strategy (LNRS).
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPCW11: St Thomas School and Osney Warehouse

Planning permission will be granted for mixed use development which should include retention or reprovision of community facilities. The minimum number of dwellings to be delivered on the site is 10 (or, if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) A sequential approach should be taken to locating development on the site, with more vulnerable uses away from the highest flood risk. A site-specific Flood Risk Assessment (FRA) is required and should consider onsite routes and any infrastructure required to reach the access route. Access/egress from the site is over land that runs through the flood extents of the Wareham Stream and Castle Mill Stream. Given there is no advance flood warning provision for the site, the potential for evacuation before a more extreme fluvial or pluvial flood, considering the effects of climate change for the lifetime of the development, needs to be considered by an FRA, with advice sought from the emergency services and the local authority's emergency planner. Early flood warning will be vital to ensure the access route can be utilised before it is inundated by floodwaters. Areas of surface water flood risk are also present within the site and along the access routes, therefore the FRA should consider in more detail the nature of the surface water flood risk to determine how quickly it occurs and the degree of hazard on site. The drainage strategy should be designed to manage runoff arising from the development and ensure surface water flood risk on and off the site is not increased, noting that potential for infiltration SuDS is likely to be quite limited. A geotechnical investigation should be undertaken at this site to obtain further information relating to infiltration rates to confirm whether infiltration could be viable in some areas **(Policy G7** and **Policy G8).**

b) Part of the site is identified in the Local Nature Recovery Strategy as having the potential to become important for biodiversity. Proposals should have regard for the LNRS, including demonstrating that they have explored ways to deliver onsite biodiversity improvements that align with the suggested measures set out for this area. Refer to the LNRS mapping tool for further details.

c) Mature trees on the site should be retained where possible.

Urban design & heritage

d) Development proposals should be designed with consideration of their impacts on the setting of the Central (University and City) Conservation Area, the setting of the nearby listed buildings and views, and demonstrate compliance with **policies HD3 and HD6.**

e) Development should be based upon a clear understanding of the significance of the site and its surrounding context. Development should seek to preserve the character of the Western Fringe Area of the wider conservation area. The size, alignment and design of any proposed development should take account of the importance of preserving the visual and physical connections between important, surviving, historic elements.

f) Development proposals that exceed the height stated in the High Buildings TAN may have an impact on the Historic Core Area and so will be required to provide an LVIA so that the full impacts can be understood and assessed as listed in **Policy HD6**.

g) Materials and construction details used for new development schemes should be of high quality, appropriate for the setting and sympathetic to the local context.

h) Proposals should consider retention of the St. Thomas's School building where possible because of its townscape value and clear representation of past usage of

the area.

i) There is also some potential for archaeological remains on the site. Proposals should ensure that these are appropriately investigated and responded to (**Policy HD5**).

Movement & access

j) The most appropriate vehicular access would be to continue to use of Osney Lane to the north of the site improve access to the current warehouse site via Woodins Way.

k) Development proposals should demonstrate how the development enables access by alternative means of transport including improving connectivity for walking, cycling and wheeling.

West Wellington Square

Site area	0.88 ha
Ward	Carfax & Jericho
Landowner	University of Oxford
Current Use(s)	Academic Institutional uses
Flood zone	Flood Zone 1
Notable heritage assets	Site wholly located within the Central (City and University) Conservation Area Grade II Listed Buildings (2-63 St John St and 5 Pusey St). Site has archaeological potential it is the site of a former workhouse and on the projected line of Royalist Defences.
Notable ecological features	Numerous mature trees near the site benefit from conservation area protection
Urban Greening Factor score	The site is likely to score below the Urban Greening Factor target.

Policy SPCW12: West Wellington Square

Planning permission will be granted for a mix of the following uses:

- Academic institutional uses;
- Residential development (including employer-linked affordable housing in accordance with Policy H4);
- Student accommodation;
- Appropriate uses to the local centre of Little Clarendon Street and Walton Street as set out in Policy C1.

The minimum number of homes to be delivered is 13 dwellings net gain (or if delivered as student rooms, the equivalent number of rooms when the relevant ratio is applied). Other complementary uses will be considered on their merits.

Open space, nature, flood risk

a) Development proposals should seek to ensure that the mature and semi-mature gardens and greenspaces to the rear of the properties at Walton Street and to the rear of Wellington Square are retained.

b) Proposals are encouraged to enhance and improve any other existing greenspaces

Urban design & heritage

c) Proposals will be required to demonstrate how the design of the scheme has been influenced by and has considered the surrounding heritage.

d) Proposals should demonstrate how the surrounding designated and non-designated, heritage assets can be incorporated into plans to redevelop the site, or justify an alternative approach (**Policy HD3**).

e) Archaeological assets must be appropriately investigated and responded to (**Policy HD5**).

Movement & access

f) Access to the site is limited. As such, Development proposals should deliver a low car residential scheme in accordance with **Policy C8**.

g) Non-residential car parking should be in accordance with **Policy C8**.

h) Every opportunity should be taken to enhance walking and wheeling links between Walton Street and Wellington Square.

GLOSSARY

Term	Definition
Active travel	Refers to modes of travel that involve a level of activity. Central Oxfordshire Travel Plan (COTP) – This plan sets out the transport strategy for Oxford and travel connections between the city and Kidlington, Eynsham, Botley, Cumnor, Kennington and Wheatley
Affordable Housing	Affordable housing – This comprises of Social Rent, Affordable Rented, and intermediate housing (with varying levels of ownership of the home) provided to eligible households whose needs are not met by the open market. The high property and rental values in Oxford are so extreme that many of the models for affordable housing do not achieve genuine affordability for people looking to rent or buy in Oxford. The most recent Tenancy Strategy will be used to assess whether proposed forms of affordable housing are genuinely affordable in Oxford. Affordable housing will also comply with one or more of the following definitions: **a) Affordable housing for rent:** meets all of the following conditions: i) the rent is set in accordance with the Government's rent policy for Social Rent (see separate definition) or Affordable Rent, or is at least 20% below local market rents (including service charges where applicable); ii) the landlord is a registered provider, except where it is included as part of a Build to Rent scheme (in which case the landlord need not be a registered provider except for any social rented element of the scheme. This may also include employer-linked housing); and iii) it includes provisions to remain at an affordable price for future eligible households, or for the subsidy to be recycled for alternative affordable housing provision. For Build to Rent schemes affordable housing for rent is expected to be the normal form of affordable housing provision (and, in this context, is known as Affordable Private Rent). **b) Starter homes:** is as specified in Sections 2 and 3 of the Housing and Planning Act 2016 and any secondary legislation made under these sections. The definition of a starter home should reflect the meaning set out in statute at the time of plan-preparation or decision-making. Income restrictions should be used to limit a household's eligibility to purchase a starter home to those who have maximum household incomes of £80,000 a year or less (or £90,000 a year or less in Greater London). **c) Discounted market sales housing:** is that sold at a discount of at least 20% below local market value. Eligibility is determined with regard to local incomes and local house prices. Provisions should be in place to ensure housing remains at a discount for future eligible households. **d) Other affordable routes to home ownership:** is housing provided for sale that provides a route to ownership for those who could not achieve home ownership through the market. It includes shared ownership, relevant equity loans, other low cost homes for sale (at a price equivalent to at least 20% below local market value) and rent to buy (which includes a period of intermediate rent). Where public

	grant funding is provided there should be provisions for the homes to remain at an affordable price for future eligible households, or for any receipts to be recycled for alternative affordable housing provision, or refunded to Government or the relevant authority specified in the funding agreement. Campus sites of the colleges of the University of Oxford and of Oxford Brookes University - These are sites with academic accommodation existing at the time of the adoption of the Local Plan, and where academic institutional use would remain on the site, even with the development of some employer-linked housing.
Affordable workspace	Workspace that overcomes a market failure and is delivered to support certain social, or cultural or economic purposes including: - Sectors that have social value such as charities, voluntary and community organisations or social enterprises; - Sectors that have cultural value such as creative and artists' workspaces, rehearsal and performance space and makerspace; and - Supporting start-up and early-stage businesses or regeneration. Affordable workspaces should be provided using a discounted or "alternative" rent model, and/ or by providing suitable premises to meet end-user requirements (i.e., through the provision of a specific use class).
Affordable workspace strategy	A strategy which sets out the details of the affordable workspace to be delivered on site which will include details of the size, marketing, servicing, management and how the space provided will meet end-user requirements.
Arterial road	The principal routes for the movement of people and goods within the city. Arterial roads in Oxford include Botley Road and Iffley Road among many others
Biodiversity	A collective term for the variety of wildlife and flora that are present in a particular area. More species and greater variety is generally reflective of higher biodiversity, this can be important for ensuring greater resilience to pressures such as climate change and pollution
Biodiversity net gain	Biodiversity net gain is a strategy to develop land and contribute to the recovery of nature. It is a way of making sure the habitat for wildlife is in a better state than it was before development
Built environment	Refers to aspects of our surroundings that are built by humans, that is, distinguished from the natural environment. It includes not only buildings, but the human-made spaces between buildings, such as parks, and the infrastructure
Campus	Accommodation occupied by an educational institution and comprising academic institutional uses including academic (teaching, seminar and lecturing spaces), research (laboratories and special facilities) and/or administrative uses (offices and administrative functions).
Circular Economy	Unlike traditional linear economy whereby materials and products are created, used and then thrown away, a circular economy promotes conservation of energy, reduction in waste and extending the lifetime of products through various means such as sharing, reusing, repairing, refurbishing and recycling existing materials and products for as long as possible
Climate Change Adaption	A process of adjustment to actual or expected climate and its effects, in order to moderate harm or exploit beneficial opportunities
Climate Change mitigation	Actions to reduce the impact of human activity on the climate system. Entails interventions to reduce the emission of greenhouse gases like carbon dioxide, or to increase their storage within 'sinks' (adapted from IPCC)
Communal Accommodation	A type of residential development providing managed accommodation. These cover 'traditional' university and college student halls, hospital staff accommodation, care homes and hostels
Conservation	An area of special architectural or historic interest, the character or appearance of

areas	which it is desirable to preserve or enhance
Construction, Logistics and Community Safety (CLOCS)	A set of requirements for construction vehicles and construction traffic operations designed to eliminate collisions with vulnerable road users and mitigate the negative community and environmental impacts of construction traffic
Contaminated Land	Where substances are causing or could cause: significant harm to people; property or protected species, significant pollution of surface waters (for example lakes and rivers); or groundwater or harm to people as a result of radioactivity.
Critical infrastructure	Facilities, systems, sites, information, people, networks and processes, necessary for a country to function and upon which daily life depends
DEFRA biodiversity metric	The biodiversity metric is a habitat based approach used to assess an area's value to wildlife. The metric uses habitat features to calculate a biodiversity value. Use of the metric is required to demonstrate net gain requirements in line with the Environment Act legislation
Demographic	The measures (such as age, gender and income) of a specific group of people.
Design flood event	A flood event of a 1 in 100 probability, factoring in the maximum estimated water level during the design storm event, with an allowance for climate change set in accordance with national planning guidance (the design flood level). Mitigation measures should respond to this and the suitability of proposals will be assessed in accordance with it.
District centres	District centres comprise groups of shops often containing at least one supermarket or superstore, and a range of non-retail services, such as banks, building societies and restaurants, as well as local public facilities such as a library
Ecological buffer zone	A primarily undeveloped area of land adjacent to the watercourse which is designed to secure benefits for nature and people, whilst also forming a natural buffer to the waterfront.
Ecological network	This is one component of the overall green infrastructure network and where the term is used in the Local Plan, this specifically relates to the collection of spaces in the city which play a particularly vital role in supporting ecology and have been designated for this primary purpose
Ecosystem services	The direct and indirect goods and services that nature contributes to our health and wellbeing, including benefits like food production, water quality, regulation of floods, resilience to soil erosion, as well as more intangible benefits like stress reduction and contributing to our sense of place and character of the city
Embodied Carbon	The carbon dioxide in producing materials, including the energy used to extract and transport raw materials as well as emissions from manufacturing processes. The embodied carbon of a building can include all of the emissions from the construction process and materials used throughout; as well as from deconstructing and disposing of it at the end of its lifetime (adapted from UCL fact sheet)
Employer-linked affordable housing	Housing that is provided on specified sites by key employers in the city for staff carrying out their work. The housing should be rented at levels that are affordable to a cross-section of the key employer's employees, and should be available at Affordable Rent levels in perpetuity.
Employment generating uses	Employment generating uses are referred to in planning terms as employment floorspace or employment land. Employment generating uses include the sectors that make up the following Use Classes: - Use Class EG(i): Office - Use Class EG(ii): Research and Development (R&D)

	- Use Class EG(iii): Light Industrial - Use Class B2: General Industrial - Use Class B8: Warehousing, Storage and Distribution
Existing employment sites not designated as Key Employment Sites	Outside the city and district centres, these sites are usually smaller employment sites which can be less-well located and that do not perform an important economic function, or are unlikely to be able to in the future. Within the city and district centres, centres these are existing employment sites that are less than 2ha.
Existing university or college campus or academic site	An existing university or college campus or academic site is one that exists at the time the Plan is adopted
Flood zones	Areas with different probabilities of flooding as set out in the Planning Practice Guidance: Flood Risk and Coastal Change: Zone 1 (low probability) - Land having a less than 0.1% annual probability of river or sea flooding. Zone 2 (medium probability) - Land having between a 1% and 0.1% annual probability of river flooding; or land having between a 0.5% and 0.1% annual probability of sea flooding. Zone 3a (high probability) - Land having a 1% or greater annual probability of river flooding; or Land having a 0.5% or greater annual probability of sea. Zone 3b (the functional floodplain) - Land where water from rivers or the sea has to flow or be stored in times of flood. This is land that is designed to flood.
Frequent bus service	Every 15/20 mins in both directions.
Green infrastructure	A network of spaces and features including parks, playing fields, woodland, allotments, private gardens, green roofs and walls, street trees. The term also incorporates 'blue infrastructure' such as streams, ponds, canals, and the rivers
Gross Value Added (GVA)	This measures the contribution to an economy of an individual producer, industry, sector or region. It is used in the calculation of gross domestic product (GDP). GDP is commonly estimated using one of three theoretical approaches: production, income or expenditure. When using production or income approaches, the contribution to an economy of a particular industry or sector is measured using GVA
Heritage assessment	May also be referred to as a Heritage Statement or Heritage Impact Assessment (HIA). This should set out the significance of a heritage asset or landscape within its wider setting and outline the proposal, assess the impact on significance and set out a mitigation strategy. The local Historic Environment Record should be consulted, and expert assessment will be required. It should have a level of detail appropriate to enable an informed decision to be reached
Heritage assets	A building, monument, site, place, area, or landscape positively identified as having a degree of significance meriting consideration in planning decisions. Heritage assets are the valued components of the historic environment. They include designated heritage assets and assets identified by Oxford City Council during the process of decision-making or through the plan-making process (including local listing)
Historic core	area of the city centre comprising the spires and towers that make up the historic skyline, and in which any additions of height will intrude directly into the view of the skyline.
Housing and Economic Land	A strategic assessment reviewing the supply of potential sites and their capacity to meet future needs for housing, and for economic growth.

Availability Assessment	
Housing Delivery Test	A check run by the Government to check whether the level of housing delivery in each planning authority is meeting the housing requirement set out in the local plan
Housing in Multiple Occupation (HMO)	A house, flat or building will be a house in multiple occupation (HMO) if it meets the definition under the Housing Act 2004 s254 or s257. A HMO is usually a house or flat that is shared by 3 or more people, who are unrelated, form more than 1 household and is their only main residence. There are 2 types of HMO: C4 HMO, and sui generis HMO. A C4 HMO is a small house or flat that is occupied by 3-5 unrelated people who share basic amenities such as the bathroom and/or kitchen. A sui Generis HMO is the same as a normal C4 HMO except that it is a large house or flat occupied by 6 or more unrelated people and can be subject to slightly different planning rules.
Housing Need	Housing need is an unconstrained assessment of the number of homes needed in an area (DLUHC).
Housing target/requirement	The number of homes set out to be delivered in the plan period to 2040, also expressed as an annual requirement. In the case of Oxford this number reflects the capacity rather than the need, as the need is greater than can be met
Inclusive economy	An Inclusive Economy is defined in Oxford's Economic Strategy 2022-32 as "growing prosperity that reduces inequality and is sustainable" (Plymouth Inclusive Growth Group). An Inclusive Economy offers a genuine progressive conceptual frame in which greater consideration is given to social benefits that flow from, and feed into, economic activity. (Centre for Local Economic Strategies)
Infrastructure Development Plan (IDP)	The IDP assesses the potential risks of infrastructure not being delivered in a timely manner to support development
Intermediate housing	Housing at prices and rents above those of Social Rent, but below market or affordable housing prices or rents. These can include shared equity (shared ownership and equity loans), intermediate rent and other low cost homes. The Council will consider the suitability of other forms of intermediate housing, such as low-cost market housing, in light of its genuine affordability to those in housing need. NB: Key worker housing is defined separately from intermediate affordable housing
Key Employment Sites	Key Employment Sites are larger employment sites that make a contribution to the national or local economy or are recognised for the social value that they bring to an area. When located: - outside the city and district centres, Key Employment Sites are at least 0.25ha - within the city and district centres, Key Employment Sites are very large sites (2ha or more)
Key worker	The broad definition of key worker is someone employed in a frontline role delivering an essential public service where there have been recruitment and retention problems. In Oxford, a key worker is any person who is in paid employment solely within one or more of the following occupations: i) NHS: all clinical staff except doctors and dentists; ii) Schools: qualified teachers in any Local Education Authority school or sixth form college, or any state-funded Academy or Free School; qualified nursery nurses in any Oxfordshire County Council nursery school; Universities and colleges: lecturers at further education colleges; lecturers,

	academic research staff and laboratory technicians at Oxford Brookes University or any college or faculty within the University of Oxford; iii) Police & probation: police officers and community support officers; probation service officers (and other operational staff who work directly with offenders); prison officers including operational support; v) Local authorities & Government agencies: those providing a statutory service, including but not limited to social workers; occupational therapists; educational psychologists; speech and language therapists; rehabilitation officers; planning officers; environmental health officers; clinical staff; uniformed fire and rescue staff below principal level Ministry of Defence: servicemen and servicewomen in the Navy, Army or Air Force; clinical staff (with the exception of doctors and dentists); and vi)Unregistered Workforce (Support Workers): In Health roles may include: Assistant Practitioner, Care Assistant, Healthcare Support Worker, Maternity Support Worker, Nursing Assistant, Occupational Therapy Assistant, Physiotherapy Assistant, Radiography Assistant, Speech and Language Therapy Assistant, Senior Care Assistant. In Adult Social Care roles may include: Activities worker, Day Care Assistant, Day Care Officer, Domiciliary care worker, Home care worker, Nursing Assistant (in a nursing home or a hospice), Personal Assistants, Reablement Assistant, Residential Care Worker, Senior Home Care Worker, Support Worker.
Listed Building	A building deemed to be of special architectural or historical interest is placed on a statutory list maintained by Historic England. Such buildings cannot be demolished, extended, or altered without special permission from a local planning authority, which typically consults with Historic England before determining an application. The designation regime is set out in the Planning (Listed Buildings and Conservation Areas) Act 1990 Listed buildings are classified into three grades: Grade I buildings are of exceptional interest Grade II* buildings are particularly important buildings of more than special interest Grade II buildings are of special interest warranting every effort to preserve them
Listed building consent	permission required from a local planning authority before making changes that affect the character or appearance of a listed building
Liveable city	Where essential needs can be met locally such as food, open spaces, cultural activities, community needs
Liveable neighbourhoods	A neighbourhood where local residents can reach facilities such as small shops, community facilities, primary school within a 15- 20 minute walk
Local centres	Local centres (classified as Town Centres in the NPPF) include a range of small shops of a local nature, serving a small catchment. Typically, local centres might include, amongst other shops, a small supermarket, a newsagent, a sub-post office and a pharmacy. Other facilities could include a hot-food takeaway and launderette. Small parades of shops of purely neighbourhood significance are not classified as local centres
Local connection (for intermediate housing)	The applicant is currently resident in the local area and has been for a continuous period of at least 12 months, or the applicant is currently employed in Oxford and has been for at least the previous six months, or the applicant has close family members (parents or adult children) who have lived in the area for at least 5 years.
Main Town Centre	The National Planning Policy Framework (NPPF) defines main town centre uses as

Uses	retail development (including warehouse clubs and factory outlet centres); leisure, entertainment and more intensive sport and recreation uses (including cinemas, restaurants, drive-through restaurants, bars and pubs, nightclubs, casinos, health and fitness centres, indoor bowling centres and bingo halls); offices; and arts, culture and tourism development (including theatres, museums, galleries and concert halls, hotels and conference facilities)
Major development	The National Planning Policy Framework (NPPF) defines major development as follows: For housing, development where 10 or more homes will be provided, or the site has an area of 0.5 hectares or more. For non-residential development it means additional floorspace of 1,000m2 or more, or a site of 1 hectare or more, or as otherwise provided in the Town and Country Planning (Development Management Procedure) (England) Order 2015.
Market housing	Housing provided by the private sector with no intervention from public bodies and sold or rented via the private market
Micro-renewables	Small-scale non-commercial renewable energy installations such as a domestic solar panel array
Mobility hubs	An area in which a variety of transport modes and community assets are co-located for seamless interchange. These facilities provide added benefit to communities and combined they make up an easy-to-use transport network
Multi-functional	In the context of green infrastructure, the term multi-functional means the multiple benefits that features and spaces can provide simultaneously, often contributing to better health and wellbeing for people and the natural environment (e.g. supporting mental/physical health; providing space for biodiversity; climate resilience etc). Some types of GI may provide more benefits than others
Native planting	A native plant is one that has evolved naturally in its location without direct human intervention, as opposed to species that have not existed historically in an area but are introduced by human activities
Net zero carbon	A situation where any emissions of carbon dioxide are balanced out by removal elsewhere – equating to no net increase (adapted from IPCC)
Oxford Heritage Assets Register	A register of buildings, structures, features, or places that make a special contribution to the character of Oxford and its neighbourhoods through their locally significant historic, architectural, archaeological or artistic interest
Oxford Living Wage	The Oxford Living Wage is an hourly minimum pay that promotes liveable earnings for all workers and recognises the high cost of living in Oxford. For 2023-24 the rate is £11.35 per hour
Oxford Short Stay Accommodation Study	A study that provides a summary of findings with an analysis of the impact on the development of policies which will influence both the existing stock of short stay accommodation as well as the amount and type of future provision to meet future forecasted demand
Parking Standards for New Developments	A document produced by Oxfordshire County Council used to help determine the level of parking at new developments
Planning Practice Guidance	A web-based resource that brings together national planning practice guidance for England
Principal elevation	In most cases the principal elevation will be that part of the house that fronts (directly or at an angle) the main highway serving the house (the main highway will be the one that sets the postcode for the house concerned). It will usually contain the main architectural features such as main bay windows or a porch serving the main entrance to the house. Usually, but not exclusively, the principal elevation will be what is understood to be the front of the house. Where there are two elevations that may have the character of a pincipal elevation, for example on a

	corner plot, a view will need to be taken as to which of these forms the principal elevation
Registered Parks and Gardens	Registered Parks and Gardens are designed landscapes, such as parks and gardens, that have been identified as being of special historic interest. Each registered park and garden is listed on the National Heritage List for England (NHLE).
Renewable energy	Energy that uses technologies which generally rely on the elements (e.g. sunlight, wind, rain), biomass, or on generating energy from the earth itself
Residual risk	Residual risk is the risk that remains after efforts to identify and eliminate some or all types of risk have been made
Resilience	Our ability to anticipate, absorb, accommodate, or recover from the effects of a hazardous event in a timely and efficient manner. When talking about climate resilience such events could include flash flooding or intense heatwave events
Retro-fitting	In the context of this chapter, retro-fitting describes improvement works to an existing building for the purpose of improving its energy efficiency (such as by making them easier to heat or by replacing fossil fuel systems with renewable energy-based systems), or its resilience to climate change
East West Rail Safeguarding Directions	This refers to the *Safeguarding Directions for development affecting the route and associated works for the East West Railway Project* which came into force on 19 November 2025. The East West Rail Safeguarding Directions include a requirement to consult the East West Rail Company on any planning application on land covered by the Directions. They also introduce specific requirements which must be followed before planning permission can be granted.
Scheduled Monuments	Archaeological sites and structures that have been recognised as nationally important due to their historical or cultural significance. These can include both above-ground and below-ground features such and standing stones, burial mounds, or the remains of monastic buildings, among others. Monuments are added to the Schedule by the Secretary of State if they are deemed of national importance.
Short stay accommodation	Accommodation providing residential tenancies, typically provided on a daily basis, principally for short stays by visitors. Accommodation will typically be in self-contained space consisting of complete furnished rooms or areas for living/dining and sleeping, with amenities (e.g. television, internet) included in the rent. This accommodation type includes hotels, bed and breakfast (B&B), Aparthotels, short-term lets, and serviced accommodation.
Site of Special Scientific Interest (SSSI)	Areas identified by Natural England as being of special interest for their ecological or geological features. Natural England is the government's advisor on the natural environment
Site specific flood risk assessments (FRAs)	A study that determines how a proposed development will manage flood risk from all possible water sources to the site in question
Social Rent	Homes that are let at a level of rent set much lower than those charged on the open market. The rent will be calculated using the formula as defined in the Rent Standard Guidance of April 2015 (updated in May 2016) or its equivalent or replacement guidance (relevant at the time of the application).
Special Area of Conservation (SAC)	Special Areas of Conservation are areas that have been designated at a European level as important for nature conservation
Standard Method	The Government has set out a Standard Method for identifying housing need. This should be the starting point for assessing housing need and it identifies an overall minimum average annual housing need figure

Student accommodation	Accommodation whose main purpose is to house students in higher education, registered on full-time courses of an academic year or more in Oxford
Sui Generis	A term used to categorise buildings that do not fall within any particular use class for the purposes of planning permission. Such as petrol stations and cinemas
Sustainable Urban Drainage Systems (SuDs)	Sustainable Urban Drainage Systems are a sequence of water management practices and facilities designed to drain surface water and protect against flooding. These include porous roads, high-level road drainage, swales, soakaways, filter trenches, wet and dry attenuation ponds and ditches. SuDS helps mimic natural drainage processes and can provide benefits in terms of sustainability, water quality and amenity
The City Centre Archaeological Area	Area of the city centre where archaeological remains are almost certain to be present
Traffic filters	Cameras that are intended to reduce traffic levels in Oxford by managing the use of certain roads in the city by private cars
Transport assessment	A thorough assessment of the transport implications of development
Transport statement	A 'lighter-touch' evaluation to be used where this would be more proportionate to the potential impact of the development (i.e. in the case of developments with anticipated limited transport impacts)
Whole building approach	In the context of retrofitting, taking a Whole Building Approach means that improvements are informed by an understanding of how the entire building and the different materials that it is comprised of currently performs, considering issues such as air quality, damp management and ventilation. It involves selecting fabric improvements and other upgrades that complement each other to ensure the best results for the long-term sustainability of the building and health of occupants and avoiding problems of maladaptation, whereby improvement projects can have unintended, negative consequences (such as excessive moisture build-up, or inadequate ventilation)
Working drivers	Residents and drivers who are dependent on their vehicle more than 50% of their working day to earn a wage. Where the vehicle is required to undertake multiple journeys in the city (or wider) to deliver the service provided by the business. Examples include NHS community-based staff, carers working for private care companies, delivery drivers, plumbers, electricians and other trades, mobile hairdressers, dog grooming, food bank staff
Zero Emission Zone	An area within Oxford that prevents vehicles that emit Carbon Dioxide for travelling through without an associated charge

APPENDIX 1 – STRATEGIC

APPENDIX 1.1 DESIGN CHECKLIST

Introduction

Purpose of this design code/guide - what it does
The design guide sets out the key considerations that applicants will need to respond to in order to demonstrate high-quality design in line with requirements of Policy HD1.

The guide also brings together broader design considerations in Oxford which will arise from the requirements of policies across the Local Plan.

Structure of this design code/guide
The design guide is structured as a series of questions which the City Council will look to see answered as part of a planning application. These answers will explain the design approach, most likely in the design and access statement. Under each question are a series of prompts intended to help flag key issues, the relevant Local Plan policies are noted, as are helpful guidance documents or information sources. Many of the topics are inter-related, cross references are provided where this is clear although the issues covered should also be considered as a whole. Context should always be the starting point of the design process, and the contextual analysis will inform many aspects of design. For major developments, where early consultation with the community is encouraged in the Statement of Community Involvement, this should include engagement on context and how that may inform design.

The structure of the document has been loosely guided by the key principles of high-quality design as set out in the National Design Guide, tailored to an Oxford setting.

Context

The context refers to the attributes of the site and its surroundings. Understanding and responding to context is complex. It applies to the physical, but also cultural and historic context. Understanding context is important, but an appropriate response will not merely be to copy existing built forms and densities. A thorough understanding of context is a key starting point in good design, as not only will it help to ensure a high-quality development, it will also help to identify the key opportunities and constraints that the design process will need to work at an early stage to ensure a successful application.

C.1 What are the key features identified in the contextual analysis that should inform the design?

The constraints and opportunities plan should form a key part of the design and access statement, explaining the design story and showing how the key features of the site have been identified and help to inform the design proposal. The analysis should therefore be wide-ranging, including but not limited to:

- What is the landscape/townscape character of the area (e.g. Riparian edge, clay hills, gravel raised bed) and the urban character of the area? What is the built-form in the area? Are there features that have a positive or negative impact on character, and how should this affect the design? Relevant may be roofscapes, materials, detailed features such as windows, boundary treatments and height and massing. Heritage assets on or near the site will need particular attention. See: Oxford in its Landscape Setting:

https://www.oxford.gov.uk/downloads/download/1054/014_des_-_design_and_heritage

- What are the major movement corridors around the site – including roads, public transport routes, cycleways and footpaths. What is movement like along these corridors at present? Are there barriers or pinch points which constrict movement? What is access like into the site?
- What is the natural landscape like around and on the site? Is there green open space and what function does it provide? What is tree canopy cover like? Are there green or blue corridors or is there the potential to establish these by connecting up fragmented areas? What habitats are present and are there designated ecological or geological sites that could be susceptible to harm? Are there waterways or other blue features? See: Oxford Urban Forest strategy; Green Infrastructure study 2022; Playing pitches study; Natural England mapping
- What is the heritage context of the area? This is expanded upon in section C2 below.
- What other constraints could be present (e.g. areas of flood risk, air pollution hotspots, noise environments)?
- What features/constraints could be present below the ground (e.g. utilities, soil quality/typologies; groundwater levels and movement; archaeology; contaminated land)?

Additional data sources (such as up-to-date satellite imagery, biodiversity/ contamination/hydrology surveys) could be used to inform the site-specific context.

C.2 What is the heritage and cultural context of the site and are there any heritage assets that may be affected by the development?

The historic character of the city is unique and comprises a range of heritage assets, many of which are designated either locally or nationally.

- When considering whether there are any heritage assets that may be affected by the development, the setting of these must also be considered. If there is to be any impact on a heritage asset, a heritage statement will be required. This may be standalone or form part of the design and access statement. Policies HD1-HD6 and HD9 set out what is expected.

The following sources of information will help to identify whether any heritage assets or their setting may be affected by the development:

- Historic England List https://historicengland.org.uk/listing/the-list/map-search?clearresults=True/
- Historic England Heritage at Risk Register https://historicengland.org.uk/advice/heritage-at-risk/search-register/
- Conservation Area Maps and Appraisals https://www.oxford.gov.uk/info/20195/conservation_areas/871/conservation_areas
- Oxford Heritage Asset Register https://www.oxford.gov.uk/info/20196/oxford_heritage_asset_register/874/oxford_heritage_asset_register_-_overview

Heritage assets offer an opportunity to maintain and inject local character. They are distinctive, and responding to them positively will help ensure a contextually rich design, as well as maintaining the significance of the asset.

C.3 How has the design rationale responded to the presence of important views across the city?

Views are particularly important in Oxford: there are wide-ranging views to and from and across the buildings in the historic core which include the internationally renowned skyline, which as an entity is considered a heritage asset; and views out towards the city's unique setting (which includes the green hills rising up around the city and the low-rise character of its suburbs). Also relevant are the views and setting of each individual tower and spire that comprises the iconic skyline, as this includes individually listed buildings of the highest significance.

Several types of views need to be considered:

- Long ranging views across the city that are protected (Policy HD6) - information on these can be found at: https://www.oxford.gov.uk/info/20064/conservation/876/oxford_views_study
- Views identified in conservation area appraisals – typically shorter in range but important role in supporting the character of these areas – information on these can be found at: https://www.oxford.gov.uk/info/20195/conservation_areas
- Views out towards the city's landscape setting and low-lying suburbs and landform which visually present the story of Oxford's history and development
- Locally important views that create or aid appreciation of the townscape and character of the area, including those potentially identified in neighbourhood plans.

The high buildings TAN identifies four principal visual characteristics that are worth considering when assessing views and how a building could impact on them:

- The iconic spires and silhouette of the historic city centre.
- The open and natural character of the river floodplains.
- The green (wooded or agricultural) backdrop to the city formed by the surrounding hills.
- The enclosed and often intimate views within the city centre.

As set out in policy HD6, the methodology outlined in the Assessment of the Oxford View Cones report will support in assessing potential impacts of high buildings on heritage significance.

Built form

Built form refers to the 3-D arrangement of streets, open spaces, development blocks and buildings. An appropriate built form and the design rationale will need to explain how the contextual analysis has informed this. It is important that the elements of built form set out below are not considered in isolation later sections in the guide such as movement and public space also play an important role in determining the correct arrangement for the site.
Site layout and block arrangement

B.1 Has the proposed site layout been informed by the features identified through the contextual analysis? ;

The layout of development on a site and the siting of uses within that need to consider the contextual analysis. A comprehensive analysis should help to inform which parts of the site are more sensitive to development or need to be avoided completely. Policy HD2 sets out important considerations regarding the site's context that will affect the overall density of the development.

- Does the contextual analysis suggest that any areas of the site need to be left undeveloped, for example because of archaeological remains, valuable habitats, mature trees or areas of flood risk? These undeveloped areas will not only affect

site layout and block arrangement but also height/massing and density, and will influence the pattern of streets.
    - Certain constraints may be able to be overcome through targeted design measures to allow development to come forward in an acceptable way – e.g. contaminated land could be remediated; noise concerns could be overcome with sufficient attenuation measures, open space may be able to be re-provided.
    - Other constraints may necessitate an arrangement of the site that completely avoids the concern – for example if part of the site is particularly high risk from flooding or to ensure a sufficient buffer to a sensitive ecological site nearby or a watercourse.
- The built form of the surrounding area will likely influence site layout. The design will need to respond to the way that buildings and spaces are arranged around the development site, including their heights, massing and density. Existing building lines should also be considered, and in most cases it will be appropriate to continue these where relevant. If that is not the design choice, the rationale should be explained.
- Movement will also be a key part of informing the site layout. The contextural analysis should identify existing accesses, roads and footpaths, and key destinations in the surrounding area. The Movement section has more detailed considerations but particular questions that may influence layout could include:
    - Are existing accesses adequate, or do they need to be moved or enhanced?
    - Can access be achieved (or are any additional accesses needed) for vehicles or just for cyclists and pedestrians to improve their choice of routes and to allow direct crossing of desire lines?
    - How direct is access through the site to surrounding destinations such as shops and bus stops and can it be made more direct?
    - How easy is it to navigate through the public realm? Key navigating points, or nodes, may be marked by buildings with notable features to make clear that it is a significant point in the network and to make routes memorable. Small block sizes can help maximise choice of routes.

B.2 What is the strategy behind the configuration of development blocks and how has this been tailored to the opportunities and constraints of the site?

Proposals should consider how different configurations of block typologies can satisfy the need of the development and respond to existing context. In general, key considerations will be the orientation of blocks, how they fit into the surroundings and maintain or create views and glimpses, the impact on solar gain, any wind tunnel effects and so on. The location of uses within blocks may need to be tailored to specific constraints on the site and surrounding area, for example noise pollution. Retail and similar uses that create activity will be best located on a frontage on primary streets. The uses proposed will influence the type of blocks. There are specific considerations for particular block arrangements:

- Standalone detached blocks may be more suitable for constrained sites or infill development, however standalone buildings can also be used in key locations on larger sites as statement buildings that can bring interest and improve legibility of site. Careful consideration needs to be given to the spaces between buildings to ensure they are integrated into their surroundings successfully. They typically give fewer opportunities to establish defined open space so the surrounding public realm will be particularly important establishing their character and setting.
- Courtyard or perimeter block arrangements establish more continuous building lines along the boundaries of an urban block and can offer more opportunities to contain shared space within. The shape and size of shared spaces within the

blocks can be varied based upon the needs of the occupants but should also be based upon wider environmental considerations such as presence of daylight/overshadowing.

- Where a site requires more flexibility but an appropriate amount of space more hybridised blocks arrangements can be more effective. This incorporates more breaks in building lines that can act as secondary access routes. Hybrid arrangements can allow for more variation in heights and massing, introducing more visual interest as well as opportunities to attain greater levels of floorspace whilst also keeping the footprint of the building minimised. Because of the more open nature of this type of arrangement, they can include semi-private amenity spaces that have a stronger relationship with the surrounding public realm.

B.3 How have the heights and massing of buildings been determined and how is this justified?

Oxford is particularly renowned for its spires and iconic skyline. Heights and massing of buildings should be informed by the context of the site (neighbouring uses and local built form and character) as well as the needs of the uses proposed.

- The height at which a building is considered to be high will be dependent on its surrounding context and will vary across the city. Even an increase in height of a single storey may constitute a high building. Building heights may impact views and Policy HD6 relates to high buildings. An understanding of context is critical. High buildings may offer visual interest and higher density. The choice of height should be design led, and the overall design will affect the impact of the height. Buildings at greater mass will often be more impactful at a lower height than a building of less mass. The impact on the heritage asset of the historic core is particularly important to consider.
- Vu City can be a useful resource for determining impacts of heights and reference should also be made to the methodology outlined in the Assessment of the Oxford View Cones report in accordance with policy HD6. In addition, the high buildings TAN sets out four visual tests which should be investigated as part of the design iteration process and included in the final submission proposal to demonstrate the potential effects a high building may have to the character, visual and heritage resource. These tests are:
- Visual obstruction – the physical obstruction of a feature or component in the view caused by a high building.
- Visual Competition / Complement – the siting of a high building within the same view as the feature such that the two are viewed together.
- Skylining – when high buildings break the skyline, horizon or silhouette, which may be formed by built form or vegetation.
- Change of character – occurs when the composition of a view is altered to the extent the character of the view is discernibly different to that of the existing.
    - There are other key design considerations when designing tall buildings. The profile or silhouette of the building is important. The articulation of built form should clearly respond and contribute positively to Oxford's skyline. The scope for diversity of profile / silhouette will depend on demonstrating a clear understanding of the context and positive contribution to the modulation of the city's skyline. High building designs should provide well organised and designed roof environments and contribute to the modulation of the city's skyline.
    - Microclimate is another important consideration as greater heights have greater potential to modify the microclimate. Effects may include the tunnelling of wind, partial or permanent shading of adjacent areas and / or intensification of solar irradiation. Privacy and access to light will also need

to be considered and the massing will need to be designed in a way that supports this.
    - Think about how the visual impact of the development will be influenced by the bulk and massing of buildings including the relationship between different sections of the building (e.g. how its base, its middle and its top are balanced out). Larger, unbroken facades that form bulky or homogenous building lines can have a more significant impact on the streetscape and views from a distance, which may be more harmful in more sensitive areas of the city. Taller buildings of slender form are more likely to be more appropriate than bulky tall buildings.
- Whilst more complicated massing which results in a higher surface area (sometimes referred to as a high form factor) can come at a detriment to energy efficiency (see Resources section), consider how massing and building facades can be strategically designed to create visual interest through use of smaller components or features that can create depth and rhythm where appropriate (see Articulation of building features under the Identity and Character section).
- Consider the experience of people within the streetscape as they pass by and use the building. Think about how the building fronts onto the street and how design relates to the human scale so that spaces created between buildings are welcoming and pleasant to inhabit.

B.4 How do alterations to existing buildings respect the form, scale, character and appearance of the existing building and surrounding area?

The same design principles apply when considering alterations to existing buildings; any alterations should respect the form, scale, character and appearance of the existing building. When extending a building, the impact on the existing building and surrounding buildings needs careful consideration.

The privacy and internal daylight and sunlight of the existing property and surrounding properties maybe negatively affected. Policy HD8 sets out expectations for levels of privacy, sunlight and daylight, including the 25o and 45o guidelines. With an extension there is more limited scope to consider orientation, meaning the height and length of the extension and any impacts on overshadowing will be particularly important, as well as the size and placement of windows and rooflights.

Movement

The quality of the movement network into and through a development plays an integral role in establishing its character and how it functions. Particular focus should be on enabling safe and easy walking and cycling as well as on the needs of those who are less mobile. A quality movement strategy will play a role in supporting people to access daily needs such as shops and facilities; employment and services; accessing open space and nature without having to rely on private vehicles. The way that streets are laid out can support social interaction and promote a safer public realm. Movement considerations will also need to address access to public transport for journeys beyond the local area and balance out the need for parking for those who do rely upon private vehicles.

M.1 Has movement into and through the development been considered and what is the strategy for this?

It is important that sites integrate well with the surrounding area. As part of the contextual analysis (as discussed in the Context section) movement corridors of various transport modes in and around the site should have been identified including barriers and opportunities to movement which new development could respond to.

- New developments should provide permeable streets to tie in with existing street networks and secure improved connectivity.
- Levels of movement will vary, with higher levels of activity likely to be located around particular uses like shops, schools and areas of employment and lower levels of activity in other areas such as residential streets.
- Very large sites may have streets across a hierarchy e.g. primary, secondary and tertiary routes. Even for small sites with a single access route, consideration of the position of this route within the surrounding street hierarchy should inform design.
- The street width, building height, enclosure, set backs and uses are likely to differ between the different street types to help distinguish between them (and therefore aid wayfinding) and to accommodate the level of activity of movement on them.
- Streets should not be vehicle dominated but should reflect a more human scale and allow for and encourage more active and sustainable modes of transport. Opportunities will be available for accommodating other design features, such as greening in the form of trees or SuDS, as well as street furniture and services but a balance needs to be struck to ensure that these spaces do not become cluttered.
- Narrower streets (secondary and tertiary routes) offer opportunities to slow down or remove through traffic and prioritise active travel like walking and cycling and are likely to be more fitting of residential areas. The design of new streets and alterations to existing ones should seek to encourage social interaction, natural surveillance and opportunities for active and sustainable traffic by prioritising the quality of the public realm and removing the dominance of the car in the street user hierarchy.

M.2 Has active travel been prioritised and how has design been used to ensure safety and security for all modes and different groups?

On routes of all sizes, pedestrian and cyclist friendliness should be maximised to ensure that all users are safe and comfortable throughout Oxford's movement network. The street user hierarchy should prioritise children, pedestrians, cyclists over motor vehicles and the built form and street design should reflect this. Oxfordshire County Council's Local Transport and Connectivity Plan should be referred to and its Street Design Guide provides useful advice.

- Oxford's communities are diverse with varying needs and vulnerabilities that can modify their experience of the public realm at different times; this needs to be taken into consideration in designing movement routes. Is there sufficient pavement space for different users needs – e.g. those with pushchairs, individuals in wheelchairs or with other assisted mobility needs?
- Consider how route design will impact perceptions of security and promote safety for different groups, such as by facilitating desire-lines for pedestrians and cyclists wherever possible including across open spaces. Avoid creation of spaces and routes that feel cut off or lacking in visibility and take opportunities to reduce street crime/fear of crime and deter anti-social behaviour. Think about how different routes might be experienced at different times of the day and in different seasons, how could perceptions of safety change at night or in bad weather and how can street design be used to improve these (e.g. lighting, shade and shelter).
- Consider also how use of planting could be incorporated into roads, streets and paths to soften the urban fabric and encourage active travel across the site and beyond. Green features like trees that provide canopy cover can be beneficial for providing shade to pedestrians during the summer months as well as movement corridors for wildlife; careful placement of hedges can act as a buffer to air pollutants as well as softening noise impacts. However, care should be taken in choice of species and placement to ensure negative impacts are avoided – for

example certain species can produce pollutants that reduce air quality, whilst poor design can also trap air pollution (e.g. large tree canopies reducing air flow within narrower street canyons). See Nature section for more information.

- Think about how street design can support active travel in other ways, for example by providing secure storage for cycles to ensure that people have somewhere safe to leave bikes in between travelling. Think about how and where these should be located, think about where the demand for storage would be. Is it convenient to use? Does it benefit from natural surveillance? Has situation avoided creating hazards for other road users?

M.3 How does the layout and design of streets promote access to public transport and create areas with minimal traffic

Lower traffic streets allow more space for social interaction and for children to play and have been demonstrated to increase 'neighbourliness' and access to active and more sustainable travel and freedom of movement for children. Even in a relatively small scheme, attention can be given to creating areas with low or no vehicular traffic.

- Placement of parking areas is important, particularly on schemes with only one vehicular access. Is it possible to position parking so that cars do not need to circulate around the whole development? Has permeability been maximised for pedestrians and cyclists?
- Most schemes in Oxford will be smaller, infill schemes on or near to existing bus routes, but will not have new bus routes within them. However, in cases where bus routes are needed within a scheme, these must be direct, wide and straight enough to be easily navigated for a bus driver with adequate space for passenger to wait comfortably, without conflicting with other road users.
- Think about requirements of other services like delivery vehicles and waste collection and design routes to ensure they can move efficiently. All streets should have some provision for emergency access, regardless of hierarchy. Solutions for otherwise pedestrian areas, such as designated delivery zones, may be useful.

High quality public spaces

Except for the smallest developments, most new developments will include public spaces. Multi-functionality is encouraged, from allowing movement and access to allowing social activities and recreation. The link with the Green Infrastructure strategy will influence whether there are long, narrow strips of green corridor, larger and more formal spaces, natural spaces or small pocket parks.

P.1 Are all spaces clearly defined, with a clear purpose, with no awkward or leftover spaces?

Public spaces should be well-defined and clearly distinguished from private spaces. The purpose of the public spaces should be clear, with a certain amount of flexibility about their future use. For example, if routes are segregated, with pavements or cycle lanes for pedestrians and cyclists, the divisions should be clear, but potential for change in the future should also be considered, for example to a shared space. Public open spaces should be obviously public, clearly visible, and accessible. Awkward patches of land that are too small to have an obvious function should be avoided. Landscaping and street furniture such as benches and carefully locating small spaces within the network to create a small social or stopping place will help to ensure they are functional and not wasted.

P.2 How are public spaces designed to give a sense of safety

When a public space is overlooked, with doors and windows fronting onto it, it can offer the user passing through a sense of security, this is particularly important at night and for more vulnerable pedestrians. Is there overlooking to create a sense of surveillance? Are all external public spaces such as streets and parks overlooked by windows serving habitable rooms in buildings and adjacent activity?

P.3 How do public spaces support social interaction and is there adequate space in the public realm to linger and walk side-by-side?
The public realm should do more than just enable people to walk from a to b. Except in the smallest infill sites with only a short access road, there should be an opportunity to design the public realm to include wider and more spacious areas that enable people to interact with others. Routes for pedestrians should not be so narrow as to require single-file walking. Oxfordshire County Council's Street Design Guide provides useful advice.

P4 How are any public open spaces designed with all ages and needs in mind?
Public spaces should be useable and attractive for everyone. Playable space and playful streets that are welcoming to all support sustainable communities and wellbeing. This is important in all of the public realm, not just large parks and squares and playgrounds. Smaller, informal spaces including pavements, pocket parks and small community gardens and growing spaces can all provide these opportunities. Those with visual or hearing impairments benefit from well-designed spaces that are easy to navigate and pleasant to use.

P.5 How has the public realm been designed to be flexible, adaptive and stimulating
Public realm should be able to respond and adapt to various uses and needs and it should also be engaging. Variety in the public realm will help achieve this. How will there be opportunities for children and adults to play games and be active or stop and watch the world go by? All senses should be considered, including the sounds that different planting and surfacing may make, visual variety and smells.

Identity and character

Identity and character are influenced both at a broad level as was discussed under the Built Form section, but also on a more detailed level, by the articulation of specific features of buildings and spaces as well as the choice of materials. Where these elements come together successfully, they can help to generate local character that makes a development distinctive and memorable and gives users a sense of pride as well as establishing places that are sustainable and resilient for the future.

Articulation of building features

I.1 Do the proposals contribute positively to the roofscape?
Oxford has a rich roofscape and new development needs to consider any impact on it. The positive design of roofscape will help to enhance any significant long views the development might be part of and also the experience of the place at street level. The contextual analysis undertaken on the development site will help inform an appropriate approach to the design of rooftops.

- How the design of roofscape sits within longer views will be particularly important where the development is sited within the protected views that cross the city, but also where it is sited within views identified within Conservation Areas Appraisals – See Views section.
- Along with the presence of protected views, consideration should be given as to whether there are specific characteristic aspects of roofscape in the area – this

will be of particular relevance where the site is located within a conservation area – for many of the CAs the style of rooftop is an important element in their designation.

- Variety in the roofscape through a mixture of flat and articulated roofs can help to provide visual interest. Think strategically about the appropriateness of additional features such as dormers or extractors. Where incorporated carefully, these can add visual interest and punctuate the roofline, but their incorporation needs to consider the wider context of the area as well as the overall balance of other features on the building.
- Where roofscape design is less constrained and particularly on larger developments or those within constrained site boundaries, consider how design could support the use of rooftops as communal areas or private amenity space. Equally, think about how rooftops can support wider environmental/sustainability objectives such as promoting biodiversity, and rainwater harvesting, as well as roof-mounted photovoltaics (which can be integrated with green or biodiverse/brown roofs). See Nature and Resources sections.

I.2 How have façade details such as windows and entrances been designed with consideration of any positive characteristics in the area?

As with roofscape, the articulation of façade features like windows and doors can play a major role in contributing to the character of the building and the setting of the wider area. Again, think about the contextual analysis and what factors might need to be considered in the design of these features.

- Articulation of the windows on surrounding buildings including their size, positioning and the types of materials used in their construction. Think about how the design of window/doors will fit in with the rhythm of adjacent buildings so that they respect and enhance the positive character of the area where possible. Where contrasting design choices are made, these should be justified.
- As well as the location of windows/doors, think about how the specific glazed features are designed, including how individual panes are subdivided. Large uninterrupted areas of glazing (e.g. a wide, undivided patio door) can give the impression of voids which may be detrimental to overall design depending on where they are located. Conversely, use of glazing that is subdivided on particular facades can draw attention to these elements in a positive way, but can be equally disruptive where multiple styles of sub-division, or uneven subdivision are located on one frontage.
- Think about the impacts of window/door sizing and spacing on internal amenity. Larger areas of glazing can allow for more daylight but could disrupt privacy, so may be more appropriate at levels higher than ground floor. Equally, size and positioning of glazing can impact solar gain and indoor thermal comfort – there are specific requirements for meeting overheating tests set out in the Building Regulations (Part O – Overheating) which need to be balanced out against design aspirations to ensure planning permission is not in conflict with building regulations. See Resources section.

I.3 Attention to detail: storage, waste, servicing and utilities

Design will need to take into account a range of external features servicing the development and its occupants; it is important that their impact is considered both in terms of their location and the materials they are devised from. Are external servicing features such as bin storage facilities, rainwater goods integrated into the design of the development with well considered placement?

- The positioning of features like bins and storage for outdoor equipment (including bikes) at the front of buildings can have a negative impact where they protrude inappropriately as well reducing the perceived activity of frontages which can

impact the street scene and reduce perceptions of safety. Think about how these could be positioned away from facades intended to provide active frontages, potentially to the rear of properties and away from the streetscene where possible, though it is important to ensure that there is good access for users and it is acknowledged this isn't always feasible. Where positioning away from street scene is not possible, there will be a need for high quality materials and more careful design that can reduce impacts.

- Think about the impact of other external features required to provide for essential services such as meter boxes, gutter pipes, satellite dishes and Electric Vehicle charging (see Resources section for more on EVs). Whilst these should again be located in a way that minimises their visual impact and best fits in with the character of the building and the local area, it may not be feasible to fully limit visual impact by position alone. Again, this is where it is important to pay attention to material choice and specific design characteristics like size, colour, and location and factor this early into the design process. Can these features be designed with a similar colour to the wider building? Can features like guttering be integrated into the façade?

I.4 How do the materials chosen reinforce the overall design concept, respect the local context and ensure high quality?

It should be explained in the DAS how the contextual analysis been used to inform the materials chosen. Considerations that may be of relevance as part of the design rationale for materials used could include:

- In many cases it is likely to be appropriate to select materials and vernacular used in the local area as well as wider Oxford. Where contrasting materials are deliberately chosen for example to create visual interest and distinctive style, the design rationale should be justified, including with regard to the impact on existing character.
- It may be appropriate to use combinations of materials or different materials on different parts of the building for example on different storeys or in order to articulate certain parts of the structure. In those cases, the change from one material to another should appear logical and be justified within the design rationale.
- The selection of materials should consider various characteristics including colour, variation, reflectivity, texture of materials.The extent and character of glazing will also influence the appreciation of a building. The use of prominent colours and materials should be carefully considered; muted colours that respect the existing character of Oxford may be most appropriate. Substantially glazed elevations should demonstrate sensitive appreciation of orientation and reflectance.
- Consider the way materials are seen and appreciated under different atmospheric conditions, for example in bright sunshine and at different times of the day and night. This should be tested through the provision of visualisations agreed during pre-application consultation.
- Materials utilised in external/detailed elements like rainwater harvesting (e.g. guttering), boundary treatments (e.g. fences, walls) and other extraneous features, also need careful consideration, particularly where these are publicly visible. Are these of a high quality, durable and in keeping with the wider context of the building and the local area?
- Consideration should also be given to how the materials will perform over time; they should be chosen to be long-lasting and wear and weather well, without degradation of their aesthetic appeal or functionality. This applies to materials used in the buildings and also external areas including private amenity space and public realm which will be subject to differing levels of wear (e.g. weathering). In

external areas, materials should be easy to maintain and repair, and when it comes to replacement, easy to source matching materials.

- Other considerations of relevance to material selection could include how they will support other design choices and sustainability. For example, considering the embodied carbon cost of particular materials, as well as thermal performance of fabric materials which is important for energy efficiency and maintaining a comfortable indoor environment throughout year (see Resources section and policies R1, R2 and G9).

Nature - Green Infrastructure and biodiversity

Given the constrained nature of the city and increasing pressures on landscapes and biodiversity arising from all sizes of development, it is essential that the provision of green and blue infrastructure are considered at the earliest stage in the design process. Natural and designed landscapes that integrate existing features and incorporate new features should offer multi-functional benefits including for health and wellbeing, biodiversity, water management and climate change. Impacts on existing biodiversity should be avoided and new spaces for wildlife and flora prioritised, integrating with the wider ecological network wherever possible, so that development can help to enhance biodiversity across the city.

N.1 How has design been informed by an understanding of the quality of existing Green Infrastructure features on and around the site and are these being retained/enhanced wherever possible?

Design should be informed by an understanding of the quality of existing green and blue features on and around the site and the value they contribute to the local area as well as wider GI network. A range of factors should be considered in determining quality – think about not only age and physical condition but also their value to wider amenity of the area as well as other functions that may not be as visible – such as benefits for biodiversity; climate adaptation and carbon storage; as well as being of heritage significance (e.g. Registered Parks) or contributing to the setting for heritage assets or for physical recreation.

- Retention of existing green infrastructure should always be the priority, particularly where this is high-quality and could be challenging or time consuming to replicate elsewhere. Mature trees and hedgerows for example take many years/decades to establish and it is preferable for development to be designed in a way that avoids adverse impacts such as their removal.
- Certain functions of green infrastructure are specific to their existing location, making them infeasible to relocate, for example where they contribute to setting of heritage assets; protect reserves of carbon heavy peat; or act as flood storage within the functional flood plain.
- The potential for enhancement of lower quality features should also be considered, this can help meet the requirements of the Local Plan such as for the Urban Greening Factor (Policy G3) or biodiversity net gain (Policy G4).
- It is important that design not only considers the site itself but also the areas that extend beyond the boundaries and the interconnections between green features wherever possible. This will help meet the requirements of Policy G2 on enhancement and provision of green and blue features.
- Consider whether there are existing linear features such as lines of trees, hedges, pockets of green spaces or watercourses that extend into or alongside the site. These can be important spaces for movement of wildlife and people and support an array of habitats. Consideration should be given to strengthening these existing connections, enhancing existing habitats, and avoiding any further fragmentation. Potential for recreation and movement should also be considered.

A range of tools and metrics are available to inform assessments of existing GI and should be utilised where relevant including existing information in the Oxford GI study 2022; the Council's Urban Greening Factor tool; Natural England's GI standards; the DEFRA Biodiversity metric as well as other best practice such as the British Standards for trees BS.5837:2012 (or its future equivalent). Refer to satellite mapping as well as other data sources that details the types of green features, spaces and habitats that surround the site.

N.2 How have new Green Infrastructure features been designed to deliver multiple functions/benefits for the sustainability of the environment and health and wellbeing of people?

Green infrastructure needs to be considered in design with the same level of importance as traditional 'grey' infrastructure like sewers and roads, particularly as it is often able to perform multiple roles that support the sustainability of a development and its occupants. This is especially important in Oxford where our green space is limited or unevenly distributed. Policy G2 sets out the various multi-functional benefits that new GI should seek to deliver, and green and blue features should be selected to meet the needs of the proposal and the wider area in this context. Highlighting where design features are addressing multiple policy requirements (for example providing green space for occupants as well as SuDS features that can reduce flood risk) will help in demonstrating the merits of an application and the overall approach.

- The functionality of open space and the role any type of provision plays in supporting occupants of the development should also be informed by an understanding of the wider local context as well as the needs of the users of the development. Consider what types of spaces are available already in the local area, whether there are deficiencies in certain types of space that could be addressed by the proposal.
- The scale of the development is likely to influence the levels of opportunity for provision of green spaces but all sites should be able to provide some level of high-quality greening – this will be an expectation on major development, to be demonstrated via the Urban Greening Factor (Policy G3). On larger sites, networks of green spaces can help to break up urban fabric as well as green corridors. For larger applications with public open space provision, engagement with the local community will help inform the type of space needed.
- Simple design solutions such as avoiding extensive areas of artificial surfaces like tarmac or concrete can be beneficial for the long-term sustainability of a site and can be beneficial in helping to meet specific policy requirements such as those set out for the Urban Greening Factor (Policy G3) and Soil quality (Policy R6).
- On building facades such as roof and walls, use of green features where carefully installed can further reduce artificial surfaces and promote more multi-functionality. This approach can be particularly helpful on more constrained sites, where opportunities are limited elsewhere.
- The plan for ongoing management and maintenance of green features should be set out. Care will be needed during the establishment period (including watering and feeding as well as replacement of failed specimens) but also ongoing care needs such as pruning of trees and shrubbery and maintenance of green spaces.
- Green spaces with a mixture of play features for young people will enhance wellbeing – these spaces do not have to be overly designed or dominated by fixed equipment, but could also be compromised of wild areas and facilities that encourage engagement with nature and free-play.
- Opportunities for communal food growing, which could be small scale and informal such as community orchards can also meet an important need not only for food but also social engagement and mental health.

Information is available published data sources from the Council (such as the Oxford GI Study 2022, the Playing Pitches study). National data sets such as the mapping accompanying the Natural England Green Infrastructure Framework and OS data.

N.3 Are there protected species or other biodiversity/habitat features on the site or in proximity to the development and how has the design been tailored to avoid adverse impacts and/or enhance these features?

- Part of the contextual analysis informing design should be an understanding of the potential for protected species or other biodiversity value (such as important habitat) on the site and ensuring design responds in a way that avoids adverse impacts in line with the mitigation hierarchy and ideally enhance these features.
- The site layout will need to be informed by considerations arising from proximity to important habitats and take into account the potential for causing impacts even at a distance.
- Where a development is proposed in proximity to a designated ecological site, the layout of the site may need to be designed in a way that incorporates sufficient buffering – potentially through use of landscaping features and informed by appropriate ecological expertise. Buffering may also be required where there is proximity to blue corridors.
- Where there are sufficient indicators of species of interest, there may be a requirement for detailed biodiversity surveys which
- ascertain the specific nature of species present and help inform any mitigation that may be necessary.

A range of information sources are available detailing the presence of biodiversity interests in the city, including a detailed set of records held by Thames Valley Environmental Records Service (TVERC); as well as habitat data from Natural England (Magic tool), and the network of ecological sites designated by Policy G6.

N.4 How have external areas and features provided on the site been designed to support biodiversity and allow wildlife to flourish?

It is important to consider the types of landscaping features and how these can support feeding and shelter of various forms of wildlife where possible. Care should also be taken in the design of site features which could impact wildlife.

- The inclusion of native and/or pollinator friendly planting, as well as species that bear fruits/nuts is encouraged in order to support feeding for example.
- Making space for areas of informal planting that can grow wilder during the year can provide opportunities for shelter and hibernation within the urban environment.
- Species selection should avoid invasive species or those that are particularly harmful to people or the wider environment.
- Consider how the design of external lighting could impact on the wider environment and avoid overuse of artificial lighting where it could be particularly detrimental to nocturnal species. Seek to ensure that outdoor lighting is targeted and proportionate to the needs of the development and its users.
- Try to limit other sources of disturbance such as noise from plant equipment and emission of pollutants into the air or water – these are considerations which will be of equal importance during the construction phase as much as during the operational phase and will help to meet the requirements of Policy R5 and R8.

Resources

It is essential that development responds to the challenges of climate change. This includes meeting net zero carbon and having buildings that are resilient to hazards like overheating

and flooding, and prudent use of natural resources. Many of the responses to these challenges, such as energy efficient design and efficiently performing buildings will need to be thought about at the beginning of the design process. Careful design choices can secure efficient buildings and reduced impacts on the environment, whilst also securing high-quality design and benefits for the health and wellbeing of occupants.

R.1 How has development been designed to ensure it is net zero carbon in operation and in accordance with the energy hierarchy?

Policy R1 sets out the energy hierarchy and its application in the design of new buildings. The first step in the hierarchy is designing so that demand for energy to operate the building and its systems is minimised, this could be achieved in a number of ways many of which align with Passivhaus principles such as:

- Orientation - Design the orientation of the building so as to maximise solar gain in the winter (e.g. south-facing) and minimise overshadowing. Dual aspect, south-facing facades are particularly beneficial for this where a site allows.
- Massing - Consider how the massing of the building will influence energy required for heating/cooling. Be strategic in how the articulation of elements such as roof shape, the use of insets and overhangs as well as the grouping of dwellings are used to achieve character without resulting in excessive form factor (the ratio between the external surface area and the internal treated floor area) which will require greater amounts of energy to heat/cool. Also think about whether all spaces require heating/cooling - grouping of 'cold spaces' like garages and bike sheds can allow for a more efficient layout.
- Facades including glazing - Think about how the proportions of glazed surfaces like windows/doors can influence performance. Design glazing with considerations of orientation, daylight and thermal comfort in summer. It is important to minimise heat loss towards the northern elevations in winter, such as by incorporating smaller windows on northern facades, whilst solar gain needs to be maximised on southern facades where window sizes could be bigger. Equally, higher storeys are likely to benefit from more light so could include reduced levels of glazing than lower levels.
- Fabric-first - Take a fabric-first approach which seeks to incorporate high levels of insulation; a very air tight building fabric as well as minimising thermal bridges. Use of triple glazing in windows/doors will help with thermal efficiency of these elements.
- Ventilation - Include efficient ventilation systems in order to preserve good indoor air quality, avoid overheating and moisture build up. Because of the need for high air tightness in building fabric as outlined above, net zero carbon homes are likely to require some form of mechanical ventilation with heat recovery which will allow for a constant rate of ventilation. Consider the placement of these systems to allow for easy access and maintenance. Habitable rooms need to have openable windows – ideally try to ensure windows are placed on opposing sides of the building to facilitate purge ventilation providing bursts of fresh air through the building as required.

After minimising energy use, the second step in the energy hierarchy as set out in Policy R1 is that design should consider how energy is used as efficiently as possible and sourced renewably. Each development site will have its own considerations but some factors to consider include:

- Use of heat pumps that can secure cooling as well as heating and can be up to 3x more efficient than other heating systems. Where a building has followed the principles of high fabric efficiency above, they will be well set up for the more gradual heating method of technologies such as air source heat pumps.

- Consider the orientation of the roof and how this can maximise performance of solar photovoltaics and thermal technology. Consider the types of systems the building will accommodate, the orientation of the roof to maximise solar irradiation, and the structural considerations to support pv in high winds.
- Careful design can allow solar pv and green roofs to exist mutually with the correct orientation and placement of panels – indeed the cooling effect of green roofs can support the performance of pv (which can reduce at very high temperatures).
- Design of the renewable energy generation system can be made more efficient through incorporating battery storage to make use of the renewably generated energy at times of low capacity. Space will need to be made to incorporate such systems.
- Design considerations for electric vehicles chargers such as location and placement, size of unit and colour for example will be particularly relevant where installing in a sensitive area of the city (e.g. conservation area). Properties without a driveway may need to consider potential for other solutions such as pavement cable channel as a priority before considering the need for creation of new driveways. There is additional information on the City Council website and the County Council's website.

Where proposals involve the retro-fitting of existing buildings (including traditional buildings), policy R3 sets out the importance of being guided by a Whole Building Approach, as well as other guidance that should be considered in design. Reference should also be made to the Council's Retro-fitting Technical Advice Note as well as Historic England's advice note.

R.2 How has consideration of the carbon footprint embodied within the construction process been incorporated into the design?

The issue of embodied carbon in the construction process is not a simple one and will be influenced by various considerations such as the types of materials selected, where they are sourced from, how they are put together and their longevity. Nevertheless, having consideration of this issue upfront and throughout the design process will ensure opportunities to reduce carbon emissions embodied in the construction process are not missed. Think about:

- Reuse of buildings - consider whether demolition of existing buildings is really necessary and reuse buildings where possible (try to reuse demolition materials if not). Maximise recycling on the site and the use of recycled materials more generally and minimise waste.
- Source of materials - consider where materials are sourced from and how these are to be transported to the site. Can modular construction techniques be utilised to prepare parts of the building in advance and be brought to site? This is also a good way to reduce waste in the construction process.
- Types of materials - certain materials have a higher carbon cost to produce than others. Some materials can come in lower carbon alternatives such as low carbon concrete mixes. Natural materials like wood and hemp which may be used in the structure, insulation or the finishing, can even sequester (lock up) more carbon than is emitted in their production. In terms of the finishing, can elements be left open/uncovered without the need for additional finishes being applied?. For example, careful selection of the material used to construct the floor can mean there is no need for additional carpeting or other coverings.
- Maintenance - think about the entire lifespan of the building. Ensure that easy maintenance of the building and its systems are considered to support longevity.
- The future - consider how design of features and layout could allow the building and its spaces to adapted to alternative uses in the future. What will happen at

the end of its life span? Plan for ease of deconstruction in selection of materials and construction methods.

R.3 How does the design consider resilience to the impacts of overheating and water stress/drought in a changing climate?

A highly fabric efficient building should be as good at keeping heat out during the summer months as it is in keeping heat in during the winter months. However, the performance of the building during high heat events should be an integral consideration in the design process and additional measures that can reduce the risk of overheating are greatly encouraged. There are certain requirements that will need to be met to pass Building Regulations (specifically the requirements of Part O: Overheating) - as these requirements can have a close relationship with design process, it is helpful to consider them together.

Policy G9 sets out the importance of design being guided by a cooling strategy which follows the principles of energy saving and efficiency in line with the energy hierarchy, promoting passive cooling options in the first instance before exploring more energy intensive measures. The following hierarchy should be used as a guide for selecting cooling interventions:

- Minimise internal heat generation and reduce amount of heat entering a building in summer through energy efficient design and careful building layout/design (e.g. orientation, shading, albedo, fenestration, insulation and green infrastructure)
- Manage the heat within the building through exposed internal thermal mass and high ceilings
- Passive ventilation
- Mechanical ventilation
- Active cooling systems (ensuring only most energy efficient technologies are used).
- Consider how the design of façade elements such as windows can reduce solar gain during the summer months. Windows on southern elevations will experience sunlight coming in at a higher angle in the middle of the day which can be easier to address through fixed shading like wider eaves (and other forms of overhang like balconies). Use of shutters and windows that open to allow rapid ventilation through the building can allow occupants to quickly respond to temperature extremes.
- Consider how water saving measures such as water efficient fixtures and fittings as well as grey water recycling can be incorporated into the design to reduce water use, alongside rainwater harvesting features to collect water for uses such as gardening. Where these features require elements on the roof, there will need to be sufficient space to accommodate these alongside other features like green infrastructure, renewables and plant equipment.

R.4 How does the design consider resilience to the impacts of flooding in a changing climate, avoiding increasing flood risk elsewhere and ideally reducing existing flood risk?

The approach to site layout needs to be informed by a comprehensive understanding of current and future flood risk on the site (taking into account the impacts of climate change) as part of the Flood Risk Assessment. There is a range of detailed guidance and data sources that should be considered. The Flood Risk Assessment needs to be integral to informing the design process and how the development is planned. Some general considerations that will need to be factored into the design process include:

- The current context of the site including existing land uses and how these may contribute to or increase flood risk. This includes whether there are areas of

existing flood storage or natural features which contribute to mitigating surface run off (e.g green space and areas of planting).

- Taking a sequential approach to the layout of uses on the site with more vulnerable uses (see NPPF for vulnerability classifications) being located in areas of lowest risk from flooding on the site.
- Incorporating a range of design features into the fabric of the building itself to improve resilience to flooding and helping occupants to recover more quickly. Such measures are generally broken down into two categories: dry proofing, which seeks to keep water out at times of flood; and wet proofing which seeks to allow the building and its systems to continue to operate during flooding and be dried out quickly.
- Thinking about how design can support emergency management at time of flooding – are there clear and safe access/egress routes into the site and individual buildings, are evacuation routes easily identified for occupants including those who may have reduced mobility (e.g. elderly and disabled); how will emergency services access the site if necessary; what provision is there for alarm systems and alerts?
- Taking account of the age, construction and heritage significance of any existing buildings and structures on the site. Where retro-fit is being proposed, follow the guidance of policy R3 in relation to Whole Building Approach.

R.5 How have Sustainable Urban Drainage Systems been incorporated?

Sustainable Urban Drainage Systems (SuDS) features should be an integral component of the design of outdoor spaces in line with the requirements of Policy G8. Applicants should refer to the Council's SuDS planning guidance as well as guidance prepared by the County Council in how to design SuDS features into the development, available here. In particular, it is expected that high quality design in relation to SuDS will factor in a number of considerations including:

- Design of SuDS should follow a strategic process that seek to slow down and capture rainfall first, allowing as much of it as possible to evaporate or soak into the ground close to where it fell. The rest is then directed in a way that improves water quality towards the nearest watercourse to be released at the same rate and volumes as before development. The types of features selected should be informed by the context of the site. The Council's preference is that natural surface features which are primarily green are prioritised, these could include green roofs, ponds, wetlands and shallow ditches called swales.
- Additional context informing SuDS selection should consider the geological and hydrological conditions of the site, informed by appropriate ground investigations including percolation testing as well as testing to understand the potential presence of contamination. Issues that may be of relevance and may make certain types of drainage features inappropriate could include: unstable ground, contaminated ground, poor infiltration, proximity to buildings, the highway or other sensitive areas; presence of other services/infrastructure; as well as existing ground water levels/potential for pollution.
- Whilst SuDS features need to prioritise their water management benefits including flood retention and improving water quality of runoff, design should follow the principles of multi-functional design so that these landscape features can perform multiple benefits in the development throughout its lifetime, particularly when they are not in use at times of low rainfall. See guidance on multi-functional green infrastructure features in the Nature section.
- All SuDS should have a comprehensive maintenance plan in place in order to ensure they remain functional and safe for the lifetime of the development.

Homes and buildings

Well-designed homes and communal areas within buildings should provide a good standard and quality of internal space. The needs of occupants will relate not only to the internal space provision and how this allows them to live day to day (e.g. socialising, working and keeping active) but also to external space provision in the form of private or communal outdoor spaces. Well-designed homes also consider the varying needs of different groups in the community including the disabled and the elderly and are easily adapted to meet changing needs over time.

H.1 Are internal spaces of sufficient size and proportion for their intended functions?

It is important to ensure that new homes are of an adequate size and suitable layout to provide high quality, functional homes that meet the needs of a wide range of people, and consider how those needs might change over time. This applies to development at all scales, from large strategic sites to infill development. While there is added pressure to deliver as many homes as possible, this should not automatically result in the creation of smaller homes, or housing that has unacceptably small or poor functioning internal spaces that do not meet appropriate standards.

- Policy HD9 sets out the requirement for internal dwelling spaces to meet at a minimum the Nationally Described Space Standards. These are technical standards, distinct from the Building Regulations, that have been developed as a means to create a common baseline that can be applied across all planning authorities. It contains requirements for the Gross Internal (floor) Area of new dwellings at defined levels of occupancy, and includes areas and dimensions for key parts of the home - notably bedrooms, storage and floor to ceiling height.
- Along with living space, dwellings should allow for a usable amount of storage space integrated within internal layouts. Without it, people's belongings and items for everyday use will encroach on the space available within rooms and limit enjoyment of them. Space requirements should also consider other needs such as waste and recycling storage, which are essential for enabling people to live sustainably.
- Think about the more specialised accessibility needs of the disabled such as the need for wheelchair adapted housing, the requirements for which are contained in (Category 3 homes in Part M of the Building Regulations). Also is the dwelling designed to accommodate aging occupants and changing mobility over time? See lifespan section for more.

H.2 Does the development provide sufficient private and/or communal open space?

Occupants of new homes also need to have access to outdoor space for socialising, exercise and meeting other needs like drying clothes. Ideally there should be access to private outdoor space (such as gardens, balconies, roof terraces) but it may be appropriate to provide access to communal spaces also.

- Where outdoor space is provided, this should be easily accessible to the occupants of the development it is serving,
- Consider wider amenity issues that might affect the space such as privacy/overlooking, security, light and safety.

Lifespan

High quality design should consider how development will be sustained in the long term. Consideration needs to be given to how these places will be maintained and cared for in the future so that they can retain their quality for generations to come. Buildings and spaces

need to be flexible and adaptable to changing needs over time to allow them to remain usable and useful without needing to be replaced.

L.1 Is there a proposed management plan or approach in place for future maintenance and upkeep?

High quality design should mean that places are well-managed and maintained in the long term. For larger and more complex schemes, management and maintenance regimes should be established from the early stages of the design process and set out in a management plan.

- Consider the wide range of elements in a development and their on-going maintenance and management including buildings, landscaping, streets and open spaces, public art, sustainable drainage systems etc.
- Management and maintenance responsibilities should be clearly defined for all parts of a development. They should consider potential impacts on communities such as in the form of service charges or where management will pass into their control.
- Management of local waste, cleaning, parking, internal common spaces, shared spaces and public spaces are all considered from the outset. These include play areas, open spaces, streets and other public spaces.

L.2 How easy will it be to maintain, repair or source matching materials? Have the materials been proven to be robust and weather well?

Materials should be selected that are robust, easy to use and look after, and enable their users to establish a sense of ownership and belonging, ensuring places and buildings retain their aesthetic appeal and functionally for the long term.

L.3 How will the scheme be flexible to changing needs?

Well-designed spaces are adaptable to the changing needs of users and to evolving technologies and innovations. The aspiration is for public places that are inclusive to all. Well-designed private places, such as homes and gardens, should be designed to be flexible to adapt to the changing needs of their users over time. This would include changes such as growing households and mobility due to health changes as well as adaptability to remote home working. How easily can buildings and spaces be adapted without costly or extensive construction works?

- In keeping with the evolving nature of work, development should include adequate space and servicing to facilitate remote working. At the minimum, spaces must at least be flexible enough to be easily adapted for use as living and work and back again.
- There are broader changes to living patterns that should be integrated in design schemes, or sufficient flexibility to adapt to such changes as needed. These would include the reduction in emphasis on dedicated car parking spaces, access to EV infrastructure, adequate and integrated bin and cycle storage.
- Well-designed places should also have consideration for how digital and connectivity infrastructure can be integrated into designs from the outset, as well has how such infrastructure can be maintained and upgraded with the minimum level of disruption to wider users or compromising the functionality and aesthetic appeal.

APPENDIX 1.2 STRATEGIC POLICIES

S1 Spatial Strategy and Presumption in Favour of Sustainable Development
S2 High Quality Design
S3 Infrastructure Delivery in New Development

S4 Plan Viability
H1 Housing Requirement
H2 Delivering Affordable Homes
H3 Affordable Housing Contributions from Other Development Types
H4 Employer-Linked Affordable Housing
H8 Location of New Student Accommodation
H9 Linking New Academic Facilities with the Adequate Provision of Student Accommodation
E1 Employment Strategy
G1 Protection of Green Infrastructure
G2 Enhancement and Provision of New Green and Blue Features
G6 Protecting Oxford's Biodiversity Including the Ecological Network
G7 Flood Risk and Flood Risk Assessments (FRAs)
R1 Net Zero Buildings in Operation
HD1 Principles of High-Quality Design
HD2 Making Efficient Use of Land
HD3 Designated Heritage Assets
HD5 Archaeology
HD6 Views and Building Heights
C1 City, District and Local Centres
C2 Maintaining Vibrant Centres
C6 Transport Assessments, Travel Plans and Service and Delivery Plans
C8 Motor Vehicle Parking Design Standards
I2 Safeguarding Land for Infrastructure

Site allocations: All Protected Key Employment Sites and sites with a minimum housing capacity of 50+
Area of Focus Policies

APPENDIX 2- HOUSING

APPENDIX 2.1 METHOD FOR CALCULATING AFFORDABLE HOUSING CONTRIBUTIONS

Contributions for payments in lieu of providing affordable housing onsite (eg in relation to Policies H3 and H4) are based on seeking 40% of the value of the land being developed as a financial contribution (in other words the equivalent contribution if the land had been developed for residential use and delivered onsite affordable housing).

The formula that will be applied to calculate payments in lieu is:
$X = ((A - B) \times C) - ((A \times C) \times D)$

Where:
X = the payment in lieu
A = the market value of a square metre of floorspace in the development
B = the value of affordable housing per square metre of floorspace (reflecting the blend between affordable rent and shared ownership)
C = the notional number of square metres that would be required to meet the target in Policy H2

D = additional developer costs (the difference between the profit applied to market housing and affordable housing; and marketing costs on the affordable units converted to private housing).

In addition to this, a 5% administration charge will be levied on the calculated sum payable.

The formula for calculating the contribution towards affordable housing from new employment-generating uses is as follows: GIA (net sqm) x £10

APPENDIX 2.2 HMO CALCULATION

Policy H7 states that planning permission will only be granted for the conversion to or a new HMO where the proportion of buildings used in full or part as an HMO within 100 metres of street length either side of the application site does not exceed 20%.

The illustrations below show what is meant by this. The buildings highlighted in the examples would all be included in assessing whether the 20% threshold has been exceeded. It should be noted that, for the purposes of applying these guidelines:

i. Buildings containing flats are counted as an HMO only if any one of the flats within the building are being used as an HMO;
ii. Non-residential buildings are counted as an HMO only if any part of the building is in residential use as an HMO;
iii. Buildings NOT counted as an HMO include all single dwellings that are occupied by a family, a homeowner together with up to two lodgers, or by up to 6 people receiving care (e.g. supported housing schemes for people with disabilities). Also NOT counted as HMO are social housing, care homes, children's homes, religious communes, and all buildings occupied by students and managed by the educational establishment (this includes student accommodation), as well as all buildings entirely used for non-residential purposes;
iv. Any building on a plot with a curtilage that lies partially within 100 metres will be included in the calculation, although non-habitable buildings (e.g. garage blocks) will be excluded from the calculation.
v. The 100 metres street length will include non-adopted roads and footpaths (but does not include roads wholly situated within private largely non-residential sites such as hospitals).

In counting individual properties, the City Council will have regard to the number of houses, flats or buildings that are licenced HMO, or for which a licence application is pending. The Council may also count any other property for which reasonable evidence exists that the property is in use as an HMO.

100 metres
Application Property
Buildings within 100m on application street on same side of road
Buildings within 100m on application street on opposite side of road
Principal elevation

100 metres
Application Property
Buildings within 100m on application street on same side of road
Buildings within 100m on application street on opposite side of road
Principal elevation

100 metres
Application Property
Buildings within 100m on application street on same side of road
Buildings within 100m on application street on opposite side of road
Principal elevation

APPENDIX 2.3 METHOD FOR CALCULATING THRESHOLDS FOR LINKING ACADEMIC FACILITIES WITH THE ADEQUATE PROVISION OF STUDENT ACCOMMODATION

Student threshold calculation Policy H9 applies to full-time taught course students. To inform each annual Authority Monitoring Report the universities will be asked to provide information relating to their student numbers and the number of student accommodation rooms they provide and, in the case of Oxford Brookes, purpose-built student rooms they are aware are occupied by their students. A snapshot of information will be requested from a point in time in the Autumn of the monitoring year in question. The monitoring year is the one-year period from 1st April - 31st March. The 'snapshot' figures provided for the Annual Monitoring Report will be representative of the monitoring period and applicable to Policy H9.

If a university is shown in the snapshot to be in breach of threshold, but are able to demonstrate a reduction in numbers during the year that brings them under their threshold, this will be accepted as an update by the City Council alongside an application for development of academic, research or administrative facilities. The universities will be asked to state how many students they have and specify how many of them are in each of the following categories. The following categories of students are not relevant for the purposes of Policy H9 and they will be excluded from the total number used in the calculation under Policy H9. There may be students who fall into more than one of these categories and they should not be excluded more than once:

- Part-time and short-course students
- Students studying a research based post-graduate degree
- Students studying a Further education course or a foundation degree
- Vocational course students who will at times during their course be training on work-placements including student teachers and health care professionals who have a split study arrangement between the university and the NHS including student nurses, midwifery students, paramedics, physiotherapists, occupational therapists and student doctors
- Students with a term-time address outside of the city (OX1, 2, 3, 4)
- Students living within the city (OX1, 2, 3, 4) prior to entry onto a course
- Students not attending the institution or studying at a franchise institution
- Students studying outside Oxford (e.g. at Oxford Brookes' Swindon campus)
- Specific course exclusions (BTh Theology and MTh Applied Theology)
- Students who also have an employment contract with the university
- Students on a year abroad and other placement students away from the university

The following student accommodation types will be counted as university-provided accommodation:

- Purpose built student halls managed by the university
- Rooms in other student halls for which the university has nomination rights secured, or in the case of Oxford Brookes, also rooms in purpose-built student accommodation that they are aware their students are occupying during term times.
- Other university leased or owned housing stock

The number of students who meet the definition of the policy (i.e. the total number of students minus the exclusions detailed above) will be subtracted from the total number of student rooms provided by the university, and the resulting figure will be taken to represent the number of students living outside of university provided accommodation in Oxford.

APPENDIX 3 – EMPLOYMENT

APPENDIX 3.1 - KEY EMPLOYMENT SITES

The following university/ research sites:

- Old Road Campus
- Radcliffe Observatory Quarter (ROQ)
- University of Oxford Science Area and Keble Road Triangle

The following hospital research sites:

- Churchill Hospital
- John Radcliffe Hospital
- Nuffield Orthopaedic Hospital
- Warneford Hospital

The following major publishing sites:

- Oxford University Press, Great Clarendon Street

The following major manufacturing/ research sites:

- Mini Plant Oxford
- Unipart site

The following Science and Business Parks

- Oxford North
- Oxford Science Park
- ARC Oxford

The following key knowledge / innovation sector centres:

- Wood Centre for Innovation

West End and Botley Road:

- Botley Road Retail Park
- New Barclay House, 234 Botley Road
- Osney Mead
- Oxpens

Woodstock Road and Banbury Road:

- Jordon Hill Business Park, Banbury Road

St. Clements and Cowley Road:

- 496 Cowley Road
- Newtec Place, Magdalen Road
- The Gallery Marston Street

Cowley and Horspath:

- Horspath Industrial Estate Pony Road, Horspath

Risinghurst

- Light Industrial Units, Green Road

Garsington Road Cluster:

- Ashville Way Industrial Estate, Watlington Road
- Chiltern Business Centre, Garsington Road
- Fenchurch Court, Bobby Fryer Close
- Huw Grays, (formerly Buildbase), Watlington Road
- Oxford Bus Company, Cowley House, Watlington Road
- Oxford Trade Centre, Harrow Road
- County Trading Estate, Watlington Road

Sandy Lane West:

- Eastpoint Business Park
- Nuffield Industrial Estate, Ledgers Close
- Oxford Trade City and Network Oxford

APPENDIX 4 – A GREEN BIODIVERSE CITY THAT IS RESILIENT TO CLIMATE CHANGE

APPENDIX 4.1 - URBAN GREENING FACTOR

The Urban Greening Factor (UGF) is a planning tool used to improve the provision of Green Infrastructure and increase the level of greening on new development. Policy G4 sets out that all major development will need to demonstrate how it has included urban greening as a fundamental element of site and building design, demonstrating no net loss of greening score and that it meets the minimum target score for the development type (0.3 for predominantly residential and 0.2 for predominantly non-residential schemes). Its use is encouraged on other schemes as a way to assess current levels of greening and the changes proposed but is not mandatory.

The UGF score provides a figure for the proportion of urban greening in comparison to the total area of a given development site. It is based on the assessment of surface cover types within the site boundary, and is measured for the existing situation and post development conditions following building and landscape proposals. Each surface cover type is assigned a weighting factor (between 0.0 to 1.0) that reflects its environmental and social value in urban greening; its functionality in providing ecosystem services, including improving permeability; and its benefit in supporting biodiversity and habitat creation.

The UGF score is calculated by multiplying the area of each of the various surface cover types within the site boundary by its factor; each figure is then added together and divided by the total area within the red-line boundary of the development site. The result is assessed against the policy target score for the type of development.

Calculation of Urban Greening Factor Score :

$$\text{Urban Greening Factor Score} = \frac{\text{Sum of each Surface Area type } (m^2) \text{ (Surface Area A x Factor A + Surface Area B x Factor B + Surface Area C x Factor C, etc.}}{\text{Total site area } (m^2)}$$

For the purposes of Policy G4, the Local Plan follows the categorization of green infrastructure elements and surface cover types set out in the Green Infrastructure Standards from the Natural England Green Infrastructure Framework to calculate a UGF score. For surface cover types not specified on the list, a suitable approach will be to select the closest match in the description, in discussion with the Council where appropriate.

A copy of the assessment matrix is available on the website to download. This should be completed and submitted along with the application. All surface cover types utilised in the assessment should be clearly highlighted on associated landscaping/elevation plans.

Natural England's surface cover weightings* for the calculation of UGF Score.

No.	UGF Surface Cover Type	Category	Factor	General Description
1	Semi-natural vegetation and	Vegetatio	1.0	Protection and enhancement of

No.	UGF Surface Cover Type	Category	Factor	General Description
	wetlands retained on site (including existing / mature trees)	n & Tree Planting		existing vegetation within the development site including mature trees and habitats.
2	Semi-natural vegetation established on site	Vegetation & Tree Planting	1.0	New areas of vegetation and species-rich habitats within the development site that are connected to sub-soils at ground level.
3	Standard / semi-mature trees (planted in connected tree pits)	Vegetation & Tree Planting	0.9	Tree planting established within engineered and interconnected systems with structural soils to maintain tree health at maturity.
4	Native hedgerow planting (using mixed native species)	Vegetation & Tree Planting	0.8	Dense linear planting of mixed native hedgerow species, at least 800mm wide and planted two or more plants wide.
5	Standard / semi-mature trees (planted in individual tree pits)	Vegetation & Tree Planting	0.7	Tree planting established within separate designed tree pits with structural soils to maintain tree health at maturity.
6	Food growing, orchards and allotments	Vegetation & Tree Planting	0.7	Areas and facilities provided for local allotment and community-based food growing including formal orchards with fruit trees.
7	Flower rich perennial and herbaceous planting	Vegetation & Tree Planting	0.7	New areas of mixed native and ornamental herbaceous and perennial plant species to support seasonal cycles of pollinating insects.
8	Mixed hedge planting (including linear planting of mature shrubs)	Vegetation & Tree Planting	0.6	Dense linear planting of native or ornamental shrub and hedgerow species, closely spaced with one or more plants wide.
9	Amenity shrub and ground cover planting	Vegetation & Tree Planting	0.5	Areas of formal and informal non-native shrub and ground cover planting connected to sub-soils at ground level or in planters.
10	Amenity grasslands including formal lawns	Vegetation & Tree Planting	0.4	Areas of short-mown grass and lawn used for active sports or informal recreation that is regularly cut and generally species-poor.
11	Intensive green roof (meets Green Roof Organisation / GRO Code)	Green Roofs & Walls	0.8	High maintenance accessible green roof with planting and a depth of growing substrate with a minimum settled depth of 150mm.
12	Extensive biodiverse green roof (meets the GRO Code, may include Biosolar)	Green Roofs & Walls	0.7	Green roof with species-rich planting, with limited access, may include photovoltaics, the depth of growing substrate is 100 - 150mm.
13	Extensive green roof (meets GRO Code)	Green Roofs & Walls	0.5	Low maintenance green roof, limited species mix in planting and with no access, the depth of growing

No.	UGF Surface Cover Type	Category	Factor	General Description
				substrate is 80 - 150mm.
14	Extensive sedum only green roof (does not meet the GRO Code)	Green Roofs & Walls	0.3	Low maintenance sedum green roof, no access, combined depth of growing substrate, including sedum blanket, is less than 80mm.
15	Green facades and modular living walls (rooted in soil or with irrigation)	Green Roofs & Walls	0.5	Vegetated walls with climbing plants rooted in soil supported by cables or modular planted systems with growing substrate and irrigation.
16	Wetlands and semi-natural open water	SuDS & Water Features	1.0	Areas of semi-natural wetland habitat with open water for at least six months per year contributing to surface water management.
17	Rain gardens and vegetated attenuation basins	SuDS & Water Features	0.7	Bio-retention drainage features including vegetated rain gardens and attenuation basins that also provide biodiversity benefit.
18	Open swales and unplanted detention basins	SuDS & Water Features	0.5	Sustainable drainage systems to convey and temporarily hold surface water in detention basins with minimal vegetation cover.
19	Water features (unplanted and chlorinated)	SuDS & Water Features	0.2	Ornamental and generally chemically treated water features providing amenity value but with minimal biodiversity and habitat benefit.
20	Open aggregate and granular paving	Paved Surfaces	0.2	Porous paving using gravels, sands and small stones as well as recycled materials that allow water to infiltrate across the entire surface.
21	Partially sealed and semi-permeable paving	Paved Surfaces	0.1	Semi-permeable paving using precast units and filtration strips that allow water to drain through defined joints and voids in the surface.
22	Sealed paving (including concrete and asphalt)	Paved Surfaces	0.0	Impervious paving constructed of concrete, asphalt or sealed paving units that do not allow water to percolate through the surface.

**Correct as at time of publication. As the framework is new some information may be subject to change. Any updates will be published via the Green infrastructure and biodiversity TAN which applicants should refer to.*
***Canopy measurements should be based on their extent on maturity or 25 year growth*

APPENDIX 4.2 - BIODIVERSITY POINTS

In line with the requirements set out in Policy G5, applicants are expected to incorporate a selection of features as part of the design of their development to support local species. Applicants should select features from the biodiversity points list in line with the below requirements, moving through pots 1 to 3 in order.

Type of application	Pot 1 Mandatory requirements	Pot 2 Shelter and movement features	Pot 3 Supporting landscape features

		requirements	requirements
Householder	All mandatory features (where applicable)	N/A	N/A
Minor development	All mandatory features (where applicable)	1 feature	1 feature
Major development	All mandatory features (where applicable)	2 features	2 features

The policy requires that biodiversity features selected to secure the required points for an application are clearly demonstrated on related landscape/elevations plans submitted as part of the application. Requirements/design specs. The biodiversity points list is included below, however, the intention is for this to be kept as a 'live list' updated and/or added to throughout the lifetime of the Local Plan, therefore, the Green Infrastructure and Biodiversity Technical Advice Note should be referred to for the most up-to-date version where appropriate (along with additional guidance on the requirements of the list).

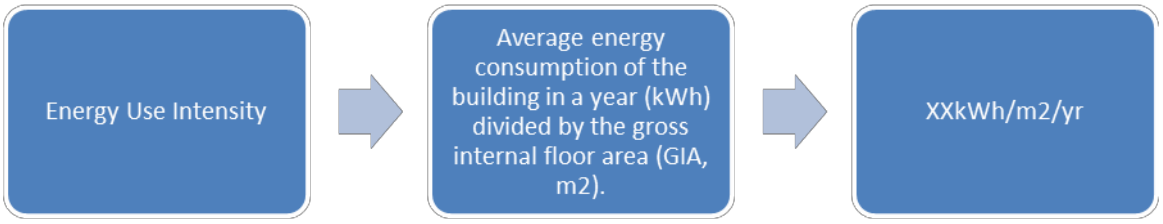
Biodiversity feature	**Priority areas in Oxford**	**Additional details to be provided in Technical Advice Note**
Pot 1: Mandatory requirement - Household/Minor/Major		
At least one swift box or swift brick	If within an identified swift hotspot	Mapping and general guidance on location/maintenance of boxes
At least one bat box	If within 200m of rivers/ woodland	Mapping and general guidance on location/maintenance of boxes AND licensing requirements
Pot 1: Mandatory requirement - Minor/Major		
At least one bird box per dwelling (resi) or per 1000m2 footprint (non-residential), including consideration of building-dependent species.	City-Wide	General guidance where needed.
At least one bat box for every five dwellings (resi) or per 2000m2 footprint (non-residential)	City-Wide	General guidance where needed.
Choose two of the following: insect hotel, planting for pollinators, night-flowering species	In valuable areas/corridors identified in the TAN	Mapping and general guidance on species choice
Pot 2: Shelter and movement features for wildlife		
Hedgehog highways in new boundary fencing	City-wide	General guidance where needed.
Reptile hibernacula in suitable location	City-wide	General guidance where needed.
Amphibian hibernacula in suitable location	City-wide	General guidance where needed.
At least one insect hotels per dwelling	City-wide	General guidance

(residential) or per 1000m2 footprint (non-residential)		where needed.
Provision of at least one dark corridor through the site	City-wide	General guidance where needed.
Pot 3: Supporting landscape features for wildlife		
An appropriate amount of the trees and bushes on the site bear fruit/ berries and/or nuts	City-wide	General guidance where needed.
An appropriate amount of vegetation provides a range of food and host plants for local invertebrate populations	City-wide	General guidance where needed.
Suitable size freshwater pond(s) designed to support aquatic species (no fish or invasive plant species)	City-wide	General guidance where needed.

APPENDIX 5 – CARBON/RESOURCES

APPENDIX 5.1 - WORKED EXAMPLE OF POLICY R1

The following sets out a worked example of the key requirements for Policy R1, additional expanded guidance will be set out in the Energy and Carbon Technical Advice Note.



1. **Determine the Gross Internal Floor Area of the proposed new dwelling (m2):**
   - Measure the internal floor area of all the enclosed spaces within the building in m2.

2. **Determine the average annual energy demand for the building:**
   - Determine the overall energy demand after one year in kWh.
   - This calculation will need to be informed by modelling software using a Council approved methodology that helps to predict how the building will operate. It takes into consideration various factors influencing the energy demand once in operation, such as:
     - The form of the building (its shape), as well as the layout and orientation;
     - The specifications of the fabric of the building including type of materials and their thermal efficiency (the U values) etc.
     - Energy demands from regulated loads and unregulated loads e.g. energy used for lighting, cooking, washing, drying, IT equipment, lighting, audio/visual, other appliances.
     - Average number of occupants and typical occupant behaviour – this is likely to differ between residential and non-residential buildings.
     - External factors like typical climate and solar gain.
   - Informed by the above, a projection of average energy consumption can be determined (though it will likely be subject to some uncertainties). Some methodologies may look to produce several scenarios with varying certainties.

3. **Calculate Energy Use Intensity (EUI) for the proposed development:**
   - Using the outputs of the previous steps, the Energy Use Intensity for the building can be calculated as follows:

Average annual energy demand
For example: 3325 kWh per year

÷

Gross Internal Area (GIA)
For example: 95 m2

=

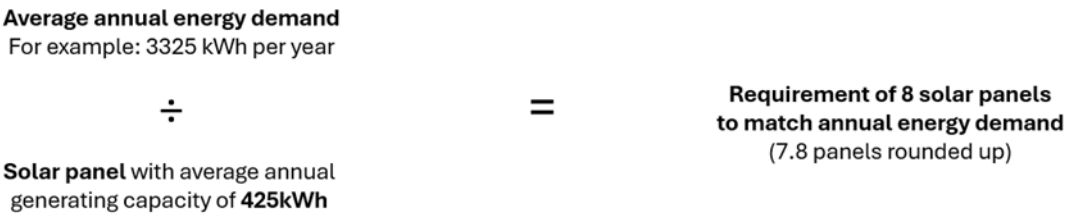
Energy Use Intensity
35 kWh/m2/yr

4. **Calculate space heating demand for the proposed development:**

- A highly efficient building fabric will help to secure a lower space heating demand for the building, as well as other factors such as ensuring an efficient building layout, orientation, and maximising solar gain during winter months.
- Related to heating considerations, remember to ensure no fossil fuels are used in the building and that different types of heating technologies will have varying benefits - e.g. some are more energy efficient than others. There may be opportunities to connect into communal or district heat networks also.

5. Net zero building in operation should match average annual energy demand through renewable energy generation, ideally generated onsite:

- If the average annual energy demand for the building is 3325 kWh per year, then this needs to be matched by an appropriate level of renewable energy provision.
- If installing residential 450W solar panels with capacity to produce approximately 425kWh per year each (subject to factors like orientation, tilt, and shading), then an appropriate number of panels needed can be worked out as follows:



6. Compare the building's performance to the targets set in Policy R1:

- Refer to the targets set out in Policy R1 – note that whilst the space heating demand target is the same across all development, residential and non-residential development is subject to differing Energy Use Intensity targets.
- If the Energy and Carbon statement (with reference to relevant evidence such as energy performance modelling) can demonstrate that the building will perform at or below the policy targets – the relevant criteria in Policy R1 are considered met.
- If the performance does not meet the policy targets – e.g. EUI or space heating demand exceeds Policy R1 criteria, or onsite energy generation does not match total energy demand. Various options should be explored, which could include but are not limited to:
    - Revisit the energy hierarchy and look for opportunities to revise design e.g:
        - Can layout be altered or more efficient materials to reduce energy demand for heating (and by extension overall energy demand)?
        - Can more efficient technologies be utilised in the operation of the building?
        - Can roof space and rooftop equipment be reorganised to accommodate additional pv provision, or are there opportunities to explore provision on neighbouring buildings?

7. Determining offsetting payment meet policy requirements as a last resort:

- If, after exploring all options for maximising provision, renewable energy generation cannot be provided to sufficiently match the development's average annual energy demand, the deficit in provision can be addressed via payment into energy offsetting fund.
- An S106/developer contribution will be agreed and the process for determining the amount of this contribution. Costs figures will be kept updated regularly to keep up with inflation and applicants will need to refer to the current pricing which will be published on the website.

APPENDIX 5.2 - ADDITIONAL EXTERNAL GUIDANCE ON NET ZERO CARBON DESIGN

Guidance around designing buildings to net zero carbon standards is constantly evolving, however, there are a number of useful resources that can support applicants in designing buildings in ways that reduce their carbon footprint. Whilst the following are not Council resources and should be treated as independent, the below is a list of some external reference sources which may be helpful in implementing the requirements of policies R1, R2 and R3 of chapter 5:

- Low Energy Transformation Initiative (LETI)
- UK Green Building Council (UKGBC)
- Royal Institute of British Architects (RIBA)
- Climate Change Committee
- Historic England -- retrofit and energy efficiency guidance for historic buildings
- UK Net Zero Carbon Buildings Standard

A fuller list of guidance will be kept updated within the Energy and Carbon Technical Advice Note.

APPENDIX 6 – DESIGN AND HERITAGE

APPENDIX 6.1 - CONSERVATION AREAS

Oxford has 18 Conservation Areas at present. They include a diverse range of qualities from the compact college environment found in the city centre, the open green space found in the Headington Hill Conservation Area, to the vast meadows in Wolvercote and Godstow. See all conservation areas on a map. Architectural styles and landscape qualities are diverse, but they all have the common element of containing features that contribute to our historic past. It is the protection of these elements that need to be properly managed, ensuring future generations will value and enjoy their special qualities. Oxford's Conservation Areas:

- Bartlemas
- Beauchamp Lane
- Binsey
- Central (University and City)
- Headington Hill
- Headington Quarry
- Iffley
- Jericho
- Littlemore
- North Oxford Victorian Suburb
- Old Headington
- Old Marston
- Osney Town
- Oxford Stadium, Sandy Lane
- St Clement's and Iffley Road
- Temple Cowley
- Walton Manor
- Wolvercote with Godstow

APPENDIX 6.2 - HEALTH IMPACT ASSESSMENT PROCESS

Health Impact Assessment

A Health Impact Assessment (HIA) is a tool used to identify the health impacts of a plan or project and to develop recommendations to maximise the positive impacts and minimise the negative impacts, while maintaining a focus on addressing health inequalities. By bringing such health considerations to the fore, HIAs add value to the planning process.

When is a Health Impact Assessment required?

Policy HD7 requires that a HIA is undertaken for major development proposals (e.g. 10 or more dwellings or 1000m² or more of non-residential development).

How to undertake a Health Impact Assessment?

The Council recommends that applicants refer to the Health Impact Assessment toolkit created by Oxfordshire County Council for resources and guidance on completing a HIA,

which is available on their website[1]. The scope of the assessment, extent of stakeholder engagement, as well as use of alternative HIA methodologies should be discussed and agreed with the relevant case officer to ensure a proportionate approach to the HIA is taken.

Whilst the specific details of what to include in the HIA will vary with the nature of the development, the HIA methodology should usually be structured into five key stages, which are outlined in greater detail in the Oxfordshire HIA toolkit:

1) Description of the proposed development;
This will need to include a description of the physical characteristics of the site of the proposed development site and surrounding area, including the current use.

2) Identification of population groups affected by the development;
Most proposals will not affect all individuals or groups across a community in the same way, so consider which groups of the existing population would be affected by the proposed development.

3) Identification of geographical area and associated health needs and priorities;
Identifying localised health priorities will enable a HIA to focus on the key issues for a particular location of a development, ensuring any HIA submitted to a Planning Authority is targeted and appropriately scoped so that it provides the most benefit. The expectation set out in Policy HD7 is that analysis on health trends set out in the HIA is supported by appropriate evidence/data - for example from local health statistics.

4) Assessment of health and recommendations; and
A series of assessment tables should be completed for each of the health priorities identified as relevant to a proposed development guiding the reader through the process of establishing a baseline of the existing situation, building an evidence base around health impacts associated with a health priority, and identification of likely effects (positive and negative), and the population groups likely to experience these effects. The policy requires that mitigation measures are identified that can address any identified negative effects and these should be presented as part of this assessment.

Typical health priorities likely to be affected by a proposed development could include: Housing, Physical activity, Healthy food environments, Air quality, Noise, Traffic and Transportation, Crime and anti-social behaviour, Economy and Employment, Education and Skills, Local natural environment and access to green spaces, and Access to Services.

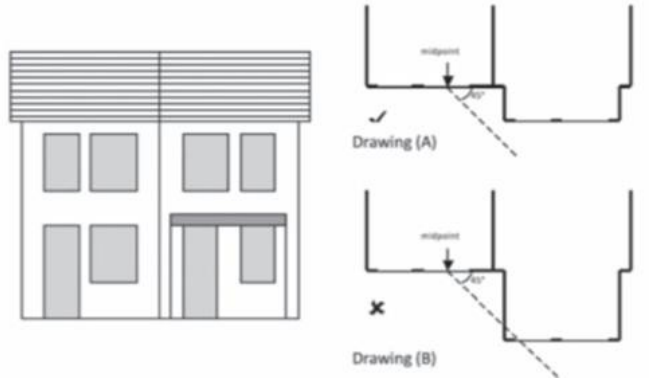
5) Monitoring.
The HIA should set out where the applicant will undertake monitoring in relation to the findings of the HIA. These should be linked to the proposed mitigation measures identified to address negative impacts from the development identified by the assessment and be S.M.A.R.T.

Please refer to both our Technical Advice Note and the online Oxfordshire Health Impact Assessment Toolkit for further information on how to complete a thorough HIA for major development in Oxford.

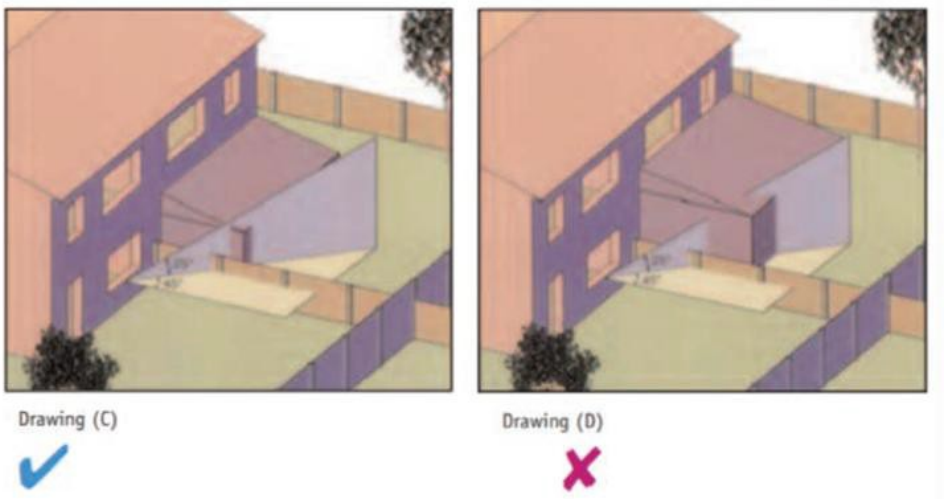
APPENDIX 6.3 - PRIVACY, DAYLIGHT AND SUNLIGHT: THE 45 AND 25 DEGREE GUIDELINE

Many factors are significant in assessing whether new dwellings will enjoy adequate sunlight and daylight, both internally and externally, and the same factors must be taken into account when assessing the impact of new development on existing dwellings. Reflected light and the amount of sky visible affect daylight within a room or garden. Applicants must consider the function of the room or that part of the garden, and also whether other windows serve the affected room. Existing features including boundary walls, trees, proposed buildings and any change in ground level between sites are all relevant factors that also need to be taken into account. Applicants must also consider the impact on outlook - it is important not to create conditions that are overbearing (oppressive or claustrophobic) for existing or future occupiers. While development proposals will be considered in the light of these factors, as a guideline to assess their impact on daylight, sunlight and outlook, the City Council will use the guidelines illustrated below. In normal circumstances, no development should intrude over a line drawn at an angle of 45° in the horizontal plane from the midpoint of the nearest window[2] of a habitable room and rising at an angle of 25° in the vertical plane from the sill. If a main window to a habitable room[3] in the side elevation of a dwelling is affected, development will not normally be allowed to intrude over a line drawn at an angle of 45° in the vertical plane from the sill.

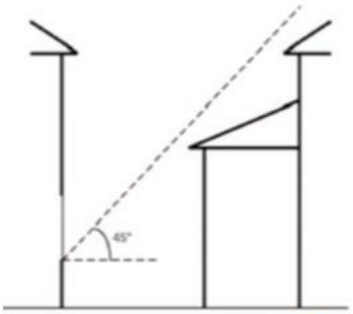
Example 1 A single storey extension as shown below is generally acceptable if the projection is limited as shown in Drawing (A). It may not be acceptable if the projection intrudes beyond the 45° line as shown in Drawing (B)



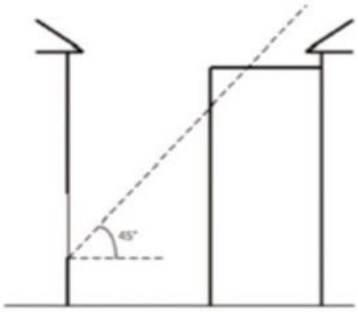
Example 2 If the 45° rule is broken, generally the proposal will still be acceptable if the line drawn outwards at 45° is tilted upwards at 25° from the sill level, and is unbroken by the highest part of the extension. This is shown as Drawing (C). The example shown as Drawing (D) is unlikely to be acceptable.



Example 3 If a main window to a habitable room in the side elevation of a dwelling is affected, development will not normally be allowed to intrude over a line drawn at an angle of 45° in the vertical plane from the sill.



Drawing (E) Cross-section showing side elevations ✔



Drawing (F) Cross-section showing side elevations ✘

APPENDIX 7 – COMMUNITIES

APPENDIX 7.1 - MARKETING EXPECTATIONS

A property should be marketed for its existing use as a public house or live performance venue for a minimum period of at least 12 months, or for any other cultural or visitor attraction for its use or a use that meets similar needs.

The applicant should then submit a supporting statement to accompany a planning application for a change of use that contains evidence to confirm the length of time the site has been marketed for; details of the agent used; information to show where this marketing has taken place for example in the local press, through signs on site, on the internet and/or in journals or publications used by the trade.

The statement needs to confirm the price the property was advertised for to show that it has been pitched at a 'reasonable' rate to generate interest from potential operators. Finally there needs to be a summary of the interest received and the reasons why offers have not been accepted.

APPENDIX 7.2 - TRANSPORT ASSESSMENTS

Where a Transport Assessment (TA) is required for a development proposal, it should be submitted alongside the planning application. The City Council may agree to the scope of TA being reduced if the development proposal is in a suitable location and in line with planning policy. TAs should address the desirable modal split and provide for a package of measures designed to reduce the role of car travel to the site. If the potential modal split is difficult to predict, the TA will need to consider whether and how far it may vary. The TA should be easy to understand for non-technical people.

Thresholds

The Transport Assessment of a proportionate level of detail will generally be required if the development:

a. is likely to generate car traffic, particularly at peak times, in an already congested or heavily trafficked area;
b. is likely to introduce a new access or additional traffic (any mode) onto a trunk road or other dual carriageway;
c. is likely to generate significant amounts of traffic;
d. is for a new or expanded school facility; and
e. would be refused on local traffic grounds but where mitigation measures can be implemented to overcome any adverse impacts;
f. A detailed TA will be required for developments likely to generate in excess of 10 freight or 200 vehicle movements a day.

Proposals over 500m^2 or which may generate over 100 vehicle movements or 5 freight movements per day will require at least a transport statement. For residential development in Oxford, this equates to developments of 20 dwellings or more.

Contents

All TAs and TSs must include a non-technical summary and must address:

a. location and layout including access and egress points;

b. size, in terms of site area and floorspace per activity; and/or number of dwellings and number of bedrooms per dwelling; and use of the site eg. staff, students, patients, visitors;
c. proposed uses and activities; and
d. issues such as timing and type of access requirements

Where a detailed TAs is required, this must additionally address the following:
a. Potential travel characteristics: accessibility by all modes and predicted modal split. TA should consider ease of access and catchment areas by travel-to-site times for each mode.
b. Measures: influencing travel patterns and minimising the need for parking using measures to improve access by walking, cycling or public transport in order to minimise non-essential car travel. TA should consider appropriateness of location, scale, density and uses of the site and development.
c. Impact appraisal and mitigation: maximising accessibility by sustainable transport modes such as through minimising prominence of car parking, management of access and parking, and organisational policies. TA should determine whether the development is acceptable or not in terms of the transport impacts, and propose measures to mitigate the impacts in terms of accessibility, integrating modes of travel, reducing environmental impact and promoting safety.

APPENDIX 7.3 - TRAVEL PLANS

If a Travel Plan (TP) is required for a development proposal, it should be submitted with the planning application.

Thresholds

TPs must be submitted alongside planning applications if the development:
a. is likely to generate significant amounts of travel in or near the city centre air quality management area (AQMA);
b. is for new or expanded school facilities; and
c. would be refused on local traffic grounds but where the TP sets out to overcome any adverse impacts.

Proposals over the following thresholds will require a TP:

Food retail . . . . . 1,000m^2
Non-food retail . . . . . .1,000m^2
Leisure . . . . . .1,000m^2
Cinemas and conference facilities . . . . . .1,000m^2
Stadiums . . . . . .1,500 seats
Offices . . . . . 2,500m^2
B2 industry . . . . . .5,000m^2
B8 distribution and warehousing . . . . . .10,000m^2
Hospitals . . . . . 2,500m^2
Higher and further education . . . . . .2,500m^2

TPs must recognise the potential for modal shift and therefore the early stages of the TP are likely to focus on those car drivers “most able” or “most likely” to change their mode of travel. This does not mean that other categories should be neglected. Greater effort in terms of more measures will be needed in the longer term to address the needs of those less likely to switch from driving.

The reasons for car use, the distances travelled, and from where journeys start, and finish must be assessed. There are many ways that information could be assessed and represented in the TP.

For example, on a proposal to expand an existing site, surveys of current staff would be useful. For a relocated organisation, current staff surveys could indicate travel habits at the new site. An isochrone map can be useful in indicating distances from a site, accessibility by various modes, or potential catchment areas.

Modal split targets are normally displayed as percentages. However, this does not address the issue of rising staff numbers for example, and over time may in fact hide an increase in the number of cars being brought to a site. Targets should be stated as actual numbers as well as percentages.

Contents

There is no right or wrong way to present a useful and effective TP. However, the following guidelines should be considered:

Background:

Information about the organisation must be stated clearly, including:

a. Staff details such as numbers (for example, full-time/part-time, staff on payroll/fulltime equivalents[4]), times of travel (for example, Monday to Friday at 9am and 5pm or shift pattern), where they travel from, and how they currently travel;
b. Site assessment including current access and egress (pedestrian/cycle/vehicular) into and within the site, cycle facilities, accessibility by public transport, accessibility of nearby shops and services, and car parking;
c. Assessment of non-staff travel (for example, visitors, deliveries, fleet vehicles);
d. Attitudes of staff towards travel to and from the site and towards their travel needs.

Objectives:

The statement of objectives should identify the motivation behind the TP and clearly state its purposes. (For example, reasons for a TP include reductions in car usage (especially single occupancy journeys at peak times), and increased use of walking, cycling and public transport). It may be relevant to address:

a. Reducing traffic speeds, improved road safety and personal security (especially for people on foot or cycle); and
b. More environmentally friendly delivery and freight movements, including home delivery services.

Measures:

The TP must identify what needs to be done to achieve its objectives and what measures need to be implemented.

Targets:

Targets must be specific, measurable, realistic and split into identifiable time frames based on the short term, medium term and long term and preferably dated by month and year.

Monitoring and Review:

The effects of TPs must be monitored, and they must state clearly how monitoring will take place (for example by stating what will be monitored by whom and when). Baseline data must therefore be provided (for example, as part of the background information). The outcome of monitoring may suggest that a review of the measures and/or targets is necessary. (For example, it is not necessarily a bad thing to discover through monitoring that a measure is no longer feasible, but new measures will then need to be set to meet the objectives of the TP.)

Enforcement:

The TP must set out arrangements for appropriate enforcement action in case agreed targets are not met.

APPENDIX 7.4 - CYCLE AND POWERED TWO WHEELER PARKING STANDARDS

Cycle Parking Standards:

Residential:
Houses and flats up to 4+ bedrooms . . . . . 2 spaces per bedroom
HMO . . . . . 1 space per bedroom
Student Accommodation . . . . . .1 space per study bedroom

Non – Residential: Minimum cycle parking standards

B2 General Industrial.	1 space per 175sqm for staff and 1 space per 250sqm for visitors
B8 Storage.	1 space per 250sqm for staff and 1 space per 500 sqm for visitors.
C1 Hotels.	1 cycle space per 5 car-parking spaces provided or 1 space per 5 non-resident staff plus 1 space per resident staff, whichever is greater.
C2 Residential Care Homes	0.5 spaces per bedroom available to residents, visitors, and staff.
E Commercial, Business and Services - Shops and retail.	1 space per 50sqm for staff and 1 space per 50sqm for customers.
E Commercial, food retail (supermarket)	1 space per 50sqm for staff and 1 space per 50sqm for customers
E Commercial, Business and Services – Financial and Professional Services.	1 space per 100sqm for staff and 1 space per 250sqm for visitors
E Commercial, Business and Services – food and drink (mainly in premises) i.e. restaurants and cafes.	1 space per 4 staff and 1 space per 25sqm for customers.
E Commercial, Business and Services – office, research and development and light industrial process.	1 space per 100sqm for staff and 1 space per 250sqm for visitors.
E Commercial, Business and Services – Non residential institutions (medical or	1 space 50sqm or 1 per 30 seats capacity. Plus 1 space 5 per employees.

health services, creches, day nurseries and centres.	
E Commercial, Business and Services – Assembly and Leisure (indoor sport, recreation or fitness, gyms).	1 space 50 sqm or 1 per 30 seats capacity. Plus 1 space 5 per employees.
F.1 Non-residential institutions (education, art gallery, museum, public library, public exhibition hall, place of worship, law courts, and other than primary/junior schools, senior/secondary schools and non-residential higher/further education).	Staff provision 1 space per 20 staff. Students; 1 space per 10 students.
F.1 Primary/junior schools	1 space per 5 pupils, plus 1 space per 3 staff.
F.1 Senior/secondary schools	1 space per 2 pupils, plus 1 space per 3 staff.
F.1 Non-residential higher/further education	1 space per 2 students (based on anticipated peak number of students on-side at any one time), plus 1 space per 5 staff.
F.2 Shop no larger than 280sqm (selling mostly essential foods and at least 1km from another similar shop); community hall, outdoor sport/ recreation area, indoor or outdoor swimming pool, skating rink.	1 space per 50sqm for staff and 1 space per 50sqm for customers.
Sui Generis, Public House, wine bar, drinking establishment	1 space 4 staff and 1 space per 25sqm for customers.
Sui Generis, Hot Food Takeaway.	1 space 4 staff and 1 space per 25sqm for customers.
Sui Generis, Cinema, Concert Hall, Bingo Hall, Dance Hall, Live Music venue.	1 space per 20sqm for staff plus visitor / customer cycle parking.

Other developments . . . To be treated on their individual merits, guided by the general principle of 1 space per 5 people

Cycle parking provision should be made on the site. If there is a shortfall of on-site parking provision, a contribution may be sought towards off-site cycle parking or associated facilities, based on the standards set out in this appendix.

The standards will be applied to ensure that there would be adequate provision if permitted development were carried out, unless applicants are willing to accept a condition restricting their permitted developments rights in this respect.

The reference to staff should be taken to mean the peak number of staff expected to be onsite at any one time, whether part-time or full-time.

The standards are intended as minimum standards for new development and where appropriate, change of use. One space means that one cycle can be secured. A bike stand, for example a Sheffield style stand, can provide two cycle-parking spaces.

Cycle parking should be future proofed to ensure that the infrastructure to support the charging of electric cycles is supported.

Powered Two Wheeler Parking Standards:

Residential . . . . . .1 space per 5 dwellings
Non-residential developments . . . 1 space per 400m^2 up to 2000m^2, 1 space per 1000m^2 thereafter

APPENDIX 7.5 - SHOWER, CHANGING ROOM AND LOCKER FACILITIES PROVISION IN COMMERCIAL/NON RESIDENTIAL DEVELOPMENT

The City Council will seek the provision of shower, changing and locker facilities in commercial/non residential developments on the following basis:
-Office . . . 1 shower per 500m^2 up to 1000m^2, 1 shower per 4,000m^2 thereafter
-Warehousing and retail warehousing . . . 1 shower per 5,000m^2 up to 10,000m^2, 1 shower per 8,000m^2 thereafter
-Other . . . 1 shower per 2,500m^2 up to 10,000m^2, 1 shower per 4,000m^2 thereafter

The application of these standards will be subject to the merits of each proposal. Except where specified, all areas quoted refer to gross floor measured externally, i.e. where proposals are submitted to extend, consolidate or reconfigure an existing site, these standards may be applied to the site as a whole rather than just the additional floor space, to ensure adequate provision on site.

APPENDIX 7.6 - VEHICULAR PARKING STANDARDS

Vehicular parking standards:

Policy C8 sets out Oxford City Council's policy on providing parking for new residential developments. The standards below should be read alongside Policy C8 and the supporting text.

Any dwellings*1 space per dwelling (may be allocated or unallocated) to be provided within the development site

Houses in Multiple Occupation Parking standards to be decided on a case-by-case basis.

Wheelchair accessible or adaptable houses and flats . . . 1 space per dwelling, to be provided on-plot must be designed for wheelchair users in accordance with Part M of Building Regulations)
Retirement homes . . . . . 1 space per 2 residents' rooms
Sheltered/extra care homes . . . . . 1 space per 2 homes plus 1 space per 2 staff
Nursing homes . . . . . .1 space per 3 residents' rooms plus 1 space per 2 staff
Student accommodation . . . . 0 spaces per resident room. Operational parking and disabled parking to be considered on a case-by-case basis in accordance with Policy H8.

*Any parking provided on plot to be excluded from a permit for any future CPZ and only 1 permit to be provided per dwelling on street when not provided on plot.

Disabled Parking/Blue Badge Holders:

On developments of 4 or more homes, wheelchair accessible or adaptable homes should provide dedicated space for blue badge holders/disabled parking, irrespective of location. On sites of 20 or more homes blue badge holders/disabled parking should be provided for at

least 5% of dwellings. Disabled parking should have level access to, and be within 50 metres of, the building entrance which it is intended to serve.

Low car parking standards for working drivers, pooled cars/car clubs and visitor spaces:

0.2 car parking spaces per 20 units should be provided on site for working drivers, service and delivery vehicles, pooled cars/car clubs and visitor spaces. For sites which are constrained evidence must be submitted to satisfy the local planning authority as to why this threshold should be reduced.

Non-residential development:
Existing employment uses . . . . . No additional increase in parking spaces
All other uses . . . To be determined through pre-application meetings/planning applications in the light of their Transport Assessment and Travel Plan

Local Plan 2045 - Monitoring Framework

The table below sets out the proposed approach Oxford City Council will take to monitoring the effectiveness of the Local Plan, as well as its impacts in line with the requirements of Sustainability Appraisal combined with Strategic Environmental Assessment. The approach to monitoring is broken down into two key reporting areas which are separated under each of the themes of the Local Plan. It is envisaged that certain elements of monitoring will be undertaken annually and reported upon in the Authority Monitoring Report (AMR) or the Infrastructure Funding Statement (IFS). The second element of the framework addresses longer-term trends which the Council intend to monitor but would be reported upon less frequently because of the increased resource demand or due to monitoring data being available less frequently and these link to environmental standards set out in our Sustainability Appraisal.

Whilst the details set out below highlight the priority monitoring the Council will seek to report upon within the AMR on a regular basis, there are often other mechanisms for monitoring the impact of other Local Plan policies which are not touched upon below. These include other data collection methods and reporting mechanisms such as where developments need to meet legal duties required as part of environmental health/ sustainability responsibilities (e.g. in relation to contaminated land, air quality, biodiversity net gain).

Local Plan Theme	**Monitoring of Local Plan 2045 outcomes (every year)**	**Key Policies**	**Longer term monitoring of sustainability outcomes**	**Related SA/SEA topic**
A healthy inclusive city to live in	Cumulative requirement and cumulative supply, including 5YHLS.	H1 – Housing requirement	Change in population / households	Local housing needs

	Net completions including: - Affordable housing (including employer linked) - Student - Care - Other communal - Self- build/ community led housing Applications permitted for: - Affordable housing (including employer linked) - Student - Care - Other communal - Permanent/transit residential pitches or plots - Residential moorings on Oxford's waterways - Boarding school accommodation - Self- build/ community led housing - Houses in Multiple Occupation	H1 – Housing requirement H2 – Delivering affordable homes H3 – AH Contributions from Other Development Types H4 – Employer linked affordable housing H6 – Development involving loss of dwellings H7 – Houses in Multiple Occupation H10 – Homes for travelling communities H11 – Homes for boat dwellers H12 - Older persons and other specialist accommodation H13 - Self-build and custom housebuilding H14 – Boarding school accommodation	N/A	Inequalities Local housing needs
	Applications permitted for student accommodation and redeveloped or refurbished academic research or administrative accommodation	H8 – location of new student accommodation H9 - Linking new academic facilities with the adequate provision of student accommodation	N/A	Local housing needs

A prosperous city with a globally important role in learning, knowledge and innovation	Net completions including - Employment generating uses Applications permitted including: - Employment generating uses	E1 - Employment strategy E2 – Warehousing, Storage and Distribution Uses	Change in floorspace including employment generating uses	Economic growth
	Number of Community Employment and Procurement Plans (CEPPs) secured	E3 – Community Employment and Procurement Plans	Number of skills and employment opportunities secured for local residents in priority areas Percentage or amount (£) spent locally (i.e. money that supports the local economy)	Economic growth
	Number of Affordable Workspace Strategies secured	E4 – Affordable Workspace	Amount of affordable workspace floorspace delivered	Economic growth
	Applications permitted for short stay accommodation	E5 – Hotel and short stay accommodation	N/A	Economic growth
A green biodiverse city that is resilient to climate change	Applications permitted on protected green space	G1 – Protection of the GI network	N/A	Efficient use of land, Leisure
	Biodiversity net gain being delivered in the city	G4 – Delivering mandatory gains in biodiversity	Change in area (ha) in areas of biodiversity importance & Condition of SSSIs, integrity of SACs	Biodiversity
	Applications permitted against Environment Agency flood risk advice	G7 – Flood risk	Change in no. homes in flood zone 3	Climate change resilience
A city that utilises its resources with care, protects the air, water and soil and aims for net zero carbon	S106 contributions secured and proportion of fund spent against climate change offsetting fund	R1 – Net zero buildings in operation	Change in per capita CO2 emissions	Carbon emissions
	Air quality progress: NOx, PM10, PM2.5	R4 – Air Quality Assessments and Standards	N/A	Transport and air pollution
	N/A	R5 – Water Resources and Quality	% river length assessed as fairly good or very good for chemical quality and biological quality	Water

	Applications permitted on protected peat reserves	R6 – Soil quality	N/A	Efficient use of land
A city of culture that respects its heritage & fosters design of the highest quality	Applications permitted that result in the loss of listed buildings, registered parks and gardens, scheduled monuments	HD3 – Designated Heritage Assets (Conservation areas Listed buildings, Registered Parks and Gardens, Scheduled monuments)	Updates on how the City Council is managing its conservation areas. Change in no. heritage assets at risk	Urban design and heritage
	N/A	HD7 – Health Impact Assessment	Index of Multiple Deprivation & Health dimension of Index of Multiple Deprivation	Inequalities
A Liveable City with Strong Communities and Opportunities for All	Class E % share of total use classes Footfall statistics within the city centre, district centres, and local centres (where data available)	C1 – City, District and Local Centres C2 - Maintaining vibrant centres	N/A	Economic growth
	Applications permitted for new community spaces, cultural venues and visitor attractions	C3 - Protection, alteration and provision of local community facilities C4 – Protection, alteration and provision of learning and non-residential institutions C5 - Protection, alteration and provision of cultural venues and visitor attractions	Significant new community assets, cultural venues and visitor attractions	Services, facilities and infrastructure Leisure
			Modal split of journey in Oxford	Traffic and air pollution

1. Non-technical summary

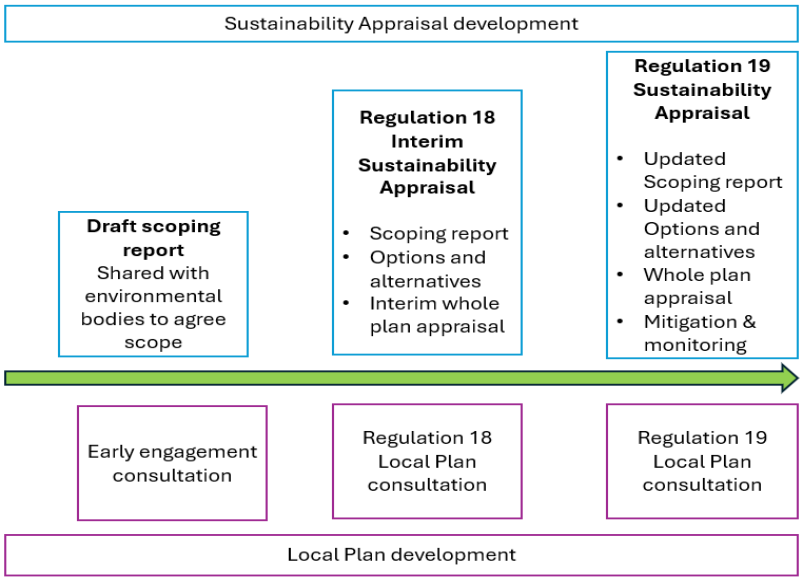
1.1 Introduction and process for undertaking Sustainability Appraisal

1.1 The Oxford Local Plan 2045 will update the Oxford Local Plan 2036. It will allocate sites for housing, employment and other uses, and provide policies to manage development in the city. It will need to include measures to improve public transport, protect and enhance the natural and historic environment, reduce carbon emissions, and protect against flooding. It will be used to make decisions about planning applications.

1.2 The environmental, social and economic impacts of Local Plans must be assessed through Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA). SA/SEA aims to ensure that the decisions taken in the context of the Local Plan's preparation are made in the knowledge of all likely sustainability effects of the proposed policies and reasonable alternatives, seeking to minimise negative impacts and maximise positive ones. The Oxford Local Plan 2045 SA process incorporates the requirements of SEA within them, and any reference to the Sustainability Appraisal/SA should be taken as also including the Strategic Environmental Assessment/SEA where relevant.

1.3 Sustainability Appraisal is an iterative process that aligns with the various stages of the Local Plan's development (as per Figure 1.1). The report is supported by a range of topic-specific background papers which expand on key information, particularly in relation to scoping and options for policies.

Figure 1.1. The Sustainability Appraisal and the wider Local Plan preparation process



1.4 This Sustainability Appraisal report, which accompanies the Regulation 19 Local Plan consultation, sets out how the Council has undertaken work associated with the formal SA process stages, as set out in Table 1.1. The Council has previously consulted on two versions of the emerging SA, including an early draft of the scoping report that was shared with the Environment Agency, Historic England and Natural England (February 2025), and an Interim Sustainability Appraisal that was published as part of the Regulation 18 consultation (June/July 2025).

Table 1.1. The Sustainability Appraisal (SA) process and the stages of the Oxford Local Plan 2045 preparation

Stages of the Sustainability Appraisal process	**Relevant consultation**
Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope Task A1: Identify other relevant policies, plans and programmes and sustainability objectives Task A2: Collect baseline information Task A3: Identify key sustainability issues and problems Task A4: Develop the SA framework Task A5: Consult the consultation bodies on the scope of the SA report	Relevant bodies* were consulted on early draft of scoping report to agree scope (Feb-March 2025) **Complete** Updated version of scoping report published as part of Interim SA Report (Part 1) for Summer 2025 Reg 18 consultation **Complete**
Stage B: Developing and refining alternatives and assessing effects Task B1: Test the Local Plan objectives against the SA framework Task B2: Develop the Local Plan options including reasonable alternatives Task B3: Evaluate the likely effects of the Local Plan and alternatives	Published as part of the Interim SA Report (Part 2) for Summer 2025 Reg 18 consultation **Complete**
Task B4: Consider ways of mitigating adverse effects and maximising beneficial effects Task B5: Propose measures to monitor significant effects of implementing the Local Plan *Stage C: Prepare the SA report* *Stage D: Seek representations on the SA report from consultations and the public*	Published as part of this Regulation 19 SA report - including updated information related to earlier stages. **Current stage**
Stage E: Post adoption reporting and monitoring Task E1: Prepare and publish post-adoption statement Task E2: Monitor significant effects of implementing the Local Plan Task E3: Respond to adverse effects	To be published post examination

* *The Environment Agency, Historic England and Natural England*.

1.2 Policy context

1.5 The National Planning Policy Framework (NPPF) requires local authorities to deliver enough homes, build a strong economy, support non-car travel, protect the Green Belt, support good design, deal with climate change, and protect nature and heritage. This is underpinned by various pieces of online guidance in the Planning Practice Guidance, as well as specific guidance in relation to design via the National Design Guide and Model Design Code. The Environment Act 2021 will require development to deliver at least 10% biodiversity net gain.

1.6 The Levelling Up and Regeneration Act came into law in October of 2023 and is set to impose far-reaching changes to the planning and SA/SEA processes. Many of the changes provided for in the legislation are dependent on subsequent regulations, including replacing SA/SEA with "environmental outcomes reports", setting up national development management policies that would apply to all local authorities, and removing local authorities' duty to cooperate with neighbouring authorities.

1.3 Sustainability context and existing problems

1.7 The city of Oxford is a compact one, with areas of dense urban development, interspersed by areas of natural green space and various blue corridors such as the rivers, streams and canal that interweave them. The city has a wealth of historic assets, and hosts a number of important ecological habitats of varying designations. The presence of the rivers and urbanisation in many areas makes flood risk a particular concern in many areas of the city; the impacts of climate change are likely to exacerbate this as well as other risks such as overheating.

1.8 The population of the city skews particularly to younger age groups and hosts a significant student population due to the two universities. Whilst there are areas of wealth, there are also areas characterised by high levels of deprivation and inequalities are a significant challenge in relation to health and wellbeing, as well as skills and access to jobs for some residents. Constraints on the city make space for new development limited, this has various knock-on-effects, particularly for access to housing and housing affordability.

1.9 The adopted Oxford Local Plan 2036 preceded various societal and national policy changes of recent years such as Brexit and Covid-19, the Environment Bill, and the changes to permitted development, as well as new local aspirations such as the target of being a net zero carbon city by 2040. There are ongoing challenges such as the continued housing crisis, the changing picture of retail, pressures on biodiversity and impacts of pollution on the environment from various activities.

Table 1.2. A summary of the current situation and likely future without a plan.

SA topic	Current situation	Likely future without plan	Summary findings
1. Carbon emissions	-	-	Carbon emissions in Oxford show a steady decline, principally in line with decarbonisation of the national grid which is expected to continue, though pace is uncertain. Despite an overall trend of reductions, emissions are still much above the net zero carbon emissions that Oxford City Council aims to achieve by 2040. There will be an ongoing need for significant retro-fitting of existing development, and behaviour change as well as enabling the shift away from reliance on fossil fuels at various scales.
2. Resilience to climate change	--	-	A significant area covering properties and other land uses in Oxford is at risk from flooding. This risk is likely to increase with climate change. National policy is strong on flood risk, also a flood alleviation scheme (OFAS) is proposed for the west side of Oxford, although this will not mitigate flood risk everywhere. Overheating is an increasing risk facing the city although national building standards have been updated to address overheating to some degree.
3. Efficient use of land	0	0	Increased housing pressure means that there will be more pressure on undeveloped land. Without a new plan, housing may be developed in less sustainable locations. Development density and protection of undeveloped land have been good to date, which also helps protect soils and some known peat-rich soils.
4. Local housing needs Need and supply	--	--	Oxford's housing need is more than the identified capacity in the city. The city is limited in terms of large housing sites. Some of Oxford's housing needs may therefore need to be met outside the city.
Affordable housing	--	--	House prices in Oxford are already very high, including for rent, and future prices are likely to continue to rise more quickly than average salaries. Annual provision of affordable housing has been increasing as a result of new development and the city council's own house building and delivery programme but still unlikely to meet need.
Students and student accommodation	0	0	The existing Local Plan sets a threshold on student numbers living outside of university owned or managed accommodation to reduce the loss of family homes, and to manage competition for residential sites.
5. Inequalities and health Inequality	-	--	Oxford's overall prosperity masks localized areas of deprivation. There are sharp inequalities across the city in terms of opportunities, wellbeing and health, likely exacerbated by the cost of living crisis.

General health	+	+	Despite more localised inequalities, Oxford residents' general health is good and the higher-than-average levels of activity and healthy weight need to be maintained and increased.
Health and housing	-	--	Beyond the Local Plan, there are plans for improving the existing areas of regeneration in the city, such as Blackbird Leys and West End. Physical regeneration interventions, however, need to be supported with a package of social, economic and environmental measures to ensure the maximum wider benefits.
6. Services, facilities and infrastructure Community facilities	0	-	Oxford's compact nature means there are many areas which benefit from good access to services/facilities, however this is not universal across city. Increasing population will become make it more important to protect and enhance facilities. Economic shocks like the pandemic, rising costs of energy and living in general continue to put pressure on services and facilities, however. Changes to use class order (e.g.use class E) make it harder to protect particular services/facilities locally.
'Grey' infrastructure	-	-	There are some known utilities issues in the city, including capacity concerns with the wastewater treatment plant and potential challenges around energy supply as the city moves towards net zero carbon. The Local Plan has enabling role in supporting improvements but alone has limited influence. They also rely upon investment and infrastructure upgrades by others with primary responsibility such as the utilities providers.
Digital infrastructure	+	++	The pandemic has increased and highlighted people's reliance on the Internet. Broadband coverage in Oxford is generally good and increasing.
7. Green infrastructure and leisure	++	+	Oxford has a wide range of green spaces which are generally of good quality, although unevenly distributed and protected through existing Local Plan. As Oxford's population increases, there will be increasing pressure on green spaces. Limited development opportunities mean an ongoing demand for infill development making use of garden spaces and reducing local green infrastructure features.
8. Traffic and air pollution Air quality	-	+	All of Oxford is an Air Quality Management Area for NO2, and there are air quality 'hot spots' at various major road junctions. Most of the city's air pollution comes from the transport sector according to the most recent source apportionment studies. Since the launch of the city's Air Quality Action Plan, good progress in terms of reductions in NO2 levels have been recorded although there is still work to be done. County led actions as well as national phasing out of petrol/diesel cars will help to improve air quality.
Traffic levels and congestion	--	-	Congestion on Oxford's main roads is endemic even though Oxford has very good bus services and higher levels of cycling and public transport use than many comparable cities. Population and job growth envisaged for Oxfordshire means a continuation of existing levels of car use would threaten to over-burden the transport network. Various measures are planned or in progress to tackle combined issues of congestion and poor air quality, see also the analysis above against 'air quality'.
9. Water Water resources	-	--	Oxford is in an area of serious water stress and current Local Plan sets water use limits on new development in line for this reason. Water resources are currently adequate but may not be by 2045 due to challenges like climate change and a growing population. Thames Water have various interventions planned through their Water Resources Management Plan (2024) to help address resources. There are various ecological sites in the city which are sensitive to changes in hydrology and the Local Plan 2036 protects these sites.

Water quality	-	?	Water quality in the Thames catchment is moderate or poor in certain watercourses. Some of the causes of this are outside of Local Plan influence though impacts from increased development could worsen this. The extant Local Plan includes policies that help address water quality however. Upgrades are in progress to address capacity concerns for the Oxford Sewage Treatment Works, and as these come online the situation is likely to improve for water quality.
10. Biodiversity	-	0	Biodiversity is plummeting worldwide including in Oxfordshire. The Environment Act requires at least 10% net gain in biodiversity in new development nationally, superseding existing policy in Local Plan 2036. The new Local Nature Recovery Strategy identifies a range of enhancement opportunities across the city but these are reliant on willing landowners/investment. Wider challenges such as climate change, invasive species and pollution (e.g. air, water) are likely to continue.
Nature conservation areas	+	0	Nature conservation areas such as Oxford Meadows SAC are currently well protected nationally and locally. The absence of a new local plan after 2036 could reduce protection for local sites (although many may benefit from other tangential protections e.g. Green belt).
11. Urban design and historic environment	++	+	Oxford has a high-quality landscape and historic environment and various national protections exist for designated historic assets. Non-designated local assets will continue to be protected under current Local Plan. High levels of development and tourism continue to put a strain on natural and historic sites and Oxford's landscape/townscape.
12. Employment and economy Employment	++	++	Oxford has a very strong economy, with high employment and with strong demand for research and development uses, which is a driver of the national economy. Oxford's economy has remained resilient in the face of recession and wider national economic challenges.
Unemployment	++	++	Future employment growth in Oxford is likely to be in high-skill sectors: without appropriate skills and training, these jobs will not be accessible to local people. Also, see analysis against 'employment' above.
Education, skills and employability / training	+	?	Oxford's population overall is highly skilled, but there are parts of the city where the local population is classified within the 10% most deprived for educational skills and training in the country. State schools across Oxford, and particularly in deprived areas, generally under-perform compared to regional and national averages. Greater opportunities for start-ups and SMEs are important for Oxford's economy to fully function, and diverse job opportunities are needed, otherwise an 'inclusive economy' will not be realised.
Regeneration and economic revival	0	0	Unlikely that significant new employment sites will be identified in Oxford: the focus at present is on the redevelopment, intensification and renewal of existing sites. Ensuring the right balance of employment and housing growth supported by infrastructure is fundamental to ensuring sustainable growth in Oxford. It is important to ensure that the capacity for housing in the city is delivered including on employment sites. Oxford's housing shortage and its affordability cause problems for businesses and key sectors in both recruiting and retaining staff.

1.10 Key problems in Oxford include:

- Oxford has very high housing costs, limited land available for housing, and difficulty in providing affordable housing.
- There are high levels of inequality across the city which particularly affect economic advantages for certain residents as well as health and wellbeing.
- Much of Oxford is prone to flooding: this is likely to increase with climate change.
- Oxford is still far from achieving its 2040 target of net zero carbon emissions.
- All of Oxford is an Air Quality Management Area because of transport pollution.
- Nature in Oxford, and nationally, is under pressure from climate change, air pollution, and development.
- Oxford is in an area of serious water stress and experiences ongoing challenges around water quality in its watercourses due to various sources of pollutants, although good progress is being made working with Thames Water and the EA on the issue of wastewater treatment, which is a key contributor.

1.4 SA/SEA Framework

1.11 This SA/SEA uses the framework at Table 1.2 to assess the impacts of the Oxford Local Plan 2045 policies. An adapted framework, with more site-specific criteria underlying each objective, is used for development sites.

Table 1.2: The SA/SEA framework used to assess the impacts of the new Local Plan policies.

SA/SEA Framework
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.
4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.
5. To reduce poverty, social exclusion, and health **inequalities**.
6. To provide accessible essential **services and facilities**.
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.
9. To achieve **water** quality targets and manage water resources.
10. To conserve and enhance Oxford's **biodiversity**.
11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

1.12 The scoring matrix set out in Table 1.3 is used for assessing various impacts throughout this report. The scoring highlights whether a positive, negative, neutral or unclear impact could arise as compared to the current baseline for the city and is as follows:

Table 1.3: Colour coding used throughout this report as assigned to varying levels of impact resulting from appraisals

Description of impact	Scoring symbol
Very positive impacts (compared to the current situation)	++
Positive impacts (compared to the current situation)	+
Neutral / none	0
Some positive and some negative impacts	+/-
Negative impacts (compared to the current situation)	-
Very negative impacts (compared to the current situation	--
Unclear	?
Depends upon implementation	I

1.5 Developing and testing Local Plan options

1.13 The SA report explores options / alternative approaches with a focus on key elements of the Local Plan in order to ensure that the SA focuses only on 'significant effects', which are as follows:

- The Local Plan growth strategy
- Select thematic policy areas
- Site allocations

1.14 Oxford has many constraints such as flood plain, designated sites of ecological importance, and designated heritage assets which limit the amount of available land over which growth can occur within the city's tight administrative boundaries. Six growth strategy alternatives have been identified and appraised (Table 1.5), each involving a different approach to balancing housing and employment, as well as wider development

needs alongside other Local Plan objectives. The growth strategy alternatives are framed around two key questions:

1. should the focus be on balancing development needs with wider Local Plan objectives or, alternatively, fully maximising the development capacity of sites whilst minimising requirements for other provisions like open space or greening (with a distinction between brownfield and greenfield sites); and
2. should the focus first be on meeting housing needs or employment land needs. The chosen growth strategy for the Local Plan is a balanced one that has a focus on providing for housing.

Table 1.5: Growth strategy alternatives considered for Oxford Local Plan 2045.

	Balanced development	**Boost brownfield supply**	**Boost greenfield supply**
Prioritise housing	Option 1a (The chosen growth strategy)	Option 2a	Option 3a
Prioritise employment	Option 1b	Option 2b	Option 3b

1.15 The growth strategy alternatives have been appraised using the SA framework. The results of the appraisal (Table 1.6) indicate that Option 1a, (the chosen growth strategy for the Oxford Local Plan 2045), performs most sustainably and is associated with the most positives and fewest negatives. Whilst a case could be made for options 2b, 3a and 3b from either a housing (option 3a), or an economic growth perspective (options 2b and 3b), this would come at considerable cost in terms of wider objectives.

Table 1.6: Summary of appraisal results for the growth strategy alternatives

SA Objective	**Option 1A**	**Option 1B**	**Option 2A**	**Option 2B**	**Option 3A**	**Option 3B**
1. Carbon emissions	-	--	-	--	--	--
2. Resilience to climate change	+	+	+/-	+/-	--	--
3. Efficient use of land	+	+	+/-	+/-	--	--
4. Local housing needs	+	+/-	+	-	++	-
5. Inequalities	?	?	?	?	?	?

6. Services and facilities	**+/-**	**+**	**+/-**	**+**	**-**	**-**
7. Green infrastructure, leisure and recreation	**+**	**+**	**+/-**	**+/-**	**--**	**--**
8. Traffic and associated air pollution	**+/-**	**-**	**+/-**	**-**	**-**	**--**
9. Water	**+/-**	**+/-**	**-**	**-**	**--**	**-**
10. Biodiversity	**0**	**0**	**0**	**0**	**-**	**-**
11. Good urban design / the historic environment	**+**	**+**	**--**	**--**	**--**	**--**
12. Economic growth	**+**	**+**	**+**	**++**	**+**	**++**

1.16 Guided by the overall growth strategy, the policy team considered different ways of writing the Local Plan, including identification of various policy options to help inform the preferred approaches to the 40+ draft policies. The supporting background papers document the sets of options/alternatives for each of the policies consulted on at Regulation 18 stage, referred to as 'options sets'.

1.17 All options sets were appraised at a high-level against the SA objectives (as is documented in the relevant background papers). Some of the options for particular policies were considered to have likely significant effects against one or more of the SA objectives. These options sets were scoped into the Sustainability Appraisal for a detailed appraisal to more fully understand how they performed in sustainability terms and are as follows:

- Policy Options set 001a: Housing requirement for the plan period
- Policy Options set 002e: Employer-linked affordable housing
- Policy Options set 003a: Houses in Multiple Occupation (HMOs)
- Policy Options set 003b: Location of new student accommodation
- Policy Options set 008c: Retrofitting existing buildings including heritage assets
- Policy Options set 012d: Motor vehicle parking design standard

1.18 The findings from these appraisals contributed to the decision about preferred approach for these policies and were helpful in informing where potential mitigations might be needed to ensure the overall strategy was as sustainable as possible. The background papers each set out how the Council came to identify its preferred options for policies and this drew upon the testing that was undertaken as part of the Sustainability Appraisal where relevant.

1.19 The Local Plan also includes site allocation policies. Identifying and developing site allocations is an iterative process that draws from multiple areas of work including the Strategic Housing Land Availability Assessment (SHLAA) and the Employment Land Needs Assessment (ELNA).

1.20 The Council has followed a 'no stone left unturned' approach to identify as many allocations for development as possible in order to meet identified need for the city. This includes initially identifying a large list of potential sites from a wide range of sources. These potential sites are then assessed and filtered with consideration of their availability for development (e.g. landowner intent) and suitability for development (bearing in mind fundamental environmental constraints) resulting in a refined list of allocations.

1.21 The proposed list of allocations were assessed against a modified version of Sustainability Appraisal Framework Draft which considers sustainability impacts against the 12 SA objectives. An individual SA site assessment proforma has been completed for all proposed allocations and these are published separately. The assessment process informs the appraisal of Local Plan sustainability impacts and any necessary mitigation to avoid significant effects by identifying where an allocation could have particular sustainability concerns (e.g. proximity to a watercourse, or sensitive heritage asset) in relation to the SA objectives.

1.6 Assessing the Local Plan's impacts

1.22 Table 1.7 sets out a summary of the overall impacts of the Local Plan which is set out more fully in Chapter 6 of the report. Other plans, projects and underlying trends will have additional impacts and these are discussed in the full table in Chapter 6 also.

Table 1.7: Summary of overall impacts of the Local Plan

SA/SEA topic	Overall impact	Comments
1. Carbon emissions	**+/-**	Local Plan includes a range of policies which will support meeting local and national net zero carbon targets, including net zero buildings in operation, embodied carbon and retro-fitting as well as policies supporting walking/cycling/wheeling and public transport access. Additional growth, including 9,267 of new homes to 2045 will be associated with some level of new emissions, particularly in relation to construction. Some impacts are likely to reduce, e.g. as national grid continues to decarbonise, other impacts will be take longer to address and will require further advances in technologies/construction practices (e.g. in relation to carbon impacts of construction).

SA/SEA topic	Overall impact	Comments
2. Resilience to climate change	**+/-**	Local Plan includes a specific resilient design policy as well as other policies supporting aspects of climate resilience including greening policies, flood risk, SuDS, Health Impact Assessment. New development is likely to further urbanise parts of the city, resulting in some loss of green space, and some development in areas of flood risk including some site allocations. The new Oxford Flood Alleviation Scheme will help to address flood risk in parts of the city, however, climate change will continue and this could exacerbate climate risks like overheating or introduce new ones.
3. Efficient use of land	**+/-**	Efficient use of land is a theme running throughout the Local Plan, with specific policies encouraging appropriate densities, restrictions on new car parking, retaining high-quality green features, all helping to ensure limited land is used efficiently. Arguably, strong protection for a network of green space and heritage could be seen to reduce efficient use of land, but this would support sufficient safeguards for wider environment. The requirement for new homes will result in some loss of green field sites, but these would potentially allow for more efficient development in terms of higher density and reduced reliance on cars than if they were built elsewhere.
4. Local housing needs	**+**	The Local Plan prioritises new housing across available sites over other uses in response to the city's high housing need. The city's identified housing need is for 1,087 new homes per year and the Local Plan's capacity based requirement looks to provide for 9,267 of new homes (463 homes per year) to 2045. Whilst the Local Plan's requirement will make an overall positive contribution to housing need in a highly constrained area whilst balancing out other Local Plan objectives, this will leave an under-provision which adjacent local authorities would likely need to fill. The Local Plan includes policies that seek to secure affordable housing and a number of policies addressing specialist housing to meet needs of other groups.
5. Inequalities	**+**	The focus on delivering new homes in the city, including affordable housing will help to address a key source of inequality in the city. The Local Plan strongly supports walking/cycling/wheeling and access to public transport and other daily needs via local/district centres, helping people who do not have access to a car. Policies supporting protection of green spaces, new greening on developments as well as a specific health impact assessment policy will also support health and wellbeing. Some wider pressures such as the ongoing cost-of-living crisis bring about some level of uncertainty about wider impacts on inequality and how these will interact with the Local Plan's proposals.
6. Services and facilities	**0**	Additional growth is likely to put additional pressures on key services, facilities and infrastructure, however, the Local Plan aims to ensure that adequate infrastructure, including services in district and local centres, are provided to support planned growth. The plan aims to prevent the loss of community facilities, schools and cultural sites and to direct certain uses towards accessible locations in the city/district/local centres.
7. Green infrastructure, leisure	**0**	The Local Plan includes strong protection for a network of green spaces of various types and other features across the city, as well as policies seeking to ensure minimum levels of greening across new development sites. Equally, the provisions for growth including new housing will result in the loss of some green infrastructure,

SA/SEA topic	Overall impact	Comments
and recreation		though the Local Plan policies and specific requirements in the allocations seek to focus losses on lower quality features and to mitigate impacts.
8. Traffic and associated air pollution	**+/-**	The Local Plan has various policies that seek to reduce reliance on car including requirements for low car development, vibrant centres, appropriate development densities, and bike parking. Additional housing provision in the city could help to reduce numbers of in-commuters as more people are enabled to live closer to work, however, it could increase levels of car ownership depending on how this housing is implemented. Unmet housing need that would have to be delivered beyond the boundaries may have impacts, but this is highly dependent on the manner in which it is brought forward (e.g. location and access to public transport). The Local Plan includes requirements for addressing impacts on air quality, and whilst there may be short term impacts on air quality (e.g. from new vehicles or construction) these are likely to reduce over time in combination with county measures and national drivers (e.g. phasing out of fossil fuel vehicles).
9. Water	**-**	Population growth/new housing will incur additional demands on water. In terms of water resources, the Local Plan sets limits on water use and seeks a range of water saving measures to limit impacts, though it is unlikely to totally mitigate additional demand and additional measures planned for by Thames Water will be important for helping to meet future demands on water supplies. The Local Plan includes various requirements for protecting water quality, including buffers for water courses, measures to prevent impacts of pollution, as well as greening policies which should help to mitigate impacts of further urbanization. Alongside important upgrades in progress to the Oxford Sewage Treatment Works to address current and future demands on wastewater treatment, impacts on water quality are expected to be able to be mitigated.
10. Biodiversity	**+/-**	The Local Plan is protecting a network of green infrastructure across the city which will have benefits for supporting a range of species, alongside additional protections for designated sites. There are also policies requiring onsite enhancements for species and minimum levels of greening which should complement national requirements for Biodiversity Net Gain. However, biodiversity continues to be under pressure across the country, subject to a range of national/internation drivers like climate change. Additional urbanization in the city associated with new development will also result in some losses of green features that could impact species (though the Plan also includes mitigation requirements to address impacts).
11. Good urban design / the historic environment	**+/-**	The Local Plan's heritage policies aim to protect the city's heritage. Its design policies promote high-quality design. There are a number of site allocations within conservation areas or in proximity to designated assets that could have impacts on townscape and heritage unless these are appropriately mitigated in line with the Local Plan's requirements. Equally, various sustainability requirements, e.g. in relation to net zero carbon and greening, will necessitate different approaches to design than what has been built in the past, though equally these could be construed as important components of 'high-quality' design today, so impact on local townscape could be mixed and will be highly dependent on implementation.
12.	**+**	The Local Plan's employment strategy seeks to modernise and intensify existing employment sites, while supporting a flexible approach to land-uses within the city

SA/SEA topic	Overall impact	Comments
Economic growth		and district centres to be able to respond quickly to changing needs and economic circumstances. The focus on providing for new housing will also help to address a key barrier to economic growth, which is employees' inability to find affordable housing close to where they work in the city. The Local Plan includes measures that seek to secure affordable workspaces and provide local people with skills/training opportunities through Community Employment and Procurement Plans, and this will help to address local barriers to employment and economic growth.

1.7 Minimising negative impacts and maximising positive impacts

1.23 In the preparation of the Oxford Local Plan 2045, informed by the Sustainability Appraisal process, the Council has incorporated a range of mitigation measures to minimise negative impacts and maximise positive ones. There are a number of key policies which form important mitigation for the Local Plan in relation to a number of topics including:

- **Limiting carbon emissions** – **Policy R1** requires all new buildings to be net zero in operation; **Policy R3** strongly supports retro-fitting of existing buildings to reduce their carbon impacts; **Policy R2** strengthens requirements for addressing embodied carbon in construction.
- **Traffic and air pollution –** Policies within **Chapter 7**, seek to promote walking/cycling/wheeling and improved access to public transport. Additionally, **Policy R4** sets out various requirements to address air quality impacts.
- **Water – Policy R5** sets requirements meeting water use limits and incorporating other water conservation methods, as well as ensuring no adverse impacts on water quality. Also supported by policies such as preserving amenity and environmental health from release of pollutants (**Policy R8**), additional protections for sensitive ecological sites (**Policy G6**), requirements for ecological buffers (**Policy G2**), and greening on developments (**Policies G2, G3**).
- **Green infrastructure and biodiversity – Policy G1** protects a network of green spaces, including national and local designated ecological sites. Additional protections related to designated ecological sites is assigned through **Policy G6**. Strong requirements in relation to providing new green features (**Policies G2 and G3**) as well as requirements for onsite ecological enhancements (**Policy G5**).

- **Infrastructure and services –**The Infrastructure Delivery Plan identifies the key infrastructure needs in the city and the Local Plan includes a strategic policy (**Policy S3**) which aims to ensure that essential infrastructure needs to facilitate new development are provided for and is important for helping to ensure the plans proposals

1.24 Additionally, the Council has undertaken individual site assessments for site allocations using an adapted version of the Sustainability Appraisal framework to appraise the sites for likely significant effects. Where potential adverse effects of development on the allocations has been identified, the Local Plan's site allocation policies (as set out in Chapter 8 of the plan) incorporate mitigation measures to minimise or obviate those impacts. These measures typically cross refer to key policies such as those highlighted above, where there are site specific considerations that need to be taken into account in mitigating for any impact.

1.8 Monitoring the Local Plan's impacts

1.25 The social, environmental and economic impacts of the Local Plan will be monitored and Table 1.8 sets out the proposed monitoring framework. The impacts of the plan will be monitored every year and some wider sustainability outcomes will be monitored every three years.

Table 1.8: Proposed monitoring framework.

SA/SEA topic	Monitoring of Local Plan 2045 outcomes (every year)	Monitoring of sustainability outcomes (every 3 years)
1. Carbon emissions	Contributions secured towards and proportion spent from energy offset fund (assumes that all other developments are net zero carbon)	Change in per capita CO2 emissions
2. Resilience to climate change	Applications permitted against Environment Agency flood risk advice	Change in no. homes in flood zone 3
3. Efficient use of land & 7. Green infrastructure and leisure	Applications permitted on protected green space	
4. Local housing needs	Net housing completions	Change in population / households
5. Inequalities	Net affordable housing completions	Changes in inequalities according to indices of Multiple Deprivation
6. Services, facilities and infrastructure	Applications permitted for new community spaces, cultural venues and visitor attractions	Significant new community assets
8. Traffic and air pollution	Air quality progress: NOx, PM10, PM2.5	Modal split of journey in Oxford

9. Water		Changes in quality of watercourses according to WFD classifications for chemical quality and biological quality.
10. Biodiversity	Biodiversity net gain being delivered in the city.	Condition of SSSIs, integrity of SAC, condition of local wildlifes sites.
11. Urban design and heritage	Applications permitted that result in the loss of listed buildings, registered parks and gardens, scheduled monuments	Change in no. heritage assets at risk
12. Economic growth	Net gain / loss of employment floorspace (sqm)	% employment / unemployment in the city

1.9 Next steps

1.26 The Regulation 19 Oxford Local Plan 2045 and this Regulation 19 Sustainability Appraisal report will be consulted on during the Regulation 19 consultation beginning 30th January 2026. The Local Plan will be submitted for examination later in 2026, and it is expected to be adopted in 2027.

2. Introduction

2.1 This Sustainability Appraisal (SA) / Strategic Environmental Assessment (SEA) report accompanies the Regulation 19 consultation on the proposed Oxford Local Plan 2045. This chapter gives a high-level introduction to the city of Oxford; discusses the Oxford Local Plan 2045, as well as the requirements of SA and SEA, and then sets out the structure of the rest of the report.

2.1 Background to Oxford City

2.2 Oxford City Council is a district council at the heart of Oxfordshire. It has a total area of about 46 km^2 (17.6 miles^2), parts of which are very densely developed. The built-up area of the city extends to the administrative boundary around much of the eastern half of Oxford, but the river corridors of the Thames and Cherwell penetrate as extensive green wedges into the heart of the city. This uneven distribution of urban and rural landscapes gives Oxford a distinct physical form, with much of the residential population concentrated to the east of the city centre (Figure 2.1).

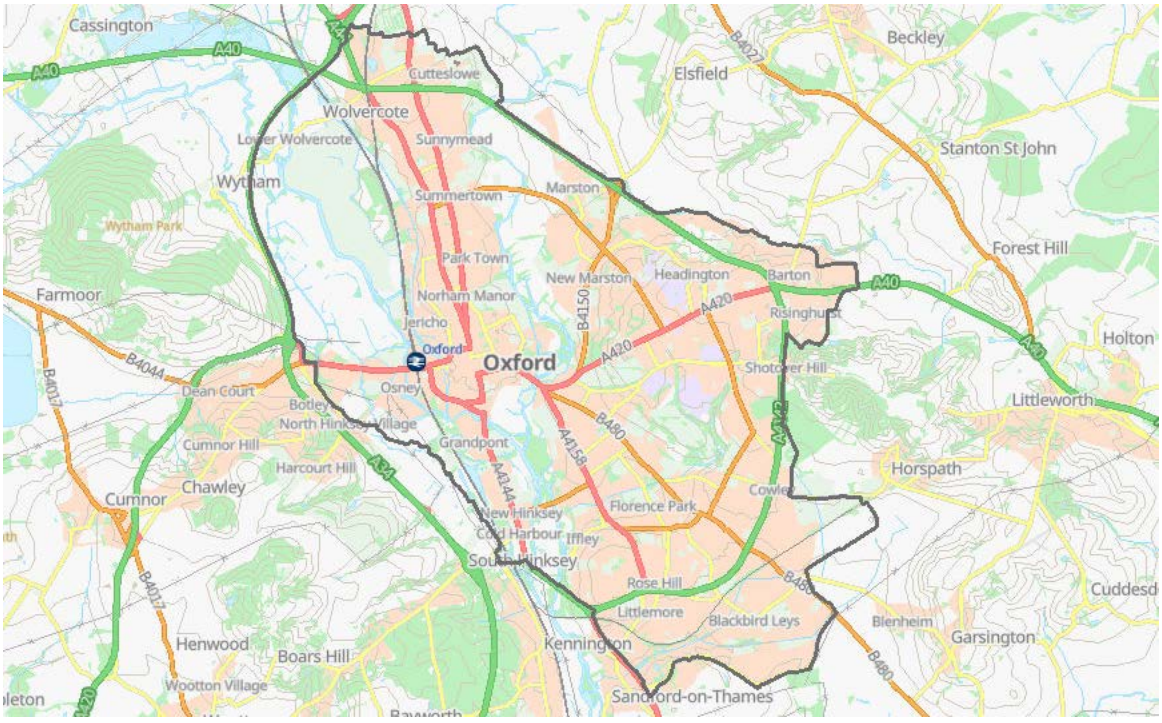


Figure 2.1: Map of Oxford including administrative boundaries of the City Council (© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.)

2.3 Oxford's population is approximately 166,034 according to the Office for National Statistics (Mid-year population estimates, July 2025). The 2021 census estimated that one-third of the population is aged between 18 and 29, more than double the national average.

Oxford is home to 34,945 students, and 4,885 businesses providing 131,000 jobs. There is a high level of in-commuting in the city with the 2021 census recording that of the 57,315 commuters working in Oxford, 28,342 were from outside the city (*although the 2021 census data is likely to have been influenced by the Covid-19 lockdown measures including requirement to stay at home where possible*).

2.4 Oxford is a compact city with a unique and world-renowned built heritage which draws many visitors each year. Its original Saxon street pattern and some of the earliest buildings and monuments still survive. Around 27% of Oxford is within the Green Belt which is an important contributor to the city's historic setting and, unusually, not only constrains development in the outer cordon of the city, but also through the city's heart. Oxford sits at the confluence of the Thames and Cherwell rivers and is quite flat, so it is prone to flooding from a range of sources. The rivers form an intrinsic part of the unique environment of the city and promote tourism and a range of important water-based sports and social activities in the city. The historic city parks and nature conservation areas create pockets and corridors of green within the administrative boundary; several have national and international nature conservation designations, further constraining development, and a number of green spaces also contribute to the historic character of the city.

2.5 Oxford is one of the most unaffordable places to live in the country. In recent years, Oxford has experienced a booming housing market with rising house prices. This has led to open market housing becoming expensive and difficult to obtain. It has also limited the supply of affordable housing, and there is now a huge need for affordable housing. There are severe pressures on the housing stock, with concentrations of Houses in Multiple Occupation, homeless and vulnerable people, and areas of deprivation with relatively high crime rates, health deprivation and poor educational achievement.

2.6 Oxford has remained economically very successful despite the global recession of the 2000s, Brexit and the Covid pandemic. The government sees Oxford as playing a key role within the 'Pan-Regional Partnership' between Oxford and Cambridge, with high future housing and economic growth.

2.2 The Oxford Local Plan 2045

2.7 The Oxford Local Plan 2045 carries forward and updates policies set in the Oxford Local Plan 2036. Its preparation has built upon the considerable amount of resource and effort that went into the preparation of the withdrawn Local Plan 2040, whilst taking opportunities to revisit and reappraise the policy framework supported through further rounds of consultation and engagement with various stakeholders.

2.8 Whilst earlier stages of consultation had envisioned the new Local Plan setting out a vision for the city to 2042, as was the case for the early engagement consultation of spring 2025 and the Regulation 18 consultation of summer 2025, the Regulation 19 consultation document now establishes the Plan period running through to 2045. This Regulation 19 Sustainability Appraisal report has been prepared in light of this updated context, including reviewing and revising where necessary the content previously published for consultation as part of the Interim Regulation 18 Sustainability Appraisal report (which remains available in the evidence base).

2.9 The Oxford Local Plan 2045 vision is as follows:

In 2045 Oxford will be a healthy and inclusive city, with strong communities that benefit from equal opportunities for everyone, not only in access to housing, but to nature, employment, social and leisure opportunities and to healthcare.

Oxford will be a city with a strong cultural identity, that respects and values our heritage, whilst maximising opportunities to look forwards to innovate, learn and enable businesses to prosper.

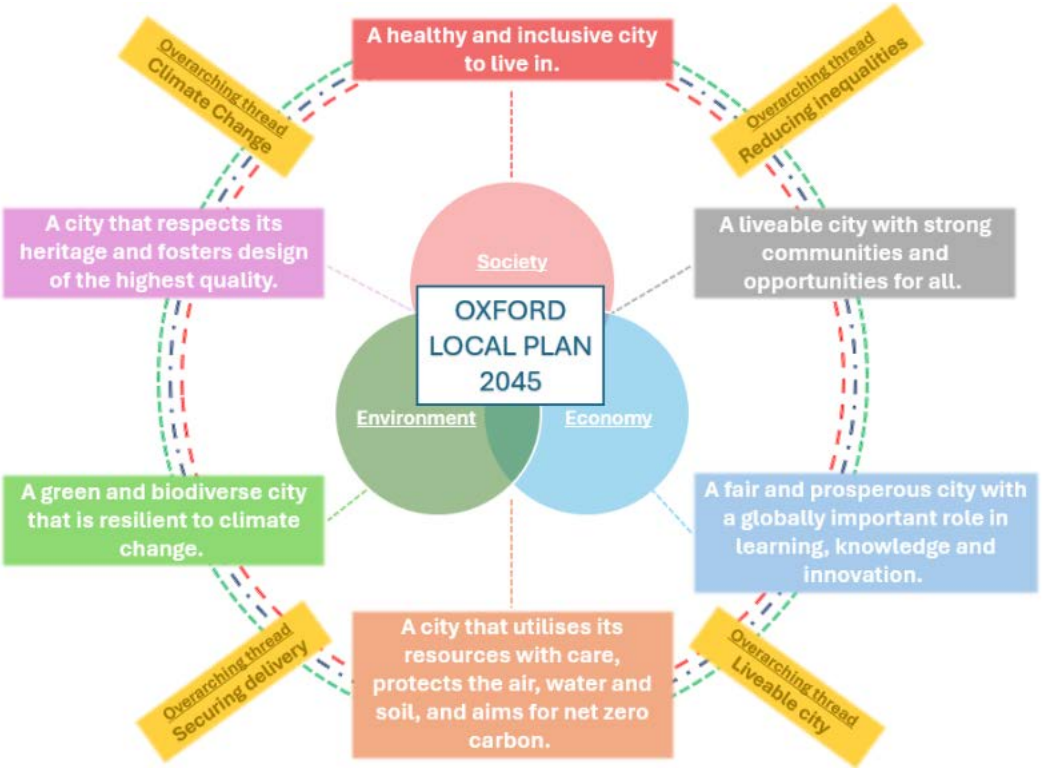
The vision is one which supports research and development in the life sciences and health sectors which will continue to provide solutions to global challenges.

The environment will be central to everything we do; it will be more biodiverse, better connected and more resilient. We will utilise resources prudently whilst mitigating our impacts on the soil, water, and air.

The city will be net zero carbon, whilst our communities, buildings and infrastructure will be resilient to the impacts of climate change and other emergencies.

2.10 The vision is underpinned by six themes that are adapted from the three pillars of sustainability and their interconnections, as is illustrated in Figure 2.2. There are various specific objectives for the city which sit under each of these themes and these are discussed further in Chapter 4. The Plan also includes several overarching threads which interconnect throughout the document and across the six themes – these are: addressing climate change; reducing inequalities; ensuring a liveable city; and securing delivery.

Figure 2.2: The Local Plan's themes and overarching threads which interweave between them.



2.11 The Local Plan allocates sites for housing and employment. It also sets policies for the management of development in the city including: the conservation and enhancement of the historic and natural environment, biodiversity; guiding the quality of urban design; achieving the city's net zero carbon targets and flood risk management. The Local Plan will be used in determining planning applications and helping guide investment decisions across the city alongside other key documents such as neighbourhood plans and Supplementary Planning Documents.

2.12 The range of policies within the Local Plan, excluding those relating to site allocations and areas of focus, are set out in Table 2.1.

Table 2.1: The policies of the Oxford Local Plan 2045, excluding Areas of Focus and site allocations.

Ref	Policy title
S1	Spatial Strategy and Presumption in Favour of Sustainable Development
S2	Design Code and Guidance
S3	Infrastructure Delivery in New Development
S4	Plan Viability
H1	Housing Requirement
H2	Delivering Affordable Homes
H3	Affordable Housing Contributions from Other Development Types
H4	Employer-Linked Affordable Housing
H5	Mix Of Dwelling Sizes (Number Of Bedrooms)

H6	Development Involving Loss Of Dwellings
H7	Houses In Multiple Occupation
H8	Location Of New Student Accommodation
H9	Linking New Academic Facilities With The Adequate Provision Of Student Accommodation
H10	Homes For Travelling Communities
H11	Homes For Boat Dwellers
H12	Older Persons And Other Specialist Accommodation

C8	Motor Vehicle Parking Design Standards
I1	Digital Infrastructure To Support New Development
I2	Safeguarding Land For Infrastructure

2.3 Strategic Environmental Assessment (SEA) and Sustainability Appraisal (SA)

2.13 The Environmental Assessment of Plans and Programmes Regulations 2004, SI No. 1633 (hereafter the "SEA Regulations") is the governing legislation in England and Wales that manages the Strategic Environmental Assessment (SEA) process. While the SEA legislation focuses on assessing environmental effects, this assessment process is widened to include an analysis of social and economic effects through the legal requirement to undertake a Sustainability Appraisal (SA) as set out in Section 19 of the Planning and Compulsory Purchase Act 2004. According to the Planning Practice Guidance (PPG) section on Strategic environmental assessment and sustainability appraisal, "Section 19 of the Planning and Compulsory Purchase Act 2004 requires a local planning authority to carry out a sustainability appraisal of each of the proposals in a plan during its preparation.

2.14 The SEA Regulations state that SEA must assess the likely significant effects of the plan or programme on the environment, namely:

- Biodiversity
- Population
- Human health
- Fauna
- Flora
- Soil
- Water
- Air
- Climatic factors
- Material assets
- Cultural heritage, including architectural and archaeological heritage
- Landscape
- The inter-relationship between the above

2.15 There are various requirements of the SEA Regulations and Table 2.2 highlights these as well as where they are covered in this SA/SEA for the Oxford Local Plan 2045.

Table 2.2: Requirements of the SEA Regulations and where they are covered in the SA/SEA for the Oxford Local Plan 2045

Requirements of the SEA Regulations	**Where covered**
a) an outline of the contents, main objectives of the plan or programme…	Chapter 2 of this report
… and relationship with other plans or programmes	Chapter 3 of this report, and in individual Background Papers.
b) the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme	Chapter 3 of this report and in individual Background Papers.
c) the environmental characteristics of the areas likely to be affected	In individual site assessment forms and summarised in chapter 6.
d) Any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to the Habitat Regulations;	In individual Background Papers and summarized in chapter 3 of this report.
e) The environmental protection objectives, established at international, Community or national level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation;	In individual Background Papers.
f) The likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors. (These effects should include secondary, cumulative, synergistic, short, medium and long term permanent and temporary, positive and negative effects);	Chapters 4, 5 and 6 of this report.
g) The measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme;	Chapter 7 of this report
h) An outline of the reasons for selecting the alternatives dealt with…	Chapter 5 of this report
… and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information;	Chapter 2 of this report.
i) a description of measures envisaged concerning monitoring in accordance with Article 10;	Chapter 8 of this report.
j) a non-technical summary of the information provided under the above headings.	Chapter 1 of this report.

Consultation: authorities with environmental responsibility, when deciding on the scope and level of detail of the information to be included in the environmental report (Art. 5.4)	A summary of feedback received on the early draft of the scoping is included in Appendix A and discussed in Chapter 3/Section 3.5.
authorities with environmental responsibility and the public shall be given an early and effective opportunity within appropriate time frames to express their opinion on the draft plan or programme and the accompanying environmental report before the adoption of the plan or programme (Art. 6.1, 6.2).	A summary of the feedback received on the interim SA published for Reg 18 is included in Chapter 3/Section 3.5.
other EU Member States, where the implementation of the plan or programme is likely to have significant effects on the environment of that country (Art. 7)	Not applicable
Taking the environmental report and the results of the consultations into account in decision-making (Art. 8)	
When the plan or programme is adopted, the public and any countries consulted under Art.7 shall be informed and the following made available to those so informed: • the plan or programme as adopted; • a statement summarising how environmental considerations have been integrated into the plan or programme and how the environmental report pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of consultations entered into pursuant to Article 7 have been taken into account in accordance with Article 8, and the reasons for choosing the plan or programme as adopted, in the light of the other reasonable alternatives dealt with; and • the measures decided concerning monitoring (Art. 9 and 10)	Will be carried out upon plan adoption
Monitoring of the significant environmental effects of the plan's or programme's implementation (Art. 10)	Will be carried out from after plan adoption
Quality assurance: environmental reports should be of a sufficient standard to meet the requirements of the SEA Directive (Art. 12).	Throughout the process

2.16 Sustainability Appraisal is an iterative process to assist in the development of a Local Plan. It is used to appraise emerging options against the three pillars of sustainability; the social, environmental and economic dimensions. It assists in selecting the options deemed to be the most sustainable for the area, and in fine-tuning the policies in the Local Plan. Ultimately, the SA documents 'the story' of the Local Plan's development.

2.17 There are different requirements for undertaking an SA compared to those for SEA; the requirements for undertaking SA are outlined in Table 2.3 below. This SA/SEA report fulfils the legal requirements for both SA and SEA. Where reference is made within this

document to Sustainability Appraisal/SA, it also implies (where appropriate) Strategic Environmental Assessment. The Council has consulted on two early versions of this Sustainability Appraisal as it has emerged in advance of this Regulation 19 version, details of these are set out in the Table below, but in summary:

- An early draft of the scoping report was shared in advance of Regulation 18 consultation with the Environment Agency, Natural England and Historic England to confirm the scope of the Sustainability Appraisal (February 2025). Feedback was incorporated into the subsequent versions.
- An Interim Sustainability Appraisal report, including an updated scoping report, appraisal of options/alternatives for the Local Plan, and early whole plan appraisal was published as part of the Regulation 18 First Draft (Preferred Options) Local Plan consultation (June/July 2025).

Table 2.3: The Sustainability Appraisal (SA) process and the stages of Local Plan 2045 preparation

Stages of the Sustainability Appraisal process	**Relevant consultation**
Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope Task A1: Identify other relevant policies, plans and programmes and sustainability objectives Task A2: Collect baseline information Task A3: Identify key sustainability issues and problems Task A4: Develop the SA framework Task A5: Consult the consultation bodies on the scope of the SA report	Relevant bodies* were consulted on early draft of scoping report to agree scope (Feb-March 2025) **Complete** Updated version of scoping report published as part of Interim SA Report (Part 1) for Summer 2025 Reg 18 consultation **Complete**
Stage B: Developing and refining alternatives and assessing effects Task B1: Test the Local Plan objectives against the SA framework Task B2: Develop the Local Plan options including reasonable alternatives Task B3: Evaluate the likely effects of the Local Plan and alternatives	Published as part of the Interim SA Report (Part 2) for Summer 2025 Reg 18 consultation **Complete**
Task B4: Consider ways of mitigating adverse effects and maximising beneficial effects Task B5: Propose measures to monitor significant effects of implementing the Local Plan *Stage C: Prepare the SA report* *Stage D: Seek representations on the SA report from consultations and the public*	Published as part of this Regulation 19 SA report - including updated information related to earlier stages. **Current stage**

Stage E: Post adoption reporting and monitoring Task E1: Prepare and publish post-adoption statement Task E2: Monitor significant effects of implementing the Local Plan Task E3: Respond to adverse effects	To be published post examination

** The Environment Agency, Historic England and Natural England*.

2.18 The colour coding system as set out in Table 2.4 will be used throughout this SA/SEA. It is intended to score whether a positive, negative, neutral or unclear impact could arise as compared to the current baseline for the city and is as follows:

Table 2.4: Colour coding used throughout this report as assigned to varying levels of impact resulting from appraisals

Description of impact	Scoring symbol
Very positive impacts (compared to the current situation)	++
Positive impacts (compared to the current situation)	+
Neutral / none	0
Some positive and some negative impacts	+/-
Negative impacts (compared to the current situation)	-
Very negative impacts (compared to the current situation	--
Unclear	?
Depends upon implementation	I

2.4 Habitat Regulations Assessment

2.19 Oxford is home to part of the Oxford Meadows Special Area of Conservation (SAC), which is a site of international nature conservation importance because of its lowland hay meadows and creeping marshwort (Apium repens). The site has benefited from the survival of traditional management, which has been undertaken for several centuries, and so exhibits good conservation of structure and function. Port Meadow is the largest of only two known naturally occurring sites in the UK for creeping marshwort.

2.20 A Habitat Regulations Assessment (HRA) is a legal requirement to test if a plan or project proposal could have a significant impact on the conservation objectives of designated sites such as the SAC. In the Council's work on the Oxford Local Plan 2036, and on the withdrawn Local Plan 2040, the Council has produced Habitat Regulations Assessments and maintained regular engagement with Natural England throughout. This

work previously identified that potential impacts on air quality, recreational disturbance, and changes to local hydrology/ water quality are all issues which require assessment through the Habitat Regulations Assessment process.

2.21 The Council has published a Habitat Regulations Assessment (comprising of an updated screening and Appropriate Assessment) for the Regulation 19 consultation. This takes into account ongoing engagement with Natural England, including their feedback on the screening report published at Regulation 18.

2.22 The assessment currently concludes that the Oxford Local Plan 2045 will not affect the integrity of the Oxford Meadows SAC through air quality impacts (either 'alone' or 'in-combination'). With the suite of mitigation measures proposed through the Stage 2 Appropriate Assessment, it also concludes that the Local Plan will not affect the integrity of the Oxford Meadows SAC through recreational (dog fouling) impacts, impacts on water levels or quality (either 'alone' or 'in-combination').

2.5 Health Impact Assessment

2.23 Whilst there are no distinct legislative requirements to do so, the Council has also undertaken a separate Health Impact Assessment on the Local Plan. This reflects the reality that planning and the built environment can have a significant role to play in shaping healthier environments (or hindering them) for people, which is particularly pertinent to Oxford, being a city characterised by health inequalities across its population. This separate form of assessment is a valuable way of helping to identify the key positive and negative health impacts that could arise from proposed policies in the new Local Plan.

2.24 A scoping study was previously undertaken to inform the Regulation 18 stage of the Local Plan's preparation and was published as part of that consultation for feedback. The Council has produced a further assessment which reviews the proposals of the Regulation 19 Submission Draft Local Plan in the context of health and wellbeing impacts and this is available separately as part of the consultation.

2.6 Difficulties in compiling the SA/SEA

2.25 There were no significant difficulties encountered in compiling this report. Where the interim report published previously encountered some data gaps due to work still being prepared, the previous analysis has now been reviewed afresh and updated where necessary.

2.7 Structure of this report

2.26 This report has been prepared by Oxford City Council. It comprises an updated version of 'Stage A' and elements of 'Stage B' of the Sustainability Appraisal process (as set out in Table 2.3 earlier), as were first published in the summer of 2025, during the Reg 18 consultation, as well as the remainder of Stage B. The following chapters of the report are structured as follows:

- Chapter 3 – an updated version of the scoping report (Stage A1 – A5)
- Chapter 4 - an appraisal of the Local Plan vision and themes/objectives (Stage B1)
- Chapter 5 – presents and appraises the alternatives to the Local Plan (Stage B2)
- Chapter 6 – appraises the Local Plan's policies and site allocations (Stage B3)
- Chapter 7 – discusses mitigation measures to minimise the Local Plan's negative impacts and maximise its positive impacts (Stage B4)
- Chapter 8 – sets out a monitoring framework for the Local Plan (Stage B5)
- Chapter 9 – Discusses next steps.

2.27 This Sustainability Appraisal report, particularly the scoping stages and identification of alternatives, is supported by more detailed analysis which is presented across a number of the supporting Background Papers which expand on key information of relevance to the various topics they address. Previous iterations of these were published as part of the Regulation 18 consultation and similarly supported the Interim Sustainability Appraisal report at that stage also. Table 2.5 lists these papers, which can also be accessed via the evidence base online, as well as directly via the hyperlinks, and shows how they relate to the Sustainability Appraisal objectives which will be discussed in Chapter 3.

Table 2.5: Background papers and SA objectives/SEA themes

Relevant background paper(s)	**SA objective**	**SEA Themes**
008 Carbon reduction and climate resilient design 012 Transport	1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040	Climatic Factors, Air
008 Carbon reduction and climate resilient design 007 Flood risk, drainage and SUDS 010 Health and Wellbeing	2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	Water, Climatic Factors
006 Green belt 009 Natural Resources	3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	Soil, Material Assets, Biodiversity

001 Housing need, requirement and mix 002 Affordable housing 003 Specialist housing	4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.	Material Assets, Population, Human Health
010 Health and Wellbeing	5. To reduce poverty, social exclusion, and health **inequalities**.	Population, Human Health, Material Assets
013 Livable city 014 Infrastructure	6. To provide accessible essential **services and facilities**.	Material Assets, Human Health
005a Green infrastructure 005b Biodiversity	7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	Landscape, Biodiversity, Human Health,
012 Transport 009 Natural Resources	8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	Air, Climatic Factors
009 Natural resources	9. To achieve **water** quality targets and manage water resources.	Water, Biodiversity
005a Green Infrastructure 005b Biodiversity	10. To conserve and enhance Oxford's **biodiversity**.	Flora, fauna, biodiversity
011 Urban design, placemaking, heritage and archaeology	11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	Cultural Heritage, Landscape
004 Employment and inclusive economy	12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.	Population, Material Assets

3. Updated Sustainability Appraisal scoping

3.1 This chapter presents the SA scoping work, a version of which was initially presented in the interim SA report that informed the Regulation 18 stage of the Local Plan's production. The chapter incorporates updates and refinements to that previous scoping work where appropriate, reflecting the more advanced point in the Local Plan's production and any subsequent changes in context including:

- Any additional considerations arising from the changing context of the Local Plan's production (e.g. updated Local Plan base and end dates; further detail in relation to the Local Plan's proposals and policies which have developed since Reg 18).
- Relevant feedback from the Regulation 18 consultation.
- Any other relevant changes to national or local context that have arisen since the interim SA.

3.1 Policy context (Sustainability Appraisal Task A1)

3.2 The Oxford Local Plan 2045 is influenced by a range of policies, plans, programmes and sustainability objectives. The key policies, plans and programmes that affect the entire plan are discussed below. Additional policies/plans/programmes that affect individual topic areas such as air quality and deprivation are discussed in the Background Papers which support the SA (as set out in Table 2.5).

3.1.1 National context

Levelling Up and Regeneration Act 2023

3.3 This Act came into law in October of 2023 and is set to impose far-reaching changes to the planning and SA/SEA processes which are intended to boost development and speed up the planning process. Many of the changes provided for in the legislation are dependent on subsequent regulations before they would come into effect and detail as to how or when they will come into place specifically is limited. The various changes that the Act lays the groundwork for include:

- Greater digitisation of planning documents
- SA/SEA replaced by "environmental outcomes reports"
- Community Infrastructure Levy replaced by a new national infrastructure levy
- Development of a common framework of National Development Management Policies (including on a national model design code), and commensurate focusing of Local Plans on locally specific matters
- Repeal of the Duty to Cooperate

- Speeding up of the plan-making process
- Removal of the requirement for a rolling five-year supply of housing land where the Local Plan is up to date.

Environment Act 2021

3.4 This Act was signed into law in November 2021 and assigned government a range of new powers to set binding environmental targets for issues such as air quality, water, biodiversity, and waste reduction. From February 2024 (and April 2024 for small sites), it required the majority of new planning applications to deliver at least 10% biodiversity net gain, based on the DEFRA Biodiversity Metric. The Act also set out requirements for the creation of Local Nature Recovery Strategies (LNRSs) to cover the entire country, discussed further below.

Climate Change Act 2008

3.5 This legislation sets statutory targets for reducing national carbon dioxide emissions below 1990 levels at intervals up to 2050. The targets set out in the Act have been amended since to reflect updated goals for climate mitigation, such as most recently setting out a target of net zero emissions by the year 2050 (100% reduction in emissions over 1990 levels). Under the Act, the government is required to set interim reduction targets via carbon budgets, most recently the sixth carbon budget was agreed, whilst the seventh is expected to be set in 2025.

National Planning Policy Framework (NPPF) and associated guidance

3.6 The NPPF sets out the Government's planning policies for England and how these are to be applied and was most recently updated in December of 2024 (with minor revisions in early 2025). The NPPF addresses various topics that Local Plans should cover, including planning for housing, employment and protection of the environment (dealing with matters such as climate change, flood risk, biodiversity, high quality design and the historic environment). The various topic-specific background papers that inform this SA provide detailed summaries on the relevant aspects of the NPPF for each topic. A consultation was published in December 2025 on an updated NPPF and remains open at time of writing.

3.7 The NPPF is supported by an online National Planning Practice Guide and the National Design Guide of October 2019 which provides additional guidance on various topics. Again, where relevant, the supporting background papers expand on the relevant detail contained in these resources for each topic.

The Localism Act 2011

3.8 Introduced the right for communities to shape development in their areas through the production of Neighbourhood Plans, Neighbourhood Development Orders and Community Right to Build Orders. Currently Oxford has five designated Neighbourhood Forums: Headington, Littlemore, Summertown/St. Margaret's, Wolvercote and Blackbird Leys. The Headington and Summertown/St. Margaret's Neighbourhood Plans were 'made' in July 2017 and April 2019 respectively, whilst the Wolvercote Neighbourhood Plan was 'made' in June 2021. The Littlemore Neighbourhood Plan was subject to examination in 2025 with the examiner recommending that the Plan could proceed to referendum subject to a number of modifications.

3.1.2 Regional context

Oxford-Cambridge Growth Corridor and Oxford Growth Commission

3.9 In January 2025, the Chancellor unveiled new plans to deliver the Oxford-Cambridge Growth Corridor that will boost the UK economy by up to £78 billion by 2035, catalysing the growth of UK science and technology. Sir Patrick Vallance has been appointed as the Oxford-Cambridge Growth Corridor Champion to provide senior leadership to ensure that the Government's ambitions are delivered. The Oxford-Cambridge Growth Corridor will provide a clear strategy for the entire region backed by funding for housing and infrastructure. A new growth commission for Oxford was also announced in January to review how nationally significant growth for the city and the surrounding area can be unlocked and accelerated.

Oxfordshire's Strategic Economic Plan and Action Plan, 2023/2024

3.10 The Strategic Economic Plan (SEP), published in 2023, updates and replaces Oxfordshire's previous economic strategies and is supported by an accompanying Action Plan (2024). Informed by a county-wide conversation, it provides a post-pandemic statement of economic priorities for Oxfordshire. The SEP charts a positive economic future for the county, and sets out a strategy to 2033 and includes four key objectives which the SEP will seek to advance, working in concert with other strategic processes across and beyond Oxfordshire, these are to:

- Enable Oxfordshire's businesses to thrive and encourage pervasive innovation.
- Widen access to current opportunities and equip people and places as jobs change over the next decade.
- Secure resilient infrastructure for planned growth, consistent with Oxfordshire's commitment to net zero carbon by 2050.
- Ensure that Oxfordshire's places are sustainable and inclusive, and that local communities flourish.

Oxfordshire Local Transport and Connectivity Plan (LTCP), 2022

3.11 The Local Transport and Connectivity Plan, adopted in July 2022, is the statutory Local Transport Plan required under the Transport Act 2000. It sets out Oxfordshire County Council's (as Local Highways Authority) strategy for both digital infrastructure and transport to 2050. It outlines a clear vision to deliver a net-zero Oxfordshire transport and travel system that enables the county to thrive while protecting the environment and making Oxfordshire a better place to live for all residents. The LTCP is supported by a number of strategies and plans which are relevant to Oxford—these are detailed further in the Transport Background Paper.

Central Oxfordshire Travel Plan, 2023

3.12 The Central Oxfordshire Travel Plan COTP covers the urban area of Oxford, the immediate movement and connectivity corridors to and from the city, as well as the main villages that lie on these corridors. The COTP sets out 23 actions to achieve the plan outcomes and support the achievement of the LTCP targets.

3.13 For Oxford these include the expansion of the Zero Emission Zone; strategic traffic filters to reduce traffic levels in Oxford; a workplace parking levy; improving priority and safety of sustainable modes in the city and introduction of a Central Oxfordshire Movement and Place Framework (a joint County-City project which aims to raise the quality of public realm, support a shift to active travel and public transport, improve access to green and blue spaces and make the most of development and regeneration).

East-west Rail link

3.14 In December 2022, England's Economic Heartland published 'connectivity studies' for an East-West rail link from Oxford to Milton Keynes and Cambridge; rail links from Oxford to Northampton, Wellingborough and Peterborough; and other connectivity improvements. Upgrades in relation to the East-West rail route are ongoing with the latter stages still in the planning stage. A recent non-statutory consultation which included discussion around improvements to Oxford Station and the rail network in order to facilitate the delivery of East West Rail from Cambridge to Oxford closed in January of 2025.

Oxfordshire Minerals and Waste Core Strategy, 2017

3.15 Part 1 (the Core Strategy) was adopted in September 2017 and sets out the vision, objectives, spatial planning strategy and policies for meeting development requirements for the supply of minerals and the management of waste in Oxfordshire over the period to

2031. A Part 2 that would address site allocations was originally intended to follow, however, this is no longer being pursued.

3.16 An updated development scheme published in July 2025 sets out that the intention of the county is to prepare a new Minerals and Waste Plan under the new plan-making system proposed by the Levelling Up and Regeneration Act 2023, once it is brought into effect. A review of the situation will take place in six months if the secondary legislation of the Act has not yet come forward. At present, there is currently no timetable for a new Minerals and Waste Plan's production.

Oxfordshire Local Nature Recovery Strategy

3.17 The Environment Act set out requirements for the creation of Local Nature Recovery Strategies (LNRSs) to cover the entire country. LNRSs are intended to identify important areas for biodiversity as well as opportunity areas for its enhancement. In November 2025, Oxfordshire County Council published the LNRS which covers the county, including the city of Oxford.

3.1.3 Local context

Oxford City Council Our Strategy (2024-2028)

3.18 The Council's ambition is for Oxford to continue to be a city that is a world-leading centre of research, innovation and science and a thriving place for independent businesses. We will nurture strong, inclusive communities and be a welcoming and supportive place for people from all backgrounds to work, live and visit. As part of the strategy, the Council has identified five priorities:

- Good, affordable homes
- Strong, fair economy
- Thriving communities
- Zero carbon Oxford
- A well-run council

Oxford's Economic Strategy (2022-2032)

3.19 This local strategy seeks to establish a new standard for economic inclusion in the city, underpinned by an impactful and purposeful contribution to the UK and global economy. It also seeks to rapidly address the environmental impacts of economic activity and harness the opportunities of a new net zero carbon economy.

Oxford Climate Emergency declaration and Zero Carbon Action Plan

3.20 In January 2019, Oxford City Council declared a climate emergency. Subsequently a number of organisations across the city came together to agree a net zero carbon target of 2040, ten years in advance of the national net zero target date. In March 2021, the various stakeholders in the city who comprise the Zero Carbon Oxford Partnership (ZCOP), and including the Council, published an Action Plan and Roadmap for bringing about a net zero carbon city by 2040, or earlier. The document outlines key milestones and actions which need to be taken in different sectors from 2020 to 2050 including in relation to planning and design of the built environment.

3.21 The partnership is currently in the process of expanding to incorporate the rest of the county and will be known as the Zero Carbon Oxfordshire Partnership.

3.1.4 Other Key Plans, Programmes and Environmental Objectives

3.22 First originating from the European Union, there are several pieces of environmental legislation influencing planning policy in the UK that have subsequently been transposed into UK law. These include:

- The Habitats Directive (92/43/EEC) which were transposed into the Conservation of Species and Habitats Regulations 2017 (amended in 2019),
- The Air Quality Directive (2008/50/EC) which is transposed into the Air Quality Standards Regulations 2010
- The Water Framework Directive (2000/60/EC) which is transposed into the Water Environment Regulations (Water Framework Directive) 2017.

3.2 Sustainability context (Sustainability Appraisal Task A2)

3.23 In the absence of a new Oxford Local Plan 2045, the currently adopted Oxford Local Plan 2036 would continue. It is important to understand the current sustainability context for the city and how this could change in future under this scenario before we can consider the impacts of taking forward any new Local Plan and this is discussed further in the following section.

3.2.1 Current situation and likely future without a new Local Plan

3.24 Table 3.1 presents an analysis, supported by the assessments presented within the supporting Background Papers, which summarises the current situation and the likely situation if the current Local Plan 2036 continued but no new Local Plan was prepared. It helps to inform the baseline from which to assess the impacts of the new Oxford Local Plan 2045 as it is prepared.

Table 3.1: Current situation and likely future without the plan

SA topic	Current situation	Likely future without plan	Summary findings
1.Carbon emissions	-	-	Per capita carbon emissions in Oxford show a steady decline (more than 40% since 2005), principally in line with decarbonisation of the national grid which is expected to continue, though pace is uncertain. Despite overall trend of reductions, emissions are still much above the net zero carbon emissions that Oxford City Council aims to achieve by 2040. National building standards for new development are improving but not to net zero standards and ignore other elements like embodied carbon/energy. Whilst the Local Plan can set standards for carbon reduction in new buildings (and the existing Plan does this), it has limited powers in other respects, for instance, driving the retro-fit of existing homes (e.g. via energy efficiency measures). Greater energy efficiency and renewable energy requirements can also conflict with other priorities, such as providing affordable homes owing to viability issues. Regardless of new development, there will be an ongoing need for significant retro-fitting of existing development, and behaviour change as well as enabling the shift away from reliance on fossil fuels at various scales. The city's Net Zero Carbon Action Plan identifies the key steps/milestones that need to be met to secure net zero by 2040 and the Zero Carbon Oxfordshire Partnership aims to drive this through various initiatives (Local Plan is only one part of the response).
2.Resilience to climate change	--	-	A significant area covering properties and other land uses in Oxford is at risk from river flooding, as well as other sources of flooding such as groundwater, surface water and sewer flooding. This risk is likely to increase with climate change. A flood alleviation scheme (OFAS) is proposed for the west side of Oxford, although this will not mitigate flood risk everywhere. Given constraints on development in Oxford, there could be increased pressure to locate development in areas of higher flood risk or upon areas of existing flood storage. Local Plan 2036 has strong policies on flood risk, as does NPPF, but residual risk can remain an issue for new development in at risk areas. Oxfordshire County Council has undertaken a Climate Risk assessment for Oxfordshire: alongside flooding it identifies overheating as an increasing risk, particularly if future global climate change targets are missed. Updated national building standards have incorporated limited requirements to consider overheating in new buildings but resilience building to this risk, as well as flooding from various sources, will need to be achieved through a variety of responses: Local Plan policies are one tool in the longer term, but other actions will also be needed.
3.Efficient use of land	0	0	Increased housing pressure means that there will be even more pressure on undeveloped land including green spaces which are important for

			sustainable communities and biodiversity. Without a new plan, housing may be developed in less sustainable locations. Without policies to prioritise delivery of new homes, many sites are far more likely to come forward for commercial uses (in less suitable locations). Green belt runs through the city, following the lines of the rivers. The Council has undertaken green belt assessment to identify whether any sites would be suitable for allocation in the Local Plan and this has informed the plan making process. Development density and protection of undeveloped land have been good to date. Protection of undeveloped land should have supported the protection of soil in parts of the city, although it is likely that soil quality in other areas could be impacted by urbanisation. The higher costs associated with dealing with any remaining contaminated sites could affect viability and increase pressure to develop greenfield sites. Oxford has a number of locations with peat-rich soil deposits which are particularly valuable as important storage for carbon (carbon sinks), managing/storing water, and also for retaining archaeological deposits. Historic development has likely removed some wider deposits, and there are also potentially unmapped/unknown deposits still present in areas. Current Plan protects some of the key areas of known deposits (as protected open space), but there is potential for additional losses of unrecorded deposits to development in future without additional mitigation.
4.Local housing needs Need and supply	--	--	The government's proposed standard method (published December 2024) sets annual housing need is set at 1,087 per annum (21,740 for the 20 year plan period). The Strategic Housing Land Availability Assessment indicates that there is not enough capacity within Oxford to meet all of the housing need. Some of Oxford's housing needs may therefore need to be met outside the city. Without additional large-scale development sites, the proportion of homes delivered through small infill sites is likely to increase, and could increase pressure on the existing infrastructure owing to the incremental nature of these proposals, without them delivering new on-site infrastructure. There is also limited opportunity to deliver affordable housing from these smaller developments.
Affordable housing	--	--	House prices in Oxford are already very high, and future prices are likely to continue to rise more quickly than average salaries. Housing to rent on the open market is also unaffordable to a significant proportion of people. So, delivering affordable housing is also a priority for the Plan, particularly for those in greatest levels of need (social rent homes). The annual provision of affordable housing has been increasing as a result of new development and the city council's own house building and delivery programme. However, national policy provides challenges, for example, reducing the number of sites from which contributions can be sought towards affordable housing to those of 10 or more units, and allowing affordable housing models which are still not affordable in the Oxford context.

Students and student accommodation	**0**	**0**	The existing Local Plan sets a threshold on student numbers living outside of university owned or managed accommodation to reduce the loss of family homes, and to manage competition for residential sites.
5.Inequalities and health Inequality	**-**	**--**	Oxford's overall prosperity masks localized areas of deprivation. There are sharp inequalities across the city in terms of opportunities, wellbeing and health. These are being exacerbated by the cost of living crisis. Continued action needs to be taken to address these inequalities to enable all parts of Oxford's communities to experience a good quality of life. For example, the health of Oxford's residents is generally good, but there is great variation: for instance, men in wealthier parts of the city live more than 13 years longer than men in more deprived parts of the city. This disparity needs to be reduced. Inequalities are likely to exacerbate the future risks to health and wellbeing caused by climate change, particularly overheating and flooding. Oxford is already at higher risk to overheating because of the level of urbanisation compared with other parts of the county and this will continue in future according to 2050 projections without appropriate resilience measures.
General health	**+**	**+**	Despite more localised inequalities, Oxford residents' general health is good and the higher-than-average levels of activity and healthy weight need to be maintained and increased. The Local Plan can help to address wellbeing and mental health by improving housing quality, access to open spaces and building communities. There is some national research that indicates national picture of population health is deteriorating, although consequences for Oxford's population specifically are unclear. See also analysis against 'inequality' above.
Health and housing	**-**	**--**	Beyond the Local Plan, there are plans for improving the existing areas of regeneration in the city, such as Blackbird Leys and West End. Physical regeneration interventions, however, need to be supported with a package of social, economic and environmental measures to ensure the maximum wider benefits are delivered. See also analysis against 'inequality' above.
6.Services, facilities and infrastructure Community facilities	**0**	**-**	Availability of services and facilities plays a key role in quality of life and Oxford's compact nature means there are many areas which benefit from good access to daily needs, however this is not universal across city. The pandemic highlighted the value people put on facilities in their local areas. With an increase in population, it will become even more important to protect and enhance these facilities, and ensure that they are easy to access by walking, cycling and public transport. Economic shocks like the pandemic and other factors including rising costs of energy and living in general continue to put pressure on services, community and cultural facilities however. Changes to use class order such as the introduction of use class E make it harder to protect particular services/facilities through local planning policy.
'Grey' infrastructure	**-**	**-**	There are some known utilities issues in the city, including capacity concerns with the wastewater treatment plant and potential challenges around energy supply as the city moves towards net zero carbon.

			Transport is covered under 8. (Traffic and air pollution). Water is covered further under 9. (Water). The improvements needed to address many of the grey infrastructure issues are somewhat outside of the Local Plan's control. They rely upon investment and infrastructure upgrades by others with primary responsibility for the infrastructure, such as the utilities providers, with the Council acting in a enabling/supporting role helping to ensure plans are appropriate for scales of growth expected.
Digital infrastructure	+	++	The pandemic has increased and highlighted people's reliance on the Internet. Broadband coverage in Oxford is generally good and increasing.
7.Green infrastructure and leisure	++	+	Oxford has a wide range of green spaces which are generally of good quality although unevenly distributed. However, as Oxford's population increases, there will be more demand for outdoor sports and recreation, and increasing pressure on Oxford's green spaces. Limited development opportunities are likely to mean an ongoing demand for infill development making use of garden spaces and reducing local green infrastructure features. It is unlikely that new large public open spaces will be created with or without a Plan, although smaller spaces could be, and existing open spaces can be enhanced. In addition, any green space (unless it can be show to be surplus) lost to development has to be replaced elsewhere in the city. Green spaces will need to respond to climate change, providing long term flood protection and adaptable habitats, as well as other to impacts from surrounding urbanisation like pollution (e.g. water, air).
8.Traffic and air pollution Air quality	-	+	All of Oxford is an Air Quality Management Area for NO2, and there are air quality 'hot spots' at various major road junctions. Most of the city's air pollution comes from the transport sector according to the most recent source apportionment studies. Since the launch of the city's Air Quality Action Plan, good progress in terms of reductions in NO2 levels have been recorded although there is still work to be done. The Oxfordshire authorities are focusing on active travel, improving walking and cycling infrastructure and public transport, and restricting cars e.g. through low traffic neighbourhoods, traffic filters, work place parking levy, extending the area of the zero emission zones and supporting the introduction of non ICE bus fleets. These actions should potentially benefit air quality as well as congestion. The national phasing out of petrol/diesel cars will help to improve air quality.
Traffic levels and congestion	--	-	Congestion on Oxford's main roads is endemic even though Oxford has very good bus services and higher levels of cycling and public transport use than many comparable cities. With the population and job growth envisaged for Oxfordshire, a continuation of existing levels of car use would threaten to over-burden the transport network. Various measures are planned or in progress to tackle combined issues of congestion and poor air quality, see also the analysis above against 'air quality'.
9.Water Water resources	-	--	Oxford is in an area of serious water stress and the current Local Plan sets water use limits on new development in line with Building regs for this reason. Water resources are currently adequate but may not be by

			2045 due to challenges like climate change and increased demand for water from a growing population. Beyond any Local Plan, Thames Water have various interventions planned as part of a strategy covering the next 50 years to address water supply deficits through their Water Resources Management Plan (2024), including proposing a large new reservoir at Abingdon. There are various ecological sites in the city which are sensitive to changes in hydrology (water flows and water quality). The Local Plan 2036 sets policies which ensure development considers and addresses potential impacts and these would remain relevant in the absence of a new Plan.
Water quality	-	**?**	Water quality in the Thames catchment is moderate or poor in certain watercourses. Some of the causes of this are outside of Local Plan influence (e.g. agricultural practices and invasive species). Other causes have a more direct relationship to development, for instance, run-off from increased development could worsen this. The extant Local Plan cover city to 2036 and includes policies that help address water quality such as SuDS to address run off. Addressing existing capacity problems at the wastewater treatment plant which serves housing in the city is considered to be the key intervention needed to support improvements in water quality. Thames Water are in the process of implementing an upgrade scheme which should address capacity concerns for the Sewage Treatment Works, and as this come online in future, the situation is likely to improve for water quality in the city.
10.Biodiversity	**-**	**0**	Biodiversity is plummeting worldwide including in Oxfordshire. The Environment Act requires at least 10% net gain in biodiversity in new development nationally (irrespective of the Local Plan) and superseding existing biodiversity net gain policy in Local Plan 2036. The County Council has published a Local Nature Recovery Strategy which identifies a range of enhancement opportunities across the city but these are reliant on willing landowners/investment. Wider challenges such as climate change, invasive species and pollution (e.g. air, water) are likely to continue to put pressure on biodiversity more broadly.
Nature conservation areas	**+**	**0**	Nature conservation areas such as Oxford Meadows SAC are currently relatively well protected, and policies in the extant Plan protect all green spaces identified as being of high biodiversity value at a local, regional or national level. This would remain the case to 2036, after which national policy would apply. Designated sites like the SAC and SSSIs benefit from national protection, however the absence of a new local plan after 2036 could reduce protection for local sites (although many may benefit from other tangential protections e.g. Green belt).
11.Urban design and historic environment	**++**	**+**	Oxford has a high-quality landscape and historic environment. Various national protections for designated historic assets (e.g. listed buildings) and non-designated local assets will continue under current Local Plan. High levels of development and tourism continue to put a strain on natural and historic sites and Oxford's landscape and townscape.
12.Employment and economy Employment	**++**	**++**	Oxford has a very strong economy, with high employment, low unemployment and high Gross Value Added. Oxford is a fast growing, innovative city that delivers significant economic growth. There is strong

			demand for research and development uses, which needs to be supported as a key sector of Oxford's economy and a driver of the national economy. Oxford's economy has remained resilient in the face of recession and wider national economic challenges.
Unemployment	++	++	Future employment growth in Oxford is likely to be in high-skill sectors: without appropriate skills and training, these jobs will not be accessible to local people. Also, see analysis against 'employment' above.
Education, skills and employability/ training	+	?	Oxford Economic Strategy includes a vision to deliver a more 'inclusive economy.' The city includes areas amongst the most deprived in UK. Oxford's population overall is highly skilled, but there are parts of the city where the local population is classified within the 10% most deprived for educational skills and training in the country. State schools across Oxford, and particularly in deprived areas, generally under-perform compared to regional and national averages. Skills mismatches increase in-commuting, exacerbating congestion problems. Greater opportunities for start-ups and SMEs are important for Oxford's economy to fully function, and diverse job opportunities are needed, otherwise an 'inclusive economy' will not be realised.
Regeneration and economic revival	0	0	It is unlikely that significant new employment sites will be identified in Oxford: the focus at present is on the redevelopment, intensification and renewal of existing sites. Ensuring the right balance of employment and housing growth supported by infrastructure is fundamental to ensuring sustainable growth in Oxford. It is important to ensure that the capacity for housing in the city is delivered including on employment sites. Oxford's housing shortage and its affordability cause problems for businesses and key sectors in both recruiting and retaining staff.

3.25 Even without the Oxford Local Plan 2045, the analysis in Table 3.1 indicates that there will be some improvements in performance against certain sustainability indicators for the city in future due to factors outside of the Local Plan's direct influence such as national legislation and shifting technologies on the market. For example, the Biodiversity Net Gain requirements of the Environment Act, alongside the opportunities identified in the Local Nature Recovery Strategy, may help to support new spaces for flora and fauna. Tightened building regulations bringing about improvements in energy efficiency and the ongoing decarbonisation of grid energy will go some way to reducing carbon emissions. Meanwhile, the policies of the Local Plan 2036 will remain in effect, securing various sustainability benefits from new development coming forward in the intervening period.

3.26 There will likely also be reductions in the performance of the city against some sustainability indicators without a new Local Plan, such as increasing pressures on land including green spaces or areas of flood storage, as well as pressure from new development on the setting of existing assets like historic buildings which contribute to the character of the city. The impacts of climate change are a factor which will have various effects such as increased stress on water resources, and increasing health risks from hotter summers. Whilst the city's economy is buoyant and expected to continue to

generate employment opportunities, there is a risk that those with less skills or experience could be left behind where these opportunities are skewed towards higher skilled sectors; meanwhile, uncertainty and cost of living challenges could impact upon provision of services and other facilities for local residents.

3.27 The Oxford Local Plan 2036 preceded various societal and national policy changes of recent years such as Brexit and Covid-19, the Environment Bill, and the changes to permitted development which now allow, for instance, offices to be turned into housing. It also preceded the creation of the new Oxford Growth Commission as part of the government's new plans for the Oxford-Cambridge Growth Corridor; the city's declaration of a climate emergency and subsequent signing of a net zero carbon target of 2040. Meanwhile, there are ongoing challenges such as the continued housing crisis, the changing picture of retail, and impacts of pollution on the environment from various activities which have not been resolved. A new Local Plan offers the opportunity to respond to these changes and ongoing challenges.

3.2.2 Existing problems at areas of particular environmental importance

3.28 Also of relevance to the current sustainability context of the city, the SEA process requires an analysis of existing problems at areas of particular environmental importance, including Special Protection Areas (SPAs) and Special Areas of Conservation (SACs). SPAs and SACs are internationally important nature conservation sites designated for, respectively, birds and habitats/species. This section also discusses the city's Sites of Special Scientific Importance which are nationally designated areas of importance in the city.

3.29 Whilst there are no SPAs in or near Oxford, there are three SACs within 20km of Oxford:

Oxford Meadows SAC - is a 267ha site, part of which lies within the city boundary. It is designated because of its lowland hay meadow and creeping marshwort *Apium repens*. In December 2015, the last year of analysis of Oxford Meadows, it had excellent overall ('global') value for its hay meadow and creeping marshwort. However, it is highly threatened by human induced changes in hydraulic conditions, pollution to surface water and invasive non-native species. Previous HRA work and discussions with Natural England have also flagged concerns about air quality impacts arising from traffic emissions and recreational disturbance.

Cothill Fen SAC - is a 43ha site located 7km from the city boundary. It is designated for its lowland valley mire, which contains one of the largest surviving examples of alkaline fen vegetation in central England. In December 2015, the last

year of analysis of Cothill Fen, the alkaline fens were of good overall ('global') value, and the alluvial forests were of significant overall ('global') value. The SAC is highly threatened by pollution to groundwater and human-induced change in hydraulic conditions.

Little Wittenham SAC - is a 69ha site located 19km from the city boundary. It is designated because it contains one of the best-studied great crested newt sites in the UK. In December 2015, the last year of analysis of Little Wittenham, the great crested newt population was assessed as being of good overall ('global') value, but it is highly threatened by non-native invasive species.

3.30 Additionally, Oxford also has a number of Sites of Special Scientific Importance (SSSIs) as is shown at Table 3.2 and Figure 3.1. Of those SSSIs within, or partially within the city, they are of varying condition, with the majority being in favourable condition, but two in unfavourable condition (Hook Meadow and the Trap Grounds SSSI, and Littlemore Railway Cutting SSSI) and three in partial unfavourable condition (Brasenose Wood and Shotover Hill SSSI, Iffley Meadows SSSI, and Lye Valley SSSI). The information on SSSI condition is normally 5-10 years old, so their condition may have changed since it was assessed. The table includes links to the summary information for each site on Natural England's Designated Sites viewer website.

Figure 3.1: Locations of Sites of Special Scientific Interest (SSSIs) within and around Oxford and their condition, (source: DEFRA MAGIC website)

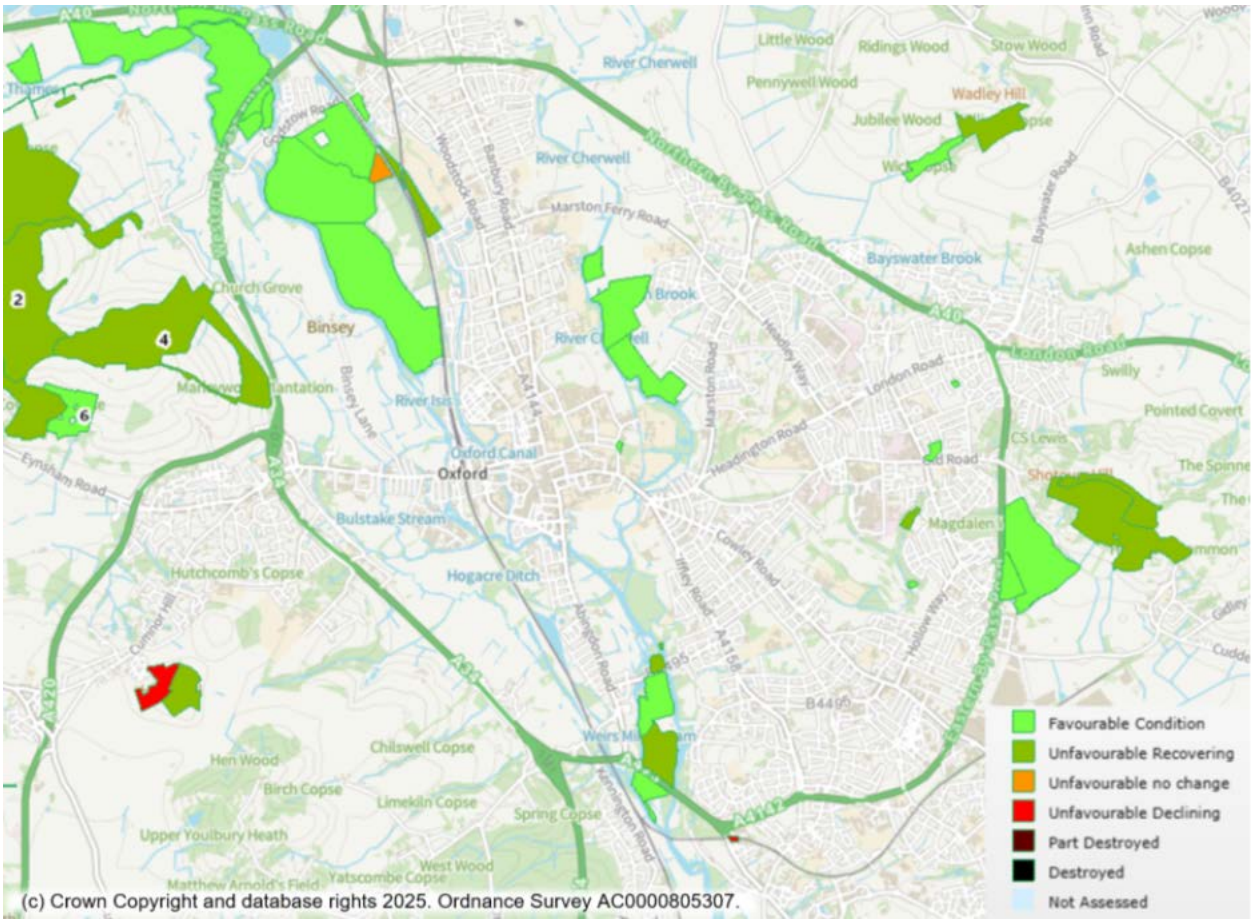

Table 3.2: Additional details relating to Sites of Special Scientific Interest (SSSIs) within Oxford or nearby

Site of Special Scientific Interest (SSSI)	Size in hectares	Within city?	Unit(s) condition
Brasenose Wood and Shotover Hill	109.24ha	Partially	42.67% Favourable; 57.33% Unfavourable - recovering
Cassington Meadows	6.89ha	Nearby/outside city *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Hook Meadow and the Trap Grounds	11.85ha	Yes	67.56% Unfavourable - recovering; 32.44% Unfavourable – no change
Iffley Meadows	36.14ha	Partially	53.80% Favourable; 46.20% Unfavourable - recovering
Littlemore Railway Cutting (Geological SSSI)	0.50ha	Yes	100.00% Unfavourable – no change
Lye Valley	2.34ha	Yes	22.96% Favourable; 77.04% Unfavourable - recovering

Magdalen Grove (Geological SSSI)	0.43ha	Yes	100.00% Favourable
Magdalen Quarry (Geological SSSI)	0.34ha	Yes	100.00% Favourable
New Marston Meadows	44.70ha	Yes	100.00% Favourable
Pixey and Yarnton Meads	86.38ha	Partially *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Port Meadow with Wolvercote Common and Green	167.15ha	Yes *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Rock Edge (Geological SSSI)	1.72ha	Yes	100.00% Favourable
Sidling's Copse and College Pond	21.71ha	Nearby/outside city	33.19% Favourable; 66.81% Unfavourable - recovering
Wolvercote Meadows	7.06ha	Yes *(also comprises part of Oxford Meadows SAC)*	100.00% Favourable
Wytham Ditches and Flushes	2.74ha	Nearby/outside city	100.00% Unfavourable - recovering
Wytham Woods	423.83ha	Nearby/outside city	3.50% Favourable; 96.50% Unfavourable - recovering

3.31 As can be seen above, the areas of particular environmental importance in and around the city are in varying condition and subject to various ongoing threats. Some of these threats can be more directly influenced by the Local Plan and the planning system than others.

3.3 Identify key sustainability issues and problems (Sustainability Appraisal Task A3)

3.32 The policy context of Task A1 and sustainability context of Task A2, as was presented in the previous sections and accompanying Background Papers, identified a range of issues and problems of relevance to the development of the Oxford Local Plan 2045. This section now takes forward and identifies the key sustainability issues and problems that the Council will need to be aware of and respond to where possible in line with Task A3 of the SA process. It is an important step in helping to narrow down the focus of the Local Plan 2045 as well as the accompanying SA/SEA process informing the Plan's development.

3.33 Table 3.3 draws together the key issues and problems which were highlighted in the previous sections and the background papers that support the SA.

Table 3.3: Key sustainability issues and problems for the Oxford Local Plan 2045

SA objective	Sustainability issues and problems
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	• Oxford is still very far away from achieving its 2040 target of net zero emissions and Local Plan cannot deliver it alone. • Retrofitting existing developments will be a significant challenge but critical to helping meet local and national net zero targets. • New development must not further contribute to climate change or the existing retro-fit burden in the city. • Policy needs to target energy efficiency and embed the energy hierarchy into the design of new buildings (fabric first, reducing energy use, mitigating remaining emissions). • Embodied carbon is an ongoing challenge to be addressed as part of the construction process although it is a complex and multi-faceted issue. • There is potential for supporting more renewable energy generation across city through greater uptake of micro-renewables in new development and on existing rooftops, although capacity elsewhere (e.g. for larger installations) is uncertain due to the many constraints on land.
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	• A significant area covering properties and other land uses in Oxford is at risk from river flooding, as well as other sources of flooding such as groundwater, surface water and sewer flooding. The Oxford Flood Alleviation Scheme is expected to reduce flood risk for a number of existing properties and infrastructure. • There will be residual risks of flooding after applying the sequential approach to locating development and incorporating defence measures. • Overheating is a prominent and increasing risk in the city, particularly more urban areas. Overheating risk is exacerbated in areas with reduced green infrastructure as well as higher levels of deprivation or poor quality buildings. • The Local Plan 2045 will need to take long term flood risk and overheating into account, including the impacts of climate change and how this could change the pattern and severity of these risks in the city. • New development should not exacerbate flood risk or overheating, such as through excessive use of hard

	surfaces increasing surface run off into sewers, or exacerbating the urban heat island effect. • There are links between flooding/overheating and human health (physical and mental), particularly in areas of the city that are most deprived or highly urbanised/lacking in green infrastructure.
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	• The plan must aim to use suitable brownfield sites and other underutilised land as a preferred option for development. • An increase in minimum housing density should be considered where a sufficient level of infrastructure is present. • Prioritising brownfield land for development may reduce opportunities to repurpose the sites for public amenity or as green infrastructure with a focus on ecological/biodiversity functions. • The cost of developing contaminated sites is likely to be higher than developing elsewhere. In turn, these higher costs increase pressure to develop greenfield sites. • Soils are at risk from pollution arising from new development as well as degradation from development/construction processes, this includes limited carbon-rich peat reserves that have already been degraded by historic development in the city. • The City Council should only release land from the Green Belt or alter the boundary where exceptional circumstances are fully evidenced and justified. • The plan should consider a more comprehensive approach to Oxford's Green Belt and whether any part of it is now designated as 'grey belt' as defined in the updated NPPF (December 2024).
4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.	• Housing costs in Oxford are very high, land available for housing is very limited, and affordable housing has historically been difficult to provide. • Oxford has limited capacity to deliver new homes within its boundary and has been unable to meet housing need in full without support from neighbouring authorities. • A continued reliance on smaller sites is likely to increase pressure on existing infrastructure. • The type of affordable housing delivered in Oxford is likely to be impacted upon by changes made through national policy, i.e., requirements for First Homes. • The Plan should assess and respond to the need for student housing: The links between provision of student housing and other types of housing should be considered when developing policies.

	• The potential implications of student housing in different locations, for students, neighbourhoods and in terms of delivering sufficient housing of the right type should be considered.
5. To reduce poverty, social exclusion, and health **inequalities**.	• Oxford has high levels of health inequalities across the city. • Covid and the ongoing cost of living crisis have exacerbated inequalities and harmed health for many. • Oxford's higher-than-average levels of activity and lower-than-average levels of obesity need to be maintained and improved. • The Local Plan can help to improve mental health and wellbeing through, for instance, improving quality of housing, improving access to open spaces, and focusing on building communities, particularly learning from the coronavirus pandemic. • Climate resilience measures will be essential for reducing impacts on health and wellbeing as the city moves towards a net zero future, particularly for the most vulnerable communities.
6. To provide accessible essential **services and facilities**.	• Economic shocks impacting cost of living and generating higher energy prices is likely putting strain on community and cultural facilities. Protection of facilities may become more difficult, given changes to government policy on permitted development. • With high pressure for housing, it will be important to make a case for the importance of the facilities that support this housing. The plan will need to meet the infrastructure needs of additional development in the city over the Local Plan period. • New infrastructure must address the climate emergency (low carbon, climate resilient). Natural solutions will be important in ensuring the resilience of infrastructure. • Infrastructure needs to help people to live healthy, active lives (e.g. walking/cycling, GP surgeries). • The city generally and its infrastructure should be adaptable to future changes in technology. • The retail and service sector plays a crucial role in Oxford's economy, providing job and leisure opportunities to local people. The city must offer a diverse range of retail uses and services, ideally in accessible locations.
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	• Unequal access to, and distribution of, green infrastructure across the city exacerbate wider health inequalities. There are priority areas which would benefit particularly from increased greening.

	• Infill development within the city, particularly on garden land, can reduce green infrastructure coverage which would otherwise provide natural benefits like water storage and habitat for wildlife. • Increased recreational pressure arising from population growth and visitors to the city puts pressure on open spaces, including playing pitches, which are important for health and wellbeing of residents, particularly those without gardens. • Climate change and impacts from development such as on water quality (e.g. run-off from roads etc.) puts pressure on existing green infrastructure and biodiversity. • Very limited opportunities to create large areas of new public open space.
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	• Although Oxford is known for its high levels of walking, cycling and public transport use, Oxford's roads are still congested, with high levels of commuting by car. • All of Oxford is an Air Quality Management Area because of NOx, which mostly comes from vehicles. Tackling emissions from domestic and nondomestic sources is likely to improve air quality. • Past transport policy has focused on carrots: improving facilities for walking, cycling and public transport. However current policy is also to discourage car use, for instance through restricted parking, zero emission zones, and reallocation of some road space to sustainable forms of transport. • Restrictions in car use in the city must be supported via a strong and affordable public transport infrastructure network. • Improvements in electric transport provision and the restriction of cars in the city centre will help to achieve a zero carbon Oxford. The uptake of low/zero emission vehicles should be encouraged, in particular buses and taxis which will continue to need to access the city centre. • Improvements to cycling and walking infrastructure must be inclusive and the benefits shared by all of Oxford's residents. • Improved public transport connections between the city and surrounding areas will improve the integration of settlements throughout Oxfordshire
9. To achieve **water** quality targets and manage water resources.	• Oxford is already in an area of serious water stress. Climate change, particularly incidences of hotter, drier summers may exacerbate water supply issues and create increased water shortages.

	• Increased demand for water is likely to put more pressure on water resources. Additional water efficiency measures will need to be investigated through the plan-making process. • There are known water quality issues in local watercourses arising from a variety of sources. Nutrients from wastewater could further impact these local water bodies. Pollutants can also arise from other sources, like road runoff. This may have knock on implications in terms of the Water Environment Regulations, and the city's ambitions for bathing water status for parts of the River Thames. • Capacity upgrades are needed for the wastewater treatment works that services the city, Thames Water are working on plans to undertake these works but these works are still emerging and will take time to complete. • There are various ecological sites in the city which are sensitive to changes in underlying hydrology that supports these areas (both changes in water flows and water quality), which new development may need to consider depending on location.
10. To conserve and enhance Oxford's **biodiversity**.	• The Oxford Meadows SAC is already negatively affected by air pollution and is threatened by recreational pressure, changes to the hydrological regime as well as invasive species. • Two SSSIs out of the twelve in the city are in unfavourable condition and three are partly in unfavourable condition. • Development pressure on, or near to protected sites could result in direct loss of habitat or species, fragmentation of ecological networks, as well as indirect impacts e.g. from noise, light, air pollution. • Climate change is likely to impact habitats and species distribution. • Off-site areas for biodiversity net gain stemming from development will probably be needed in response to the Environment Act. • The County have published the Local Nature Recovery Strategy, a key requirement arising from the Environment Act. This document identifies opportunity areas for biodiversity enhancement in the city and wider county (including offsite BNG), although there may be other opportunity areas. The LNRS does not assign additional protection nor mandate enhancements itself.
11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets	• Oxford is a historic city, characterised by an abundance of designated and non-designated heritage assets which form an important part of the city's character.

while respecting local character and context and promoting innovation.	• Potential heritage impacts of new development proposed in the plan should be considered and assessed where necessary, both in terms of any direct physical impacts and impacts on setting. • Development pressures continue to put a strain on natural and historic sites and landscape/townscape features of Oxford. A good understanding of heritage value will be required to ensure continued development pressure associated with new sites and the intensification of existing sites does not adversely affect the significance of heritage assets, important townscape features and local character. • Local design guidance informed by local communities should reflect the special characteristics and needs of different parts of the city. • Green spaces and features should be woven into the urban fabric. • Mitigation of, and adaptation to, climate change will require good design. This is a particular challenge for heritage assets, which will require a Whole Building Approach to any retro-fit measures. • Good design should focus on people within the spaces, how they move, interact and socialise; and should engender feelings of safety and security.
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.	• Employment in the city remains high and likely to continue growing; • The city's economic potential is being constrained by a lack of availability of suitable and appropriate housing. Some employers have reported difficulties attracting and retaining staff because of these issues; • It is unlikely that new strategic sites will be identified for employment development. As such, it will be important that sufficient employment floorspace is available throughout the city's network of existing employment sites. This is to help ensure that Oxford can meet any identified employment land needs; • The focus for new employment development in Oxford is likely to continue with an approach of redevelopment (including modernisation and intensification) and renewal of existing sites; • A strategy that enables appropriate levels of employment growth while encouraging the delivery of much-needed housing is key to ensuring that Oxford grows in a sustainable manner; • Employment growth in Oxford is most likely to continue in the key sectors of healthcare and STEM, especially those involving R&D;

	• Without appropriate skills & training, jobs in Oxford's key sectors are unlikely to be accessible to local people; • State schools across Oxford, and particularly in deprived areas of the city, generally under-perform compared to regional and national averages; • Some changes were accelerated by the pandemic. For instance, due to the increase in on-line retail, the make-up of the city and district centres are seeing a shift in their make-up. Once dominated by retail, other uses, such as employment and educational uses are bringing footfall and vitality and these important centres. Examples of non-retail opportunities that are emerging in city centres include co-working spaces, R&D and more; • Ensuring expanded and robust digital infrastructure is available in as many settings as possible to align with the expectations and flexibility of hybrid working. This will enable people to have the opportunity to work or study in numerous locations across the city; • Small scale brownfield development across the city is more likely to put pressure on existing school places and will not in itself provide new school sites.

3.34 Table 3.3 has brought together the key issues and problems identified across the SA scoping work and the accompanying Background Papers. It highlights a range of challenges facing the city in relation to different aspects of sustainability which the new Local Plan will need to try to respond to. The analysis not only helps to frame the vision and objectives for the new Local Plan but also helps in informing the assessment framework that should be utilised to appraise the emerging policy framework and its impacts on the city and wider environment.

3.4 Develop the SA framework (Sustainability Appraisal Task A4)

3.35 An SA/SEA Framework provides a method by which the sustainability effects of a plan can be identified, described, analysed and compared. The analysis undertaken in the previous sections of this report, and fulfilling tasks A1 to A3 of the SA process stage A, helps to formulate the specific SA/SEA Framework that should be used for the Local Plan 2045, ensuring that it is tailored to the local context of Oxford. The development of the Framework is discussed in this section.

3.36 Development of the Oxford Local Plan 2045 will involve two types of decisions:

- on the plan objectives, alternatives and policies (general directions for the plan); and
- on sites (specific locations for development).

3.37 Assessing the impacts of the plan objectives, alternatives and policies involves a more general analysis against an overall framework of SA objectives. Assessing the impacts of sites involves analysing the site's location and future ability to support sustainable development. As such, two different appraisal frameworks have been used, which are discussed in turn in the following sub-sections.

3.4.1 The SA framework for plan objectives, alternatives and policies

3.38 The SA Framework of Table 3.4 consists of SA objectives and issues and is what will be used to assess the impacts of the plan objectives, alternatives and policies. The SA objectives provide a method by which to test whether the Local Plan will yield the best possible outcomes in terms of sustainability—its environmental, social and economic effects. The SA objectives therefore cover a full cross-section of sustainability issues. The objectives and the issues covered have been informed by the analysis undertaken in the previous tasks (particularly the key issues/problems identified under Task A3/Section 3.3).

Table 3.4: SA/SEA framework for plan objectives, alternatives and policies

SA Objective	Issues covered	SEA Themes
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	• Building standards and energy efficiency • Renewable energy generation • Active travel and public transport • Waste reduction • Sustainable construction practices including addressing embodied carbon	Climatic Factors, Air
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	• Flooding • Resilient and adaptable building design and layout • Overheating	Water, Climatic Factors
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	• Building densities and layout • Greenfield versus Brownfield land • Green belt and grey belt • General biodiversity and designated sites • Soils including peat reserves. • Land contamination	Soil, Material Assets, Biodiversity
4. To meet **local housing needs** by ensuring that	• Housing numbers • Housing size/mix	Material Assets,

everyone has the opportunity to live in a decent affordable home.	• Affordable housing • Specialist accommodation (e.g. care homes, gypsies/travelers) • Student accommodation	Population, Human Health
5. To reduce poverty, social exclusion, and health **inequalities**.	• Regeneration • Geographical spread of new development • Accessibility for areas of deprivation • Availability of services/infrastructure in areas of deprivation • Improving health and wellbeing and reducing health inequalities	Population, Human Health, Material Assets
6. To provide accessible essential **services and facilities**.	• Daily needs met within a short walk/cycle ride • Thriving city/local centres • Retail/shops provision • Community facilities, health care/GP, schools • Facilities for children/young people inc. play areas • 'Grey' infrastructure e.g. wastewater treatment, transport, energy.	Material Assets, Human Health
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	• A network of green and blue infrastructure • Leisure facilities • Playing fields and public open space • Distribution/location as well as quantity of typologies of green infrastructure (inc the above)	Landscape, Biodiversity, Human Health,
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	• Promoting active travel – walking/cycling etc. • Reducing reliance on the private car • Public transport incl. Train station and branch line • Commuting and housing/jobs balance • Parking • Electric vehicle charging points, zero emission zones • Addressing poor air quality and links to transport	Air, Climatic Factors
9. To achieve **water** quality targets and manage water resources.	• Water use and water resources • Improving water quality and avoiding further deterioration • SUDS, buffers on streams etc.	Water, Biodiversity
10. To conserve and enhance Oxford's **biodiversity**.	• Habitat Regulations Assessment inc. Air quality and recreational disturbance • SAC, SSSIs, local nature designations • Biodiversity more generally (e.g. wildlife friendly measures and habitat features) • Biodiversity Net Gain (BNG)	Flora, fauna, biodiversity

11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	• Designated assets incl. Listed Buildings, scheduled monuments, Registered Parks & Gardens and Conservation areas • Non-designated assets, particularly those of local importance • Archaeology • Setting/curtilage • High quality urban design • View cones • High buildings	Cultural Heritage, Landscape
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.	• Jobs incl. Knowledge-based jobs • Visitor economy • Locations for start-up ventures • Jobs for local unskilled/underskilled residents, apprenticeships • Keeping high streets alive amist changing shopping habits, changes to permitted development etc. • Cultural provision and tourism	Population, Material Assets

3.39 The SEA process requires the Environmental Report to include information on the likely significant effects on a specified list of environmental factors. Table 3.5 shows how the SA Objectives relate to these factors.

Table 3.5: Links between SEA Directive issues and SA objectives

SEA Directive issue	**SA objectives**
Biodiversity	3, 7, 9, 10
Population	4, 5, 12
Human health	4, 5, 6, 7
Flora	10
Fauna	10
Soil	3,
Water	2, 9
Air	1, 8
Climatic factors	1, 2, 8,
Material assets	3, 4, 5, 6, 12
Cultural heritage (including architectural and archaeological heritage)	11
Landscape	7, 11

3.4.2 The SA framework for sites

3.40 More site-specific appraisal criteria will be used to assess the impact of proposed development sites. Many of these relate to the location of the site, which is a key determinant of its sustainability, e.g. how easily would users of the site be able to access a range of facilities (more sustainable)? How close is the site to sensitive environmental areas (less sustainable)?

3.41 The same colour/symbol coding will be used as for policy appraisal (see Table 2.4), however there may be instances where an additional colour/code will be used to score a particular criterion where the ultimate score will depend upon implementation of the particular design of a proposed scheme. The site-specific criteria is listed below under each SA objective.

- **SA objective 1.** To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

  See SA Objective 8 for decision-making criteria.

- **SA objective 2**. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

  Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Table 3.6: Sites sustainability appraisal scoring criteria for SA objective 2

Category	Flood zones
--	Site is partially or wholly in Flood Zone 3b
-	Site is partially or wholly in Flood Zone 3a or Zone 2
0	Site is in Flood Zone 1
Category	**Flooding of land surrounding site for access/ egress**
--	There is no safe access/egress to/from the site
-	Access/egress from the site is over moderate to low hazard land
0	There is safe access/egress from the site – area surrounding site is FZ1

- **SA objective 3.** To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

  Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Table 3.7: Sites sustainability appraisal scoring criteria for SA objective 3

Category	Previously developed land
--	Site is protected open space

-	Site is unprotected open space
0	Site is previously developed land (with buildings in use on site)
+	Site is previously developed land (with vacant buildings on site)
++	Site is previously developed land (cleared)
Category	**Green Belt**
--	Site is on Green Belt land
0	Site is not on Green Belt land

- **SA objective 4.** To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

  Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Table 3.8: Sites sustainability appraisal scoring criteria for SA objective 4

Category	Housing provision
-	Site would decrease the amount of net new housing
0	Site would provide no net new housing
+	Site would provide up to 10 new homes
++	Site would provide more than 10 new homes
I	Depends on implementation
Category	**Affordable Housing provision**
-	Site is allocated for housing but would provide no affordable housing
0	Site is allocated for use other than housing or is not allocated
+	Site provides up to 40% affordable housing
++	Site provides 40% or more than 50% affordable housing
I	Depends on implementation

- **SA objective 5.** To reduce poverty, social exclusion, and health **inequalities**.

  Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Table 3.9: Sites sustainability appraisal scoring criteria for SA objective 5

Category	Regeneration Areas
0	Site is not in or adjacent to a regeneration area
+	Site is adjacent to a regeneration area
++	Site is in a regeneration area

- **SA objective 6.** To provide accessible essential **services and facilities**.

  Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Table 3.10: Sites sustainability appraisal scoring criteria for SA objective 6

Category	Community facilities
-	Allocation leads to a decrease in community facilities
0	Site not allocated for community facilities OR amount of community facilities remain the same due to the allocation
+	Community facilities provided on site
++	Allocation leads to a significant increase in community facilities
I	Depends on implementation

- **SA objective 7.** To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

  Decision-making criteria: Will it increase the provision of public open space?

Table 3.11: Sites sustainability appraisal scoring criteria for SA objective 7

Category	Public open space
-	Allocation leads to a decrease in public open space
0	Site not allocated OR amount of public open space remains the same due to the allocation
+	Site allocated for housing – 10% public open space provided on site
++	Allocation leads to an increase in public open space greater than 10% of the total site area

- **SA objective 8.** To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

  Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Table 3.12: Sites sustainability appraisal scoring criteria for SA objective 8

Category	Sustainable transport links (bus stop)
-	> 400m from a bus stop
+	< 400m from a bus stop
Category	**Sustainable transport links (rail station)**
-	> 1600m from train station

0	1200-1600m from train station
+	800-1200m from train station
++	< 800m from train station
Category	**Primary Schools**
-	>800m from the nearest primary school with spaces
+	<800m from the nearest primary school with spaces
Category	**Secondary Schools**
-	>800m from the nearest secondary school with spaces
+	<800m from the nearest secondary school with spaces
Category	**GP Surgeries**
-	>800m from the nearest GP Surgery
+	<800m from the nearest GP Surgery
Category	**Post office**
-	>800m from the nearest post office
+	<800m from the nearest post office
Category	**Air Quality**
--	Site is within or adjacent to a local air quality monitoring hotspot
-	Site is within an Air Quality Management Area (AQMA)
0	Site is not within an AQMA

- **SA objective 9.** To achieve **water** quality targets and manage water resources.

  Decision-making criteria: Does the site contain, or is it near, a water body?

Table 3.13: Sites sustainability appraisal scoring criteria for SA objective 9

Category	Water
--	Site contains a water body (e.g. lake, pond, stream)
-	Site is within 30m of a water body
0	Site is not within 30m of a water body

- **SA objective 10**. To conserve and enhance Oxford's **biodiversity**.

  Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Table 3.14: Sites sustainability appraisal scoring criteria for SA objective 10

Category	Ecology and Biodiversity
--	Contains an internationally or nationally protected site: Oxford Meadows SAC or SSSI
-	Contains or is adjacent to a locally protected site. Within 100m of a nationally/ internationally designated site. Potential for legally protected species to be present

0	Within 100m of a locally protected site or 200m of an internationally/nationally protected site
+	Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity
++	Contains no nature conservation designations but has potential for significant nature conservation enhancement

- **SA objective 11.** To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

  Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Table 3.15: Sites sustainability appraisal scoring criteria for SA objective 11

Category	**Archaeology**
--	Site contains a nationally important archaeological site (such as a Scheduled Ancient Monument)
-	Site provides the setting to a nationally important archaeological site OR site has known archaeological sites or potential (e.g. close to 'Sites and Monument' symbol or in local area of archaeological importance)
0	Site contains no known archaeological sites or has limited or uncertain archaeological potential
Category	**Conservation Areas & Register of Parks and Gardens (RPG)**
--	Site lies in a conservation area or the site is on the RPG register
-	Site lies on the edge of a conservation area or of a site on the RPG register
0	Site is not in or on the edge of a conservation area or site on the RPG register
Category	**Listed Buildings**
--	Site contains a listed building
-	Site forms the setting of a listed building or contains a locally listed building
0	Site contains no identified historic building constraint
Category	**View Cones**
-	Site lies within a view cone
0	Site lies outside of a view cone
Category	**Historic Core Area**
-	Site lies within the City Council's locally designated Historic Core Area.
0	Site lies outside the City Council's locally designated Historic Core Area.

- **SA objective 12.** To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Table 3.16: Sites sustainability appraisal scoring criteria for SA objective 12

Category	Employment Opportunities in the knowledge-based economy
-	Site would mean loss of jobs or economic floorspace in knowledge-based economy
0	No change in number of jobs/economic floorspace in knowledge-based economy
+	Site would increase number of jobs or economic floorspace in knowledge-based economy
I	Depends on implementation
Category	**Diversifying the economy end employment opportunities**
-	Site would not support diversification of the employment base or provision of affordable workspace
0	No change in employment base or access to affordable workspaces
+	Site would support diversification of the employment base or provide affordable workspace
I	Depends on implementation

3.42 Figure 3.2 summarises the site-specific criteria and shows how these link with the SA objectives of Table 3.4.

Figure 3.2: Site assessment appraisal criteria versus SA objectives

Site assessment criteria	SA objectives											
	1. Carbon emissions	2. Resilience to climate change	3. Efficient use of land	4. Local housing needs	5. Inequalities and health	6. Services, facilities and infrastructure	7. 3.5 Previous consultation on the emerging Sustainability Appraisal (Sustainability Appraisal Task A5)

3.43 In advance of its Regulation 18 consultation, the Council sought to make an early version of its scoping study (incorporating Tasks A1 to A4) available for six weeks to the consultation bodies (Historic England, Natural England and the Environment Agency) via email on January 17th 2025 and invited feedback by February 28th 2025. The Interim Reg 18 SA report included summaries of comments received and the Council's responses, including how the scoping work was subsequently updated to reflect the feedback, and this has been reproduced in Appendix A for reference.

3.44 The interim SA report, including the updated scoping study, was published as part of the Regulation 18 consultation (from the 27th June to 8th August 2025). There was no additional specific feedback on the interim SA report from the consultation bodies,

although there was some feedback received from other stakeholders which is summarised in Table 3.17.

Table 3.17: Summary of feedback received on Regulation 18 Interim Sustainability Appraisal

Summary of comments received	Council's response
The assigned scores for housing options, especially for the City Council's preferred Option B, lack clear and transparent justification. Not evident why Option B consistently receives more positive scores than Options A or C in numerous instances. Appears to be based on incomplete assessment without considering the full sustainability impacts of unmet housing. The sustainability impacts of cross-boundary housing provision do not disappear at the border; they are displaced. These distributed impacts, particularly those associated with Option B's reliance on external provision, could be worse than those of Options A or C. For example, accommodating development across more dispersed areas, potentially distant from Oxford's public transport routes, is highly likely to lead to increased car dependency and significantly higher carbon emissions due to longer commuting distances.	The detailed commentary for the scoring of the option set was included in the appendix to the Reg 18 report, as it is in this Reg 19 SA report (see Appendix B). We have reviewed the scoring in light of these comments, and remain of the view that these represent a valid assessment of the sustainability impacts of the different options. While the assessment of cross boundary impacts does represent a part of the SA/ SEA process, when assessing the sustainability impacts of the plan, it is important that the core assessment focuses on the impacts of the strategy within the local authority administrative area. Any assessment of the cross-boundary implications of delivering homes outside of Oxford's administrative boundary would depend on where these homes would be delivered – this is not something that is within the City Council's procedural jurisdiction. The location of the new homes delivered outside city boundary (including those to meet Oxford's unmet housing need), is a matter for each partner authority to engage with in the production of their own plans. Nevertheless, we have sought to ensure that some commentary on potential cross-boundary implications is incorporated where relevant in the updated report.
The testing under SA Objective 3 focuses primarily on judgements related to densities and the loss of green space. However, it fails to explicitly evaluate the impact of the options on the Green Belt, despite the Green Belt being directly mentioned within the scope of SA Objective 3 itself. This is a significant omission.	We will look to ensure that the findings of the Green Belt assessment are incorporated into the SA report for transparency.
SA Objective 7's conclusions are based on the identical impacts of density and green spaces already assessed under SA Objective 3. This is unnecessary duplication of testing and analysis, which raises questions about the thoroughness and efficiency of the SA process. A robust and unbiased re-evaluation of the housing options should be undertaken.	The SA Framework provides the key SA indicators that are considered for each SA objective. There is naturally some cross over between the two objectives, but they are treated differently as each has a different scope/focus.
Oxford Wastewater Treatment Work is mentioned in the Sustainability Appraisal as important infrastructure. This is located within South Oxfordshire and facilitated by the adopted and emerging Plans of South Oxfordshire, but	Noted – Thames Water are leading on this project and they will be involving partners as appropriate.

South Oxfordshire District Council isn't mentioned as a partner to work with.	
Care needed not to make things too bureaucratic when it comes to housing development. The crisis is acute and builders should not be deterred from delivering.	The Sustainability Appraisal process is a tool that helps to inform the development of the Local Plan. It does not, in of itself, create any additional burden for developers when they come to making an application.
It seems quite thorough	Comment noted.
Needs more focus on Oxford to be green, blue, clean air, low car, big on public transport, litter free, with penalties for cars parked on curbs. Other similar comments including need for more community gardens with edible plants and food forests, as well as even greener developments (more trees for shade) and more solar panels on buildings.	The Sustainability Appraisal framework addresses these various considerations across several of its objectives (e.g. Objective 7 Green Infrastructure; Objective 8 Traffic and Air Pollution). As set out above, the SA's role is to help inform the development of the Local Plan, which in of itself has various policies across Chapter 4 and 7 which address different aspects of this comment where appropriate.
The sustainability appraisal has taken consideration on environmental conservation and health but is lacking educational inputs. These should cover diversity and inclusion, British culture, political systems, institutions, laws, community concepts, religions, ethnicities and local history regardless of where residents are from.	We will look to draw these considerations into the relevant underlying background papers where they are not already mentioned and where this would be of relevance to the Local Plan.
Sustainability appraisal is lacking proposals for making public transport viable and attractive.	The Sustainability Appraisal helps to inform the development of the Local Plan. The Local Plan includes a range of policies intended to support access to public transport.
A couple of comments flagging concern that report does not take sustainability seriously and that there is too much focus on growth without due concern for climate change, protecting environment, the health/needs of local residents.	A key role of the Local Plan, which the Sustainability Appraisal helps inform, is about guiding growth to happen in the right way for the city. Nevertheless, the Sustainability Appraisal framework which is used throughout the report includes objectives that address all three pillars of sustainability (the environmental, social and economic).
Comments on sustainability appraisal scores for particular sites in their interim site assessment forms.	The Council will be reviewing the sustainability appraisal scores for all the sites being taken forward to Regulation 19 and updated forms will be published alongside this report. Scores will be updated where appropriate.

4. Developing and testing the Local Plan vision, themes and objectives (Sustainability Appraisal Task B1)

4.1 Developing the Local Plan vision, themes and objectives

4.1 The Regulation 18 consultation included a vision for the city which was guiding the new Local Plan which had first emerged during the development of the withdrawn Local Plan 2040. Whilst it had already been subject to public engagement and feedback throughout the Local Plan 2040's preparation, it had been reviewed and modified in light of the scoping undertaken to inform the early work in developing the new Local Plan in 2025. Since that Regulation 18 consultation, the vision has been further reviewed and subject to a minor update to reflect the extended Local Plan period to 2045, but the Council proposes that this remains a strong and relevant guide for the new Local Plan's development. It is as follows:

In 2045 Oxford will be a healthy and inclusive city, with strong communities that benefit from equal opportunities for everyone, not only in access to housing, but to nature, employment, social and leisure opportunities and to healthcare.

Oxford will be a city with a strong cultural identity, that respects and values our heritage, whilst maximising opportunities to look forwards to innovate, learn and enable businesses to prosper.

The vision is one which supports research and development in the life sciences and health sectors which will continue to provide solutions to global challenges.

The environment will be central to everything we do; it will be more biodiverse, better connected and more resilient. We will utilise resources prudently whilst mitigating our impacts on the soil, water, and air.

The city will be net zero carbon, whilst our communities, buildings and infrastructure will be resilient to the impacts of climate change and other emergencies.

4.2 The vision for the Local Plan 2045 is underpinned by six themes which also emerged through the Local Plan 2040's early development. These six themes were adapted from the three pillars of sustainable development (Society, Environment and Economy) and the intersects between them.

4.3 In turn, each of the six themes are supported by a grouping of more specific Local Plan objectives. These objectives add greater detail to how the Local Plan will seek to deliver upon the themes and overarching vision, and more specifically respond to the

particular sustainability issues, as well as local, regional and national priorities which were captured earlier in the report (see chapter 3).

4.4 In practice, there is overlap between the themes and the objectives, and these could ultimately be grouped in a variety of ways. Indeed, the specific objectives can be integral to multiple themes, and conversely, the themes are influenced by multiple objectives.

4.5 As with the vision, the Council has kept the scope of the themes and objectives under review throughout its work on the Local Plan 2045. This was important for determining whether these remained relevant or whether contextual changes since they had first been prepared, or following the summer 2025 Regulation 18 consultation, suggested amendments were needed. Whilst the six themes were considered to remain an effective and relevant framework through which to structure the new Local Plan, various modifications have been made to the underlying objectives since they were first conceived during Local Plan 2040's development. The six themes and the objectives of the Local Plan 2045 are presented in Table 4.1.

Table 4.1: The six Local Plan 2045 themes and underlying objectives

Local Plan 2045 theme	**Underlying Local Plan objectives** ***The Oxford Local Plan 2045 will...***
A healthy and inclusive city to live in.	• Maximise capacity for delivering homes across the city and set a housing requirement that seeks to meet the needs of different groups as far as possible. • Provide access to affordable, high-quality and suitable accommodation for all.
A green and biodiverse city that is resilient to climate change.	• Secure strong, well-connected ecological networks and net gains in biodiversity. • Be resilient and adaptable to climate change and resistant to flood risk and its impacts on people and property. • Protect and enhance Oxford's green and blue network. • Provide opportunities for sport, food growing, recreation, relaxation and socialising on its open spaces.
A fair and prosperous city with a globally important role in learning, knowledge and innovation.	• Maximise the benefits of the city's strengths in knowledge, healthcare and education while supporting economic growth in key sectors including science and innovation. • Recognise the valuable contribution that supporting a range of businesses (including SMEs) can make to innovation and economic diversity. Help to create the conditions in which all businesses can prosper. • Create opportunities for everyone in the city to access employment. Support local people giving them access to training, education and apprenticeships to make the most out of new job opportunities created in the city.

	• Help Oxford to continue in its role as a national and international destination and support the visitor economy by encouraging longer stays and higher spend in Oxford.
A liveable city with strong communities and opportunities for all.	• Provide neighbourhoods facilities needed to support our daily lives within a short walk from our homes, to support a liveable city. • Develop thriving local centres that support a variety of uses and foster activity throughout the day and night. • Demonstrate we value diversity whilst fostering greater inclusivity within our communities. • Create opportunities for supporting the transition to more sustainable/active forms of transport, including by reducing the need to travel, supporting good bicycle parking facilities and avoiding on and off-street car parking where possible across the city.
A city that respects its heritage and fosters design of the highest quality.	• Ensure well-designed buildings and public spaces that feel safe, that are sustainable, and that are attractive to be in and travel to. • Protect and enhance our valued and important heritage. • Curate a built environment that supports and enables people to be physically and mentally healthy.
A city that utilises its resources with care, protects the air, water and soil, and aims for net zero carbon.	• Ensure Oxford is ready for a net zero carbon future. • Ensure our resources, including land, soil, and raw materials, will be protected and used prudently, with consideration for replenishment and renewal. • Contribute towards continued improvement in the city's air quality and its further limit impacts upon public health. • Ensure the city's water resources are utilised efficiently with consideration for the future, whilst water quality is protected and enhanced for the benefit of the wider environment.

4.2 Testing the Local Plan themes and objectives

4.6 The six themes, including the underlying objectives that comprise them, are central to achieving the overall vision. As such, these have been assessed against the twelve Sustainability Appraisal objectives to identify where there is potential for positive/negative/neutral or uncertain impact and the results of that assessment are presented in Table 4.2.

Table 4.2: Appraisal of Local Plan 2045 themes against SA Objectives

Local Plan 2045 themes	1. Carbon emissions	2. Resilience to climate change	3. Efficient use of land	4. Local housing needs	5. Inequalities and health	6. Services, facilities and infrastructure	7. Green infrastructure and leisure	8. Traffic and air pollution	9. Water	10. Biodiversity	11. Urban design and historic environment	12. Employment and economy
A healthy and inclusive city to live in.	-	0	0	++	+	?	0	+/-	-	0	0	+?
A green and biodiverse city that is resilient to climate change.	0	++	+	-	+	+	++	0	+	++	0	+/-
A fair and prosperous city with a globally important role in learning, knowledge and innovation.	-	0	0	-?	+	0	0	-	0	0	0	++
A liveable city with strong communities and opportunities for all.	+	0	+	0	+?	++	0	+	0	0	0	+
A city that respects its heritage and fosters design of the highest quality.	+/-	+/-	0	-	+?	0	+?	0	0	+?	++	+/-
A city that utilises its resources with care, protects the air, water and soil, and aims for net zero carbon.	++	0	?	0	+?	0	0	+	+	+	+/-	0

4.7 The assessment as set out in Table 4.2 identifies that, taken as a whole, the six themes address each of the 12 SA objectives with varying degrees of impact. There are a significant number of areas where the six themes represent positive or significant positive impacts in relation to the SA objectives and suggests that they are generally compatible. There are, however, elements of each of the themes which represent negative impacts with the SA objectives, or else less certain impacts and potentially suggest conflicts which may need to be managed. The rationale for the negative or uncertain scores is discussed in Table 4.3, this is followed by a short commentary on what the impacts mean for developing the Local Plan.

Table 4.3: Rationale for negative or uncertain scoring of Local Plan 2045 themes/objectives against the 12 Sustainability Appraisal criteria as were presented in previous table.

A healthy and inclusive city to live in	• Negative impacts identified against SA criteria 1 and 9, because new housing required to help meet identified needs will represent additional carbon emissions and water demands, though this could be mitigated to some degree with appropriate design standards. • Some positive impacts for criterion 8 where new housing can reduce commuting for Oxford employees currently forced to live further afield, however, more residents could increase local congestion resulting in negatives. • Uncertain positive impact against criterion 12, as new housing may improve employers ability to retain staff, however, depends on implementation. • Uncertain impact against criterion 6, new housing may help residents locate closer to services, improving access, however, it may also increase pressure on existing services unless commensurate contributions are secured to mitigate these pressures, impact is less clear and depends on implementation again.
A green and biodiverse city that is resilient to climate change	• Some negative impact against criterion 4 because the additional constraints presented by protecting green networks is likely to reduce availability of sites for housing and could reduce capacity of sites in terms of amount of housing delivered. • Some positive and some negative impacts for criterion 12, in that incorporating green infrastructure and generally making space for nature can help to boost market values of various uses and may make city more attractive to employers, however, additional constraints presented by protecting green networks could reduce ability of employers to expand.
A fair and prosperous city with a globally important role in learning, knowledge and innovation	• Negative impact identified against SA criteria 1 and 8, because new employment in the city, without commensurate housing could lead to increased numbers of commuters into the city with associated carbon emissions (at least in short term until fossil fuel vehicles are phased out). Additional employment growth, particularly high energy demand uses, will likely have additional associated carbon emissions (e.g. if energy demand is not sourced renewably), though again this could be mitigated somewhat with appropriate design standards. • Uncertain negative impact against criterion 4, if additional employment generates more staff needing housing in the city, though depends on where staff are coming from (they may already be local).
A liveable city with strong communities and opportunities for all	• Uncertain positive impact against criterion 5, if improvements in accessibility to services and other facilities across the city can be secured, then this may help to reduce various health and economic inequalities amongst Oxford's communities, although it is highly dependent on how various policies and DM decisions are ultimately implemented.
A city that respects its	• Some positive and some negative impacts for criteria 1 and 2, in that high-quality design could help to secure reductions in carbon emissions and

heritage and fosters design of the highest quality	deliver climate adaptation. However, sensitivities around heritage assets may limit scope of the actions that can be taken in new development if it could impact these, or it may mean existing emissions/ climate vulnerabilities affecting heritage assets remain locked in. • Protecting existing heritage assets may help to preserve Oxford's special qualities which draw tourists yearly and support economy, however, heritage constraints may reduce scope of employment uses to expand, thus positive and negative impacts under criterion 12 also. • Uncertain positive impacts for criteria 5, 7 and 10, because high quality design could mean ensuring new development is designed to support health and wellbeing of occupants, and also respects existing green features/biodiversity or brings forward enhancements/net gains as part of design, but depends upon implementation. • Likely to be some negative impact for criterion 4 where existing heritage constraints might reduce capability to maximise capacity of sites for new housing.
A city that utilises its resources with care, protects the air, water and soil, and aims for net zero carbon	• Some positive and some negative impacts for criterion 11, whereby net zero standards and need to mitigate impacts on wider environment from new development could drive more efficient design and higher quality development overall, however, some net zero design measures may not be compatible with existing traditional buildings or protected heritage assets, also the improved performance of buildings may reduce scope of design (functionality prioritised over beauty). • Uncertain positive impacts for criterion 5 because net zero design could help to reduce risks of occupants being exposed to fuel poverty, high energy bills, thus improving economic resilience. • Uncertain impact for criterion 3, whereby improved practices around use of soils might secure some positives on previously degraded soils, but often this will represent purely mitigation of impacts to stop further degradation, so unclear.

4.8 Of course, the six themes will work together as a whole, and identified positive or negative impacts in Table 4.2 do not consider the potential counterbalance in impacts that can occur under other themes. Areas of negative impact, as discussed in more detail above, do help to highlight areas where particular care will need to be taken around whether mitigation is needed. Equally, positive impacts identified can be considered as opportunities that the Council should seek to preserve.

4.9 The benefit of the testing is in helping to understand where there is potential for impacts that should be avoided or mitigated, if necessary, that may need to be explored further through the detail of the Local plan strategy and its policies, as is explored further in the next chapters.

5. Exploring options for the emerging Local Plan 2045 (Sustainability Appraisal Tasks B2 and B3)

5.1 Developing the growth strategy for Local Plan 2045

5.1 There is more than one way of trying to meet the needs of residents, workers and visitors to Oxford and achieving the various objectives that have been identified for the new Local Plan. Oxford is a constrained city and there is insufficient land to meet all of the city's development needs within its boundary, but from this starting point there are a range of alternative approaches to explore. At the heart of this is a need to explore ways of balancing housing and wider development needs with objectives which could constrain growth, including relating to protecting and enhancing Oxford's sensitive environment and many heritage assets.

5.1.1 Identifying reasonable alternatives for the Local Plan growth strategy

5.2 Responding to key sustainability issues affecting the city, the Council considered a number of potential growth strategy options (collectively 'alternatives') for the Oxford Local Plan 2045. These were initially consulted on as part of the Regulation 18 consultation in June/July 2025, including the preferred growth strategy (which is referred to for the purposes of this report as the 'chosen growth strategy').

5.3 The Local Plan's chosen growth strategy involves striking a balance between providing for housing and employment land / floorspace (henceforth floorspace) needs whilst also delivering on wider plan objectives. The primary focus under the chosen growth strategy is planning for new homes, responding to the significant pressure in the city for improving access to housing and addressing ongoing affordability issues. The government's standard method identifies the housing need for the city. However, the constrained nature of the city means that a capacity-based requirement is being planned for, i.e. the requirement is below Oxford's identified need.

5.4 This shortfall could be met by neighbouring local authorities, but there are risks and uncertainties with any such strategy, such that there was a need to explore higher growth options with a view to ensuring that the Council has left 'no stone unturned'.

5.5 With regards to employment floorspace, under the chosen growth strategy employment needs would be provided for almost in full, responding to the city's strong performing economy, particularly through a focus on intensifying and modernising key employment sites; however, some specific needs may not be met because land is prioritised for accommodating housing need. There is clearly market demand (as distinct

from established need) to deliver a considerable further boost to employment floorspace, at least in the short term; however, on the other hand, a lack of available housing for workers is a key barrier to the city's economic growth.

5.6 It is recognised that there is an argument to be made for boosting employment floorspace supply (over-and-above what would be planned for under the chosen growth strategy), such that this was also something to explore further through appraisal of (and consultation on) growth strategy alternatives.

5.7 In summary, in addition to appraising and consulting on the merits of the chosen growth strategy, there was a need to explore alternatives involving a boost to housing and/or employment.

Defining the alternatives in detail

5.8 Beginning with the chosen growth strategy which, as discussed, involves striking a careful balance, there is a need to distinguish between choices made at two spatial scales:

- City-wide – striking a balance means: A) supporting redevelopment of all available brownfield sites; and B) taking forward select greenfield sites, whilst also protecting a strong hierarchy of green and blue spaces that perform important functions like making space for biodiversity, flood resilience and physical/mental health.
- Site level – striking a balance means maximising capacity / development yields whilst also accommodating other features intrinsic to sustainable, healthy and well-designed places – like appropriate greening, open space, measures supporting active travel – and designing with onsite or nearby heritage and environmental assets in mind.

5.9 With regards to boosting supply, this might be achieved broadly by: A) boosting capacities at brownfield sites; or B) boosting greenfield supply from additional sites (though it should be noted that there is a very limited supply of additional greenfield sites without intrinsic constraints like flood plain, or national designation) and/or supporting increased capacities at greenfield sites.

5.10 As such, there are three broad alternatives:

1. The chosen growth strategy (striking a balance)
2. Boost brownfield supply (boost site capacities)
3. Boost greenfield supply (boost sites and/or site capacities)

5.11 With regards to (2) and (3), the aim would be to provide more fully for development needs and drive greater quantums/densities of development across available sites whilst reducing alignment with wider plan objectives. This could be achieved by:

- Minimising any locally set policy requirements that could restrict development capacity on sites, including expectations around environmental enhancements.
- Protecting only the open spaces that have intrinsic constraints on development, such as areas of flood plain, or nationally designated ecological or heritage sites, and limiting consideration of wider benefits that many of other spaces provide.

5.12 However, it is important to be clear that the above would only be within reason - significant negative environmental effects would need to continue to be avoided/mitigated. There will also be intrinsic constraints such as flood risk, nationally designated biodiversity and heritage, which make development in certain locations inappropriate.

5.13 Finally, there is the question of policy support for housing versus employment.

5.14 The chosen growth strategy, as discussed, can be described as an approach that is weighted towards supporting homes, which in practice means intervening to curb very high current market demand for employment floorspace, but there is also a need to consider the alternative of reduced policy support for housing / increased flexibility for employment.

5.15 What this means in practice is either:

- Prioritising housing – policy emphasis on bringing forward new housing sites and additional housing on existing sites; and resisting any net loss of housing and encouraging alternative uses to convert to (or incorporate an element of) housing where suitable and not conflicting with wider LP objectives (e.g. amenity); and only then, seeking to meet employment land / floorspace needs through policies which focus primarily on protecting and intensifying only key existing employment sites.
- Prioritising employment – policy emphasis on driving the intensification and expansion of existing employment sites or delivering new employment sites; and resisting the net loss of employment floorspace and setting policies for the protection of a range of employment sites (sites of national, regional and local importance); also encouraging alternative uses (not residential) to convert to uses that can deliver more employment where suitable and not conflicting with wider LP objectives (e.g. amenity); and only then seeking to provide for housing need through policies which focus on bringing forward new housing sites and additional housing on existing sites.

5.16 The above rationale led to six reasonable alternative growth strategy options consulted on at Regulation 18 stage , as are illustrated in the matrix in Table 5.1.

Table 5.1: Growth strategy alternatives considered for the Oxford Local Plan 2045.

	Balanced development	**Boost brownfield supply**	**Boost greenfield supply**
Prioritise housing	Option 1a (The chosen growth strategy)	Option 2a	Option 3a
Prioritise employment	Option 1b	Option 2b	Option 3b

5.1.2 Reviewing the reasonable alternatives for the Local Plan Growth Strategy

5.17 The six growth strategy alternatives, including the chosen strategy, were consulted on at Regulation 18. Feedback to the consultation did not identify any significant omissions in relation to other distinct alternatives that should have been considered.

5.18 However, the context of the Local Plan's development has continued to evolve since the Regulation 18. For example:

- There has been an update to the Local Plan period (now covering the period 2025-2045), as discussed in Section 2, with consequential updates to the housing and employment evidence base to align.
- The Council has also continued to develop the Local Plan, including preparing site allocation policies (not subject to consultation previously), as well as developing further its wider evidence base.
- A range of feedback was provided more broadly on the Local Plan in response to the Regulation 18 consultation, a recurring theme being the importance of protecting green space (see the Regulation 18 consultation report).

5.19 This evolving context necessitates revisiting the growth strategy alternatives to ensure that they remain robust and appropriate.

5.20 Whilst the update to the Local Plan period was necessary for various technical reasons, the impact on the strategy principally relates to the growth that needs to be planned for, including for housing and employment. Key updates show very little change for the 2025-2045 period as compared to the previous 2022-2042 period. The housing need is still 21,740, applying the standard method over 20 years. Employment need has not

changed much and is still at the level that it is likely can be met within existing and pipeline sites.

5.21 The Council has sought to comprehensively explore the capacity of all of the proposed site allocations for Regulation 19. Alongside the capacity assessments, the Council has undertaken site specific sustainability appraisals (as discussed further in Chapter 6) to identify key sustainability impacts. The housing capacity has been updated, including after a new call for sites, but the capacity has not changed much and at 9,267 over the Plan period is still significantly below supply.

5.22 Another avenue of additional technical work has explored the matter of Green Belt, with updates to National Policy setting out the importance of the Council reviewing its green belt for availability for housing. A green belt assessment has been undertaken, with a number of sites identified for assessment. However, regardless of the performance of Green Belt parcels against the purposes of Green Belt, the Green Belt in and of itself has not been treated as a constraint. Parcels of the Green Belt were then considered for development potential in accordance with the chosen growth strategy of the Plan and its other objectives. Ultimately, one additional site allocation has been identified as suitable for allocation.

5.23 A recurring theme in the Regulation 18 consultation was a push for the Local Plan to protect remaining green space from development. Protecting green infrastructure for its range of multi-functional benefits is a key objective of the Local Plan, however, the city also has an outstanding need for housing, and reliance on brownfield sites alone to provide for this need would be insufficient. The chosen growth strategy, which seeks a balanced approach to growth that protects a strong hierarchy of green spaces, whilst allowing some to come forward for development in recognition of the city's high housing need, is considered to align with the feedback.

5.24 In light of the updated SHLAA work which confirms that the Council remains unable to meet its identified housing need, it is important that a thorough approach has been taken to identifying additional land for housing in Oxford. It was considered important therefore to further consider the plan's approach to green infrastructure protection and whether an alternative approach may provide additional potential homes in the city. To that end, the Council has undertaken some further appraisal work of options for the protection of green infrastructure – this is discussed in detail in later in Chapter 5 (Section 5.2). The findings of this additional appraisal work, however, did not identify significant variation in impacts for housing provision between the options.

5.25 In summary, whilst it was important to revisit the alternatives through the additional work post-Regulation 18, this has not led to any additional distinct reasonable alternatives for the Local Plan Growth Strategy being identified. The appraisal of the alternatives as set out in the following section has been reviewed in light of the above, although this has not resulted in material changes to scoring.

5.1.3 Testing the growth strategy alternatives

5.26 In order to explore the potential impacts arising from the growth strategy alternatives, these have been appraised against the 12 Sustainability Appraisal criteria using the same scoring mechanism as is used elsewhere in this report (see Table 2.4).

5.27 The detailed appraisal is set out in Table 5.2, followed by a concluding discussion.

Table 5.2: Detailed appraisal results for Local Plan growth strategy alternatives, including commentary explaining rationale.

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
1. Carbon emissions	-	--	-	--	--	--	• Assume negative impact in terms of emissions under all scenarios because more development is likely to equate to more emissions. • Option 2a will result in more housing than option 1a/1b, however, may reduce in-commuting as more employees able to live closer to work. • Options 1b, 2b and 3b will result in more employment generated without commensurate housing and therefore more commuters into city, with associated additional transport emissions. • Option 3a could reduce commuting levels, but also brings in additional housing development than other options so similar level of impact to 3b and 2b.
2. Resilience to climate change	+	+	+/-	+/-	--	--	• Option 1a and 1b allow protection of a range of green spaces that help with reducing overheating and flood risk. They would also allow a balanced approach to the design of sites, fully utilising capacity for development, whilst also providing for range of greening and open space that helps resilience. • Option 2a and 2b would seek to fully maximise already developed sites, potentially able to protect a similar network of green spaces as under options 1a/1b. However, the minimal local standards that would facilitate maximising sheer quantity of development could reduce ability to deliver resilience measures like greening onsite. • Options 3a and 3b would potentially see development across a range of green spaces, impacting local resilience. Whilst the most high-risk spaces for flooding (e.g. floodplain) would not be developed, thus retaining some resilience, other spaces that still provide important resilience (e.g. slowing water run off and storing water, as well as urban cooling), could be lost.
3. Efficient use of land	+	+	+/-	+/-	--	--	• Options 1a and 1b perform best as development would be required to maximise capacity of sites whilst also delivering upon wider LP objectives,

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
							coupled with protection of a network of greenfield sites and steering development to brownfield spaces first (though not ruling out lower quality green sites). • Option 3a and 3b are considered least efficient because of potential for loss of a range of green spaces including more valuable green spaces in the city. It is likely that more development of green sites will harm more areas of soil which have not already been impacted by development (another consideration under this objective). More potential greenfield sites for development could also reduce the pressure to maximise the efficient use of brownfield sites first. A push to maximise quantums of development on greenfield sites could come at the cost of securing other measures on these sites, such as additional greening, open space, which could impact efficiency in terms of meeting all objectives. • Options 2a and 2b are likely to have some positives and negatives. Though some greenfield sites would still be allocated under these scenarios, these options would encourage the maximising of previously developed sites in the city which is considered to be a very efficient use of land. However, as with options 3a and 3b above, there is potential that in the drive for maximising the quantums/density of development on brownfield sites at the cost of securing other measures on these sites, such as additional greening, open space, would lead to less efficient developments in the round. • A contrary view would be that option 2a and 2b are most efficient for delivering highest densities of development on brownfield sites in the city whilst protecting greenfield land, so these could be scored higher if a view of efficiency was more solely focused just on this element of the issues covered under this criterion.
4. Local housing needs	+	+/-	+	-	++	-	• All options will provide some level of additional housing having a positive impact, though the housing focus of options 1a, 2a and 3a will have greater

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
							positive impact and are likely to support greater provision for meeting housing needs of various groups (e.g. need for affordable housing). • Options 2a and 3a would each go further towards meeting a greater proportion of housing needs than 1a because they would seek to drive greater quantums/capacity of development whilst reducing other provisions on site (though still unlikely to meet need in full). Option 2a is not considered significant positive, as even maxing out development capacity on sites is unlikely to have potential to contribute any significant additional housing capacity as the sites are already quite constrained, although it would likely be somewhat higher than option 1a. • Option 1b, 2b and 3b would provide some housing, but the focus on delivering to meet employment need first is likely to then exacerbate existing housing need (generating more jobs and more people needing to places to live). This indicates a score that reflects some positives and negatives for option 1b. • Option 2b and 3b would also provide some housing, though the focus of using the additional capacity unlocked on brownfield (as under 2b) or greenfield sites (as under 3b) would firstly be for employment. Overall, the potentially greater levels of employment generated in the city under these options would exacerbate housing need further and outweigh positives, leading to minor negative impacts (compared to 1b).
5. Inequalities	**?**	**?**	**?**	**?**	**?**	**?**	• The impact of the options on inequalities will depend heavily on implementation and is difficult to score at this level. It is likely that all options will make some contribution to elements of inequality, however, such as access to affordable housing or access to jobs skills. Specific impacts will depend on how particular applications come forward.
6. Services and facilities	**+/-**	**+**	**+/-**	**+**	**-**	**-**	• More housing, particularly on brownfield sites, under options 1a and 2a will mean more people can live in accessible locations that allow them to reach various daily needs via active travel. However, additional residents could

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
							put strain on existing services if these are not enhanced or added to, or if existing facilities are allowed to be lost. • Additional growth in employment uses under option 1b, 2b and 3b could include uses that provide for daily needs of the local population which may therefore improve access—this will be slightly more positive under the brownfield focused options than greenfield, which could see some of these uses located in less accessible locations too (so may depend on implementation somewhat). The reduced population growth under these scenarios would still include some additional pressure, however, but less so than under housing focused scenarios. • Greenfield sites in the city are less likely to be located in accessible locations, though some areas will be more accessible than others. When this is combined with the more significant population growth associated with more housing accommodated across greenfield sites, this leads to a more negative impact under option 3a. The same accessibility concerns would impact the greenfield sites if employment instead came forward (as under option 3b) and could also mean employment generated away from existing employment clusters, although additional pressure on existing services from new housing may be reduced compared with scenario 3a. • There is, however, an element of uncertainty to these scores as it should be acknowledged that any viable sites may be able to deliver additional public benefits, including new community infrastructure.
7. Green infrastructure, leisure and recreation	**+**	**+**	**+/-**	**+/-**	**--**	**--**	• Options 1a and 1b have some positive benefits. The balanced approach to requiring development to maximise quantums/density whilst also delivering upon wider LP objectives will allow for development to incorporate a range of new green features (or protect existing features). This is coupled with protection of a network of greenfield sites (though not ruling out lower quality green sites) across the city which will contribute to a strong GI network.

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
							• Options 2a and 2b are unlikely to be able to secure as significant benefits on brownfield sites because they would sacrifice additional local standards for environmental enhancements like greening and open space in order to maximise development quantums/density. However, they would still allow for protection of a network of green infrastructure across the city (though some lower quality greenfield sites would be allocated). • Options 3a and 3b will be significantly negative because of potential for loss of a range of green spaces including more valuable green spaces in the city. A push to maximise quantums of development on greenfield sites could come at the cost of securing other measures on these sites, such as additional greening, open space, which leads to less efficient developments too.
8. Traffic and associated air pollution	**+/-**	**-**	**+/-**	**-**	**-**	**--**	• Under all options, it is assumed that air quality impacts will continue to reduce as vehicles shift away from fossil fuel burning, and wider county measures such as LTNs, expansion of the Zero Emissions Zone and electric bus fleet introduction take affect. However, emissions impacts will continue to some degree, particularly in earlier years of the Plan. • Option 1a, 2a and 3a would help to reduce the imbalance between those working in Oxford but being forced to live further afield and having to commute in for work, by providing more housing in the city (increasing levels for 2a and 3a). • However, under the same options, the associated increases in population associated with greater levels of housing could bring additional vehicles into the city (meaning some negative impact). Though private vehicle ownership may be tempered by reduced levels of parking provision that would be necessitated by low parking requirements, but also because maximising density of development of sites will mean trade off with space for parking. • Additionally, under option 3a, some of the greenfield housing sites coming forward for development are likely to be in less easily accessible locations

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
							which may increase reliance on private vehicle ownership (pushing this option into predominantly a negative impact score). However, this negative might be reduced where there is a major focus on greenfield sites that can deliver sustainable transport improvements. • Options that focus on boosting employment/economic growth risk further exacerbating the imbalanced commuting patterns in the city, particularly where job creation is not matched with housing provision. The result is likely to mean more people travelling into city, some via private vehicles. This is likely to result in negative impacts under options 1b and 2b, and more significant negatives under 3b, due to it enabling greater expansion of employment floorspace as well as new sites in less accessible locations (including away from existing employment clusters).
9. Water	**+/-**	**+/-**	**-**	**-**	**--**	**-**	• For water, there is a need to consider both water resources/supply and water quality including impacts on wastewater infrastructure (although a scheme has been agreed with Thames Water to bring upgrades to the local wastewater treatment works to address existing capacity concerns and unlock future growth). • Options 1a and 1b would both generate housing, (more so under option 1a), and this will increase demand for water, as well as pressure on wastewater infrastructure. However, there will be greater opportunities to mitigate impacts from development on water quality because of the more balanced approach to design on sites. Some development capacity is afforded to environmental improvements like greening, open space, SUDs and buffers along watercourses. • Maximising the development quantums on brownfield sites not only increases amount of housing that can be delivered (with additional demands on water resources and wastewater treatment), but also minimises the environmental features that can mitigate impacts on water quality, leading to negative impacts under options 2a and 2b (2a is likely

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
							slightly more negative than 2b in terms of impact on water resources/wastewater). • Option 3a and 3b have similar impacts as options 2a and 2b, however, the more expansive loss of greenfield sites across the city will have greater impacts on the water environment. For example, more urbanisation and loss of natural surface cover could exacerbate surface water run-off, leading to flooding and additional pollutants running into watercourses, though this may be mitigated somewhat depending on how SUDs are applied. However, the impact under 3a is more significant due to the additional amounts of housing that would come forward, with associated demands on water resources/wastewater.
10. Biodiversity	**0**	**0**	**0**	**0**	**-**	**-**	• Outside of the Local Plan's control, under all options, development will be expected to deliver the mandatory 10% Biodiversity Net Gain associated with the Environment Act, so there should generally be positive impacts in terms of habitat creation. However, the nature of many sites in Oxford is that BNG is likely to need to be delivered offsite. • The loss of greenfield sites under scenarios 3a and 3b is likely to lead to some additional fragmentation of habitats and wildlife corridors. On the assumption that some BNG will need to be delivered offsite, the limited opportunities to deliver locally in the wider city could be reduced further if greenfield sites are taken forward for development, meaning that this could be pushed further outside of Oxford. Allowing more development of greenfield sites would have additional negative impacts if this extended to local designated sites, although it is assumed national designations (e.g. SAC and SSSIs) would still be protected as minimum. • Options 1a, 1b, 2a, and 2b would likely lead to a neutral impact. They would retain a broader network of greenfield sites which would include national and local designated sites and would help to maintain wildlife corridors/linkages across the city. Options 1a and 1b would, however, also allow for incorporating space for greening and other non-habitat ecological

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
							enhancements (e.g. features not recognised by the DEFRA BNG metric's habitat focus). This means that spaces for biodiversity could be incorporated onsite, to the benefit of species including priority species, even if onsite BNG is not feasible. It is uncertain whether this would push the options into a positive impact or maintain neutral impact, however.
11. Good urban design / the historic environment	+	+	--	--	--	--	• Good urban design requires a balancing of various requirements on a development, not just the maximising of density. As such, options 1a and 1b would have positive impacts because of the balanced approach they would push for. These options would also allow for incorporating policies that guide design towards sufficiently mitigating harm (and ideally enhancing the setting of) various local and national designated (and non-designated) heritage assets. • Options 2a/2b, and 3a/3b which focus on maximising density on brownfield or greenfield sites, could have significant negative impacts for design as they forgo other design considerations in order to maximise sheer quantums of development/density of development on these sites. • In addition, for options 2a/2b/3a/3c, the minimised local standards necessary to reduce constraints on development quantums/density would likely reduce the ability to influence design with respect to local context, such as the wealth of historic assets in the city. Equally, many brownfield sites are clustered closest to the city's dense array of heritage assets, meanwhile, some of the only greenfield sites that could feasibly be explored under options 3a/3b (and that have not otherwise been ruled out for other reasons like floodplain or ecology), make an important contribution to Oxford's historic setting and townscape. Thus, additional development under these scenarios is considered to have potential for significant negative impacts on heritage in the city.

SA Objective	Option 1a	Option 1b	Option 2a	Option 2b	Option 3a	Option 3b	Appraisal rationale
12. Economic growth	+	+	+	++	+	++	• All options are considered to have some level of positive impact for the economy in Oxford, though options 2a and 3a would bring more significant positive impact. • Housing delivery is a key barrier to economic growth as businesses struggle to retain or attract staff due to inability to access affordable housing nearby, thus the housing focus scenarios would have some positive impact for economic growth in this way. • Option 1b, 2b and 3b are focused on employment/economic growth. These will ensure a wide network of protected sites are protected from loss of employment uses including locally, regionally and nationally important sites, even if these sites are not currently performing. • Options 2b and 3b will more easily facilitate increases in employment floorspace by allowing existing sites to expand/intensify fully and allow new sites to come forward, particularly under option 3b which would allow development on more greenfield sites. • Regardless of the option taken, there will likely continue to be competition from high value employment uses which could push out lower value employment and reduce access to affordable workspaces and lower skilled jobs.

5.1.3 Findings from the testing of growth strategy alternatives

5.28 Table 5.3 presents a summary of the appraisal scoring for each of the six growth strategy alternatives as was detailed in the previous section.

Table 5.3: Summary of appraisal results for Local Plan growth strategy alternatives

SA Objective	Option 1A	Option 1B	Option 2A	Option 2B	Option 3A	Option 3B
1. Carbon emissions	-	--	-	--	--	--
2. Resilience to climate change	+	+	+/-	+/-	--	--
3. Efficient use of land	+	+	+/-	+/-	--	--
4. Local housing needs	+	+/-	+	-	++	-
5. Inequalities	?	?	?	?	?	?
6. Services and facilities	+/-	+	+/-	+	-	-
7. Green infrastructure, leisure and recreation	+	+	+/-	+/-	--	--
8. Traffic and associated air pollution	+/-	-	+/-	-	-	--
9. Water	+/-	+/-	-	-	--	-
10. Biodiversity	0	0	0	0	-	-
11. Good urban design / the historic environment	+	+	--	--	--	--
12. Economic growth	+	+	+	++	+	++

5.29 The Council's chosen growth strategy (Option 1a), the balanced approach to growth with a housing focus, is clearly shown to perform well, in that it is associated with comfortably the most positives and fewest negatives. It is recognised that there is also a case to be made for options 2b, 3a and 3b from either a housing (option 3a) or an economic growth perspective (options 2b and 3b), but these benefits come at a considerable cost in terms of wider sustainability objectives.

5.30 As was initially set out in the interim Sustainability Appraisal, and following the Regulation 18 consultation for which these appraisals were first published, the Council remains of the view that option 1a represents sustainable development on balance. As

part of this, it is important to be clear that option 1a would provide significantly for housing delivery, thereby contributing strongly to meeting locally arising needs (but still likely generating unmet needs) and would make a positive contribution to economic growth, specifically by protecting key employment sites and enabling their intensification/modernization whilst also contributing new housing to reduce barriers for employees wanting to live closer to where they work. It would also allow a strong framework to be set out for protecting and enhancing the wider environment and securing various benefits for the health and wellbeing of the city's residents and visitors.

5.2 Developing Local Plan policy approaches

5.31 This sub-section of the Sustainability Appraisal discusses the development of specific policies within the Local Plan 2045 as are set out in the Regulation 19 consultation, including how alternative options were considered where relevant.

5.2.1 Identifying options for policies and considering sustainability impacts

5.32 The summer 2025 Regulation 18 first draft Local Plan consultation included a number of preferred options for policies and a first draft of what these policies could look like. For each of the preferred policy approaches, the Council had also often identified alternative approaches that could be taken and these were presented within tables of 'options sets' in the relevant supporting background papers that accompanied that consultation (these are also included in the appendices of the updated versions published for Regulation 19).

5.33 In developing these options sets, the Council had also considered the implications of each policy option and presented a summary of these alongside the potential policy options, including:

- potential positive consequences that taking the option forward would secure for the city,
- negative or neutral consequences of the option, such as where these would conflict with local priorities, or where they could cause other challenges.

5.34 As part of weighing up the different options that could be taken during this 'optioneering' process, the Council sought to ensure that choices about each preferred approach had also been considered with regard to its sustainability implications at a high-level—with reference to the 12 SA objectives as a framework to guide officers' thinking. This has helped to ensure that sustainability considerations have been intrinsic to the process of identifying a preferred approach. A summary of these high-level screenings

undertaken for each option set was also presented alongside the tables of options sets within the relevant background papers.

5.35 This high-level sustainability screening helped to identify where particular options and alternatives for a policy approach have likely significant effects against any of the SA objectives. Where potential for significant sustainability impacts were identified, it was determined that these options sets should be 'scoped in' for Sustainability Appraisal with a full assessment of their potential impacts against the 12 SA objectives, which is documented later in this report.

5.36 Table 5.5 identifies all of the options sets considered in preparing the Local Plan and which of the background papers these are presented in (alongside their high-level sustainability screening). The Table also identifies which policies were scoped in for testing through the Sustainability Appraisal, following the high-level screening (coloured blue and flagged in column three).

Table 5.5: Results of high-level SA screening of policy options sets including options sets that have been 'screened in' for detailed appraisal

Regulation 18 policy options sets	**Applicable background paper where each options set is presented**	**Detailed appraisal needed?**
001a: Housing requirement for the plan period	001 Housing need, requirement and mix	Yes
001b: Mix of housing sizes (no. bedrooms)	001 Housing need, requirement and mix	No
001c: Loss of dwellings	001 Housing need, requirement and mix	No
002a: Affordable housing – Overall requirement	002 Affordable housing	No
002b: Affordable housing: financial contributions for new student accommodation…	002 Affordable housing	No
002c: Affordable housing: financial contributions from self-contained older-persons accommodation	002 Affordable housing	No
002d: Affordable housing: financial contributions from commercial development	002 Affordable housing	No
002e: Employer-linked affordable housing	002 Affordable housing	Yes
003a: House of Multiple Occupation (HMOs)	003 Specialist housing including student accommodation, self-build, older persons	Yes
003b: Location of new student accommodation	003 Specialist housing including student accommodation, self-build, older persons	Yes
003c: Ensuring there is enough student accommodation to meet needs	003 Specialist housing including student accommodation, self-build, older persons	No
003d: Homes for travelling communities	003 Specialist housing including student accommodation, self-build, older persons	No
003e: Homes for boat dwellers	003 Specialist housing including student accommodation, self-build, older persons	No

003f: Elderly persons' accommodation and other specialist housing needs	003 Specialist housing including student accommodation, self-build, older persons	No
003g: Self-build and custom house building options	003 Specialist housing including student accommodation, self-build, older persons	No
003h: Community-led housing	003 Specialist housing including student accommodation, self-build, older persons	No
003i: Boarding school accommodation	003 Specialist housing including student accommodation, self-build, older persons	No
004a-1: Employment strategy	004 Employment and inclusive economy	No
004a-2: Making Best Use of Existing Employment Sites	004 Employment and inclusive economy	No
004a-3: Allowing housing on existing employment sites	004 Employment and inclusive economy	No
004a-4: Location of new employment uses	004 Employment and inclusive economy	No
004b: Warehousing and storage uses	004 Employment and inclusive economy	No
004c: Community Employment and Procurement Plans	004 Employment and inclusive economy	No
004d: Affordable Workspaces	004 Employment and inclusive economy	No
004e-1: Short-stay accommodation (hotels and guest-houses) (New Accommodation)	004 Employment and inclusive economy	No
004e-2: Short-stay accommodation (hotels and guest-houses) (Existing Accommodation)	004 Employment and inclusive economy	No
005a: Protection of GI network and green features	005 Green Infrastructure and biodiversity	No
005b: Provision of new GI features	005 Green Infrastructure and biodiversity	No
005c: Provision of new GI features – Urban Greening Factor	005 Green Infrastructure and biodiversity	No
005d: Delivering mandatory net gains in biodiversity in Oxford	005 Green Infrastructure and biodiversity	No
005e: Protecting and enhancing onsite biodiversity in Oxford	005 Green Infrastructure and biodiversity	No
005f: Protecting Oxford's ecological network	005 Green Infrastructure and biodiversity	No
007a: Flood risk and Flood Risk Assessments (FRAs)	007 Flood risk, drainage and SuDS	No
007b: Sustainable Drainage Systems (SuDS)	007 Flood risk, drainage and SuDS	No
008a: Net zero buildings in operation	008 Carbon reduction and climate resilient design	No
008b: Embodied carbon	008 Carbon reduction and climate resilient design	No
008c: Retrofitting existing buildings including heritage assets	008 Carbon reduction and climate resilient design	Yes
008d: Resilient design and construction	008 Carbon reduction and climate resilient design	No
009a: Air Quality Assessments and standards	009 Natural resources	No
009b: Water resources and quality	009 Natural resources	No
009c: Soil quality	009 Natural resources	No
009d: Contaminated land	009 Natural resources	No
009e: Amenity and environmental health impacts of development options	009 Natural resources	No

010a: Healthy Design/Health Impact Assessments (HIAs)	010 Health and wellbeing	No
010b: Privacy, daylight and sunlight	010 Health and wellbeing	No
010c: Internal space standards for residential developments	010 Health and wellbeing	No
010d: Outdoor amenity space	010 Health and wellbeing	No
010e: Accessible and adaptable homes	010 Health and wellbeing	No
011a: Designated Heritage Assets	011 Urban design, placemaking, heritage and archaeology	No
011b: Non-Designated Heritage Assets	011 Urban design, placemaking, heritage and archaeology	No
011c: Archaeology	011 Urban design, placemaking, heritage and archaeology	No
011d: Principles of high-quality design of buildings	011 Urban design, placemaking, heritage and archaeology	No
011e: Efficient use of land	011 Urban design, placemaking, heritage and archaeology	No
011f: View Cones and High Buildings	011 Urban design, placemaking, heritage and archaeology	No
011g: Bin and Bike Stores and external servicing features	011 Urban design, placemaking, heritage and archaeology	No
012a: Transport assessments, travel plans and servicing and delivery plans	012 Transport	No
012b: Bicycle parking design standards	012 Transport	No
012c: Motorcycle and Powered Two Wheelers Parking Design Standards	012 Transport	No
012d: Motor vehicle parking design standards	012 Transport	Yes
012e: Electric Vehicle Charging	012 Transport	No
013a: Focusing town centre uses in existing centres	013 Livable city - including retail	No
013b: Maintaining vibrant centres	013 Livable city - including retail	No
013c: Protection and alteration of existing local community facilities	013 Livable city - including retail	No
013d: Provision of new local community facilities	013 Livable city - including retail	No
013e: Protection and alteration of learning and non-residential institutions	013 Livable city - including retail	No
013f: Provision of new learning and non-residential institutions	013 Livable city - including retail	No
013g: Protecting cultural, social and visitor attractions	013 Livable city - including retail	No
013h: Provision of new cultural, social and visitor attractions	013 Livable city - including retail	No
014a: Infrastructure considerations in new development	014 Infrastructure	No
014b: Digital Infrastructure	014 Infrastructure	No
014c: Safeguarding Land (new policy incorporated post-Regulation 18 stage)	014 Infrastructure	No

5.2.2 Targeted Sustainability Appraisal for scoped in policy options sets

5.37 As set out in Table 5.5 in the previous section, a limited number of policy options sets for the Local Plan have been taken forward for further testing through the Sustainability Appraisal process because it was determined that the options (or some of the options considered) were likely to result in significant effects against one or more of the SA objectives. Scoping them in for a full appraisal has allowed the Council to explore each option's potential for impacts against the 12 SA objectives in greater depth and to factor this into the decision about the preferred approach. The list of the 'scoped in' options sets is as follows:

- Policy Options set 001a: Housing requirement for the plan period
- Policy Options set 002e: Employer-linked affordable housing
- Policy Options set 003a: Houses in Multiple Occupation (HMOs)
- Policy Options set 003b: Location of new student accommodation
- Policy Options set 008c: Retrofitting existing buildings including heritage assets
- Policy Options set 012d: Motor vehicle parking design standard

5.38 The following tables set out the results of the detailed Sustainability Appraisal testing undertaken for these scoped in policy options sets, more detailed versions of the tables with additional commentary that explains the rationale for scoring are included in Appendix B. Options considered for each policy are set out in columns and scored against each of the twelve SA objectives which form the SA framework using the same scoring methodology used elsewhere in this report.

5.39 Testing these 'scoped in' options sets in this way helps to identify which options perform most positively against the sustainability objectives and where the Local Plan may need to incorporate mitigations to avoid negative impacts. It should be noted that there is no obligation to take forward the option with the most positive (or fewest negative) sustainability impacts—there may also be additional important considerations that need to inform the preferred approach—however, the findings help to more fully understand the potential for significant impacts arising from particular options and thus form an important factor in determining the preferred approach. After each table, the preferred option taken forward in the Local Plan is set out with a rationale for why.

<u>Policy Options set 001a: Housing requirement for the plan period</u>

5.40 Three policy options were considered, as discussed in detail in Background Paper 001. The options have been revisited and updated for this Regulation 19 Sustainability Appraisal to reflect the revised Local Plan period and updated capacity assessment work from the Strategic Housing Land Availability Assessment. The options are as follows:

- **Option a:** Set a housing requirement in the Plan based on the full housing need identified through the Standard Method (c.21,740 dwellings over the Plan period 2025-2045).
- **Option b:** Set a housing requirement lower than the need identified by the Standard Method, based on capacity calculated in accordance with the spatial strategy (c.9,267 dwellings over the Plan period 2025-2045).
- **Option c:** Set a housing requirement higher than the standard method in order to support economic growth or affordable housing need, even though achieving this requirement would rely on delivery outside of Oxford's boundaries.

5.41 There is some overlap in testing of this option set with the testing undertaken for the growth strategy alternatives as set out in Section 5.1, particularly where they related to having a focus on housing. Whilst that appraisal has helped inform this testing as there are considerations that overlap, this option set specifically considers (at a high-level) different approaches to setting the housing requirement in the Local Plan and the impacts that could arise, thus the appraisal does differ.

Table 5.6: Appraisal of options set 001a

SA Objective	Option A	Option B	Option C
1. Carbon emissions	--	-	--
2. Resilience to climate change	--	0	--
3. Efficient use of land	?	?	?
4. Local housing needs	++	+	++
5. Inequalities	?	?	?
6. Services and facilities	?	?	?
7. Green infrastructure, leisure and recreation	-	0	-
8. Traffic and associated air pollution	-?	+/-?	-?
9. Water	--	+/-	--
10. Biodiversity	-?	0	-?
11. Good urban design / the historic environment	--	0	--
12. Economic growth	+/++	+	++

5.42 The option taken forward in the Local Plan is **Option B**, which is to base the housing requirement on the housing capacity (*see Background Paper 001 for more detail*). This was to ensure the policy is deliverable and meets the tests of soundness. Setting a housing requirement that meets or exceeds need is likely to be unachievable, and would mean that pressure would be placed on other policies aiming to meet the Plan' strategy.

5.43 The option was found to be better performing in the balance of positive and negative impacts against the sustainability objectives than the other options. Whilst it is acknowledged that the other options could have greater positive impacts in relation to delivering housing and economic growth, they also come at greater cost in terms of significant negative impacts against other sustainability objectives. Nevertheless, some mitigation would likely be needed to address negative impacts against SA objectives 1 (carbon emissions), 8 (traffic/air pollution) and 9 (water).

Policy Options set 002e: Employer-linked affordable housing

5.44 Policy options that were considered, as discussed in detail in Background Paper 002, are as follows:

- **Option a**: On specified sites listed in the Plan, allow developments of homes that are available only for employees who work for a specific listed organisations at an affordable rent level (as agreed with the local authority).
- **Option b**: Do not include an employer linked housing policy.

Table 5.7: Appraisal of options set 002e

SA Objective	Option A	Option B
1. Carbon emissions	**N/A**	**N/A**
2. Resilience to climate change	**N/A**	**N/A**
3. Efficient use of land	**+**	**0**
4. Local housing needs	**++**	**0**
5. Inequalities	**+**	**0**
6. Services and facilities	**N/A**	**N/A**
7. Green infrastructure, leisure and recreation	**N/A**	**N/A**
8. Traffic and associated air pollution	**+**	**0**

9. Water	**N/A**	**N/A**
10. Biodiversity	**N/A**	**N/A**
11. Good urban design / the historic environment	**N/A**	**N/A**
12. Economic growth	**++**	**0**

5.45 The option taken forward in the Local Plan is **Option A**, which allows, on specified sites listed in the Plan, developments of homes that are available only for employees who work for a specific listed organisations at an affordable rent level, as agreed with the local authority (*see Background Paper 002 for more detail*). The option also had a greater number of positive impacts against the sustainability objectives than the other option tested.

5.46 The list of specified sites reflects willing landowners and sites that would otherwise not be available for residential uses, if they were not being developed for staff. The policy also requires legal agreements to ensure that the homes are truly affordable and are addressing identified housing needs, for example to agree an allocations policy and rent levels.

Policy Options set 003a: Houses in Multiple Occupation (HMOs)

5.47 Policy options that were considered, as discussed in detail in Background Paper 003, are as follows:

- **Option a**: Prevent a concentration of HMOs in any area by only allowing a certain percentage of HMOs within a frontage or radius (currently this is 20%).
- **Option b**: Allow new purpose-built HMOs in appropriate locations, (potentially restricting the size of these in particular areas).
- **Option c**: Concentrate HMOs in certain areas so there is no restriction in particular areas and a complete or near complete restriction in others.
- **Option d**: Do not have any restriction on HMOs.

5.48 Option B is not really an alternative to the other options, but rather an additional element that could be incorporated alongside either option a, c or d.

Table 5.8: Appraisal of options set 003a

SA Objective	Option A	Option B	Option C	Option D
1. Carbon emissions	**N/A**	**N/A**	**N/A**	**N/A**

2. Resilience to climate change	**N/A**	**N/A**	**N/A**	**N/A**
3. Efficient use of land	**+**	**+**	**+**	**+**
4. Local housing needs	**+/-**	**+/-**	**+/-**	**-**
5. Inequalities	**0**	**+?**	**0**	**0**
6. Services and facilities	**N/A**	**N/A**	**N/A**	**N/A**
7. Green infrastructure, leisure and recreation	**N/A**	**N/A**	**N/A**	**N/A**
8. Traffic and associated air pollution	**N/A**	**N/A**	**N/A**	**N/A**
9. Water	**N/A**	**N/A**	**N/A**	**N/A**
10. Biodiversity	**N/A**	**N/A**	**N/A**	**N/A**
11. Good urban design / the historic environment	**0**	**+/-?**	**-?**	**-**
12. Economic growth	**N/A**	**N/A**	**N/A**	**N/A**

5.49 The option taken forward in the Local Plan is **Option A**, which will provide an opportunity for HMOs to come forward to meet needs in all parts of the city, but will avoid an over-saturation in any one length of street frontage, helping manage the potential impacts on amenity of this type of housing (s*ee Background Paper 003 for more detail*). It was also generally the better performing option in terms of impacts against the SA objectives according to SA testing, compared with its alternatives (options C and D).

5.50 Option B might potentially have additional positive impacts, but this is an additional element that could be combined with the other options and addresses requirements for purpose-built HMOs. It is not part of the preferred approach because of its potential impacts in competing with delivering housing that meets greater needs (such as social rented housing).

<u>Policy Options set 003b: Location of new student accommodation</u>

5.51 Policy options that were considered, as discussed in detail in Background Paper 003, are as follows:

- **Option a**: Restrict the locations where new student accommodation would be allowed to: on or adjacent to existing or campus sites, existing student

accommodation sites, district centres and the city centre (or potentially only parts of these or some of these) and existing student accommodation.

- **Option b**: Restrict the locations where new student accommodation would be allowed to: existing campus sites, existing student accommodation sites, district centres, the city centre and on arterial roads.
- **Option c**: Have no locational restriction on student accommodation but a criteria-based policy.
- **Option d**: Allow new student accommodation only on existing campus sites and on existing student accommodation sites.

5.52 The options set included additional options (Options E, F and G), which are not incorporated into the detailed appraisal as they address options for management of student accommodation, rather than options for spatial approach to location of this type of use which was considered to be the area where there could be significant effects that needed to be investigated further.

Table 5.9: Appraisal of options set 003b

SA Objective	Option A	Option B	Option C	Option D
1. Carbon emissions	**N/A**	**N/A**	**N/A**	**N/A**
2. Resilience to climate change	**N/A**	**N/A**	**N/A**	**N/A**
3. Efficient use of land	**0**	**0**	**0**	**?**
4. Local housing needs	**+/-**	**+/-**	**+/-**	**+/-**
5. Inequalities	**N/A**	**N/A**	**N/A**	**N/A**
6. Services and facilities	**N/A**	**N/A**	**N/A**	**N/A**
7. Green infrastructure, leisure and recreation	**N/A**	**N/A**	**N/A**	**N/A**
8. Traffic and associated air pollution	**+**	**+**	**-**	**+**
9. Water	**N/A**	**N/A**	**N/A**	**N/A**
10. Biodiversity	**N/A**	**N/A**	**N/A**	**N/A**
11. Good urban design / the historic environment	**+**	**-**	**?**	**+**
12. Economic growth	**N/A**	**N/A**	**N/A**	**N/A**

5.53 The approach taken forward in the Local Plan is a combination of **Options A**, **E and F** (s*ee Background Paper 003 for more detail*). This approach recognises that there may be additional sites, beyond existing campus/student accommodation sites, which are particularly suited to this type of accommodation, potentially more so than general market housing, and should help to achieve the high densities that these locations provide the opportunity for. It also includes a proposed approach for managing impacts from students.

Policy Options set 008c: Retrofitting existing buildings including heritage assets

5.54 Policy options that were considered, as discussed in detail in Background Paper 008, are as follows:

- **Option a**: Include a presumption in favour of retrofit measures for all existing buildings that are not heritage assets or in the setting of, subject to certain conditions, where these measures secure demonstrable carbon reduction/energy efficiency/climate adaptation.
- **Option b**: In relation to designated heritage assets and historic buildings, or proposals within conservation areas, set out that carbon reduction/ energy efficiency/climate adaptation measures will be considered as public benefits that may outweigh harm. Be explicit in setting out some key principles to follow, including the need for taking a Whole Building Approach to retro-fit. Expand on guidance through a Technical Advice Note.
- **Option c**: In relation to designated heritage assets and historic buildings, or proposals within conservation areas, set out that carbon reduction/ energy efficiency/climate adaptation measures will be considered as public benefits that may outweigh harm. Be explicit in setting out some key principles to follow, including the need for taking a Whole Building Approach to retro-fit. Additionally, set out in the policy the retro-fit measures that would be more or less likely to cause harm (e.g. permanent versus temporary), and how levels of harm would be assessed against public benefit. Expand on guidance through a Technical Advice Note.
- **Option d**: Do not include policy addressing retrofitting of existing buildings and/or heritage assets.

5.55 For the purposes of this assessment, options B and C are considered similar enough to be appraised together (the key difference is in how prescriptive the guidance around retro-fit measures would be in the policy wording, option B only setting key

principles guiding design of retro-fit, option C going further and identifying specific measures that would be considered more/less harmful).

Table 5.10: Appraisal of options set 008c

SA Objective	Option A	Option B/C	Option D
1. Carbon emissions	**+**	**+**	**0**
2. Resilience to climate change	**+**	**+**	**0**
3. Efficient use of land	**N/A**	**N/A**	**N/A**
4. Local housing needs	**N/A**	**N/A**	**N/A**
5. Inequalities	**+**	**+**	**0**
6. Services and facilities	**N/A**	**N/A**	**N/A**
7. Green infrastructure, leisure and recreation	**N/A**	**N/A**	**N/A**
8. Traffic and associated air pollution	**+**	**+**	**0**
9. Water	**N/A**	**N/A**	**N/A**
10. Biodiversity	**N/A**	**N/A**	**N/A**
11. Good urban design / the historic environment	**0**	**-?**	**0**
12. Economic growth	**N/A**	**N/A**	**N/A**

5.56 The approach taken forward in the Local Plan is a combination of **Option A and B**. This establishes clear support for retro-fitting projects that help deliver benefits in relation to mitigating/adapting to climate change and provides additional support to applicants in relation to designing proposals impacting sensitive traditional buildings/heritage assets (*see Background Paper 008 for more detail*).

5.57 The combination of these options secures greater positive impacts against the SA objectives, though potential negative impact against SA objective 11 should be mitigated through wording of policy to ensure clear requirements for applications impacting historic/traditional buildings.

<u>Policy Options set 012d: Motor vehicle parking design standard</u>

5.58 Policy options that were considered, as discussed in detail in Background Paper 012, are as follows:

- **Option a**: Seek low car residential development across the city, subject to criteria to ensure accessibility to public transport and local shops. Consideration will be given in the policy to setting a threshold for the numbers of pooled cars/ car club spaces because larger sites have more scope for successful carpooling and more space for essential vehicles.
- **Option b**: Adopt parking standards for residential developments
- **Option c**: Seek low car non-residential development across the city. This could vary by accessibility of the area of the city and/or existing parking levels.
- **Option d**: Adopt parking standards for non-residential developments

Table 5.11: Appraisal of options set 012d

SA Objective	Option A	Option B	Option C	Option D
1. Carbon emissions	**+**	**-**	**+**	**+/-?**
2. Resilience to climate change	**N/A**	**N/A**	**N/A**	**N/A**
3. Efficient use of land	**+**	**-**	**+**	**+/-?**
4. Local housing needs	**+/-**	**0**	**0**	**0**
5. Inequalities	**-?**	**0**	**0**	**0**
6. Services and facilities	**N/A**	**N/A**	**N/A**	**N/A**
7. Green infrastructure, leisure and recreation	**N/A**	**N/A**	**N/A**	**N/A**
8. Traffic and associated air pollution	**+**	**-**	**+**	**+/-?**
9. Water	**N/A**	**N/A**	**N/A**	**N/A**
10. Biodiversity	**N/A**	**N/A**	**N/A**	**N/A**
11. Good urban design / the historic environment	**+**	**-**	**+**	**+/-?**
12. Economic growth	**0**	**0**	**+/-?**	**0**

5.59 The approach taken forward in the Local Plan is a combination of **Options A**, **B and C** (*see Background Paper 012 for more detail*). This approach pushes for lower levels of parking provision in areas of the city that are suitable e.g. where they are accessible to

public transport, but accepts that some parking will be needed in parts of the city and for people that rely on a vehicle e.g. for employment or those with a disability.

5.60 In terms of effects against the SA objectives, the options have varying impact. Seeking low car where possible which will help to maximise positive sustainability impacts, but it is acknowledged that there could be some negative sustainability impact where higher levels of car parking come forward.

5.2.3 Additional policies work post-Regulation 18

5.61 Consultation feedback on the interim Sustainability Appraisal report published as part of the Regulation 18 consultation did not identify any significant omissions in terms of policy options sets that should have been 'scoped in' for detailed assessment due to likely significant effects in addition to those identified in the previous sections. There were some specific comments in relation to the appraisal of options for the Housing Requirement policy, as are detailed in Section 3.5 along with the Council's responses.

5.62 The main Regulation 18 Consultation Report documents all of the key feedback received on the draft policies that were consulted on and the alternative options that the Council identified. The consultation report identifies where changes have been made to the proposed approaches as a result, including changes to policy wording. An additional policy has been incorporated into the Regulation 19 Local Plan which addresses the safeguarding of land for a couple of key infrastructure projects (Policy I2). Options for this policy were considered following feedback from the Regulation 18 consultation.

5.63 For clarity, it should be noted that there have also been changes to the presentation of some policy requirements in the preparation of the Regulation 19 draft compared with the drafts of policies consulted on at Regulation 18 stage. Principally, this relates to the consolidation of requirements set out in individual draft policies at Regulation 18 addressing protections of various types of designated heritage asset (e.g. Conservation Areas, Listed Buildings, Registered Parks and Gardens, Scheduled Monuments) into one overarching Designated Heritage Assets policy (Policy HD3). The options previously considered and consulted on relating to these requirements remain relevant.

<u>Additional appraisal of options for protection of the green infrastructure network</u>

5.64 The Initial Sustainability Appraisal Screening of Options Sets undertaken to inform the Regulation 18 consultation (summer 2025) did not consider a detailed appraisal was required for option set 005a which related to protection of green infrastructure and green features. This was because (as drafted) the proposed option set resulted in generally

neutral, or positive impacts, the extent of which were considered to depend largely on implementation.

5.65 Following the Regulation 18 consultation, various comments were received on Policy G1, and the Local Plan's approach more generally to green space protection from a wide range of organisations and individuals. Following the analysis of the representations, and as additional work was carried out to refine the growth strategy alternatives between the statutory consultation stages, a full appraisal of a selection of some of the options consulted upon at the Regulation 18 consultation stage was considered to be beneficial. This is because the extent of protection within the green infrastructure network potentially affects the underlying context to the plan's strategy.

5.66 The initial set of options as presented in the background paper (005a Green Infrastructure) covered a range of approaches to protecting green spaces as well as other features like trees. These are reproduced in this report's Appendix B. The Council has considered what an alternative approach to protecting a hierarchy of green spaces would look like. This involved appraising updated versions of two of the previously identified options (as presented in the aforementioned background paper) for further appraisal.

5.67 These two options focus on either protecting a selection of spaces completely from development for their in-situ benefits, (Core GI), or extending the hierarchy of protection further to include an additional set of spaces which would be protected unless loss or harm from development can be sufficiently mitigated (Supporting GI). The options can be summarised as follows:

- **Option a* -** Protect a limited network of green spaces from any and all development through local policy (core GI). Allow remaining green spaces to be developed in line with national policy.
- **Option b* -** Protect a limited network of green spaces from any and all development through local policy (core GI) AND protect a broader network of green spaces from development through local policy but permit their development if the harm/loss can be mitigated through like-for-like reprovision (supporting GI). Allow remaining green spaces to be developed in line with national policy. <u>This (option b*) represents the draft policy approach consulted on at Regulation 18.</u>

*It is assumed under both options that land with intrinsic constraints e.g. flood zone 3b, national ecological/heritage designations would be protected regardless.

Table 5.12: Appraisal of options for green infrastructure network protection, adapted from the Regulation 18 options set 005a

SA Objective	Option A*	Option B*
1. Carbon emissions	0	0
2. Resilience to climate change	-	0
3. Efficient use of land	-	+/-
4. Local housing needs	+	+
5. Inequalities	+/-	0
6. Services and facilities	0	0
7. Green infrastructure, leisure and recreation	+/-	+
8. Traffic and associated air pollution	0	0
9. Water	-	0
10. Biodiversity	+/-	+
11. Good urban design / the historic environment	?	0
12. Economic growth	0	0

5.68 As the Regulation 18. options screening did not identify likely significant effects for this option set, the main driver of this new options appraisal focused on whether there would be likely significant effects on SA Framework Objective 4 – Housing. A full SA has been undertaken, however, which looks across the whole framework as is shown in the table above.

5.69 The SA of these option sets identified that both option sets would result in a minor positive effect on housing delivery and when the two options were considered side-by-side, the SA concluded that there would be a marginal difference in housing delivery. However, Option b* (the Reg. 18 approach) was considered to deliver more environmental and social benefits than the more limited GI protection provided through Option a*. On balance, therefore, this scored more highly against the SA Framework Criteria and accordingly has been selected as the policy approach to carry forward within the Regulation 19 version of the plan.

5.3 Developing Local Plan site allocations

5.70 This section discusses the process undertaken for developing site allocations for the Local Plan. The process is discussed in greater detail in Background Paper 015.

5.71 Chapter 8 of the Oxford Local Plan 2045 sets out policies for Areas of Focus and site allocations. Site allocations are policies specific to a site and set out the types of land use, or mix of uses, which would be acceptable on that site, or protects the site for certain types of development in line with the overall plan strategy. Areas of focus are broader areas where changes are anticipated over the Plan period resulting from new development, and the policy for each Area of Focus sets out key development principles specific to that area.

5.3.1 Identifying potential development sites in the city

5.72 In relation to developing housing allocations—the long-standing need for housing means that the Council applies a 'no stone left unturned' approach when identifying land that might be suitable for accommodating future housing in the city. Potential residential or mixed-use development sites for allocation through the Oxford Local Plan 2045 have been identified from a range of sources, which have then fed into the Strategic Housing Land Availability Assessment (SHLAA), including:

- Previously allocated sites in the Oxford Local Plan 2036 and any additional sites that were being considered in the Oxford Local Plan 2040;
- Further sites submitted to the Oxford Local Plan 2040 examination;
- Sites in historic planning policy documents such as the West End Area Action Plan and Sites and Housing Plan;
- Call for sites inviting landowners and others to nominate sites;
- Reviewing ongoing suitability of employment sites;
- Green spaces;
- Commitments (sites with planning permission or Prior Approval for housing);
- Sites refused planning permission or with expired planning permission or at pre-app, which are potentially suitable for development;
- Desk-based map survey.

5.73 In relation to employment allocations—the Council has also been reviewing employment land needs and assessing sites across the city as part of its Employment Land Needs Assessment (ELNA). This helped to identify sites to be allocated to be protected for employment development, as well as to update the Council's understanding of existing employment uses that should be protected through employment-related policies. Equally

it helped to identify sites which could help deliver some homes. The approach to employment sites is discussed in further detail in Background Paper 004.

5.74 Using these sources, a large initial pool of potential sites for development was identified, including housing sites and employment sites as well as some mixed-use sites. The list of initial sites are then subject to different types of assessment and refinement through the SHLAA and ELNA processes in order to identify those that the Council considers reasonable and deliverable.

5.3.2 Testing and refining site allocation for the Local Plan 2045

5.75 Many of the sites initially identified from the various sources informing the SHLAA and ELNA workstreams were not ultimately suitable for allocations in the Oxford Local Plan 2045 for various reasons. For example, the presence of intrinsic environmental constraints such as national ecological designations (e.g. the SAC and SSSIs), or undeveloped land within the flood plain (greenfield flood zone 3b) may make development ultimately unsuitable. Some sites were too small to warrant a specific allocation in the Local Plan. Other sites were not considered to be deliverable, that is whether a landowner has intent or willingness to bring forward the site for development.

5.76 As with previous Local Plans undertaken for Oxford, the Sustainability Appraisal process has been integrated into the site assessment/refinement process. This allows officers to streamline the procedure such that a single assessment can be carried out for each of the potential sites whilst also ensuring that sustainability considerations are intrinsic to developing site allocations.

5.77 All sites that pass through the initial tests as part of the SHLAA/ELNA workstreams and are considered to have potential for allocation, are subject to more in-depth appraisal using the SA framework and its site-specific criteria as was outlined in Section 3.4. Incorporating the work of the SHLAA and ELNA, alongside that of the Sustainability Appraisal, demonstrates that potential site allocations for the Local Plan 2045 have gone through a multi-stage process, as outlined in Table 5.13. The criteria applied in the SHLAA and ELNA assessments are explained in more detail in those studies.

Table 5.13: The multi-stage process of site assessment informing potential allocations for the Oxford Local Plan 2045

Stage 1a: Exclude those sites with clear conflicts with national policy and/or insurmountable environmental or physical constraints. Undertaken as part of the SHLAA*.
First stage of assessment undertaken through the SHLAA considered conflicts with national policy or insurmountable environmental/physical constraints. Sites were then taken forward for further consideration as allocations for development at Stage 1a unless they were: • A Special Area of Conservation (SAC) or Site of Special Scientific Interest (SSSI);

• Greenfield in flood zone 3b; • Less than 0.25 hectares in area OR site does not have capacity to deliver 10+ net gain dwellings**; • Already at an advanced stage in the planning process (i.e. development has commenced). *Although it should be noted that in some instances sites are still taken forward for further consideration even if one of the above applies*.
Stage 1b: Assessment against additional deliverability considerations. Undertaken as part of the SHLAA*.
All sites that had passed the Stage 1a assessment are considered at Stage 1b in terms of deliverability as part of the SHLAA process. Sites were then taken forward for further consideration as allocations for development unless: • They were extremely unlikely to become available during the plan period; • The landowner had indicated they have no intention to develop; • There was serious conflict with the National Planning Policy Framework/Oxford Local Plan Preferred Options strategy and no mitigation was possible.
Stage 2: Assessment against the SA/SEA objectives.
All sites that had passed the Stage 1a/1b assessment process were then considered against the SA/SEA objectives. Sites were scored accordingly based upon any identified positive/negative impacts against the twelve Sustainability Appraisal framework criteria.
* *The Methodology section in the Strategic Housing Land Availability Assessment (SHLAA) can be referenced for further details*. ** *Sites can still come forward during the Local Plan period as windfall development without the need for allocation*.

5.78 The first stages (1a and 1b) of filtering in the above Table are carried out across the SHLAA and ELNA workstreams. The sites that pass Stage 1 of the assessment process are assumed to be deliverable at a high-level - that is, they do not have insurmountable barriers to allocation. Those sites have then been subject to Sustainability Appraisal as part of stage 2. For sites that have passed onto Stage 2, an individual Site Assessment form has been completed, which documents the Sustainability Appraisal findings alongside the results from the assessment at Stage 1a and 1b for completeness, and these can be referenced in the consultation evidence base.

5.79 The site sustainability appraisal process helps to identify potential sustainability impacts that could arise from taking forward an allocation, based on an initial desktop review of each site's context using the site-specific scoring framework as set out in Section 3.4.2 of chapter 3. The scoring documents where development on a potential site can positively support the 12 sustainability objectives, and also helps to identify where potential negative impacts/conflicts could occur that may need to be mitigated. These mitigations would come in the form of specific requirements set out within the allocation policy (e.g. policy wording that directs applicants to incorporate buffers alongside nearby

watercourses where present; or to ensure potential impacts upon sensitive ecological sites nearby are appropriately avoided).

5.80 For the proposed site allocations identified at Regulation 18 stage, an interim site assessment incorporating SA appraisal was published for each site. As allocation policies had not been prepared for the sites at that stage, the scoring completed was subject to further work in places (e.g. the sites were scored as 'depends upon implementation' against a number of criteria). For sites carried forward to Regulation 19, the site assessment forms have subsequently been reviewed and updated to reflect the detail of the allocations and/or where information had subsequently changed, as is discussed further below.

5.3.3 Additional sites work post-Regulation 18

5.81 Following the Regulation 18 consultation, the sites being considered for site allocations were subject to further and more in-depth assessment and refinement to inform the detail of their allocation. This also took into account responses from the consultation (including any new or amended sites submitted), updates to the evidence base, and further engagement with landowners and with statutory bodies.

5.82 This additional work was often iterative and sometimes resulted in adjustments to the site allocations compared with what was consulted on at Regulation 18, for example red line boundaries being adjusted. It also helped to inform key principles for the site allocation policy and potential mitigation requirements being identified. The process is summarised in a Site Capacity Assessment form which has been completed and published for each site (note these forms are separate to the site assessments incorporating site-specific sustainability appraisal discussed earlier).

5.83 Furthermore, subsequent to the Regulation 18 consultation, the time period of the Plan was reviewed and was adjusted from 2022-2042 to 2025-2045. In response to this, some of the evidence base which had informed site allocations needed to be refreshed to reflect the new timescales, and an additional Call for Sites was also undertaken in October 2025. Landowners of site allocations were also contacted to see if they had any additional sites, whilst planning records were reviewed to identify any additional sites which could be tested for allocations, and the Green Belt assessment study had reached a stage where Green Belt and Grey Belt sites could be identified for assessment for allocations.

5.84 The additional workstreams above resulted in some new sites being introduced to the assessment process at this point, subsequent to Regulation 18. These new sites were put through the same process described earlier in Table 5.13 to filter them for their appropriateness for allocation.

5.85 Alongside new sites identified following the Regulation 18 consultation, there were a number of sites previously consulted on as proposed allocations which have not been carried forward as allocations in the Regulation 19 Local Plan for various reasons, these are detailed in Table 5.14 along with the reasoning for why.

Table 5.14: Potential site allocations identified at Regulation 18 stage which have not been carried forward to allocation at Regulation 19 stage and reason for why.

SHLAA ref	**Site name**	**Reason for site not being taken forward to allocation in Oxford Local Plan 2045 Regulation 19 document.**
62	University of Oxford Science Area and Keble Road Triangle	Does not need allocation- infill and alterations withing same type of use are expected and these can be sufficiently managed by the principles in the Area of Focus policy that covers this area.
111	Oxford Stadium (greyhound stadium)	Landowner interest in housing across the whole site, which would not come forward without loss of existing community use on the site.
173	Bayards Hill Primary School Part Playing Fields	No evidence site could come forward without unacceptable loss of playing field.
440	1 Pullens Lane	It is expected to be developed within the Local Plan time period but unlikely to deliver 10+
467	Edge of Playing Fields, Oxford Academy	No evidence site could come forward without unacceptable loss of playing field.
579	ROQ Site	Does not need allocation- infill and alterations withing same type of use are expected and these can be sufficiently managed by the principles in the Area of Focus policy that covers this area.
43	Old Road Campus	No significant change expected- does not need allocation
665 (inc 639)	Oriel College Sports Ground, Bartlemas and former Bowling Green	Partially carried forward as East Oxford Bowls Club to Reg 19. Significant heritage concerns (and playing pitch) on remaining section.
657	Clarendon Centre	Construction commenced
658	Barton 3b (Land to the rear of Harolde Close)	Biodiversity (potential priority species) and significant uncertaintly could mitigate for loss and delivery more than 10 homes.
660	2 Harberton Mead	Site is suitable but unlikely to deliver net gain of 10+

5.86 The final list of proposed allocations have also been reviewed against the site specific SA criteria again to assess any potential sustainability impacts arising from development on these sites. As discussed earlier, where interim assessments were already completed, these have been updated to take into account the latest evidence base, the specific detail of the proposed allocation policy wording as well as any other

relevant context (e.g the other local plan policies). The scoring has helped to inform any necessary mitigation measures in the site allocation wording that would be needed to avoid significant negative sustainability effects. This is discussed further in Chapter 6 (Whole Plan Appraisal) and Chapter 7 (Mitigating the Local Plan's impacts).

6. Whole Plan Appraisal – predicting impacts of the Local Plan's policies and allocations (Task B3)

6.1 This chapter assesses the impacts of the Oxford Local Plan 2045 policies and allocated sites. Section 6.1 assesses the sustainability impacts of the Local Plan's policies; Section 6.2 assesses the sustainability impacts of the allocated sites; and Section 6.3 discusses the overall impacts of the Local Plan.

6.1 Predicting the impacts of the Local Plan's policies

6.2 Table 6.1 summarises the impacts of the Local Plan's policies, using the SA/SEA framework of Table 2.4.

Table 6.1: Appraisal of impacts for Local Plan 2045 policies.

6.3 As set out in the table, the impacts of the individual policies in the Local Plan vary depending on their focus, however, the Plan needs to be read as a whole, and there is limited value in reading into the impacts of any one policy in isolation. Where policies relate to requirements for growth, such as housing, they positively support related SA objectives, such as providing for local housing need, but have potential to impact aspects of the environmental objectives more negatively such as water or carbon. Meanwhile, policies primarily focussed on mitigating impacts of development, such as net zero carbon and water quality policies, as well as protection for the historic environment, naturally lead to positive impacts against related SA criteria, whilst having neutral impacts in other areas. The benefit of the testing does help to inform the whole plan appraisal later in this chapter and will be drawn upon further there.

6.2 Predicting the impacts of the Local Plan's site allocations

6.4 Table 6.2 details the impacts of the 53 site allocations contained in chapter 8 of the Oxford Local Plan 2045. The table summarises the detailed individual assessments undertaken for each site, using the adapted SA framework for sites (as set out in Section 3.4.2). The full assessments for each site are also available separately as part of Appendix C.

Table 6.2: Appraisal of impacts for Local Plan 2045 site allocations.

6.5 The appraisal of the site allocations indicates that the sites are associated with a mixture of positive and negative impacts against the Sustainability Appraisal Framework. Where potential for negative (-) or significant negative (--) impacts has been identified, this suggests the potential need for mitigation and the approach to handling this through the Local Plan is discussed further in Chapter 7.

6.6 It should be noted that the Local Plan also includes five 'Area of Focus' policies which are not included in the above table which cover the following areas:

- Northern Edge Of Oxford Area Of Focus
- Cowley Branch Line, Littlemore And The Leys Area Of Focus
- Marston Road And Old Road Areas Of Focus
- University Areas North Of The City Centre Area Of Focus
- West End And Botley Road Area Of Focus

6.7 The Area of Focus policies cover areas in the city which are expected to go through changes over the plan period resulting from new development and where the Local Plan seeks to set out particular considerations in relation to urban design, the wider environment, movement and key infrastructure that might be needed. These areas are not development sites as such, so the criteria for individual site appraisal cannot be applied.

6.8 Because of the size of the areas there is a lot of variation within them as to what the scores would be, so detailed sites appraisal would not be meaningful. The Area of Focus policies also set out how the general policies of the plan can be met in a coordinated way across these areas. The policies therefore cover a broader array of considerations than the policies discussed in Table 6.1 above. They also do not set specific requirements for what development should come forward in the same way as a site allocation (as addressed in Table 6.2), and are not site allocations themselves, but reflect areas where there are several site allocations. They are therefore not expected to give rise to significant effects.

6.3 Overall and cumulative impacts of the Local Plan 2045

6.9 An interim whole plan appraisal was previously presented within the Reg 18 Interim Sustainability Appraisal (in Part two of that report) that considered the emerging proposals for the Local Plan as set out in the Regulation 18 consultation. This factored in preferred approaches and initial drafts of policies (absent of supporting text), but was limited in detail in relation to site allocations (as that consultation presented only a list of sites and high-level detail on expected uses for the sites but no specific policies).

6.10 Table 6.3 shows the updated whole plan appraisal which takes into account the Regulation 19 Local Plan, and draws upon the appraisals of the policies and the site allocations discussed earlier in this chapter. It also draws on relevant context from earlier in the report, including what is summarised in the scoping chapter (Chapter 3).

6.11 As well as the expected overall impacts of the Oxford Local Plan 2045 policies and site allocations; the table also touches upon the expected cumulative impacts of the Local Plan plus other relevant plans, projects and existing trends against each of the SA objectives. This is because Oxford is not an isolated island and the impact of the Local Plan can often be expected to differ when impacts of other plans, projects and trends are taken into account. It should be noted, however, that an assessment of cumulative impact is inherently more uncertain.

Table 6.3: Whole Plan appraisal including expected overall impacts of the Oxford Local Plan 2045 and cumulative impacts with other plans, projects and trends.

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
1.Carbon emissions	+/-	+/-	• The chosen growth strategy (as with the alternatives) is likely to have a negative impact for carbon emissions due to the additional growth it supports. Whilst it seeks to follow a balanced approach to distributing growth that favours use of brownfield land, the additional growth, including 9,267 of new homes to 2045, would have emissions associated with construction and operation unless these are mitigated. • The Local Plan includes policies focused on directly mitigating the impacts of carbon emissions from new development and supporting reductions in existing buildings, which will support meeting local and national net zero carbon targets. Primarily, the Local Plan seeks to ensure new buildings are net zero in operation, in order to mitigate emissions related with buildings once they are built, and also seeks to boost levels of renewable energy generation (R1). The plan includes policies that seek to reduce embodied carbon impacts (R2), although without imposing strict limits on embodied carbon, the benefit will vary across applications and will not neutralise all construction related emissions. The Local Plan also provides explicit support for applicants to undertake retrofit of existing buildings where this will have benefits for climate (R3), although this relies on occupants coming forward to undertake such projects. • There will be other indirect benefits from elements of the Local Plan as it seeks to ensure people are supported in living lifestyles that have lower carbon impacts with policies which support access to their daily needs within local/district centres that can be accessed by walking, cycling and public transport (C1 and C2). There are also policies which set requirements for transport assessment which prioritise walking/cycling (C6), limit new car parking and set guidance for EV charging (C8), and requirements for bike parking and storage in new development (HD12, C7). • **Cumulatively** with other policies, for instance, the national push towards phasing out petrol/diesel engines in favour of electric vehicles and decarbonising the national energy grid, carbon emissions are likely to go down, although not at the speed needed to achieve a net-zero carbon by the city's 2040 target. There is likely to be some level of additional emissions related to construction due to wider growth across the county for the foreseeable future.

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
2.Resilience to climate change	+/-	+	• The chosen growth strategy seeks to protect a strong network of green spaces for their various benefits including flood storage, slowing run off and promoting cooling. It will help to ensure space for development is balanced with space for resilience features like greening and SUDs as part of development sites. This will strongly support resilience to climate change. • However, the addition of 9,267 new homes will necessitate some loss of green spaces or other green features along with benefits they can provide and this would come at the cost of resilience. Table 6.2 identifies that eleven of the site allocations are located partially or wholly within Flood Zone 3b, another nine sites are located partially or wholly within Flood Zones 3a or 2. Mitigation requirements for these sites are discussed further in Chapter 7 of this report. • Despite the above, the Plan sets a strong framework for development to address flood risk (G7) and to include Sustainable Drainage Systems (SuDS) (G8), to mitigate impacts of current and future exposure to flood risk. Policies which protect green infrastructure (G1) and set standards for provision of new green features (G2 and G3) will have a range of benefits for resilience and would seek to ensure losses in GI are mitigated through reprovision in most circumstances. Proposals are also required to directly consider future climate change and set out how design has sought to mitigate risks (G9) which includes addressing risks of overheating. • Other policies will have indirect benefits in terms of resilience building, including requirements for energy efficiency and good fabric performance (R1), and for using water prudently (R5). • In terms of **cumulative** impact, the climate will continue to change due to ongoing emissions and the long lifetime of the emissions already in the atmosphere. This will bring new risks which means that levels of resilience are in an ever-changing state. Development upstream of Oxford is likely to increase runoff, leading to increased flooding in Oxford, however, the Oxford Flood Alleviation Scheme, expected to be in operation by 2030, will reduce the risk of flooding from the River Thames for many properties in Oxford. There are planned improvements for meeting water supplies as WRMPs take effect which should support future needs, but the strain on supplies will worsen with additional growth and will need additional interventions in future.
3.Efficient use of land	+/-	+/-	• The chosen growth strategy promotes efficient use of land through a brownfield first approach, seeking to maximise capacity of sites whilst meeting other sustainability objectives. The strategy does allow for the loss of some green spaces as brownfield land alone will not be able to meet needs, but would be steering development to the lower quality green spaces in the first instance.

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			• Efficient use of land is promoted through various policies, principally through the density requirements and other considerations of making efficient use of land (HD2). Other policies seek to limit new car parking (C8), require applicants to remediate land so as to bring previously contaminated sites back into use (R7), and guide particular uses to local/district/city centre(s) (C1). • The plan prioritises development sites in the city for housing and aims to provide for 9,267 new homes—a target that has been informed by a detailed assessment of the capacity of all available land in Oxford. Table 6.2 identifies that thirteen of the site allocations are located on open space/greenfield land, one is previously developed land that is located within the Green Belt (SPE9 Marston Paddock Extension). The allocation policies themselves seek to maximise capacity of sites by setting minimum housing numbers that have been informed by site-specific capacity considerations. • In relation to employment land, the plan does not allocate new employment sites, but instead seeks to drive the intensifying and modernizing of employment land (E1). It also allows for an element of housing to come forward on employment sites which also supports efficiency. • It could be argued that the plan's wider environmental requirements in relation to green infrastructure, biodiversity and heritage policies reduce the 'efficiency' of land used for housing. However, efficient use of land more broadly also needs to incorporate sufficient safeguards for the wider environment to ensure the Local Plan delivers sustainable growth. • Overall, whilst there would be some negative impacts on greenfield land as some sites would inevitably be developed to accommodate housing need, there would also be positive impacts in terms of optimising development density and reducing the need to build elsewhere (where potentially higher densities would be less likely and more reliance on cars with associated car parking would be needed). **Cumulatively,** with other Local Plans, again the Local Plan would reduce the amount of undeveloped land across the county, but less than under other alternatives.
4.Local housing needs	+	+	• The chosen growth strategy provides a positive impact for contributing to housing needs by prioritizing housing and seeking to maximise capacity across sites in the city. However, the need for balancing other Local Plan objectives such as protecting and enhancing the natural environment, alongside Oxford's intrinsic constraints on land (e.g. flood plain, national designations) means these needs cannot be met in full.

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			• Oxford's housing need as defined by the government standard method is 1,087 homes per year and Policy H1 provides for at least 9,267 new homes across the Plan period (463 homes/year). This will be a positive impact that reduces local housing need, but it means that there will be under-provision which adjacent local authorities would likely need to fill. • The Local Plan has policies which support housing needs of different groups. Policies H2-H4 aim to provide affordable homes, and policies H7-H14 focus on providing specialist accommodation for particular groups including those who need temporary accommodation, students, travelling communities, boat dwellers, older people, and boarding school pupils. • The overall impact of the Local Plan is to positively impact housing need, despite not being able to meet this need in the city in full. The neighbouring authorities in Oxfordshire are all at varying stages of development of their own Local Plans and these contain allocations agreed under the previous round of plan making which accommodate some of Oxford's unmet need to 2036. **Cumulatively**, this will have some positive impact for Local Housing Need.
5.Inequalities	+	I	• The chosen growth strategy is likely to have some indirect impacts on various elements of inequality, such as access to affordable housing or access to jobs, but this will often depend on how development comes forward. • As discussed under objective 4, the plan sets policies for supporting housing needs of various groups including affordable housing, and those with specialist housing needs. There are also design policies which help to ensure the quality of housing is addressed (e.g. wheelchair accessibility, space standards, privacy and daylight). Meanwhile, the Local Plan also includes requirements for affordable workspaces (E4) and employment and procurement plans (E3) which should have some positive impacts in relation to economic inequality. • Additionally, the plan strongly supports protection of green infrastructure and greening of new development which can have a variety of benefits for physical and mental health, as well as walking, cycling and public transport, which should help those without access to a car. Requirements of major developments to undertake Health Impact Assessment should also help to ensure proposals respond to inequalities in the local area. • The overall impact for inequalities should be positive though this is subject to some uncertainty, particularly as many of the benefits above depend on how applications come forward and the Plan's requirements are

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			implemented. The city remains one of the most unaffordable places to live, and the Local Plan is not able to provide for all of its housing need, which would include affordable homes, and this could limit any positive impact. When the Local Plan is looked at alongside wider trends in society, the **cumulative** impact is likely to be negated by a range of national and international drivers which continue to exacerbate the cost of living crisis, entrenching and/or worsening existing inequalities.
6.Services and facilities	**0**	**0**	• The chosen growth strategy's focus on delivering new housing on brownfield sites in the city can help to ensure more people live in areas that have good access to a range of services/facilities. Where greenfield sites are developed, these are likely to have some reduced access, although the majority of the city is generally considered to be accessible. • The new development that is being planned for in the Local Plan has the potential to bring additional pressures for existing services/facilities due to the growth in population this brings with it, and this is true of the additional 9,267 new homes the Local Plan aims to provide for. However, the Local Plan is supported by its Infrastructure Delivery Plan (IDP) and aims to ensure that adequate infrastructure is available including those that are identified in the IDP to support Oxford's housing and employment growth (S3). The Plan also supports the provision of services and facilities in town/district/local centres (C1 and C2), and aims to prevent the loss of community facilities, learning institutions and cultural venues (C3, C4, and C5). • The Local Plan also seeks to support particular infrastructure improvements aimed at ensuring that services and facilities are easily accessible, including the redevelopment of the Oxford train station, work towards a Cowley Branch Line, and other transport works (e.g. traffic filters). • Whilst the additional growth expected to arise from the Local Plan will increase pressures on existing services and facilities, the overall impact and **cumulative** impact with other plans and projects, is expected to be unlikely to significantly change access to services and facilities.
7.Green infrastructure, leisure and recreation	0	0	• Whilst the chosen growth strategy option does allow for some greenfield sites to be developed, it provides for the most beneficial approach to protecting high-quality, multifunctional green infrastructure and allowing for additional greening on development through a balanced approach to developing sites. • Policy G1 defines and protects a Green Infrastructure network made up of a variety of typologies of green space and other features and this includes spaces that are important to leisure and recreation such as parks and

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			pitches as well as other areas like allotments. It will help to ensure existing deficits in access that have been identified across the city will not get worse. Meanwhile, the Local Plan also sets requirements for new provision of green features, including that proposals for major development meet minimum targets according to the Urban Greening Factor and do not result in a reduction in baseline score (G2 and G3). The minimum targets are set fairly conservatively to ensure some provision of green surface cover, whilst recognizing that many sites are constrained and need to deliver a variety of uses onsite. • The framework of the above policies allows for losses of green features in particular circumstances (e.g. on supporting G1 spaces, or where retention is technically unfeasible), but also sets requirements for mitigating these losses including reprovision where necessary which should generally neutralise these. There could be instances where poorer quality green features are lost to new development, particularly on wholly greenfield sites with limited scope for fully retaining the same levels of green surface cover, however, equally, there will be situations where development will bring about an overall increase in greening, e.g. on wholly urbanised sites that need to meet minimum greening targets. • Overall, the policies of the plan will help to ensure minimum levels of greening on new development, and could bring about small levels of enhancement to existing spaces. Equally, the provisions for growth including new housing will result in the loss of some green infrastructure, though the Local Plan policies and specific requirements in the allocations will help to mitigate impacts. The **cumulative** impact alongside other plans and trends is likely to remain similar.
8.Traffic and associated air pollution	**+/ -**	**+**	• The chosen growth strategy is likely to have positive and negative impacts. Prioritising additional housing in the city could help to reduce in-commuting by providing additional housing for workers in the city, but equally, more housing could increase car ownership depending on how this is implemented (e.g. if residents need to rely on a vehicle), including how other elements of the Local Plan's requirements are met (as discussed further below). As some housing need would not be able to be met in the city, there is potential for some additional traffic impacts elsewhere from housing needing to be delivered beyond the city, however, this is highly dependant on where and how this unmet need is incorporated into relevant plans (e.g. proximity to public transport routes). • A key theme running through the Local Plan is liveable communities where people can meet all their daily needs through walking/cycling/wheeling and without relying on private vehicles. The Local Plan has policies which support vibrant local/district centres (C1 and C2). It also has policies that seek to enable people to take up

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			active and sustainable transport options, including requirements for transport assessments which prioritise walking/cycling (C6), limit new car parking and set guidance for EV charging (C8), and require provision for bike parking and storage in new development (HD12, C7). • **Cumulatively**, in terms of air pollution, the impact of private vehicles is likely to continue to reduce in the long term due to various county transport measures (e.g. Low Emission Zone, electrification of bus fleet etc.), and national phasing out of fossil fuel vehicles, (though this trend is longer term).
9.Water	-	--	• The chosen growth strategy will introduce additional demands for water from new housing (as with the alternatives). The balanced approach to development, however, will allow for the best outcomes in terms of mitigating impacts on the sensitive water environment. • The impacts from the Local Plan and cumulatively with other plans needs to be considered in two dimensions: Water resources • The delivery of 9,267 new homes and associated population increase will put additional demands on water resources. The Local Plan includes requirements for new development to limit impacts on water resources through water use limits and other water saving measures (R5) which responds to Oxford's location in a water stressed region. • Overall, the impact of these requirements is unlikely to completely offset the additional demands on water supplies arising from new development. **Cumulatively**, alongside plans for significant additional development of neighbouring authority areas, the impact is likely to worsen, however, this will be mitigated somewhat by the range of water saving interventions being planned for by Thames Water through their Water Resources Management Plan, though there will likely need to be additional interventions towards the end of the plan period. Water quality • Whilst the waterbodies in the city face ongoing water quality challenges due to pollution from a range of sources, the Local Plan most directly impacts this through generating additional pressures on wastewater treatment and increasing levels of run off due to urbanisation. • The Plan sets requirements that seek to ensure development mitigates impacts on water quality where this is directly in the applicants' control (R5). Other policy areas will also have a positive impact, such as by seeking to

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			preserve amenity and environmental health from release of pollutants (R8), and protections for sensitive ecological sites (G6). Additionally, there are protections for watercourses, including requirements for ecological buffers (G2), this will be of relevance to the various sites identified in Table 6.2 as containing or being in close proximity to a watercourse. Collectively, alongside the general approaches to seeking more greening on developments should also support reducing surface water flows (G2, G3), these should help to neutralise direct negative impacts on water quality. • On wastewater treatment capacity and associated infrastructure, which is a key factor in mitigating additional wastewater treatment pressures from new development, additional housing will increase demands on wastewater treatment infrastructure. The Local Plan seeks to ensure new development is supported by investment in infrastructure where needed to support this growth (S3). Thames Water are already in the process of upgrading the Oxford Wastewater Treatment Works. The sequence of planned upgrades is expected to allow capacity for the development of new homes in and around Oxford and is an important solution for helping to mitigate water quality impacts from future growth. **Cumulatively**, these upgrades alongside the Local Plan's requirements should ensure a neutral impact for water quality.
10.Biodiversity	**+/-**	**+/-**	• The balanced approach to growth in the chosen growth strategy allows for protection of a network of green and blue spaces and also allows onsite capacity to be balanced with other objectives such as incorporating open space and greening which can support biodiversity, although it does allow for some loss of green spaces. • The Local Plan's chapter 4 supports biodiversity through a number of policies. Principally, those that relate to protection of biodiversity, including designated sites and ecological features elsewhere (G6) as well as policies for net gain and onsite biodiversity features (G4 and G5). The policies for protection and enhancement of green infrastructure (G1-G3) will also support preserving and making new space for species, particularly as the GI network (G1) is protecting designated sites and sites with informal benefit for biodiversity, including corridors that help species to move across the city. • However, the provision of new homes will involve building on some greenfield sites as recognised earlier, reducing space for biodiversity and potentially impacting species and habitat present there. Table 6.2 identifies that ten site allocations are on or adjacent to designated ecological sites (adjacent to in actuality). Separately, the Council's Source Pathway Receptor Analysis and Habitats Regulations Assessment have also identified

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			potential sites that could have impacts on designated sites. Mitigation requirements for any site allocations that could impact designated sites are discussed further in Chapter 7 of this report. • Indirectly, various policies play a role in protecting the environment from the impacts of this new development including, sustainable drainage systems requirements (G8), air quality (R4), water quality (R5) and Amenity/environmental health (R8). These should help to ensure direct negative impacts like pollution are neutralised. • **Cumulatively**, the impact is also likely to be mixed. Biodiversity is continuing to face a range of challenges nationally which is driving ongoing declines. Adjacent local authorities are also likely to see additional development on greenfield sites which is likely to negatively impact biodiversity. Conversely, the national Biodiversity Net Gain (BNG) requirements necessitate 10% BNG on all new planning permissions (subject to some exemptions) and are intended to bring about improvements for biodiversity nationally. The County has also now finalized and published its Local Nature Recovery Strategy for Oxfordshire which also supports the delivery of improvements for biodiversity by identifying the best opportunities for enhancement, although in the city these opportunities are limited.
11.Good urban design / the historic environment	**+/ -**	**0**	• The chosen growth strategy should avoid the most significant negative impacts to the historic environment (compared to the alternatives). It would also enable the most positive benefit in relation to high-quality design and conserving heritage, on the assumption that this requires a balancing of various types of uses on sites—meeting growth needs whilst ensuring this is sustainable. • The Local Plan's historic environment policies (HD3-HD5) are primarily focused on mitigating harm, protecting Oxford's various heritage assets from the negative impacts that could arise from new development. These will largely ensure no further harm and neutral impacts, although there may be some minor positive impact as they do discuss taking opportunities to enhance these assets in places. Table 6.2 identifies that 16 site allocations are in Conservation Areas; and 8 contain listed buildings, with a number of others lying adjacent to one of these assets and within its wider setting. Again, mitigation requirements for any site allocations that could impact sensitive heritage assets are discussed further in Chapter 7 of this report. • The Local Plan also seeks to promote high quality design in new development, principally through policies S2 and HD1, along with the Design checklist features in the appendix, as well as the other design policies in chapter 6 (HD6-HD12). Other policies in the Plan promote various aspects of high-quality design which could

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			have indirect benefits, such as requirements for green infrastructure (G2 and G3), onsite ecological enhancements (G5), and climate resilience (G9). Conversely, construction in greenfield locations could negatively affect the land/townscape, whilst net zero carbon requirements (R1) and requirements around onsite greening and biodiversity (G3 and G5) will necessitate different approaches to design than in the past so as to support sustainability and overall performance; however, they could also be construed as important elements of high quality design, so impact may be mixed and will depend upon implementation. • The NPPF and National Design Guide already strongly promote heritage protection and good design, and **cumulatively** with the Local Plan, change is likely to be insignificant.
12.Economic growth	+	+	• While the chosen growth strategy focuses on prioritising new sites for housing, it is likely to have a positive effect on economic growth as the employment strategy (Policy E1) creates the conditions for Oxford to meet its identified employment floorspace needs arising to 2045 within the city. • The plan's employment strategy seeks to modernise and intensify existing employment sites, while supporting a flexible approach to land-uses within the city and district centres to be able to respond quickly to changing needs and economic circumstances and encourage a wide range of uses (including housing). Encouraging a range of appropriate uses within the city and district centres supports their vitality and vibrancy which also has a positive effect on economic growth of the local economy. • The plan's employment strategy (Policy E1) also supports the complete loss of the city's poorly performing employment sites to housing and enables an element of housing to come forward on the city's Key Employment Sites (subject to certain criteria being met). • Housing affordability issues coupled with lack of affordable housing are often cited by employers in the city as reasons why they struggle to attract and retain staff. By creating the conditions to enable housing delivery across Oxford is likely to have a positive effect on economic growth by helping to address the affordability-related barriers. • The plan also supports economic diversity by ensuring that larger major development proposals can support the local economy by choosing to source materials locally, providing employment opportunities for local people or by supporting local educational initiatives by submitting a Community Employment and Procurement Plan (Policy E3). This is likely to have positive effect on the local economy and thereby support economic growth as it provides local people with the skills, training and opportunities to find work.

SA/SEA topic	Overall impact	Cumulative impact	Appraisal comments
			• The city's strong recent market for commercial research and development (R&D) and flexible laboratory space (and its associated prime rents) has resulted in many SMEs and social enterprises being priced out of the city or struggling to find affordable workspace. This unintended consequence of economic success risks undermining economic diversity in the city, with associated potential likely negative effects (albeit minor). The plan's response is to therefore to provide mitigation (Policy E4) which introduces a process to facilitate delivery of affordable workspaces on certain named sites. It is anticipated that, through the introduction of a flexible policy approach, this will help to overcome the unintended negative consequences of an otherwise successful economy. • Oxford's visitor economy also makes a positive contribution to economic growth, and that encouraging visitors to the city to stay longer and spend more is likely to have a positive impact on the local economy. However, the plan recognises that this should not be at the expense of much-needed housing and supports new hotel and short stay accommodation (Policy E5) at a limited number of sustainable and accessible locations including the city and district centres, and on arterial roads. This provides a balanced approach that supports both the visitor economy and enables much-needed housing to come forward elsewhere. • Oxford's strong employment land supply suggests that there is a healthy demand-driven market supporting key economic sectors relating to R&D and associated flexible-lab enabled uses. • Nevertheless, the overall impact of the plan is expected to be positive for supporting the local economy. **Cumulatively**, whilst macro-economic uncertainties associated with the long-term impacts of Brexit, the on-going war in Ukraine and fluctuating Tariffs from the United States, continue, the long-term economic picture for the city is a positive one. Oxford and Oxfordshire continue to contribute to the national economy, while the city anchors one end of Oxford-Cambridge Growth Corridor, which reinforces a likely longer-term positive effect on economic growth which has been supported by recent government announcements for infrastructure.

6.12 Table 6.4 summarises the main **direct** and **indirect** impacts of the Local Plan.

Table 6.4: Direct and indirect impacts of the Oxford Local Plan 2045.

Direct impact(s)	Indirect impact(s)
• Provision of new housing contributes positively towards identified housing need, including for affordable housing. • Protecting key employment sites whilst promoting their intensification and modernisation will support the local and regional economy. Requirements for affordable workspaces and skills plans should support inclusive economy. • Pushing for higher density development will help ensure more efficient use of land and support delivery of more homes, employment. • More development will result in some loss of greenspace/green infrastructure, but policies seek reprovision neutralising losses. Requirements should drive greener development, particularly brownfield sites, and also help to make additional spaces for biodiversity on sites. • More development will result in more carbon emissions associated with construction. Net zero policy should neutralise carbon associated with operation and bring about additional renewable energy generation. • Additional demands on resources like water supplies and energy, coupled with less demand on other resources like fossil fuels. • Significant environmental impacts including on biodiversity would largely be neutralised through various mitigation requirements built into the policies. • New infrastructure delivered where needed to support new development.	• Population growth associated with more housing will likely increase demands on facilities, as well as impact air quality congestion where this is accompanied by more car ownership, although mitigated somewhat by strong drive for reducing reliance on car ownership. • Capacity based requirement for housing means some need will need to be met beyond Oxford's boundaries, with knock on impacts e.g. numbers travelling into city for work impacting congestion and air quality, loss of greenspace elsewhere etc. • Enabling some shift from employment land to housing will help contribute to housing needs and will also improve accessibility to jobs, reducing barriers to employment and helping support air quality objectives and reducing congestion by allowing employees to live closer to work. • More support for retrofitting of existing buildings should improve energy efficiency and carbon footprint as well as climate resilience. Energy offset fund should support further retro-fitting of existing buildings elsewhere. • Protection and enhancement of green areas, should support health and wellbeing of residents, as well as climate change adaptation. Should also benefit biodiversity in conjunction with other interventions. • Requirements on high-quality design and heritage should protect and improve local townscape as well as setting of heritage assets. • Protection of local/district centres and requirements to support more walking/cycling/wheeling and access to public transport should benefit people's health, air quality and congestion;

6.13 Table 6.5 summarises the expected **short term, temporary** impacts versus the **long term, permanent** impacts of the Local Plan.

Table 6.5: Short term, temporary and long term, permanent impacts of the Local Plan.

Short term, temporary	Long term, permanent
• Largely these relate to impacts arising from construction processes for new development including dust, noise, traffic and other impacts. • Additional air pollution relating to some increase in cars related to population growth although should diminish as fossil fuels are phased out.	• Delivering new homes should help reduce housing need, including for affordable homes, as well as barriers to economic growth. • Some loss of employment land to other uses e.g. housing. Equally, ongoing support for the region's economy; • More sustainable, climate resilient and energy efficient buildings – supporting a reducing carbon footprint and less need to retro-fit. More space for nature and greener developments. • Increased urbanisation and intensification of development leading to some loss of green space (alongside greener development elsewhere). • Additional demands on resources like water and energy. • Reduced levels of inequality though this is also dependent on wider factors (e.g. national economy). • Reduced car traffic and air pollution due to strong support for walking/cycling/wheeling and public transport. • More infrastructure and/or services to meet additional demands generated by population growth.

6.14 The Local Plan will have a range of impacts across the SA objectives. The plan will positively support inequalities, economic growth and local housing need (although the city's capacity means need cannot be met in full). Some impacts are varied, such as on carbon emissions, biodiversity and traffic where the Local Plan's policies make positive contributions through the requirements of its policies (e.g. net zero development, renewable energy generation, ecological enhancements, supporting more people to live closer to work and in accessible locations), whilst being unable to avoid some impacts of new development. The impact on water is expected to be negative, predominantly due to additional demands on water resources arising from population growth, although the Local Plan's policies seek to mitigate this as far as they can.

6.15 Some negative impacts have been reduced where mitigation has been built into the policy framework, this is discussed further in chapter 7. The mitigations built into the Local Plan mean some impacts against the objectives are ultimately neutralised, as is the case under green infrastructure and services/facilities. Some negative impacts are not able to be fully mitigated, as is the case under water and carbon emissions for example, particularly when impacts of other plans, projects and wider trends are taken into account.

7. Mitigating the Local Plan's impacts (Task B4)

7.1 This chapter discusses the necessary mitigation measures required to prevent, reduce and as fully as possible offset any significant adverse effects arising from the new Local Plan. The chapter discusses mitigation measures that have been incorporated into the plan as it has been prepared, as well as how the Sustainability Appraisal process has helped to identify and inform mitigation measures incorporated into the site allocations.

7.1 Mitigating negative impacts and maximising positive impacts of the Local Plan's policies

7.2 The potential for significant adverse effects arising from the Local Plan has been an integral consideration throughout the development of the Local Plan. It is important to note that the policies of the plan need to be read as a whole, and whilst some could have adverse effects in isolation, others play an important role in offsetting these and the Council has generally sought to incorporate various mitigation measures into the policy framework to address these where they have been identified – many of these are also valuable for securing positive impacts from development.

7.3 There are some key policy areas which are included in the plan which seek to address the main adverse effects arising from the plan as follows:

- **Carbon emissions** – Some level of emissions can be expected under any of the growth strategy alternatives considered for the Local Plan. Whilst the chosen growth strategy is one of the options associated with the reduced negative impact, by its nature of delivering lower levels of growth and protecting a wider range of green spaces, it would still have impacts without sufficient mitigation. **Policy R1** is the primary mitigation, seeking to ensure all new buildings are net zero in operation and ensuring no net increase in emissions through their operation by requiring high levels of energy efficiency and matching energy demand through new renewable energy generation. The approach is also supported by **Policy R3** which seeks to strongly support retro-fitting of existing buildings to reduce their carbon impacts.

  Emissions associated with construction are a more complex issue and one that cannot be fully mitigated at present. The Local Plan takes an important step forward through **Policy R2** in strengthening requirements for addressing embodied carbon in construction however, although some level of impact will remain.

- **Traffic and air pollution –** Additional growth is likely to be accompanied by some increase in private vehicle ownership, though equally it can help reduce congestion

in city by allowing people to live closer to work. Whilst cumulative efforts regionally and nationally are expected to bring down emissions related to vehicles over time, some sources of pollutants associated with things like break pads and tyre dust will remain. The Local Plan includes various policies, particularly through **Chapter 7**, that seek to promote walking/cycling/wheeling and improved access to public transport so that people and are important forms of mitigation to help reduce the impacts of growth on problems of congestion and air pollution. Additionally, **Policy R4** sets out various requirements to address air quality impacts.

- **Water –** New development being planned for can impact water quality and water resources without sufficient mitigation. Most directly, the Local Plan includes a specific water resources and quality policy (**Policy R5**) which seeks to ensure impacts are mitigated and sets out various requirements for applicants including meeting water use limits, with other water conservation methods, as well as ensuring no adverse impacts on water quality. This is also supported by a range of other policies such as preserving amenity and environmental health from release of pollutants (**Policy R8**), additional protections for sensitive ecological sites (**Policy G6**), requirements for ecological buffers (**Policy G2**), as well as generally seeking more greening on developments (**Policies G2, G3**).

  These requirements, in combination with upgrades in progress by Thames Water on the wastewater treatment infrastructure should ensure neutral impact on water quality over time. In relation to water resources, they are important for reducing impacts from development as far as is practically possible, although the impacts of the additional demand cannot be fully neutralised without further interventions more broadly across the catchment from other stakeholders.

- **Green infrastructure and biodiversity –** The city is highly constrained and in order to go as far as possible in meeting identified housing needs and meet other Local Plan objectives, some loss of greenfield sites and green infrastructure is inevitable, with associated adverse effects for wildlife and habitats. The Local Plan includes a range of important mitigation measures to neutralise these impacts as far as possible. Principally, a network of core and supporting green spaces is protected through **Policy G1** which includes national and local designated ecological sites. Additional protections related to the particular ecological considerations for designated sites is assigned through **Policy G6**. Whilst **Policy G1** allows development to impact upon supporting spaces, the impacts need to be mitigated for through reprovision to the same standard or higher.

Additionally, the Local Plan includes strong requirements in relation to providing new green features (**Policies G2 and G3**) as well as requirements for onsite ecological enhancements (**Policy G5**)**.** These play an important role in bringing in additional green features, and features that are important for local species which are often already under threat.

- **Infrastructure and services –** The growth that is planned for, including new housing, as well as development of employment sites, will need to be supported by new infrastructure or improvements to existing infrastructure. The Infrastructure Delivery Plan identifies the key infrastructure needs in the city which the Council has identified through engagement with various stakeholders. The Local Plan includes a strategic policy (**Policy S3**) which aims to ensure that essential infrastructure needs to facilitate new development are provided for and is important for helping to ensure the plans proposals do not have adverse impacts related to these needs not being met.

7.2 Mitigating negative site-specific impacts arising from Local Plan site allocations and maximising positives

7.4 Where development on allocated sites is likely to have significant impacts, the Local Plan's site allocation policies (as set out in Chapter 8 of the plan) incorporate mitigation measures to minimise or obviate those impacts, whilst also identifying opportunities to bring about positive impacts. Many of these refer to the plan's development management policies. In other instances, where there are no site-specific considerations that would warrant an explicit cross reference to the development management policies in the allocation itself, they would be expected to nevertheless ensure for mitigation as part of any proposed development where necessary. These include mitigation measures related to:

A. Urban design (HD1 Principles of High-Quality Design)
B. Buffer area around adjacent wildlife site (G6 Protecting Oxford's Biodiversity)
C. Walking, cycling, public transport (various policies in Chapter 7 of Local Plan although generally no explicit cross reference in site allocations unless a site-specific requirement has been identified)
D. Protection of view cone/ Tall buildings (HD6 Views and Building Heights)
E. Protection of archaeology (HD5 Archaeology)
F. Provision/protection of community facilities (C3 Protection, Alteration and Provision of Local Community Facilities)

G. Protection of biodiversity including HRA related (G6 Protecting Oxford's Biodiversity)
H. Green infrastructure requirements (G1 Protection of Green Infrastructure, G3 Provision of New Green & Blue Features – Urban Greening Factor)
I. Compensation re. green belt
J. Conservation area management (HD3 Designated Heritage Assets)
K. Air quality management (R4 Air Quality Assessments and Standards - No explicit cross reference in any site allocation policies).
L. Provision of public open space (G2 Enhancement & Provision of New Green and Blue Infrastructure)
M. Listed building management (HD3 Designated Heritage Assets)
N. Protection of water body / SuDS (G2 Enhancement & Provision of New Green and Blue Infrastructure and/or G8 Sustainable Drainage Systems)
O. Protection from flood risk / sequential approach (G7 Flood Risk and Flood Risk Assessments)

7.5 As part of the SA/SEA process, the individual site assessments, which are summarised at Table 6.2 of this report, were compared to the wording of the site allocation policies in Chapter 8 of the Local Plan. Table 7.1 shows those negative impacts identified as part of the site assessment process (in amber and red, from Table 6.2), and the mitigation measures proposed to address them. This has allowed for a cross-check to ensure that all significant impacts are mitigated.

Table 7.1: Mitigation measures (letters) for negative impacts identified as part of the site assessment process (red and amber in Table 6.2).

7.6 As part of this cross-checking exercise between the site assessments and the policies, some impacts flagged in the site assessments were identified that had not initially clearly been mitigated in the site allocation policies. The team have subsequently updated the policies to pick up the additional mitigations needed and strengthen their alignment with the analysis of the site assessments. In some instances, the policies have not been amended further where an overarching policy elsewhere in the Local Plan will address the issue without need for an explicit cross-reference in the allocation policy with more site specific guidance. For example:

- Air Quality - The entire city is covered by an Air Quality Management Area, as such all sites were scored as having a potential negative impact for air quality. There are a number of hotspots dispersed across the city generally corresponding with high traffic areas, and the sites were compared with these with none being identified as sufficiently close to necessitate a significant negative impact. Policy R4 sufficiently sets out requirements for development wherever it occurs in the city without need

for site-specific requirements, although some allocations do flag proximity to potential sources of air pollution which would need to be considered.

- Proximity to services (e.g. Bus stop, rail station, primary/secondary school, GP, Post Office) – where lack of access to these services is identified as a potential negative, mitigation in the policies is generally focussed around requiring applicants to consider measures that can support active travel and improve connectivity to services in wider area via walking/cycling/wheeling and/or public transport. The policies within Chapter 7 would also act as important mitigation, though it was not considered necessary to explicitly reference these in all allocations.
- Proximity to a waterbody – the assessment identifies potential negative impacts where a site is in proximity to a water body which is highlighted on a number of sites. Mitigation requirements are already built into the Local Plan through policy G2 which sets requirements for buffers to watercourses which would apply, and separate policies set requirements for mitigating impacts from pollutants (policy R5 and R8), and this was expected to be sufficient in many cases. However, where the specific context of a site indicates particular risks of impact, e.g. because an open watercourse is in close proximity to where development might be expected to come forward within a site, specific wording has been incorporated into the allocation.

7.7 Additionally, separate technical work arising from the Council's Habitat Regulations Assessment (HRA) (which considers whether there would be likely significant effects on "European Sites" within 10km of the city) and Source Pathway Receptor Analysis (SPRA) (which looks at the SSSIs within Oxford), has informed the plan-making process. Where the HRA and SPRA have identified specific mitigation measures (for the HRA this was undertaken as part of a Stage 2 Appropriate Assessment), these mitigation measures have been included within certain specific policies and site allocations.

8. Monitoring the Local Plan's impacts

8.1 The Council undertakes yearly monitoring of key policy areas in the Local Plan 2036, these are published annually on the Authority Monitoring Report webpage. As part of this yearly monitoring, some (but not all) of the indicators proposed in the SA/SEA report for the Local Plan 2036 have also been monitored. The lack of monitoring reflects resource constraints on the Council, and the fact that some underlying data (e.g. on water quality, condition of Sites of Special Scientific Interest, Index of Multiple Deprivation) are collected nationally and only available sporadically.

8.2 Reflecting these realities, the following table (Table 8.1) seeks to propose a realistic and implementable SA/SEA monitoring framework. The first section (columns 1 and 2)

relates to Local Plan outcomes, which would be monitored annually, and would be made available annually in the Authority Monitoring Reports. These indicators relate to the effectiveness of specific plan policies that are particularly important for achieving sustainability outcomes. The second section (columns 3 and 4) relates to more long-term sustainability outcomes that link to some broader environmental standards, these would be monitored every 3 years and would be made available in an SA/SEA appendix to the appropriate Authority Monitoring Reports. They focus on sustainability outcomes that are particularly important to Oxford and also aim to act as a step towards the government's proposed Environmental Outcome Reporting.

8.3 Education and tourism are not proposed for monitoring because their links to sustainability impact of the plan are limited

Table 8.1: Proposed SA/SEA monitoring framework.

SA/SEA topic	Monitoring of Local Plan 2045 outcomes (every year)	Monitoring of sustainability outcomes (every 3 years)	Target/ standard
1. Carbon emissions	Contributions secured towards and proportion spent from energy offset fund (assumes that all other developments are net zero carbon)	Change in per capita CO2 emissions	Net zero carbon city by 2040
2. Resilience to climate change	Applications permitted against Environment Agency flood risk advice	Change in no. homes in flood zone 3	Minimise numbers of new dwellings in flood risk/avoid increasing flood risk elsewhere in city.
3. Efficient use of land & 7. Green infrastructure and leisure	Applications permitted on protected green space		Resist loss of protected green space
4. Local housing needs	Net housing completions	Change in population / households	Delivery of new housing to meet identified needs.
5. Inequalities	Net affordable housing completions	Changes in inequalities according to indices of Multiple Deprivation	Reductions in deprivation
6. Services, facilities and infrastructure	Applications permitted for new community spaces,	Significant new community assets	Delivery of new services/facilities to

	cultural venues and visitor attractions		support local residents
8. Traffic and air pollution	Air quality progress: NOx, PM10, PM2.5	Modal split of journey in Oxford	City/UK air quality standards
9. Water		Changes in quality of watercourses according to WFD classifications for chemical quality and biological quality.	Water Framework Directive targets
10. Biodiversity	Biodiversity net gain being delivered in the city.	Condition of SSSIs, integrity of SAC, condition of local wildlife sites.	No reduction in condition/integrity of ecological designations.
11. Urban design and heritage	Applications permitted that result in the loss of listed buildings, registered parks and gardens, scheduled monuments	Change in no. heritage assets at risk	No loss in protected heritage
12. Economic growth	Net gain / loss of employment floorspace (sqm)	% employment / unemployment in the city	Supporting economic growth through job creation.

9. Next steps

9.1 Any comments on the Regulation 19 Submission Draft Local Plan and this SA/SEA report should be submitted as part of the consultation which begins 30th January 2026. More details can be found on the website: https://www.oxford.gov.uk/oxford-local-plan-2045

9.2 The Local Plan is expected to be submitted for examination later in 2026. Once submitted for examination, the timetable is not within the City Council's control. Based on the timescales for the examination of the Oxford Local Plan 2036 the examination period is expected to be around 15 months, from submission to adoption meaning that the Local Plan is expected to be adopted in 2027.

Appendix A - Feedback from the consultation bodies on the scope of the SA report

Fulfilling the requirements of the Strategic Environmental Assessment legislation, the Council sought to make an early version of this scoping study (incorporating Tasks A1 to A4) available to the consultation bodies for feedback on the scope of the report. The Council made this document available for six weeks to the consultation bodies (Historic England, Natural England and the Environment Agency) via email on January 17th 2025 and invited feedback by February 28th 2025. This section summarises the feedback received, which is set out in Table A.1.

Table A.1: Key feedback received on early Sustainability Appraisal Scoping Study and Council responses from Natural England (NE), Environment Agency (EA) and Historic England (HE)

Respondent	Feedback provided	Council response
NE	Welcome the key issues identified within the report and support the SA objectives within the framework as they aptly cover our interests in the natural environment. We have no further comments to make on this consultation.	Feedback noted, no further actions proposed.
EA	Consider the SA Objectives highlighted in topic papers [Green Infrastructure and Biodiversity; Flood risk, SuDS and drainage and Natural Resources including air, water, soil quality and Infrastructure] of interest to the Environment Agency to be satisfactory.	Feedback noted, no further actions proposed.
EA	Agree with the key sustainability issues listed in Topic Paper 9 highlighted as issues for the Local Plan to address. Pleased to note in Topic Paper 9, that Oxford City Council will undertake a Water Cycle Study -WCS.	Feedback noted, no further actions proposed.
EA	*"Prioritising brownfield land for development may reduce opportunities for the remediation of contaminated sites which could be repurposed for public amenity or as green infrastructure with a focus on ecological/biodiversity functions."* If this is a key issue that the proposed plan will address, then the above point is not clear.	Background paper amended.
EA	Point also under *'Land/soils' should read; - "Restoration and protection of carbon-rich peat reserves that have already been degraded by historic development in the city."*	The Local Plan is limited in how it can drive restoration but point has been reworded in Background paper to try and accommodate.
EA	In Topic Paper 7, under the key issues for the Local Plan to address, the last bullet point should read; *"There will be residual risks of flooding after applying the Sequential approach Test to locating development and incorporating flood defence measures.*	Background paper amended.
EA	It is stated in Topic Paper 9 that; *"Oxford has seen significant industrial change to the present day in fact Oxford's industrial*	Background paper amended.

	history has resulted in a substantial amount of land affected by contamination." To further ensure the local plan addresses the protection of ground water resources, the Environment Agency's guidance on groundwater protection should also be referenced.	
EA	In Topic Paper 14, under the issues for the Local Plan to address, the last bullet point should read; *Meeting the wastewater infrastructure needs of additional development in the city over the Local Plan period. This is because of the awareness of how challenging this issue is*. Also, in Topic Paper 14, the list of policy framework/plans, policies and programmes should include the forth coming Water Cycle Study.	Background paper amended, the Water Cycle study has been referenced in the water infrastructure sub-section of the current situation section of the paper. The study is also referenced in topic paper 009 which talks about water resources/quality more generally.
EA	Note the list in Section 3 A as well as in topic papers 5, 7, 9 and 14 of relevant Policies, Plans and Programmes and consider it satisfactory. The plan maker (Oxford City Council) would need to update the Strategic Flood Risk Assessment and Water Cycle Study evidence base to help them understand the impact of planned growth in Oxford City Council on flood risk, water quality and resources. We suggest the following are also added to the list as they are relevant to the preparation of the local plan. • Planning Practice Guidance - Flood risk section, • Environment Agency SFRA Guidance, • Flood and Water Management Act 2010, • Flood Risk Regulations 2009 , • Strategic flood risk assessment good practice guide. • Water cycle studies guidance • Water supply, wastewater and water quality - GOV.UK	Noted, we agree many of these resources are useful, though some of it is practical guidance that may be better referenced elsewhere. Some are referenced in the relevant background papers, particularly BP007 on flood risk. Additionally, some of this guidance will be useful for preparing evidence base (SFRA and Water Cycle Study) and can be referenced there where appropriate.
EA	Regarding collecting baseline information: Advise a focus on updating the evidence base i.e. Strategic Flood Risk Assessment (SFRA) level 1 and 2 and producing the Water Cycle Study (WCS) which are useful in informing growth in Oxford City. Important to capture changes to national policy as well as to any flood map changes in Oxford, but also to understand the impact of growth on the water environment.	Noted, we have updated section 1.6 to flag we are aware of need for updating these docs and that this is happening in due course (as well as referring to them in relevant background papers).
EA	Consider that the environmental problems described in Section 5 (Table 5.1) highlight the main issues of relevance for the SEA topics/themes within the EA's remit. And the key environmental issues and trends which characterise Oxford appear to be highlighted. The Environment Agency would expect Oxford's local plan to cover the following topics, but not limited to: Net Gain; Flood risk management; Climate change; Strategic water planning; Drainage and infrastructure; Green and blue infrastructure; Contaminated land; Water Framework Directive objectives; Biodiversity; Waste management.	*For reference, Table 5.1 is now Table 3.3 in Reg 19 version of this report.* Comment is noted, the Regulation 18 first draft local plan addresses all these topics across its various draft policies (note some topics are grouped into other policies).

EA	Table 6.1: 'SA/SEA framework for plan objectives, alternatives and policies', the SA objectives and issues covered under the various SEA themes appear reasonable. Make the following suggestions: • SA objective 3: would be beneficial to include soil and land contamination under the issues that the 2042 plan will address, considering Oxford's industrial history which has resulted in a substantial amount of land affected by contamination. • For assessing the impacts of the sites and their ability to support sustainable development, we encourage the inclusion of a commentary section within the framework matrices to state, where necessary, the reasons for the effects cited and the score given to help explain the rationale behind the assessment results. This allows the transparency and also allows the reader to understand the rationale behind the scores given.	*For reference, Table 6.1 is now Table 3.4 in Reg 19 version of this report.* SA objective 3 has been amended to make it clearer that land contamination would also be factored into issues considered. A comments box to record rationale for scoring of sustainability impacts in the site assessments is included alongside the score itself and would be used where necessary.
EA	It is important for alternatives to be considered from an early stage in the process. It appears an appraisal of Reasonable Alternatives has not yet been undertaken but will be carried out at the Regulation 18. The plan-maker may use a hierarchy to help identify suitable alternatives when considering plan options. The same hierarchy can be used to judge if suggested alternatives are reasonable, realistic and relevant. The diagram in Table 14 in Annex 5 of A Practical Guide to the Strategic Environmental Assessment Directive (publishing.service.gov.uk) contains further advice on developing and accessing alternatives can be found.	Comments are noted, for the Regulation 18 consultation, a Part 2 report is included as part of the Interim Sustainability Appraisal which addresses this.
EA	Other minor points: Please amend sentence in section 1.1 to: - 'It will need to include measures to improve public transport, protect the historic environment, protect and enhance the natural environment, and nature, reduce carbon emissions, and protect against flooding.' We agree with the key problems in Oxford outlined in section1.3. It will be useful for section 2.1 to include the fact Rivers form an intrinsic part of the unique environment of Oxford city and promotes tourism and a range of important water-based sports and social activities in the city. In Table 4.2: Current situation and likely future without the plan, we agree that without the 2042 plan, there will be Very negative impacts (compared to the current situation) on water resources. We note the Table states that the impact of the 2042 plan on water quality is unclear. We believe this is likely to end up being positive (compared to the current situation). This is because of the willingness by Oxford City Council to address water quality issues by engaging with the Environment Agency as well as working on producing a Water Cycle Study evidence to inform growth in Oxford City.	Report has been amended in response to these points.
HE	The Scoping Report is light on detail about heritage policies, plans and programmes, and Background Paper 11 includes only some of	Background paper amended, additional detail

	this content (principally within a section on "Current situation"). Analysing this in more detail, SA Objective 11 considers both designated and non-designated heritage; but the background paper centres only on designated assets. We recommend strengthening the SA baseline by updating Background Paper 11 and adding more detail that connects with designated and non-designated assets and associated programmes, such as the Oxford Heritage Asset Register and work on the local Historic Environment Record. Also, this would offer an opportunity to recognise the extent and nature of non-designated archaeological remains in Oxford which have been discussed during LP2040 production.	added to section 2 and 3 including highlighting the presence of non-designated heritage.
HE	Need to correct Background Paper 11 regarding entries in Oxford on the national Heritage at Risk Register (the wrong 3 assets are listed) and we recommend liaison with the Council's conservation team regarding the position on local buildings at risk.	Background paper amended, references have been updated to reflect the current situation.
HE	The Cowley study merits inclusion in any revised Background Paper 11, as an important piece of the Council's expanding evidence base.	Background paper amended, reference to the emerging work has been added.
HE	We are broadly comfortable with the proposed SA Framework and draft objectives. Regarding decision-making criteria, SA objective 11 should refer to setting and/or the interests that collectively comprise significance. A focus solely on archaeological or historic features within the site could miss wider impacts and opportunities. Potential wording for consideration: "~~Does~~ Is development of the site likely to affect the significance (including the setting) of one or more heritage assets, including ~~contain~~ any associated historic~~al~~, ~~or~~ archaeological, artistic and/or architectural interests ~~features~~?"	Decision-making criteria related to Table 5.12 has been updated for the site assessment framework using suggested wording.
HE	Page 14: presumably the Scoping Report will be updated to reflect recent announcements regarding support for growth in the Oxford – Cambridge corridor. Page 25: Unsure that a future without a new local plan can be considered positive for heritage. Note in background paper 11: "For Oxford, this lack of local level policies could present a real risk to the unique heritage of the city. "	The scoping report has been updated to reflected the recent announcements. In relation to likely future without a new local plan, the policies of the LP2036 would continue to apply and there would remain strong protection through national policy, though we assessed that positive impacts would be reduced in this scenario due to reduced ability to respond to ongoing pressures or changes in local context. We are happy

		to discuss this detail further however.
HE	Page 32: we advise minor wording changes to the text linked with SA objective 11 in Table 5.1, specifically we suggest: • revised wording for the second bullet, focusing on formal assessment of heritage impacts, rather than consideration of impacts on archaeological and historical value: "Potential heritage impacts of new development proposed in the plan should be assessed, both in terms of any direct physical impacts and impacts on setting ~~on areas of archaeological and historical value should be considered~~." • Revised wording for the third bullet, adding reference to heritage significance and the challenges arising from the intensification of existing sites: "Development pressures continue to put a strain on natural and historic sites and landscape/townscape features of Oxford. A good understanding of heritage value will be required to ensure continued development pressure associated with new sites and the intensification of existing sites does not adversely affect the significance of heritage assets, important townscape features and local character."	*For reference, Table 5.1 is now Table 3.3 in Reg 19 version of this report*. We have made amendments to the text in response to these points.
HE	Pages 37 – 39 (Table 6.1): as the Council is aware, "non-heritage" themes such as carbon emissions and green infrastructure have a heritage dimension. No major changes to the approach suggested – though reference to heritage is worth considering as an issue for SA Objectives 1, 2 and 7 and 12. There is scope to embed such nuance in other relevant topic papers as appropriate, which in turn inform relevant sections of the new plan, and potentially Table 6.2. We look forward to continuing our positive engagement with the Council on the cross-cutting nature of heritage. Also note, for objective 11 the issues should also include other non-designated assets, not just those of local importance.	*For reference, Table 6.1 is now Table 3.4 in Reg 19 version of this report*. Comments around cross-cutting nature of heritage are noted and something we will keep in mind as we prepare the plan. Objective 11 has been tweaked re: non-designated assets.
HE	Page 44 (Table 6.12): we suggest deleting "(Scheduled Ancient Monument)" in the top row. Including only Scheduled Monuments implies non-designated archaeological assets of national importance are not treated in the same way, which we do not believe is the intention.	*Table 6.12 now Table 3.15 in updated draft in the updated version of the report*. We have updated the wording to reflect that Scheduled Monument is one consideration (but may not be the only one).
HE	Strongly recommend liaison with the Council's conservation team and archaeological advisers to inform the approach to SA. They are best placed to advise on: local historic environment issues and priorities.	Comment is noted.

Appendix B – Detailed SA appraisal of select policy options sets

Policy Options set 001a: Housing requirement for the plan period

The following updated policy options, reflecting revised plan period and additional Strategic Housing Land Availability Assessment work, have been considered:

- **Option a:** Set a housing requirement in the Plan based on the full housing need identified through the Standard Method (c.21,740 dwellings over the Plan period 2025-2045).
- **Option b:** Set a housing requirement lower than the need identified by the Standard Method, based on capacity calculated in accordance with the spatial strategy (c.9,267 dwellings over the Plan period 2025-2045).
- **Option c:** Set a housing requirement higher than the standard method in order to support economic growth or affordable housing need, even though achieving this requirement would rely on delivery outside of Oxford's boundaries.

SA objective	Option A	Option B	Option C	Additional Remarks
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	--	-	--	Carbon impacts likely to arise from all options without additional mitigation, though more housing in city may reduce in-commuting and reduce transport emissions.
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-	-- To meet the higher housing requirement, the Council will need to take a more relaxed approach to constraints – potentially developing	0 Takes into account constraints like flood risk, green space etc.	-- To meet the higher housing requirement, the Council will need to take a more relaxed approach to constraints – potentially developing	

	being, the economy and the environment.	more green spaces, areas of flood risk.		more green spaces, areas of flood risk.	
3.	To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	**?** Might allow more efficiency in terms of higher capacity, but potentially sacrificing other uses like green space etc	**?** Arguably most efficient approach as capacity approach would mean still seeking to max out the developable land on sites, but also providing for open space, green infrastructure etc to meet other objectives.	**?** Might allow more efficiency in terms of higher capacity, but potentially sacrificing other uses like green space etc	Ultimately, depends upon implementation
4.	To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.	**++** The Government's Standard Method identifies housing need in the absence of other locally specific factors.	**+** Does depend upon implementation, likely does not meet housing need in full within the city, but attempts will be made to meet unmet need elsewhere. Will however still make a substantial contribution to housing need.	**++** Depends upon implementation, would likely bring forward more housing in the city to meet need, however trying to meet a global number this could come at expense of meeting other specific local needs (e.g. family dwellings,).	
5.	To reduce poverty, social exclusion, and health **inequalities**.	**?**	**?**	**?**	Depends upon implementation for all options. Depends where in the city the housing comes forward, also the tenure of the housing (e.g. how much is affordable etc). More housing isn't necessarily

				going to help inequality alone.
6. To provide accessible essential **services and facilities**.	**?**	**?**	**?**	Depends upon implementation, new housing should come alongside provision for facilities/services (e.g. developer contributions/CIL). However, nature of city means many small sites that limits opportunities to provide for new services/facilities, leading to cummulative impacts.
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	**-** More pressure on existing sites and potentially more loss of green spaces including various green features on sites.	**0** Wouldn't be delivering new GI, however potentially more space on sites to incorporate GI – however this is likely to be more about mitigation of impact.	**-** More pressure on existing sites and potentially more loss of green spaces including various green features on sites.	
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	**-?** More people accommodated in the city with some associated increase in cars. Potentially more workers able to live closer to employment reducing in-commuting	**+/-?** More people accommodated in the city and likely some increase in cars (though to lesser degree than other options). Potentially more workers able to live closer to	**-?** More people in the city and going beyond need to support growth. Though potentially more workers able to live closer to employment reducing in-commuting generated.	Complex topic to score due to varying factors that could impact traffic/emissions. Generally it is assumed emissions related to transport will reduce as private vehicles move away from fossil fuels

	generated from beyond boundaries.	employment reducing in-commuting generated from beyond boundaries, but to a lesser degree than other options, though impact beyond boundaries would be highly dependent on how any unmet need is planned for (e.g. proximity to public transport).		and air quality measures in the city continue to have positive effects.
9. To achieve **water** quality targets and manage water resources.	**--** More people means more demand for water and more pressure on wastewater.	**+/-** More people means more demand for water and more pressure on wastewater. Capacity approach, would include scope to incorporate buffers to streams and other mitigations etc.	**--** More people means more demand for water and more pressure on wastewater.	All options would put additional stress on the water environment.
10. To conserve and enhance Oxford's **biodiversity**.	**-?** Does depend upon implementation – development would deliver net gain, might not be within the city. If more sites are used for development, even less opportunity to deliver net gain in city (or protect informally important biodiversity sites).	**0** Does depend upon implementation – development would deliver net gain, but might not be within the city. But would allow protection of a network of green sites important for supporting biodiversity, and may enable developments to better mitigate impacts	**-?** Does depend upon implementation – development would deliver net gain, might not be within the city. If more sites are used for development, even less opportunity to deliver net gain in city (or protect informally important biodiversity sites).	Assume that net gain is requirement regardless of local policy.

		on biodiversity or to accommodate more biodiversity features.		
11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	**--** Will depend on implementation to some degree, however, assuming a more minimal approach to heritage considerations and wider place-making choices in order to maximise capacity of sites which could lead to harm to assets onsite and nearby.	**0** Capacity is based on taking into account considerations like impact on heritage. More scope to incorporate other features to support good urban design.	**--** Will depend on implementation to some degree, however, assuming a more minimal approach to heritage considerations and wider place-making choices in order to maximise capacity of sites which could lead to harm to assets onsite and nearby.	
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge-based economy and the culture/leisure/ visitor sector.	**+/++** Will make some contribution to economic growth by adding to housing and reducing barrier to employment in city, though some employment sites could be lost to housing.	**+** Will make some contribution to economic growth by adding to housing.	**++** Aims to provide enough homes for high economic growth, however, some employment sites could be lost to housing	

Conclusions/potential mitigation needed

Options A and C have some significant benefits for supporting housing and the economy but also come at the cost of more significant negative impacts against various other objectives. Option B would have positive impacts for housing and economy as it would still make an important contribution to housing need, though to a lesser degree than the other options, but it also incurs much less in the way of negative impacts for other objectives because of the capacity-based approach that drives it. Depending on the option selected, mitigation will be necessary in relation to carbon emissions, water and potentially traffic/air pollution (though this is less certain as impacts are hard to judge). Were options a or c to be selected, additional mitigation would need to be considered for a range of other areas including in relation to design/heritage, biodiversity, green infrastructure and climate resilience.

Policy Options set 002e: Employer-linked affordable housing

Policy options considered:

- **Option a:** On specified sites listed in the Plan, allow developments of homes that are available only for employees who work for a specific listed organisations at an affordable rent level (as agreed with the local authority).
- **Option b:** Do not include an employer linked housing policy.

SA objective	Option A	Option B	Additional Remarks
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	**N/A**	**N/A**	
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	**N/A**	**N/A**	
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of	**+** Potentially may lead to more efficiently using sites, or parts of sites, that would	**0**	

greenfield and Green Belt land.	otherwise not come forward.		
4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.	**++** Would bring forward housing on sites that would not otherwise come forward, though this may not be available to everyone, it would still meet an identified need.	**0**	
5. To reduce poverty, social exclusion, and health **inequalities**.	**+** The sites would not otherwise be providing any housing. Whilst the affordable housing that would come forward might not be social rented housing, it would still be affordable rent set at a level agreed with the Council.	**0**	
6. To provide accessible essential **services and facilities**.	N/A	N/A	
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	N/A	N/A	
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and	**+** Depends upon implementation (e.g. who the units are offered to), but is likely to support this	**0**	

reducing the need to travel by car/ lorry.	criteria (e.g. reducing car travel – and some people would be housed on site).		
9. To achieve **water** quality targets and manage water resources.	N/A	N/A	
10. To conserve and enhance Oxford's **biodiversity**.	N/A	N/A	
11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	N/A	N/A	
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge-based economy and the culture/leisure/ visitor sector.	**++** Part of the purpose of the policy is to support recruitment and retention of employees for key employment sectors.	**0**	

Conclusions/potential mitigation needed

Option a has greater positive sustainability impacts than option b. The assessment does not identify any obvious requirement for mitigations to be factored in alongside either option.

Policy Options set 003a: Houses in Multiple Occupation (HMOs)

Policy options considered:

- **Option a:** Prevent a concentration of HMOs in any area by only allowing a certain percentage of HMOs within a frontage or radius (currently this is 20%).
- **Option b:** Allow new purpose-built HMOs in appropriate locations, (potentially restricting the size of these in particular areas).
- **Option c:** Concentrate HMOs in certain areas so there is no restriction in particular areas and a complete or near complete restriction in others.
- **Option d:** Do not have any restriction on HMOs.

Option B is not really an alternative to the other options, but rather an additional element that could be incorporated alongside either option A, C or D.

SA objective	Option a	Option b	Option c	Option d	Additional Remarks
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	N/A	N/A	N/A	N/A	Potentially, option b and d could encourage more HMOs which would be denser development – potentially better for emissions – same energy source? Very indirect.
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the	N/A	N/A	N/A	N/A	

economy and the environment.					
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	**+**	**+**	**+**	**+**	New HMOs or converting existing homes would be positive for efficient use of land. HMOs are generally a very space-efficient way to house people.
4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.	**+/-** This is potentially helping to protect the existing mix of housing sizes and types (e.g. family dwelling), but also allowing HMOs to come forward.	**+/-** This option could meet certain communities' needs but these would be competing with others.	**+/-** This is potentially helping to protect the existing mix of housing sizes and types (e.g. family dwelling), but also allowing HMOs to come forward.	**-** In some areas it wouldn't make a difference, but in other areas there is likely to be a signficant amount coming forward in others at the expense of meeting other local housing needs.	Anecdotally, there appears to be some demand for this type of accommodation, but it is not measured explicitly. All options could meet certain community's needs, but it would compete with other types of housing need.
5. To reduce poverty, social exclusion, and health **inequalities**.	**0**	**+?** Purpose-built HMOs can provide a better quality of environment for residents and neighbours – planning can influence the 'healthiness' that is designed into the development.	**0**	**0**	Some of the health impacts are controlled by a separate regulatory regime (selective licensing). Planning can control the design elements.

6. To provide accessible essential **services and facilities**.	N/A	N/A	N/A	N/A	Potentially, more HMOs/higher density means more people and more pressure on existing services. Cumulative impact as they are not contributing to provision.
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	N/A	N/A	N/A	N/A	Potentially, more HMOs/higher density means more people and more pressure on existing green infrastructure/spaces. Cumulative impact as they are not contributing to provision.
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	N/A	N/A	N/A	N/A	
9. To achieve **water** quality targets and manage water resources.	N/A	N/A	N/A	N/A	
10. To conserve and enhance Oxford's **biodiversity**.	N/A	N/A	N/A	N/A	

11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	**0** The use of a threshold would prevent an overconcentration of HMOs in any one area, limiting the negative impacts to amenity/local character etc.	**+/-?** Uncertain, could result in more HMOs coming forward with associated negative impacts on local amenity, though depends upon implementation, however, new build gives the opportunity to tailor the design to mitigate impacts.	**-?** Very much depends upon implementation. This option could lead to some neighbourhoods becoming inappropriately dominated – although the policy can control which areas – losing some local character where significant numbers of new HMOs come forward whilst others maintain theirs.	**-** Depends upon implementation but likely more negative. This option could lead to any of the neighbourhoods becoming inappropriately dominated, losing some local character where significant numbers of new HMOs come forward whilst others maintain theirs.	Scoring against this criterion considers the potential harmful urban design impacts that can arise from HMOs such as bins, bicycles, car parking etc.
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge-based economy and the culture/leisure/ visitor sector.					

Conclusions/potential mitigation needed

Option A and C both perform better in sustainability impacts than option D, though there is some additional uncertainty with elements of option C compared with A, which could result in additional negative impact under obj 11. Option B does potentially have additional positive impacts in regard to obj 5, but this is an additional option (rather than an alternative approach that can be directly compared with the other options). The assessment does not identify any obvious requirement for mitigations to be factored in alongside either option.

Policy Options set 003b: Location of new student accommodation

Policy options considered:

- **Option a**: Restrict the locations where new student accommodation would be allowed to: on or adjacent to existing or campus sites, existing student accommodation sites, district centres and the city centre (or potentially only parts of these or some of these) and existing student accommodation.
- **Option b**: Restrict the locations where new student accommodation would be allowed to: existing campus sites, existing student accommodation sites, district centres, the city centre and on arterial roads.
- **Option c**: Have no locational restriction on student accommodation but a criteria-based policy.
- **Option d**: Allow new student accommodation only on existing campus sites and on existing student accommodation sites.

The options set included additional options (Options E, F and G), which are not incorporated into the detailed appraisal as they address options for management of student accommodation, rather than options for spatial approach to location of this type of use, which was considered to be the area where there could be significant effects that needed to be investigated further.

SA objective	Option A	Option B	Option C	Option D	Additional Remarks
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	N/A	N/A	N/A	N/A	
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	N/A	N/A	N/A	N/A	
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	**0**	**0**	**0** Would depend upon implementation. Would apply to campus sites or not – might encourage more efficient use of campuses.	**?** Potentially encourages more efficient use of institutional land and university-owned sites where space on the campus would be forced to be maximised – which might not otherwise be the case.	
4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in	**+/-** Potentially meets more of the student housing need but this	**+/-** Potentially meets more of the student housing need (and slightly more than	**+/-** Potentially allows more student accommodation to come forward and	**+/-** Potentially means not meeting full student housing need but would	Essentially it is a balance between opening up more sites to meet specialist housing

	a decent affordable home.	would be balanced out against not meeting/losing housing provision for other housing need.	option a) but this would be balanced out against not meeting/losing housing provision for other housing need.	meet needs, but would likely be competing with meeting other housing needs which might not be met as a result.	ensure other housing needs outside campus sites is not lost to student accommodation.	need (students) and restricting it to preserve accommodation for wider housing need.
5.	To reduce poverty, social exclusion, and health **inequalities**.	N/A	N/A	N/A	N/A	
6.	To provide accessible essential **services and facilities**.	N/A	N/A	N/A	N/A	
7.	To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	N/A	N/A	N/A	N/A	
8.	To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	**+** Depends upon implementation, most locations will be accessible to public transport/active travel (potentially not all of the student	**+** Depends upon implementation, most locations will be accessible to public transport/active travel (potentially not all of the student	**-** Potentially means student accommodation in inaccessible sites e.g. edge of city. Potentially forces reliance on private vehicles.	**+** Depends upon implementation, some locations will be more accessible to public transport/active travel than others.	

	accommodation sites)	accommodation sites)			
9. To achieve **water** quality targets and manage water resources.	N/A	N/A	N/A	N/A	
10. To conserve and enhance Oxford's **biodiversity**.	N/A	N/A	N/A	N/A	
11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	**+** Limits new accommodation to the areas that can arguably most-easily accommodate without additional harm to amenity.	**-** The addition of arterial routes allows the risk of long stretches of student accommodation to develop, negatively impacting amenity of the area.	**?** Depends upon implementation – could result in negative impacts as not preventing over-concentration.	**+** Generally, more positive, ensuring that student accommodation is located on the main university campuses, although potentially some negative impact where some student accommodation is outside the campuses.	
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and	N/A	N/A	N/A	N/A	

knowledge-based economy and the culture/leisure/ visitor sector.					

Conclusions/potential mitigation needed

Options A and D scored fairly similarly in terms of impact, with slight nuances in the underlying impact against each SA objective, whilst options B and C had additional negative impacts.

Policy Options set 008c: Retrofitting existing buildings including heritage assets

Policy options considered:

- **Option a:** Include a presumption in favour of retrofit measures for all existing buildings that are not heritage assets or in the setting of, subject to certain conditions, where these measures secure demonstrable carbon reduction/energy efficiency/climate adaptation.
- **Option b:** In relation to designated heritage assets and historic buildings, or proposals within conservation areas, set out that carbon reduction/ energy efficiency/climate adaptation measures will be considered as public benefits that may outweigh harm. Be explicit in setting out some key principles to follow, including the need for taking a Whole Building Approach to retro-fit. Expand on guidance through a Technical Advice Note.
- **Option c:** In relation to designated heritage assets and historic buildings, or proposals within conservation areas, set out that carbon reduction/ energy efficiency/climate adaptation measures will be considered as public benefits that may outweigh harm. Be explicit in setting out some key principles to follow, including the need for taking a Whole Building Approach to retro-fit. Additionally, set out in the policy the retro-fit measures that would be more or less likely to cause harm (e.g. permanent versus temporary), and how levels of harm would be assessed against public benefit. Expand on guidance through a Technical Advice Note.
- **Option d:** Do not include policy addressing retrofitting of existing buildings and/or heritage assets.

For the purposes of this assessment, options B and C are considered similar enough to be appraised together (the key difference is in how prescriptive the guidance around retro-fit measures would be in the policy wording, option B only setting key principles guiding design of retro-fit, option C going further and identifying specific measures that would be considered more/less harmful).

SA objective	Option A	Option B/C	Option D	Additional Remarks
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	**+** Would support energy efficiency/carbon reduction measures in existing non-heritage buildings	**+** Would support energy efficiency/carbon reduction measures in heritage assets, historic buildings etc. (with some constraints)	**0** No explicit local support for energy efficiency/carbon reduction retro-fit.	
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	**+** Would support climate resilience measures in existing non-heritage buildings	**+** Would support climate resilience measures in heritage assets, historic buildings etc. (with some constraints)	**0** No explicit local support for climate resilience retro-fit.	
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	**N/A**	**N/A**	**N/A**	
4. To meet **local housing needs** by ensuring that everyone has the	**N/A**	**N/A**	**N/A**	

opportunity to live in a decent affordable home.				
5. To reduce poverty, social exclusion, and health **inequalities**.	**+** Helps to make existing homes more liveable and (over time) more affordable – particularly in terms of lowering energy bills/reducing exposure to fuel poverty.	**+** Helps to make existing homes that are also older buildings more liveable and (over time) more affordable – particularly in terms of lowering energy bills/reducing exposure to fuel poverty.	**0**	
6. To provide accessible essential **services and facilities**.	**N/A**	**N/A**	**N/A**	
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	**N/A**	**N/A**	**N/A**	
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	**+** Heating systems (e.g. boilers) are a source of some of the pollutants contributing to poor air quality in the city. Where retro-fit drives replacements in boilers	**+** Heating systems (e.g. boilers) are a source of some of the pollutants contributing to poor air quality in the city. Where retro-fit drives replacements in boilers	**0**	

	to electric systems this will have some limited positive impacts in helping to reduce this source of pollution.	to electric systems this will have some limited positive impacts in helping to reduce this source of pollution.		
9. To achieve **water** quality targets and manage water resources.	N/A	N/A	N/A	
10. To conserve and enhance Oxford's **biodiversity**.	N/A	N/A	N/A	
11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	**0** Some retrofit measures (e.g. solar panels, small wind turbines) have the potential to change the character of a neighbourhood, although this impact is likely to be insignificant outside conservation areas etc.	**-?** Some retrofit measures are incompatible with heritage assets, listed buildings etc. The impact would depend on the specific implementation of the principles/requirements in the policy.	**0**	
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge-based economy and the	N/A	N/A	N/A	

culture/leisure/ visitor sector.				

Conclusions/potential mitigation needed

Option A and B/C both have positive impacts against a number of criteria. Option B/C may have negative impacts in terms of urban design/historic environment, though this depends on how retro-fit schemes are implemented. Mitigation for this impact could be achieved through a robust set of principles/guidance as part of the policy or in supporting guidance.

Policy Options set 012d: Motor vehicle parking design standard

Policy options considered:

- **Option a:** Seek low car residential development across the city, subject to criteria to ensure accessibility to public transport and local shops. Consideration will be given in the policy to setting a threshold for the numbers of pooled cars/ car club spaces because larger sites have more scope for successful carpooling and more space for essential vehicles.
- **Option b:** Adopt parking standards for residential developments
- **Option c:** Seek low car non-residential development across the city. This could vary by accessibility of the area of the city and/or existing parking levels.
- **Option d:** Adopt parking standards for non-residential developments

For this appraisal, options b and d which refer to parking standards, assumes the Council would apply County standards. This means that for residential, there will be more parking provision per household (e.g. one space per dwelling) than the low car option. For non-residential development, the standards seek car free development or operational use only with supporting evidence, which means applicants are able to justify higher levels of provision according to their site's needs which can result in significantly more provision – so it will depend upon implementation.

SA objective	Option a	Option b	Option c	Option d	Additional Remarks
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	**+**	**-**	**+**	**+/-?**	Low car would achieve significant reductions in car parking (and transport emissions). Parking standards would result in more car parking for resi, but for non-resi, impact is less certain as car free would have positive impact, but applicants could justify higher levels of provision (so it depends upon implementation).
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	N/A	N/A	N/A	N/A	
3. To encourage the **efficient use of land** through good design and	**+**	**-**	**+**	**+/-?**	Low car standards mean that applicants will need to give proper and adequate

	layout, and minimise the use of greenfield and Green Belt land.					consideration as to where the car parking should be located in the most efficient way. Parking standards will result in more land being used for car parking which is inefficient, but for non-resi, impact is less certain as car free would have positive impact, but applicants could justify higher levels of provision (so it depends upon implementation).
4.	To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.	**+/-?** Low car may provide more space for housing, however the space may be used for other uses. Equally, low car could impact viability of some schemes and ability to deliver affordable housing although the evidence for this is complex and uncertain.	0	0	0	

5.	To reduce poverty, social exclusion, and health **inequalities**.	**-?** Even though low car would allow some spaces for operational needs (e.g. those who need a car for work), it might not provide enough spaces. Typically, many such jobs that rely on a car are low paid, so could negatively impact this group. However, does depend upon implementation of each scheme (and who is occupying).	0	0	0	
6.	To provide accessible essential **services and facilities**.	N/A	N/A	N/A	N/A	
7.	To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily	N/A	N/A	N/A	N/A	Depends upon implementation, less land used for car parking may have benefits if the space is used for more greening/biodiversity.

accessible for all.					
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry.	**+**	**-**	**+**	**+/-?**	Low car would achieve significant reductions in car parking (and transport emissions/congestion). Parking standards would be county standards, which would result in more car parking for resi, but for non-resi, impact is less certain, as car free would have positive impact, but applicants could justify higher levels of provision (so it depends upon implementation).
9. To achieve **water** quality targets and manage water resources.	N/A	N/A	N/A	N/A	
10. To conserve and enhance Oxford's **biodiversity**.	N/A	N/A	N/A	N/A	Depends upon implementation, less land used for car parking may have benefits if the space is used for more greening/biodiversity.
11. To promote **good urban**	**+**	**-**	**+**	**+/-?**	Low car standards mean that applicants

design through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.					will need to give proper and adequate consideration as to where the car parking should be located in the most efficient way (including making space for active/sustainable transport measures) which should benefit urban design. Parking standards will result in more land being used for car parking which is inefficient, though again, impact for non-resi is less certain depending on if car free is delivered or not.
12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge-based economy and the culture/leisure/ visitor sector.	**0**	**0**	**+/-?** Low car may provide more space for employment uses, however the space may be used for other uses. Equally, low car could impact viability of some schemes including new developments although the evidence for this is	**0**	

			complex and uncertain. It will also depend upon implementation and the specifics of the site.		

Conclusions/potential mitigation needed

Options A and C are score most positively against the SA objectives. Option B has negative impacts against some of the criteria, potentially allowing additional cars than the low car options which could have some congestion impacts and emissions, though in relation to emissions these are likely to reduce in the long term as transport decarbonises. Option D is uncertain because it allows applicants to justify car requirements which may result in additional vehicles (or may result in fewer vehicles where car free development is delivered), it depends on implementation.

568

Appraisal of policy options for Protection of GI network and green features (updated from Policy Options set 005a)

The following options were considered (see Reg. 18 Background Paper 005: Green Infrastructure and Biodiversity for further details) in developing draft policy G1:

- **Option a:** Identify a network of green and blue infrastructure for protection, informed by the green infrastructure study. Incorporate multi-functional green spaces of varying sizes, with clear criteria for inclusion in the network. All spaces in the network would be treated with equal protection, based on presumption against any net loss (because being a part of a network means that it would be challenging for them to be replaced elsewhere). (Core)
- **Option b:** Set out a hierarchy of protection that will be accorded to spaces comprising the identified GI network. Hierarchy will focus on protection from loss to development and will rank from protection from all development other than in exceptional circumstances, to permitting development with reprovision of spaces to a similar standard, to protection of spaces to the minimum standard as set by national policy. (Core + Supporting)

- **Option c:** In addition to the network, have a series of separate policy protections based on different types of greenspaces (e.g. outdoor sports, designated ecological sites, allotments and greenbelt) and address each specifically. Note that none of these designated sites are considered surplus.
- **Option d:** Only allow the loss of trees, hedgerows and woodland where it is clearly justified (level of justification to be considered against quality of tree) and any loss mitigated. Require developers to demonstrate how the retention of existing trees/hedgerows and the planting of new trees/hedgerows has been considered (applying BS.5837:2012 Guidance or future equivalent) in the design and layout of new development and outside space. This should include protection and/ or enhancement of tree canopy cover. Planning permission will not be granted for development resulting in the loss or deterioration of ancient woodland or ancient or veteran trees except in wholly exceptional circumstances.
- **Option e:** Do not define a network of green spaces but assign individual protection to larger strategic sites including public parks, biodiversity sites, allotments, cemeteries and outdoor sports, with sets of criteria relevant to each. Include the wording from the NPPF that sets out protection for all green spaces unless they are surplus or can be re-provided.
- **Option f:** Do not include a policy protecting green and blue infrastructure and defer to national policy/standards.

For the purposes of this appraisal, the Council has considered what the preferred approach at Regulation 18 would look like in practice where this related to protection of a hierarchy of green spaces and appraised two options which relate to the extent of protection that would be afforded to green spaces within the network.

- **Option a* -** Protect a limited network of green spaces from any and all development through local policy (core spaces). Allow remaining green spaces to be developed in line with national policy.
- **Option b* -** Protect a limited network of green spaces from any and all development through local policy (core spaces) AND protect a broader network of green spaces from development through local policy but permit their development if the harm/loss can be mitigated through like-for-like reprovision (supporting spaces). Allow remaining green spaces to be developed in line with national policy.

**Land with intrinsic constraints e.g. flood zone 3b, national ecological/heritage designations would be protected regardless of option*.

SA objective	Option a*	Option b*	Additional Remarks
1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.	**0**	**0**	
2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.	**-**	**0**	
3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.	**-**	**+/-**	
4. To meet **local housing needs** by ensuring that	**+**	**+**	

everyone has the opportunity to live in a decent affordable home.			
5. To reduce poverty, social exclusion, and health **inequalities**.	**+/-**	**0**	
6. To provide accessible essential **services and facilities**.	**0**	**0**	
7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.	**+/-**	**+**	
8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the	**0**	**0**	

need to travel by car/ lorry.			
9. To achieve **water** quality targets and manage water resources.	**-**	**0**	
10. To conserve and enhance Oxford's **biodiversity**.	**+/-**	**+**	
11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.	**?**	**0**	
12. To achieve sustainable inclusive **economic growth**, including the development and expansion	**0**	**0**	

of a diverse and knowledge-based economy and the culture/leisure/ visitor sector.			

Conclusions/potential mitigation needed

Option 2* (protection of the Core and Supporting GI Network) represents the draft policy approach (Policy G1) consulted on at Reg 18 (summer 2025). This option ensures a high level of protection for the city's most important green infrastructure assets (Core GI), while allowing development to take place where sites have been identified as part of the Supporting GI network providing any harm or loss of features is satisfactorily mitigated. The supporting GI network is made up of a number of different typologies including general public amenity space and playing fields/ pitches (associated with primary and secondary schools, the two universities (including individual Oxford colleges), and private sports facilities). Where development potential exists on sites within the supporting GI network, these spaces are typologies that could feasibly be re-provided as part of development proposals. This approach would not give rise to significant numbers of new homes, in fact any new homes that came forward would be captured sufficiently with the plan's existing windfall estimations. Broadly speaking this policy approach scores well against some of the other SA framework criteria. For instance, given the re-provision requirements of the policy in relation to SA objective 7, it is likely that this approach would give rise to minor positive benefits for green infrastructure, which may have been lost without this additional protection.

Option 1 (protection of the Core GI network) would ensure a high level of protection for the city's most important green spaces only (some of which already receive intrinsic protection by virtue of their location in flood zone 3b, or because they also benefit from national ecological or heritage designations). The absence of a local designation for supporting green spaces (and associated green space reprovision requirements) would only be likely to have a marginal effect on housing delivery. This is due other factors including national planning policy for open space (including playing fields and formal play spaces. Removing the supporting GI network designation from the plan would at best have a marginal effect on housing delivery (any homes delivered would be picked up through the housing windfall allowance). However, the removal a tier of protection from

the green infrastructure network, would have a range of likely negative effects including on SA objective “inequalities”. This is because some supporting GI is located in areas of the city with known open space inequalities. Reducing open space in these parts, of the city, in the absence of policy protection for the supporting GI network, would potentially worsen inequalities in these areas the city.

On balance, given the marginal effects on housing delivery of removing the Supporting GI tier of the Green Infrastructure Network, and the raft of minor negative effects identified in the Table above, Option 2 (which provides a local policy designations for both Core and Supporting GI) has been taken forward in the Reg. 19 Plan.

Site name	Diamond Place and Ewert House
SHLAA reference (and OLP2036 Policy if applicable)	018 Policy SP6
Ward	Summertown
Total site size (ha)	1.73 ha
Existing use(s)	Oxford City Council and University of Oxford owned public car park, offices and academic uses.

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	An Outline Strategic Business Case has been prepared by one of the landowners (City Council) who consider that it is possible to bring forward a viable scheme. OUD, as the development agency arm of the University of Oxford, are keen to explore the site's development potential and have an ambition to provide some student accommodation. The University will need to find alternative accommodation for the Examination Building. In order to maximise the public benefits of this scheme, it will be important to undertake a comprehensive redevelopment of the site involving both key landowners, so the timing, phasing and mechanism for partnership working will be key to its delivery.
Does the landowner specify types of development	Housing both market and affordable, student accommodation, replacement community hall and potentially a new health / medical centre. Possibly retention of some element of car parking.

Stage 1b conclusion
Consider allocation of the site for a mixed-use development, principally housing and student accommodation. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	0	Site is in Flood Zone 1 *(Patches of surface water flood risk present within site, including a larger patch over the existing car park)*
Flooding of land surrounding site for access/ egress	0	There is safe access/ egress from the site – area surrounding site is in Flood Zone 1

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Site is previously developed land (with buildings in use on site) and includes a car park.
Green belt?	0	Site is not on Green Belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site is allocated for at least 135 dwellings (or if delivered as non-self-contained student accommodation, the equivalent number of rooms when the relevant ratio is applied).
Affordable housing provision	?	Depends on implementation (if delivered as dwellings where the site is likely to be policy compliant and deliver 40% affordable housing or if delivered as self-contained student accommodation).

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site is not in or adjacent to a regeneration area. (Site lies within an area that is less deprived than more than 95% of neighbourhoods in England – IMD 2025).

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	I	Depends on implementation. A replacement community centre will be required if the existing community centre is demolished. The allocation also allows for healthcare facilities and town centre supporting uses including additional shops/cafes/services/ Class E uses.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	Site allocated for housing – 10% public open space provided on site but could potentially be more depending on how the scheme evolves/ design.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*

Sustainable transport links (bus stop)	+	Site is 200m away from Banbury Road bus stops, which are very well served with numerous frequent buses including the 2, 2A, 700, S4 gold and S5 gold.
Sustainable transport links (rail station)	-	More than1600m from the nearest rail station (Oxford and Oxford Parkway are equidistant from the site).
Primary Schools	-	More than 800m from the nearest primary school (St Aloysius Catholic Primary School is 1300m away).
Secondary Schools	+	Less than 800m from the nearest secondary school (Cherwell School is 400m away).
GP Surgeries	+	Less than 800m from the nearest GP surgery (Summertown Health Centre is 350m away).
Post office	-	More than 800m from the nearest post office (Kendall Crescent and St Giles on Woodstock Road are both 2100m away).
Air Quality	-	Site is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	Site is not within 30m of a water body

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Potential protected species constraints are likely limited to roosting bats in existing buildings. The school fields east of the site are well connected to the wider landscape via hedgerows. There would be an opportunity to deliver meaningful ecological enhancements through habitat creation in the east of the allocation site.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	There is high potential for archaeological interest as the site is adjacent to an area of cropmarks of Prehistoric or Roman era.
Conservation Areas & Register of Parks and Gardens (RPG)	0	Site is not in or on the edge of a conservation area or site on the RPG register.
Listed Buildings	-	The Grade II listed Diamond Cottages sit near to the site, between Ferry Leisure Centre and the Banbury Road. At present, the cottages are characterised by their back-land feel and their backdrop is already of significantly larger-scale and more modern developments. There is some potential for the backdrop to be enhanced.
View Cones	0	Site lies outside of a view cone
Historic Core Area	0	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	The redevelopment of the site is principally for housing and student accommodation. While it would involve the loss of some Ewert House, Examination Building and some offices, the majority of which are associated with the University of Oxford. As the loss of the University-associated buildings are likely to form part of a wider estate strategy, it is unlikley that there will be direct losses of jobs associated with the knowledge economy resulting from this redevelompent. As such, there is likely to be no change these jobs within the city.
Diversifying the economy	I	Depends on implementation. The redevelopment of the site would provide opportunities for skills and training programmes to be

end employment opportunities		introduced associated with the construction of the new development, and provide some other jobs linked to the service sector / retail, cafes, and subject to viability, a new medical centre.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, principally via Diamond Place or Ewert Place and potentially other options depending on scheme that comes forward.
Can walking and cycling connections with the surrounding area be achieved?	Yes, there is an opportunity to significantly improve walking and cycling through the site.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	There is a change in ground level from north to south between the two principal car parks. Site contains trees which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees within the site and adjacent to it will influence the developable area of site and its capacity.
Are land contamination issues likely?	No known contamination issues.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The relationship between the development site and the nearby listed buildings (Diamond Cottages), needs to be carefully considered.

Stage 2 conclusion
There are no significant conflicts with national policy or environmental or physical constraints to the development of this site, although potential heritage sensitivities such as the archaeological potential of the site and nearby Listed Buildings will need to be considered. Site to be put forward for allocation in Regulation 19 Local Plan.

SPN2: Elsfield Hall, Elsfield Way

Site name	Elsfield Hall, Elsfield Way
SHLAA reference (and OLP2036 Policy if applicable)	20b2
Ward	Cutteslowe
Total site size (ha)	0.39ha
Existing use(s)	Vacant – formerly in use as an office.

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Yes- residential

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Very small patches of surface water flood risk adjacent to the northern and western boundaries of the site.)*
Flooding of land surrounding	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	+	Building on site are vacant.
Green belt?	0	Not on green belt land.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site would provide more than 10 new homes
Affordable housing provision	+	Site provides up to 40% affordable housing

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	Site not in or adjacent to a regeneration area

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*It is unlikely community facilities will change.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	Site not allocated OR amount of public open space remains the same due to the allocation

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Within 400m of 'Harefields' bus stops on Banbury Rd. Served by service no. 2, 2A, 24, 700, S4, S5, S7, X4*
Sustainable transport links (rail station)	-	*1.8km from Oxford Parkway Station*
Primary Schools	+	*Cutteslowe Primary School less than 800m away (via pedestrian/cycle bridge over A40 Elsfield Way).*
Secondary Schools	-	*Cherwell School over 800m from site*
GP Surgeries	-	*Banbury Road Medical Centre, Summertown Health Centre both over 800m from site.*
Post office	+	*Kendall Crescent post office located within 250m of the site*
Air Quality	-	*Site is located within an Air Quality Management Area and is within 150m of an air quality hotspot: Cutteslowe Roundabout.*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	*Site is not within 30m of a water body.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Contains no nature designations but Kendall Crescent Amenity Green Space lies to the west of site and there is potential to improve wildlife linkages or habitat continuity.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	Site contains no known archaeological sites or has limited or uncertain archaeological potential
Conservation Areas & Register of Parks and Gardens (RPG)	0	Site is not in or on the edge of a conservation area or site on the RPG register
Listed Buildings	0	Site contains no identified historic building constraint
View Cones	0	Site lies outside of a view cone
Historic Core Area	0	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*

Employment Opportunities in the knowledge-based economy	0	No change in number of jobs/economic floorspace in knowledge-based economy
Diversifying the economy end employment opportunities	0	No change in employment base or access to affordable workspaces

Other constraints which could affect suitability of site for development

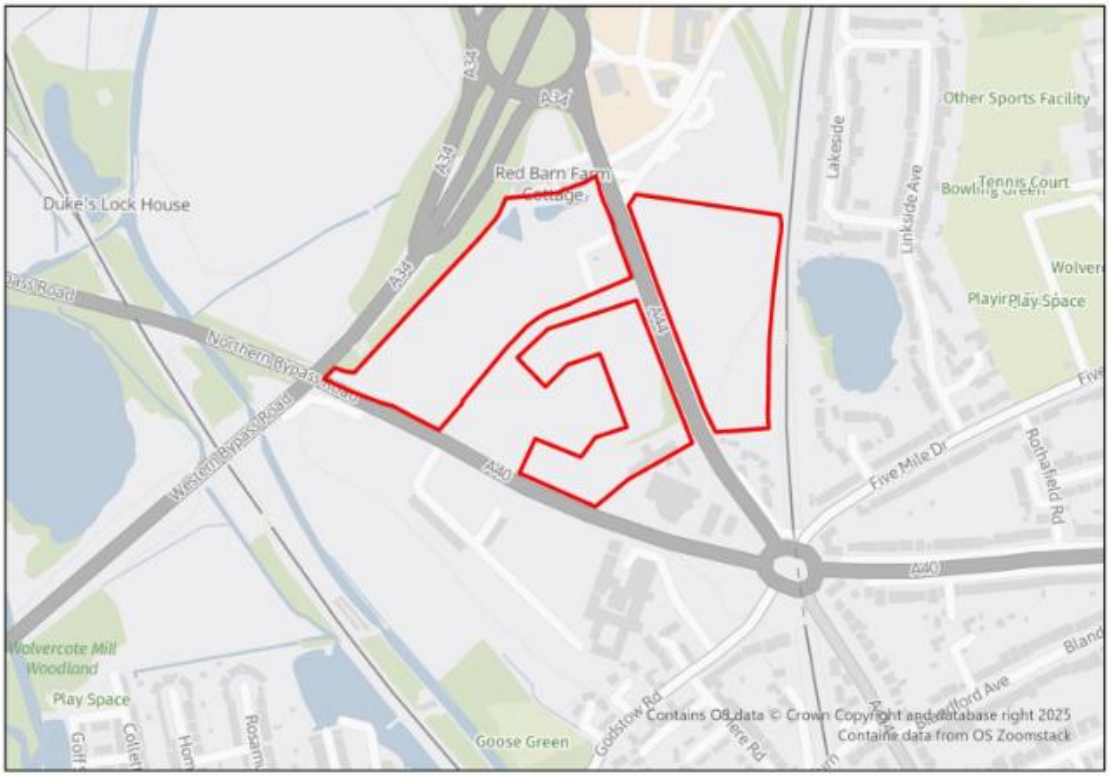
Can access for vehicles be achieved?	Yes, existing vehicular access from Harefield Road.
Can walking and cycling connections with the surrounding area be achieved?	Yes, via Harefield's Road
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No
Are land contamination issues likely?	Will require contamination site investigation if not already completed.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site is located within a residential area but the A40, Elsfield Way is immediately to the south of the site and there may be traffic noise.

Stage 2 conclusion
No insurmountable constraints to development. Site to be put forward for allocation in Regulation 19 Local Plan.

SPN3: Oxford North Remaining Phases

Site name	Oxford North remaining phases
SHLAA reference (and OLP2036 Policy if applicable)	001a1
Ward	Wolvercote
Total site size (ha)	13.28
Existing use(s)	Part under construction, part greenfield

Site location plan



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	Yes	Site has outline permission (as part of wider Oxford North development). Earlier phases on adjoining sites have built out, and some parts have reserved matters permissions. Hybrid permission for (18/02065/OUTFUL) for 480 homes and up to 87,300m2 employment and also (21/01053/RES), (22/00081/RES), (22/00675/RES) and (24/00411/VAR).

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner confirmed (2025) intention to develop rest of site for mixed use including residential and R&D.
Does the landowner specify types of development	Hybrid outline permission sets out mix of uses, primarily employment and residential.

Stage 1b conclusion
Continue to next stage of assessment, site allocation will help to ensure remaining (non-commenced) phases are delivered in a sustainable and comprehensive way.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	0	Site is in Flood Zone 1 Patches of surface water flood risk present, particularly towards the northern part of the site.
Flooding of land surrounding site for access/ egress	0	There is safe access/egress from the site – majority of land surrounding site is in Flood Zone 1.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	Part under construction and parts are unprotected open space.
Green belt?	0	Not on green belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site is due to deliver at least the remaining new homes, as set out in outline permission.
Affordable housing provision	+	Residential phases expected to deliver affordable housing.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site not in or adjacent to a regeneration area

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	+	S106 for the outline permission sets out that the wider Oxford North development, within which this site falls, will pay contributions to expanding nearby facilities such as a Primary School in Wolvercote.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	++	Public open space will be provided onsite at the higher level of 15%

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	< 400m from a bus stop (S2, and 300 at Peartree Park & Ride)

Sustainable transport links (rail station)	-	> 1600m from train station (Oxford Parkway)
Primary Schools	-	1100m to Wolvercote Primary School
Secondary Schools	-	>800m from the nearest secondary school with spaces
GP Surgeries	-	1500m to Wolvercote GP surgery
Post office	-	>800m from the nearest post office (Summertown)
Air Quality	-	Whole city is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	--	Site contains two balancing ponds

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Remaining phases are 1km from Oxford Meadows SAC or SSSI. Small corner on western edge of the parcel on west of A44, and strip running down eastern boundary of the parcel to east of A44, is identified in the LNRS.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	Site contains no known archaeological sites or has limited or uncertain archaeological potential
Conservation Areas & Register of	-	None within the site, but close to Wolvercote Conservation Area designation so potential impacts on setting.

Parks and Gardens (RPG)		
Listed Buildings	0	Site contains no identified historic building constraint
View Cones	0	Site lies outside of a view cone
Historic Core Area	0	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	+	Site will support growth in knowledge-based economy
Diversifying the economy end employment opportunities	+	Commercial phase of site will likely provide affordable workspace

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes - access via A44 and A40, new link road within site has also already been constructed.
Can walking and cycling connections with the surrounding area be achieved?	Yes - Area is well connected to pedestrian and cycle routes into Oxford and surrounding area, and improvements being delivered as part of S106.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Two balancing ponds delivered already through earlier phases.
Are land contamination issues likely?	Contamination risks being addressed under current planning permission.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Eastern parcel adjoins railway line, which may have noise implications for the proposed residential on that parcel.

Stage 2 conclusion
Site is generally sustainable. Site has outline permission, and parts have reserved matters permissions. Site should be considered further for allocation which will help to ensure remaining (non-commenced) phases are delivered in a sustainable and comprehensive way. Site to be put forward for allocation in Regulation 19 Local Plan.

SPN4: Oxford University Press Sports Ground

Site name	Oxford University Press Sports Ground
SHLAA reference (and OLP2036 Policy if applicable)	049 Policy SP52
Ward	Wolvercote
Total site size (ha)	3.65
Existing use(s)	Private sports ground

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner has indicated a willingness to develop the site.
Does the landowner specify types of development	Housing and public open space

Stage 1b conclusion
Landowner has expressed interest in further development of the site. Continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Large patch of surface water flood risk along the upper side of the eastern perimeter, with small patches along the southern perimeter.)*
Flooding of land surrounding	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	***SA rating***	***Comments***
Previously developed land?	-	*Site is unprotected open space (private sports ground) including a cricket pitch and three tennis courts. Part of the Green Infrastructure Network (supporting).*
Green belt?	*0*	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	***SA rating***	***Comments***
Housing provision	++	*Site would provide more than 10 new homes. (Site allocation in Oxford Local Plan 2036 is for a minimum of 130 homes, depending on relocation of the cricket pitch).*
Affordable housing provision	+	*Site likely to deliver affordable housing*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	***SA rating***	***Comments***
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not in or adjacent to a regeneration area*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Site not allocated for community facilities*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	*Site allocated for housing – 10% public open space to be provided on site*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*The site is 400m from the nearest bus stop (Jordan Hill on Banbury Road). Buses along Banbury Road are frequent and include the 2, 2A, 700, S5 and S7.*
Sustainable transport links (rail station)	+	*Less than 1600m from the nearest rail station (Oxford Parkway is 1500m away)*
Primary Schools	-	*More than 800m from the nearest primary school (Wolvercote Primary School)*
Secondary Schools	-	*More than 800m from the nearest secondary school (Cherwell School)*
GP Surgeries	-	*More than 800m from the nearest GP surgery (Wolvercote Surgery)*
Post office	-	*More than 800m from the nearest post office (Kendall Crescent)*
Air Quality	-	*Site is within an Air Quality Management Area (AQMA)*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	*Site is not within 30m of a water body*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Contains no nature conservation designations but has potential for nature conservation interest. Aerial imagery indicates the site is comprised of grassland used for recreational purposes (cricket pitch), developed land, and boundary hedgerows/tree lines. It forms part of a wider block of semi-natural habitats incorporating the golf course to the north, and the lake and cemetery to the south. As such, it may act as a green corridor in the landscape, potentially for nesting birds, foraging and commuting bats, badgers, reptiles, and amphibians. Any development proposals should assess what connectivity is provided and preserve. Any of the faunal groups identified above could also provide constraints within the application site itself.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*General potential for Roman and prehistoric activity and specific interest for proximity to Lower Palaeolithic Wolvercote Channel*
Conservation Areas & Register of Parks and Gardens (RPG)	*0*	*Site is not in or on the edge of a conservation area or site on the Register of Parks and Gardens*
Listed Buildings	*0*	*Site contains no identified historic building constraint*
View Cones	*0*	*Site lies outside of a view cone*
Historic Core Area	*0*	*Site lies outside the City Council's locally designated Historic Core Area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	*No change in number of jobs/economic floorspace in knowledge-based economy*
Diversifying the economy end employment opportunities	*0*	*No change in employment base or access to affordable workspaces*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Site is accessible by vehicle from Jordan Hill.
Can walking and cycling connections with the surrounding area be achieved?	Pedestrian and cycle connections from Jordan Hill via Banbury Road.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	The existing use is as a private sports ground. There are limited physical features/ changes in ground level etc. Site contains significant existing trees along the northern and western boundaries which are important to public amenity in the area and will provide valuable ecosystem services. Trees are protected by the Oxford City Council Jordan Hill Road (No.1) Tree Preservation Order 1981 and the Cherwell District Council (No.1) Tree Preservation Order, 1982. Existing trees will influence the developable area of the site and its capacity.
Are land contamination issues likely?	There are no likely land contamination issues.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The adjacent business park is in use for science, technology, innovation and offices, so the potential for noise nuisance to impact residential uses on the development site would be low.

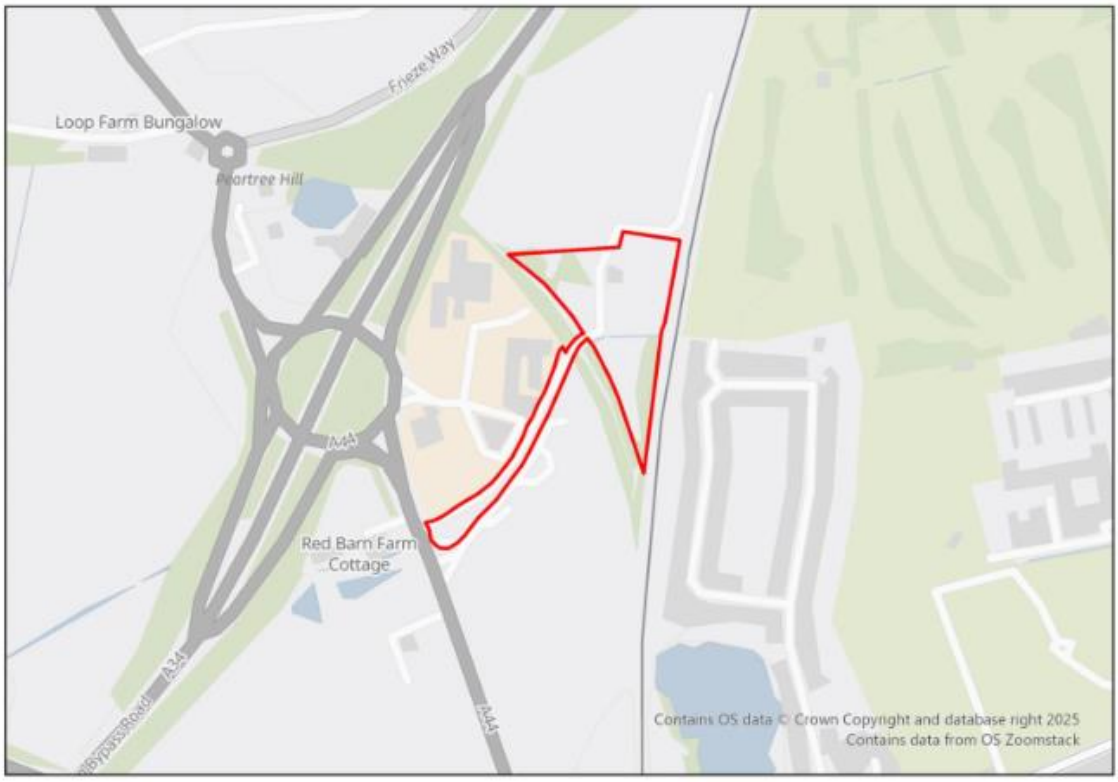
Stage 2 conclusion

The site scores quite well overall against the sustainability criteria and although the scoring for accessing local services such as schools and GP surgeries is low, there is good access to sustainable transport links which are in close proximity to the site.
Site to be put forward for allocation in Regulation 19 Local Plan.

SPN5: Pear Tree Farm

Site name	Pear Tree Farm
SHLAA reference (and OLP2036 Policy if applicable)	001e
Ward	Wolvercote
Total site size (ha)	2.54
Existing use(s)	Greenfield / farmland, including farm buildings

Site location plan



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
There are no clear conflicts with national policy or insurmountable environmental or physical constraints. However, site allocation policy itself would benefit from acknowledging the EWR Safeguarding Direction (19 November 2025) and highlighting the procedural implications of the site's potential inclusion within this land. The Direction (19 November 2025) maps suggest that part of the eastern boundary of the site is included within the safeguarded area. Where a planning application is submitted on land included within the EWR Safeguarding Direction, the East West Rail Company becomes a statutory consultee and must be consulted in accordance with the instructions in the Direction before planning permission can be granted. Continue to next stage assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Landowner confirmed intention (confirmed 2025) to develop the site for residential-led development, as part of wider scheme with the parcel of land to the north (in Cherwell district).

Stage 1b conclusion
Landowner has confirmed intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	0	Site in Flood Zone 1 Some small patches of surface water flooding.
Flooding of land surrounding site for access/ egress	0	Surrounding area in Flood Zone 1

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	Site is unprotected open space plus some farm buildings
Green belt?	0	Site is not on Green Belt land (de-designated in previous local plan)

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	**++**	Site allocated for residential development (in Northern Gateway AAP) and would provide more than 10 new homes
Affordable housing provision	**+**	No known viability challenges. Site would likely provide up to 50% affordable housing

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within	**0**	Site is not in or adjacent to a regeneration area (2025 data)

the top 20% most deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	No change

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**+**	Allocated for residential, so public open space will be required to be provided onsite. The type and layout of this could take the form of wilder, natural areas that are more informal in design and can play a dual role in allowing people to get closer to nature, whilst also supporting existing species. Onsite open space could also help with maintaining the UGF score and for supporting biodiversity.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**-**	Approximately 500m from a bus stop (S2 or Park & Ride 300)
Sustainable transport links (rail station)	**-**	> 1600m from train station (Oxford Parkway). Station is relatively close but the pedestrian/cycle access is longer due to site being severed by the railway line.

Primary Schools	**-**	>800m from Wolvercote Primary School
Secondary Schools	**-**	>800m from the nearest secondary school with spaces
GP Surgeries	**-**	>800m Wolvercote GP surgery
Post office	**-**	>800m from the nearest post office (Summertown)
Air Quality	**-**	Whole city is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**0**	Site is not within 30m of a water body

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	No nature conservation designations on site, although majority of site falls within the LNRS and there is substantial tree coverage on site.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	Background Roman and Bronze Age sites to east and west but not close by, sizable development would require evaluation in relation to general potential.
Conservation Areas & Register of Parks and Gardens (RPG)	0	Site is not in or on the edge of a conservation area or site on the RPG register
Listed Buildings	0	Site contains no identified historic building constraint

View Cones	0	Site lies outside of a view cone
Historic Core Area	0	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**0**	No change in number of jobs/economic floorspace in knowledge-based economy
Diversifying the economy end employment opportunities	**0**	No change in employment base or access to affordable workspaces

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicle access to the site is a constraint as the current single-lane track would not be suitable for this development in its current form. An alternative access would be required.
Can walking and cycling connections with the surrounding area be achieved?	Current access is single lane track to the A44. As site adjoins railway line and proximity to Oxford Parkway, there is potential to improve pedestrian/cycle access to station.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Substantial tree coverage on site Telephone mast which would constrain development if required to be retained.
Are land contamination issues likely?	Unlikely
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Railway line and A34 adjoins site, likely to need buffers & screening for noise for residential uses

Stage 2 conclusion

Site is generally sustainable as a site allocation for residential development. Access road for vehicles & pedestrians needs addressing as the current single-lane track would not be suitable for this development in its current form. Additionally the site adjoins the A34 and railway line so mitigation may be required to minimise noise impacts on new residents. Site to be put forward for allocation in Regulation 19 Local Plan.

SPN6: Red Barn Farm

Site name	Red Barn Farm
SHLAA reference (and OLP2036 Policy if applicable)	001c
Ward	Wolvercote
Total site size (ha)	0.96
Existing use(s)	Classroom/workshop/office buildings and a motorcross track

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner confirmed (2025) intention to develop for economic
Does the landowner specify types of development	Economic development (knowledge economy)

Stage 1b conclusion
Landowner has confirmed (2025) intention to develop for employment (R&D/knowledge economy). Continue to next stage of assessment.

Stage 2 assessment – Qualitative assessment of deliverability (incorporating Sustainability Appraisal)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	**0**	Site is in Flood Zone 1 (Southern portion of the site is impacted by surface water flood risk).
Flooding of land surrounding	**0**	There is safe access/egress from the site – area surrounding site is Flood Zone 1

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Site is mostly previously developed land (with buildings in use on site), the track part is grass/soil
Green belt?	0	Site is not on Green Belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	0	Site allocated for use other than housing
Affordable housing provision	0	Site allocated for use other than housing

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site is not in or adjacent to a regeneration area

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	I	Development of the site could lead to decrease in community/training facilities unless these are appropriately reprovided. Will depend upon implementation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	I	Development for employment would provide some landscaping. Policy suggests that design of outdoor spaces could seek to incorporate a variety of features including pocket parks; trees and hedges; green roofs; as well as linear features that can facilitate movement through the site and integrate with surrounding areas.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	< 400m from a bus stop, service S2 and the Peartree Park & Ride (300)
Sustainable transport links (rail station)	-	> 1600m from train station (Oxford Parkway)
Primary Schools	-	1100m to Wolvercote Primary School
Secondary Schools	-	>800m from the nearest secondary school
GP Surgeries	-	1500m to Wolvercote GP surgery
Post office	-	>800m from the nearest post office (Summertown)
Air Quality	-	Whole city is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	Site is within 30m of a water body (balancing ponds within the adjoining Oxford North development)

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	No nature conservation designations on the site, but there is substantial tree coverage around perimeter. Policy suggests Trees could be retained especially along perimeter with A34 to help buffer noise. There may be potential to improve habitat provision through enhancement of the remaining green space which is currently unlikely to provide much in ecological terms.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Does the site contain any historical, or archaeological features?

Criteria	*SA rating*	*Comments*
Archaeology	I	Site contains no known archaeological sites but Roman remains recorded in the general area, site would require evaluation.
Conservation Areas & Register of Parks and Gardens (RPG)	0	Site is not in or on the edge of a conservation area or site on the RPG register
Listed Buildings	0	Site contains no identified historic building constraint
View Cones	0	Site lies outside of a view cone
Historic Core Area	0	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	++	Development of site for employment would support jobs in knowledge-based economy, as part of the wider Northern Gateway area. Policy specifies that employment uses on the site must be linked to knowledge economy.
Diversifying the economy end employment opportunities	+	Likely to provide affordable workspace as part of development (

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Current vehicle access onto the A44 is unlikely to be suitable for any significant increase in traffic without upgrading. Any plans for a left-in left-out junction would need to be agreed with the Highways Authority, or low-car development could be an option given the proximity of park & ride.
Can walking and cycling connections with the surrounding area be achieved?	Generally area is well connected to pedestrian and cycle routes into Oxford and surrounding area.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Nearby balancing ponds on adjoining site. Substantial tree coverage around perimeter of site could be retained as buffer to traffic of A34/A44 which adjoin the site on two sides at raised levels.
Are land contamination issues likely?	Land contamination issues are unlikely given the current use.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Noise from adjoining A34/A44, which are also at raised levels, orientation of buildings could help mitigate this.

Stage 2 conclusion
Site allocation for employment generally scores well against sustainability objectives, the main negative scores relate to access to schools, GP etc which are less significant to development for employment compared to if the site were being developed for residential. The existing community facilities on the site are important to local young people so whilst the area is suitable for redevelopment, the loss of this community facility needs to be addressed and mitigated as part of any redevelopment. Employment use would complement the adjoining Oxford North development. Vehicle access needs to be addressed, because the current access

onto the A44 is unlikely to be suitable for any significant increase in traffic. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS1: 474 Cowley Road

Site name	474 Cowley Road
SHLAA reference (and OLP2036 Policy if applicable)	**516**
Ward	**Donnington**
Total site size (ha)	**0.34ha**
Existing use(s)	**Former use as a commercial timber yard, now vacant.**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	Planning application 17/01463/FUL for construction of a 64-bed care home not implemented.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes.
Does the landowner specify types of development	Residential development. Planning permission was granted in September 2017 for the demolition of the existing buildings on the site and erection of a 64-bedroom care home, along with landscaping and car parking facilities (17/01463/FUL). Development was not implemented and the site remains available.

Stage 1b conclusion
Consider further for allocation for residential development, continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	-	Site is partially in Flood Zone 3a *(Large patches of surface water flood risk within central and northern areas of site).*

Flooding of land surrounding site for access/ egress	-	Access immediately from the site, for a short duration in either direction of Cowley Road lies within Flood Zone 3a, after which the access lies within Flood Zone 1.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	+	The site will make use of previously developed land (with vacant buildings on site).
Green belt?	0	The site is not on Green Belt land.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site will deliver at least 20 homes.
Affordable housing provision	+	Affordable housing likely to be policy compliant.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site not within one of the most deprived areas of Oxford.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	Site not allocated for community facilities.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	No change.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	<400m to the nearest bus stop. There are frequent services on the 1, 5A City, 5 City, 10 etc.
Sustainable transport links (rail station)	-	>1,600m to Oxford Train Station.
Primary Schools	+	<800m to the nearest primary school (St Frideswide Primary School).
Secondary Schools	+	<800m to the nearest secondary school (Greyfriars Catholic School).
GP Surgeries	-	>800m to the nearest GP surgery
Post office	-	>800m to the nearest post office
Air Quality	-	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	The site does not contain and is not near a body of water.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	Site is adjacent to Allotments (Elder Stubbs Charity Allotments). If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e. at least no net loss. Trees along the boundary should be retained and protected. Reptiles, bats, birds, badgers and potentially invertebrates are likely present. To provide mitigation, retention and where possible enhancement of habitat suitable for reptiles along the south-western area of the site is likely required. However, this must be informed through protected species surveys.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	General potential only. Requirement for evaluation would depend on the scale of development.
Conservation Areas & Register of Parks and Gardens (RPG)	0	The site is not within a conservation area.
Listed Buildings	0	The site is not within close proximity to a listed building.
View Cones	0	The site does not lie within the city's view cones.

Historic Core Area	0	The site is not within the city's High Building's Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	No change in number of jobs.
Diversifying the economy end employment opportunities	0	No change.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Site can be accessed from Cowley Road, almost opposite the junction with Gillian's Way.
Can walking and cycling connections with the surrounding area be achieved?	There are existing cycling and pedestrian connections but there is potential to significantly improve these.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No significant physical features identified. Site contains existing trees around and near to boundaries which are important to neighbouring residential properties. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	Any re-development of this site would require a site investigation and contamination risk assessment.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The site is bounded by a residential area. To the north-west are the rear gardens of the residential properties in Milton Road and to the south is a car repair business set behind 496-510 Cowley Road.

Stage 2 conclusion

No significant constraints to development however, part of sites lies in FZ3a so will need careful design and planning. Subsequent stages in the planning process (e.g., planning application stage) likely to need to be supported by suitable site-specific FRA work. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS2: ARC Oxford

Site name	ARC Oxford
SHLAA reference (and OLP2036 Policy if applicable)	587 (SP10 – Oxford Business Park and AOC7 – Cowley Branch Line)
Ward	Cowley
Total site size (ha)	35.4 Ha
Existing use(s)	Office/ Lab/ R&D/ vacant plots

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	Part	Numerous planning applications for various plots at various stages of the planning process.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes, numerous planning applications at various stages of the planning process
Does the landowner specify types of development	Yes, employment uses focusing on labs/ R&D

Stage 1b conclusion
Consider further for allocation for a mix of employment uses including labs/ R&D and other appropriate Class E and B employment uses. Continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Patches of surface water flood risk present across site)*
Flooding of land surrounding site for access/ egress	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*A mix of previously developed land and vacant plots*
Green belt?	*0*	*Site is not on Green Belt Land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	*I*	*Depends on implementation*
Affordable housing provision	*I*	*Depends on Implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site not in or adjacent to a Regeneration area. Site within one of 40% most deprived areas (IMD – 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Community facilities likely to remain the same.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	*Amount of public open space likely to remain the same although redevelopment opportunities will bring potential to improve public realm*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Numerous frequent service bus stops within the site boundary, including "The Longwall" stop on Garsington Road*
Sustainable transport links (rail station)	-	*Site more than 800m from Oxford Railway station (over 5km)*
Primary Schools	+	*Nearest Primary School is less than 800m away (Our Lady's Catholic Primary School is 550m away)*
Secondary Schools	-	*Nearest Secondary school is more than 800m away (Oxford Academy, Sandford Lane is over 2km away)*
GP Surgeries	+	*Nearest GP Surgery is less than 800m away (Temple Cowley Medical Group is 750m away)*
Post office	-	*Nearest Post Office is more than 800m away (Balfour Road is more than 1.5km away)*
Air Quality	-	*Within the city-wide AQMA. Not in proximity to a current air quality hotspot*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Site contains two small ponds*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Site not within a designated ecological site. Opportunities for improvements and enhancements through green walls/ roofs etc.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site contains potential for Roman archaeology*
Conservation Areas & Register of Parks and Gardens (RPG)	-	*Western boundary of the site is adjacent to the Temple Cowley Conservation Area*
Listed Buildings	-	*Site contains no listed building constraints, however adjacent to the western boundary of the site (Hollow Way) is the Grade II Listed Nuffield Press East Wing and Attached Former School House*
View Cones	*0*	*Site lies outside the city's view cones*
Historic Core Area	*0*	*Site lies outside the historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities	+	*Site likely to continue to support key knowledge-based sectors that drive economic growth*

in the knowledge-based economy		
Diversifying the economy end employment opportunities	+	*Site has potential to help deliver affordable workspaces*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains numerous trees associated with landscaping. No Tree preservation orders on site. Site is a fairly regular shape and no significant changes in ground level.
Are land contamination issues likely?	Contamination risks possible associated with former use.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site adjoins the ring road and a residential area.

Stage 2 conclusion
No insurmountable constraints to development. Care should be taken if redeveloping buildings near the western site boundary as there is an opportunity to improve the relationship between the site and the conservation area and listed building. Air quality at Hollow Way (again at the western boundary of the site) has previously been a potential issue and it will be important to ensure that this does not persist. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS3: Bertie Place Recreation Ground

Site name	Bertie Place Recreation Ground
SHLAA reference (and OLP2036 Policy if applicable)	008a Policy SP3
Ward	Hinksey Park
Total site size (ha)	0.67ha
Existing use(s)	Recreation ground, playground, MUGA

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	Yes	Small amount (approximately 1%) of site lies within FZ3b and some of access

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	Planning application 23/00988/FUL not yet determined. 31 units.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Planning application indicates landowner intention to develop for residential.
Does the landowner specify types of development	Residential

Stage 1b conclusion
Landowner has set out intentions through planning application. Continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	--	*Site is partially in Flood Zone 3b* *(Small patch of surface water flood risk towards western boundary on site)*
Flooding of land surrounding	-	*Access/egress from the site and immediate surroundings lies within Flood Zone 2. Part of Abingdon Road which lies in close proximity to the site is in Flood Zone 3b.*

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	*Unprotected green space*
Green belt?	*0*	*Not Green Belt*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Current allocation for housing and application for 31 homes. Unlikely other uses would be proposed or would align with strategy.*
Affordable housing provision	+	*Site is subject to a live planning application for 31 affordable homes.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not in or adjacent to a regeneration area*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Site not likely to deliver new community facilities.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	-	*Depends on how loss is compensated for, but the developable part of the site is currently a small recreation ground, multi-use games area (MUGA) and playground.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	Better than 10min frequency at peaks of buses to the city centre (many of which go to Abingdon in the opposite direction) (X2, X3 and 35 most frequent). Bus stop on Abingdon Rd or Redbridge P&R both under 250m
Sustainable transport links (rail station)	-	*3.2km walk to Oxford Parkway Station, closest station*
Primary Schools	+	*700m to New Hinksey Primary School*
Secondary Schools	-	*2300m to Greyfriars Oxford Catholic School*
GP Surgeries	+	*c.800m walk to South Oxford Health Centre*
Post office	-	*1,500m to Donnington PO*
Air Quality	-	*Site is within Air Quality Management Area*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Within 30 m of a water body (Redbridge Stream)*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	The recreation ground appears to contain regularly managed grassland, likely of limited diversity, though the tree lines bordering the site may be of greater value. There will be few protected species considerations.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	*0*	*Site contains no known archaeological sites or has limited/uncertain archaeological potential*
Conservation Areas & Register of Parks and Gardens (RPG)	*0*	*Site is not in or on the edge of a conservation area or site on the RPG*
Listed Buildings	*0*	*Site contains no identified historic building constraint*
View Cones	*0*	*Site lies outside of a view cone*
Historic Core Area	*0*	*Site lies outside the City Council's designated historic core area.*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	*No change in the number of jobs/economic floorspace supporting the knowledge economy.*
Diversifying the economy end employment opportunities	*0*	*No change.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes – road access from Bertie Place, although only potential for one route in, one route out, so site will be a cul-de-sac (for vehicles) There is pedestrian access through to the Abingdon Road and Wytham Street
Can walking and cycling connections with the surrounding area be achieved?	Yes – good pedestrian and cycling connections using National Cycle Route 5 which cuts through the site and will need to continue through the site, even if its exact location is altered
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	A number of established trees onsite, particularly around perimeter Sites contain significant existing trees and woodland which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	Yes, but can be mitigated.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site adjoins existing residential development

Stage 2 conclusion
Access/egress from the site is over land in moderate flood risk so will need further investigation and mitigation is likely to be required. Re-provision of MUGA and playground will be required. No

other significant constraints to development. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS4: Cowley Marsh Depot

Site name	**Cowley Marsh Depot**
SHLAA reference (and OLP2036 Policy if applicable)	**016** **Policy SP35**
Ward	**Temple Cowley**
Total site size (ha)	**1.71ha**
Existing use(s)	**City Council depot, storage for refuse vehicles**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	Potentially in the catchment of Lye Valley SSSI

Is the site greenfield in flood zone 3b?	No	Brownfield Flood Zone 3b
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner (City Council) confirmed intention to develop, subject to alternative site for the Depot uses being found
Does the landowner specify types of development	Residential proposed

Stage 1b conclusion
Landowner has expressed interest in further development of the site. Continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	**Comments**
What flood zone(s) is the site in?	--	Site is partially in Flood Zone 3b, plus large patches of surface water flood risk within central area of site.

Flooding of land surrounding site for access/ egress	-	Majority of the land surrounding the site for access/egress lies within Flood Zone 3b (not insurmountable)

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Site is previously developed land, with buildings in use as depot. Fairly low density so redevelopment could make more efficient use of site
Green belt?	0	Not Green Belt

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site would provide more than 10 new homes
Affordable housing provision	+	Site is allocated for residential and would be required to provide affordable housing

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site is not in or adjacent to a regeneration area

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	Site not allocated for community facilities

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	Site allocated for housing – 10% public open space provided on site

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	<100m to Marsh Road bus stop. Frequent services to Oxford City Centre eg 1, 5, 10
Sustainable transport links (rail station)	-	Approx 4400m to Oxford Rail station
Primary Schools	+	Approx 450m to St Christophers Primary School, Temple Road
Secondary Schools	-	Approx 1000m to Oxford Spires Academy, Glanville Road
GP Surgeries	+	Approx 800m to Temple Cowley Medical Group
Post office	-	Approx 1.5km to Donnington Post Office
Air Quality	-	Site is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	Boundary Brook runs along eastern boundary of the site

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Contains no nature conservation designations but has potential for nature conservation interest including roosting bats and nesting birds. Identified in LNRS as area that could help improve biodiversity (along southern boundary of site). Can improve wildlife linkages or habitat continuity from adjoining core GI site. TPO nearby Land west of Leafield Road) but not within site.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	Site contains no known archaeological sites
Conservation Areas & Register of Parks and Gardens (RPG)	0	Site is not in or on the edge of a conservation area or site on the RPG register
Listed Buildings	0	Site contains no identified historic building constraint
View Cones	-	Very small part of site (northern corner) is within Crescent Road View Cone
Historic Core Area	0	Site lies outside the City Council's locally designated Historic Core Area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	Site in existing employment use but not in knowledge-based economy. No change in number of jobs/economic floorspace in knowledge-based economy
Diversifying the economy end employment opportunities		While the site does support employment uses it is in use as a depot for the city council. As such, should site come forward for residential development, there are unlikely to be job losses as the city council is rationalising its estate.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes – via Marsh Road, including for emergency vehicles
Can walking and cycling connections with the surrounding area be achieved?	Yes – via Marsh Road (and Cowley Marsh Sports field if site is opened up). There are safe, segregated surfaced pedestrian/cycle access routes across the field to the Boundary Brook nature reserve green corridor and National Cycle Route 57 which also follows along the Brook.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Hedgerow along the eastern boundary with cycle lane 2 existing dwellings on site.
Are land contamination issues likely?	Yes – former depot and fueling station
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Adjoins residential uses to the north and opposite site of Marsh Road

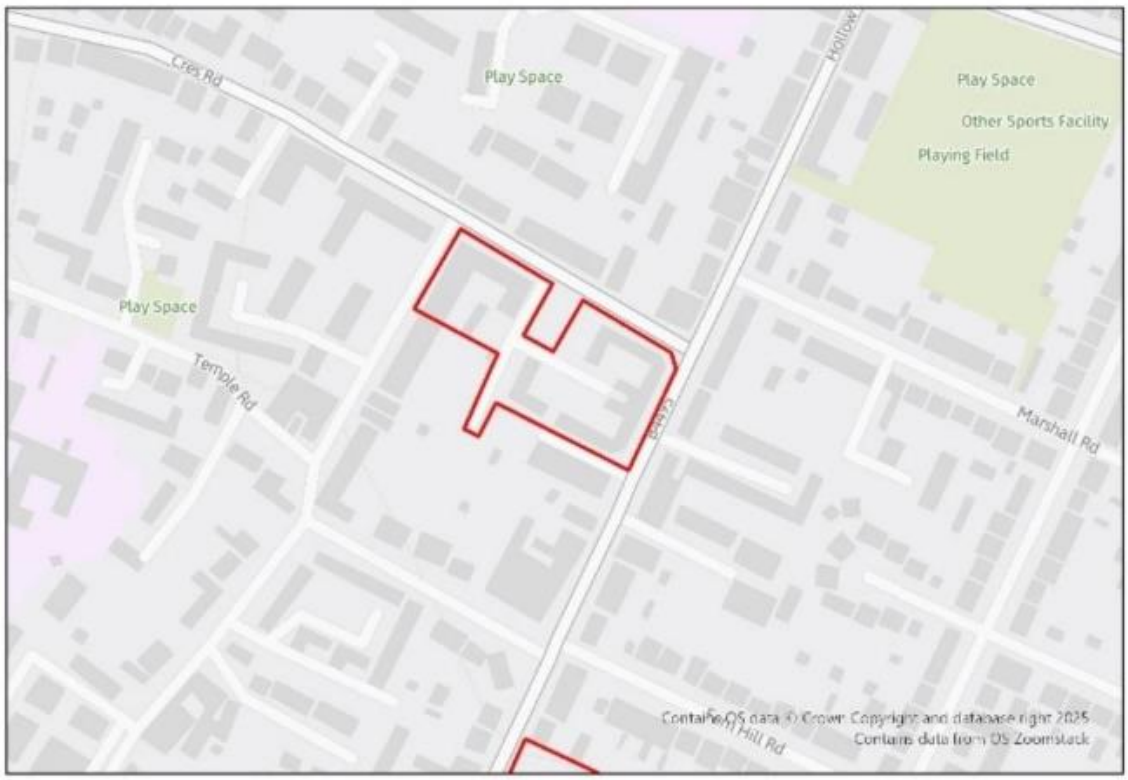
Stage 2 conclusion
The site is generally sustainable – it is on previously developed land and is an accessible location. The site is not sensitive from an ecological perspective however it lies within one of the city's locally designated View Cones so development should be designed accordingly. The flood risk classification of the site has increased in recent years following updated Environment Agency modelling data, which will need an SFRA Level 2 assessment to explore the risks in more detail. This may impact on capacity but is not thought to be insurmountable. Finding a site to relocate the existing depot uses is

challenging so is likely to impact delivery timelines. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS5: Crescent Hall

Site name	**Crescent Hall**
SHLAA reference (and OLP2036 Policy if applicable)	**017**
Ward	**Temple Cowley**
Total site size (ha)	**0.9**
Existing use(s)	**Student accommodation**

Site location plan



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	

Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	The landowner has expressed interest in further developing the site for student accommodation.
Does the landowner specify types of development	Student accommodation

Stage 1b conclusion
Landowner has expressed interest in further development of the site. Continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1*

		(Small patch of surface water flood risk towards the northern corner of the site, with a much larger patch within the south eastern half of the site, towards Hollow Way).
Flooding of land surrounding site for access/ egress	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	***SA rating***	***Comments***
Previously developed land?	*0*	*Site is previously developed land (with buildings in use on site)*
Green belt?	*0*	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	***SA rating***	***Comments***
Housing provision	++	*Site is currently in use as student accommodation. There is the potential to increase the current number of student rooms by further developing the site, and by more than the number of student rooms that equate to 10 dwellings.*
Affordable housing provision	*?*	*Depends on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	***SA rating***	***Comments***

Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not in or adjacent to a regeneration area. (Site lies within an area that is less deprived than more than 60% of neighbourhoods in England – IMD 2025).*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Site not allocated for community facilities*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	*Site not allocated*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Site is less than 400m away from a bus stop. The nearest one is the Crescent Hall bus stop on Hollow Way which is 150m away. Buses along Hollow Way are frequent and include the 10, 600 and 700.*
Sustainable transport links (rail station)	-	*Over 1600m from the nearest rail station (Oxford)*
Primary Schools	+	*Less than 800m from the nearest primary school (St Christopher's C of E Primary School is 500m away)*
Secondary Schools	-	*More than 800m from the nearest secondary school (Oxford Spires Academy)*

GP Surgeries	+	*Less than 800m from the nearest GP surgery (Hollow Way Medical Centre is 300m away)*
Post office	-	*More than 800m from the nearest post office (Woodfarm)*
Air Quality	-	Site is within Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	Site is not within 30m of a water body

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Contains no nature conservation designations but has potential for protected species to be present such as roosting bats and nesting birds. Could improve wildlife linkages or habitat continuity.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	*0*	*Site lies within a large zone of general potential for Roman Kilns and has low to moderate archaeological potential.*
Conservation Areas & Register of Parks and Gardens (RPG)	-	*Site lies on the edge of the Temple Cowley Conservation Area*
Listed Buildings	*0*	*Site contains no identified historic building constraint*
View Cones	*0*	*Site lies outside of a view cone*
Historic Core Area	*0*	*Site lies outside the City Council's locally designated Historic Core Area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	*No change in number of jobs/economic floorspace in knowledge-based economy*
Diversifying the economy end employment opportunities	*0*	*No change in employment base or access to affordable workspaces*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Site is accessible by vehicle from Crescent Road.
Can walking and cycling connections with the surrounding area be achieved?	There are existing walking and cycle connections with the surrounding area to/ from the site.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains significant existing trees along the Crescent Road, Junction Road and Hollow Way frontages which are important to public amenity in the area and will provide valuable ecosystem services. These trees are protected by the Oxford City Council Crescent Road (No.1) Tree Preservation Order 1998. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	There are no likely land contamination issues.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The site is already in use for student accommodation, however design sensitivity would be required for further redevelopment as there are residential uses in close proximity to the site.

Stage 2 conclusion

The site scores well overall against the sustainability criteria and has good access to sustainable transport links. However, design sensitivity is likely to be required due to the site's location adjacent to a conservation area. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS6: Former Iffley Mead Playing Field

Site name	**Former Iffley Mead Playing Field**
SHLAA reference (and OLP2036 Policy if applicable)	**104 (OLP 2036 ref SP38)**
Ward	**Rose Hill & Iffley**
Total site size (ha)	**2.04**
Existing use(s)	**Vacant, former playing field**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	Vacant but outside flood zone
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	Outline application submitted July 25 for up to 90 homes (25/00813/OUT). Yet to be determined.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Site has been allocated for residential use in current plan, and landowner retains interest.

Stage 1b conclusion
Site does not have insurmountable obstacles to development and is suitable for allocation for residential use. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1.* *Very small patch of surface water flood risk on the south eastern boundary.*
Flooding of land surrounding site for access/ egress	*0*	*One of two existing access routes to the site lies within Flood Zone 1 and could potentially provide hazard free access to and from the site via Augustine Way/Iffley Turn. (Cavell Road at NE corner of site lies within Flood Zone 3).*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	*Site is vacant greenfield*
Green belt?	*0*	

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Site would provide more than 10 new homes*
Affordable housing provision	+	*Affordable provision will depend on policy at time of application. Current 2036 policy requires a min of 40%.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*

Regeneration area (within the top 20% most deprived areas IMD)	+	*Site is adjacent to an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Site is allocated for residential use, although suitable complementary uses would be considered on their merits*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	*Site allocated for housing, which will require min 10% public space on site.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*There are a number of bus stops within 400m of site, served by several routes towards city centre and suburbs.*
Sustainable transport links (rail station)	-	*Oxford Rail Station is approx 4km away.*
Primary Schools	+	*A number of primary schools are within 800m of site (Larkrise, St Frideswide, Greyfields). Site is also directly opposite Iffley Academy, which is a SEND specialist school.*

Secondary Schools	-	*Site is directly opposite Iffley Academy, which is a SEND specialist school, nearest secondary schools are at least 900m away.*
GP Surgeries	+	*Nearest GP surgery just over 400m distance (Donnington Medical practice)*
Post office	+	*Nearest post office within 800m (at junction between Iffley Road/Howard Street)*
Air Quality	-	*Entire city is within an AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	*Site is 350m from Thames watercourse.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	*0*	*Site has no specific ecological designations, although it has been vacant for some time and mature planting is present throughout so there is potential for biodiversity value.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*The site has general archaeological potential, as it is located 70m from a Neolithic pit circle and there is potential for further remains. It also has potential for Early Saxon settlement as the Archeox excavation to the north recovered a significant amount of Saxon pottery. Any sizable development will require pre-determination evaluation (geophysical survey and trenching).*
Conservation Areas & Register of	-	*Site boundary adjoins Iffley CA*

Parks and Gardens (RPG)		
Listed Buildings	*0*	*No listed buildings on site.*
View Cones	*0*	*Site lies outside a view cone but there is potential for it to impact views from the Rose Hill view cone.*
Historic Core Area	*0*	*Site is not in historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	*0*	*Site is allocated for residential use so no implications for knowledge economy expected*
Diversifying the economy end employment opportunities	*0*	*Site is allocated solely for residential use and suitable complementary uses.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Mature planting and trees on site boundary.
Are land contamination issues likely?	Significant contamination unlikely.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site is directly opposite Iffley Academy.

Stage 2 conclusion

There are a number of physical and policy constraints, however these are not considered to be insurmountable, though potential mitigations may need to be considered as part of any allocation where necessary. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS7: Kassam Stadium

Site name	Kassam Stadium
SHLAA reference (and OLP2036 Policy if applicable)	028a LP2036 Policy SP14 028c
Ward	Littlemore + Northfield Brook
Total site size (ha)	6.52 ha
Existing use(s)	Kassam football Stadium with related conference facilities, car parking, cinema, bowling, other community/leisure uses

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the	No	

planning process (development commenced)?		

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Yes – mixed use development including R&D (already planning permission for part of site 23/01198/FUL)

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	**--**	Very small area of Flood Zone 3a and 3b immediately adjacent to the brook, slightly wider area of Flood Zone 2. Patches of surface water flooding, particularly south of the stadium.

Flooding of land surrounding site for access/ egress	**0**	Grenoble Road nearly all free of flood risk.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	Site consists of previously developed land
Green belt?	**0**	Site lies outside the Oxford Green Belt

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	**++**	The landowner is interested in developing the site for a mix of uses including a significant amount of residential, which it is suitable for.
Affordable housing provision	**+**	The site is likely to include deliver of affordable housing (not suitable for student accommodation)

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most	**++**	Site is within a regeneration area.

deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**I**	Community function would be replaced, but whether there is additional or the form will depend on implementation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**+**	Site is likely to deliver additional public open space.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**+**	<400m to nearest bus stop outside Kassam stadium which provides 3A service every 30mins to Templars Square and the 600 service every 30 mins to the Hospitals and Thornhill Park and Ride. Most of the site is within 800m of Pegasus Road stop with the 1 and 5 services running approximately every 5-6mins to the City Centre and Oxford Rail station.
Sustainable transport links (rail station)	**I**	Over 3.5km walk to Oxford Station, however there is potential for the site to be within walking distance of the Cowley Branch line station if this is delivered during the plan period.
Primary Schools	**-**	Approximately 1km to Windale Primary and John Henry Newman Academy Primary.
Secondary Schools	**-**	Approximately 1.5km to Oxford Academy.

GP Surgeries	**+/-**	Some parts of the site are within 800m of the nearest GP Surgery (The Leys Health Centre) while other parts of the site are further away.
Post office	**-**	Over 1km to Littlemore PO or Balfour Road PO (Dunnock Way Drop and Collect within 800m of some of the site).
Air Quality	**-**	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**-**	Northern boundary of site within 30m of a watercourse.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity e.g., along brook. The site is dominated by hardstanding and the stadium, with patches of vegetation along the brook and to the east. It appears to have very limited intrinsic ecological value. However, it is bordered by the Littlemore Brook and Northfield Brook OCWSs, which provide a corridor for wildlife. A buffer should be included to support these features. There is scope to deliver significant ecological enhancements, which should include an element focused on buffering the brooks. Site contains significant existing trees around the boundaries which are important to public amenity in the area and will provide valuable ecosystem services. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e. at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	The Minchery Farmhouse is on the adjacent site. There is potential for prehistoric, Roman and medieval archaeology, dispersed Roman pottery manufacturing activity, burials and other features east and north of the standing Nunnery dormitory range. This will need to be explored as part of any redevelopment.
Conservation Areas & Register of Parks and Gardens (RPG)	**0**	The site is outside of a conservation area.
Listed Buildings	**-**	Minchery Farmhouse (Grade II*) is adjacent to the site.
View Cones	**0**	Site lies outside of a view cone
Historic Core Area	**0**	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	***0***	Some employment-generating uses as part of the stadium, which will be replaced.
Diversifying the economy end employment opportunities	***0***	Unlikely to provide affordable workspace.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicular access exists from Grenoble Road
Can walking and cycling connections with the surrounding area be achieved?	Walking and cycling connections already exist to surrounding area (e.g., to Blackbird Leys). Potential for improvements to be made depending on use delivered.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No significant changes in ground level. Site contains significant existing trees around the boundaries which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity. The quality of all existing trees should be assessed against the criteria in table 1 of BS5837:2012 (or its latest iteration). High quality trees must be retained unless there is a robust over-riding policy-based justification. Moderate and low quality trees should be retained where it is feasible to do so. Opportunities exist to plant new trees to benefit public amenity in the area.
Are land contamination issues likely?	Includes areas of filled ground which may be unsuitable for housing without mitigation.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	N/A

Stage 2 conclusion
No insurmountable constraints to development. Proximity to Grade II* listed Farmhouse may require design sensitivity in a small part of the site. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS8: Land at Meadow Lane

Site name	Land at Meadow Lane
SHLAA reference (and OLP2036 Policy if applicable)	389 Policy SP42
Ward	Rose Hill and Iffley
Total site size (ha)	0.99ha
Existing use(s)	Private green space, in the past rented out for horse grazing

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	Yes	Small part in corner of the site.
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner has expressed an intention to develop this site.
Does the landowner specify types of development	Seeking to deliver residential development.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	--	Small amount of Flood Zone 3a and 3b on the western boundary of the site, and a slightly wider area of Flood Zone 2. Surface water flooding in same area.
Flooding of land surrounding	0	Safe access and egress from the site can be achieved as the route identified is flood-free, with the majority of the site also in Flood Zone

site for access/ egress		1. (There is a watercourse running along the site's western boundary, but the site would not be accessed from here).

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	Site is unprotected open space.
Green belt?	0	Not in the Green Belt

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	
Affordable housing provision	+	

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Not within a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	Amount of community facilities likely to remain the same as a result of the application.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	-	>400m to nearest bus stop, Iffley turn. Services include 3 City, 3A.
Sustainable transport links (rail station)	-	>3200m from Oxford railway station
Primary Schools	-	>800m from nearest primary school (Rose Hill School)
Secondary Schools	-	>800m from nearest Secondary School (Greyfriars Oxford Catholic School)
GP Surgeries	-	>800m from the nearest GP surgery
Post office	-	>800m from the nearest post office
Air Quality	-	Whole city is within an Air Quality Management Area.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	Small watercourse along western boundary of the site

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	Site contains no nature designations. Ecological assessments undertaken in support of a planning application have found the site is of value for invertebrates, and badger activity is evident. As such, the site is highly ecologically constrained. Although it is not subject to any designations for its wildlife value, it may qualify at least as an Oxford City Wildlife Site (if not a Local Wildlife Site). Any development proposals coming forward should retain and enhance as much of the habitat supporting the invertebrate assemblage as possible, and ideally the badger sett as well. If this cannot be achieved, a detailed assessment of how invertebrates and badgers utilise the site and surrounding land should be made, to inform a package of mitigation and compensation measures that ensures there are no residual impacts on either.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Known archaeological potential. General potential for Iron Age and Roman activity and located within the historic core of the medieval village.
Conservation Areas & Register of Parks and	--	Site lies within the Iffley Conservation Area.

Gardens (RPG)		
Listed Buildings	-	Two Grade II Listed Buildings (Tudor Cottage and Townsend Close) and a Grade II Listed Wall (Wall and Gate of Townsend Close) nearby. The setting and any impacts on it of any proposed development would need to be understood as part of any application.
View Cones	-	Site within view cone
Historic Core Area	0	Not within historic core area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	No change in the number of jobs/ economic floorspace in the knowledge economy
Diversifying the economy end employment opportunities	0	No change

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes. Via Church Way. Limited access for existing properties along Meadow Lane
Can walking and cycling connections with the surrounding area be achieved?	Yes.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains significant existing trees and hedgerows which are important to public amenity in the area and will provide valuable ecosystem services. Trees are protected by the location within the Iffley Village Conservation Area. Existing trees will influence developable area of site and its capacity. The quality of all existing trees should be assessed against the

	criteria in table 1 of BS5837:2012 (or its latest iteration). High quality trees must be retained unless there is a robust over-riding policy-based justification. Moderate and low quality trees should be retained where it is feasible to do so. Opportunities exist to plant new trees to benefit and enhance the character and appearance of the Iffley Village Conservation Area.
Are land contamination issues likely?	No significant contamination risks identified.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Surrounding uses are residential.

Stage 2 conclusion
This site is an unprotected undeveloped greenfield site with a small portion of the site in Flood Zone 3b. There are some heritage assets on the site including the site's location within the Iffley Conservation Area. It has some general archaeological potential and is sited within one of the city's locally designated view cones. Careful design will be needed to mitigate impacts on nearby heritage assets. There are also ecological concerns, in terms of the potential for badgers and invertebrates, but with potential for a scheme that responds to these carefully. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS9: Littlemore Mental Health Centre, Sandford Road

Site name	Littlemore Mental Health Centre, Sandford Road
SHLAA reference (and OLP2036 Policy if applicable)	33
Ward	Littlemore
Total site size (ha)	6.6
Existing use(s)	Site is in use for health care facilities, includes employer linked housing. Use Class C2.

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	Within 200m of SSSI (Littlemore Railway Cutting)
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Intending to develop some residential (employer-linked) subject to operational hospital uses.

Stage 1b conclusion
Confirmed landowner intent, continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	*Site is in Flood Zone 1* *(Patches of surface water flood risk present throughout site)*
Flooding of land surrounding site for	0	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	*Site is currently in use as a mental health centre.*
Green belt?	0	*Site is not on green belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	I	*Depends on implementation.*
Affordable housing provision	I	*Depends on implementation.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	+	*Site is adjacent to an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Bus stops located on Sandford Road - services 3A, 45, X40*
Sustainable transport links (rail station)	-	*Oxford Rail station over 1.6km from site*
Primary Schools	-	*John Henry Newman Academy located over 800m from the site*
Secondary Schools	-	*The Oxford Academy located over 800m from the site*
GP Surgeries	-	*Donnington Medical Practice over 800m from the site*
Post office	-	*Littlemore Post Office over 800m from the site*
Air Quality	-	*Site is located within an Air Quality Management Area*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	--	*Site contains a water body.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	0	*Scrub by Heyford Hill Roundabout (incl. Littlemore Railway Cutting SSSI, which is a geological SSSI)* *Site has tree, grassland, pond and ditch habitats. Potential for various Priority/ Principal species in the area including swifts, badgers, common toad, hedgehog, grass snake, starling, dunnock, house sparrow, song thrush, reed bunting, starling.* *Earthwatch Tiny Forest: Littlemore within/ adjacent to site.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Has archaeological potential – roman pottery has been found previously, also Iron Age and Roman remains recorded nearby.*
Conservation Areas & Register of Parks and Gardens (RPG)	0	*Site is not in or on the edge of a conservation area or near site on the RPG register. Littlemore Conservation Area is located to the north of the site beyond the railway line.*
Listed Buildings	0	*Site contains no identified historic building constraint but heritage assets are located nearby.*
View Cones	0	*Site lies outside of a view cone*
Historic Core Area	0	*Site lies outside the City Council's locally designated Historic Core Area.*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	*No change in number of jobs/economic floorspace in knowledge-based economy*
Diversifying the economy end employment opportunities	0	*No change in employment base or access to affordable workspaces*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicular access from Sandford Road
Can walking and cycling connections with the surrounding area be achieved?	Walking and cycling connections already exist to surrounding area.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	There are numerous trees on the northern (railway cutting) and southern (A4074) boundaries and other trees within the site. There is also a hedge line along site frontage with Sandford Road. There is a pond and brook on the site. Site is within 200m of SSSI (Littlemore Railway Cutting)
Are land contamination issues likely?	Any re-development on this site would likely require a contamination site investigation and risk assessment.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	N/A

Stage 2 conclusion
No insurmountable constraints to development. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS10: MINI Plant Oxford

Site name	MINI Plant Oxford
SHLAA reference (and OLP2036 Policy if applicable)	497 (SP8 MINI Plant Oxford; AOC7 – Cowley Branch Line)
Ward	Blackbird Leys
Total site size (ha)	69.9Ha
Existing use(s)	Car Plant (Mix of B2/ B8 and Class E(g) uses associated with manufacturing process)

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	Yes	Application reference 23/02166/FUL for 26,350sqm net (GIA) under construction

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes – ongoing ambitions continue to produce BMW MINI at MINI Plant Oxford.
Does the landowner specify types of development	No however, an appropriate mix of B2/ B8 and Class E(g) employment uses to enable on-going car manufacturing to remain in the city has been assumed.

Stage 1b conclusion
Landowner has ongoing ambitions to continue to use the site for car manufacturing. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	*Site is in Flood Zone 1* *(Large patches of surface water flood risk present, particularly centrally and towards the western corner of site.)*

Flooding of land surrounding site for access/ egress	0	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	*Site is previously developed land (in use as car manufacturing plant)*
Green belt?	0	*Site not within the Green Belt*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	0/l	*Site is primarily a non-residential allocation however policy E1 allows housing delivery on employment sites if landowner sought this.*
Affordable housing provision	0/l	*Site unlikely to deliver affordable housing but depends on implementation.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most	0	*The site is not within a Regeneration Area. (Site lies within an area that is more deprived than 55% of neighbourhoods – IMD 2025)*

deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	*Community facilities unlikely to change*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	*Public open space unlikely to change*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Nearest Bus Stops is Factory Gate (Garsington Road) - less than 400m from site entrance. This is a frequent service bus stop. There is turn style access for workers directly onto the site.*
Sustainable transport links (rail station)	-	*Oxford Railway station is more than 800m away (in fact, more than 5km away)*
Primary Schools	-	*Nearest Primary school is more than 800m away (St Francis CofE Primary)*
Secondary Schools	-	*Nearest secondary school is more than 800m away (Oxford Academy is almost 2km away)*
GP Surgeries	-	*Nearest GP Surgery is more than 800m away (Hollow Way Medical Centre – part of St Bartholomew & Hollow Way Medical Practice is 1.5km away)*

Post office	-	*Although Balfour Road Post Office is within 800m of Gate 10 (Garsington Road), given the size of the site, the majority of it is more than 800m away from the nearest Post Office*
Air Quality	-	*Within city-wide AQMA but outside of recognised air quality "hotspot".*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Pond within 30m of eastern site boundary*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Contains no nature conservation designations. However, site contains 9ha approx. of former playing fields. Aerial imagery shows some hedgerows on this greenspace which have some ecological potential. The remainder of the site contains limited green spaces which seem to comprise artificially landscaped areas including trees and mowed grass areas.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site is of archaeological interest as the Dorchester-Alchester Roman Road runs through the site and there is potential for roadside settlement. Archaeological remains from the Bronze Age and Roman remains have also previously been recorded.*
Conservation Areas & Register of Parks and Gardens (RPG)	0	*Site is not in or on the edge of a conservation area or site on the RPG register*

Listed Buildings	0	*Site contains no identified historic buildings constraint*
View Cones	0	*Site lies outside of a view cone*
Historic Core Area	0	*Site lies outside the historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	I	*Unlikely to increase jobs in knowledge-based sectors due to nature of employment – i.e., car manufacturing but depends upon implementation*
Diversifying the economy end employment opportunities	I	*Site would support continued diversification of employment base by continuing to offer car manufacturing jobs – again generally depends upon implementation*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes, although size, nature and location of the site – accessed from Oxford Ring Road (A4142) result in a rather car-dominated environment.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	The site contains scattered trees around car parking areas and along main vehicular routes. Overall, the site appears relatively flat.
Are land contamination issues likely?	Possible contamination issues due to many years of use as a car manufacturing plant. Site investigations and remedial works likely to be necessary.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site adjoins a railway line, the ring road and other industrial/ storage style employment. Site is also adjacent to fields/ arable land and sports pitches.

Stage 2 conclusion

No insurmountable constraints to continued car-manufacturing-related development activities at this site. The site has some archaeological potential due to its proximity to the Dorchester-Alchester Roman Road. Potential for surface water flood risk at parts of site. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS11: Overflow Carpark at Kassam Stadium

Site name	**Overflow carpark at Kassam Stadium**
SHLAA reference (and OLP2036 Policy if applicable)	**028b** **Policy SP14**
Ward	**Northfield Brook**
Total site size (ha)	**2.29**
Existing use(s)	**Surface level overflow car park**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Yes

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	**--**	*Site is partially in Flood Zone 3b (south-western corner of car park and partly along south-eastern perimeter).* *(Patch of surface water flood risk towards far eastern corner of site)*
Flooding of land	**-**	*A very small part of the initial access route is within Flood Zones 2 and 3a, although most of the route lies within Flood Zone 1.*

surrounding site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	*Site consists of previously developed land*
Green belt?	**0**	*Site lies outside the Oxford Green Belt*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	**++**	*Landowner interest in developing the site for housing, which is a suitable use.*
Affordable housing provision	**+**	*Site likely to deliver affordable housing.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	**+**	*Site is adjacent to a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**I**	There is potential for community facilities to be delivered on site however this would depend on implementation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**+**	*Site likely to deliver additional open space.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**-**	*600m to Littlemore 5A every 30 mins, just over 800m to Pegasus Road stop with buses every 5-6mins to the city centre*
Sustainable transport links (rail station)	**I**	Over 3.5km walk to Oxford Station however there is potential for the site to be within walking distance of a new Cowley Branch line station if this delivered during the plan period.
Primary Schools	**-**	*Just over 800m to John Henry Newman Academy primary*
Secondary Schools	**-**	*1.4km to Oxford Academy*
GP Surgeries	**-**	*1.4km to The Leys Health Centre*
Post office	**-**	Over 1km to Littlemore PO or Balfour Road PO
Air Quality	**-**	*Whole city is within an AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**-**	*Southern boundary of site within 30m of a watercourse*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity e.g., along brook. The site is dominated by hardstanding and the stadium, with small patches of vegetation in the northern parcel. It appears to have very limited intrinsic ecological value. However, it is bordered by the Littlemore Brook and Northfield Brook OCWSs, which provide a corridor for wildlife. A buffer should be included to support these features. There is scope to deliver significant ecological enhancements, which should include an element focused on buffering the brooks. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e. at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	There is potential for prehistoric, Roman and medieval archaeology. The archaeology is dispersed and mostly focused around the fringes of the car park (peat with potential for prehistoric pollen sequences near the Bingo Hall, dispersed Roman pottery manufacturing activity, burials and other features

		east and north of the standing Nunnery dormitory range). This will need to be explored as part of any redevelopment.
Conservation Areas & Register of Parks and Gardens (RPG)	**0**	The site is outside of a Conservation Area but close to the Littlemore Conservation Area.
Listed Buildings	**0**	Site is nearby Minchery Farmhouse (Grade II*) although not within the setting of.
View Cones	**0**	Site lies outside of a view cone
Historic Core Area	**0**	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	**0**	*Not expected to lead to a change in the number of jobs or amount of floorspace in knowledge-based economy.*
Diversifying the economy end employment opportunities	**0**	*No change in employment base or access to affordable workspaces expected.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicular access exists from Grenoble Road, through the main Kassam site and across the bridge into the site.
Can walking and cycling connections with the surrounding area be achieved?	Walking and cycling connections already exist to surrounding area, e.g., to Blackbird Leys and Littlemore, but improvements would be needed.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Vegetation around the edges of the site. Brook to the south is a wildlife corridor which can be enhanced.

Are land contamination issues likely?	Includes areas of filled ground which may be unsuitable for housing without mitigation.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	n/a

Stage 2 conclusion
No insurmountable constraints to development. Proximity to Grade II* listed Farmhouse may require design sensitivity in a small part of the site. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS12: Oxford Science Park

Site name	Oxford Science Park
SHLAA reference (and OLP2036 Policy if applicable)	588 LP2036 Policy SP9 – Oxford Science Park & Policy AOC7 – Cowley Branch Line
Ward	Littlemore
Total site size (ha)	27.33
Existing use(s)	Mix of employment uses (mainly office and labs) and ancillary uses including car parking and nursery.

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	Site not greenfield, but some areas of Flood zone 3b,

		generally following the line of the watercourse which runs through the site.
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	Yes	All remaining plots, either have planning permission or development has commenced

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Confirmed intention to retain/redevelop for employment R&D uses
Does the landowner specify types of development	Employment (R&D) uses – primarily a mix of laboratory and office buildings and associated uses

Stage 1b conclusion
Confirmed landowner intention, continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***

What flood zone(s) is the site in?	**--**	Site is partially in Flood Zone 3b - the flood zone largely follows the boundaries of the watercourse which runs east-west along northern portion of site. Areas of Flood Zone 2 and 3a extend slightly further beyond. (Various patches of surface water flood risk present within site)
Flooding of land surrounding site for access/ egress	**0**	There is safe access/egress from the site – surrounding area for access to the site is Flood Zone 1.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Site is previously developed land
Green belt?	0	Site is not on Green Belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	I	Site unlikely to deliver new homes however policy E1 allows housing delivery on employment sites if landowner intentions were to change
Affordable housing provision	I	Site unlikely to deliver affordable housing because no housing is proposed, but depends on implementation.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	++	Site is partly within 20% most deprived, and partly within 30% most deprived.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	Community facilities unlikely to change as a result of allocation

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	Public open space should be provided as part of redevelopment of plots

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	Bus stop on site (number 45 – limited hours service). Also close to site (Park Homes stop – frequent service stop, close to the site – 550m away)
Sustainable transport links (rail station)	-	Oxford Station is more than 5km away
Primary Schools	-	John Henry Newman Academy is 1.5km away

Secondary Schools	-	The Oxford Academy is 2km
GP Surgeries	-	The Leys Health Centre is more than 2km away)
Post office	-	Littlemore Stores & Post Office is more than 2km away)
Air Quality	-	Within AQMA but outside of identified hotspot or area in breach of local air quality standards

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	--	Littlemore Brook runs through the site

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	Littlemore Brook (Oxford City Wildlife Site) runs through the site. Several trees appear on-site as does a small area of woodland which screens acts as a visual screen from the sewage infrastructure located to the south. Trees along part of the northern boundary to the site are covered by a TPO woodland group area (which runs part of the way along the Littlemore Brook from the A4074 and then acting as a boundary between Littlemore house and the new development directly to the south and the Science Park itself. Northern boundary and area on the east (generally following the watercourse) identified in LRNS as areas that have the potential to become important for biodiversity.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Archaeological potential for Saxon and Roman remains
Conservation Areas &	0	Site not within one of the city's conservation areas or on the RPG register

Register of Parks and Gardens (RPG)		
Listed Buildings	-	Minchery Farmhouse (Grade II*) is adjacent to the site.
View Cones	0	Site lies outside the city's view cones
Historic Core Area	0	Site lies outside the city's historic core area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	+	Development of remaining plots, and intensification of existing developments will support the knowledge economy.
Diversifying the economy end employment opportunities	+	Site has potential to deliver affordable/ flexible workspaces

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, access already exists
Can walking and cycling connections with the surrounding area be achieved?	Yes, active travel connections can be improved as accessibility of area is car-dominated
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains trees, hedgerows and woodland likely to form part of structural landscaping. Site contains Littlemore Brook – Oxford City Local Wildlife Site. No significant changes in ground level.
Are land contamination issues likely?	Some areas of potential contamination are present resulting from filled ground. Further site investigations will be required.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Oxford Sewage Treatment Works is located to the South of the site (smells). Residential properties in Littlemore are located to the North. A4074 is located to the west (noise) and

	to the east is the Kassam Stadium including the Ozone Leisure Park.

Stage 2 conclusion
Site is generally sustainable for ongoing / intensified use for employment, and more so with the opportunities for sustainable travel that will come with the reopening of Cowley Branch line with a new passenger station adjoining this site during the plan period. Care will need to be taken in terms of the site's proximity to the brook (including in relation to potential need for buffers but also in terms of addressing flood risk arising from the watercourse); to nearby protected trees; and the potential for archaeology which may need investigation. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS13: Ozone Leisure Park and Minchery Farmhouse

Site name	**Ozone Leisure Park and Minchery Farmhouse**
SHLAA reference (and OLP2036 Policy if applicable)	**028c**
Ward	**Littlemore**
Total site size (ha)	**3.0 ha**
Existing use(s)	**Cinema, bowling, other community/leisure uses**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the	No	

planning process (development commenced)?		

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Yes – mixed use development including R&D (already planning permission for part of site 23/01198/FUL)

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	**--**	Very small area of Flood Zone 3a and 3b immediately adjacent to the brook, slightly wider area of Flood Zone 2. Patches of surface water flooding.
Flooding of land	**0**	Grenoble Road nearly all free of flood risk.

surrounding site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	Site consists of previously developed land
Green belt?	**0**	Site lies outside the Oxford Green Belt

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	***0***	
Affordable housing provision	***0***	

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	**++**	Site is within a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**I**	Community function would be replaced, but whether there is additional or the form will depend on implementation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**+**	Site is likely to deliver additional public open space.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**+**	<400m to nearest bus stop outside Kassam stadium which provides 3A service every 30mins to Templars Square and the 600 service every 30 mins to the Hospitals and Thornhill Park and Ride. Most of the site is within 800m of Pegasus Road stop with the 1 and 5 services running approximately every 5-6mins to the City Centre and Oxford Rail station.
Sustainable transport links (rail station)	**I**	Over 3.5km walk to Oxford Station, however there is potential for the site to be within walking distance of the Cowley Branch line station if this is delivered during the plan period.
Primary Schools	**-**	Approximately 1km to Windale Primary and John Henry Newman Academy Primary.
Secondary Schools	**-**	Approximately 1.5km to Oxford Academy.
GP Surgeries	**+/-**	Some parts of the site are within 800m of the nearest GP Surgery (The Leys Health Centre) while other parts of the site are further away.
Post office	**-**	Over 1km to Littlemore PO or Balfour Road PO (Dunnock Way Drop and Collect within 800m of some of the site).

Air Quality	**-**	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**-**	Northern boundary of site within 30m of a watercourse.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity e.g., along brook. The site is dominated by hardstanding and the stadium, with patches of vegetation along the brook and to the east. It appears to have very limited intrinsic ecological value. However, it is bordered by the Littlemore Brook and Northfield Brook OCWSs, which provide a corridor for wildlife. A buffer should be included to support these features. There is scope to deliver significant ecological enhancements, which should include an element focused on buffering the brooks. Site contains significant existing trees around the boundaries which are important to public amenity in the area and will provide valuable ecosystem services. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e. at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**--**	Contains the Minchery Farmhouse, which formed part of Littlemore Priory. There is potential for prehistoric, Roman and medieval archaeology (peat with potential for prehistoric pollen sequences near northwestern corner of the Ozone, dispersed Roman pottery manufacturing activity, burials and other features east and north of the standing Nunnery dormitory range). This will need to be explored as part of any redevelopment.
Conservation Areas & Register of Parks and Gardens (RPG)	**0**	The site is outside of a conservation area.
Listed Buildings	**--**	Minchery Farmhouse (Grade II*)
View Cones	**0**	Site lies outside of a view cone
Historic Core Area	**0**	Site lies outside the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**+**	The redevelopment of the ozone leisure park presents an opportunity to deliver an increase in jobs to support the knowledge economy.
Diversifying the economy end employment opportunities	**+**	The Kassam Stadium is a site where affordable workspaces may be expected to come forward. This site would therefore support diversification of the employment base or provide affordable workspaces.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicular access exists from Grenoble Road

Can walking and cycling connections with the surrounding area be achieved?	Walking and cycling connections already exist to surrounding area (e.g., to Blackbird Leys). Potential for improvements to be made depending on use delivered.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No significant changes in ground level. Site contains significant existing trees around the boundaries which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity. The quality of all existing trees should be assessed against the criteria in table 1 of BS5837:2012 (or its latest iteration). High quality trees must be retained unless there is a robust over-riding policy-based justification. Moderate and low quality trees should be retained where it is feasible to do so. Opportunities exist to plant new trees to benefit public amenity in the area.
Are land contamination issues likely?	Includes areas of filled ground which may be unsuitable for housing without mitigation.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	N/A

Stage 2 conclusion
No insurmountable constraints to development. Proximity to Grade II* listed Farmhouse may require design sensitivity in a small part of the site. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS14: Redbridge Paddock

Site name	Redbridge Paddock
SHLAA reference (and OLP2036 Policy if applicable)	113 Policy SP29
Ward	Hinksey Park
Total site size (ha)	3.64ha
Existing use(s)	Private open space previously used for horse grazing.

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes (2025 confirmed intention)
Does the landowner specify types of development	Yes – Residential development.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	-	A very small portion of the site lies within Flood Zone 3a, mainly along the watercourses, with a marginally higher area within Flood Zone 2 (mainly towards the northern boundary of the site). Only a few very small patches of surface water flooding.

Flooding of land surrounding site for access/ egress	0	There is safe access/egress from the site from the south, as the ring road and Abingdon Road lies in Flood Zone 1.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	Site is meadowland used for grazing until recently (unprotected private open space)
Green belt?	0	Site not in the green belt.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site allocated for homes and residential moorings.
Affordable housing provision	+	Site expected to deliver policy compliant levels of affordable housing.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site is not in or adjacent to a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	Site not allocated for community facilites.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	10% POS will be provided within the site.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	Less than 100m away there are regular bus services on the Abingdon Road, and from the Park and Ride opposite the site
Sustainable transport links (rail station)	-	Oxford railway station is over 20 minutes walk (3500m)
Primary Schools	-	The nearest school is more than 800m away.
Secondary Schools	-	The nearest school is more than 800m away.
GP Surgeries	-	The nearest GP surgery is more than 800m away.
Post office	-	The nearest post office is more than 800m away.
Air Quality	-	Entire city lies within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	Weirs Mill Stream, a tributary of the Thames, runs along the eastern edge of the site.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	0	Within 50m of the Iffley Meadows SSSI Site is not subject to any designations for its wildlife value; however, the land opposite the River Thames forms part of the Iffley Meadows Site of Special Scientific Interest (SSSI). The potential for any proposed development to directly or indirectly impact the SSSI must be assessed. Aerial imagery indicates Redbridge Paddock is dominated by grassland with areas of scattered scrub and potentially a woodland belt along the eastern boundary. Numerous tree lines are present. Iffley Meadows SSSI is noted for its alluvial flood meadows containing a rich grassland flora. It should be a priority to establish the distinctiveness and condition of the grassland within the allocation site to understand the extent of constraint this provides to potential development. Potential protected species constraints include roosting bats, foraging and commuting bats, badger, water vole, otter, breeding birds, reptiles, and invertebrates. In addition, the River Thames is likely to be an important foraging and commuting resource for bats and should not be subject to any artificial illumination as a result of any proposed development. A lighting strategy should be submitted in support of any planning application, setting out the lighting associated with the proposed development. Given the proximity of the proposed development, this will need to account for both internal and external lighting. It is vital that a suitable buffer in terms of size and composition is provided to the River Thames and Iffley Meadows SSSI. This should include retaining the existing treeline / woodland belt and delivering high quality habitats within the river corridor. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the

		area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e. at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Potential for Norman/ medieval archaeological remains.
Conservation Areas & Register of Parks and Gardens (RPG)	0	Site not within a conservation area or RPG
Listed Buildings	0	Site does not contain any listed buildings
View Cones	0	Site not within view cone
Historic Core Area	0	Site outside the city's locally designated high buildings area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	Site not allocated for employment, unlikely to support additional jobs in the knowledge economy.
Diversifying the economy end	0	No change.

employment opportunities		

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicular access to the site would be from Abingdon Road and may require either a connection into the existing signalised junction from Abingdon Road/Old Abingdon Road or a connection into the existing traffic signals for buses accessing the Redbridge P & R site opposite.
Can walking and cycling connections with the surrounding area be achieved?	Yes two points of access would be required for pedestrians and cyclists: one to the west connecting with the bus stops at the P & R site and the other to the north connecting with existing bus stops on Abingdon Road. The existing cycle track which runs along the western boundary should be retained.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Weir Mill stream forms the eastern boundary to the site, the site is comprised of made up ground being a former landfill site. Site contains significant existing trees along the river bank which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity. The quality of all existing trees should be assessed against the criteria in table 1 of BS5837:2012 (or its latest iteration). High quality trees must be retained unless there is a robust over-riding policy-based justification. Moderate and low quality trees should be retained where it is feasible to do so. Opportunities exist to plant new trees to benefit public amenity and to enhance the street scene along Abingdon Road and cycle track.
Are land contamination issues likely?	Yes – historic use as landfill
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No but consideration needs to be given about views into the site from Iffley village

Stage 2 conclusion
No insurmountable constraints. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS15: Sandy Lane Recreation Ground

Site name	**Sandy Lane Recreation Ground**
SHLAA reference (and OLP2036 Policy if applicable)	**SHLAA #289** **Local Plan 2036 policy SP11**
Ward	**Blackbird Leys**
Total site size (ha)	**5.15ha**
Existing use(s)	**Green open space with sports pitches, vacant car parking area off Ambassador Avenue currently used for motorbike training**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	2023 landowner intention to develop.
Does the landowner specify types of development	Local Plan 2036 allocation establishes site as suitable for residential on the western part of site, subject to reprovision of sports facilities and safeguarding land for Cowley Branch line.

Stage 1b conclusion
Landowner has confirmed intention to develop – continue to next stage of assessment.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	*Site is in Flood Zone 1*. *Surface water flooding across site*.

Flooding of land surrounding site for access/ egress	0	*There is safe access and egress from the site- surrounding streets in Flood Zone 1.*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	Site is greenfield land (public open space)
Green belt?	0	Site not in the green belt

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Site is allocated residential-led development. Landowner intention to include significant amount of residential.*
Affordable housing provision	+	*Site should be capable of providing affordable housing.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation.*

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most	**0**	*The site is not within a Regeneration Area. (Site lies within an area that is more deprived than 64% of neighbourhoods – IMD 2025)*

deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	I	*Development of the site could lead to decrease in sports facilities unless these are appropriately reprovided. Will depend upon implementation.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	-	Development at this site likely to reduce the amount of available public open space.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	<400m to nearest bus stop on the Blackbird Leys Road with frequent services
Sustainable transport links (rail station)	-	Currently more than 1600m from Oxford Railway Station, however, potential to be in close proximity to Cowley Branch Line in future.
Primary Schools	+	Primary school within 800m
Secondary Schools	-	Nearest secondary school is more than 800m away.
GP Surgeries	-	1.5km to nearest GP in Blackbird Leys.
Post office	-	About 1km to Balfour post office
Air Quality	-	Whole city within AQMA but not in proximity to hotspot.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	Not within 30m of a watercourse

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	No designations on or near the site. The site is currently an open space for recreational sports pitches, there is scrub and vegetation and some tree planting along the southeastern and southwestern edges of the site. Potential protected species constraints are likely limited to nesting birds in boundary vegetation. There may be potential to improve habitat provision through enhancement of the remaining green space which is currently unlikely to provide much in ecological terms.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	A sizable site with Roman kiln 90m to west and medieval stray finds to the east means some potential for deposits on site.
Conservation Areas & Register of Parks and Gardens (RPG)	**0**	Nothing notable
Listed Buildings	**0**	Nothing notable
View Cones	**0**	Nothing notable

Historic Core Area	**0**	Nothing notable

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	*Unlikely to result in change in the number of jobs related to the knowledge economy.*
Diversifying the economy end employment opportunities	0	*No change.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, from BBL road however there is a slope from the road and so the change in levels needs to be considered.
Can walking and cycling connections with the surrounding area be achieved?	There is a cycle path running along the north-western side of the site beyond the ring road. There is scope to improve connections for pedestrian and cycling by creating access through the retail park.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Change is ground levels as the BBL road is above the site Site contains significant existing trees around the boundaries which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity. Opportunities exist to plant new trees to benefit public amenity in the area.
Are land contamination issues likely?	Some made ground and potential fill so likely minor contamination risks. Site investigations would be required.

Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The ring road runs along one side of the site and the Cowley Branch Line to the other side which if opened up to passenger services would result in more train movements with the potential for more noise and pollution.

Stage 2 conclusion
The site is generally a sustainable one with limited heritage or biodiversity sensitivities, however, any development will need to take into consideration the loss of existing pitch provision and deliver appropriate reprovision to mitigate for losses of these public facilities. Additionally, the site adjoins a railway line and the A4142 and mitigation may be required to minimise impacts on new residents. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS16: Templars Square

Site name	Templars Square
SHLAA reference (and OLP2036 Policy if applicable)	014 Policy SP3
Ward	Cowley
Total site size (ha)	3.88Ha
Existing use(s)	Mixed use including retail, parking, residential

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	Planning permission was granted (November 2021) for a mixed-use scheme comprising retail, 225 residential units and hotel (16/03006/FUL). There has since been a change in ownership and this permission has expired.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to stage 2 assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Mixed of uses including retail and residential

Stage 1b conclusion
Landowner has expressed interest in further development of the site. Continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***

What flood zone(s) is the site in?	**0**	*Site is in Flood Zone 1* *(Patches of surface water flood risk present across site, particularly towards the south western area around Hockmore Street and central area to the east.)*
Flooding of land surrounding site for access/ egress	**0**	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	***SA rating***	***Comments***
Previously developed land?	**0**	*Site is occupied and in use for retail, economic and residential uses*
Green belt?	**0**	*Site not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	***SA rating***	***Comments***
Housing provision	**++**	*Expired permission includes 225 residential units. Landowner intent remains to deliver housing.*
Affordable housing provision	**+**	*Likely that any new scheme coming forward would deliver affordable housing.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	***SA rating***	***Comments***

Regeneration area (within the top 20% most deprived areas IMD)	**0**	*Site is not within one of the most deprived areas of Oxford.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	**0**	*Community facilities likely to remain the same- would be protected by policy.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**I**	Public open space could be re-modelled or re-provided as part of residential e.g. rooftop gardens. There is also opportunity to improve access and visual links to nearby green spaces especially the park area opposite (John Allen Park), and to create new areas of attractive public open space within the site.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot? 18 St Omer Rd, Oxford OX4 3HBtemp

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**+**	Multiple frequent bus services adjacent to the site, along Between Towns Road, Crowell Road and Barns Road, with services connecting to the City Centre, Cowley Road, JR Hospital, and Blackbird Leys. (Services 1, 5A, 5, 10, 700). Also less frequent (hourly) services connecting further afield to Great Milton, Chalgrove and Watlington (services 11, 46).

		Also within 400m are bus stops along Oxford Road, including Brookes Bus frequent service. Policy SP3 also notes that bus stopping facilities should also be improved.
Sustainable transport links (rail station)	**-**	5.3km to Oxford Rail Station
Primary Schools	**+**	Primary schools within 800m (Church Cowley St James).
Secondary Schools	**-**	Greyfriars Oxford Catholic School 1.3km, Oxford Spires Academy 1.9km
GP Surgeries	**+**	Temple Cowley Health Centre 500m
Post office	**+**	Onsite and Rose Hill 650m
Air Quality	**-**	Whole city is within an AQMA

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**0**	Not within 30m of a water body

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	The site is predominantly brownfield so there will be opportunities to introduce some biodiversity and natural resource enhancements, e.g. more trees, green walls, roof gardens. Semi-natural habitats are absent from the site. Potential protected species constraints include roosting bats and nesting birds; however, the urban surrounding reduces the likelihood that bats are present. The need for survey work should be assessed on a case-by-case basis with any application coming forwards.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	Site is of archaeological interest - Historic core of Church Cowley and western end of Roman pottery manufacturing compound, though heavily built up.
Conservation Areas & Register of Parks and Gardens (RPG)	**-**	Partly adjoins Beauchamp Lane CA
Listed Buildings	**-**	Site forms the setting of a number of listed buildings on Beauchamp lane.
View Cones	**0**	The site is not in a View Cone, although is in an elevated position in the city.
Historic Core Area	**0**	Site outside of Historic Core Area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**0**	No change in the number of jobs/economic floorspace in the knowledge-based economy.
Diversifying the economy end employment opportunities	**I**	In this district centre location, there is scope for affordable workspace to be delivered and diversification outside of the knowledge economy, but it will depend on implementation.

Other constraints which could affect suitability of site for development

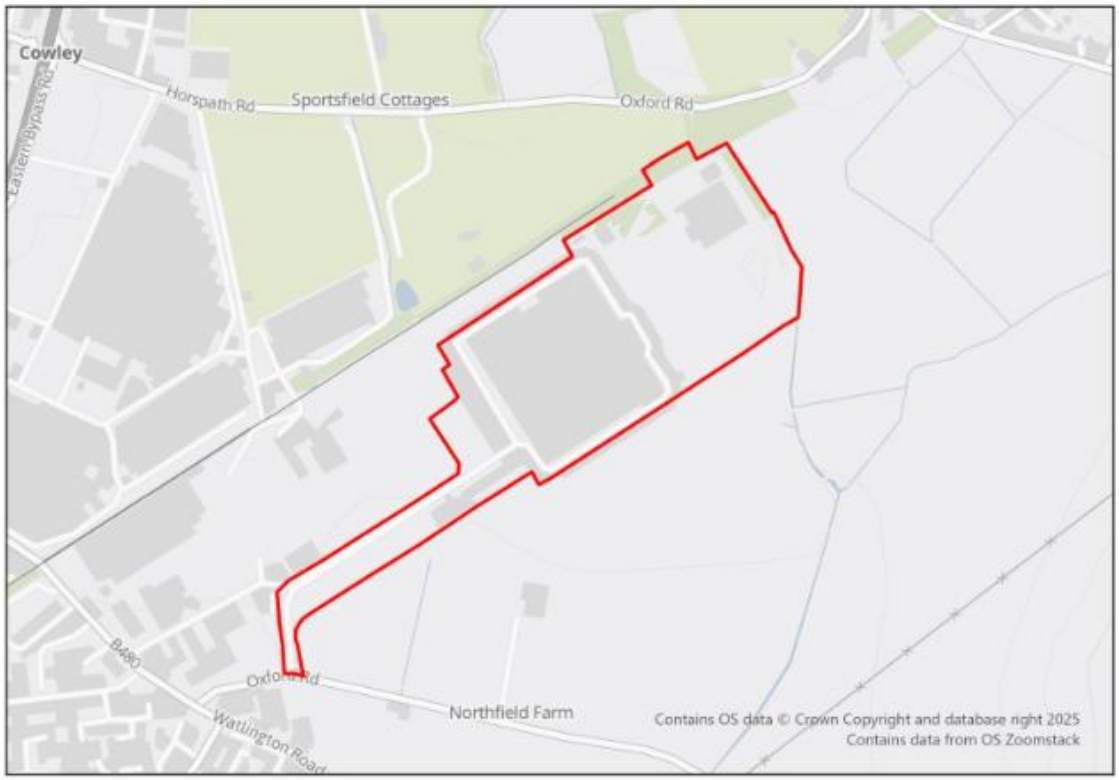
Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes There is currently pedestrian access from all directions, all around the site. The surrounding pavements are fairly wide. Height differences across the site at present could present access issues for wheelchair users and buggies, as the site is accessed in some places via stairways. Opportunity to enhance public realm to accommodate improved pedestrian connectivity across Between Towns Road and across Barns Road which are both busy roads, and an improved pedestrian and cycle experience e.g. there are some large junctions that cyclists would currently need to navigate including the junction at the entrance to John Allen Way, and other ways to improve support for walking and cycling should also be explored as the current situation is skewed towards access by car.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	There is a variation in base level across the site, with the rear/northern side of the site being 1-2 storeys higher up that the base level at the southern edge of the site along Between Towns Road. No significant physical features, a few ornamental trees.
Are land contamination issues likely?	Contamination risks potentially present. Site investigations and remedial works likely to be necessary.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	None identified, mainly residential surrounding the site

Stage 2 conclusion
The site is previously developed land and is in an accessible location. The site is also not sensitive from an ecological perspective. However, it lies adjacent to a conservation area, so design sensitivity in that location will be required. Also, the site has some archaeological potential. None of the heritage constraints are insurmountable. Site to be put forward for allocation in Regulation 19 Local Plan.

SPS17: Unipart

Site name	Unipart
HELAA reference (and OLP2036 Policy if applicable)	120 (Policy SP7 Unipart and Policy AOC7 Cowley Branch Line)
Ward	Blackbird Leys
Total site size (ha)	30.63ha
Existing use(s)	Warehousing, Industrial uses, offices

Site location plan



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes, landowner has expressed an interest to redevelop the site within the plan period
Does the landowner specify types of development	Yes – employment uses

Stage 1b conclusion
Landowner has confirmed intent to develop. Consider site further for employment uses, continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	*Site is in Flood Zone 1* *(There are patches of surface water flood risk present throughout site)*
Flooding of land	0	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

surrounding site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	*Site is previously developed land and with buildings in use on site*
Green belt?	0	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	0/ I	*Site is primarily a non-residential allocation however policy E1 allows housing delivery on employment sites if landowner sought this.*
Affordable housing provision	0/I	*Site unlikely to deliver affordable housing but depends on implementation.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	*The site is not within a Regeneration Area. (Site lies within an area that is more deprived than 55% of neighbourhoods – IMD 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	*Site unlikely to deliver community facilities*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	*Public open space is unlikely to increase resulting from the allocation of this site.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Less than 100m from site entrance to "Buildbase" Bus Stop (11 City bus)*
Sustainable transport links (rail station)	-	*More than 1600m from nearest railway station (Oxford Station)*
Primary Schools	-	*More than 800m from nearest Primary School (Pegasus Primary School)*
Secondary Schools	-	*More than 800m from nearest Secondary School (Oxford Academy is more than 2km away)*
GP Surgeries	-	*More than 800m from nearest GP Surgery (The Leys Health Centre is more than 1km away)*
Post office	-	*More than 800m from nearest Post Office (Balfour Road Post Office is more than 1km away)*
Air Quality	-	*Within AQMA but outside known "hotspots"*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Hollow Brook runs along the north-eastern boundary of the site*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Site is highly urbanised with mainly artificial/ impermeable surface cover. It contains an area of scrub to the north-east and trees and hedges on the boundaries. There are opportunities for greening of surfaces/ roofs.* *Potential for Open Mosaic Habitat to be present in the surrounding developed land. Potential protected species constraints likely include breeding birds, foraging and commuting bats, reptiles, badgers, and water vole and otters (associated with Hollow Brook). Hedging/trees on boundaries.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site is of archaeological interest as part of the access road is on the line of the Dorchester-Alchester Roman road and there is high potential for roadside settlement. There is also high potential for other prehistoric and Roman remains (sites are recorded to the north & south of the plot).*
Conservation Areas & Register of Parks and Gardens (RPG)	0	*Site is not within or adjacent to a conservation area or RPG site*
Listed Buildings	0	*Site contains no identified historic building constraint*
View Cones	0	*Site lies outside of a view cone*

Historic Core Area	0	*Site lies outside the City Council's locally designated Historic Core Area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	+	*Site likely to be redeveloped in the plan period for a mix of B class and E class jobs, the latter have the potential to support the knowledge economy*
Diversifying the economy end employment opportunities	+	*The site is likely to be redeveloped in the plan period and has the potential to support diversification of the employment base by nature of the mix of B class and E class jobs. Also has the potential to deliver affordable workspaces*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, Vehicular access exists
Can walking and cycling connections with the surrounding area be achieved?	Yes, it is possible to achieve these although currently the site has poor accessibility for walking and cycling
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No significant features however site is an irregular shape.
Are land contamination issues likely?	Potential for contamination. Site investigations and remedial works likely to be necessary.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site is in an industrial area with adjacent fields (to the east).

Stage 2 conclusion
There are no notable issues with the site. The site is currently designated as a category 1 employment site and is likely to continue to remain suitable for employment uses in future. Design would need to consider any impacts to the hollow brook on the boundary of the site and

should take opportunities to incorporate natural features to break up the urbanised nature of the site. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE1: Churchill Hospital

Site name	Churchill Hospital
SHLAA reference (and OLP2036 Policy if applicable)	012 Policy SP19
Ward	Churchill
Total site size (ha)	22.74
Existing use(s)	Hospital, student and staff accommodation

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	Partially	Incremental change including 2 completed permissions for housing. Still significant potential and intention for change.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Planning permission 19/01039/FUL for 19 key worker units, completed, and permission for further 32 units also completed (June 2022).
Does the landowner specify types of development	Potential interest in further development at the site, as hospital, research, and additional housing.

Stage 1b conclusion
Landowner has expressed interest in further development of the site. Continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Several patches of surface water flood risk present within site)*
Flooding of land surrounding	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Site is occupied and is in use as an NHS Trust hospital.*
Green belt?	*0*	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	*I*	*The hospital will remain the principal use of the site, however there is already accommodation on the site and the hospital trust may propose more, depending on implementation.*
Affordable housing provision	*I*	*If housing comes forward it is likely to be in the form of employer-linked housing, affordable to staff of the hospital trust.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not in a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	/	Unlikely to increase community facilities on site but precise mix will depend on implementation and which of the other suitable uses come forward. Depends on implementation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	/	Depending on how much of the site is brought forward for residential there is the potential to require some public open space. Depends on implementation

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	<300m away from the nearest bus stop with frequent service into Oxford City Centre e.g. 15, 600, 700
Sustainable transport links (rail station)	-	> 1600m from train station (4.2km)
Primary Schools	-	*>800m from Wood Farm Primary (c.1km)*
Secondary Schools	+	*600m from the nearest secondary school (Cheney School)*
GP Surgeries	-	*1,200m from nearest GP surgery (Brookes Medical Centre)*
Post office	-	1,100m from the nearest post office (Wood Farm Post Office)
Air Quality	-	*Whole city is within an AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Boundary Brook runs along the southern boundary*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	While there are no designated ecological features on the site itself, the site directly adjoins a number of designated ecological sites and parts of the GI network including Lye Valley SSSI, Boundary Brook wildlife corridor and local/ city wildlife sites. The site and boundary does contain deciduous woodland which would constitute a priority/ principal habitat. The site itself is mostly built out and dominated by buildings and hardstanding, with pockets of green space comprising grassland, scrub and scattered trees. The site has significant existing trees scattered within it and near to the western boundary growing along Boundary Brook which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity. Protected species constraints within the site are likely limited to roosting bats and nesting birds; consideration should also be given to what value different parts of the site may hold for ecological connectivity in the wider landscape. Any planning application will need to demonstrate how a reduction in the quantity or quality of groundwater recharge, or an increase in surface water run-off, will be avoided to ensure there are no significant effects on the Lye Valley SSSI.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	This site has known archaeological potential (Roman pottery manufacturing and further Roman archaeological remains).
Conservation Areas & Register of Parks and Gardens (RPG)	*0*	
Listed Buildings	*0*	
View Cones	*0*	
Historic Core Area	*0*	

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*I*	Site has potential to deliver additional jobs to support the knowledge economy and life sciences.
Diversifying the economy end employment opportunities	*I*	

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicle access already exists
Can walking and cycling connections with the surrounding area be achieved?	Existing connections and routes to site are established, although movement within the site can be improved by making more pedestrian and cyclist friendly and more legible.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site has significant existing trees scattered within it and near to the western boundary growing along Boundary Brook which are important to

	public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity. Peat reserves potential at northwestern corner of site.
Are land contamination issues likely?	Long-established continuous medical use onsite so it may be possible.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site adjoins SSSI.

Stage 2 conclusion
Site does not have significant constraints to development. The site's proximity to the Lye Valley SSSI means that any development that does take place will need to be fully mitigated to ensure that development does not adversely impact the SSSI. No insurmountable constraints. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE2: East Oxford Bowls Club

Site name	East Oxford Bowls Club
SHLAA reference (and OLP2036 Policy if applicable)	204
Ward	St Clement's
Total site size (ha)	0.3ha
Existing use(s)	Recreation

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes.
Does the landowner specify types of development	Residential.

Stage 1b conclusion
Landowner has confirmed intent to develop, consider further for allocation for housing. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	Site is in Flood Zone 1 *(Surface water flood risk is located predominantly inside the north western, south eastern and south western perimeter of site, with a patch located more centrally.)*
Flooding of land surrounding site for	0	There is safe access/egress from the site – area surrounding site is Flood Zone 1

access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	+	Site is previously developed with vacant buildings on site.
Green belt?	0	Site is not on Green Belt land.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site allocated for residential development and would provide more than 10 homes.
Affordable housing provision	+	Site would likely provide up to 40% affordable housing.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site is not within or adjacent to a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	Allocation would lead to loss of former community facility, although this is no longer in use or accessible ot the public.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	Site not allocated.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	<400m from multiple bus services on Cowley Road.
Sustainable transport links (rail station)	-	>1600m from Oxford train station.
Primary Schools	-	>800m to the nearest primary school.
Secondary Schools	-	800m to the nearest secondary school (Oxford Spires Academy).
GP Surgeries	+	<800m from the nearest GP (Bartlemas Surgery).
Post office	-	>800m from the nearest post office (Donnington Post Office).
Air Quality	-	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*

Water	0	Site is not within 30m of a water body.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Adjacent to green infrastructure network (allotments). Site itself contains no nature conservation designations but has potential for nature conservation interest. Potential to improve wildlife linkages or habitat continuity. Records of swifts <100m from site.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	Located between Leper Hospital and Cowley Road the potential is unclear, would require desk based assessment in first instance.
Conservation Areas & Register of Parks and Gardens (RPG)	-	Site is entirely within Bartlemas Conservation Area.
Listed Buildings	-	Site forms the setting of multiple listed buildings within the conservation area.
View Cones	-	Within view cone/High Buildings Area.
Historic Core Area	0	Site is not within Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*

Employment Opportunities in the knowledge-based economy	0	No change in number of jobs/employment floorspace in knowledge-base economy.
Diversifying the economy end employment opportunities	0	No change in employment base or access to affordable workspaces.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes.
Can walking and cycling connections with the surrounding area be achieved?	Yes.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	As the site is entirely within a conservation area, all trees within and surrounding the site are subject to a Tree Protection Order.
Are land contamination issues likely?	No.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No.

Stage 2 conclusion
No insurmountable constraints although any potential development would need to take into account the site's sensitive historic environment including nearby listed buildings, the view cone and make a positive contribution to Bartlemas Conservation Area. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE3: Government Buildings and Harcourt House

Site name	Government Buildings and Harcourt House
SHLAA reference (and OLP2036 Policy if applicable)	024 (formerly also 023) Policy SP16
Ward	Headington Hill and Northway
Total site size (ha)	2.37ha
Existing use(s)	Car park, offices and cadet accommodation

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes - landowner has confirmed intention.
Does the landowner specify types of development	Yes - mixed use academic development to include residential for staff and students with complimentary commercial uses.

Stage 1b conclusion
Consider site further for allocation for mixed use academic development to include residential development for staff and students, continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	*Site is in Flood Zone 1* *(Patches of surface water flood risk around the southern half of the lower parcel)*.
Flooding of land surrounding site for access/ egress	0	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	*The site is previously developed with some buildings in use*
Green belt?	0	*Site not in the Green Belt*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Site currently allocated residential-led development. Landowner intention to include significant amount of residential.*
Affordable housing provision	I	*Depends on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	*The site is not within a Regeneration Area. (Site lies within an area that is less deprived than 93% of neighbourhoods – IMD 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*

Community facilities	I	Site has potential to deliver community facilities- depends on implementation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	I	*Likely to deliver public open space, depending on amount and form of residential.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Bus stop outside site with buses 100 and X3 to city centre about 10min frequency*
Sustainable transport links (rail station)	-	*c.3km to Oxford Station*
Primary Schools	+	*c.300 metres to St Michaels CE*
Secondary Schools	-	*1.3km to Cheney School*
GP Surgeries	-	*c.1km to Brookes Medical Centre*
Post office	+	*c.600m to St Clement's Post Office*
Air Quality	-	*Whole city is within an AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	*Site is more than 30m away from a water body*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	There are limited opportunities for habitat creation at this site however there are opportunities to retain and enhance existing features. Buffering of the woodland (where possible), could also help to mitigate the impacts of development. The site is within 200m of a Local Wildlife Site and within 600m of the New Marston Meadows SSSI. The site is comprised of hardstanding, buildings, scrub and woodland. Part of the northern parcel is identified by Natural England as potentially containing Open Mosiac Habitat (a priority habitat). This would require a detailed botanical survey to determine presence/absence. Small areas of woodland in the southern parcel (mostly at the boundary) are also included on the priority Habitat Inventory. Potential protected species constraints include foraging and commuting bats, roosting bats (trees and buildings), badgers, and nesting birds. Existing trees on the site, some protected by TPOs.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Potential for archaeological remains on the site. The Civil War Parliamentarian siege line has been identified in Headington Hill Park, suggesting that it runs through the northern of the two plots. This would warrant protection through sensitive design if the line confirmed by trenching as it's the only part of the siege line confidently located to the east of the town.
Conservation Areas & Register of Parks and Gardens (RPG)	--	This site is in two parts. Part 1 (Government Buildings) is adjacent to the Headington Hill Conservation Area and Part 2 (Harcourt House) is within it. The whole site is opposite to the to St Clements and Iffley Road CA.
Listed Buildings	-	There are no listed buildings on the sites but the Grade II* Headington Hall sits within the park and St. Clements Church is nearby.

View Cones	-	The Headington Hill viewcone passes through Part 1 (Government Buildings) and South Park Viewcone passes to the south of Part 2 (Harcourt House). Significant view lines are indicated in the conservation area documents from Headington Hill Hall towards the site and along the paths at the back of Part 2 (Harcourt House).
Historic Core Area	0	*The site is outside the Historic Core Area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	I	Depends on implementation – if site brought forward for other uses than residential.
Diversifying the economy end employment opportunities	I	Depends on implementation – if site brought forward for other uses than residential .

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes – via Marston Road
Can walking and cycling connections with the surrounding area be achieved?	Partially, via Marston road. Part 1 (Government Buildings) has potential for pedestrians access alongside the existing vehicle entrance. However, Part 2 (Harcourt House) does not currently have pedestrian access. There is the potential for pedestrian linkage between the sites where Cuckoo Lane and the Park meet the road. Good existing cycle connections from Marston Road to the city centre. Further plans to improve environment for cyclists from the County Council.

Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Yes - Large mature trees define the north and south edges of the site including a number of TPOs. A high hedge separates the site from the Marston Road and low trees and shrub define back edge Sites contain significant existing trees which are important to public amenity in the area and will provide valuable ecosystem services. Various trees at the northern site are protected by OCC-Marston Road (No.1) TPO, 2000, and trees at the south site are protected within the Headington hill Conservation Area. Existing trees within the sites and adjacent to them will influence developable area of site and its capacity. Opportunities exist to plant new trees to benefit public amenity and the character and appearance of the conservation area
Are land contamination issues likely?	Potential for contamination at Government Buildings site (although site previously remediated, further investigations may be required). No known issues on Harcourt House site. Depending on proposed use, a site investigation and contamination risk assessment may be required to confirm absence of risks.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No

Stage 2 conclusion
No significant issues identified – however, there are a number of historic environment/heritage constraints which would need to be carefully considered and addressed within the design of any scheme, including archaeological potential. Opportunities should also be sought to incorporate green features which can improve connectivity with neighbouring green spaces, as well as to retain significant green features on boundaries. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE4: Jesus College Sports Area

Site name	**Jesus College Sports Area**
SHLAA reference (and OLP2036 Policy if applicable)	**234 and 026 (SP43)**
Ward	**Donnington**
Total site size (ha)	**234 = 0.8** **026 = 0.55** **Combined = 1.35**
Existing use(s)	**Open air sports**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Landowner (2025) confirmed intention to develop for postgrad accommodation.

Stage 1b conclusion
Confirmed landowner intent, continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Several small patches of surface water flood risk present within site)*

Flooding of land surrounding site for access/ egress	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	*Unprotected open space*
Green belt?	*0*	*Site is not within GB*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Previously allocated for housing in part.*
Affordable housing provision	*I*	*Will depend on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Not in or adjacent to regen. area*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*I*	*Depending on the scale and type of housing delivered, there could be potential to require a small increase in community facilities, however, this would depend on implementation.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*I*	*Site has potential to deliver public open space, but depends on implementation.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	>400 from bus stops located on Cowley Road – high frequency services including no's 1, 5, 10
Sustainable transport links (rail station)	-	>3500m miles from Oxford Railway station via Bartlemas Close and B480
Primary Schools	-	Over 800m from a primary school (East Oxford Primary)
Secondary Schools	+	>1,100m from Oxford Spires Academy
GP Surgeries	+	> 800m from Bartlemas Surgery and Cowley Road Medical Practice
Post office	+	>1000m from Donnington Post office
Air Quality	-	Site is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	Ditch to south of site

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity e.g., through retention of hedgerows, green roofs, walls, etc. Aerial imagery indicates the site is dominated by grassland subject to recreational use, with hedgerows flanking two boundaries. Potential protected species constraints are likely limited to nesting birds. The land is at the edge of a block of green space including the Lye Valley and Oxford Golf Course, and it would be beneficial for any development to deliver ecological enhancements onsite where possible. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e., at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*

Archaeology	-	Site contains no known archaeological sites. Roman kilns to the east at Oxford Spires, general potential for prehistoric and Roman would likely require assessment and evaluation.
Conservation Areas & Register of Parks and Gardens (RPG)	-	Adjacent to Bartlemas Conservation Area but within the Bartlemas Historic Hamlet.
Listed Buildings	-	No listed buildings onsite but within the setting of a no. of listed buildings – including Grade 2* Bartlemas Farm House and Bartlemas House and Grade 1 listed St Bartholomew Chapel – these buildings can be seen from within the site/ the site frontage on Bartlemas Close.
View Cones	-	Crescent Road View Cone across part of site
Historic Core Area	*0*	Outside the locally designated High Buildings Area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	*0*	No change in jobs for the knowledge economy
Diversifying the economy end employment opportunities	*0*	No change

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes from Bartlemas Close and Barracks Lane
Can walking and cycling connections with the surrounding area be achieved?	Yes – Cycle route along the site's southern boundary – National Cycle Route 57. Walking connections to existing residential areas north and south of site via Bartlemas Close and Barracks Lane.

Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Ditch to southern boundary, outside of site. Site contains significant existing trees and hedgerows along the southern and western boundaries which are important to public amenity in the area and will provide valuable ecosystem services. 2 group of trees north of the pavilion in the western corner of the site are protected by the OCC -Bartlemas Close (No.1) TPO, 2006. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	Unlikely
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Surrounding area is primarily residential in nature.

Stage 2 conclusion
Although the site is protected open space it is in a suitable location for residential development. The site is adjacent to an existing CA and lies within an Historic Hamlet. Part of the site also lies within a view cone. Design sensitivity will be required in order to mitigate impacts on heritage assets. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE5: John Radcliffe Hospital

Site name	John Radcliffe Hospital
SHLAA reference (and OLP2036 Policy if applicable)	027, OLP2036 SP41
Ward	Headington Hill and Northway
Total site size (ha)	27.75
Existing use(s)	Hospital including A&E & associated uses, key worker accommodation

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	Yes	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to stage 1b assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Site is available and viable for development. There are a number of planning permissions for the site, with some being implemented.
Does the landowner specify types of development	Landowner has expressed an interest in delivering some employer-linked affordable housing on site in addition to maintaining hospital-related uses. Site likely to be developed in phases as part of hospital restructuring within the Local Plan time period.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***

What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Patches of surface water flood risk present throughout site, with noticeably larger patches around the hospital buildings to the north west and south east.)*
Flooding of land surrounding site for access/ egress	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	***SA rating***	***Comments***
Previously developed land?	*0*	*Site is currently in use.*
Green belt?	*0*	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	***SA rating***	***Comments***
Housing provision	*I*	*Depends on implementation*
Affordable housing provision	*I*	*Depends on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	***SA rating***	***Comments***

Regeneration area (within the top 20% most deprived areas IMD)	*0*	*The site is not in a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*It is unlikely that the amount of community facilities will change.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*<100m from several stops on site and in the immediate vicinity e.g. X3 City, 700, 10*
Sustainable transport links (rail station)	-	*Oxford Station (4.6 km)*
Primary Schools	+	*St Joseph's RC Primary School (750m)*
Secondary Schools	-	*Cheney School (1.7 km)*

GP Surgeries	+	*The Manor Surgery (500 m)*
Post office	-	*Marston Road (1.2 km)*
Air Quality	-	*Entire city is with AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	--	*Watercourse (brook between car parks) on site and on site boundaries.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity.* *The site boundary contains Section 41 (Priority/ Principal) habitats that fall within the LPA Biodiversity Duty. Deciduous Woodland. Extent needs to be confirmed from TVERC database.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*The eastern part of the site has significant potential because it incorporates parts of the medieval village of Headington. Significant new development in undisturbed areas may require evaluation.*
Conservation Areas &	--	*Outer comparatively less developed edge of site within Old Headington CA, with most of site directly adjacent.*

Register of Parks and Gardens (RPG)		
Listed Buildings	--	*Grade II listed Manor House, annex and boundary wall within site boundary on outer edge*
View Cones	*0*	*While not within view cones the site is very prominent in views across Oxford.*
Historic Core Area	*0*	*Not within high buildings area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	*0*	
Diversifying the economy end employment opportunities	*0*	

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicular access already exists.
Can walking and cycling connections with the surrounding area be achieved?	Footpaths and cycleways connecting to the site, with links through the site.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	There are some mature hedges on site. Site contains many significant existing trees. Some of the trees are protected by location within the Old Headington Conservation Area.
Are land contamination issues likely?	Investigation and risk assessment would be required due to current and historical use of land.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause	The site is located within an area of mixed character including residences, educational

disturbance or environmental issues such as noise or smells?	sites, and partly within the setting of heritage assets.

Stage 2 conclusion
Part of the site falls within a conservation area, with the remainder within the setting of this conservation area. The site contains a number of listed buildings on its outer edge. Design sensitivity will be needed to mitigate potential impacts on heritage assets at certain parts of the site. No insurmountable constraints to development. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE6: Land Surrounding St Clement;s Church

Site name	Land Surrounding St Clement's Church
SHLAA reference (and OLP2036 Policy if applicable)	117 Policy SP18
Ward	St Clement's
Total site size (ha)	2.31ha
Existing use(s)	Greenfield land surrounding churchyard.

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes. The landowner (Magdalen College) has intention to develop
Does the landowner specify types of development	Primarily residential

Stage 1b conclusion
Consider further for allocation for residential-led development, continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	-	A small area in the western part of the site, adjacent to the River Cherwell lies in Flood Zone 3a. Surface water flood risk south of the church.
Flooding of land	*0*	There is safe access/egress from the site – area surrounding site is Flood Zone 1.

surrounding site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	The site is greenfield and will therefore not make use of previously developed land. The site can be defined as unprotected open space, surrounding a churchyard.
Green belt?	*0*	*Site is not on Green Belt land.*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Landowner interest in housing, which is a suitable use for the site.*
Affordable housing provision	+	*Likely to deliver affordable housing (unless student accommodation).*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not within one of the most deprived areas of Oxford.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	It is unlikely that any development will increase the provision of essential services and facilities on site. Facilities will remain the same.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	*Likely that development would create additional public open space.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Bus stop outside site with buses 100 and X3 to city centre about 10min frequency*
Sustainable transport links (rail station)	-	*2.7km to Oxford Station*
Primary Schools	+	*c.750m to East Oxford Primary School*
Secondary Schools	-	*c.1.2km to Cheney School*
GP Surgeries	-	*Just over 800m from most of the site to St Clement's Surgery*
Post office	+	*Under 800m to St Clement's Post Office.*
Air Quality	-	*Whole city is within an AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Adjacent to Cherwell*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	*0*	The site is within 50m of Long Meadow Oxford City Wildlife Site (OCWS). Aerial imagery indicates the site is comprised of grassland, with scrub incursion from the hedgerows at the boundaries. The site is located at the edge of the central green corridor through Oxford (to the west) and areas of parkland and woodland (to the east). The River Cherwell is located immediately adjacent to the western boundary. One meadow in the surrounding landscape is identified by Natural England as priority habitat, another is identified as an OCWS. It should be a priority to establish the distinctiveness and condition of the grassland within the allocation site to understand the extent of constraint this provides to potential development. Potential protected species constraints include roosting bats (both in trees onsite and in the adjacent St Clement's Church), foraging and commuting bats, nesting birds, badger, reptiles, water vole and otter (associated with the River Cherwell). In addition, the River Cherwell is likely to be an important foraging and commuting resource for bats and should not be subject to any artificial illumination as a result of any proposed development. If St Clement's Church has the potential to support roosting bats, neither the church nor flightpaths to and from it should be subject to illumination either. A lighting strategy should be submitted in support of any planning application, setting out the lighting associated with the proposed development. This will need to account for both internal and external lighting.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	*0*	Site contains no known archaeological sites.
Conservation Areas & Register of Parks and Gardens (RPG)	--	The entire site is within the St Clement's and Iffley Road Conservation Area. The site is also adjacent to the Headington Hill Conservation Area and Central (University & City) Conservation Area.
Listed Buildings	-	The site is adjacent to St Clement's Church, which is Grade II* listed.
View Cones	--	*The site is partly within a view cone.*
Historic Core Area	*0*	*Site lies outside of the Historic Core Area.*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	*No change expected.*
Diversifying the economy end employment opportunities	*0*	*No change expected.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	There is existing vehicular access via Marston Road; however this will need to be improved.
Can walking and cycling connections with the surrounding area be achieved?	Walking and cycling connections are already established within the area, however these could also be improved to better connect the site.

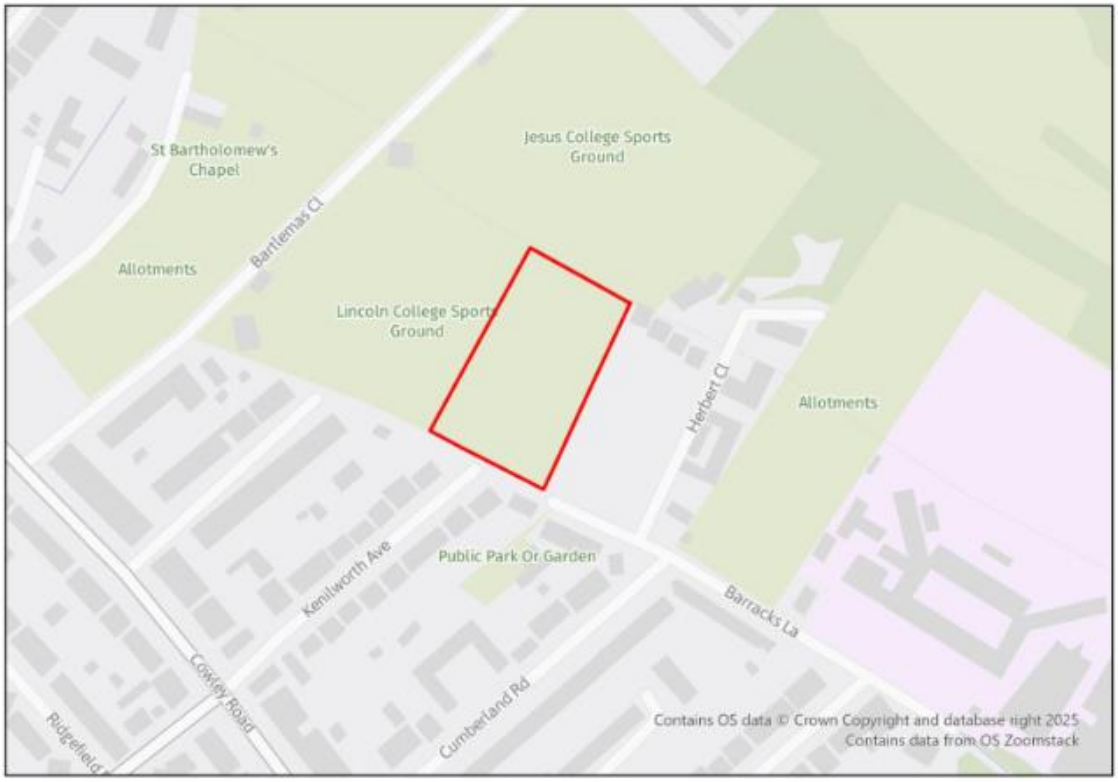
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	St Clement's Churchyard is adjacent to the site and contains a number of designated TPO's.
Are land contamination issues likely?	The current land use suggests contamination issues are unlikely.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site is adjacent to Magdalen College Sports Ground South.

Stage 2 conclusion
Site is greenfield land surrounding a churchyard and forming the setting of the adjacent listed building, it is also located within a conservation area and may have ecological sensitivities; new development will need to consider impacts and respond accordingly. There is some flood risk on the site and proximity to the watercourse will also need to inform design response. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE7: Lincoln College Sports Ground

Site name	Lincoln College Sports Ground
SHLAA reference (and OLP2036 Policy if applicable)	032 (SP40)
Ward	Donnington
Total site size (ha)	0.8ha
Existing use(s)	Open air sports

Site location plan



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Landowner (2025) confirmed intention to develop for postgrad accommodation.

Stage 1b conclusion
Confirmed landowner intent, continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Several small patches of surface water flood risk present within site)*
Flooding of land surrounding	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	***SA rating***	***Comments***
Previously developed land?	-	*Unprotected open space*
Green belt?	*0*	*Site is not within GB*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	***SA rating***	***Comments***
Housing provision	++	*Previously allocated for housing in part.*
Affordable housing provision	*I*	*Will depend on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	***SA rating***	***Comments***
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Not in or adjacent to regen. area*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*I*	*Depending on the scale and type of housing delivered, there could be potential to require a small increase in community facilities, however, this would depend on implementation.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*I*	*Site has potential to deliver public open space, but depends on implementation.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	>400 from bus stops located on Cowley Road – high frequency services including no's 1, 5, 10
Sustainable transport links (rail station)	-	>3500m miles from Oxford Railway station via Bartlemas Close and B480
Primary Schools	-	Over 800m from a primary school (East Oxford Primary)
Secondary Schools	+	>1,100m from Oxford Spires Academy
GP Surgeries	+	> 800m from Bartlemas Surgery and Cowley Road Medical Practice
Post office	+	>1000m from Donnington Post office
Air Quality	-	Site is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	Ditch to south of site

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity e.g., through retention of hedgerows, green roofs, walls, etc. Aerial imagery indicates the site is dominated by grassland subject to recreational use, with hedgerows flanking two boundaries. Potential protected species constraints are likely limited to nesting birds. The land is at the edge of a block of green space including the Lye Valley and Oxford Golf Course, and it would be beneficial for any development to deliver ecological enhancements onsite where possible. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e., at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Site contains no known archaeological sites. Limited/ uncertain archaeological potential. Roman kilns to the east at Oxford Spires, general potential for prehistoric and Roman would likely require assessment and evaluation.
Conservation Areas &	-	Adjacent to Bartlemas Conservation Area but within the Bartlemas Historic Hamlet.

Register of Parks and Gardens (RPG)		
Listed Buildings	-	No listed buildings onsite but within the setting of a no. of listed buildings – including Grade 2* Bartlemas Farm House and Bartlemas House and Grade 1 listed St Bartholomew Chapel – these buildings can be seen from within the site/ the site frontage on Bartlemas Close.
View Cones	-	Crescent Road View Cone across part of site
Historic Core Area	*0*	Outside the locally designated High Buildings Area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	*0*	No change in jobs for the knowledge economy
Diversifying the economy end employment opportunities	*0*	No change

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes from Bartlemas Close and Barracks Lane
Can walking and cycling connections with the surrounding area be achieved?	Yes – Cycle route along the site's southern boundary – National Cycle Route 57. Walking connections to existing residential areas north and south of site via Bartlemas Close and Barracks Lane.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Ditch to southern boundary, outside of site. Site contains significant existing trees and hedgerows along the southern and western boundaries which are important to public amenity in the area and will provide valuable

	ecosystem services. 2 group of trees north of the pavilion in the western corner of the site are protected by the OCC -Bartlemas Close (No.1) TPO, 2006. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	Unlikely
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Surrounding area is primarily residential in nature.

Stage 2 conclusion
Although the site is protected open space it is in a suitable location for residential development. The site is adjacent to an existing CA and lies within an Historic Hamlet. Part of the site also lies within a view cone. Design sensitivity will be required in order to mitigate impacts on heritage assets. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE8: Manzil Way Resource Centre

Site name	**Manzil Way Resource Centre**
SHLAA reference (and OLP2036 Policy if applicable)	**SHLAA ref: #574** **LP2036 ref: SP46**
Ward	**St Clement's**
Total site size (ha)	**0.75 ha**
Existing use(s)	**Administrative uses and health facilities**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	SHLAA records that: Leaseholder (Oxford Health NHS Foundation Trust) has indicated (2023) that site could be available for broad range of alternative uses if it were to be declared surplus to requirements. Not currently available but likely to be in plan period subject to wider estate reorganisation.
Does the landowner specify types of development	SHLAA records that: developer has indicated site would be suitable for broad range of alternative uses. LP2036 allocation establishes the site as being suitable for improved health-care facilities and associated administration; and/or residential development including employer-linked affordable housing

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***

What flood zone(s) is the site in?	**0**	*Site is in Flood Zone 1* *(Surface water flood risk present throughout site, particularly around the main buildings).*
Flooding of land surrounding site for access/ egress	**0**	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	*Site is previously developed land with buildings in use on site.*
Green belt?	**0**	*Site is not designated as greenbelt.*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	**I**	*Depends on implementation. May be opportunity to deliver some housing during the plan period.*
Affordable housing provision	**I**	*Depends upon implementation.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within	**0**	*Site is not in or adjacent to a regeneration area*

the top 20% most deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	**0**	*It is unlikely that the amount of community facilities will change.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**0**	*Allocation would not lead to loss of public open space, though ability to provide 10% additional open space is unlikely due to size constraints of site.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**+**	*200 metres to bus stop on the Cowley Road*
Sustainable transport links (rail station)	**-**	*3km to train station*
Primary Schools	**+**	*550m to East Oxford Primary School*
Secondary Schools	**-**	*1.3km to Oxford Spires; 1.9km to Cheney School.*
GP Surgeries	**+**	*Bartlemas Surgery 92m*

Post office	**-**	*St Clements Street post office is 900m*
Air Quality	**-**	*Within city-wide AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**0**	*Nothing notable nearby.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	*No international/national or local sites within 200m. Opportunity to link with area of green space/ park to the south of the site which could help enhance existing wildlife corridors/ green infrastructure/ ecological habitats. Potential for enhanced/ additional planting/ screening/ landscaping. Opportunities for 'green' communal areas. Opportunity to incorporate root protection areas for existing trees into overall scheme design.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	*There is potential for Roman pottery as previously found near Cowley Road hospital.*
Conservation Areas & Register of Parks and Gardens (RPG)	**0**	*Not within or on edge. Is to the west of the Bartlemas Conservation Area but not adjoining.*
Listed Buildings	**0**	*No listed buildings identified on Historic England mapper.*

View Cones	-	*Majority of site falls within the Crescent Road View Cone.*
Historic Core Area	**0**	*Not within or on edge*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**0**	
Diversifying the economy end employment opportunities	**0**	

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes – via Manzil Way.
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains existing trees and hedges which are collectively important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	Unlikely
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	East Oxford Central Mosque lies to the north of the site.

Stage 2 conclusion
The site is brownfield land and has existing residential dwellings (their rear gardens) located to the east. No significant ecological constraints, though some potential heritage constraints as view cone crosses part of the site and site is close to the Bartlemas Conservation Area, which may need to be considered as part of the allocation. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE9: Marston Paddock Extension

Site name	**Marston Paddock Extension**
HELAA reference (and OLP2036 Policy if applicable)	**114e**
Ward	**Marston**
Total site size (ha)	**0.51**
Existing use(s)	**Vacant farmhouse and curtilage including outbuildings and parking area**

Site location plan

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the	No	

planning process (development commenced)?		

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes (2025 confirmed intention)
Does the landowner specify types of development	Yes – Residential development.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Flood Zone 1*
Flooding of land surrounding site for access/ egress	*0*	*Safe access and egress to the site*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Site is previously developed land, as a farmhouse and curtilage, although with green features found within the site.*
Green belt?	--	*Site within Green Belt*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	
Affordable housing provision	+	

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*

Community facilities	*0*	*Site not allocated for community facilities*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	*Some new publicly accessible open space will be required as part of the 'golden rules' for Green belt release.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Bus stop about 400m with buses every 30mins*
Sustainable transport links (rail station)	-	*>1,600m from train station*
Primary Schools	-	*>800m from the nearest primary school*
Secondary Schools	-	*>800m from the nearest secondary school*
GP Surgeries	-	*>800m from the nearest GP surgery*
Post office	-	*>800m from nearest post office*
Air Quality	-	*While city within AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	*Site is not within 30m of a water body*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Contains no nature conservation designations but has potential for significant nature conservation enhancement

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	*0*	
Conservation Areas & Register of Parks and Gardens (RPG)	--	*Site within Old Marston Conservation Area*
Listed Buildings	*0*	
View Cones	*0*	
Historic Core Area	*0*	

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	*No change in number of jobs/economic floorspace in knowledge-based economy*
Diversifying the economy end	*0*	*No change in employment base or access to affordable workspaces*

employment opportunities		

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, from Butts Lane
Can walking and cycling connections with the surrounding area be achieved?	Site within existing urban area with existing pedestrian and cycle connections.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Some significant trees along boundaries and scattered within site, whic hare important to public amenity in the area and will provide valuable ecosystem services. The quality of existing trees should be assessed against the criteria in table 1 of BS5837:2012 (or its latest iteration). High quality trees must be retained unless there is a robust over-riding policy-based justification. Moderate and low quality trees should be retained where it is feasible to do so. Opportunities exist to plant new trees to benefit public amenity in the area.
Are land contamination issues likely?	Potential contamination risks from previous uses and waste materials including tyres and scrap cars. Full contamination risk assessment would be required to determine contamination risks and any remediation required.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Surrounding uses are fields and Old Marston village, with the A40 relatively close.

Stage 2 conclusion
No insurmountable constraints. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE10: Nuffield Orthopaedic Centre (NOC)

Site name	Nuffield Orthopaedic Centre (NOC)
SHLAA reference (and OLP2036 Policy if applicable)	042 SP20
Ward	Headington
Total site size (ha)	8.38
Existing use(s)	Hospital and medical research

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	Within 200m of Rock Edge SSSI and 350m of Lye Valley SSSI.
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Some scope for intensification of the site for hospital uses but this is unlikely during the during the plan period as landowner is focusing on other sites within their ownership.
Does the landowner specify types of development	Healthcare, medical research

Stage 1b conclusion
Site is not available for residential development and whilst there is some scope for intensification of the site for hospital related uses, it is unlikely to be during the plan period. Continue to next stage.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	**0**	*Site is in Flood Zone 1* *(South-east quarter of site has a large area of surface water flood risk, with smaller patches interspersed across rest of site).*

Flooding of land surrounding site for access/ egress	**0**	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	*Buildings currently in use on site.*
Green belt?	0	*Not green belt land.*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	0	*Site would not provide new housing.*
Affordable housing provision	0	*Site not allocated for housing.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	*Site is not within a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	0	*It is unlikely that the amount of community facilities will change.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	*Public open space remains the same due to allocation.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Less than 400m from multiple bus stops on Old Road and Windmill Road.*
Sustainable transport links (rail station)	-	*Site is more than 1600m from train station.*
Primary Schools	+	*Less than 800m from the nearest primary school with space (Wood Farm Primary School)*
Secondary Schools	+	*Less than 800m from Cheney School.*
GP Surgeries	-	*More than 800m to the nearest GP.*
Post office	+	*Less than 800m to Wood Farm Post Office.*
Air Quality	-	*Site is within an AQMA.*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	*Site is not within 30m of a water body.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	0	*200m from Rock Edge SSSI.* *Within 350m of Lye Valley SSSI.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site has potential for archaeological interest as Roman remains have been found in the area.*
Conservation Areas & Register of Parks and Gardens (RPG)	0	*Site is not in or on the edge of a conservation area or site on the RPG register*
Listed Buildings	0	*Site contains no identified historic building constraint*
View Cones	0	*Site lies outside a view cone*
Historic Core Area	0	*Site lies outside the City Council's locally designated Historic Core Area.*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*

Employment Opportunities in the knowledge-based economy	I	*Depends on implementation.*
Diversifying the economy end employment opportunities	I	*Depends on implementation.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Mature trees on Old Road and Windmill Road frontages.
Are land contamination issues likely?	No
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No

Stage 2 conclusion
There are no significant conflicts with national policy or environmental or physical constraints to the development of this site, although the proximity of the site to two nearby SSSI's would need further consideration in any proposals that come forward; as well as potential for archaeological remains. The site is viable for intensification of medical related uses, although the landowners are currently focusing on other properties within the Trust. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE11: Oxford Brookes Marston Road Campus

Site name	Oxford Brookes Marston Road Campus
SHLAA reference (and OLP2036 Policy if applicable)	439 LP2036 Policy SP50
Ward	Headington Hill & Northway
Total site size (ha)	1.18 ha
Existing use(s)	Educational facilities

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner update 2025 - confirmed intention to retain for use for academic and research but may be available during plan period if surplus.
Does the landowner specify types of development	Academic and research uses.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	Site is in Flood Zone 1 (A significant proportion of the site is at risk from surface water flooding.)
Flooding of land	0	There is safe access/egress from the site – area surrounding site is Flood Zone 1

surrounding site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Yes.
Green belt?	0	Not in Green Belt.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	I	Landowner wishes to maintain the principle of institutional use and student accommodation use with a potential option to dispose for housing following a strategic review of its requirements. Site allocated for residential use including student accommodation in emerging plan, although delivery will be dependent on implementation.
Affordable housing provision	I	If residential development or student accommodation is brought forward on the site, then there is the potential to deliver some affordable housing through financial contributions.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most	0	Site is not in or adjacent to a regeneration area.

deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	I	Depends on implementation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	I	Depends on implementation.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	<400m from bus stops on Jack Straws Lane.
Sustainable transport links (rail station)	-	>1600m from train station.
Primary Schools	+	<550m to the nearest primary school (St Michaels CE Primary)
Secondary Schools	-	>2,400m to the nearest secondary school (Cheney School)
GP Surgeries	-	>1600m from the nearest GP surgery (Brookes Medical Centre)
Post office	-	>850m from the nearest post office (Marston Road post office)
Air Quality	-	The whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	There are ponds within the nature park but over 30m distance.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	Contains The Quad, part of Milham Ford Field and Quad Local Wildlife site. Both parcels of the LWS are included in the designation due to the presence of botanically rich unimproved grassland. The main 'Nature Park' should be excluded from any development area, while any development should be encouraged to retain the Quad as well. There may be an opportunity to fund ongoing and additional habitat management through any development. Potential protected species constraints include roosting bats, foraging and commuting bats, breeding birds, reptiles, amphibians, badgers, and invertebrates. Please note the current Biodiversity TAN also states: "Additional consideration shall be given to developments in the vicinity of the Lye Valley SSSI and the Milham Ford City Wildlife Site. An Infiltration Drainage and Pollution Control Scheme for roof and hard surfacing run-off is required where the development is in the catchment area of the above sites. This is because reduction in water entering the aquifer is threatening the survival of this nationally rare habitat. Applicants for development in this area should discuss the requirements with the Council at an early stage." If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e., at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	None identified
Conservation Areas & Register of Parks and Gardens (RPG)	-	The site lies over the boundary, but within the setting of the Headington Hill Conservation Area and thus has an important relationship to the conservation area which will need to be considered.
Listed Buildings	0	No statutory heritage assets on the site. Former school have been included on the OHAR (i.e. the local list). School has a fairly significant history and is identified as a landmark in the Oxford in its Landscape Setting document.
View Cones	0	The site sits just to the south of the Doris Field Memorial Park view cone which skirts north east corner of site and looks south west
Historic Core Area	0	No

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	I	Depends on implementation. Potential for research-related jobs to support the knowledge economy.
Diversifying the economy end employment opportunities	0	No change.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes from north and south of site. However, roads offer limited capacity into site (narrow and fairly quiet). Site may be more suitable for car free development that would not put additional pressure on surrounding connections.
Can walking and cycling connections with the surrounding area be achieved?	Yes from north and south of the site – depending on layout of development, opportunity to establish and north/south connection through site (currently divided by the buildings)
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	The car park to the north of the site is on two levels with a fairly substantial slope. The row of hedges and trees form a natural border along the western boundary as well as to the north of the site (which are characteristic of the length of Jack Straw's Lane) and could be easily retained. There is a medium-sized tree located within the car parking to the north of the site as well as a couple of other medium-sized trees along the borders on the southern frontage, also appears to be 2-4 trees in north-west corner behind hedge. The site and boundary contains Section 41 (Priority/ Principal) habitats that fall within the LPA Biodiversity Duty. Deciduous Woodland. Extent needs to be confirmed from TVERC database. Site contains significant existing trees and hedgerows along the northern boundary and Jack Straws Lane frontage and also trees scattered within the site which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees will influence developable area of site and its capacity. The quality of all existing trees should be assessed against the criteria in table 1 of BS5837:2012 (or its latest iteration). High quality trees must be retained unless there is a robust over-riding policy-based justification. Moderate and low quality trees should be retained where it is feasible to do so. Opportunities exist to plant new trees to benefit public amenity in the area.
Are land contamination issues likely?	No major contamination issues likely.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	None identified.

Stage 2 conclusion
No significant issues identified – care will need to be taken around how the development impacts the LWS (the Quad) which is within the site and adjacent (Milham Ford Field). The site may be better suited to car free development, to reduce pressure on the surrounding access roads into the site from

the north and south. There may also be an opportunity to create a pedestrian/cycle route through the site.

The site sits within the setting of (adjacent to) the Headington Hill Conservation Area, and the design of any proposal will need to respond to this accordingly. Equally, whilst the former school building itself is not subject to designation, it is noted as a landscape feature in the Oxford Landscape Assessment with some positive architectural features that would preferably be retained in any development and guidance could be set out in the allocation.
Site to be put forward for allocation in Regulation 19 Local Plan.

SPE12: Rectory Centre

Site name	Rectory Centre
SHLAA reference (and OLP2036 Policy if applicable)	428
Ward	St Clement's
Total site size (ha)	0.21ha
Existing use(s)	Healthcare

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	Yes	0.21hectares

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner has confirmed intention to redevelop site.
Does the landowner specify types of development	Landowner intends to redevelop for residential use subject to consolidation of existing uses onto alternative sites.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	Site is in Flood Zone 1 *(Patch of surface water flood risk in south eastern corner of site.)*
Flooding of land surrounding	0	There is safe access/egress from the site – area surrounding site is Flood Zone 1

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Site is previously developed land (with buildings currently in use)
Green belt?	0	Site is not on Green Belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site allocation proposes a minimum of 21 residential dwellings at the site.
Affordable housing provision	+	It is likely that affordable housing would be provided at policy compliant levels.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site is not in or adjacent to a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	-	Re-development of this site would lead to a loss of community healthcare facilities, policy includes mitigation and suggests that these should be re-provided elsewhere however the precise amount would depend on implementation and assessed need.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	Site under 1.5ha. No requirement to provide public space on site. As such public open space likely to remain the same as a result of the allocation.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	The site is located <200m from a bus stop on Cowley Road that is frequently served by buses, including routes number 1, 5 and 10 and on Headington Road served by 8, 15, 108, 120, 275, N8, N400, ST2, X3, X20, X32.
Sustainable transport links (rail station)	-	Oxford Station is situated 2.5km from the site, a walk of >30 minutes.
Primary Schools	+	The site is located <800m from the nearest primary school (East Oxford Primary School)
Secondary Schools	-	The site is located >800m from the nearest secondary school (Cheney School).
GP Surgeries	+	The site is located <800m from the nearest GP surgery (Manzil Way)

Post office	+	The site is located <800m from the nearest post office (St Clements Street)
Air Quality	-	The entirety of Oxford is situated within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	The site is not within 30m of a body of water.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	The site is not within proximity to an area designated for its biodiversity value. Aerial images show the site is almost entirely developed land, bordered by a tree line to the east that is situated within private residential gardens.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	The site contains no known archaeological sites and has limited archaeological potential.
Conservation Areas & Register of Parks and Gardens (RPG)	0	The site is not in or on the edge of a conservation area or site on the RPG.
Listed Buildings	0	The site does not contain and is not near to any listed buildings.
View Cones	-	The site lies within the Crescent Road View Cone.
Historic Core Area	0	Not within historic core area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	There would be no change in number of jobs/employment floorspace for the knowledge-based economy.
Diversifying the economy end employment opportunities	0	No change.

Other constraints which could affect suitability of site for development

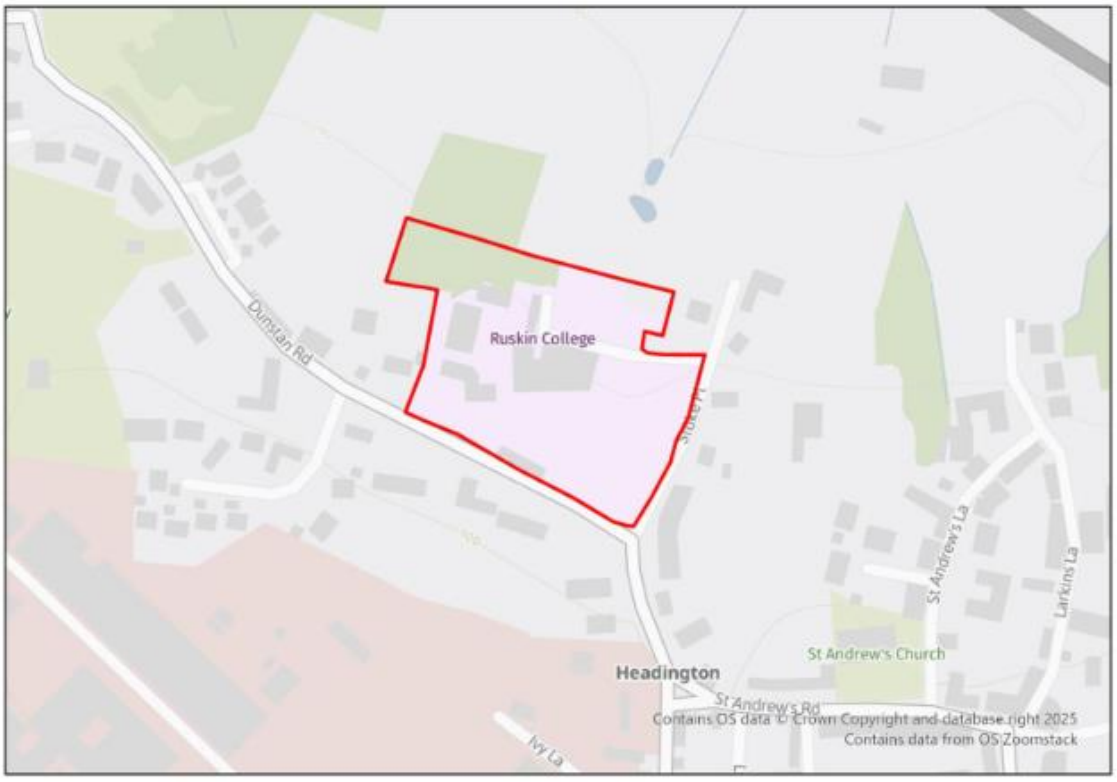
Can access for vehicles be achieved?	Site has existing vehicular access from Rectory Road and car parking spaces on southern boundary.
Can walking and cycling connections with the surrounding area be achieved?	Site has good walking and cycling connections with the surrounding area as it is located in the Cowley Road District Centre.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	The site does not contain any significant physical features that would impact upon potential redevelopment.
Are land contamination issues likely?	The site has potential contamination. Any re-development of this site would require a site investigation and contamination risk assessment.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	All surrounding properties are residential in nature and the potential for disturbance or environmental issues is low.

Stage 2 conclusion
The site scores well overall against the sustainability criteria and there are limited constraints to development at this location. Consideration will need to be given as to the accommodation of existing healthcare facilities on alternative sites and to the likely necessity for remedial works. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE13: Ruskin Campus

Site name	Ruskin Campus
SHLAA reference (and OLP2036 Policy if applicable)	054 SP55
Ward	Headington
Total site size (ha)	1.86
Existing use(s)	University campus

Site location plan



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	Approval has been granted for student accommodation on part of site (ref 22/00962/FUL), but work has not yet commenced.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes – approval has been granted for student accommodation on part of site (ref 22/00962/FUL), but work has not yet commenced.
Does the landowner specify types of development	Approval has been granted for student accommodation on part of site (ref 22/00962/FUL), but work has not yet commenced.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses and planning consent issued. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Patches of surface water flood risk present, particularly towards eastern end of site.)*
Flooding of land surrounding	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Land is occupied by university buildings that are currently in use.*
Green belt?	*0*	*Site is not on green belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Proposed development is for student accommodation*
Affordable housing provision	*0*	*Affordable housing is not included in proposed development*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Not within a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Approved scheme does not include community facilities provision that is open to wider public*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	*Amount and accessibility of open space in development may be dependent on implementation*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	-	*Several bus stops in the vicinity, although they are not directly adjacent to site.*
Sustainable transport links (rail station)	-	*Rail station is 5km away*
Primary Schools	-	*Nearest primary school is 1100m away, although there is a special needs school nearer. (St Andrew's)*
Secondary Schools	-	*Nearest secondary school is 2000m away (Cheney School)*
GP Surgeries	+	*Approx 450m from The Manor Surgery*
Post office	-	*More than 800m from nearest Post Office.*
Air Quality	-	*Entire city is within an Air Quality Management Area.*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*

Water	*0*	*Site is over 30m away from nearest watercourse.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*The grounds comprise of extensive private open space, no specific ecological designations although with the location there is potential for linkages with adjoining greenfield and wildlife continuity. Dunstan Park wildlife site located to the west.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	The site is of archaeological interest with Iron Age activity and Roman pottery production having been recorded previously.
Conservation Areas & Register of Parks and Gardens (RPG)	--	*Entire site is within Old Headington CA.*
Listed Buildings	--	*Site contains Grade II listed Rookery (Ruskin College) and is in the setting of Grade II listed walled garden.*
View Cones	*0*	*Site is not within any view cones.*
Historic Core Area	*0*	*Site is outside of Historic Core Area.*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities	*0*	*Current and proposed uses are for higher education with no significant research activity expected.*

in the knowledge-based economy		
Diversifying the economy end employment opportunities	*0*	*Current and proposed uses are for higher education with no significant research activity expected*.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains several mature trees, and changes in level at various points.
Are land contamination issues likely?	No
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No ecological designations, but the site contains Grade II listed heritage assets within the site boundary.

Stage 2 conclusion
There are a number of physical and policy constraints, however these are not considered to be insurmountable. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE14: Ruskin Field

Site name	Ruskin Field
SHLAA reference (and OLP2036 Policy if applicable)	463 SP56 (part of site)
Ward	Headington
Total site size (ha)	3.51ha
Existing use(s)	Field

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes. The landowner has confirmed that the site is available.
Does the landowner specify types of development	Landowner intention to develop for residential.

Stage 1b conclusion
Landowner has expressed intention to develop for residential use - continue to the next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	**0**	Site is in Flood Zone 1 *(Patches of surface water flood risk present in close proximity to watercourse)*

Flooding of land surrounding site for access/ egress	**0**	There is safe access/egress from the site – area surrounding site is Flood Zone 1

SA objective 3. To encourage the **efficient use of land** through good design and layout and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**-**	Site is greenfield land (unprotected open space).
Green belt?	**0**	Site is not in the Green Belt.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	**++**	The developer has expressed the intention to develop a minimum of 28 dwellings.
Affordable housing provision	**I**	Depends on implementation.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most	**0**	Site is not in or adjacent to a regeneration area.

deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**0**	Site is not allocated for community facilities so would remain the same.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**+**	10% public open space on site likely achievable as housing allocation

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**-**	> 400m to the nearest bus stops. Halliday Hill stop is 1000m away connecting to Risinghurst (Service 14). Headington Shops is 1000m away connecting to the City Centre (Services 8, 400, X20). John Radcliffe Main Entrance is 1100m away with multiple destinations (including Services 10, 14, 600).
Sustainable transport links (rail station)	**-**	>1600m to Oxford Train Station (over an hour's walk).
Primary Schools	**-**	>800m to the nearest primary school (New Marston, St Andrews).
Secondary Schools	**-**	>800m to the nearest secondary school (Cheney).
GP Surgeries	**+**	<800m to the nearest GP surgery (The Manor Surgery).
Post office	**-**	>800m to the nearest post office.

Air Quality	**-**	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	--	There is a pond to the south of the site, and a ditch that runs through the site to this.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	*Contains no nature conservation designations but has potential for nature conservation interest. Site is located within close proximity to Dunstan Park wildlife site.* *Aerial imagery indicates the site is comprised of grassland and hedgerows/tree lines. There is potentially a wetland element given the springs, seepages, and ponds in the surrounding area. This should be established through detailed botanical survey.* *Potential protected species constraints include roosting bats, foraging and commuting bats, breeding birds, reptiles, amphibians and invertebrates. The site contains Section 41 (Priority/Principal) habitats that fall within the LPA Biodiversity Duty. Decideous Woodland. Extent needs to be confirmed from the TVERC database.* *Site contains significant existing trees and hedgerows around boundaries of site and marking historic field boundaries, and also indiviudal trees and groups of trees scattered within the site, which are important to public amenity in the area and will provide valuable ecosystem services. Trees are protected by location within the Old Headington Conservation Area. Hedgerows are potentially "important" under the Hedgerow Regs. Existing trees and hedgerows will influence developable area of site and its capacity. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e. at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	*Evidence of Iron Age activity and Roman pottery production has been recorded from this site, so it has significant archaeological potential.*
Conservation Areas & Register of Parks and Gardens (RPG)	**--**	*The site is entirely within the Old Headington Conservation Area.*
Listed Buildings	**--**	*There is a Grade II listed wall to the south of the site (Walls of Walled Garden at Ruskin College). The site lies within the settings of a number of other listed buildings: The Rookery (Ruskin College), Grade II, Stoke House, Grade II listed, 8 Dunstan Road, Grade II listed, The Manor Farmhouse and Garden Wall of Manor Farmhouse, both Grade II, Church of St Andrew, Grade II*.*
View Cones	**0**	*The site is not within the city's view cones.*
Historic Core Area	**0**	*Not within historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**0**	*No change in number of jobs.*
Diversifying the economy	**0**	*No change.*

end employment opportunities		

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	There is currently no vehicle access to the site. Foxwell Drive is adjacent to the site and therefore access could be created to the site from there.
Can walking and cycling connections with the surrounding area be achieved?	Improved walking and cycling connections are likely to be required.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains significant existing trees and hedgerows around boundaries of site and marking historic field boundaries, and also individual trees and groups of trees scattered within the site, which are important to public amenity in the area and will provide valuable ecosystem services. Trees are protected by location within the Old Headington Conservation Area. Hedgerows are potentially "important" under the Hedgerow Regs.
Are land contamination issues likely?	Current land use suggests that land contamination issues are unlikely.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The A40 (Oxford ring road) is at the northern boundary of the site which may cause disturbance such as noise and pollution. Mitigation may be necessary to minimise these impacts.

Stage 2 conclusion
Overall the site scores fairly well against the criteria. No significant heritage concerns although design sensitivity likely to be required as the site is within a conservation area and there is a listed wall to the south of the site. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE15: Slade House

Site name	Slade House
SHLAA reference (and OLP2036 Policy if applicable)	124 Policy SP57
Ward	Lye Valley
Total site size (ha)	1.31 Ha
Existing use(s)	Former NHS care facility currently used for staff training and office accommodation, owned by Oxford Health NHS Trust

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes, site expected to be developed within Local Plan period.
Does the landowner specify types of development	Landowner has expressed an interest in redeveloping site if is surplus to requirements following wider estate re-organisation. Specified uses are improved healthcare facilities and associated administration and/ or residential development including employer linked affordable housing.

Stage 1b conclusion
Consider further for allocation for improved healthcare facilities, associated administration and/ or residential development including employer linked affordable housing. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***

What flood zone(s) is the site in?	0	*Site is in Flood Zone 1* *(Patches of surface water flood risk present, particularly towards the east of the site).*
Flooding of land surrounding site for access/ egress	0	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	*Site is mainly PDL.*
Green belt?	0	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	I	*Potential for delivery of some housing at this site but precise amount will depend on implementation.*
Affordable housing provision	I	*Potential for delivery of some affordable housing tenures at this site but precise amount will depend on implementation.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*

Regeneration area (within the top 20% most deprived areas IMD)	**0**	*Site is not in or adjacent to a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	0	*Unlikely to be any change in community facilities as result of this allocation.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	I	*Site is only slightly larger than threshold (1.5ha) for delivery of 10% public open space on site. Whether public open space is provided on site will depend on how site is brought forward.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Nearest bus stop is the corner house. Frequent services to the city and other destinations. E.g. 10, 100, 600, NU5, OX7, U5 Brookes.*
Sustainable transport links (rail station)	-	*Oxford Station (5.9 km)*
Primary Schools	-	*Tyndale School (1.4 km)*

Secondary Schools	-	*Cheney School (2.4 km)*
GP Surgeries	+	*Wood Farm Health Centre (500m)*
Post office	-	*Wood Farm Post Office (900m)*
Air Quality	-/--	*Air quality hotspot is nearby (on Eastern Bypass Ring Road), although this is probably far enough from site to alleviate any direct impacts.*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	Site is not near water body.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	0	*Site allocation policy requires assessment of potential recreational pressure on nearby Brasenose and Shotover SSSI which may include onsite mitigation measures.* *Aerial imagery indicates the site contains developed land and associated amenity habitats. Potential protected species constraints are likely limited to roosting bats and nesting birds.* *If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*

Archaeology	-	*Parliamentarian siege line may cross through this plot. May require evaluation depending on build footprint.*
Conservation Areas & Register of Parks and Gardens (RPG)	0	*Not within conservation area*
Listed Buildings	0	*No listed buildings on site*
View Cones	0	*Not within view cones*
Historic Core Area	0	*Not within historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	I	*Site is currently mainly used for admin and training purposes. Depends upon implementation whether the site allocation will result in any net change.*
Diversifying the economy end employment opportunities	0	*Site is currently mainly used for admin and training purposes, diversification of use unlikely with allocated uses.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicle access already exists.
Can walking and cycling connections with the surrounding area be achieved?	Footpaths and cycleways run in front of the site (Horspath Driftway)
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	There are some mature trees and mature hedges on site. Site contains scattered significant existing trees which are important to public amenity in the area and will provide valuable ecosystem services. Trees are protected by the OCC - Horspath Driftway/Eastern By-Pass (no.1) TPO, 1994. Existing trees will influence developable

	area of site and its capacity. Opportunities exist to plant new trees to benefit public amenity in the area.
Are land contamination issues likely?	No significant contamination issues likely but might need further investigation.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site located in a residential area, including student accommodation adjoining northern boundary.

Stage 2 conclusion
There are no significant constraints to development on the site. The site should be considered further for allocation subject to any additional work informing Regulation 19 Local Plan. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE16: Thornhill Park (Phase 2)

Site name	**Thornhill Park (phase 2)**
SHLAA reference (and OLP2036 Policy if applicable)	**38a2** **LP2036 SP47**
Ward	**Barton and Sandhills**
Total site size (ha)	**3.39 ha**
Existing use(s)	**Former offices & landscaping**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	Yes	Planning permission (21/01695/FUL) for mixed use residential, hotel, car parking and sport grounds, not yet implemented.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes – planning permission and confirmed intention to develop
Does the landowner specify types of development	Yes

Stage 1b conclusion
Landowner has set out intentions for residential development. Continue to next stage of assessment.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	**0**	Site is in Flood Zone 1 There are some small patches of surface water flood risk to the north of the site close to the London Road and a couple of smaller patches further south.
Flooding of land surrounding site for access/ egress	**0**	There is safe access/ egress from the site – area surrounding site is in Flood Zone 1.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Part previously developed, part greenfield
Green belt?	0	Site is not within the green belt.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site allocated for residential development and would provide more than 10 homes.
Affordable housing provision	+	Site expected to deliver affordable housing in line with policy.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site outside of a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	-	Allocation would lead to a loss of community facilities. However, the existing pavilion is 25 years old and at the end of its lifespan, unable to comfortably accommodate the needs. The loss is considered acceptable provided a contribution is made towards a replacement pavilion as set out in the previous planning permission.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	Given site size, site expected to deliver at least 10% open green space.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	Less than 400m from Thornhill Park and Ride.
Sustainable transport links (rail station)	-	>1,600m from Oxford Railway Station
Primary Schools	-	>800m from the nearest primary school (Barton Park Primary)
Secondary Schools	-	>800m from the nearest secondary school (Cheney School)
GP Surgeries	-	>800m from the nearest GP surgery
Post office	+	<800m from the nearest post office
Air Quality	-	Whole city within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	Watercourse running along eastern boundary of the site

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	Previous ecological assessments indicate the site is comprised of species-poor grassland, scattered trees, scrub, and developed land. It contains a medium population of great crested newt (GCN) and multiple bat roosts. Updated surveys would be required in support of any planning application, while both GCN and bats are European Protected Species and therefore any consented development would only be able to proceed under licence from Natural England. Other potential protected species constraints include reptiles, nesting birds, and badgers. Site contains significant existing treesaround the boundaries and scattered within the site which are important to public amenity in the area and will provide valuable ecosystem services. All trees within the site are protected by the OCC - London Road (No.1) TPO, 1994. Existing trees will influence developable area of site and its capacity. The site is not designated for its nature conservation value. However, it is located in close proximity to the CS Lewis Nature Reserve and any planning application must assess the potential for recreational impacts on this site and agree suitable mitigation measures for any impact. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. Opportunities exist to plant new trees to improve connectivity within GI network. Create or enhance suitable flower-rich grassland habitats with plentiful populations of violets and light patches of scrub for the Dark Green Fritillary Create new areas of lowland meadow by creating and restoring meadows in suitable locations (particularly on floodplains) Create areas of species-rich acid grasslands in suitable locations Create new areas of heathland on suitable soil types.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	The site has been evaluated for the recent planning application and no significant archaeology was identified.
Conservation Areas & Register of Parks and Gardens (RPG)	0	Site outside conservation area
Listed Buildings	0	Site contains no listed building constraint however Grade II listed milestone located close to the site (in the central reservation of the A40).
View Cones	0	Site outside the locally designated view cones
Historic Core Area	0	Site lies outside the locally designated high buildings area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	No change in number of jobs/economic floorspace in knowledge-based economy.
Diversifying the economy end employment opportunities	0	No change in employment base or access to affordable workspaces.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes - Existing access from the A40
Can walking and cycling connections with the surrounding area be achieved?	Yes

Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains significant existing trees around the boundaries and scattered within the site which are important to public amenity in the area and will provide valuable ecosystem services. All trees within the site are protected by the OCC - London Road (No.1) TPO, 1994. Existing trees will influence developable area of site and its capacity. Opportunities exist to plant new trees to benefit public amenity in the area
Are land contamination issues likely?	Site investigations would be required due to previous use and potential contamination risks. Extensive investigations works completed over parts of site already?
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No

Stage 2 conclusion
The site itself has limited constraints for development. Design sensitivity will be required, as development in the southern part of the site could have a visual impact on open countryside, and there are also ecological sensitivities in terms of protected species and proximity to local ecological site that would need to be addressed. Unless the consented scheme is implemented, the site should be considered further for a mixed-use including residential allocation. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE17: Union Street Car Park

Site name	**Union Street Car Park**
SHLAA reference (and OLP2036 Policy if applicable)	**061**
Ward	**St Clement's**
Total site size (ha)	**0.24**
Existing use(s)	**Public Car park**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	No live planning application.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Residential and/or student accommodation

Stage 1b conclusion
Developer has expressed intent to develop. Site should be considered for allocation for residential use, continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site and immediate surrounding areas are in Flood Zone 1.* *(An area of surface water flood risk runs along the length of Collins Street, forming the northern boundary of the site and extending down the eastern and western boundaries).*

Flooding of land surrounding site for access/ egress	*0*	*Site and immediate surrounding areas are in Flood Zone 1.*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	+	*Site is in use as a car park.*
Green belt?	*0*	*Site is not on green belt land.*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	*I*	*Landowner has expressed intention of developing site as residential or student accommodation*
Affordable housing provision	*I*	*Landowner has expressed intention of developing site as residential or student accommodation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not in a ward that is in or adjacent to a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	*I*	*Community facility (supermarket) already exists on site, provision will depend on implementation.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	*Site allocated for housing – dependent on implementation but open space can be provided.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Several bus stops along Cowley Road, with a wide range of routes*
Sustainable transport links (rail station)	-	*Site is 2.7km from Oxford Rail Station*
Primary Schools	+	*Site opposite East Oxford Primary School*
Secondary Schools	-	*Nearest state secondary school is 1.12km*
GP Surgeries	+	*Nearest GP is in St Clements (approx 600m away)*
Post office	+	*Nearest Post office is approx 600m away*
Air Quality	-	*Entire city is within AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	*No watercourses nearby*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	*0*	*No designations onsite, site is c.200m from South Park which is core in GI network. Not much potential for linkages with wider network other than providing for local amenity.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	*0*	*No known archaeological sites or potential*
Conservation Areas & Register of Parks and Gardens (RPG)	*0*	*Site is not in a conservation area.*
Listed Buildings	*0*	*No listed buildings on site.*
View Cones	-	*Site is within Crescent Road view cone*
Historic Core Area	*0*	*Site is outside Historic core.*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*

Employment Opportunities in the knowledge-based economy	*0*	*Site is not promoted for employment or knowledge economy uses, but residential so no impact expected on quantity of employment floorspace.*
Diversifying the economy end employment opportunities	*0*	*Site is not promoted for employment or knowledge economy uses, but residential so no impact expected on quantity of employment floorspace.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, although this may be affected by LTNs.
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No
Are land contamination issues likely?	Site investigation would be required due to previous use and slight potential contamination risks.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No

Stage 2 conclusion
No insurmountable obstacles to development, though sensitivity in respect to the view cone should be addressed. Site to be put forward for allocation in Regulation 19 Local Plan.

SPE18: Warneford Hospital

Site name	**Warneford Hospital**
SHLAA reference (and OLP2036 Policy if applicable)	**#063** **LP2036 Policy SP22**
Ward	**Headington**
Total site size (ha)	**8.67ha**
Existing use(s)	**Hospital, research, playing fields**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	Site is currently subject to an undetermined application (25/01859/OUTFUL) Previous applications, relating to Intensive Care Annex (21/00302/FUL)

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	2025 – landowner confirmed intention to develop surplus areas
Does the landowner specify types of development	Current allocation establishes site as suitable for healthcare related facilities primarily plus other uses inc residential and student accommodation, academic research, B1 uses with a link and education.

Stage 1b conclusion
Landowner has confirmed intention to develop – continue to next stage of assessment.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	0	Site is in Flood Zone 1

		Patches of surface water flood risk present in the south-west of the site and also some smaller patches around the north-east boundaries.
Flooding of land surrounding site for access/ egress	0	There is safe access/egress from the site – area surrounding site is Flood Zone 1

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	0	Site is currently in use as a hospital and research centre, but does include some undeveloped green space. Some green infrastructure on the site.
Green belt?	0	Site is not on Green Belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	0/I	*Site is primarily a non-residential allocation however policy E1 allows housing delivery on employment sites if landowner sought this.*
Affordable housing provision	I	Depends on implementation

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*

Regeneration area (within the top 20% most deprived areas IMD)	0	*The site is not within a Regeneration Area. (Site lies largely within an area that is less deprived than 74% of neighbourhoods – IMD 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**I**	Provision of community facilities will depend on implementation of uses.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**I**	Site has potential for providing public open space, but precise type and quantum will depend on implementation.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**+**	<100m from bus stop with frequents services (Roosevelt Drive)
Sustainable transport links (rail station)	**-**	Oxford Station (3.9 km)
Primary Schools	**-**	1.6 km from Wood Farm Primary School
Secondary Schools	**+**	250m from Cheney School

GP Surgeries	**-**	About 1.4km from Bartlemas Surgery, Cowley Medical Centre
Post office	**-**	St Clements St Post Office (1.6 km)
Air Quality	**-**	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	Nothing notable within 30m, although the site lies within the catchment area of Lye Valley SSSI, which contains important peat deposits and as a result is particularly sensitive to impacts to groundwater flows and other changes to hydrology.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**-**	Site is adjacent to OCWS – Warneford Meadows and Orchard Potential for protected species constraints in the site likely include roosting bats, foraging and commuting bats, nesting birds, and reptiles. Site sits between two green corridors, and onsite there are several mature trees, lawns and hedges, and a playing field. Proposals should consider what connectivity the site provides to protected species and seek to preserve and enhance existing permeability through the site.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	Site is of archaeological interest for potential Roman remains. This will require further investigation as part of any redevelopment.
Conservation Areas &	**-**	Adjoins Headington Hill CA

Register of Parks and Gardens (RPG)		
Listed Buildings	**--**	Various elements of the hospital complex are Grade II listed (the main hospital building, ancillary annexes (mortuary, nurses home, and chapel), front garden wall including lodge and piers)). Warneford Meadow nearby is on the Oxford Heritage Asset register.
View Cones	**0**	Site not within a view cone
Historic Core Area	**0**	Site not within historic core area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**I**	Hospital use and research centre likely to remain onsite, expansion or otherwise depends on implementation of development plans.
Diversifying the economy end employment opportunities	**I**	No indication on diversification of employment use on the site

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes via Roosevelt Road. Boundary wall and gate piers are at least partially covered by the listing so creating new access points will be difficult to deliver.
Can walking and cycling connections with the surrounding area be achieved?	Existing connections and routes to site are established. No segregated cycle paths through the site. Pedestrian walkways limited outside of built footprint. Car movement is currently prioritised through site.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains extensive greenspace around that makes a noticeable contribution to the setting and creates a character that is less institutional than nearby Churchill Hospital. Site contains significant existing trees scattered across the site which are important to public amenity in the area and will

	provide valuable ecosystem services. Existing trees are protected by the OCC - Warneford Hospital (No.1)TPO, 1994 and the OCC -Warneford Hospital (no.1) TPO, 1994. There is an orchard adjacent to the south eastern boundary of the site. Existing trees will influence developable area of site and its capacity. Opportunities exist to plant new trees to benefit public amenity and enhance the setting of the Listed Buildings. Within 200m of peat reserves potentially
Are land contamination issues likely?	Although significant contamination is not expected, a site investigation will be required.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Wildlife site adjoins site, residential dwellings on east and west boundaries. Hospital uses likely to be retained onsite.

Stage 2 conclusion
There are heritage sensitivities including presence of listed buildings and adjacent conservation area; ecological sensitivities including adjacent local wildlife site and potential for protected species on site; as well as presence of protected trees on the site which will need to be addressed through appropriate mitigation requirements as part of any allocation. These are not considered insurmoutable. Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW1: Banbury Road University Sites – Parcel B

Site name	Banbury Road University Sites - Parcel B
SHLAA reference (and OLP2036 Policy if applicable)	006b Policy SP31
Ward	Walton Manor
Total site size (ha)	1.26
Existing use(s)	Academic and student accommodation

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the	Yes	22/02849/FUL - provision of student accommodation (130 student rooms) and an

planning process (development commenced)?		academic building approved November 2024.

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes – the planning application approved in November 2024 indicates there is landowner intention to develop.
Does the landowner specify types of development	The approved planning application is for student accommodation and academic use.

Stage 1b conclusion
Confirmed landowner intent, continue to next stage.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(Patches of surface water flood risk present within site)*
Flooding of land surrounding site for	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*The site is previously developed land with buildings in use on site.*
Green belt?	*0*	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*The site has planning permission for the provision of 130 student rooms (C3 equivalent: 52 dwellings)*
Affordable housing provision	*0*	*Site is allocated in LP2036 for housing (including student accommodation) and other uses which typically would not provide affordable housing. The recent planning approval also does not make provision for affordable housing. Policy compliant affordable housing delivery.*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not in or adjacent to a regeneration area. (Site lies within an area that is less deprived than more than 90% of neighbourhoods in England – IMD 2025).*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Site not allocated for community facilities and the recent planning approval only included development relating to student accommodation and academic facilities.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	*The amount of public open space is likely to remain the same due to the allocation.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*The site is less than 400m from a bus stop. The nearest one is the Bevington Road bus stop on Banbury Road which is 200m away. Buses along Banbury Road are frequent and include the 2, 2A, S4, S5 and S7.*
Sustainable transport links (rail station)	-	*Over 1600m from the nearest rail station (Oxford)*
Primary Schools	+	*Less than 800m from the nearest primary school (St Barnabas C of E Primary School is 650m away)*
Secondary Schools	-	*More than 800m from the nearest secondary school (Cherwell School). Most of the schools within 800m are private/independent schools.*
GP Surgeries	+	*Less than 800m from the nearest GP surgery (Jericho Health Centre/ Observatory Medical Practice are 550m away).*
Post office	+	*Less than 800m from the nearest post office (St Giles is 500m away)*
Air Quality	-	*Site is within an Air Quality Management Area (AQMA)*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	*0*	*Site is not within 30m of a water body*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	*Contains no nature conservation designations but surveys undertaken (in association with planning application 22/02849/FUL) identified numerous bat roosts on part of the site bounded by Bevington Road.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site is of archaeological interest as it is located on the line of a Bronze Age linear barrow cemetery and there is potential for prehistoric and Roman remains.*
Conservation Areas & Register of Parks and Gardens (RPG)	--	*The site lies entirely within the North Oxford Victorian Suburb Conservation Area.*
Listed Buildings	--	*There is one Grade II listed building within the site located at 59 Banbury Road. There are several other Grade II listed buildings within the vicinity of the site, notably across the other side of Banbury Road including Wycliffe Hall, Wykeham House, 60 and 62 Banbury Road and Gees' Restaurant immediately adjacent to the north of the site.*
View Cones	*0*	*Site lies outside of a view cone*
Historic Core Area	*0*	*Site lies outside the City Council's locally designated Historic Core Area.*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	*No change in number of jobs/economic floorspace in knowledge-based economy*
Diversifying the economy end employment opportunities	*0*	*No change in employment base or access to affordable workspaces*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Site is already accessible by vehicle from Banbury Road.
Can walking and cycling connections with the surrounding area be achieved?	Site is bounded by pedestrian and cycle connections on Banbury and Woodstock Road.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	There are a considerable number of trees across the site, particularly around its perimeter but no other topographical constraints. One of the trees (in front of 10 Winchester Road) is protected by a Tree Preservation Order.
Are land contamination issues likely?	There are no likely land contamination issues.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The site adjoins residential and educational uses, so design sensitivity would be required.

Stage 2 conclusion
The site scores well overall against the sustainability criteria and has good access to sustainable transport links. However, design sensitivity is likely to be required due to the site's location within a conservation area, and the high number of listed buildings around the site, as well as the Listed Building within it.

Site to be put forward for allocation in Regulation 19 Local Plan (unless construction has commenced in the meantime).

SPCW2: Botley Road Sites around Cripley Road including River Hotel and Westgate Hotel

Site name	**Botley Road sites around Cripley Road including River Hotel and Westgate Hotel**
SHLAA reference (and OLP2036 Policy if applicable)	**(613) - 0.34ha** 3-15 Botley Road and The River Hotel **(614) - 0.31ha** Land at Cripley Place **(615) - 0.19ha** Westgate Hotel, Botley Road and 3-7 Mill Street
Ward	**Osney & St Thomas**
Total site size (ha)	**0.84ha**
Existing use(s)	**Mixed uses including hotel with associated car park, residential dwellings and retail unit (courier service).**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Landowner indicates interest in mixed use development, including residential use.

Stage 1b conclusion
Landowner has confirmed intention to develop the site . Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	-	*Three of the four parcels partly lie within Flood Zone 3a, whilst the parcel to the southeast (south of Botley Road and east of Mill Street) lies within Flood Zone 2. Flood Zone 2 is prevalent within all four parcels.* *Small area of surface water flood risk present within most southwestern parcel (north of Botley Road and west of Mill Street).*
Flooding of land surrounding site for access/ egress	--	*Site is adjacent to Osney Bridge. Mill Street and Park End Street are other access routes and are within Flood Zone 2.*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Buildings are occupied and in use.*
Green belt?	*0*	*Site is not in green belt.*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Site allocated for residential development and would provide more than 10 homes.*
Affordable housing provision	+	*Site has potential to deliver policy compliant affordable housing*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site is not in a regeneration area.*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Community facilities unlikely to change resulting from allocation*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	*Public open space unlikely to change resulting from allocation.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Site is in a very central location and opposite to city's key transport hub so a variety of options are available, including buses, taxis and rail links.*
Sustainable transport links (rail station)	+	*Site is opposite Oxford railway station.*
Primary Schools	+	*Nearest primary school is West Oxford Community School, approx 650m.*

Secondary Schools	-	Nearest secondary school is over 800m from the site.
GP Surgeries	+	*Nearest GP is located 800m away (Beaumont Street)*
Post office	-	*Nearest Post office located more than 800m away*
Air Quality	-	*Entire city is designated as an AQMA.*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Western edge of site is directly adjacent to Thames/Isis watercourse.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	*0*	*No ecological designations on site or adjacent.* Given part of the site's location adjacent to watercourse and associated riparian habitat potential for a variety of protected species. Appropriate ecological surveys should be undertaken. A lighting strategy may be required along the river. The mature trees adjacent to the river should be protected. A 10m watercourse buffer should be maintained along the river or reinstated where possible. Any habitat delivery should be reflective of the River Thames context (i.e., providing for species such as otter and bats with natural vegetation along the river boundary). Habitat would benefit from being delivered along the river corridor, with habitat retained and enhanced in line with the LNRS. Whole site covered by LNRS.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site is wholly located within City Centre Archaeological Area*
Conservation Areas & Register of Parks and Gardens (RPG)	-	*Part of the site allocation located adjacent to Osney Town CA*
Listed Buildings	*0*	*Site contains no listed buildings.*
View Cones	-	*Site within a View Cone (Boar's Hill)*
Historic Core Area	-	*Site is within Historic Core Area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	*0*	*No change in knowledge economy jobs*
Diversifying the economy end employment opportunities	*0*	*Wider employment opportunities unlikely to change through redevelopment.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No
Are land contamination issues likely?	sites would likely require a site investigation and contamination risk assessment if re-developed to a sensitive end-use.

Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	The site is adjacent to a mainline railway track. The immediate surrounding area is of mixed character comprising of residential dwellings, hotels and some commercial uses.

Stage 2 conclusion
Site is in a sustainable and accessible location. There are several considerations including flood risk and above and below ground heritage, however these are not insurmountable and are likely be able to be addressed through appropriate further investigation/ mitigation at the planning application stage. Site should be allocated for a residential-led scheme (housing). Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW3: Canalside Land, Jericho

Site name	**Canalside Land, Jericho**
SHLAA reference (and OLP2036 Policy if applicable)	**011** **Policy SP33**
Ward	**Jericho and Osney**
Total site size (ha)	**0.49 ha**
Existing use(s)	**Part boat hire base, garages, open space, derelict workshops, boat repair yard. The site has been derelict since 2006.**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Multiple land ownership. Confirmed intention from one landowner for part of the site.
Does the landowner specify types of development	Planning application 20/01276/FUL (18 units) indicates intent to develop. Planning application was refused in 2022 and the applicants lodged an appeal which was determined in 2023. The appeal was allowed however the appeal for Listed Building Consent was dismissed on the basis that the proposed works were covered by Ecclesiastical Exemption and therefore Listed Building Consent was not required

Stage 1b conclusion
Consider further as an allocation for a mixed-use development including residential and boatyard. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***

What flood zone(s) is the site in?	--	Site is partially in Flood Zone 3b *(Patches of surface water flood risk towards centre/ north east of site.)*
Flooding of land surrounding site for access/ egress	-	The initial parts of the access route are within Flood Zone 2, with the hazard rating generally low at the start of the route. Access/ egress from the site is over land at moderate to low risk/ hazard.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	+	The site would make use of previously developed land although the existing buildings would need to be cleared from the site.
Green belt?	0	The site will not be on Green Belt land.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	I	Site allocated for a number of uses including residential development however precise amount of units delivered will depend on implementation.
Affordable housing provision	I	Precise amount of affordable housing to be delivered on site will depend on implementation, including possible off site contribution.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within	0	Site not within regeneration area.

the top 20% most deprived areas IMD)		

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	+	Development likely to increase the amount of community facilities on site as one of the allocated uses is a replacement community centre.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	Site allocated for mixed use including a pubic open space.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	-	>400m to the nearest bus stop (10-minute walk) (850m). The bus routes to this site which go into Oxford city centre only travel via and stop along Woodstock Road. Services on this road are frequent.
Sustainable transport links (rail station)	+	Site is within a 1km walk of Oxford train station.
Primary Schools	+	The nearest primary school is within a 5-minute walk of the site (350m).
Secondary Schools	-	Site is just over 1km away from the nearest secondary school.
GP Surgeries	+	Site is within 500m of GP surgery.
Post office	+	Site is within 500m of a post office.

Air Quality	-	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	Site is adjacent to Oxford Canal.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	Site is near to Oxford Meadows SAC and may require mitigation including notice boards and signage for example. Site is adjacent to Oxford Canal which is an Oxford City Wildlife Site. The site supports a small number of common bat roosts but is otherwise of limited ecological value. Key to any development is avoiding potential impacts on the Canal and the wildlife that utilise it, including foraging and commuting bats, otter and (potentially) water vole. Any planning application should incorporate a robust lighting assessment that demonstrates no additional artificial lightspill on the Canal – from either exterior or interior lighting – or otherwise demonstrate that the lightspill will avoid any significant impacts on the faunal interest. Site contains significant existing trees including a false acacia and silver birch in the public open space north of the church and an ash tree in the church grounds next to Cardigan Street. There also is a row of important trees adjacent to the site along the western side of the Canal Towpath. These trees are collectively important to public amenity in the area and will provide valuable ecosystem services. All these trees are protected by location within the Jerichio Conservation Area. Existing trees will influence developable area of site and its capacity. If existing trees are removed new trees should be planted to fully mitigate the impact tree canopy cover green infrastructure in the area. Opportunities exist to plant new trees to improve connectivity within GI network.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	0	Site contains no known archeological sites or has limited or uncertain archaeological potential.
Conservation Areas & Register of Parks and Gardens (RPG)	--	Site is entirely within the Jericho Conservation Area.
Listed Buildings	--	Site is adjacent to a Grade I Listed Building (Church of St Barnabas).
View Cones	0	Site lies outside of a View Cone.
Historic Core Area	-	Site lies within the historic core area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	Site has been designated for mixed-use development with residential. Any new boatyard will have employees and new leisure moorings will support tourism.
Diversifying the economy end employment opportunities	0	Site has been designated for mixed-use development with residential.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Vehicle access to the site already exists but is likely to need improvements.
Can walking and cycling connections with the surrounding area be achieved?	The site is within the urban area with existing cycle and pedestrian connections but is likely to need improvements.

Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site is adjacent to the Oxford canal and includes a docking basin. Site contains significant existing trees including a false acacia and silver birch in the public open space north of the church. There also is a row of important trees adjacent to the site along the western side of the Canal Towpath. These trees are collectively important to public amenity in the area and will provide valuable ecosystem services. All these trees are protected by location within the Jerichio Conservation Area. Existing trees will influence developable area of site and its capacity. Opportunities exist to plant new trees to benefit public amenity in the area.
Are land contamination issues likely?	Historical dockyard area. Potential for contamination.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site is adjacent to Oxford Canal on one side. Site adjoins residential therefore will need to consider sensitive design.

Stage 2 conclusion
The site scores well against a number of the sustainability criteria. Flood risk is an issue which will need to be addressed and the site is in a sensitive location with regard to the historic environment, in particular the conservation area and the Grade I Listed St Barnabus Church. There are potential biodiversity sensitivities which will also need to be considered, particularly with how the site interfaces with the canal. However none of the constraints are insurmountable and so the site is to be put forward for allocation in Regulation 19 Local Plan.

SPCW4: Faculty of Music

Site name	Faculty of Music
SHLAA reference (and OLP2036 Policy if applicable)	021 OLP2036 SP36
Ward	Holywell
Total site size (ha)	0.33
Existing use(s)	Academic use

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes – the planning application submitted in July 2025 indicates there is landowner intention to develop.
Does the landowner specify types of development	The submitted planning application is for a change of use to create a graduate centre including student accommodation (25/01872/FUL). Currently undetermined.

Stage 1b conclusion
Developer has confirmed intent to develop. Consider further for allocation for residential, continue to next stage.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	-	Site is partially in Flood Zone 2 – a small area on the eastern edge.

		Patches of surface water flood risk on the eastern, southern and western boundaries, with a narrow corridor of surface water flood risk extending into site from the west.
Flooding of land surrounding site for access/ egress	*0*	There is safe access/egress from the site – area surrounding site is Flood Zone 1

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	Site is previously developed land (with buildings in use on site) and in academic use
Green belt?	*0*	Site is not on Green Belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site allocated for ongoing academic uses, residential development and/or student accommodation. Minimum number of dwellings to be delivered is 23 (or if delivered as student rooms, the equivalent number of student rooms where the relevant ratio is applied).
Affordable housing provision	*I*	Depends on implementation (no affordable housing to be delivered under the current but undetermined planning application).

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*

Regeneration area (within the top 20% most deprived areas IMD)	*0*	Site is not in or adjacent to a regeneration area. (Site lies within an area that is less deprived than more than 50% of neighbourhoods in England – IMD 2025)

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	Site not allocated for community facilities.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*0*	The amount of public open space is likely to remain the same due to the allocation.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	City centre location with multiple bus stops and routes on St Aldate's and Speedwell Street. The nearest bus stop (Police Station on St Aldate's) is less than 100m from the site.
Sustainable transport links (rail station)	*0*	Between 1200 and 1600m from the nearest rail station (Oxford)
Primary Schools	-	More than 800m from the nearest primary school (St Ebbe's C of E Primary School is 850m away)
Secondary Schools	-	More than 800m from the nearest secondary school (Cheney School is more than 3000m away).

GP Surgeries	+	Less than 800m from the nearest GP surgery (Northgate Health Centre is 600m away).
Post office	+	Less than 800m from the nearest post office (Oxford Post Office is 350m away).
Air Quality	-	Site is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	Site is within 30m of a water body (Trill Mill stream lies adjacent to the eastern boundary of the site).

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Adjacent to GI network (Wildlife Corridor at Christchurch Meadow), so potential for improving wildlife linkages

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Located within the City Centre Archaeological Area. The site has potential for Middle-Late Saxon Archaeology (adjacent to possible causeway), also location of a short-lived medieval friary and has medieval and post-medieval potential. Potential for waterlogging and well preserved eco and artefacts.
Conservation Areas & Register of Parks and Gardens (RPG)	--	Entire site within Central (University & City) Conservation Area. Sensitive location - Christ Church Meadow; a Grade I Registered Park and Garden located in very close proximity to the site.
Listed Buildings	-	There are several Grade I and Grade II listed buildings, particularly towards the north of the site on St Aldate's. The Grade II listed

		Christ Church Footbridge and flanking walls in the Memorial Garden and Screen all lie immediately adjacent to the north of the site.
View Cones	*0*	Site lies outside of a view cone
Historic Core Area	-	Site lies within the City Council's locally designated Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	*0*	No change in number of jobs/economic floorspace in knowledge-based economy
Diversifying the economy end employment opportunities	*0*	No change in employment base or access to affordable workspaces

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, but site is located off St Aldate's in city centre, so is unlikely to be suitable for uses that require parking or generate much traffic. Therefore, continued academic use and/or student accommodation is most suitable.
Can walking and cycling connections with the surrounding area be achieved?	Very good walking and cycling connections already exist.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Some mature trees are located towards the western boundary of the site. Some of these existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	None identified
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Sensitive location in terms of conservation area, listed buildings, and archaeology.

Stage 2 conclusion
Significant historic environment constraints will need to be addressed and mitigated in terms of conservation area, listed buildings, and archaeology. Development will also likely need to be low car or car free in this city centre location. Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW5: Jowett Walk (South)

Site name	Jowett Walk (South)
SHLAA reference (and OLP2036 Policy if applicable)	664
Ward	Holywell
Total site size (ha)	0.21
Existing use(s)	Site currently a house, gardens and car park.

Site location plan

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	Yes	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion

No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Available for student accommodation

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	*0*	*Site is in Flood Zone 1* *(No surface water flood risk present on site)*
Flooding of land surrounding site for access/ egress	*0*	*There is safe access/egress from the site – area surrounding site is Flood Zone 1*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	Site is previously developed land (with buildings in use on site)
Green belt?	**0**	Site is not on Green Belt land

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	**++**	Site would provide more than 10 new homes
Affordable housing provision	**I**	Depends on implementation

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	**0**	Site is not in or adjacent to a regeneration area

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**0**	Site not allocated for community facilities OR amount of community facilities remain the same due to the allocation

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**0**	Site not allocated OR amount of public open space remains the same due to the allocation

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**-**	> 400m from a bus stop
Sustainable transport links (rail station)	**-**	> 1600m from train station
Primary Schools	**-**	>800m from the nearest primary school with spaces
Secondary Schools	**-**	>800m from the nearest secondary school with spaces
GP Surgeries	**-**	>800m from the nearest GP Surgery
Post office	**-**	>800m from the nearest post office
Air Quality	**-**	Site is within an Air Quality Management Area (AQMA)

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**0**	Site is not within 30m of a water body

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*

Ecology and Biodiversity	**+**	Contains no nature conservation designations but has potential for nature conservation interest. Can improve wildlife linkages or habitat continuity

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	Site within the central archaeological area
Conservation Areas & Register of Parks and Gardens (RPG)	**--**	Site lies in a conservation area (Central Area)
Listed Buildings	**0**	Site contains no identified historic building constraint
View Cones	**0**	Site lies outside of a view cone
Historic Core Area	**-**	Site lies within the Historic Core Area.

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**0**	No change in number of jobs/economic floorspace in knowledge-based economy
Diversifying the economy end employment opportunities	**0**	No change in employment base or access to affordable workspaces

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, via Jowett Walk and Mansfield Rd.
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No
Are land contamination issues likely?	Unlikely, but any re-development of this site would require a site investigation and contamination risk assessment.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No

Stage 2 conclusion
No insurmountable constraints. Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW6: Manor Place

Site name	Manor Place
SHLAA reference (and OLP2036 Policy if applicable)	031 (SP45)
Ward	Holywell
Total site size (ha)	1.24Ha
Existing use(s)	Former tennis court, allotments, orchards

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	Although in close proximity to New Marston Meadows SSSI
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Landowner has an intention to develop.
Does the landowner specify types of development	Potential for student accommodation or car free residential development.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	-	Site is partially in Flood Zone 3a *(Patches of surface water flood risk to the east of the site, noticeably towards the south eastern corner).*
Flooding of land surrounding	*0*	The access road to the site is within Flood Zone 1, therefore safe access/ egress from the site can be achieved.

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	-	Unprotected open space
Green belt?	0	Site not in Green Belt

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site allocated for a minimum of 43 dwellings, which could be delivered as student accommodation
Affordable housing provision	I	Depends on implementation.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	Site is not in a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	Amount of community facilities unlikely to change as a result of allocation.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	Amount of public open space would not change as a result of allocation.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	<400m from a bus stop.
Sustainable transport links (rail station)	-	>1600m from Oxford Train Station.
Primary Schools	-	>800m from nearest primary school with spaces (St Michael's CE Primary School).
Secondary Schools	-	>800m from nearest secondary school with spaces (Cheney School).
GP Surgeries	-	>800m from the nearest GP surgery (KES Northgate).
Post office	-	>800m from nearest post office (St Aldate's)
Air Quality	-	Site is located within an Air Quality Management Area.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*

Water	-	Site is bordered by the River Cherwell.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	-	Contains no nature conservation designations. Aerial imagery indicates the site contains grassland, scrub, woodland, and scattered trees. Patches of the woodland are included on the Priority Habitat Inventory. The site baseline is likely to have a high biodiversity value, making it difficult to achieve a net gain alongside development. Potential protected species constraints include foraging and commuting bats, roosting bats (trees), reptiles, badgers, nesting birds. Any development should seek to link in with the surrounding woodland and meadows and provide high-quality semi-natural habitat. The site contains Section 41 (Priority/ Principal) habitats that fall within the LPA Biodiversity Duty. Decideous Woodland. Extent needs to be confirmed from TVERC database. If existing trees are removed new trees should be planted to fully mitigate the impact on tree canopy cover green infrastructure in the area. New tree planting should be appropriate to ensure that the predicted tree canopy cover (% site area) following development (25 years) delivers policy and GI TAN expectations i.e. at least no net loss. Opportunities exist to plant new trees to improve connectivity within GI network. Site contains significant existing trees which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees are protected by location within the Central Conservation Area. Existing trees will influence developable area of site and its capacity. Strip running through middle of site within LNRS, and also along eastern boundary.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Within city centre archaeological area. The site is of archaeological interest with Civil War defences having been excavated previously. The site contains the line of Royalist defences that should be preserved in situ.
Conservation Areas & Register of Parks and Gardens (RPG)	--	Within conservation area
Listed Buildings	-	A number of Listed Buildings surround the site including Magdalen College Wall (Grade II*) and on the other side of the river St. Catherine's College Music Room (Grade I) and a number of other Grade I listed buildings associated with St. Catherine's College.
View Cones	-	Within view cone
Historic Core Area	-	Within high buildings area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	0	Development of the site is unlikely to increase jobs associated with the knowledge economy.
Diversifying the economy end employment opportunities	0	No Change

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes.
Can walking and cycling connections with the surrounding area be achieved?	Yes.

Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Trees exist on the site, change in levels and the River Cherwell borders the site. Site contains significant existing trees which are important to public amenity in the area and will provide valuable ecosystem services. Existing trees are protected by location within the Central Conservation Area. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	No known contamination issues.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site adjacent to a cemetery.

Stage 2 conclusion
Site has a number of heritage constraints which will require sensitive design in order to overcome. The site lies in a view cone and within the locally designated high buildings area and the height of any buildings should be restricted. However, no insurmountable constraints to development. Site to be put forward for allocation in Regulation 19 Local Plan for student accommodation or residential development.

SPCW7: Nuffield Sites (Island site)

Site name	Nuffield sites – Island site
SHLAA reference (and OLP2036 Policy if applicable)	070 SP1 – West End Sites
Ward	Osney & St Thomas
Total site size (ha)	0.65ha
Existing use(s)	Mix of uses including hotel, retail, office and other town centre uses

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Yes, mix of uses including commercial and residential (including student accommodation)

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	--	*Site is partially in Flood Zone 3b* *(Patches of surface water flood risk towards western and northern part of site).*

Flooding of land surrounding site for access/ egress	-	*Access/egress from the site (from both Hythe Bridge Street and Park End Street) lies within Flood Zone 2, with a small part within Flood Zone 3.*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Site is previously developed land with buildings in use on site*
Green belt?	*0*	*Site is not on green belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Likely to deliver more than ten dwellings*
Affordable housing provision	*I*	*Depends on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Outside regeneration area. Site within one of the 20% least deprived areas in the country. (IMD, 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Amount of community facilities likely to remain the same*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*I*	*Given location, potential to deliver an element of civic space*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Several Bus stops within 400m of site (within immediate vicinity of site) Park End Street (Bus stop D1) serves numerous routes within the city (1, 5, 14) and also further afield (S1, S3 gold)*
Sustainable transport links (rail station)	++	*Site within 800m from Oxford Railway station*
Primary Schools	-	*Nearest primary school (West Oxford) is just over 800m away (850m from centre of site)*
Secondary Schools	-	*Nearest secondary schools more than 800m away. Activate Learning is 500m away but this is a further education college.*
GP Surgeries	+	*KES Northgate (Northgate Health Centre) is 500m away*
Post office	+	*Oxford Post Office (St. Aldate's) is 700m away*
Air Quality	-	*Whole city is within an Air Quality Management Area*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Site within 30m of a water body (Wareham Stream)*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	*0*	*Site within 100m of Middle Fisher Row Gardens – locally protected space.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site within city centre archaeological area*
Conservation Areas & Register of Parks and Gardens (RPG)	-	*Site adjacent to boundary of Central (City and University) Conservation Area*
Listed Buildings	-	*Part of site potentially forms part of setting of a listed building (Cooper's Marmalade Factory or The Jam Factory, 27 Park End Street is nearest Listed Building)*
View Cones	*0*	*Not within view cone as within historic core area*
Historic Core Area	-	*Site lies within the historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	+	*Site has potential to increase jobs/ floorspace relating to the knowledge economy*
Diversifying the economy end employment opportunities	+	*Potential to deliver affordable workspace at this site*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Wareham Stream runs adjacent to western site boundary
Are land contamination issues likely?	Contamination risks likely to be present. Site investigations and remedial works likely to be necessary.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No

Stage 2 conclusion
No insurmountable development considerations at this stage. There are various heritage considerations including views and archaeology. Part of the site is also in an area of flood risk, so will require further site-specific analysis at the planning application stage. Site to be put forward for allocation in Regulation 19 Local Plan as part of a wider mixed-use allocation (including Worcester St Car Park and Land South of Frideswide Square) for a mix of uses commercial and residential (including student accommodation) and other appropriate complementary town centre uses.

SPCW7: Nuffield Sites (Worcester Street Car Park)

Site name	**Nuffield sites - Worcester Street Car Park**

SHLAA reference (and OLP2036 Policy if applicable)	**081 (SP1 – West End Sites and AOC1 – West End and Osney Mead)**
Ward	**Carfax & Jericho**
Total site size (ha)	**0.51ha**
Existing use(s)	**Surface Level Car Park**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Yes, mix of uses including commercial and residential (including student accommodation)

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	*-*	*Site is partially in Flood Zone 3a (narrow strip along the western boundary, adjacent to Castle Mill Stream)* *(Patches of surface water flood risk from south west to north east across the site and towards the southern corner).*
Flooding of land surrounding site for access/ egress	*0/-*	Safe access/egress exists from the site to the east, where the route lies entirely within Flood Zone 1. However, access to the west (via Botley Road) includes land within Flood Zone 2.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Majority of the site is a surface level car park. Site boundary also includes a pub (The Lighthouse)*
Green belt?	*0*	*Site not in the green belt*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Site has potential to deliver more than 10 residential units*
Affordable housing provision	*I*	*Depends on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Outside regeneration area. Site within one of the 20% least deprived areas in the country. (IMD, 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*

Community facilities	*0*	*Amount of community facilities likely to remain the same*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*I*	*Site has potential to improve public realm both on site and in immediate vicinity but ultimately how much is delivered will depend on implementation*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Numerous within 400m offering a range of frequent service bus services to and from destinations in the city and further afield (e.g., Bus Stop D2, Park End Street)*
Sustainable transport links (rail station)	++	*Oxford Railway station is less than 800m away*
Primary Schools	-	*Several primary schools are more than 800m away (1km approx. – West Oxford Primary and St Barnabus, Jericho)*
Secondary Schools	-	*Nearest secondary schools more than 800m away. Activate Learning is 500m away but this is a further education college.*
GP Surgeries	+	*Several GP Surgeries within 800m (19 Beaumont Street and Northgate Medical Centre)*
Post office	+	*Main Post Office (St Aldate's) is less than 800m away*
Air Quality	-	Entire city is within AQMA

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*

Water	-	*Western site boundary is within 30m of Castle Mill Stream*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	*0*	*No nature conservation designations on site. Site within 100m of Middle Fisher Row - locally protected space.* *The site contains several mature trees on the western boundary. Given the location of these trees within the Central (City and University) conservation area, these trees are likely protected.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site located within the City Centre Archaeological Area. Potential for late Saxon/ Norman remains. Site has potential to form part of the setting of Oxford Castle Scheduled Ancient Monument*
Conservation Areas & Register of Parks and Gardens (RPG)	--	*Entire site located within the Central (University and City) Conservation Area*
Listed Buildings	-	*Site has potential to form part of the setting of nearby Listed Buildings (e.g., Grade II Listed Nuffield College)*
View Cones	*0*	*Not within view cone as within historic core area*
Historic Core Area	-	*Site is wholly located within the historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	+	*Site has potential to increase number of jobs associated with the knowledge economy*
Diversifying the economy end employment opportunities	+	*Site has potential to support diversification of employment base/ provide affordable workspace*

Other constraints which could affect suitability of site for development

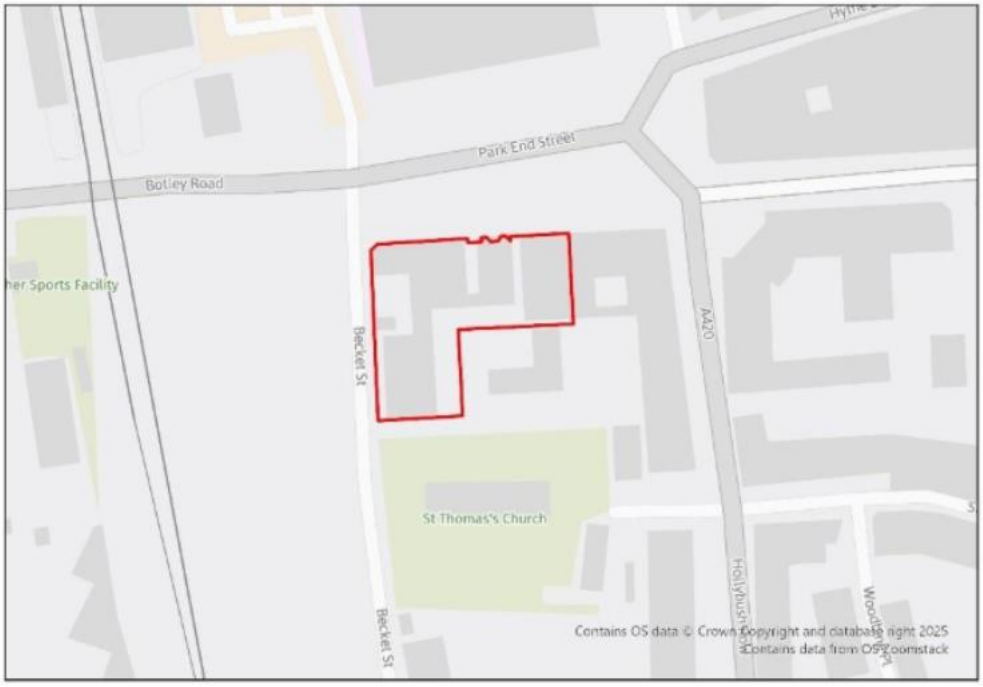
Can access for vehicles be achieved?	yes
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site is regular shaped and flat. Trees on western boundary and adjacent to Castle Mill Stream (also on western boundary)
Are land contamination issues likely?	Contamination risks likely to be present. Site investigations and remedial works likely to be necessary.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	This site is very close to Castle Mound Scheduled Ancient Monument. Unlikely to cause noise or smells but potential visual impact will need consideration.

Stage 2 conclusion
This site does not contain any insurmountable constraints, with only a narrow strip falling within flood zone 3b. There are however a range of heritage constraints including its location within the Central (City and University) Conservation Area, views, and the fact that the site lies within the the setting of various listed buildings and the Castle Motte. These will need to be given due consideration. Site to be put forward for allocation in Regulation 19 Local Plan as part of a wider mixed-use allocation (including the Island Site and Land South of Frideswide Square) for a mix of uses commercial and residential and other appropriate complementary town centre uses.

SPCW7: Nuffield Sites (Land south of Frideswide Square)

Site name	**Nuffield Sites - Land south of Frideswide Square**
SHLAA reference (and OLP2036 Policy if applicable)	**624 (and within AOC1)**
Ward	**Carfax & Jericho**
Total site size (ha)	**0.26**
Existing use(s)	**Range of residential and ground floor retail**

Site location plan



© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the	No	

planning process (development commenced)?		

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes.
Does the landowner specify types of development	Landowner intention to facilitate a general improvement to the area, including this site. Landowner proposing a mix of uses including commercial and residential (including student accommodation) across several sites within ownership (including this site).

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	-	Site is wholly in Flood Zone 2 *(Surface water flood risk present across majority of site)*
Flooding of land surrounding	-	Land immediately surrounding the area along Becket Street and Park End Street lies within Flood Zone 2, and further west along Botley Road within Flood Zone 3.

site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	Previously developed land with buildings in use on site
Green belt?	**0**	Site not in Green Belt

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Site has potential to deliver more than ten units
Affordable housing provision	I	Potential to deliver housing or student accommodation at this site given its city centre location. Amount of affordable housing would depend on implementation.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	0	*Outside regeneration area. Site within one of the 20% least deprived areas in the country. (IMD, 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	0	*Amount of community facilities likely to remain the same*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	0	*Unlikely to change as a result of allocation*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Site within 400m of bus stops on Frideswide Square*
Sustainable transport links (rail station)	++	*Site within 800m of Oxford Railway Station*
Primary Schools	+	*Less than 800m from nearest primary school (West Oxford Community Primary School)*
Secondary Schools	-	*More than 800m from nearest secondary school*
GP Surgeries	+	*Less than 800m from nearest GP surgery (19 Beaumont Street Surgery)*
Post office	-	*Post Office (St. Aldate's) is over 800m away*
Air Quality	-	*The entire city is within an AQMA*.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	0	*Site is not within 30m of a water body.*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	Site contains no nature conservation designations but has potential for nature conservation interest.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	Site within local area of archaeological importance
Conservation Areas & Register of Parks and Gardens (RPG)	--	Site within Central (City and University) Conservation Area
Listed Buildings	-	Site adjacent to several listed buildings including Grade II Listed Coopers Marmalade Factory (adjacent) and the Grade II Listed St Thomas Vicarage is behind the site and the Grade II Listed Church of St Thomas the Martyr is in close proximity to it.
View Cones	0	Not within view cone as within historic core area
Historic Core Area	-	Site lies within the city's historic core area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*

Employment Opportunities in the knowledge-based economy	I	This site has the potential to increase the number of jobs in the knowledge economy but how these are delivered will depend on implementation.
Diversifying the economy end employment opportunities	I	Site has potential to support diversification of the employment base or provide affordable workspaces but how these are delivered will depend on implementation.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes.
Can walking and cycling connections with the surrounding area be achieved?	Yes. Existing connections.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No. brownfield city centre site. contains buildings.
Are land contamination issues likely?	Unlikely.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	No.

Stage 2 conclusion
The site lies within the historic core area, within a view cone, within the city archaeological area and within the Central (University and City) conservation area. Given heritage considerations, sensitive design is likely to be required. Site is well served by a range of public transport opportunities. Site is also within a flood risk zone, including access, and this will need to be considered further along with any relevant mitigation requirements where necessary. Site to be put forward for allocation in Regulation 19 Local Plan as part of a wider mixed-use allocation (including Worcester St Car Park and the Island Site) for a mix of uses commercial and residential and other appropriate complementary town centre uses.

SPCW8: Osney Mead

Site name	Osney Mead
SHLAA reference (and OLP2036 Policy if applicable)	586 (SP2 Osney Mead and AOC1 West End and Osney Mead)
Ward	Osney & St Thomas
Total site size (ha)	17.8
Existing use(s)	Mix of employment uses including industrial, warehousing and academic activities

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820.

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage of assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes
Does the landowner specify types of development	Yes – an innovation quarter containing a mix of uses including commercial, education and residential (including student accommodation)

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	--	Flood Zone 3b to the west and middle of the site, larger area of Flood Zone 3a extends across most of northern boundary, nearly all of the site in Flood Zone 2. Areas of surface water flooding scattered across the site.

Flooding of land surrounding site for access/ egress	--	Main access through Flood Zone 3b.

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Site contains previously developed land including buildings (both in use and vacant) and areas of hard-standing*
Green belt?	*0*	*Site is not within the Green Belt*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	*I*	*Site has potential for homes/ student accommodation.*
Affordable housing provision	*I*	*Depends on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site not within a regeneration area. (Site within one of 20% least deprived areas according to (IMD 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8.*

Criteria	*SA rating*	*Comments*
Community facilities	+	*Site has ability to deliver community facilities as part of redevelopment*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	+	*Site has potential to deliver public open space/ make improvements to public realm through redevelopment opportunities.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	-	*Site is more than 400m from nearest Bus stops on Botley Road (circa 800m from "Osney Island" bus Stop on Botley Road*
Sustainable transport links (rail station)	+	*Site is 1km from Oxford Station on foot*
Primary Schools	+	*Nearest Primary School (West Oxford Primary) is less than 400m from the site*
Secondary Schools	-	*Nearest secondary school is more than 800m away*
GP Surgeries	-	*Nearest GP Surgery (19 Beaumont Street) is more than 800m away*
Post office	-	*Nearest Post Office (Oxford St Aldate's) is more than 800m away*
Air Quality	-	*Site is within an Air Quality Management Area but not within air quality "hotspot"*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Site is bounded by Bullstake Stream (to the south) and the River Thames (to the north)*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Site not within a designated nature conservation area. Potential to improve relationship with adjacent habitats including the Bullstake Stream, River Thames and surrounding fields by ensuring development close to/ near the boundaries preserves/ restores/ re-naturalises bankside habitats and provides buffers. The trees on the northern bank are situated within the Osney Town conservation area and as such are afforded protection by virtue of their location within the conservation area.*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site lies outside the city centre archaeological however there may be archaeological potential at the site*
Conservation Areas & Register of Parks and Gardens (RPG)	-	*North western boundary of the site is immediately adjacent to the boundary of the Osney Town conservation area. Trees situated along the riverbank are within the conservation area boundary. Potential for northern part of site to be within the setting of the conservation area.*
Listed Buildings	-	*Site contains no listed buildings however Listed buildings nearby include Osney Abbey (Grade II), Osney Cottage (Grade II) and a Grade II Listed memorial 300 yards south of Osney Lock (Grade II)*
View Cones	-	*Part site lies within the Raleigh Park View Cone*
Historic Core Area	-	*Eastern half of the site falls within the Historic Core Area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	+	*The Landowner's ambition is to create an innovation area which would be likely to support an increase in jobs and floorspace in knowledge-based sectors*
Diversifying the economy end employment opportunities	*I*	*Currently the site provides a diverse employment base which could be impacted through the comprehensive delivery of a knowledge-based innovation area. However, the creation of such an innovation area could also bring about opportunities to deliver flexible and/or affordable workspaces.*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes, Oxpens Bridge will enhance connectivity with the city centre enabling improved cycling and walking connections with the west end of the city centre.
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No significant changes in ground level however the River Thames and Bullstake Stream provide the northern and southern boundaries (respectively) to the site. Site contains a number of mature trees. Trees on the northern site boundary are within the Osney Town Conservation area and so benefit from protection.
Are land contamination issues likely?	Unknown, however, given the site's history as an industrial estate and considering the variety of previous industrial-related uses, contamination issues are possible.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site located close to fields, is bounded by the river and some residential development nearby on Ferry Hinksey Road. Site adjacent to a substation and contains several pylons which may impact on future development aspirations.

Stage 2 conclusion
While not insurmountable, flood risk issues are potentially significant and will require mitigation. Redevelopment of the site should be undertaken sensitively so as not to detract from views into and out of the historic city core. Development of an Innovation area has the potential to impact existing local businesses who may be displaced. Allocate site for a mixed-use innovation area including commercial, educational and residential uses (including student accommodation), acceptability of residential uses is subject to conclusions of further flood risk assessment. Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW9: Oxford Railway Station and Becket Street Car Park

Site name	**Oxford Railway Station and Becket Street Car Park**
SHLAA reference (and OLP2036 Policy if applicable)	**075 (a+b) (SP1 West End Sites and AOC1 West End and Osney Mead)**
Ward	**Osney and St Thomas**
Total site size (ha)	**2.56ha (in SHLAA)**
Existing use(s)	**Railway station and associated ancillary uses/ surface level car parking**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
The East West Rail Safeguarding Direction (19 November 2025) Maps suggests that the entire of the proposed site allocation lies within the safeguarded area. Where a planning application is submitted on land included within the EWR Safeguarding Direction, the East West Rail Company becomes a statutory consultee and must be consulted in accordance with the instructions in the Direction before planning permission can be granted. There are no clear conflicts with national policy or insurmountable environmental or physical constraints. However, site allocation policy itself would benefit from acknowledging the EWR Safeguarding Direction (19 November 2025) and highlighting the procedural implications of the site's inclusion within this land. Continue to next stage assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes. Network Rail is working to redevelop the site to support necessary upgrades to Oxford Railway Station to enable delivery of wider transport objectives (e.g., East West Rail and Cowley Branch Line)
Does the landowner specify types of development	Mixed use – residential and economic

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	-	*Site is partially in Flood Zone 2* *(Patches of surface water flood risk present within site, with the largest patches around the station building in the northern parcel and inside part of the eastern perimeter of the southern parcel along Becket Street.)*
Flooding of land surrounding site for access/ egress	-	*The initial parts of the current access route are within Flood Zone 2 (Botley Road and Becket Street) and then Flood Zone 3 if heading further west onto Botley Road.*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Site is previously developed land in use*
Green belt?	*0*	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Likely to deliver more than ten dwellings*
Affordable housing provision	*I*	*Given city centre location, a range of residential typologies are acceptable. As such, the precise amount of affordable housing would depend on implementation*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Site not within a regeneration area* *Oxford Station is within one of the 20% least deprived areas.* *Becket St Car Park is within one of the 50% least deprived areas (IMD,2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*Provision of community facilities unlikely to change.*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	*I*	*Given location, potential to deliver an element of civic space/ public realm.*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	+	*Site contains bus stops with many frequent services to a range of locations*
Sustainable transport	++	*Site contains Oxford Railway Station*

links (rail station)		
Primary Schools	+	*West Oxford Primary School is 750m away*
Secondary Schools	-	*The nearest secondary education provider is more than 800m away. Activate Learning is 650m away but this is a further education college.*
GP Surgeries	+	*Beaumont Street Surgery is 700m away*
Post office	-	*Post Office (St. Aldate's) is over 800m away*
Air Quality	-	*Within City-wide AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	***SA rating***	***Comments***
Water	*0*	*Northern boundary of site is just over 60m from Castle Mill Stream/ Sheepwash Channel*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	***SA rating***	***Comments***
Ecology and Biodiversity	+	*Contains no nature conservation designations with limited potential for nature conservation interest. Redevelopment has the potential to improve wildlife linkages*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	***SA rating***	***Comments***
Archaeology	-	*Station site in close proximity to two Scheduled Ancient monuments (Rewley Abbey and Swing Bridge, LNWR Station). Whole site lies within the city centre archaeological area. Site is therefore of potential archaeological interest.*
Conservation Areas & Register of	-	*Becket Street car park is adjacent to the Central (University and City) conservation area*

Parks and Gardens (RPG)		
Listed Buildings	-	*Potential that part the Becket Street car park lies within the setting of the Church of St Thomas the Martyr (Grade II) Listed Building. Several other Listed Buildings including Combe House (Grade II) and St Thomas Vicarage (Grade II) are close by.*
View Cones	-	*Not within a view cone as whole site within Historic Core Area.*
Historic Core Area	*0*	*Whole site lies within the Historic Core Area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	***SA rating***	***Comments***
Employment Opportunities in the knowledge-based economy	*I*	*Depending on precise nature of redevelopment, the site has potential to bring forward jobs to support the knowledge economy*
Diversifying the economy end employment opportunities	*I*	*Depending on precise nature and scale of redevelopment, site has potential to support diversification of employment base*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes, vehicular access to the site already exists
Can walking and cycling connections with the surrounding area be achieved?	Yes,
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	No
Are land contamination issues likely?	Site contains railway infrastructure which has potential for contamination
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	Site is adjacent to the railway line and part of the site contains the Oxford Railway station. Potential for noise issues, smells and other environmental issues associated with the railway.

Stage 2 conclusion
The site lies within the historic core area, and within the city archaeological area. It is also adjacent to the Central (University and City) conservation area. Given heritage considerations, sensitive design is likely to be required. Site is well served by a range of public transport opportunities. There is some flood risk on the site which may need to be addressed and appropriately mitigated. Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW10: Oxpens

Site name	**Oxpens**
SHLAA reference (and OLP2036 Policy if applicable)	**076 (Policy SP1 West End Sites and AOC1 West End and Osney Mead)**
Ward	**Osney and St Thomas**
Total site size (ha)	**6.3ha**
Existing use(s)	**Ice Rink, car park, former filling station, open space, sheltered housing and businesses**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	Yes	The site partially lies within Flood Zone 3b greenfield

Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
The East West Rail Safeguarding Direction (19 November 2025) Maps suggests that part of the northern boundary of the site (adjacent to the river and the railway line) is included within the safeguarded area. Where a planning application is submitted on land included within the EWR Safeguarding Direction, the East West Rail Company becomes a statutory consultee and must be consulted in accordance with the instructions in the Direction before planning permission can be granted. There are no clear conflicts with national policy or insurmountable environmental or physical constraints. However, site allocation policy itself would benefit from acknowledging the EWR Safeguarding Direction (19 November 2025) and highlighting the procedural implications of par of the site's inclusion within this land. Continue to next stage assessment.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes. Resolution to Grant Outline Permission (Planning Committee January 2024)
Does the landowner specify types of development	Yes. Outline permission proposes a mixed use scheme including homes, jobs and a hotel as well as public realm improvements

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	--	*Site is partially in Flood Zone 3b* *(Patches of surface water flood risk present within site, with the largest patches located towards the eastern end)*
Flooding of land surrounding site for access/ egress	-	*Initial access/egress from the site is within Flood Zone 1, although the route (A420) quickly crosses into Flood Zone 2 to both the east and west.*

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	*0*	*Part of the proposed site allocation contains publicly accessible open space (however this is outside the redline boundary of the planning application). The site also contains some previously developed land, some of which is surface level car parking and some of which contains a mixture of occupied and unoccupied buildings.*
Green Belt?	*0*	*Site is not on Green Belt land*

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	*Resolution to grant planning permission (Jan 2025) for 234 homes and 258 units of student accommodation*
Affordable housing provision	++	*40% affordable housing achieved on-site in relation to the 234 homes*

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	*0*	*Outside regeneration area. Site within one of the 50% least deprived areas in the country. (IMD, 2025)*

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	*0*	*No obvious change in built community facilities*

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	++	*Public open space retained and proposed to be significantly enhanced (likely to result in more than 10% of the site area)*

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	-	*Closest frequent service bus stops are located on Frideswide Square and Park End Street (more than 400m away). While there is a bus stop opposite the site, it does currently appear to be in use.*

Sustainable transport links (rail station)	+	*Oxford Railway Station is 600m away*
Primary Schools	-	*Two primary schools more than 800m away (West Oxford Primary is 1.1km while St. Ebbe's CofE Primary is 900m away)*
Secondary Schools	-	*The nearest secondary education provider is more than 800m away. Activate Learning is 650m away but this is a further education college.*
GP Surgeries	-	*Northgate Health Centre is 1km away*
Post office	-	*St Aldate's Post Office is over 800m away*
Air Quality	-	*Within City Centre AQMA*

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	-	*Site is within 30m of River Thames*

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	+	*Potential for improvements to wildlife linkages*

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	-	*Site lies within City Centre Archeological Area*
Conservation Areas & Register of Parks and Gardens (RPG)	*0*	*Very small portion of the site is opposite a tight corner boundary of the Central (University and City) conservation area (due to existing buildings). Unlikely to impact setting. Similarly, a portion of the south western boundary of the site is closely aligned to the boundary of the Osney Town conservation area however existing railway infrastructure acts as buffer between them.*

Listed Buildings	*0*	*No Listed Building constraint identified*
View Cones	*0*	*Not within view cone as within historic core area*
Historic Core Area	-	*Site lies within the historic core area*

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	+	*Site likely to increase jobs/ floorspace associated with knowledge economy as recent resolution to grant outline planning permission includes at least 64,057sqm of employment floorspace*
Diversifying the economy end employment opportunities	+	*Potential to diversify employment base and/ or provide affordable workspace*

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes
Can walking and cycling connections with the surrounding area be achieved?	Yes
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Trees within the site. Site is adjacent to watercourse (River Thames)
Are land contamination issues likely?	Site contains a former petrol filling station so potential for contamination on a small part of the site
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	One of the site boundaries runs alongside the railway line. Potential for environmental issues such as noise and smells.

Stage 2 conclusion
Part of the site is located in Flood Zone 3b which will need to be taken into consideration. The site contains various heritage considerations so careful design will be required. Although in the

city centre ,Oxpens Road/ Thames Street is not on a frequent service bus route however both the Westgate and Oxford Railway Station/ Frideswide Square/ Park End Street provide a good range of frequent service bus stops however these stops are all more than 400m away.

Site should be allocated for a mix of uses including commercial and residential (including student accommodation) and other appropriate complementary town centre uses. Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW11: St Thomas School and Osney Warehouse

Site name	**St Thomas School and Osney Warehouse**
SHLAA reference (and OLP2036 Policy if applicable)	**SHLAA ref: #616** **LP2036 ref: falls within AOC1 West End and Osney Mead**
Ward	**Osney & St Thomas**
Total site size (ha)	**0.41 ha**
Existing use(s)	**St Thomas: multiple social enterprises/community uses** **Osney Warehouse: visual arts company including studio, exhibition, education spaces/community uses**

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	
Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	Yes - Call for sites 2025
Does the landowner specify types of development	Call for sites 2025 landowner confirmed intention to develop for mix of uses including employment and resi/ student accommodation/ specialist elderly. Also, site was identified (but not allocated) in the former West End Area Action Plan for residential use and open space.

Stage 1b conclusion
Landowner has set out intentions for development and potential uses. Continue to next stage of assessment.

Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	*SA rating*	*Comments*
What flood zone(s) is the site in?	-	Nearly all of the site is in Flood Zone 2. (Surface water flood risk present in western half of site)
Flooding of land surrounding site for access/ egress	-	Access/egress from the site is over moderate to low hazard land

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	Site is previously developed land with buildings in use on site.
Green belt?	**0**	Site is not designated as greenbelt.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	++	Whilst the two sites in combination have the potential to deliver more than 10 new homes, the SHLAA 2025 identifies that it is unlikely to be able to deliver net gain in 10+ units alongside reprovision of community uses.
Affordable housing provision	+	Site would likely provide up to 40% affordable housing.

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	**++**	Site is not within a regeneration area.

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**I/-**	Depends upon implementation, development any development would require the reprovision of community based facilities, although this could lead to a loss on site.

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**0**	Allocation would not lead to loss of public open space, however opportunities to provide additional 10% likely limited due to size constraints of site.

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**+**	350m to Park End Street bus stop D6

Sustainable transport links (rail station)	**++**	550m to train station
Primary Schools	**-**	1km to West Oxford Community Primary School
Secondary Schools	**-**	1.8km Magdalen College Secondary School
GP Surgeries	**-**	750m to Beaumont Street surgery
Post office	**+**	Nearest post office is less than 800m away (St Aldates)
Air Quality	**-**	Within city-wide AQMA

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**0**	Nothing identified nearby, though Castle Mill stream is to the east (more than 30m)

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	No international/national or local sites within 200m. Sites separated by line of mature trees. Likely to provide habitat for roosting, foraging and commuting bats and nesting birds. Records of swifts within 100m. Retention of trees onsite to retain ecosystem benefits such as shading, as well as avoid the requirement for mandatory BNG. the development design should look to enhance the tree line with species rich grassland margins and further individual tree delivery across the site. All of the eastern parcel, and most of the western parcel apart from northwest corner are within LNRS.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	Within the City Centre Archaeological area. Close to poorly understood route of western Royalist defences and located south of Osney Lane where there is some potential for medieval settlement before later contraction. Any significant new build likely to require assessment and evaluation.
Conservation Areas & Register of Parks and Gardens (RPG)	**--**	Western half of the site is within Central (University and City) Conservation Area
Listed Buildings	**0**	No
View Cones	**0**	Not within a view cone as within historic core area
Historic Core Area	**-**	Site is within the historic core area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**I**	Depends on implementation as to whether there would be any gains – No jobs or economic floorspace would be lost in the knowledge-based economy given that the existing uses of the buildings are related to social enterprises and a visual arts studio.
Diversifying the economy end employment opportunities	**I**	Depends on implementation – Current uses support a diversification of the employment base, therefore depending on implementation, there is potential to lose this if the site is redeveloped.

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Yes – vehicular access is currently off Oxpens Road to the rear, or via St Thomas St/ Woodbine Pl onto Osney Lane. No direct

	access from Holybush Road/Oxpens Road onto Osney Lane.
Can walking and cycling connections with the surrounding area be achieved?	Yes – there are already some connections in place and pedestrian only access routes can be utilised to reach further into the city centre
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Pedestrian access to City of Oxford College separates the two sites. Site is level and no significant physical features are present There are significant existing trees significant existing trees along the west boundary of the eastern site, growing alongside the pedestrian access to City of Oxford College, which are important to public amenity in the area and will provide valuable ecosystem services. However, the viability of the trees long term is doubtful and consideration should be given to their replacement. Existing trees will influence developable area of site and its capacity.
Are land contamination issues likely?	Potential for contamination issues at eastern portion of the site due to the former use of the warehouse (Underhills Hide and Skin Market). Contamination risks may be present due to previous use. Site investigations and remedial works likely to be necessary.
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	SHLAA records that surrounding uses include: housing, employment and education. Not particularly sensitive given that the site in question is in employment use, although acknowledge that little noise/ other nuisance is likely to be generated given the current operation/ nature of use is likely to be fairly quiet with limited vehicular movements.

Stage 2 conclusion
The site is previously developed land and its location is suitable for sustainable development. The site is not sensitive from an ecological perspective, although there are potential heritage sensitivities, as well as addressing loss of community uses (depending upon implementation) which may need to be addressed as part of allocation. Much of the site is also exposed to flood risk and this will need to be appropriately investigated in further detail and mitigated where necessary. Site to be put forward for allocation in Regulation 19 Local Plan.

SPCW12: West Wellington Square

Site name	West Wellington Square
SHLAA reference (and OLP2036 Policy if applicable)	#065 LP2036 policy SP62
Ward	Carfax and Jericho
Total site size (ha)	0.88ha
Existing use(s)	Academic and Institutional uses

Site location plan

© Crown Copyright and database right 2025. Ordnance Survey AC0000808820

Stage 1a assessment – are there any clear conflicts with national planning policy and/or any insurmountable environmental or physical constraints?

Assessment criteria	Outcome	Comments
Is the site an SAC or SSSI?	No	
Is the site greenfield in flood zone 3b?	No	
Is the site area less than 0.25ha?	No	

Is the site already at an advanced stage in the planning process (development commenced)?	No	

Stage 1a conclusion
No clear conflicts with national policy or insurmountable environmental or physical constraints. Continue to next stage.

Stage 1b assessment – Assessment of deliverability of the site including any known intentions for development.

Is there confirmed landowner intention to develop	2025 – Landowner confirmed intention to develop within plan period.
Does the landowner specify types of development	Current allocation establishes site is suitable for academic institutional, student accommodation and residential development including employer-linked affordable housing. Uses appropriate to LP2036 policy V4 (inc use class E) will also be suitable in local centre.

Stage 1b conclusion
Landowner has confirmed intention to develop – continue to next stage of assessment.

<u>Stage 2 assessment – Further assessment of site deliverability, including consideration of sustainability impacts (using the Sustainability Appraisal framework)</u>

SA objective 1. To achieve the city's ambition to reach net zero **carbon emissions** by 2040.

See SA Objective 8 for decision-making criteria.

SA objective 2. To build **resilience to climate change**, including reducing risks from overheating, flooding and the resulting detriment to well-being, the economy and the environment.

Decision-making criteria: Is the use proposed suitable given the flood zone of the site?

Criteria	***SA rating***	***Comments***
What flood zone(s) is the site in?	**0**	Site is in Flood Zone 1 Small patches of surface water flood risk to the south-west corner of site and also near the eastern boundary
Flooding of land	**0**	There is safe access/egress from the site – area surrounding site is Flood Zone 1

surrounding site for access/ egress		

SA objective 3. To encourage the **efficient use of land** through good design and layout, and minimise the use of greenfield and Green Belt land.

Decision-making criteria: Will the site make use of previously developed land? And will the site be on Green Belt land?

Criteria	*SA rating*	*Comments*
Previously developed land?	**0**	Yes.
Green belt?	**0**	Site is not in the Green Belt.

SA objective 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.

Decision-making criteria: Will the site provide net new housing? And will it improve the availability of decent affordable housing?

Criteria	*SA rating*	*Comments*
Housing provision	**++**	
Affordable housing provision	**I**	Depends on implementation- likely to be student accommodation

SA objective 5. To reduce poverty, social exclusion, and health **inequalities**.

Decision-making criteria: Will it improve opportunities for people in the most deprived areas? *For the purposes of this assessment, a regeneration area is defined as an area that falls within the top 20% most deprived areas nationally according to the Indices of Multiple Deprivation*.

Criteria	*SA rating*	*Comments*
Regeneration area (within the top 20% most deprived areas IMD)	**0**	Site is not in or adjacent to a regeneration area. (Site lies within an area that is less deprived than more than 80% of neighbourhoods in England – IMD 2025).

SA objective 6. To provide accessible essential **services and facilities**.

Decision-making criteria: Will it increase the provision of essential services and facilities? *See also SA Objective 8*.

Criteria	*SA rating*	*Comments*
Community facilities	**0**	

SA objective 7. To provide adequate **green infrastructure, leisure and recreation** opportunities and make these readily accessible for all.

Decision-making criteria: Will it increase the provision of public open space?

Criteria	*SA rating*	*Comments*
Public open space	**0**	Site adjoins Wellington Square open space. Unlikely to be scope to provide open space directly within the site itself due to size and constrained nature of site

SA objective 8. To reduce **traffic and associated air pollution** by improving travel choice, shortening journeys and reducing the need to travel by car/ lorry. (also SA objective 1: To achieve the city's ambition to reach net zero **carbon emissions** by 2040)

Decision-making criteria: Will it encourage walking cycling and use of public transport? And is the site within an Air Quality Management Area or in proximity to an Air Quality hotspot?

Criteria	*SA rating*	*Comments*
Sustainable transport links (bus stop)	**+**	Nearest bus stop less than 300m (St Giles/Banbury Rd) with frequent services. Site is in fairly close proximity to city centre with range of additional connections.
Sustainable transport links (rail station)	**+**	1km to Oxford Rail Station
Primary Schools	**+**	500m to St Barnabus Primary School
Secondary Schools	**-**	2.3km to Cherwell School
GP Surgeries	**+**	400m Beaumont Surgery
Post office	**+**	350m Walton Street Post Office
Air Quality	**-**	Whole city is within an AQMA.

SA objective 9. To achieve **water** quality targets and manage water resources.

Decision-making criteria: Does the site contain, or is it near, a water body?

Criteria	*SA rating*	*Comments*
Water	**0**	Site more than 30m from a water body.

SA objective 10. To conserve and enhance Oxford's **biodiversity**.

Decision-making criteria: Will development of the site be able to protect and enhance existing flora, fauna and habitats?

Criteria	*SA rating*	*Comments*
Ecology and Biodiversity	**+**	Not located on or close to a designated ecological site. Development may offer opportunity to enhance ecology/biodiversity at adjoining Wellington Square green space (GI network). The site is largely developed, with semi-natural habitats limited to garden space (with numerous mature trees). Potential protected species constraints are likely limited to roosting bats and nesting birds.

SA objective 11. To promote **good urban design** through the protection and enhancement of the **historic environment** and heritage assets while respecting local character and context and promoting innovation.

Decision-making criteria: Is the development of the site likely to affect the significance (including the setting) of one or more heritage assets, including any associated historic, archaeological, artistic and/or architectural features?

Criteria	*SA rating*	*Comments*
Archaeology	**-**	There is a high potential for archaeological interest as it is the site of the Wellington Workhouse and a line of Civil War defences.
Conservation Areas & Register of Parks and Gardens (RPG)	**--**	Entire site within Central (City & University) Conservation Area, to which many of the buildings make a positive contribution.
Listed Buildings	**-**	Adjacent to listed buildings including 4-15 Walton Street (Grade II)
View Cones	**0**	Not within a view cone
Historic Core Area	**-**	Within the historic core area

SA objective 12. To achieve sustainable inclusive **economic growth**, including the development and expansion of a diverse and knowledge- based economy and the culture/leisure/ visitor sector.

Decision-making criteria: Will it support key sectors that drive economic growth? And will it increase the quantity and quality of employment opportunities?

Criteria	*SA rating*	*Comments*
Employment Opportunities in the knowledge-based economy	**I**	Potential for an increase in jobs the support the knowledge economy but precise uses will depend on implementation.
Diversifying the economy end employment opportunities	**0**	No Change

Other constraints which could affect suitability of site for development

Can access for vehicles be achieved?	Access is limited to a single-width carriageway between two buildings off Walton Street and is not suitable for any material increase in traffic movements.
Can walking and cycling connections with the surrounding area be achieved?	Very well connected for walking and cycling
Does the site include any significant physical features such as trees, rivers/streams or changes in ground level?	Site contains significant existing trees at the rear of properties and on the green space near the corner of Walton Street and Little Clarendon street which are important to public amenity in the area and will provide valuable ecosystem services. Trees are protected by their location within the Central Conservation Area. Existing trees will influence developable area of site and its capacity. Opportunities exist to plant new trees to benefit public amenity in the area and to enhance the character and appearance of the conservation area.
Are land contamination issues likely?	None identified
Does the site adjoin a sensitive land use? Is there an adjoining land use that may cause disturbance or environmental issues such as noise or smells?	None identified

Stage 2 conclusion
The site is previously developed land and is in an accessible location. There are some potential heritage sensitivities regarding the conservation area and archaeology, as well as nearby listed

buildings and location of the site within the historic core of the city. These would need to be addressed through appropriate mitigation requirements where necessary as part of any allocation. Site to be put forward for allocation in Regulation 19 Local Plan.

Background paper 001

Title: Housing Need, Requirement and mix

This paper addresses the overall need for housing in Oxford, how the housing requirement may differ from this, and the mix of unit sizes needed.
Relevant Local Plan 2045 Objectives: • Maximise capacity for delivering homes across the city and set a housing requirement that seeks to meet the needs of different groups as far as possible. • Provide access to affordable, high-quality and suitable accommodation for all.
Relevant SA Objective(s): 4. To **meet local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.
SEA theme(s): Material assets, population and human health.

1. Introduction

1.1 Oxford has acute housing pressures that need to be addressed. The city has an urgent need for more housing, and it is widely recognised that demand continues to outstrip supply. Oxford is an international city and important part of the knowledge economy, with a world-renowned university and hospitals. In addition, the mix of housing sizes also needs to be considered, as some will need smaller (1-bed) units and others larger homes to accommodate a large family. How to manage particular housing types such as Houses in Multiple Occupation (HMOs) is also important. This paper focuses on overall housing need and mix. The supply of available and affordable housing is a priority in supporting the economy, including healthcare and education needed for the city, because it means that staff can be both attracted and retained more readily. Meeting the needs of those in high housing need, or those who may struggle to afford to remain in the city, is also important to meet social objectives such as overcoming inequalities and improving health and wellbeing. Affordable Housing is considered in Background Paper 002. Particular groups have particular housing needs, including students, those who need extra care, gypsy, traveller and boaters. Specialist housing need is considered in Background Paper 003.

1.2 This topic paper begins with a review of the national, regional and local policy context relating to housing need and requirement. It then goes on to look at the current situation in Oxford and includes a discussion on housing need and Oxford's housing target. The "current situation" section then moves on to discuss housing supply. The next section talks about the likely future without a new local plan and discusses housing supply and the competing pressures for limited land available in the city. Finally, some key sustainability and plan issues are identified.

1.3 Historically Oxford has been unable to meet its calculated housing need. The last round of Local Plan's in Oxfordshire aimed to meet the needs assessed in the 2014 Oxfordshire Housing Market Assessment, updated for Oxford in 2018. Oxford's total capacity for housing was less than its calculated need. So unmet need was taken by the other districts' local plans (full details are set out within this paper).

1.4 The Oxford Strategic Housing Land Availability Assessment (January 2026) shows that the current capacity is 9,267 dwellings for the Local Plan period 2025-2045 (including a 10% buffer to applicable sites). This shows that Oxford's total capacity for housing is still less than its calculated need.

1.5 Paragraph 71 of the NPPF states that a range of market and affordable housing types should be available to meet a wide range of needs. Policy H5 contributes towards this by shaping the size of dwellings. The evidence which has informed the % requirements include the Updated Specialist Housing Needs Evidence (2025, Iceni) combined with factors from the affordable housing register including mix of unit sizes, need to downsize and the existing housing stock.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Planning Policy Framework (NPPF)

2.1 The National Planning Policy Framework (NPPF) states the Government's objective of significantly boosting the supply of homes and stresses the importance of bringing forward a sufficient amount and variety of land where needed (paragraph 61). At paragraph 62 the NPPF sets out that to determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard method in national planning guidance. The NPPF also considers that the needs of groups with specific housing requirements are addressed. Paragraph 63 provides an indication of those groups which includes, older persons, students, and gypsies and travellers. Paragraph 69 sets out that a housing figure for the whole local authority area should be included by strategic policy making authorities and Paragraphs 72-77 provide the national policy position on identifying land for homes. Paragraphs 78-81 discuss how strategic policy making authorities should maintain the supply and delivery of new homes.

2.2 The National Planning Policy Framework (NPPF) (2024) requires local planning authorities to plan for a mix of homes based on current and future demographic trends, market trends and the needs of different groups in the community. The size, type, tenure and range of homes needs to reflect local needs to ensure that mixed and balanced communities are supported. The housing need across Oxford is high and as such all types and sizes of dwellings are required. However, some sites and the area context will lend itself to certain mixes of dwellings. The city centre and district centres are most likely to be suitable for higher density developments and it is expected that dwelling densities would continue to be higher than those in neighbouring districts reflecting Oxford's urban area.

National Planning Practice Guidance (PPG)

2.3 The National Planning Practice Guidance (PPG) includes additional guidance on the following housing topics relevant to housing need and supply:

- Housing and economic land availability assessment;
- Housing and economic needs assessment;
- Housing needs of different groups;
- Housing needs for older and disabled people;
- Housing supply and delivery.

2.4 The PPG re-iterates the expectation for strategic policy-making authorities to follow the standard method for calculating housing need (Paragraph: 002 Reference ID: 2a-002-20241212). This explains that the standard method uses a formula that incorporates a baseline of local housing stock, which is then adjusted upwards to reflect local affordability pressures. This is intended as an unconstrained assessment of the number of homes needed in an area. The PPG is clear that this assessment does not produce the housing requirement figure.

2.5 The PPG goes on to explain the housing requirement (040 Reference ID: 2a-040-20241212). The PPG says that, once the need is calculated using the standard method, the planning authority should make an assessment of the amount of new homes that can be provided in their area. This should be justified by evidence on land availability, constraints on development and any other relevant matters.

2.6 The PPG also provides advice about assessing land availability within the boundaries of a plan-making authority including setting out the purpose of this assessment. Paragraph 001 Reference ID: 3-001- 20190722 of the PPG sets out that "An assessment of land availability identifies a future supply of land which is suitable, available and achievable for housing and economic development uses over the plan period." In relation to whether or not a site should be allocated, the PPG sets out that the role of the land availability assessment is to provide information on the range of sites which are available to meet the local authority's requirements but it is for the development plan itself to determine which of those sites are the most suitable to meet those requirements.

Regional and Local Context

Oxfordshire Housing and Growth Deal

2.7 The Oxfordshire Housing and Growth Deal supports the delivery of 100,000 homes in Oxfordshire between 2011 and 2031 and secured £215million of funding including £60million for affordable housing and £150milllion for infrastructure improvements including for road and rail. As part of this deal, there was a commitment to produce a county-wide strategic plan. For this reason, work began on the Oxfordshire Plan 2050, which was to provide high-level strategy to inform the districts' local plan, including on housing need and the housing requirement for each district. However, work on this plan was eventually aborted by the constituent authorities.

Neighbouring Local Plans

2.8 In 2016 the Oxfordshire Growth Board confirmed that Oxford was unable to meet its proportion of housing need identified in the 2014 Strategic Housing Market Assessment (SHMA) due to the constrained nature of Oxford. Oxford's need was assessed as a range of between 24,000 to 32,000 additional new homes required for the period 2011 to 2031 (or 1200 to 1600 per year). The approach taken by the Oxfordshire Growth Board (now the Future Oxfordshire Partnership) was that the mid-point of this range should be taken as the starting point for assessing the level of need and unmet need (i.e. 28,000). Based upon extensive evidence, the Oxfordshire Growth Board agreed an apportionment of homes to be provided within each of the districts. The assumed capacity for Oxford was 10,000 dwellings.

2.9 In the last round of Local Plans, the other Oxfordshire districts agreed to deliver 14,300 dwellings, which met the majority of unmet need arising from Oxford's Local Plan 2036. These were apportioned as follows:

Table 2.1

Cherwell Local Plan	4,400
South Oxfordshire	4,950
Vale of White Horse	2,200
West Oxfordshire Local Plan	2,750

2.10 Originally, the intention for the next round of local plans was that housing need and requirements would be informed by the Oxfordshire Plan 2050. The Oxfordshire Growth Needs Assessment was undertaken, agreed and published, and initial work on the Oxfordshire Plan 2050 consulted on. This had not yet got to the point of developing a strategy to use to apportion the need between the districts. Further work to update the OGNA was commissioned, but agreement on this work could not be reached, and work on

the Oxfordshire Plan ceased. Work had commenced on the Oxford Local Plan 2040, and to enable this to continue, Oxford, with Cherwell, commissioned a Housing and Economic Needs Assessment to inform the housing need of those two authorities. The Oxford Local Plan 2040 was submitted for examination on this basis, but the Inspectors concluded that the duty to cooperate had not been met because the HENA looked at the whole of Oxfordshire in order to establish the housing need of the two authorities.

2.11 Work has continued on local plans in each Oxfordshire district, however in the meantime delivery of homes to meet Oxford's unmet need for has been very slow to come forward. Negotiations and joint working have been on-going to ensure strategic sites deliver for Oxford's unmet need, including for example co-operative working on Development Briefs and by ensuring there are signed agreements on nomination rights for the affordable housing, so it meets the needs of those on Oxford's housing list. More details are provided in Section 5 below.

Oxford Growth Commission

2.12 The Interim Report of the Oxford Growth Commission (2025) highlights that *"local authorities collectively are not planning to meet their minimum housing requirements on a County wide basis".* Failure to meet Oxford's unmet need does not "support the scale of economic growth across the County" which are linked to the government's ambitions for the Oxford-Cambridge Growth corridor, and forecasted population growth.

Oxford Local Plan 2036

2.13 The Oxford Local Plan 2036 contains a number of policies relating to housing need and supply. In particular Policy H1 sets the housing requirement for the plan period. The housing requirement for the plan period from 2016-2036 is 10,884 homes, which is a stepped trajectory to reflect the anticipated delivery of housing over the plan period. The housing requirement in the Oxford Local Plan 2036 is as follows:

- 2016/17 to 2020/21: 475 dwellings per annum
- 2021/22 to 2035/36: 567 dwellings per annum

2.14 Policy H4 sets the mix of dwelling sizes. This applies only to affordable housing. For market housing, an explanation of the proposed housing mix is required. There are exceptions to the policy requirement for affordable housing, for example in the city and district centres, where density may be high and only smaller units are suitable.

Housing and Economic Land Availability Assessment

2.15 This is a constraint-based assessment that seeks to identify sites and broad locations and assesses their development potential. The assessment looks at whether sites and broad locations for development have the potential to come forward as part of the development plan process. (i.e., are sites or broad locations for development available and achievable?) The most recent one carried out for Oxford was to support the Oxford Local Plan 2040 and was completed in September 2023, with an addendum completed in March 2024. This

showed the capacity of Oxford to be 9,851 for the period 2020-2040, which is an average of 493 dwellings per annum. This will be updated to support the Oxford Local Plan 2045.

Oxford City Council "Our Strategy" 2024-2028

2.16 One of the five main priorities of the City Council's strategy to 2024 is to deliver 'good, affordable homes'. The strategy recognises that 'To address Oxford's housing issues we must drive up standards for existing housing alongside a focus on providing new homes, working in partnership across the housing sector.'

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

Housing Need

3.1 In national planning policy, an area's housing need is different from the housing requirement. The NPPF December 2024 makes it clear that the assessment of housing need should be generated using the Government's Standard Method. Oxford's housing need has been calculated as 1,087 dwellings per year, using the standard method and affordability ratio (Office for National Statistics, March 2025). The housing need figure may be updated after the new affordability figures are released in March 2026.

Housing Requirement

3.2 The NPPF recognises that there may be reasons to set a housing requirement that is different to the housing need as calculated by the Standard Method. It also recognises that there may be unmet need, if the housing need is greater than the number of homes that can realistically be delivered within the plan period within the planning authority's area. This is the case in Oxford as the housing need is significantly greater than the capacity of the city.

3.3 There are very significant constraints on the capacity of the city – physically with the city's tight administrative boundary and Green Belt, and environmentally with large areas of national and international biodiversity interests and areas within flood zone 3b functional flood zone as well as heritage and townscape considerations. Oxford's housing requirement is therefore a constrained and capacity-based target. The Inspector for the Oxford Local Plan 2036 acknowledged in his report that Oxford's housing requirement was only a proportion of the total number of homes that made up the total housing need.

3.4 Oxford's physical and environmental constraints on its capacity for growth are not new issues and through the joint working undertaken as part of the Growth Board, an element of Oxford's unmet need was apportioned to the surrounding Oxfordshire district councils to accommodate within their administrative areas as part of the Duty to Cooperate process. This led to strategic allocations for growth in plans for all of the Oxfordshire district authorities most recent Local Plans.

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

Housing Supply

4.1 Oxford's constrained capacity for housing land has traditionally meant that there is strong competition for land for housing, student accommodation, employment and other uses. In order to help address the supply of housing, the strategy for the Oxford Local Plan 2036 was housing-focused and prioritised delivery of homes. The strategy sought to allocate no new employment sites, instead prioritising the loss of certain low quality, poorly located employment sites (category 3 employment sites) for housing. Notwithstanding this approach, there is continued pressure on infrastructure as a large proportion of housing developments are on small-scale infill sites and offer limited opportunities to deliver new on-site strategic infrastructure. This has been exacerbated by changes to national policy in recent years which include permitted development for residential conversions from other uses including offices and shops. Such changes of use are not subject to the same planning considerations in relation to supporting infrastructure to support the new homes formed.

4.2 Work with the other Oxfordshire authorities has resulted in a number of strategic allocations being made in the plans of our neighbours to help meet housing need. Other actions by the City Council to deliver housing, such as setting up a housing company and setting affordable housing delivery as a corporate priority, will continue to push forward housing delivery.

Housing Completions

4.3 Since 2006, the majority of new homes have been delivered on small-scale, dispersed brownfield sites, either re-developing existing units or converting existing buildings. The city's last remaining strategic greenfield sites are Barton Park and Oxford North. For the last few years, annual delivery at Barton Park has made a significant contribution to housing delivery, and more recently housing has begun to be delivered at Oxford North.

4.4 Table 4.1 shows the net additional completions from 2016/17 (the base date of the 2016 Local Plan) which is taken from the 2023/24 Annual Monitoring Report published in December 2024. This takes into account dwellings gained and lost through new build completions, demolitions, changes of use and conversions and includes completions of purpose built student accommodation.

Table 4.1 - Showing net additional completions since 2016 (Oxford City Council 2025)

Year	Dwellings (net) completed (built)
2016/17	419
2017/18	367
2018/19	358
2019/20	790
2020/21	711
2021/22	581

2022/23	554
2023/24	365
2024/25	272
TOTAL (since 2016/17)	**4,417**

4.5 In the 24/25 monitoring year there were 272 recorded completions which represents a decrease compared to recent years. This follows a decrease in 21/22 and 22/23 compared to 19/20 and 20/21. This is reflective of both the lack of new large strategic sites, and also wider economic circumstances, including uncertainties from Brexit and the global economic situation (affected by Covid, the Ukraine war and other globally significant effects), and the lack recently of large student accommodation schemes. Changed economic circumstances have also tipped the balance towards delivery of economic development, particularly research and development, rather than housing, which has resulted in fewer conversions from economic sites to housing.

4.6 Likely trends without the plan include continued residential completions from a variety of sources including from Oxford City Housing Limited.

5. Key issues addressed through the Local Plan 2045

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to housing delivery objectives. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them.

Housing need

5.3 Housing need is an unconstrained assessment of the minimum number of homes needed in an area. The housing need for Oxford is determined by the Government's Standard Method for calculating housing need. The NPPF and PPG is clear that whilst alternative methods may be used to set the Plan's housing requirement, the Standard Method is the appropriate method for calculating housing need.

5.4 The December 2024 Standard Method uses a formula that incorporates a baseline of local housing stock, adding 0.8% to this, then adjusting upwards to reflect local affordability pressures, using the latest ONS median house price to workplace earnings ratio. The

method accounts for economic growth indirectly by application of the affordability ratio, as a number of pressures from a successful economy will impact on affordability, leading to an uplift when calculating the housing need. The Standard Method housing need for Oxford is currently 1,087, which is 21,740 over the 20-year plan period.

Housing requirement

5.5 Assessing housing need is the first step in deciding how many homes to be planned for. The number of homes to be planned for should be reflected in the housing requirement specified in the Local Plan. Policy H1 sets the housing requirement for the Plan period. The housing requirement may exceed the need if that can be justified based on, for example, economic ambitions. Likewise, a housing requirement can be set that if lower than the calculated need if there are constraints on capacity. In this case, a housing capacity assessment, carried out using the Housing and economic land availability assessment guidance needs to demonstrate that constraints limit housing capacity. It is also necessary to show that all efforts have been made to identify capacity for housing.

5.6 Over the 18 years from 2006/07 to 2023/34 housing delivery in Oxford has averaged 451 dwellings per annum, varying from 200dpa in 2010/11 to 821 in 2006/7. Therefore, from the outset, it has seemed unlikely that enough housing sites could be found to meet the identified housing need.

5.7 Every effort has been made to identify housing capacity in the city, as set out in the SHLAA. The SHLAA assesses the housing capacity over the Plan period as 9,267 dwellings (463dpa). Therefore, the housing requirement set out in Policy H1 is for 463 dwellings per annum.

Unmet housing need

5.8 Where a housing requirement set in a Plan is lower than the identified housing need, this creates an unmet housing need. The onus is on the planning authority generating this need to approach councils located where this need could be met appropriately, and to attempt to reach agreement for the unmet need to be incorporated into their local plans.

5.9 There is a long history in Oxford of working with our neighbours on housing matters, with the most recently adopted suite of Local Plans in Oxfordshire based on a joint assessment of housing need and an apportionment of, and provision for, Oxford's unmet need, As work has progressed on this Local Plan, there have been regular conversations between the Oxfordshire authorities on the likely level of Oxford's unmet need and the commitments of the neighbouring authorities to assist with this. In addition to the regular Oxfordshire Planning Policy Officers and Heads of Planning meetings the City Council took the initiative in Spring 2025 to set up a Duty to Co-operate Forum.

5.10 The Duty to Co-operate Forum has met every month since June 2025 to discuss Duty to Co-operate matters arising from our plan production processes and largely focussing on

Oxford's Plan and housing matters. This group has agreed a process for the conversation on unmet need with streams of work and key milestones identified to facilitate it. This has included: workshops on Oxford's SHLAA approach and emerging outputs, and the sharing of the full SHLAA report ahead of its publication: a formal request for assistance with unmet need; and confirmation of and collation of commitments of each of the Oxfordshire districts. This conversation is ongoing and has enabled an Interim Joint Statement of Common Ground to be published on the matter as part of the Regulation 19 consultation material, with the intention of publishing a detailed Memorandum of Understanding at the submission of the Oxford Local Plan.

5.11 The Interim Statement of Common Ground provides details on the commitments towards Oxford's unmet need in the adopted and emerging plans of neighbouring districts (as of January 2026). This confirms that Oxford has calculated the level of unmet need for the period 2025-2045 to be: 12,373 homes; that all the Oxfordshire authorities have in combination made provision for 14,300 homes in their currently adopted Local Plans; and that they plan to continue to provide for Oxford's unmet need in their emerging Local Plans (the emerging Plans of Cherwell, South Oxfordshire, Vale of White Horse are currently at examination and West Oxfordshire has recently published a Regulation 18 consultation document). This gives the City Council confidence that our identified unmet need can be met.

Housing mix

5.12 The Updated Housing Needs Assessment (2025, Iceni) provides an analysis of housing need including mix, size and tenure of homes needed. To consider the mix of homes needed, a model is applied that starts with the current profile of housing in terms of number of bedrooms and the tenure. Data about the age of households and typical sizes of homes they occupy enables demographic projections to be applied to see how much each age group is expected to grow in number and therefore the profile of housing need over the 2025-2045 period. The size of housing that households occupy relates more to their wealth and age than the number of people they contain, so in projecting it is not simply assumed that an increase in single-person households will automatically translate into a need for smaller units. Issues of supply can also impact occupancy patterns. The issue of choice is less relevant in the affordable sector. Table xxx below shows the identified need for different sizes of unit by tenure.

Table 5.1: Modelled mix of housing by size and tenure (assuming capacity-led level of housing growth).

	1-bed	*2-bed*	*3-bed*	*4-bed*
Market	*10%*	*26%*	*41%*	*23%*
Affordable home ownership	*24%*	*35%*	*24%*	*16%*
Affordable housing (rented)	*30%*	*34%*	*30%*	*5%*

Source: Iceni Housing Market Model

5.13 In setting the mix for the affordable housing element of a scheme, as well as the modelled outputs based on demographics, information about current needs represented by the housing list. The City Council's Housing Services team are able to understand immediate and pressing needs. Following consultation with Housing Services, it was established that the current (and immediate) demand for 2-bed homes is relatively low. On the other hand, there are currently long waits for 1 bedroom properties. This is expected to be a long-term trend, with countywide homelessness transformation moving to a Housing–Led model seeking to move people into supported accommodation and rough sleepers quickly into one bedroom accommodation, so demand will continue and expect this pressure to further build.

5.14 It is important that an appropriate mix of dwelling sizes is provided to help meet the needs of the range of household types, with an understanding of immediate needs, but also needs projected over the Plan period. A range of sizes will allow more flexibility over time. Therefore, Policy H5 sets out the appropriate mix of dwelling sizes. A mix is provided for affordable rented forms of dwellings, and separately for affordable rent for those over 65 and also for affordable ownership forms of homes. These mixes are provided in the form of range to allow for other site-specific considerations to inform the exact mix.

5.15 There are a number of other factors that influence the appropriate mix on a particular site including the site context and local needs. To enable a fully flexible response to current and site-specific requirements, no mix is set out for market housing, However, Policy H5 does set out that evidence will be required to support the proposed mix on residential sites, which can draw from the Specialist Housing Needs Evidence, market demand, design considerations and housing register.

Appendix A- Policy Options and Preferred Approaches

Policy options set 001a (draft Policy H1): Housing requirement

The Government has introduced a 'Standard Method' to be used to calculate each planning authority's individual housing need. It is important that the overall housing need is fully understood, in order to be able to plan to meet that need. The NPPF is clear that the housing need should be calculated using the Standard Method. The strategic policy-making authorities should establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period.

This means that there are not really options for calculating housing need. The housing need for Oxford calculated by the Standard Method introduced in December 2024 is currently 1,087. That means that the housing need over the 20-year plan period 2025-2045 is currently 21,740.

However, there are different potential options for the housing requirement set out in the Local Plan. The housing requirement is what it is expected will be delivered each year. The housing land supply will be calculated using this figure, and it will be used as the target for the Housing Delivery Test. The NPPF sets out that the requirement may be higher than the identified housing need, for example to reflect growth ambitions linked to economic development or infrastructure investment

Table 1 - Policy options set 001a: Housing requirement for the plan period

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Set a housing requirement in the Plan based on the full housing need identified through the Standard Method (c.21,740 dwellings over the Plan period 2022-2042).	The NPPF says that local plans should aim to meet identified need. Meeting housing need in full would help reduce social problems such as overcrowding and homelessness, as well as problems employers have attracting staff. It may help improve affordability. Meeting housing need within the city may help communities stay together.	It is simply not physically possible to meet the entire housing need within the city's tightly drawn boundary, potentially at all and certainly without significant detrimental effects on other objectives, including protecting open space and avoiding functional floodplain. Housing completions over the previous decade and more have averaged at around 400dpa, which reflects that most housing in Oxford is delivered on small brownfield sites. In seeking to accommodate this level of need in full there will be pressure to use unsuitable sites or to build at densities that negatively impact character and quality of life. The focus on delivering this level of housing would significantly restrict the ability to bring forward other uses for which there is also a significant need in the city and to protect important green spaces and local character. But even with the pressure of the target and negative impacts, it is still not considered achievable.
Option b Set a housing requirement lower than the need identified by the Standard Method, based on capacity calculated in accordance with	The requirement would be deliverable within the city (this is the only option that achieves this). The principle has been tested at examination and found sound for LP2036, the Core Strategy, and the 2016 Local Plan before that.	It will need to be shown that need is being met elsewhere if provision is not made for the full need. A basis will still be needed for the need calculation, even if it is not meeting the requirement. If a capacity-based approach is taken for housing it will be harder to justify provision for other land uses in any quantity.

961

the spatial strategy (c.9,800 dwellings over the Plan period 2022-2042).		
Option c Set a housing requirement higher than the standard method in order to support economic growth or affordable housing need, even though achieving this requirement would rely on delivery outside of Oxford's boundaries.	The Standard Method need calculation is based on existing housing stock with an affordability uplift applied. It does not, therefore, necessarily take account of the exceptionally strong economic growth in Oxfordshire, that, if not supported by housing, leads to greater problems of affordability, inaccessibility of housing and increased commuting. The affordable housing need in Oxford is also incredibly high and not necessarily fully accounted for by the affordability uplift. Attempting to meet this need helps overcome social problems exacerbated by insufficient housing.	The HELAA evidence base indicates that this option would be undeliverable in Oxford over the plan period, thus there would be significant unmet need issues and we would need to work with other Oxfordshire districts to make provision to accommodate unmet need in their areas. Continued growth at this level would also benefit from continued infrastructure funding from Government, such as through the Growth Deal and HIF.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? - a or b or c **High-level screening conclusion? -**the options should be subject to detailed appraisal. **Screened in for detailed appraisal? -** Yes **Rationale:** These options are about the housing requirement that has been determined as the basis of the Local Plan. The housing requirement may differ from housing need, which is calculated using the Standard Method. The NPPF states the

housing requirement may exceed the housing need, for example to reflect growth ambitions linked to economic development or infrastructure investment. There are growth ambitions for Oxford, but there is also limited capacity. Reflecting these growth ambitions through an increased housing requirement would only lead to a greater level of unmet housing need, which could not be met in Oxford anyway. Setting the housing requirement at the level of the Standard Method need calculation would mean that many other aims and ambitions would need to be compromised, and it is likely would still be unachievable. The housing requirement may also be lower than the need in order to reflect those constraints on capacity (option b).

In terms of sustainability impacts, the most relevant SA criteria are **criterion 4 local housing needs** and criterion **12, to achieve sustainable economic growth**. However, there is potential for indirect impacts on a broad range of criteria, if the strategy is to attempt to meet housing needs, which would compromise other objectives. Delivery of housing is essential to meet local housing needs, and indicators suggest there are many negative impacts in Oxford form a severe lack of suitable, affordable homes. Housing is also necessary to sustainably support economic growth. There is, therefore, potential for significant impacts from these options and they should be taken forward for further appraisal.

Housing Requirement – Draft policy H1

963

The preferred approach for the Local Plan 2045 is to have a local policy that sets the total housing requirement over the plan period, and annualised. The housing requirement could be based on the identified need, or could exceed it in order to support a greater level of economic growth. However, the preferred approach is to base the housing requirement on the housing capacity. This is to ensure the policy is deliverable and meets the tests of soundness. Setting a housing requirement that meets or exceeds need is likely to be unachievable, and would certainly mean that pressure would be placed on other policies aiming to meet the Plan' strategy, such as in relation to green infrastructure .

The options set was tested through the Sustainability Appraisal with Option B performing better in balancing positive and negative impacts. Option B scored positively for meeting housing needs and economic growth because it makes an important contribution to housing need and was more positively scoring compared with the other options in relation to objective 10 (biodiversity), 11 (heritage), 9 (water), 7 (adequate Green Infrastructure) and 2 (resilience to climate change). This is because the capacity-based target can take account of these other considerations. Whereas if the aim was to meet the need above the identified capacity, as in the case of Options A and C, whilst these options do score better than option B for meeting local housing need (objective 4) and achieving sustainable economic growth (objective 12), they also incur significant compromises to other objectives at the same time including the need for green infrastructure, high quality design and climate resilience which is likely to compromise the overall sustainability of the Local Plan.

This means **option B** is proposed as the preferred approach.

Policy options set 001b (draft policy H7): Mix of dwelling sizes (number of bedrooms)

The NPPF sets out an expectation that within the overall aim of meeting an area's identified housing need, should also be the aim to provide an appropriate mix of housing types for the local community. There are a range of considerations in setting a mix, including that some sites and locations will be more suitable for different types of dwelling, and that needs may change over time. Ensuring a range of units sizes is available will be key to meeting a range of needs. The mix could be defined by number of bedrooms or bedspaces.

Table 2 - Policy options set 001b: Mix of dwelling sizes (no. bedrooms)

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Set a policy mix to ensure a range of sizes of unit for affordable housing only (this would apply to all tenures except the market housing).	It is important that there is a housing mix where possible to meet a wide range of demand. The affordable housing mix will be informed by the housing register (a snapshot in time), existing housing stock, and acknowledgement that tenants' needs change over time and may need to downsize.	A mix can be constraining or occasionally conflict with other aspirations, for example higher densities could be achieved if there was no requirement for large units, or the local context may be more suited.
Exclude certain areas or types of development from any set mix where they would benefit	This ensures that where a mix is most suitable it will bring benefits of ensuring a range of units to meet a range of needs, but where it is not relevant or beneficial there is greater flexibility.	Depending on the exclusions, this may significantly reduce the number of sites where a set mix is required, which could affect the availability of a range of sizes over time.

from greater flexibility. For example exclude smaller sites where there is less opportunity to create a mix, avoid high density areas such as the district centres as they are suitable for small units to further increase density, do not apply to employer-linked housing as there will be specific needs linked to the staff.		
Option b Set a mix for both market and affordable homes and on a broad range of sites, for example including all those over 10 units.	This would help ensure a range of units is available for the open market and to meet the range on the affordable housing register.	This would not allow for a flexible response to the market, to changing needs in an area, or the context of a site. This more prescriptive policy approach would mean that sites at district centres and in the city centre would need to have a range of unit sizes, rather than just those that maximise density, so overall numbers may be reduced. Sites that are best delivered as flats, for example, may not come forward at all if there is a lack of market interest in 3-bedroom flats, for example.

Option c Do not specify a mix of unit sizes for any type of development but do require at least 2 or 3 types of unit size in all developments over, for example, 25 units.	This would enable the mix to be tailored to the site context and the most up-to-date data, for example the current needs on the housing list. It would also ensure there is more than one unit type coming forward. More flexibility would allow more tailoring to the location.	This level of flexibility in the policy requirement could be met by a very limited range of unit sizes. It would be more likely to fail to meet identified needs and could lead to an imbalance in sizes of new units entering the market and available as affordable housing, both in the short term and the longer term.
Option d Do not specify a mix but require the mix to respond to the Housing Register and therefore identified needs.	Such an approach could help ensure that what is being delivered is meeting immediate needs. It would provide an indicative mix which would also be informed by housing officer engagement to ensure that what is delivered is reflective of the most up to date needs.	Such an approach is dependent on reliable and up to date data. The housing list is only a snapshot in time (updated continuously). If for example there are several years with a need mainly for small units and only those are delivered, this will lead to a lack of variety, then in later years when needs may change and there will not be enough larger units to accommodate needs appropriately. This would not achieve mixed or balanced communities. It would not provide enough certainty for developers; a policy with a changing requirement may not be found sound.
Option e **Do not include a mix policy.**	Provides complete flexibility.	The absence of a policy on housing mix is likely to result in not having the optimum housing mix being delivered for the city. It would be difficult to demonstrate that the Plan is providing for the needs of different groups in the community as per the NPPF. One-bed flats are the smallest and cheapest to build and delivery would be likely to heavily skew towards these.

Initial sustainability appraisal screening of options sets

Is there only one option or are there various options we could take? - various combinations (e.g. either a, c, d, e or a+b or a+c).
High-level screening conclusion? - the options are similar to each other from a sustainability perspective
Screened in for detailed appraisal? - No

Rationale: There is no specific national requirement for a policy although it is indirectly important to helping meet NPPF requirement and there is local context which supports the inclusion of some sort of locally prescribed approach although various constraints in Oxford lead to several potential options for how best to formulate a policy. Options a and c represent different levels of scope over which to apply a mix requirement (applying just to affordable element or market provision too), meanwhile options d and e represent different ways to influence mix without having such a broad mix specification as is presented in options a and c. Option e is simply to not set a local policy in relation to housing mix and could be considered as another different option. Option b is more of an additional dimension to specifying a housing mix policy and could be incorporated alongside either option a or c.

Considering sustainability impacts of the various options, they would generally all relate to the same SA criteria, most directly, this would be **criterion 4. Local Housing Needs** because of how they influence the balance of dwelling sizes that could come forward and help to meet needs of different groups in the community**.** Indirectly, the options also have impacts that relate to **criterion 5. Inequalities**, with some of them influencing the mix within the affordable housing element which will help to cater for those who have more difficulty accessing affordable housing, as well as **criterion 3. Efficient Use of Land** (because mix can influence how many dwelling on a site) and **criterion 11. Urban design** (influencing housing mix can influence an applicant's ability to reflect local context).
Between the options, the level of sustainability impact is unlikely to vary significantly, with each of the option a, c, d or e likely having a minor positive impact for SA criteria 4. and 5. and minor negative for criteria 3. and 11. There is a potentially more positive and more negative impact in option c that addresses both market and affordable, with these impacts decreasing towards neutral across option a and then options d and c. Option e of not having a policy would likely be a neutral impact in terms of sustainability impacts. Overall, the extent of sustainability impacts is not considered to be significant for any of the criteria regardless of option and the relevant SA criteria that the impacts relate to themselves do not differ significantly between the options, so it is not considered necessary to scope in for detailed assessment.

Section 5 identified that there were a number of topics that the Local Plan 2045 could implement policy to address housing need, requirement and mix. Under each of the topics, there were various options for policy approaches which could be taken, with differing

impacts and these were presented in tables to better facilitate comparison between them. Taking into account the various impacts arising from the options, the preferred approach to be taken for each topic, and set out in the main Reg 18 consultation document, is as follows:

Mix of housing sizes – Draft policy H6

The preferred approach for the Local Plan 2045 is to have a local policy that sets a mix of housing sizes in certain circumstances, but for many schemes requires the chosen mix to be justified and explained, but does no se a specified mix. The proposed mix applies only to affordable housing, and excludes the types of schemes where the mix would be difficult to achieve, or conflict with other aims, such as in flats in the city centre or district centres where delivery of only one or wo bedroom units helps to achieve density aims and may be more fitting to the infill development often appropriate in these locations.

Whilst either of the four options, option A, B, C or D or various combinations of these could be taken forward, the preferred approach is a combination of **Options A and B** which ensures a mix of affordable home sizes to meet needs over the plan period, requires justification of the selected mix, and provides flexibility to respond to size-specific needs and changing circumstances.

896

Policy options set 001c (draft policy H8): Loss of dwellings

Given the scale of housing need in Oxford, it is important to ensure that the existing stock is protected otherwise the benefits of delivering new housing would be undermined. The city also faces considerable pressure from the use of residential units as short term lets such as Airbnb which are taking more properties away from family homes or from the longer term private rented sector. There are a range of considerations in setting an approach however the lack of available land and sites can constrain development of other facilities needed to support the local community. Future legislation may help us to control changes of use to short term lets.

Table 3 - Policy options set 001c: Loss of dwellings

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Resist a net loss of dwellings	Such specific reasons for an exception could include conversion to a nursery or primary care facility;	The loss of dwellings undermines the benefits of building a mix of new homes.

except for specific reasons.	therefore, introducing some flexibility would allow for the loss of dwellings to provide community facilities, or support/complement existing community uses in the area.	
Option b Resist the subdivision of family homes.	Help maintain the existing supply of family homes to ensure a varied supply of homes across the city.	Precludes the sub-division of the existing housing stock which in some instances would be a better or more efficient use of land in a particular location and provide more homes where the need is so great. The loss of family dwellings undermines the benefits of building a mix of new homes, which include homes suitable for families
Option c Have no restrictions on the loss of dwellings.	No restrictions means that housing stock can be changed as the market demand requires. There would be more flexibility to respond to the market. Overall numbers of homes could increase.	Losing control over the existing supply of housing stock would undermine the benefits of bringing forward housing in new development to meet the population's current and future needs (objectively assessed need).

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? – various options/combinations (option a, b, or c or a combination of options a and b). **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal? -** No **Rationale:** In terms of options, there is no specific national requirement for a policy, though local context supports the inclusion of some sort of locally prescribed approach, the considerations then are how far such a policy goes in requirements and how these are geographically expressed. Options a seeks to prevent the loss of homes unless their loss would provide or bring improved benefit to the local community. Option b seeks to specifically prevent the subdivision of family homes to help ensure that the

mix of homes available includes those suitable for families. Option c is to not set any restrictions at all via the Local Plan. Option a or b could be carried forward on their own or combined with each other.

In terms of sustainability impacts, the different options all relate primarily to **criterion 4. Housing Need, criterion 6 Essential services and criterion 11 Urban design.** Options a and b are likely to have more positive impacts against criterion 4. Option c could potentially place a greater demand on local services, having the potential to have a negative impact on criterion 6. Option c could also potentially lead to more of a negative impact against criterion 4 as the populations' current and future housing needs are not able to be met and also criterion 11 as the character of the neighbourhood could change as demand for local services could change. Overall, the sustainability impacts do not differ significantly between the options and it is not considered necessary for detailed appraisal.

970

Development involving Loss of dwellings – Draft policy H8

The preferred approach for the Local Plan 2045 policy is to have a local policy that addresses the protection of existing housing stock. This will help to relieve pressure on the use of dwellings that are of a suitable size for families and assist with the management of demand for residential units to be subdivided or converted or be brought into use as short term lets.

This means either **option A or B**, or a combination of both option A and option B could be taken forward. Option A will help ensure that homes are not lost unless their loss would provide or bring improved benefit to the local community. Option B will help prevent the subdivision of homes and ensure that the mix of homes includes homes that are suitable for families.

Background paper 002

Affordable Housing

This paper explains the key issues relating to affordable housing needs in Oxford, and the context to delivering affordable housing that reflects the local circumstances in Oxford (especially that they need to be truly affordable to Oxford residents).
Relevant Local Plan 2045 Objectives: • Maximise capacity for delivering homes across the city and set a housing requirement that seeks to meet the needs of different groups as far as possible. • Provide access to affordable, high-quality and suitable accommodation for all.
Relevant SA Objective(s): 4.To meet local housing needs by ensuring that everyone has the opportunity to live in a decent affordable home
SEA theme(s): Material assets, population, human health

Policy options set 002e (Draft policy H6): Employer-linked affordable housing..... 22

1. Introduction

1.1 Affordability (or unaffordability) of housing for people living in Oxford is a key issue to address in LP2045 and is also a corporate priority of the City Council more broadly. It is an issue that goes back many years, as a result of the high land values and property prices in Oxford not being matched by salaries, resulting in many people being priced out of the market to buy or to rent homes in Oxford.

1.2 The problems cannot be solved by planning policies alone, but LP2045 can help to address it alongside other Council initiatives and programmes including the Affordable Housing Delivery Programme and the Council's housing company OX Place delivering affordable homes.

1.3 This paper explains the key issues relating to affordable housing needs in Oxford. It then explains how LP2045 could seek to address these needs with policies to deliver affordable housing that reflects the local circumstances in Oxford and that is truly affordable to Oxford residents.

1.4 This paper helps to explain the following housing-related topics:

- Delivering affordable homes (contributions from residential developments)
- Affordable housing contributions from new purpose-built student accommodation
- Affordable housing contributions from self-contained older persons accommodation
- Employer-linked affordable housing.

1.5 This paper focuses on the affordability of housing and factors affecting the delivery of affordable housing, whilst Background Paper 003 covers specialist housing need.

2. Policy Framework/Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Planning Policy Framework and Planning Practice Guidance

2.1 The National Planning Policy Framework (NPPF) sets out that Local Plans should deliver a sufficient number and range of homes to meet identified housing need, including affordable housing. It defines affordable housing in Annex 2 of the NPPF. The

Planning Practice Guidance (PPG) sets out further clarification about how the NPPF should be applied, including how to calculate affordable housing need and supply.

2.2 Elements of national policy and guidance that are particularly relevant to delivering affordable housing in Oxford are:

- The threshold of 10 dwellings for seeking developer contributions towards affordable housing (thereby exempting developments of 1-9 dwellings from affordable housing requirements) (PPG paragraph 023).
- The Viability PPG sets expectations for the viability assessment with the intention of creating realistic, deliverable policies based on sites which are likely to come forward. Affordable housing provision is a significant consideration.
- The Permitted Development Rights (General Permitted Development Order) for conversion of office to residential, which has a similar impact of effectively exempting those conversion developments from affordable housing contributions.

2.3 The former NPPF requirement to include First Homes in the affordable housing mix, has now been removed from the NPPF (explained in footnote 31 of NPPF). Instead, there is greater emphasis on delivering social rent (paragraphs 63 and 64 of the NPPF). These amendments to the NPPF are more closely aligned with the aspirations in Oxford for affordable housing that is truly affordable to those in Oxford in housing need.

Housing and Planning Act 2016

2.4 The Housing and Planning Act (2016) sets out measures intended to boost the supply of new housing nationally, to devolve significant new powers to a local level, and to support first time buyers to make home ownership more affordable. There were also various reforms to social housing, which do not directly impact the delivery of new affordable housing but do affect the supply of Social Rent housing available because of initiatives such as right to buy.

Oxford City Council Corporate Strategy 2024-28

2.5 The City Council Corporate Strategy 2024-28 identifies housing affordability as a key issue facing the city, both for local people and local employers. The Corporate Strategy identifies delivering good, affordable homes as one of the key priorities.

Oxford City Council Housing, homelessness and rough sleeping strategy 2023-2028

2.6 Oxford City Council's Housing, homelessness and rough sleeping strategy 2023-2028 sets out intentions to provide more affordable and low carbon homes, alongside wider intentions to improve conditions for those renting homes, and to prevent homelessness and rough sleeping. Providing more affordable homes is identified as a key priority, and actions to deliver this include OX Place delivering a build programme, working with housing associations to build new homes including Social Rent, and working with neighbouring councils to ensure that more affordable housing is built in and around Oxford.

3. Current situation (supporting Task A2 and A3 of Sustainability Appraisal)

3.1 Oxford is one of the least affordable cities, due to the mismatch between average house prices/rent levels and average salaries (the affordability ratio). The high cost of housing in Oxford, compared to wages, (known as housing affordability) has many impacts and consequences, and many people who work in Oxford cannot afford to live here. The English Indices of Deprivation 2025 (IoD 2025) is the most recent measure of relative deprivation across small areas of England. It shows that Oxford has become relatively less deprived in the income domain. Oxford ranks 210 out of 296 most deprived nationally in terms of average score for income. Where 1 is most deprived and 296 is least deprived. This is a reduction since 2019, when Oxford ranked 201 out of 317. However, at the Lower-Layer Super Output Area (LSOA) level, Oxford still has 8 areas in the bottom 20% for income (compared to 9 LSOAs in 2019). This suggests that whilst Oxford is becoming relatively less deprived overall, there are still pockets of income deprivation prevalent within the city.

3.2 In August 2024 the average house price in Oxford was £489,000. This is more than 12 times the average household earnings; this makes it one of the least affordable places in the country. This has consequences for the economy and key services, as employers struggle to attract and retain staff, including essential hospital staff, health and social care workers, teachers, as well as those in retail, hospitality, and office workers. There are also potential social impacts on families and communities who may be split up because of housing costs. Even when applying so-called affordable housing purchase products, such as shared ownership or First Homes, it is still unaffordable for many people in Oxford to own their own home.

3.3 As a consequence of high house prices, there is a large private rented sector in the city. However, rent levels are also very high, so renting a home via the private-rented sector is also out of reach for many people. The average private rent in Oxford is £1,725 a month (September 2024). This can result in Oxford's workforce needing to share rented accommodation or needing to commute into the city in order to find suitable accommodation. It also means that Social Rent housing plays an important role in meeting affordable housing needs in Oxford.

3.4 Social Rented housing is the lowest cost compared to market values. Tenants rent from the City Council or a Housing Association, usually at about 40% of market cost (ie what a private landlord would charge for the same home). Thus as the lowest cost option it helps provide housing for those in greatest need. Unsurprisingly, there is a huge demand for this type of housing in the city, yet it is also the most expensive to build (due to the larger discounts on returns). There are also significant numbers of people who do not have sufficient priority on the housing register to be considered for Social Rent (when compared to households in even greater housing need), yet market housing is also out of reach. So it is also important that intermediate types of housing (such as shared ownership models) continue to be provided as well.

Oxford City Housing Register

3.5The Oxford City Council Housing Register records how many people have registered to apply for Social Rent housing in the city. There are currently (January 2026) just under 4,000 residents on the housing register, and it is expected that only around 12% of these will be housed within a year.

3.6 Regardless of the method used, Oxford is one of the most expensive places to buy or rent a property in comparison with monthly earnings, as a result of high land values, limited land availability, and a shortage of homes. This means that housing is so expensive - in absolute terms and compared to average salaries - that many people are priced out of the market and many people who work in the city are unable to afford to live here.

Affordable housing delivery

3.7 The City Council has been working to increase the delivery of affordable homes through a number of measures across council departments. Some affordable housing is delivered through planning permissions on qualifying sites, some is delivered directly by the City Council through the affordable homes programme, and some is delivered via the City Council's Housing Company OX Place. There are also various other complementary programmes and initiatives by the City Council to tackle homelessness and reduce empty homes.

3.8 Table to show affordable housing completions in Oxford 2016/17 to 2023/24, taken from Authority Monitoring Report 2023/24:

Table 3.1

Year	Affordable housing completed
2016/17	20
2017/18	17
2018/19	105
2019/20	104
2020/21	144
2021/22	274
2022/23	273
2023/24	61

4. Likely trends without a new Local Plan (supporting Task A2 and A3 of Sustainability Appraisal)

4.1 One of the biggest issues facing residents in Oxford is the unaffordability of homes, to rent or to buy. Overall the affordability of housing in Oxford is likely to continue to be an issue in future, as the lack of land for housing (including for affordable housing) and increasing land values push house prices up further. Research suggests that social and affordable housing accommodation is likely to need to continue to play an important role for Fast Growth Cities (FGCs) such as Oxford and Cambridge, where overall increases in the housing stock are unlikely to fully address affordability issues alone.

4.2 The supply of affordable homes to meet need in Oxford is likely to remain a challenge, particularly Social Rent, but also market rates and discounted purchase options, such as shared ownership. Market rental prices are also likely to continue to increase as the unaffordability of buying homes puts additional pressure on the rental market. In turn this also affects the types of homes required, and there is already high demand for shared accommodation in the private rental sector as a lower cost option than renting or purchasing individual properties.

4.3 The supply of affordable housing is being challenged due to the compounding impact of: a general lack of land supply for new homes within Oxford, losses through Right to Buy, especially since the increased discount introduced in 2012; changes to national policy which reduce the opportunities for delivering new affordable homes through developer contributions, for example the city is not allowed to secure affordable homes when new homes are delivered via office to residential prior approval B56 permissions, and even with an updated local plan this situation would not change; and caps on rental incomes for local authorities or registered providers which are set nationally.

4.4 Together these factors are likely to impact on the overall numbers of new affordable homes delivered, as well as the mix and balance of communities in Oxford during the Plan period.

4.5 If the affordability of housing worsens, then there would also be other knock-on effects because it affects not just where people can afford to live and quality of life, but also impacts the economy as employers in key sectors in Oxford already have problems recruiting and retaining staff. If economic growth is constrained, then this affects not just Oxford but the wider region and even the national economy as Oxford is a net contributor nationally.

4.6 The City Council is committed to the delivery of affordable housing through several initiatives which are outside of the local plan and would happen anyway without the plan. The City Council has set up OX Place as a wholly owned company, which has an aim of delivering more affordable housing. The Council's Affordable Housing Delivery Programme also directly delivers new homes as well as taking on homes from developer contributions. But there also needs to be supply from other sources (through developer contributions and housing associations) so overall it would be more difficult to deliver affordable housing without an up-to-date local plan.

4.7 The City Council has also been working with the other Oxfordshire district councils to help deliver homes to address Oxford's unmet need outside the city boundary. Neighbouring Local Plans make provision for these additional homes, including delivery of affordable homes. The City Council has been working with its partners on the allocation policy and management of those new affordable homes in adjoining districts, in particular ensuring that those on Oxford's housing register will be eligible to apply for the new homes. However without an up-to-date local plan to establish the housing need and housing requirement then it is less certain that unmet need within adjoining districts would be delivered because it would be difficult for those

authorities to deliver additional housing over and above their own requirements if it has not been tested by an Inspector.

4.8 Affordability is also influenced by government policies related to incentivising home ownership and house building including delivery of affordable housing, which would influence affordable housing delivery in Oxford with or without a plan.

4.9 Most of these initiatives focus on helping people to purchase homes, however the nature of the housing market in Oxford means that even with those support measures, purchase options are still out of reach for many people in Oxford and/or they are not workable or viable for developers. Recently the NPPF was updated and no longer requires First Homes to be included within the affordable element of proposals.

4.10 So overall these national initiatives in terms of affordable housing delivery, and especially Social Rent, may be fairly limited in terms of take-up and their effectiveness in addressing housing needs in Oxford because the high prices and unaffordability pressures simply do not fit with the national models. Which is why local policies are needed in the LP2045 which are bespoke to address the particular circumstances and housing needs in Oxford.

4.11 In recent years, external economic factors – including Brexit and the war in Ukraine – have also affected construction costs and availability of materials, as well as rises in the costs of borrowing. These have significantly affected the viability of developments, as explained in more detail in the Viability Study. This affects how much value can be captured to deliver public goods, such as affordable housing, and also the supply of housing generally.

5. Key issues addressed through the Local Plan

Introduction

5.1 The Regulation 18 consultation identified that there were a number of topics that the Local Plan could implement policy to address which relate to affordable housing objectives. Under each of these topics, there were various options for policy approaches which could be taken, with differing impacts and these were presented in tables to better facilitate comparison between them. The options considered have been reviewed in light of the Regulation 18 feedback (as summarised in the consultation report) and the updates to the Local Plan period, these are reproduced in Appendix A along with the preferred approach taken forward for the Local Plan.

5.2 This section will now discuss the key issues that are being addressed through the Local Plan and how the Local Plan's policies respond to them. This background paper relates to

Policies H2, H3 and H4 of the Submission Draft Oxford Local Plan 2045. The policies options considered at Regulation 18 (shown in Appendix A) split draft policies requiring contributions to affordable housing into three- student accommodation contributions, contributions from commercial/employment and contributions from self-contained older persons accommodation. However, these have now been combined into one policy because of the overlaps between then. There have been further refinements, e.g. to be clear about the type of commercial/employment development that contributions to affordable housing is expected from, but the basic approaches have not changed.

Overall level of affordable housing and tenure split

5.3 Since the adoption of the OLP2036 (June 2020), several factors have resulted in needing to review the adopted policy approach of seeking 50% affordable housing (H2 in OLP2036) in the OLP2045. These factors include the impacts of a range of global and international factors on inflation, build costs and supply chains, all of which have added to the finance costs of development. This has impacted on viability and subsequently the capacity for residential development to deliver affordable housing (and other) contributions for the public good. These impacts were explored in the Viability Study 2026.

5.4 In preparing the LP2045 there are two key principles that we are seeking to balance in setting the levels in the developer contributions policies:

• To maximise the community benefits from developer contributions but without undermining the delivery of sites/the Plan; and

• To set the levels so that most schemes can viably deliver the policy requirements, whilst also retaining some flexibility to take site-by-site circumstances into account where necessary (but this should be only a minority of schemes, in order to not add unnecessary complexity or delays to the development management process).

5.5 The tenure scenarios tested were 80% social rented and 20% intermediate housing, and 70% social rented and 30% intermediate housing, both within an overall affordable housing percentage increasing in 5% intervals from 0-50%. Results were assed for the four selected benchmark land values (BLVs) considered in the viability assessment, which were secondary offices, secondary retail, secondary industrial and greenfield/undeveloped sites. The results are summarised in Appendix 6 and Appendix 7 of the viability assessment.

5.6 There are large differences in terms of the level of affordable housing that can viably be provided, depending both on the area and also the different BLVs. When tested against the highest benchmark values (secondary office and secondary retail uses), many schemes are unviable even with very low levels of or even no affordable housing. It is clear that some BLVs are highly unlikely to come forward for housing of any type in

the current climate, so attempting to set affordable housing levels very low to make these BLVs viable in only some areas is not a sensible approach. Instead, the focus has been on setting affordable housing at a level viable for most types of schemes in most areas for the BLVs that would viably deliver housing (i.e. secondary industrial and greenfield/undeveloped sites, rather than secondary retail and secondary offices).

5.7 Policy H2 sets the affordable housing target at a level that prioritises social rented tenure and is likely to be viable for most schemes with a BLV that would realistically come forward for housing.

Affordable housing contributions

5.8 For other types of residential development where the site would have otherwise been suitable for C3 residential development, and therefore assumed to be making a contribution towards affordable housing (purpose-built student accommodation and older persons accommodation), then Policies H3 sets out the contribution that will be sought for provision of affordable housing off-site.

5.9 Commercial developments have the potential to generate demand for affordable housing. Lack of affordable housing is often referenced as a constraint on Oxford's economic potential, and employers report difficulties in attracting and retaining staff because of the lack of affordable housing. Therefore, there is a clear justification for the introduction in Policy H3 for a requirement for contributions from employment development to affordable housing. The intention when setting the level for these contributions is that it is guided very much by the viability report, so that it is set at a level that is easily affordable, whilst still ensuring a contribution is made to meeting the affordable housing needs generated by this kind of development. Whilst the housing would not necessarily go directly to the staff of the development site, it would generally help supply of affordable housing.

Employer-linked affordable housing

5.10 The other important policy in delivering affordable housing in Oxford to complement the policies above, is the employer-linked affordable housing policy H4, which is also intended to boost the supply of affordable housing where there are willing employers. In Oxford, there is high demand for accommodation in the private rental sector as a lower cost option that renting or purchasing individual properties. The employer-linked policy was first introduced in Oxford in the LP2036 as an innovative way for employers to address this issue by allowing the creation of "employer-linked affordable housing" as an alternative to the provision of the traditional "market and affordable" split. This unique tenure allows employers (such as the University of Oxford or the Hospital Trusts), to provide accommodation for their workers at reduced rents on sites owned by them, where the prospect of Socially-Rented accommodation coming

forward at these sites would prejudice the delivery of homes for staff who would potentially not be able to afford to live in the city. Monitoring of the LP2036 policy shows that affordable homes are being delivered in this way, such as at the John Radcliffe site, so the principle has been carried forward into Policy H4, following further engagement with key employers.

5.11 The list of specified sites reflects willing landowners, plus crucially they are sites that would otherwise not be available for residential uses (for example on operational campuses, health facilities, or education sites), if they were not being developed for staff. The policy also requires legal agreements to ensure that the homes are truly affordable and are addressing identified housing needs, for example to agree an allocations policy and rent levels.

Viability cascade

5.11 Linked to these policies, it is also important that the Plan includes an overall viability policy to ensure that none of the policies requiring affordable housing contributions would risk development becoming unviable. This is addressed in the cascade approach for sites if the full policy requirement for affordable housing contributions is not viable. The viability cascade is set out in Policy V4, which cascades through the policy approaches that are likely to have the biggest effect on viability, prioritising delivery of affordable housing, particularly social rented housing.

Appendix A- Policy options and preferred approaches

Policy options set 002a (draft policy H2): Affordable housing contributions

Securing new affordable housing as part of larger developments is a significant way that more affordable homes can be provided in Oxford. In successive Plans the City Council has adopted policies that require the delivery of an ambitious percentage of affordable housing. These contributions – whether onsite or financial – have made a significant contribution to the supply of affordable homes in Oxford.

With any policy about contributions towards affordable housing there are various policy decisions to reflect how to direct those contributions towards most effectively delivering homes to meet the needs of local people in the specific context of Oxford. For example whether to prioritise affordable housing to rent or to buy; whether to maximise the number of affordable homes or the greatest levels of subsidy of the homes (but fewer affordable homes as they cost more in contributions); or whether to prioritise developer contributions towards other public benefits.

Table 1: Policy options set 002a Affordable housing contributions

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Seek to maximise the overall number of affordable homes delivered through contributions	This would help to maximise the number of affordable homes, and to meet a range of different affordable tenures including for those who are seeking affordable home ownership options. Encourages a mix of tenures onsite. More flexibility to respond to market demands to help site viability.	To be viable, this option is likely to mean a lower proportion of Social Rented homes, and a larger proportion of intermediate tenures of affordable housing such as shared ownership, so would not help as many people on the housing register. Options other than Social Rent are not affordable to many of those in need of affordable housing in Oxford because of the prices to wages ratio in Oxford.
Option b Focus on maximising the number of Social Rent homes from developer contributions, even if this means fewer	This option would prioritise delivering affordable homes for those in the greatest housing need, that would not be able to afford alternative affordable housing tenures.	This is likely to result in the delivery of fewer affordable houses overall from contributions (because they cost more for developers to deliver), which could in turn worsen the level of affordable housing need if supply slows while demand continues.

affordable homes overall		Option does not help meet the needs of households that could afford shared ownership/ low-cost home ownership models. It would also not encourage mixed communities to focus on just one tenure or form of affordable housing.
Option c Do not maximise affordable housing contributions but set them at a lower level of contribution that leaves more opportunity for alternative developer contributions or greater profit margins.	This would allow for developer contributions to be directed to delivering other infrastructure or public benefits. A greater profit may also encourage delivery of sites for residential uses and make the profit levels more competitive against other land uses which are currently more attractive to developers in terms of profit levels (mainly R&D uses in recent years).	This approach would fail to maximise opportunities to address the affordable housing crisis and inequalities, and it is not necessary in order to encourage sites to come forward because that would be tested through the preparation of the local plan.
Option d Do not include any policy requiring affordable housing contributions.	This would minimise risk of affordable housing contributions negatively impacting on viability of sites, and it would allow maximum contributions towards other infrastructure and public benefits.	This would not at all be attempting to meet affordable housing needs, which would be contrary to the NPPF, so would not be a sound approach. It would also do nothing to address the housing crisis in Oxford or reducing inequalities.

985

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? A or b or c or d **High-level screening conclusion?** the options are similar to each other and are unlikely to have significant sustainability impacts **Screened in for detailed appraisal?** No **Rationale:** These options are about how to prioritise developer contributions from residential development in order to deliver public benefit in the form of affordable housing, which is a local priority. Options a and b prioritise delivering affordable housing, whilst option c prioritises affordable housing to a lesser degree (alongside other contributions or greater profits for the developer) and option d would set no local steer on affordable housing contributions. Options a and c are about the overall affordable housing requirement, usually as a percentage of the development, whereas b is about which tenure split to prioritise within that requirement. In terms of sustainability impacts, options a and b, would score positively against **criterion 4 local housing needs** by contributing to ensuring that everyone has the opportunity to live in a decent affordable home. Option c is also likely to contribute towards

criterion 4 plus other sustainability objectives such as **criterion 7. Green infrastructure** or accessibility/transport under **criterion 8** however these are likely to be minor positive impacts and would depend very much on implementation on a case-by-case basis what the contributions were targeted to. Option d would not help to meet **criterion 4**, nor would it be consistent with the NPPF which requires plans to making provision for housing including affordable housing (para 20). Similarly, by delivering affordable housing, options a, b, c would all score positively against **criterion 5 inequalities**, because access to affordable housing is a factor in reducing inequalities. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Delivering Affordable Homes – Draft policy H2

The preferred approach for the Local Plan 2045 policy is to take forward a combination of Options A and B. So the overall target is that sites should contribute 40% of the homes in a development as affordable housing, on qualifying residential developments (of 10 or more C3 units, or equivalent number of C2 rooms). Within that 40% the draft policy also seeks to prioritise delivery of social rent homes, requiring 80% of the affordable homes to be social rent, with the remaining as intermediate tenures.

The viability evidence does not identify a particular level of affordable housing that most schemes could viably deliver but suggests that a large proportion of the types of typical residential developments expected during the plan period could deliver this level. So whilst the 40% target is ambitious, the viability evidence suggests it could be applied on a maximum reasonable proportion basis whilst also allowing sufficient scope to meet other draft policy requirements.

Setting a lower proportion of affordable housing (either in part or the whole of the City) is likely to result in a lower overall number of affordable units being delivered, as sites that could have delivered more than the revised target would no longer do so. Affordable housing delivery can therefore be maximised by adopting an ambitious target and accepting that this will not be universally achieved on all developments. Hence alongside this policy, there is also Draft policy S4 which sets out a viability cascade, to ensure that the contributions towards affordable housing do not make any developments unviable.

Policy options set 002b (draft policy H3): Affordable housing: financial contributions from new student accommodation

Many sites for student accommodation could equally be suitable for non-student homes, from which an affordable housing would normally be sought. The exception to this, is where student accommodation is developed within existing university campuses, because market housing would not usually be provided within those sites. As such, it is reasonable for the Plan to include a policy which seeks affordable housing contributions from new purpose-built student accommodation.

Table 2: Policy options set 002b Affordable housing: financial contributions from new student accommodation

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Seek a financial contribution from all student accommodation developments, towards affordable housing	In many situations, affordable housing would not be suitable to be provided on student sites. Therefore, a financial contribution towards provision of affordable housing elsewhere within Oxford would help towards meeting affordable housing needs from sites that could otherwise be making contributions from residential development on such sites.	The seeking of financial contributions provides less certainty than developing on-site affordable housing because sites would need to be secured separately. The thresholds for qualifying sites would need to be tested through plan viability.
Option b Require financial contributions from student developments equivalent to 10 or more self-contained units [the same threshold as residential developments] or 25+ student rooms	This would mean that the financial contributions from student accommodation are sought on a comparable basis to residential development. It would also maximise the level of contributions towards much-needed affordable housing.	None identified.
Option c Only require financial contributions from larger student schemes, for example of more than	None identified.	This would result in a reduced financial contribution from what would be sought if the site was for general housing where the threshold is 10 dwellings. This could encourage landowners to opt for student accommodation in unsuitable locations instead of residential homes and would not help to

50 rooms (or 20 self-contained units).		address the constrained supply of new homes in Oxford or to meet housing needs within Oxford.
Option d Require affordable housing to be delivered on-site within larger student developments	Provides more certainty that affordable housing would be delivered if it is provided by the developer as part of the development.	In many situations, affordable housing would not be suitable to be provided on student sites, for example student accommodation is typically flats so in practice it would be difficult to provide separate entrances.
Option e Do not require an affordable housing contribution from any student accommodation developments	None identified.	This would make the development of student accommodation disproportionately more viable and therefore attractive to developers, than the development of general housing which would result in sites suitable for housing being delivered for student accommodation instead. This would not help to address the constrained supply of new homes in Oxford. It would also result in the loss of any financial contribution towards affordable housing that would have been secured if the site was being developed for general housing, so would result in fewer affordable homes provided in Oxford.

888

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or c or d or e **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** These options are about whether to seek contributions towards affordable housing from student accommodation developments, and about what size developments that requirement should apply to. Sites that are developed for student accommodation are also often suitable in principle for residential development, so seeking contributions on a comparable basis (ie for sites delivering 10 or more homes or equivalent number of student rooms at a ratio of 2.5:1) helps to ensure that sites are not unduly prejudiced against providing residential accommodation on the basis of viability, as well as providing an additional contribution source of much-needed affordable housing to address local needs. In terms of sustainability impacts, options a, b, c, d would all help to deliver affordable housing so would score positively against **criterion 4 local housing needs** and **criterion 5 inequalities**, with option a having the greatest potential positive impact because it would apply to the greatest number of developments. Whereas option d would do nothing to help achieve either of these

objectives. The options do not really affect the other sustainability objectives. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

Affordable housing contributions from new purpose-built student accommodation – Draft policy H3

The preferred approach for the Local Plan 2045 policy is to take forward Option B, so that contributions from student developments are sought on a comparable basis to residential schemes i.e. for the equivalent of 10 self-contained dwellings. The Government Housing Delivery Test sets out a ratio of 2.5 student bed spaces to 1 dwelling. Therefore, with the threshold at 10 dwellings for residential development affordable housing contributions, the threshold for student accommodation will be 25 bed spaces (or 10 or more self-contained student units as these are counted in monitoring terms as a dwelling). The viability evidence suggests that a large proportion of the types of typical student developments expected during the plan period could deliver this level. Exemptions are specified in the policy where contributions would not be sought.

The draft policy seeks financial contributions towards affordable housing (rather than onsite provision) because in many situations, affordable housing would not be suitable to be provided on student sites, for example student accommodation is typically flats so in practice it would be difficult to provide separate entrances.

989

Policy options set 002c (Draft Policy H4): Affordable housing: financial contributions from self-contained older-persons accommodation

Many sites for self-contained older persons accommodation could equally be suitable for mainstream residential development, from which an affordable housing would normally be sought. As such, it is reasonable for the Plan to include a policy which seeks affordable housing contributions from those developments.

Table 3: Policy options set 002c: *Affordable housing: financial contributions from self-contained older-persons accommodation*

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Seek a financial contribution from all	In many situations, affordable housing would not be suitable to be provided on older persons sites. Therefore, a financial contribution towards provision	The seeking of financial contributions provides less certainty than developing on-site affordable housing because sites would need to be secured

self-contained older persons accommodation developments, towards affordable housing	of affordable housing elsewhere within Oxford would help towards meeting affordable housing needs from sites that could otherwise be making contributions from residential development on such sites.	separately. The thresholds for qualifying sites would need to be tested through plan viability.
Option b Require financial contributions from developments equivalent to 10 or more self-contained units [the same threshold as residential developments]	This would mean that the financial contributions are sought on a comparable basis to residential development. It would also maximise the level of contributions towards much-needed affordable housing.	None identified.
Option c Only require financial contributions from larger development, for example of more than 20 self-contained units.	None identified.	This would result in a reduced financial contribution from what would be sought if the site was for general housing where the threshold is 10 dwellings.
Option d Require affordable housing to be delivered on-site within larger older-persons developments	Provides more certainty that affordable housing would be delivered if it is provided by the developer as part of the development.	In many situations, onsite provision of affordable housing within new developments for older persons such as retirement complexes, is unlikely to be appropriate because of the different housing needs and lifestyles. Management agreements and other restrictions (e.g. car parking) are also imposed which are also not necessarily appropriate to general housing.
Option e Do not require an affordable housing contribution from any older-persons accommodation developments	None identified.	This would make the development of older-persons accommodation disproportionately more viable and therefore attractive to developers. This would not help to address the constrained supply of new homes in Oxford. It would also result in the loss of any financial contribution towards affordable housing that would have been secured if the site

		was being developed for general housing, so would result in fewer affordable homes provided in Oxford.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or c or d or e **High-level screening conclusion? -** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** These options are about whether to seek contributions towards affordable housing from self-contained older-persons accommodation developments, and about what size developments that requirement should apply to. Sites that are developed for older-persons accommodation are also often suitable in principle for residential development, so seeking contributions on a comparable basis (ie for sites delivering 10 or more homes) helps to ensure that sites are not unduly prejudiced against providing residential accommodation on the basis of viability, as well as providing an additional contribution source of much-needed affordable housing to address local needs. In terms of sustainability impacts, options a, b, c, d would all help to deliver affordable housing so would score positively against **criterion 4 local housing needs** and **criterion 5 inequalities**, with option a having the greatest potential positive impact because it would apply to the greatest number of developments. Whereas option d would do nothing to help achieve either of these objectives. The options do not really affect the other sustainability objectives. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal.

991

Affordable housing contributions from self-contained older-persons accommodation – Draft policy H4

The preferred approach for the Local Plan 2045 policy is to take forward Option B. This would mean that the financial contributions are sought on a comparable basis to residential development, whilst also maximising the level of contributions towards much-needed affordable housing.

Policy options set 002d (Draft policy H5): Affordable housing: financial contributions from new commercial development

Commercial developments can impact on affordable housing needs by encouraging workers in housing need to move to Oxford to take up new jobs generated by the proposed use of the new development. As such this policy explores whether those developments should contribute towards affordable housing provision.

Table 4: Policy options set 002d Affordable housing: financial contributions from new commercial development

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a Require financial contributions towards off-site affordable housing from major commercial developments (over 1000sqm or 1ha)	Commercial developments have the potential to generate demand for affordable housing. Option would support economic growth by helping to deliver affordable housing to support a local workforce. Lack of affordable housing is often referenced as a constraint on Oxford's economic potential, and employers report difficulties in attracting and retaining staff because of the lack of affordable housing. Whilst the housing would not necessarily go directly to the staff of the development site, it would generally help supply of affordable housing.	Requiring financial contributions towards affordable housing could impact on viability of developments, especially in the period soon after adoption, because this is not currently a local policy requirement so schemes already in the pipeline may not have factored it into costs. This could however be mitigated with a viability cascade to ensure that the policy does not prevent sites being developed. Furthermore in recent years the viability of commercial developments has been very strong in Oxford, outstripping even residential developments. Option would also need to be tested via a viability assessment to check that this typology of site could deliver the policy requirements.
Option b Do not require financial contributions towards off-site affordable housing from major commercial developments (over 1000sqm or 1ha)	Financial contributions could be sought towards alternative public benefits eg public transport as part of travel to work to support sustainable commuting to the site.	Option would not help to deliver affordable housing at all, with knock on effects for employers trying to attract and retain staff.

Option c Require onsite provision of affordable housing as part of major commercial developments (over 1000sqm or 1ha)	Provision of affordable housing close onsite has the potential to reduce commuting and help address recruitment issues, although the residents would depend on implementation (the tenure and allocations policy) as to who could access the homes. Introducing residential to areas which are solely employment presently, could help to bring more vibrancy to areas of Oxford which are otherwise only occupied for part of the day/week.	Onsite provision may not be feasible or practical on all sites depending on the size and location of the site, for example if the site adjoins land uses which are not compatible with residential, or if the site is located within a larger employment park which would otherwise be empty overnight and/or weekends it may not be a pleasant living environment, or on sensitive sites such as hospital sites where employers would only wish to house their own staff for security reasons. This would depend on implementation, and certain exclusions may be justifiable eg to exclude on-profit making sectors such as health and education. It could also impact on viability if the employment use cannot be maximised on the site, or could constrain the economic potential of the site. A cascade policy would be needed to ensure the policy does not prevent sites being developed, with an option to revert to equivalent off-site financial contributions if appropriate.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b or c **High-level screening conclusion?** the options are similar to each other from a sustainability perspective **Screened in for detailed appraisal?** No **Rationale:** These options are about whether to seek contributions towards affordable housing from commercial developments, and about whether the contribution should be via financial contributions or via onsite provision of homes. Commercial developments can generate demand for affordable housing, so these options therefore seek contributions towards addressing that. In terms of sustainability impacts, options a and c would all help to deliver affordable housing so would score positively against **criterion 4 local housing needs** and **criterion 5 inequalities.** Whereas option b would do nothing to help achieve either of these objectives. By helping to address affordable housing needs, options a and c would also support **criterion 12 economic growth** because affordable housing is often reported by employers as a key issue affecting recruitment and retention especially in essential

sectors such as health care and schools, as long as there is a viability cascade to ensure the contribution does not prevent sites coming forwards. Option b would not help to address affordable housing needs but could mean more contributions could instead be used towards other public benefits eg public transport improvements to support employment and sustainable travel to work which would deliver alternative sustainability benefits. The options do not really affect the other sustainability objectives. Overall, it is considered that the sustainability impacts from the options do not differ enough to warrant them being scoped in for detailed appraisal. Implementation may need exclusions for certain types of employment site eg hospitals and schools.

Employer-linked affordable housing – Draft policy H5

The preferred approach for the Local Plan 2045 policy is to take forward Option A. To allow, on specified sites listed in the Plan, developments of homes that are available only for employees who work for a specific listed organisations at an affordable rent level (as agreed with the local authority).

The list of specified sites reflects willing landowners, plus crucially they are sites that would otherwise not be available for residential uses (for example on operational campuses, health facilities, or education sites), if they were not being developed for staff. The policy also requires legal agreements to ensure that the homes are truly affordable and are addressing identified housing needs, for example to agree an allocations policy and rent levels.

994

Policy options set 002e (Draft policy H6): Employer-linked affordable housing

Many jobs in Oxford still require people to attend their workplaces because they are jobs that are not possible to do remotely, such as in frontline healthcare, teaching in schools and universities, as well as those working in manufacturing and R&D labs. Many of these workers are unable to afford market housing or even private rented accommodation in the city and find themselves living outside of Oxford with expensive and time-consuming commutes into the city, or living in shared accommodation in Oxford that is too small for their needs.

Employer-linked housing is a bespoke approach that was introduced in Oxford in the LP2036, as an additional means to help increase delivery of much-needed affordable housing. The policy provides an alternative means of delivering affordable housing, to supplement the affordable homes delivered via Policy H2.

It involves housing being developed on specified sites, by specified key employers, in the city to provide a means of delivering affordable housing for their own staff. This allows those employers to help to address their own recruitment and retention issues by providing housing on their own land. A typical example is the NHS providing staff accommodation within the hospital sites. For most of the

specified sites, employer-linked housing will only be one element of use on the site, for example operational hospital uses will be retained on the hospital sites, or schools will be retained alongside residential development.

Table 5: Policy options set 002e Employer-linked affordable housing

Option for policy approach	Potential positive consequences of the approach	Potential negative/neutral consequences of the approach
Option a On specified sites listed in the Plan, allow developments of homes that are available only for employees who work for a specific listed organisations at an affordable rent level (as agreed with the local authority).	Provides an alternative mechanism for employers to actively help address affordable housing issues for employees, which although the homes would only be for staff, the provision of homes in turn could help reduce pressure on the housing register. Could support wider objectives of the Plan such as supporting economic growth with a sufficient workforce, and decreasing need to travel. The option could help to bring forward sites which landowners would otherwise not make available for residential uses (for example by being located on operational campuses, health facilities, or education sites).	Limited number of employers could benefit as they would need to own (suitable) land to build on and be able to act as a developer. It is important that this policy does not undermine delivery of Social Rent housing because the homes would only be available to employees of the organisations and not to those on the housing register (those in greatest need). Hence it should be restricted only to sites unlikely to deliver affordable general needs housing to households in housing need.
Option b Do not include an employer linked housing policy.	Less risk of undermining delivery of much-needed Social Rented housing, if the site were to be developed then the normal affordable housing tenure split would apply including provision of social rent.	Landowners may be put off bringing forward certain sites, if the development would not be solely for their own staff e.g. on sensitive sites like hospital sites where landowner may wish to only have staff living. Removing this policy could exclude an alternative potential supply of affordable housing or sterilise sites.

Initial sustainability appraisal screening of options sets
Is there only one option or are there various options we could take? a or b **High-level screening conclusion?** the options should be subject to detailed appraisal. **Screened in for detailed appraisal? -** Yes **Rationale:** These options are about whether to allow certain employers on certain sites, to develop those sites as affordable housing for rent solely for their own staff. As the site would be 100% affordable housing, the normal affordable housing tenure policies would not apply but would be agreed on a site-by-site basis to reflect the requirements of the workforce of that specific

employer. There is no specific policy framework for this type of provision in national policy, so the options are whether to have such a policy or not.

In terms of sustainability impacts, option a would contribute positively towards **criterion 4 local housing needs** and **criterion 5 inequalities,** and also **criterion 12 economic growth.** Under option b, the normal affordable housing tenure requirements would apply which would include social rent, however landowners may not develop the site if it cannot be guaranteed for their own staff e.g. on sensitive sites like hospital sites where landowner may wish to only have staff living. Option b could therefore exclude an alternative potential supply of affordable housing or sterilise sites. Likely impacts of option b are therefore dependent on implementation, as it could mean sites developed for residential or it could mean sites not developed at all, entirely dependent on the landowner's intentions.

Affordable housing contributions from commercial developments – Draft policy H6

This is a new policy, which needs further testing through the Regulation 18 consultation and viability. As such there is no preferred approach identified at this stage.

Background paper 003

Specialist housing including student accommodation, self-build, elderly persons, gypsy, traveller and travelling showpeople and boat dwellers.

This paper addresses Oxford's circumstances in relation to specialist housing provision including the provision of student accommodation, self build housing, housing for elderly persons, gypsy, traveller and travelling showpeople and boat dwellers.
Relevant Local Plan Objective(s): • Provide access to affordable, high-quality and suitable accommodation for all.
Relevant SA Objective(s): 4. To meet **local housing needs** by ensuring that everyone has the opportunity to live in a decent affordable home.
SEA theme(s): Material Assets, Population, Human Health.

1. Introduction

1.1 This Paper considers the need for and policy response to various types of specialist housing accommodation. Housing need is considered in Background Paper 001, but in addition we are required to consider the needs for particular types of housing and occupants. Affordable housing need is discussed in Background Paper 002. This paper focuses on student accommodation, self-build and custom build homes, elderly persons and other supported care housing, gypsy, traveller and travelling showpeople, and boat dwellers.

Student Accommodation

1.2 There are two higher education institutions within Oxford – University of Oxford and Oxford Brookes University, and also a campus of the University of West London in Dunstan Road. Provision of good quality, well managed student accommodation will be required, located in close proximity to those institutions.

Self-Build and Custom Housebuilding

1.3 Oxford's communities are varied, with differing needs for housing provision. With affordability issues, self-build and custom housebuilding can provide opportunity for individuals and groups to access the housing market a different way.

Elderly persons and other supported care housing

1.4 There are various types of supported housing, mainly provided for elderly persons, but also for others with specialist housing and additional care needs.

Gypsy, Traveller and Travelling Showpeople

1.5 The Traveller community lives in a variety of accommodation; including bricks and mortar homes, mobile homes, and touring caravans. Current and future accommodation needs for travelling communities were last assessed in 2024 at an Oxfordshire-wide level.

Boat Dwellers

1.6 Residential boats and their dwellers on both permanent and temporary visitor moorings, contribute to the cultural and housing diversity of Oxford and provide a type of accommodation that can be more affordable.

Boarding School Accommodation

1.7 Oxford is home to several boarding schools which provide accommodation for their students.

Houses in Multiple Occupation

1.8 This paper sets out the context for Houses in Multiple Occupation (HMO) in Oxford.

2. Policy Framework/ Plans, Policies, Programmes (supporting Task A1 of Sustainability Appraisal)

National Plans, Policies and Programmes

National Planning Policy Framework and Planning Practice Guidance

2.1 The National Planning Policy Framework (NPPF) makes it clear that to support the Government's objective of significantly boosting the supply of home, planning authorities should address the needs of groups with specific housing requirements and that policies should be informed by a local housing need assessment. At paragraph 63, the NPPF states *'Within the context of establishing need, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies. These groups should include (but are not limited to) those who require affordable housing (including Social Rent); families with children; looked after children; older people (including those who require retirement housing, housing-with care and care homes); students; people with disabilities; service families; travellers; people who rent their homes and people wishing to commission or build their own homes.'*

Student Accommodation

2.2 Paragraph 04 (reference ID 67-004-20190722) of the Housing Needs of Different Groups Planning Practice Guidance (PPG) published in July 2019 and updated in May 2021 states "Strategic policy-making authorities need to plan for sufficient student accommodation whether it consists of communal halls of residence or self-contained dwellings, and whether or not it is on campus. Encouraging more dedicated student accommodation may provide low cost housing that takes pressure off the private rented sector and increases the overall housing stock. Strategic policy-making authorities are encouraged to consider options which would support both the needs of the student population as well as local residents before imposing caps or restrictions on students living outside university-provided accommodation. Local Planning Authorities will also need to engage with universities and other higher educational establishments to ensure they understand their student accommodation requirements in their area."

2.3 Paragraph: 025 (reference ID: 68-034-20190722) of the Housing supply and delivery guidance published in July 2019 and updated in December 2024, allows for student accommodation to contribute towards an authority's housing land supply based upon the amount of accommodation it releases in the wider the wider housing market.

Self-Build and Custom Housebuilding

2.4 The Self-Build and Custom Housing Building Act 2015 (as amended by the Housing and Planning Act 2016) defines Self-build and Custom Housebuilding as *"the building or completion by a) individuals, b) associations of individuals, or c) persons working with or for individuals or associations of individuals, of houses to be occupied as homes by those*

individuals. It does not include the building of a house on a plot acquired from a person who builds the house wholly or mainly to plans or specifications decided or offered by that person".
