

## Local Plan 2045 - Monitoring Framework

The table below sets out the proposed approach Oxford City Council will take to monitoring the effectiveness of the Local Plan, as well as its impacts in line with the requirements of Sustainability Appraisal combined with Strategic Environmental Assessment. The approach to monitoring is broken down into two key reporting areas which are separated under each of the themes of the Local Plan. It is envisaged that certain elements of monitoring will be undertaken annually and reported upon in the Authority Monitoring Report (AMR) or the Infrastructure Funding Statement (IFS). The second element of the framework addresses longer-term trends which the Council intend to monitor but would be reported upon less frequently because of the increased resource demand or due to monitoring data being available less frequently and these link to environmental standards set out in our Sustainability Appraisal.

Whilst the details set out below highlight the priority monitoring the Council will seek to report upon within the AMR on a regular basis, there are often other mechanisms for monitoring the impact of other Local Plan policies which are not touched upon below. These include other data collection methods and reporting mechanisms such as where developments need to meet legal duties required as part of environmental health/ sustainability responsibilities (e.g. in relation to contaminated land, air quality, biodiversity net gain).
